**PUBLIC SERVICE  
COMMISSION**

Re: Big Rivers Electric Corporation's 2010 Integrated Resource Plan  
PSC Case No. 2010-00443

Dear Mr. DeRouen:

Enclosed for filing in the above referenced matter are an original and ten copies of Big Rivers Electric Corporation's responses to the Commission Staff's Second Information Request. Ms. Amber M. Roberts sponsored certain of Big Rivers' responses to the Commission Staff's First Information Request and to the Attorney General's Initial Requests for Information. Ms. Roberts is no longer an employee of GDS Associates, Inc. and will no longer be a witness for Big Rivers. Another GDS employee, Mr. Richard F. Spellman, will sponsor the responses for which Ms. Roberts is listed as a witness. I certify that a copy of this letter and the responses have been served on the parties on the attached service list.

Sincerely yours,

Tyson Kamuf

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 ("Kenergy"), and Meade County Rural Electric Cooperative  
2 Corporation ("Meade County RECC"), also collectively called the  
3 "Members"). Toward that goal, Big Rivers focuses on unit efficiency  
4 and reliability. Each year, Big Rivers publishes its rolling four-year  
5 production work plan, which includes unit- and plant-specific  
6 operation and maintenance strategies that are vital to keeping the  
7 generating facilities operating at peak performance at the lowest  
8 reasonable cost. The production work plan also includes Key  
9 Performance Indicators ("KPIs") consisting of Equivalent Forced  
10 Outage Rate, Equivalent Availability Factor, Unit Heat Rate, Variance  
11 From Planned Outage Duration, and Production Controllable Cost  
12 (O&M labor, O&M non-labor, and Capital) to measure Big Rivers'  
13 progress toward these goals. All performance KPIs are calculated  
14 using IEEE Standards which are ANSI-approved to use in reporting  
15 electric generating unit reliability, availability and productivity. Since  
16 the closing of the Unwind Transaction in July 2009, Big Rivers has  
17 created a new position (Manager of Production Services), who's  
18 primary responsibility is to develop a standardized performance  
19 improvement plan to monitor and improve the heat rate on all of its  
20 generating units. Big Rivers has also committed to utilizing Black &  
21 Veatch to measure plant performance before and after each planned  
22 unit outage to ensure Big Rivers is getting the expected improvements.  
23 Big Rivers also has a contract with Black & Veatch to continuously  
24 monitor performance on the Henderson Municipal Power & Light  
25 ("HMP&L") units.

- 26 b. Big Rivers is in the process of developing continuous plant  
27 performance monitoring programs by using data that is transmitted  
28

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION

dated February 11, 2011**

**February 25, 2011**

1 from plant equipment into its distributed control system, performing  
2 the necessary calculations, and displaying the results on dedicated  
3 monitors in each unit's control room to assist plant operators in  
4 managing controllable losses in real time.

5 c. As explained in more detail in the response to part e below, Big Rivers  
6 expects to increase scheduled outages and maintenance activities over  
7 current levels, which should benefit unit efficiency. More specifically,  
8 within the 15-year period covered by the 2010 IRP, Big Rivers will  
9 overhaul all of its turbine fleet in order to maintain turbine cycle  
10 efficiency. Additionally, Big Rivers has committed to replacing many  
11 worn out and inefficient capital assets within the 15-year period in  
12 order to maintain its plants efficiency.

13 d. A commonly used industry standard for measuring the reliability of  
14 coal-fired generating units is the weighted average Equivalent Forced  
15 Outage Rate ("EFOR"). Big Rivers determines EFOR for its  
16 generation system using the North American Electric Reliability  
17 Council's ("NERC") Generating Availability Data System ("GADS"),  
18 and can compare its EFOR to that of other utilities. Big Rivers can  
19 also use Equivalent Availability Factor ("EAF"), and Net Capacity  
20 Factor ("NCF") for making comparisons to other utilities in the  
21 industry. Big Rivers uses Navigant Consulting's "Generation  
22 Knowledge Service" to compare its plant reliability to similar units  
23 across the region. In a benchmarking study completed in January  
24 2011, for the period beginning January 2007 through September 2010,  
25 the performance statistics for Big Rivers' units were better than the  
26 median for the 99 units in the peer group. For the comparative period,  
27

CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 the performance metrics for Big Rivers' units compared to the peer  
2 group median are as follows:

3  
4 **Generating Units Performance Statistic**  
5 **January 2007 through September 2010**

<b>Big Rivers Units</b>			<b>Peer Group Median</b>	
EFOR	4.37%	(lower is better)	EFOR	6.47%
EAF	89.02%	(higher is better)	EAF	86.65%
NCF	81.05%	(higher is better)	NCF	70.57%

6  
7  
8  
9  
10  
11 The performance statistics for Big Rivers' units for the period from the  
12 closing of the Unwind Transaction through the end of 2009 and for  
13 2010 are:

14  
15 **Big Rivers Generating Units Performance Statistic**

<b>July-December 2009</b>		<b>Full Year 2010</b>	
EFOR	3.71%	EFOR	3.58%
EAF	85.90%	EAF	93.65%
NCF	73.74%	NCF	84.02%

16  
17  
18  
19  
20  
21 e. Outage planning is an important part of Big Rivers' reliability strategy.  
22 Maintenance Planners at each station utilize Big Rivers' outage  
23 planning process manual to ensure optimum results from unit down  
24 time. Big Rivers generally performs scheduled outages as identified  
25 below:

26 i. Coleman units 1, 2, and 3

27 (1) Flue Gas Desulfurization ("FGD") outages – 2 year interval

29  
30  
31

Due to the depressed economy during 2009 and 2010, load demand in the Big Rivers system was down, off-system sales volumes were low, and market prices were down. Big Rivers deferred some maintenance activities in 2010 and 2011 in order to reduce expenses so that Big Rivers could meet its loan covenants. If Big Rivers receives the rate increase it is seeking in a separate proceeding, by the end of 2012, Big Rivers expects to have all of its deferred maintenance completed, and intends to follow this planned outage maintenance schedule throughout the remaining years covered by the 2010 IRP. However, if Big Rivers does not receive that rate relief, it will have no option but to continue to defer scheduled outages and to reduce plant maintenance, which will have a negative impact on generator reliability. Following this planned maintenance outage schedule, Big Rivers expects to achieve performance metrics that are as good as, or better than, those it has achieved since the closing of the Unwind Transaction.

1                    [www.nerc.com/files/2009\\_LTRA.pdf](http://www.nerc.com/files/2009_LTRA.pdf). Big Rivers is providing an  
2                    electronic copy of NERC's 2009 Long-Term Reliability Assessment  
3                    on the CD accompanying these responses.

- 4                    b. Big Rivers used a minimum reserve margin of 14% in the modeling  
5                    process to recognize the fact that some fluctuation around the target of  
6                    15% is acceptable. A low-side bandwidth of 1% allows the reserve  
7                    margin to drop below 15% for limited amounts of time, deferring  
8                    additions that could result in reserve margins well in excess of 15% in  
9                    future periods.

10  
11                    The selection of the 15% reserve margin target and the 14% modeling  
12                    minimum were not based on a study specific to Big Rivers.

13  
14  
15                    **Respondent) Michael J. Mattox**

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 4)** *Refer to Big Rivers' 2010 IRP, Executive Summary at iv. Big Rivers*  
2 *indicates that the 4.5 percent reserve margin ("MISO Reserve Margin") used in the*  
3 *"MISO Case" is the Midwest Independent System Transmission Operator's ("MISO")*  
4 *Non-Coincident load Based Planning Reserve margin. Explain in detail the basis for*  
5 *the 4.5 percent MISO Reserve Margin and whether the 4.5 percent reserve margin was*  
6 *based on a specific study of Big Rivers' planning needs. If not based on a Big Rivers*  
7 *specific study, identify the other factors upon which the 4.5 percent MISO Reserve*  
8 *Margin was based.*

9  
10 **Response)** Big Rivers obtained the 4.5 percent margin from the Midwest ISO  
11 Business Practices Manual ("BPM") Resource Adequacy, BPM-011-r6, effective June 1,  
12 2010, at the following link:

13 <https://www.midwestiso.org/Library/BusinessPracticesManuals/Pages/BusinessPractices>  
14 [Manuals.aspx](https://www.midwestiso.org/Library/BusinessPracticesManuals/Pages/BusinessPractices). Section 3 of this document discusses how the Midwest ISO calculates the  
15 Non-Coincident Load Based margin. The basis for the information contained in the BPM  
16 is the Midwest ISO document, "Planning Year 2010 LOLE Study Report", dated  
17 February 2010 at the following link:

18 <https://www.midwestiso.org/Library/Repository/Meeting%20Material/Stakeholder/LOLE>  
19 [WG/2010/2010%20LOLE%20Report.pdf](https://www.midwestiso.org/Library/Repository/Meeting%20Material/Stakeholder/LOLE). Both of these documents are also being  
20 provided on the CD accompanying these responses.

21  
22 The reserve requirements in these documents are not specific to Big Rivers, but rather set  
23 forth responsibilities to which all load-serving entities in the Midwest ISO must adhere.  
24 The only exception to this is under Section 3.6 of the BPM, which indicates that state  
25 utility commissions may establish planning reserve margins for utilities under their  
26 jurisdiction.

BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 5)** *If none of the reserve margins cited in the responses to the two previous*  
2 *requests are based on a specific study of its planning needs, explain why Big Rivers*  
3 *believes it is appropriate to use the 14 percent reserve margin and the 4.5 percent*  
4 *MISO Reserve Margin for planning purposes.*

5  
6 *a. Explain whether Big Rivers has performed a specific study of its*  
7 *reserve margin criteria within the past 10 years.*

8 *b. Explain whether Big Rivers intends to perform a specific study of its*  
9 *reserve margin criteria for its next integrated resource plan.*

10  
11 **Response)** Please see Big Rivers' responses to Items 3 and 4 of the Commission  
12 Staff's Second Information Request dated February 11, 2011 ("Staff's 2<sup>nd</sup> Data  
13 Request").

14  
15 a. Big Rivers has not performed a specific study in the past 10 years.

16 b. Due to Big Rivers integration into the Midwest ISO, which specifies  
17 reserve margin requirements for load-serving entities, Big Rivers does  
18 not intend to perform a specific study prior to its next IRP. Big Rivers  
19 intends to comply with the Midwest ISO resource adequacy  
20 requirements. A benefit of membership in the Midwest ISO is that Big  
21 Rivers is able to take advantage of efficiencies that result from the  
22 collective membership. If a Big Rivers specific or regulatory  
23 mandated planning reserve margin in excess of that required by the  
24 Midwest ISO was implemented, it would put Big Rivers at an  
25 economic disadvantage relative to other Midwest ISO members. This  
26 would result in increased costs to Big Rivers since cost savings made  
27 possible by its Midwest ISO membership would be forgone.

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 6)** *Describe the planning reserve margin requirements with which Big*  
2 *Rivers must comply as a MISO member*

3 .

4 *a. Describe the impact such requirements will have on Big Rivers'*  
5 *future IRPs.*

6 *b. Explain whether Big Rivers anticipates any increase in generation*  
7 *efficiency as a result of MISO's economic generation dispatch. If*  
8 *yes, state the annual increase in efficiency anticipated over the 15*  
9 *year period covered by the IRP.*

10  
11 **Response)** Planning reserve margin requirements with which Big Rivers must comply  
12 as a Midwest ISO member are contained in Midwest ISO BPM Resource Adequacy,  
13 BPM-011, at the following link:

14 <https://www.midwestiso.org/Library/BusinessPracticesManuals/Pages/BusinessPractices>  
15 [Manuals.aspx](https://www.midwestiso.org/Library/BusinessPracticesManuals/Pages/BusinessPractices), and in the Midwest ISO Tariff Module E at the following link:

16 <https://www.midwestiso.org/Library/Tariff/Pages/Tariff.aspx>. An electronic copy of  
17 both documents is provided on the CD accompanying these responses. The former was  
18 provided in Big Rivers' response to Item 4 of the Staff's 2<sup>nd</sup> Data Request.

19  
20 *a. Big Rivers anticipates future IRPs will utilize Midwest ISO resource*  
21 *adequacy requirements as a base case. In general, as shown in Table*  
22 *8.1, page 8-3, of the 2010 IRP, it is anticipated that under the Midwest*  
23 *ISO, Big Rivers will be able to defer the need for new generation*  
24 *relative to the current base case.*

25 *b. For the purpose of this response, increased generation efficiency is*  
26 *assumed to mean unit heat rate improvement. As is commonly known,*  
27 *the heat rate of most thermal generating units improves as the load is*  
28

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 increased. Therefore, if the units can be operated at higher loads  
2 consistently, the units' heat rate will be improved. Big Rivers has only  
3 been in the Midwest ISO since December, 2010 and is still uncertain  
4 how its units will be dispatched by the Midwest ISO in the longer  
5 term. During the first two months in the Midwest ISO, Big Rivers has  
6 seen little change in how the Midwest ISO is dispatching the units  
7 compared to how the units have been dispatched historically.  
8 Generation is being reduced when the Midwest ISO market price is  
9 weak. Also, in the Midwest ISO, the Green units and Coleman units  
10 have been called on frequently for system regulation meaning unit  
11 output is swinging up and down regularly. The swinging load has a  
12 negative impact on heat rate.

13  
14 How Big Rivers' generation efficiency will be affected by the Midwest  
15 ISO's economic generation dispatch over the next fifteen years is  
16 currently not known due to the uncertainty of how the Midwest ISO  
17 will dispatch Big Rivers' units.

18  
19  
20 **Respondents)**

- 21 a. Michael J. Mattox  
22 b. Lawrence V. Baronowsky

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 7)** *Refer to Big Rivers' 2010 IRP, Executive Summary at iii. The first*  
2 *bulleted paragraph states "The DSM analysis conducted as part of the 2010 IRP*  
3 *evaluation includes screening of demand response ("DR") programs. The DR*  
4 *programs analyzed were not cost effective in the DSM screening analysis. Big Rivers*  
5 *will continue to monitor the cost effectiveness of DR programs." On page 58 of the*  
6 *GDS Associates, Inc.'s report ("GDS Report"), there is a listing of Total Resource Cost*  
7 *("TRC") Test evaluations. The TRCs of 15 programs are shown, some of which are*  
8 *greater than 1.0. Explain whether Big Rivers has considered bundling any of these*  
9 *programs so that programs could be grouped together with bundled TRCs being*  
10 *greater than 1.0, and whether there would be adequate participation for these*  
11 *programs.*

12  
13 **Response)** At this time Big Rivers has not considered bundling individual Demand  
14 Response ("DR") measures for further evaluation. The evaluated DR programs with  
15 TRC test values in the range of 1 or slightly higher were not deemed appropriate, at this  
16 time, for wide scale program development, but may be applicable if individual project  
17 benefits and costs are conducive.

18  
19 Individual projects, such as the 50 MW Heat and Power cogeneration project at the  
20 Domtar Paper Company LLC facility in Hawesville, Kentucky, are considered when  
21 opportunities are identified. These projects are generally site and resource specific.

CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 8)** *Describe the consideration given by Big Rivers to cogeneration in its*  
2 *resource analysis.*

3  
4 **Response)** The resource analysis included potential sources of generation that were  
5 modeled using generic characteristics, such as capital requirements, fuel requirements,  
6 non-fuel operating costs, and availability. To the extent that cogenerators could provide  
7 power at costs equivalent to those associated with power self-supplied by Big Rivers or  
8 power purchased from other sources, Big Rivers would be open to discussions with  
9 owners of potential cogeneration projects.

10

dated February 11, 2011**

**February 25, 2011**

1 **Item 10)** *Refer to section 5 on page 5-12 of Big Rivers IRP. Provide a schedule of*  
2 *the timeframes for the evaluation of existing and planned demand side management*  
3 *("DSM") programs.*

4  
5 **Response)** With the exception of continuing education efforts by Big Rivers'  
6 Members, the only current DSM program is the CFL distribution, which is ongoing.  
7 Several pilot projects are ongoing or planned for the near future which, if proven cost  
8 effective at the local level, will be converted to permanent programs. The following is  
9 the schedule for the pilot projects.

- |    |   |                        |
|----|---|------------------------|
| 10 |   |                        |
| 11 | 1. Residential weatherization           | Through May 2011       |
| 12 | 2. Commercial Lighting                  | Through June 2011      |
| 13 | 3. High efficiency security lighting    | Through June 2011      |
| 14 | 4. Energy Star new home construction    | Through September 2011 |
| 15 | 5. Energy Star refrigerator replacement | Through February 2011  |
| 16 | 6. Energy Star clothes washer           | April – May 2011       |
| 17 | 7. Energy Star HVAC tune-up             | April – May 2011       |
| 18 | 8. Manufactured home weatherization     | March – June 2011      |
| 19 | 9. Poultry Energy Efficiency Pilot      | April – October 2011   |
| 20 |   |                        |

21 Each of the Members has committed to offering the following energy efficiency  
22 programs in 2011 as they prove cost effective at a local level.

- 23
- 24 1. Residential lighting
  - 25 2. Residential products
  - 26 3. Residential advanced technologies
  - 27 4. Residential weatherization
- 28

CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 build or unit participation by Big Rivers, or purchases of capacity from  
2 appropriate resources owned by others.

3 c. The 13 mile 161 kV line from the Wilson switchyard to the tap point  
4 on the Hardinsburg to Paradise 161 kV interconnection will be part of  
5 a modification to and upgrade of this existing Big Rivers to TVA  
6 connection. When complete, the contract path limitation will be 446  
7 MVA. This contract path limitation will apply to both power import  
8 and export. With the anticipated completion of this project in 2011 and  
9 the completion of all other "Phase Two" projects, an increase of 468  
10 MW in export Available Transfer Capability ("ATC") on the Big  
11 Rivers system will be achieved (see case No. 2007-00177 The  
12 Application of Big Rivers Electric Corporation for a Certificate of  
13 Public Convenience and Necessity to Construct a 161 kV  
14 Transmission Line in Ohio County, Kentucky). Phase Two alleviates  
15 internal constraints to Big Rivers' export transfer capability, assuming  
16 the loss of both large aluminum smelter plant loads from the Big  
17 Rivers system. Big Rivers' export transfer capability, once "Phase  
18 Two" is complete, will be 1380 MW.

19 d. The Daviess County EHV substation construction resulted in the  
20 creation of two new Big Rivers to Kentucky Utilities interconnections.  
21 The new Daviess County EHV to Coleman EHV 345 kV  
22 interconnection is rated at 717 MVA. The new Daviess County EHV  
23 to Wilson EHV 345 kV interconnection is rated at 956 MVA. These  
24 contract path limitations apply to both power import and export. The  
25 completion of this project in 2008 provided an increase of some 450  
26 MW in export ATC on the Big Rivers system.

CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 12)** *Refer to the Section titled Transmission System on pages 6-3 and 6-4 of*  
2 *the IRP regarding more efficient utilization of transmission facilities. The narrative*  
3 *discussion addresses several actions taken from 2005 through August 2010, but does*  
4 *not address any actions planned during the 15 year period covered by the IRP. Table*  
5 *6-2 identifies several planned transmission system additions.*

- 6
- 7 *a. Describe any transmission constraints that may limit Big Rivers*  
8 *ability to import or export power.*
- 9 *b. Provide a discussion of the manner in which the additions listed in*  
10 *Table 6-2 will improve the efficiency of the transmission system.*
- 11 *c. Identify and describe any other actions, beyond system additions, Big*  
12 *Rivers plans to undertake with respect to its transmission system*  
13 *during the 15 year period covered by the IRP.*
- 14

15 **Response)**

- 16 a. The Big Rivers transmission system additions identified in Table 6-2  
17 include the "Phase 2" projects discussed in Big Rivers' response to  
18 Item 11c in the Staff's 2<sup>nd</sup> Data Request, and alleviate internal  
19 constraints to Big Rivers' export transfer capability assuming the loss  
20 of both large aluminum smelter plant loads from Big Rivers' system.  
21 Big Rivers expects that any other transmission constraint can be  
22 effectively managed through the Midwest ISO market processes.
- 23 b. The additions listed in Table 6-2 are necessary to allow Big Rivers to  
24 continue to serve its load in a reliable manner according to its planning  
25 criteria. The list includes seven re-conductor projects which result in  
26 increases in the capacity of existing Big Rivers transmission line  
27 facilities. The list includes six transformer additions and one line

**Item 13)** *Refer to Table 8.5 on page 8-9 of the IRP.*

- a. When is the Southeastern Power Administration ("SEPA") capacity provided from the Cumberland System expected to be in a firm dependable status?*
- b. Describe the impacts the recently announced extension of time to complete the dam repair on the Cumberland System will likely have on the timeframe for when this supply source will be in a firm dependable status.*
- c. Provide the impact this delay will have on the assumptions and conclusions in the IRP.*

**Response)**

- a. Big Rivers expects firm capacity from SEPA to be available sometime in 2013.
- b. Any delay in repairs will impact SEPA's ability to end the force majeure and allow scheduling of power on a firm basis.
- c. The delay will have no impact on the assumptions or conclusions in Big Rivers' 2010 IRP. Big Rivers conservatively assumed, due to uncertainty around the repairs, it could not schedule its full allocation of 178 MW until 2014.

**Respondent)** Michael J. Mattox

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 14)** *Refer to Table 8.16 on page 8-18 of the IRP and page 7 of Appendix B,*  
2 *Demand Side Management: Big Rivers Final Potential Study. Explain why there are*  
3 *no avoided transmission or distribution costs.*

4  
5 **Response)** Big River's current transmission capacity is well in excess of its peak  
6 demand requirements. Therefore, a reduction in peak demand currently has very little to  
7 no value in terms of deferring construction of transmission facilities.

8 It is very difficult to estimate avoided distribution costs related to  
9 reductions in peak demand. The distribution system is primarily designed to meet the  
10 Members' system peak and non-coincident peak demand constraints and not G&T-level  
11 coincident peak demands. Therefore, reductions in the Big River's peak demand may  
12 delay construction of a substation several months, but that value is negligible and would  
13 have little impact on the results of the DSM potential study.

14  
15  
16 **Respondent)** Jacob M. Thomas

**February 25, 2011**

1 **Item 15)** *Refer to Table 4.1 and 4.2 on page 18 of Appendix B, Demand Side*  
2 *Management: Big Rivers Final Potential Study. Explain why the current load forecast*  
3 *does not predict growth in the large commercial/industrial sector, either in customers*  
4 *or the forecasted sales.*

5

6 **Response)** The large commercial/industrial sector includes all customers with annual  
7 peak demand exceeding 1 MW. In the base year of the 2009 Load Forecast, 2008, there  
8 were 20 customers. Since 1996, the number of customers in the class has fluctuated  
9 between 17 and 23. At the time the load forecast was prepared, Big Rivers and its  
10 Members had received no requests for service from potential customers with expected  
11 peak demand in excess of 1 MW. Furthermore, Big Rivers and its Members had received  
12 no indications from existing large commercial customers of future plant expansions or  
13 increases in operations. It has been Big Rivers' practice, due in large part to oversight  
14 and review from the Rural Utilities Services, not to include any new load and energy  
15 growth in the large commercial class unless Big Rivers and its Members have some type  
16 of commitment (request for service, contract, *etc.*) from potential customers.

dated February 11, 2011**

**February 25, 2011**

1 **Item 18)** *Provide the dispatch order of the Big Rivers' generating units.*

2

3 **Response)** Under its membership in the Midwest ISO, Big Rivers does not determine  
4 the dispatch order of its generating units. In the day-ahead market, the Midwest ISO via  
5 Security Constrained Unit Dispatch ("SCUD"), Security Constrained Unit Commitment  
6 ("SCUC"), and Simultaneous Feasibility Test ("SFT") algorithms simultaneously co-  
7 optimizes dispatch of energy and operating reserves for all units in the Midwest ISO  
8 while ensuring system reliability. For the real-time market, the Midwest ISO uses  
9 Security Constrained Economic Dispatch ("SCED") to dispatch units.

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 19)** *Provide contract termination dates and any contract extension*  
2 *provisions of the generation available from Henderson Municipal Power and Light*  
3 *and the Southeastern Power Administration.*

4  
5 **Response)** On July 15, 1998, the City of Henderson, Kentucky, the City of Henderson  
6 Utility Commission, and Big Rivers executed Amendments to various and sundry  
7 contracts (the "July 15, 1998 Amendments"). Paragraph 1 of the July 15, 1998  
8 Amendments states, in part, "[t]he terms of all the Contracts except the Joint Facilities  
9 Agreement shall be considered to continue for the operating life of Station Two, the  
10 operating life of which shall be considered to continue for so long as Unit 1 and Unit 2,  
11 or either of them, is operated, or is capable of normal, continuous, reliable operation for  
12 the economically competitive production of electricity, temporary outages excepted."

13 The contract between Big Rivers and SEPA was executed June 30, 1998.  
14 In Section 1, that contract states, in part, that it "shall continue in effect until terminated  
15 on June 30 of any year by the Purchaser upon written notice given to the Administrator  
16 not less than thirty-seven (37) months in advance of the date of termination specified  
17 therein or by the Administrator upon written notice given to the Purchaser of not less than  
18 thirty-six (36) months in advance of the date of termination specified therein; provided,  
19 that no such termination shall be effective prior to midnight, June 30, 2017." Big Rivers  
20 is the Purchaser; SEPA is the Administrator.

21 Relevant excerpts from these contracts are attached hereto.  
22  
23

24 **Respondent)** Roger D. Hickman  
25  
26  
27  
28  
29

WHEREAS, pursuant to the Contracts, and to ordinances of the City of Henderson, Kentucky providing for the sale of its electric revenue bonds, an electric generating station consisting of generating Units 1 and 2, each described in the Contracts as having a 175-megawatt capacity, and related facilities all known herein as "Station Two," were constructed and are now owned by the City of Henderson and operated by Big Rivers under the Contracts with Big Rivers, and

WHEREAS, City and Big Rivers now seek to amend the Contracts to reflect new understandings between the parties regarding the Contracts and the business relationship between City and Big Rivers.

NOW THEREFORE, in consideration of the mutual covenants herein contained, it is covenanted and agreed among the parties hereto as follows:

#### ALL CONTRACTS

1. The terms of all the Contracts except the Joint Facilities Agreement shall be extended for the operating life of Station Two, the operating life of which shall be considered to continue for so long as Unit 1 and Unit 2, or either of them, is operated, or is capable of normal, continuous, reliable operation for the economically competitive production of electricity, temporary outages excepted. Notwithstanding any other provision in the Contracts, all of the Contracts, except the Joint Facilities Agreement and the System Reserves Agreement, shall terminate 90 days after Big Rivers' allocation of capacity from City's Station Two shall be zero; provided, however, that the terms of all the Contracts shall be extended until all Station Two bonds of the City of Henderson which have been approved by Big Rivers have been paid. Notwithstanding the above, the Joint Facilities Agreement shall terminate in accordance with

Case No. 2010-00443

Witness: Roger D. Hickman

-2- Item 19 – Attachment (HMP&L Contract Excerpt)

Page 1 of 2

Section 8 of said Agreement. This section expressly replaces the provisions of Section 1 of the May 1993 Amendments in their entirety.

2. The effective date of these 1998 Amendments shall be the date following their execution upon which the last of the following approvals of the 1998 Amendments is obtained:

2.1 Approval of the Rural Utilities Service; and

2.2 Approval of the Kentucky Public Service Commission.

3. Nothing herein contained shall constitute general obligations of the City of Henderson within Kentucky Constitutional restrictions on such obligations. The obligations herein imposed on City of Henderson shall be borne entirely from revenues or other legally available funds of City's electric light and power system.

#### POWER SALES CONTRACT

4. The Power Sales Contract of August 1, 1970, as heretofore amended, is further amended as follows:

(a) **SECTION 3.4 IS HEREBY AMENDED TO BE AND READ IN ITS ENTIRETY AS FOLLOWS:**

3.4 City agrees that it will not, after the execution and approval of this Agreement, (1) make any dispositions to others for resale of its generating capacity, other than pursuant to Section 3.8 added by these 1998 Amendments, except for the purpose of disposing of any surpluses resulting from good faith over-estimates of its needs, or (2) add any commercial or industrial customers in excess of thirty (30) megawatts each to its electric system, if to do either (1) or (2), as the case may be, would require the withdrawal of additional capacity from its Existing System and/or from Units One and Two of its Station Two. Expansions in the ordinary course of business of any commercial or industrial plants being served by City at the time of the execution of these 1998 Amendments shall not be considered added commercial or industrial customers subject to the 30 megawatt size limitation for the purposes of this Agreement. Surplus capacity resulting from good faith over estimates as referred to in (1) above shall be first offered to Big Rivers at City's

Page 2 of 2

0.7 WHEREAS the Administrator has entered into an agreement executed October 1, 1997, Contract No. 89-00-1501-1129 (hereinafter called Government-TVA Contract), whereby the Cumberland Projects will be operated and TVA transmission facilities will be utilized to implement the aforesaid written power marketing policy, including delivery of the Purchaser's allocation to interconnection points between the Purchaser and TVA; and

0.8 WHEREAS the parties hereto have agreed to sell and purchase power on the terms and conditions hereinafter set forth;

NOW, THEREFORE, the parties hereto mutually covenant and agree as follows:

Section 1. Effective Date and Term of Contract.

This contract shall become effective and all obligations of the parties hereto with respect to the delivery of power hereunder and payment therefor shall commence at midnight, June 30, 1998, and shall continue in effect until terminated on June 30 of any year by the Purchaser upon written notice given to the Administrator not less than thirty-seven (37) months in advance of the date of termination specified therein or by the Administrator upon written notice given to the Purchaser of not less than thirty-six (36) months in advance of the date of termination specified therein; provided, that no such termination shall be effective prior to midnight, June 30, 2017. This contract shall be contingent upon the Government securing alternate arrangements for the necessary services in the event of termination or cancellation of the Government-TVA Contract.

dated February 11, 2011**

**February 25, 2011**

1 **Item 22)** *Refer to the last paragraph on page 13 of Appendix B, Demand Side*  
2 *Management: Big Rivers Final Potential Study and Big Rivers' response to Item 28 of*  
3 *Commission Staffs First Information Request ("Staffs First Request").*

4  
5 *a. Provide, as a percentage, the ratio of Big Rivers' annual investment*  
6 *in DSM relative to its annual electric sales revenue for the years*  
7 *2011 through 2025.*

8 *b. Provide, as a percentage, the ratio of Big Rivers' annual energy*  
9 *efficiency savings relative to its total electric sales for the years 2011*  
10 *through 2025.*

11 *c. Describe how the responses to parts a. and b. of this request compare*  
12 *with the findings in the top energy efficiency states.*

13  
14 **Response)**

15 a. As a percentage, the ratio of Big Rivers' annual investment in DSM  
16 programs relative to Big Rivers' total annual electric sales revenue for  
17 the years 2011 through 2025 are presented in the table on the  
18 following page. Currently, direct serve large industrial customers  
19 represent approximately 77% of Big Rivers' total system energy sales.  
20 Big Rivers' DSM/EE programs are designed for rural system  
21 customers (residential, commercial, and small and mid-sized  
22 industrial), which comprise approximately 23% of Big Rivers' total  
23 system sales. Consequently, DSM investments, which correspond to  
24 rural system customers, as a percentage of total systems sales revenue,  
25 are low. Projections of rural system sales revenue were not developed  
26 for the 2010 IRP or the 2009 Load Forecast, so the information needed

1 **Item 27)** *Refer to the last sentence of the response to Item 15 of Staffs First*  
2 *Request. Identify the specific level of generation reduction that Big Rivers expects will*  
3 *be necessary if the first compliance date of the proposed Clean Air Transport Rule is*  
4 *January 1, 2012.*

5  
6 **Response)** Big Rivers' generation projections indicate that Big Rivers must reduce  
7 generation in order to meet the proposed NOx allocations under the Clean Air Transport  
8 Rule for 2012. In order to meet the proposed allocations, Big Rivers will not operate the  
9 Reid coal unit and will reduce generation at one or more of its other units as needed.

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 28)** *Refer to the response to Item 16 of Staffs First Request. When they are*  
2 *known, provide the actual Rural System energy requirements and coincident peak*  
3 *demand for 2010.*

4  
5 **Response)** The actual Rural System energy requirements and coincident peak demand  
6 for 2010 are as follows –

7

8

1. Rural System energy requirements: 2,499,895 MWh

9

2. Rural System coincident peak demand: 544 MW

Annual rural system energy and rural peak demand projections were broken down by month to provide projections for the monthly short-term forecast. Annual projected amounts were broken down by applying average monthly load shapes to the annual forecasted amounts.

Monthly rural system energy for each Member was computed by applying an average monthly shape to annual rural system energy projections. The monthly energy shapes for each Member were based on weather normalized energy estimates for each month of 2008, the base historical year. The average energy shape represents the proportion of annual rural system energy corresponding to each month. The shape was assumed constant for the entire forecast horizon. The average monthly energy shape for each Member is presented in the table on the following page.

Monthly rural system peak demand for each Member was computed by applying an average monthly shape to the summer and winter seasonal peak demand projections. The monthly peak shapes for each Member were based on averages of historical data for years 2004-2008. The average peak shape represents the ratio of monthly peak to its corresponding seasonal peak. May-October were categorized as the summer season, while January-April and November-December were categorized as the winter season. The shape was assumed constant for the entire forecast horizon. The average monthly peak shape for each Member is presented in the table on the following page.

b. The load forecast used in development of the 2010 IRP is represented as the Big Rivers' Board approved 2009 Load Forecast adjusted for differences between projected and actual weather normalized energy and peak demand requirements for 2009. Updated economic outlooks and load forecasts were not developed for Big Rivers' Members as part of the IRP process.

**Respondent) John W. Hutts**

<sup>1</sup> Kenergy = Kenergy Corp.

**February 25, 2011**

1 potential deviations in average long-term economic growth (e.g.,  
2 number of households, household income), they do not address  
3 specific events, such as a particular plant closing or individual housing  
4 developments.

- 5 c. The table below presents the long-term growth rates for those  
6 economic variables used in developing the optimistic and pessimistic  
7 forecast scenarios. The optimistic and pessimistic growth rates reflect  
8 base case growth rates plus/minus percentage amounts, which were  
9 developed subjectively upon review of historical growth rates for each  
10 variable.

	Base Case			Optimistic Case			Pessimistic Case		
	MCRECC <sup>1</sup>	JPEC <sup>2</sup>	Kenergy <sup>3</sup>	MCRECC	JPEC	Kenergy	MCRECC	JPEC	Kenergy
Household Income	0.5%	1.1%	0.1%	2.0%	2.6%	1.6%	-1.0%	-0.4%	-1.4%
Employment	0.9%	0.7%	0.4%	1.7%	1.7%	1.1%	0.2%	-0.3%	-0.4%
Retail Sales	1.8%	1.4%	1.1%	3.6%	3.4%	2.6%	0.1%	-0.6%	-0.4%
Retail Sales/Emp	0.9%	0.7%	0.8%	1.9%	1.7%	1.5%	-0.1%	-0.3%	0.0%

15 Assumptions regarding residential and small commercial customer  
16 growth and rural large commercial sales were the same across all three  
17 Members. Customer growth was increased by 50% or decreased by  
18 25%, respectively, for the optimistic and pessimistic scenarios. For  
19 example, if customer growth in a given year was 400 in the base case  
20 forecast, growth for that year would be 600 in the optimistic scenario  
21 and 300 in the pessimistic scenario. The magnitude of the range was  
22 determined based on an analysis of historical customer growth. Base  
23 case rural system large commercial energy sales in each year were  
24

increased/decreased by 10% to represent the optimistic and pessimistic scenarios.

**Respondent) John W. Hutts**

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 32)** *Refer to the response to Item 27 of Staff's First Request. Given the*  
2 *statement in the GDS report that "[t]he authors of this report emphasize that only*  
3 *energy efficiency measures that cost less than new power supply resources are*  
4 *considered to be cost effective," provide a more thorough explanation of how the*  
5 *authors of the GDS Report did not exclude from cost effectiveness the types of*  
6 *programs described in parts a. and b. of Item 27.*

7  
8 **Response)** For the types of programs listed in Item 27(a) of Staff's First Request,  
9 GDS did include in its energy efficiency potential study measures that utilities may use in  
10 order to delay or avoid the need to upgrade existing, or install new, transmission  
11 facilities. The GDS study includes a wide array of energy efficiency and demand  
12 response measures. For the types of programs listed in Item 27(b) of Staff's First  
13 Request, GDS did include in its energy efficiency potential study measures that utilities  
14 may use to avoid running, or running as often, existing higher-cost supply-side resources.  
15 As noted above, the GDS study includes a wide array of energy efficiency and demand  
16 response measures.

17  
18 The sentence in the report that reads "[t]he authors of this report emphasize that only  
19 energy efficiency measures that cost less than new power supply resources are considered  
20 to be cost effective" should be re-worded to say "[t]he authors of this report emphasize  
21 that only energy efficiency measures that cost less than the avoided capital and operating  
22 costs of power supply resources are considered to be cost effective."

23

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 33)** *Refer to the response to Item 33 of Staffs First Request and pages 62 to*  
2 *64 of the GDS Report. The response indicates the Big Rivers' staff performed a review*  
3 *of Kentucky's five other electric generating utilities' direct load control programs by*  
4 *visiting those utilities' websites. The GDS Report reflects that for the screening*  
5 *analysis, assumed incentives were \$36 annually for "AC 33% cycling" and \$48*  
6 *annually for "AC 50% cycling." Three of the state's other generating utilities,*  
7 *Kentucky Utilities Company, Louisville Gas and Electric Company, and East Kentucky*  
8 *Power Cooperative, Inc., offer air conditioning direct load programs with incentives of*  
9 *only \$20 annually. Provide a cost effectiveness analysis of the 33 and 50 percent*  
10 *cycling programs based on this lower incentive amount.*

11  
12 **Response)** The table below compares the Total Resource Cost Test results for the  
13 analysis as provided in Big Rivers' 2010 IRP and for an annual incentive of \$20 per year  
14 as requested.

15  
16

<u>Item</u>	<u>AC – 33% Recycling</u>	<u>AC – 50% Recycling</u>
<i>As Presented in 2010 IRP (Appendix B – GDS Report, Table 8.3, Page 58)</i>		
Annual Incentive	\$36	\$48
NPV Benefits	\$287	\$428
NPV Costs	\$647	\$740
Benefit-Cost Ratio	0.44	0.58
 <i>As Requested in Item 33</i>		
Annual Incentive	\$20	\$20
NPV Benefits	\$287	\$428
NPV Costs	\$524	\$524
Benefit-Cost Ratio	0.55	0.82

dated February 11, 2011**

**February 25, 2011**

1 **Item 34)** *Refer to the response to Item 20 of the Attorney General's ("AG") initial*  
2 *data request.*

3  
4 *a. Provide, for each year from 2003 through 2010, the number of*  
5 *compact fluorescent bulbs ("CFL") distributed by its member-*  
6 *owners and Big Rivers' costs of those CFLs.*

7 *b. Explain whether the CFL program was continued during 2010. If it*  
8 *was continued, provide the number of CFLs that was distributed.*

9  
10 **Response)**

11 a. Please see the attached table for the number of CFLs distributed by  
12 Big Rivers and its Members. As shown on that table, Big Rivers' cost  
13 for these CFLs for 2003-2010 was over \$215,000.

14 b. The residential efficient lighting program was continued in 2010. See  
15 the table attached to Big Rivers' response to Item 34a of the Staff's 2<sup>nd</sup>  
16 Data Request.

**BIG RIVERS ELECTRIC CORPORATION**

**2010 INTEGRATED RESOURCE PLAN OF  
BIG RIVERS ELECTRIC CORPORATION  
CASE NO. 2010-00443**

**Response to Commission Staff's Second Information Request  
dated February 11, 2011**

**February 25, 2011**

1 **Item 35)** *Refer to the response to Item 22 of the AG's initial data request. Big*  
2 *Rivers states that DSM programs previously implemented were funded through base*  
3 *rates rather than the DSM mechanism as defined in KRS 278.285.*

- 4
- 5 *a. Explain whether Big Rivers and its member-owners have discussed*  
6 *possible recovery through a surcharge mechanism and whether all*  
7 *are in agreement concerning DSM cost recovery.*
- 8 *b. If it plans to use a surcharge mechanism to recover DSM costs,*  
9 *explain whether Big Rivers has considered annual or semi-annual*  
10 *filings for the recovery and true-up of DSM costs via a DSM factor.*

11

12 **Response)**

- 13 a. Big Rivers and its Members have discussed possible recovery through  
14 a DSM surcharge mechanism. All agree, at this time, that recovery of  
15 DSM costs through base rates is their preferred course of action.
- 16 b. Big Rivers does not, at this time, plan to use a DSM surcharge  
17 mechanism to recover DSM costs.
