COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

AN ASSESSMENT OF KENTUCKY'S	)	
ELECTRIC GENERATION, TRANSMISSION	)	**ADMINISTRATIVE**
AND DISTRIBUTION NEEDS	)	**CASE NO. 2005-00090**

PETITION OF LOUISVILLE GAS AND ELECTRIC COMPANY
FOR CONFIDENTIAL PROTECTION

Louisville Gas and Electric Company ("Company") hereby petitions to the Kentucky Public Service Commission ("Commission"), pursuant to 807 KAR 5:001, Section 7 and KRS 61.878(1)(c), to grant confidential protection to certain information requested of the Company by Commission Staff in Appendix B to the Commission's March 10, 2005 Order. In support of this petition, LG&E and KU state as follows:

1. On March 10, 2005, the Commission entered an Order establishing this proceeding. In Appendix B to that Order, Commission Staff issued requests for information to all jurisdictional electric utility companies.

2. The Kentucky Open Records Act exempts from disclosure certain commercial information. KRS 61.878(1)(c). To qualify for this exemption and, therefore, maintain the confidentiality of the information, a party must establish that disclosure of the commercial information would permit an unfair advantage to competitors of the party seeking confidentiality.

PSC Request No. 12

3. Request No. 12 in Appendix B seeks the estimated capital cost per KW and energy cost per kWh for new generation by technology (the "estimated cost information").

4. The estimated cost information is confidential and proprietary because the public disclosure of this information would disclose information on estimated capital and energy cost for new generation which is not otherwise publicly available and would provide unfair commercial advantages to the Company's competitors in the wholesale market for bulk and off-system power sales.

PSC Request No. 26

5. Request No. 26 in Appendix B seeks information regarding the yearly System Average Interruption Duration Index ("SAIDI") and the System Average Interruption Frequency Index ("SAIFI"), excluding major outages, by feeder for each distribution substation.

6. The requested SAIDI and SAIFI information contains customer-specific data which, if publicly available, could impact the Company's ability to attract and compete for new customers to Kentucky and its service territory. For that reason, the public disclosure of such information would place the Company at a competitive disadvantage.

PSC Request No. 29

7. Request No. 29 in Appendix B seeks information regarding yearly Customer Average Interruption Duration Index ("CAIDI") and the Customer Average Interruption Frequency Index ("CAIFI"), including and excluding major outages, on each system for the last five years.

8. The requested CAIDI and CAIFI information is of such a nature that, if publicly available, it could impact the Company's ability to attract and compete for new customers to Kentucky and its service territory. For that reason, the public disclosure of such information would place the Company at a competitive disadvantage.

PSC Request No. 32(b)

9. Request No. 32(b) in Appendix B requests a budget for the last five years for the vegetation management program.

10. This requested information contains financial information relating to expenditures for vegetation management. Public disclosure of this information would place the Company at a competitive disadvantage with contractors and suppliers who could use the information in future negotiations or proposals, thereby resulting in increased prices for the Company and its ratepayers, and could give competitive advantage to the Company's competitors.

PSC Request No. 32(c)

11. Request No. 32(c) requests a budget for the last five years relating to the transmission and distribution inspection program.

12. This requested information contains financial information relating to expenditures for system inspections. Public disclosure of this information would place the Company at a competitive disadvantage with contractors and suppliers who could use the information in future negotiations or proposals, thereby resulting in increased prices for the Company and its ratepayers, and could give competitive advantage to the Company's competitors.

PSC Request No. 33

13. Request No. 33 requests costs/budget information for pole and conductor replacements.

14. This requested information contains financial information relating to expenditures for pole and conductor replacements. Public disclosure of this information would place the Company at a competitive disadvantage with contractors and suppliers who could use the information in future negotiations or proposals, thereby resulting in increased prices for the

Company and its ratepayers, and could give competitive advantage to the Company's competitors.

15. All of the information set forth above in Request Nos. 12, 26, 29, 32(b) and (c) and 33, for which confidential protection is sought, is not known outside of the Company, and it is not disseminated within the Company except to those employees with a legitimate business need to know and act upon the information.

16. All of the information set forth above in Request Nos. 12, 26, 29, 32(b) and (c) and 33, for which confidential protection is sought, demonstrates on its face that it merits confidential protection. If the Commission disagrees, however, it must hold an evidentiary hearing to protect the due process rights of the Company and supply the Commission with a complete record to enable it to reach a decision with regard to this matter. Utility Regulatory Commission v. Kentucky Water Service Company, Inc., Ky. App., 642 S.W.2d 591, 592-94 (1982).

17. In accordance with the provisions of 807 KAR 5:001 Section 7, the Company is filing with the Commission one (1) set of the confidential information provided in response to the aforementioned requests with the confidential information highlighted in yellow, and ten (10) copies with the confidential information redacted.

WHEREFORE, Louisville Gas and Electric Company respectfully requests that the Commission grant confidential protection for the information at issue, or in the alternative, schedule an evidentiary hearing on all factual issues while maintaining the confidentiality of the information pending the outcome of the hearing.

Dated: March 31, 2005

Respectfully submitted,

Counsel for Kentucky Utilities Company

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 12

Responding Witness: John P. Malloy

Q-12. What is the estimated-capital cost per kW and energy cost per kWh for new generation by technology?

A-12. For the technologies listed in the answer to question 11, the following estimated costs are shown, based on 2004 dollars (filed with a Petition for Confidential Protection):

Technology	Capital Cost ($/kW)	Energy Cost per kWh
Trimble County Unit 2	[redacted]	[redacted]
148 MW Greenfield CT	[redacted]	[redacted]
181 MW WV Hydro PPA	[redacted]	[redacted]
732 MW Greenfield Coal unit	[redacted]	[redacted]

Climbing inspection runs on the same schedule as the ground line inspection. Expenditure is approximately $ 75,000 per year.

LG&E Right of Way and Inspection Costs 2000-2004

	2000	2001	2002	2003	2004
ROW	-	-	390,090	309,872	265,592
Inspections	-	-	80,426	145,878	42,680

For the Companies' distribution system:

a. The distribution right-of-way management program includes a facility inspection program and a vegetation management program as described in (b) and (c).

b. The distribution vegetation management program includes inspection of LG&E's overhead lines. It is a centrally managed and supervised by one forestry manager and two utility arborists. Two contract tree companies provide the resources to trim trees and apply herbicides.

Distribution Actual $ for Last Five Years (filed with a Petition for Confidential Treatment):

	2004	2003	2002	2001	2000
Total $	[redacted]				

c. The distribution facilities are inspected as required by regulation 807 KAR 5:006 Section 25 – Inspection of Systems. LG&E inspection of overhead and underground facilities every two years. Network underground facilities are inspected every six months. Each operation center is responsible for scheduling inspections, completing work requests, and maintaining records.

Distribution Inspection Actual $ for Last Five Years (filed with a Petition for Confidential Treatment):

[redacted]

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 33

Responding Witness: Mark S. Johnson / Paul G. Thomas

Q-33. Explain the criteria your utility uses to determine if pole or conductor replacement is necessary. Provide costs/budgets for transmission and distribution facilities replacement for the years 2000 through 2025.

A-33. The Transmission Line section uses a variety of resources to determine its pole and conductor replacement criteria. The basic program for pole replacement is the ground line inspection and treatment program in conjunction with a climbing inspection program. Poles and cross arms are designated for replacement when they are identified as falling below acceptable condition and strength requirements. This program is augmented by the aerial inspection program and walking inspection program. These programs are outlined in response to Question No. 32 part c. Conductor replacements are initiated by either being in poor mechanical condition identified through a poor operating history or an infrared inspection or as a result of increase loads requiring larger conductors. The average annual capital budget to replace existing facilities (without upgrades) is approximately $2,500,000 for KU and $650,000 for LG&E.

All distribution poles and conductors are inspected during the required 2 year inspection program. Poles determined to be defective are scheduled in the work management system to be replaced or reinforced. Conductors are replaced when damaged or when the conductor loading is projected to exceed capacity. The current distribution business plan projects the budget through a three-year period (2005 - 2007). LG&E does not budget for amounts beyond this timeframe.

Distribution Pole and Conductor Replacement Cost/Budget 2000 – 2007

Re: ***AN ASSESSMENT OF KENTUCKY'S ELECTRIC GENERATION, TRANSMISSION, AND DISTRIBUTION NEEDS***
ADM. CASE NO. 2005-00090

Dear Ms. O'Donnell:

Louisville Gas and Electric Company files herewith an original and ten (10) copies of its response to the information requested in Appendix B of the Commission's Order dated March 10, 2005, in the above-referenced case.

Also filed herewith is a Petition for Confidential Protection regarding certain information provided in response to Questions 12, 26, 29, 32(b), 32(c), and 33.

If you have any questions regarding this filing, please let me know.

Very truly yours,

Kent W. Blake

AN ASSESSMENT OF KENTUCKY'S ELECTRIC GENERATION, TRANSMISSION AND DISTRIBUTION NEEDS	))))	ADM. CASE NO. 2005-00090

RESPONSE OF LOUISVILLE GAS AND ELECTRIC COMPANY TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005

FILED: MARCH 31, 2005

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 1

Responding Witness: John P. Malloy / Irv H. Hurst / Mark S. Johnson / Paul G. Thomas

Q-1. Provide a summary description of your utility's resource planning process. This should include a discussion of generation, transmission, demand-side, and distribution resource planning.

A-1. Every three years a thorough assessment of generation and alternatives are reviewed with great scrutiny as part of the Integrated Resource Planning ("IRP") process. This process is continually evolving, and as such is a dynamic effort using state-of-the-art techniques and models as well as timely and pertinent information. All planning decisions are based on certain sets of assumptions and are subject to varying degrees of risk and uncertainty. It is only through an on-going planning process that there is assurance that the interests of the Companies' constituent groups are adequately addressed. In the integrated planning process, the economics and practicality of supply-side and demand-side options are examined to determine cost-effective responses to customers' needs. The Companies' resource planning process encompasses: 1) establishment of a reserve margin criterion, 2) assessment of the adequacy of existing generating units and purchase power agreements, 3) assessment of potential purchased power market agreements, 4) assessment of demand-side options, 5) assessment of supply-side options, and 6) development of an economic plan from the available resource options. While the IRP represents the Companies' analysis of the best options to meet customer needs at a given point in time, the action plan is reviewed and re-evaluated prior to implementation.

As part of the IRP, prior to the optimization process, a screening analysis of Demand-Side Management ("DSM") options is conducted. The purpose of the screening analysis is to evaluate cost effective DSM options to use in Strategist® optimizations. The DSM programs that pass the quantitative screening process are passed on to the IRP optimization process.

With respect to transmission, the primary purpose of LG&E/KU's transmission system is to reliably transmit electrical energy from company-owned generating resources to native load customers. The transmission system is planned to withstand forced outage of 1) a single generator, 2) a single transmission element, 3) two generators, and 4) a single generator and a single transmission element.

LG&E/KU's transmission system is planned to deliver company-owned generator output and purchased generation (economic and/or emergency) to meet projected customer demands and to provide contracted firm transmission services, including any planned generation resources included in the resource plan.

With respect to distribution, the primary purpose of LG&E's distribution system is to provide reliable and quality service to customers. Computer models for load forecasting and system configuration are used to analyze and plan the system to meet customer load demands and provide voltage levels that comply with Commission requirements.

The IRP, however, is only a snapshot in time of an ongoing resource planning process, which the Companies believe is fundamental to all corporate planning. The Companies review the planning alternatives and decisions annually as part of the ongoing resource planning process.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 2

Responding Witness: John P. Malloy / Mark S. Johnson / Paul G. Thomas

Q-2. Are new technologies for improving reliability, efficiency and safety investigated and considered for implementation in your power generation, transmission and distribution system?

a. If yes, discuss the new technologies that were considered in the last 5 years and indicate which, if any, were implemented.

b. If no, explain in detail why new technologies are not considered.

A-2. Yes.

a. For the Companies' transmission system, the Transmission group investigates and considers opportunities to implement proven technologies that have not been previously utilized.

- Transmission Planning first recommended the use of current limiting reactors in 2003 to redistribute 138 kV power flows and to maximize existing resources. A second installation at 138 kV will be completed this spring that will delay the need for new line construction by approximately 7 years. Microprocessor based relays are being incorporated into certain transmission system protection schemes.

- The Companies currently utilize a CAD based design platform, Digital Terrain Models (DTM) along with Light Detection And Ranging (LIDAR) surveys to improve accuracy for structure clearances.

- The Companies implemented a new design software PLS-CADD which allows for 3D modeling using DTM's generated from LIDAR and structural analysis of transmission line support structures.

- The Companies put a pilot program in place to investigate the effectiveness of handheld GPS units in combination with laptop computers to facilitate real time routing of transmission structures.

- The Companies plan to implement a Geographic Information System (GIS) in relation to transmission system assets in order to keep system mapping and information up to date in late 2005.

- Transmission is currently partnering with Photoscience in implementing an objective EPRI GIS based line routing process for locating new transmission lines.

- The Companies are participating in a pilot program with the FAA utilizing a new aerial obstruction marking system using radar to detect approaching aircraft (OCAS).

- The Companies use Infrared technology to predict conductor and switch hot spots as required.

For the Companies' distribution system, LG&E has implemented the following technologies designed to improve the reliability, efficiency, and safety of its distribution operations within the last 5 years:

- Enterprise Management Integration Network Initiative: The Geospatial Enterprise Management Integration Network Initiative ("GEMINI") allows LG&E to obtain improved data, thus allowing the Company to better manage and optimize the work force to achieve efficiencies. Specifically, GEMINI helps the Company through improved work order scheduling and improved response to customer requests for service through streamlined data access and management. Secondarily, but importantly, GEMINI also allows the Company to provide customers with better information on the status of service restoration and service installations. This system integrates a work management system, outage management system, geographic information system, and graphical work design system.

- Geospatial Enterprise Management Integration Network Initiative ("GEMINI"): GEMINI allows LG&E to obtain improved data, thus allowing the Company to better manage and optimize the work force to achieve efficiencies. Specifically, GEMINI helps the Company through improved work order scheduling and improved response to customer requests for service through streamlined data access and management. Secondarily, but importantly, GEMINI also allows the Company to provide customers with better information on the status of service restoration and service installations. This system integrates a work management system, outage management system, geographic information system, and graphical work design system.

GEMINI is utilized by the distribution operations of LG&E. The outage management component improves crew management and dispatch functions during outages, by tracking incoming calls to assist in quickly identifying system protective devices (e.g., fuses) that have operated, thus improving dispatch efficiency. The work management function keeps track of planned construction work and available internal and external construction personnel to enable effective and efficient use of these resources. The Geospatial Information System ("GIS") overlays geographical data such as roads and other landmarks in order to more reliably and effectively locate distribution facilities.

- MAXIMO®: The MAXIMO® system is designed to identify, analyze and maintain physical assets such as substations. It has been implemented at LG&E. The MAXIMO® maintenance management system tracks equipment condition, testing results, and maintenance/testing schedules. MAXIMO® can flag test results that are out of range, equipment operating levels triggering scheduled maintenance, regulatory compliance maintenance schedules, and testing schedules, in order to optimize maintenance activities. This innovative technology also helps achieve efficiencies by accurately tracking materials and their usage, thus allowing for the maintenance of appropriate inventory levels. It allows the Company to track maintenance work and testing performed on assets so that the Company can optimize resources and maintain productivity.

For the Companies' retail operations, LG&E has implemented the following technologies designed to improve reliability, efficiency, and safety:

- Call Center Integration: One of the ways in which LG&E and KU have achieved operational efficiencies is through the integration of the LG&E and KU call centers. Those call centers, located in Louisville, Lexington and Pineville, operate together as a single virtual call center. The three center locations were integrated in 2001 so that calls can be answered by representatives in any location. It is only through new technology that these call centers can operate as if they were located in one physical location. These technologies are used to provide timely responses to customers by managing the call load among the three centers, allowing a customer to report an outage or request service without undue delay.

- Integrated Voice Response Unit: The Integrated Voice Response Unit ("IVRU"), which LG&E implemented in late 1999, allows both companies to keep costs down, to handle larger volumes of calls, and to route calls more effectively to representatives with the most appropriate skills based upon the customer's stated reason for calling.

- SMILE: Another new information system is called SMILE. SMILE is an acronym for "Service Makes It Look Easy." The SMILE system creates a common data presentation system for data drawn from both the LG&E and KU customer information systems. This single system manages the data in such a way as to assist KU and LG&E customer representatives to be trained more efficiently and effectively to respond to inquiries from either LG&E customers. The use of the SMILE system has facilitated LG&E's efforts to create a virtual call center, optimize call center personnel, and reduce training time.

- Trouble Order Entry: In tandem with the GEMINI system mentioned previously, a new Trouble Order Entry ("TOE") application was introduced in 2004 to meet the need for a tool to enter customer information regarding electric outages and other electrical problems into one virtual system across the KU and LG&E customer base. TOE has around-the-clock availability and is the single point of entry to process trouble orders and other work requests from customer provided information.

  TOE gives Customer Service Representatives the opportunity to provide more relevant and timely information to customers during an outage. To verify customer service restoration, TOE provides the ability to place automated outbound calls (callbacks). In addition, TOE provides a unified application that replaces two older, separate applications for LG&E and KU. Consolidating these IT computing platforms provides an application that serves both utilities.

- Customer Self-Serve ("CSS"): LG&E implemented an internet-based CSS system, which went live to customers in April 2003. The CSS system allows customers to view and/or pay their utility bill on-line, elect to receive a "link" that will lead them directly to an exact image (pdf) of their utility bill, view consumption and billing history, sign up for Automatic Bank Draft, elect to contribute to Winter Help, and provide the means to allow customers to pay bills with credit or debit cards. All of these functions are available on a secure web-site location.

With respect to the Companies' generation, the Companies continually evaluate means to improve reliability, efficiency and safety for the generation fleet. In the past 5 years, several new technologies have been considered and implemented.

- Distributive Control Systems ("DCS"): New control technologies allow for tighter control of key operating parameters and provide for optimization of integrated systems not previously available with analog controls. New distributive control systems ("DCS") have been added to or improved on

Trimble County Unit 1, Mill Creek Unit 3, Brown Unit 1, and Green River Units 3 and 4. Additionally, the Companies' Information Technology ("IT") groups have installed firewalls and virus protection on the DCS.

- Boiler Tube Failure Analysis ("BTFA") – PowerTube: To insure maximum availability, boiler tube studies and inspections have been conducted, using the latest technology, to identify boiler sections which need replacement. PowerTube is a software product offered by Power Technologies that helps manage the boiler tube failures.

- Catalyst Management Program ("CMP"): This program manages the life cycle of SCR catalyst material through a mix of rejuvenation and replacement options, and coordinating catalyst work with the outage schedule, while maintaining SCR operating efficiency at levels adequate to meet compliance regulations.

- Maximum Capacity Turbine Monitoring ("MCT"): A Maximum Capacity Turbine Monitoring program has been established to systematically monitor the decline of turbine generating capability. This program is to be implemented throughout the Companies, and will allow trending the generating capability of each turbine/generator as well as indicating when more comprehensive diagnostics and testing are required.

- Fuel Quality Impact Program: The increasing complexity in matching fuel supply to plant requirements necessitates a sophisticated tool to insure accurate evaluation of the operating and maintenance costs of burning various fuels. Vista is a comprehensive software package that predicts fuel-related generating costs and operating impacts of alternate fuels, assisting with competitive decisions to lower generating costs. This project is to model the generating units across the fleet in order to allow evaluation of the operating and maintenance costs of burning various fuels.

- SKM Power Tools for Windows ("PTW"): This software is used to design and analyze electrical power systems. The auxiliary loads of the Companies' power plants continue to grow due to increasing environmental requirements. Modeling plant auxiliary power systems provides information about operating the electrical equipment within ratings, identifies whether new loads can be added to existing auxiliary power systems, and aids in designing changes to the existing auxiliary power systems. PTW is configured with a base program used for data entry and as an interface to the optional analysis modules. The six modules which the Companies currently own provide the capability for load flows, motor starting data, fault analysis, transient stability analysis, arc flash evaluation studies and interactive protection coordination.

- Bar-coding: As part of the inventory system, KU implemented the bar-coding system a few years ago and LG&E in phasing this system in 2005.

- Drawing management system (DMS): This was developed for managing and viewing drawings. This is done by converting to vector and raster drawings so that they can be imported and utilized in AutoCAD.

b. Not applicable.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 3

Responding Witness: John P. Malloy

Q-3. Is your utility researching any renewable fuels for generating electricity?

a. If so, what fuels are being researched?

b. What obstacles need to be overcome to implement the new fuels?

A-3. Yes, as part of the IRP process, a supply-side screening is performed which includes looking at several renewable fuels.

a. Wind, solar thermal, solar photovoltaic, solid biomass, hydro, and several waste-to-energy technologies (including municipal solid wastes, refuse derived fuel, landfill gas, tire derived fuel, sewage sludge and animal waste anaerobic digestion).

b. Wind ratings show the Companies' service area to only be a Class 1 or 2, with 7 being high; therefore wind power is not a viable resource by location. Similarly with solar, the Companies are not located in a geographical area likely to make solar thermal projects viable (i.e. not enough clear skies days). With the exception of hydro, the remaining options did not pass the screening to be considered in the Companies' optimal expansion plan due to significantly higher costs when compared to other alternatives.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 4

Responding Witness: David S. Sinclair

Q-4. Provide actual and weather-normalized annual native load energy sales for calendar years 2000 through 2004. Provide actual annual off-system energy sales for this same period disaggregated into full requirements sales, firm capacity sales, and non-firm or economy energy sales. Off-system sales should be further disaggregated to show separately those sales in which your utility acts as a reseller, or transporter, in a power transaction between two or more other parties.

A-4.

LG&E Native Load Recorded Sales – Calendar Basis (GWh)

	2000	2001	2002	2003	2004
Total (Actual)	11,329	11,377	11,810	11,503	11,724
Total (Weather Normalized)	11,409	11,352	11,436	11,715	11,744

LG&E Off-system Sales – Calendar Basis (GWh)

	2000	2001	2002	2003	2004
Firm	1,812	1,784	1,408	1,409	1,589
Non-Firm	1,700	1,668	1,662	2,147	1,941
Total	3,512	3,452	3,070	3,556	3,530
Brokered Sales	1,491	968	865	684	290
Total	5,003	4,420	3,935	4,240	3,820

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 5

Responding Witness: David S. Sinclair

Q-5. Provide actual and weather-normalized annual coincident peak demands for calendar years 2000 through 2004 disaggregated into (a) native load demand, firm and non-firm; and (b) off-system demand, firm and non-firm.

A-5. (a)

LG&E Native Load Peak Demand (MW)

	2000	2001	2002	2003	2004
Summer					
Actual	2,542	2,522	2,623	2,583	2,485
Weather Normalized	2,542	2,525	2,559	2,612	2,562
Winter*					
Actual	1,670	1,818	1,660	1,824	1,750
Weather Normalized	1,724	1,838	1,691	1,818	1,683

* Year 2000 "Winter" represents 1999/2000 winter season and so on for other years.

LG&E Coincident Peak Demand: Firm and Non-Firm Components (MW)

	2000	2001	2002	2003	2004
Firm	2,542	2,495	2,596	2,557	2,458
Non-Firm	N/A	27	27	26	27*

* This represents an estimate of peak load curtailment under the LG&E Interruptible contracts, based on 2003 analysis. Interruptible contract volumes were broadly unchanged in 2004.

(b) LG&E Off System Demand at Time of System Peak: Firm and Non-Firm Components (MW)

	2000	2001	2002	2003	2004
Firm	N/A	67	0	5	23
Non-Firm	N/A	77	0	9	28

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 6

Responding Witness: John P. Malloy

Q-6. Provide a summary of monthly power purchases for calendar years 2000 through 2004 disaggregated into firm capacity purchases required to serve native load, economy energy purchases, and purchases in which your utility acts as a reseller, or transporter, in a power transaction between two or more other parties. Include the average cost per megawatt-hour for each purchase category.

A-6. The attached table shows purchases to serve native load, purchases for off-system sales (i.e. economy energy purchases), and brokered sales (i.e. purchases in which utility acts as a reseller or transporter) for the Combined Companies of KU and LG&E.

PURCHASES FOR NATIVE LOAD

Purchases for Native Load (MWh) - EEI, OMU, OVEC

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 7

Responding Witness: David S. Sinclair

Q-7. Provide the most current base case and high case demand and energy forecasts for the period 2005 through 2025, if available. If the current forecast does not extend to 2025, provide forecast data for the longest forecast period available. The information should be disaggregated into (a) native load, firm and non-firm demand; and (b) off-system load, both firm and non-firm demand.

A-7. The energy requirements forecast represents firm Native Load only and is net of the impact of (contractually) curtailed sales.

LG&E Energy Sales and Requirements Forecasts: Base Case and High Case (GWh)

	Billed Sales		Requirements	
YEAR	BASE	HIGH	BASE	HIGH
2005	11,983	12,097	12,657	12,781

2016	3,203	3,430
2017	3,264	3,512
2018	3,333	3,604
2019	3,401	3,694

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 8

Responding Witness: John P. Malloy

Q-8. Provide the target reserve margin currently used for planning purposes, stated as a percentage of demand, and a summary of your utility's most recent reserve margin study. If this target reserve margin has changed since 2002, provide the prior target reserve margin and explain the reasons for the change. If the target reserve margin is expected to be reevaluated in the next 3 years, explain the reasons for the reevaluation.

A-8. The Companies established an optimal reserve margin of 13% to 15%, with 14% recommended for planning purposes. The range provides an optimum level of reliability through various system operating conditions. The reserve margin analysis was performed as part of the 2002 Integrated Resource Plan ("IRP"), filed with the Commission in October 2002 (Case No. 2002-00367). The Companies are currently preparing the 2005 IRP, which will be filed with the Commission in April. The reserve analysis for the 2005 IRP is complete and recommends maintaining a range of 12% to 14%, with the Companies maintaining a 14% margin for planning purposes.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 9

Responding Witness: John P. Malloy

Q-9. For the period 2005 through 2025, provide projected reserve margins stated in megawatts ("MW") and as a percentage of demand. Identify projected deficits and current plans for addressing these deficits.

A-9. The Companies projected reserve margins for the period for the combined Companies (assuming the resource acquisitions consistent with the Companies' IRP) are as follows:

Year	Reserve Margin (MW)	Reserve Margin (%)
2005	1571	23.7%
2006	1454	21.7%
2007	1325	19.4%
2008	1152	16.5%
2009	976	13.7%
2010	1422	19.6%
2011	1256	17.0%
2012	1151	15.3%
2013	1113	14.4%
2014	1169	14.9%
2015	1298	16.2%
2016	1312	16.1%
2017	1321	15.9%
2018	1310	15.5%
2019	1838	21.3%
2020	1654	18.8%
2021	1531	17.1%
2022	1314	14.4%
2023	1901	20.4%
2024	1667	17.5%
2025	1509	15.6%

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 10

Responding Witness: John P. Malloy

Q-10. Provide the following information for every generation station operated in Kentucky.

a. Name.

b. Location (including county).

c. Number of units.

d. Date in service for each unit.

e. Type of fuel for each unit.

f. Net rating (MW) for each unit.

g. Emission control equipment in service (list by type).

h. Date emission control equipment in service.

A-10. See attached table.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 11

Responding Witness: John P. Malloy

Q-11. Provide a summary of any planned base load or peaking capacity additions to meet native load requirements in the years 2005 through 2025. Include capacity additions by the utility, and those by affiliates, if constructed in Kentucky or intended to meet load in Kentucky.

A-11. The following summary shows planned capacity additions for the Combined Companies of KU and LG&E, which includes all generation owned by the Companies or their affiliates in Kentucky.

Year	Type Unit	Capacity Additions (Summer Capacities in MW)
2010	Base Load	549 MW (75% of 732 MW) Supercritical Coal (Trimble County Unit 2)
2013	Peaking	148 MW Greenfield CT Unit 1
2014	Base Load	181 MW W.V. Hydro, Inc. Purchase Power Agreement
2015	Peaking Peaking	148 MW Greenfield CT Unit 2 148 MW Greenfield CT Unit 3
2016	Peaking	148 MW Greenfield CT Unit 4
2017	Peaking	148 MW Greenfield CT Unit 5
2018	Peaking	148 MW Greenfield CT Unit 6
2019	Base Load	732 MW Greenfield Supercritical Coal Unit 1
2023	Base Load	732 MW Greenfield Supercritical Coal Unit 2

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 12

Responding Witness: John P. Malloy

Q-12. What is the estimated capital cost per KW and energy cost per kWh for new generation by technology?

A-12. For the technologies listed in the answer to question 11, the following estimated costs are shown, based on 2004 $ (filed pursuant to a Petition for Confidential Treatment:

Technology	Capital Cost ($/kW)	Energy Cost per kWh
Trimble County Unit 2		
148 MW Greenfield CT		
181 MW WV Hydro PPA		
732 MW Greenfield Coal unit		

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 13

Responding Witness: John P. Malloy

Q-13. If current plans for addressing projected capacity deficits include the addition of gas-fired generation, describe the extent to which fluctuations in natural gas prices have been incorporated into these plans. Explain how fluctuations in natural gas prices may have altered the results of previous plans.

A-13. The relative prices of gas and coal can have a significant impact on the selection of an optimal technology type. Therefore, in order to evaluate the effect of gas and coal prices, a fuel sensitivity analysis is incorporated into the Companies' process of determining an optimal IRP. The fuel forecasts are developed by increasing (decreasing) the expected cost of coal. The gas prices are not adjusted. Not adjusting the gas price is a relatively simple method for evaluating the impact of the "gap," or difference in cost between that of coal and gas. However, the fuel sensitivity analysis looks at a base fuel and both a high fuel and low fuel cost to take fluctuation in cost into account.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 14

Responding Witness: John P. Malloy

Q-14. Provide a summary of any permanent reductions in utilization of generation capacity due to Clean Air Act compliance from 2000 through 2004. Identify and describe any forecasted reductions during the 2005 through 2025 period.

A-14. Relative to the generation capacity data provided in response to Question No. 10, there are no material incremental permanent reductions in utilization of generation capacity due to Clean Air Act compliance. Due to evolving environmental laws and regulations, current and future control technologies are continually being evaluated.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 15

Responding Witness: John P. Malloy

Q-15. Provide a summary of all forced outages and generating capacity retirements occurring during the years 2000 through 2004.

A-15. A copy of the forced outages for LG&E units which occurred in 2000 through 2004 is attached. No units were retired during those years.

LOUISVILLE GAS & ELECTRIC

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 16

Responding Witness: John P. Malloy

Q-16. Provide a summary of the utility's plans for the retirement of existing generating capacity during the 2005 through 2025 period.

A-16. Currently the Companies have no retirements planned for the 2005-2025 period. Due to the aging units in the Companies' generation fleet (as described in the Companies' IRP) and the expected economics associated with future environmental compliance requirements, retirement of some units is likely in the future. At this time the Companies have not determined the specific unit(s) and/or retirement date(s).

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 17

Responding Witness: Irv H. Hurst

Q-17. Provide a summary description of your utility's existing demand-side management ("DSM") programs, which includes:

a. Annual DSM budget,

b. Demand and energy impacts.

c. The currently scheduled termination dates for the programs.

A-17. The Companies' DSM programs include:

Residential Energy Audits – This program targets customers who own or occupy single-family homes, apartments or condominiums. It is designed to provide customers with an on-site home energy audit that will provide opportunities for improved energy efficiency. Also below market financing is available for customers interested in purchasing Energy Star appliances.

Commercial Energy Audits - This program is offered to all commercial class customers in the LG&E service area and all KU General Service commercial customers. The objective of this program is to identify energy efficiency opportunities for commercial class customers and assist them in the implementation of these identified energy efficiency opportunities. Also below market financing is available for customers interested in purchasing Energy Star appliances.

Demand Conservation Program – This program cycles residential and commercial central air conditioning units, water heaters, and residential pool pumps of both KU and LG&E customers. It is designed to provide customers with an incentive to allow the Companies to interrupt service to their central air conditioners, water heaters, and/or pool pumps at those peak demand periods when the Companies need additional resources to meet customer demand.

WeCare Program – This program helps those customers that are less fortunate by weatherizing their home which reduces their energy bills. This program is available to LIHEAP eligible customers in the Louisville and Lexington metropolitan areas.

a.

LG&E	2005	2006	2007
Residential Energy Audits	192,778	193,512	195,192
Demand Conservation	3,320,246	3,419,955	3,339,776
WeCare	1,104,863	1,144,348	1,185,255
Commercial Energy Audits	416,310	417,931	419,611
Program Development & Admin.	46,324	47,442	48,601
Total Program Expenses	5,080,519	5,223,187	5,188,434

b.

LG&E Projected Demand & Energy Impacts

	2005	2006	2007
MWh	16,652	17,080	17,502
MW	47	58	66
MCF	1,219	1,219	1,219

c. All current DSM programs expire on December 31, 2007. The Company expects to submit a filing seeking the Commission's approval to extend all programs in some form.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 18

Responding Witness: Mark S. Johnson / Paul G. Thomas

Q-18. Provide your utility's definition of "transmission" and "distribution."

A-18. For internal purposes, any line operating at 69 kV or above and any transformer with two or more windings connected to the system at 69 kV or above are generally considered "transmission." Any facility operating below 69 kV is generally considered "distribution." However, in some instances, facilities which would generally be considered transmission can and do serve distribution or generation functions.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 19

Responding Witness: Mark S. Johnson

Q-19. Identify all utilities with which your utility is interconnected and the transmission capacity at all points of interconnection.

A-19. LG&E/KU are operated as a single control area with free-flowing interconnections as shown on the attached table.

LG&E Energy LLC

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 21

Responding Witness: Mark S. Johnson

Q-21. Identify any areas on your utility's system where capacity constraints, bottlenecks, or other transmission problems have been experienced from January 1, 2003 until the present date. Identify all incidents of transmission problems by date and hour, with a brief narrative description of the nature of the problem. Provide the MW transfers for each of your utility's interconnections for these times.

A-21. See attachment A identifying transmission problems from January 1, 2003 until the present.

Attachment B, which provides the MW transfers, is being provided in Volume II of these responses.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 22

Responding Witness: Mark S. Johnson

Q-22. Provide details of any planned transmission capacity additions for the 2005 through 2025 period. If the transmission capacity additions are for existing or expected constraints, bottlenecks, or other transmission problems, identify the problem the addition is intended to address.

A-22. The transmission system planning horizon is generally ten years. The transmission upgrades and capacity additions are determined based solely on the need to deliver company-owned generator output and purchased generation (economic and/or emergency) to meet projected customer demands and to provide contracted firm transmission services and not to address existing or expected constraints or bottlenecks provided in response to Question No. 21. The upgrades and additions shown in the attachment are planned through 2014.

PROJ	DESCRIPTION	NEEDDATE
458	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the Lake Reba-Berea Tap section of the Lake Reba-Okonite 69 kV line to 212F.	5/30/2005
213	Install a 69 kV, 30 MVAR capacitor at Boone Avenue.	5/30/2005
224	Replace 600A switch 416-605 at Parker Seal with a 1200A switch.	5/30/2005
263	Replace the 336 kcm ACSR conductor in the Mud Lane-Smyrna 69 kV line with 954 kcm ACSR conductor. Open Fairmount-6662 Tap and close Fairmount bus tie switch.	5/30/2005
515	Replace the 266 kcm ACSR conductor in the Ohio County-Rosine Jct. section of the Ohio County-Leitchfield 69 kV line with 556 kcm ACSR conductor.	5/30/2005
278	Construct 7.5 miles of 138 kV line from Middletown to Ford using 954 kcm ACSR conductor and operate this line at 69 kV.	5/30/2005
211	Increase the maximum operating temperature of the 2/0 Cu conductor in the Shelbyville-Shelbyville East section of the Shelbyville to West Frankfort 69 kV line to 100C.	5/30/2005
290	Upgrade the operating limit of the Adams to Delaplain section of the Adams to Renaker/Millersburg 69 kV line from 176F to 212F.	5/30/2005
522	Increase the maximum operating temperature of the Fawkes-Fawkes Tap section of the Fawkes-Lake Reba Tap 138 kV line from 176F to 212F	5/30/2005
488	Install a 138 kV 1200A 1.3% reactor in ckt 3870 at Middletown	5/30/2005
307	Replace the 500 kcm CU risers and line wires associated with breaker 213-604 at Boonesboro North with 750 kcm CU equipment.	5/30/2005
470	Replace the 600A disconnect 676-2 in the 6676 Tap-Blue Lick RECC section of the South Park-Mud Lane 69 kV line (circuit 6676) with 1200A equipment.	5/30/2005
354	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the Fawkes-Richmond South section of the Fawkes-Okonite 69 kV line from 176F to 212F.	5/30/2005
443	Install a 69 kV, 14.4 MVAR capacitor at Leitchfield East.	5/30/2005
142	Reconductor the 397 kcm ACSR conductor in the Madisonville South Tap to McCoy Avenue section of the Madisonville loop with 556 kcm ACSR.	5/30/2005
78	Increase the maximum operating temperature of the Trimble Co to Centerfield 138 kV line to 212F.	5/30/2005
549	Install a 69 kV line exit at Middletown and at Ford for the Middletown-Ford circuit.	5/30/2005
398	Close the East Bernstadt 69 kV interconnection with EKPC by looping the Pittsburg-Lancaster 69 kV line through EKPC's East Bernstadt station.	6/30/2005
525	AEP taps the Arnold-Delvinta 161 kV line to connect to the Hazard-Leslie 161 kV line.	11/30/2005
553	Install a 69 kV line exit at Lebanon for the Lebanon-Lebanon Industrial 69 kV line.	5/30/2006
247	Change the setting of the 1200A line CT associated with breaker 135-604 at Clark County from 600A to 1200A. Replace the 500 MCM Cu bus and wires at Clark County with 750 MCM Cu equipment.	5/30/2006
192	Construct 6 miles of 138 kV line using 556 kcm ACSR conductor from EKPC's Avon - Renaker 138 kV line to the 69 kV breaker station at Paris.	5/30/2006
106	Install a second 138-69 kV, 150 MVA transformer at Fawkes.	5/30/2006
551	Install a 138/69 kV, 150 MVA transformer at Paris.	5/30/2006
503	Install a 69 kV, 28.8 MVAR capacitor at Versailles.	5/30/2006
170	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the Paris to Detroit Harvester Tap section of the Paris to Lexington Plant 69 kV line to 212F.	5/30/2006
559	Upgrade the Ashbottom to Kenwood (6649) circuit rating by increasing the maximum operating temperature of the 795 AA conductor to 100C.	5/30/2006
214	Install a 69 kV, 26.4 MVAR capacitor at the KU Hodgenville #744 station.	5/30/2006
103	Construct 1.2 miles of 69 kV line from Lebanon to Lebanon Industrial using 397 kcm ACSR conductor.	5/30/2006
554	Install a 69 kV line exit at Loudon Avenue for the Loudon Avenue-Lakeshore/Bryant Road 69 kV circuit.	5/30/2006

PROJ	DESCRIPTION	NEEDDATE
79	Install a third 138/69 kV, 112 MVA transformer at East Frankfort (use the spare 112 MVA removed from Loudon Avenue). Reconfigure the bus such that two transformers and two lines to Frankfort City stay in service during any contingency.	5/30/2006
424	Construct 4.2 miles of 69 kV line from Loudon Avenue to the Lakeshore/Bryant Road tap using 795 kcm ACSR conductor. Serve the Lakeshore and Bryant Road loads radially from this line.	5/30/2006
157	Replace the 300 kcm Cu bus, risers and line wire associated with breaker 69-604 at Richmond with 500 kcm Cu equipment.	5/30/2006
468	Increase the maximum operating temperature of the 3/0 ACSR in the Paris-Paris 12 kV section of the Paris-Millersburg 69 kV line from 176F to 212F.	5/30/2006
297	Replace the 300 MCM Cu risers and line wire associated with breaker 199-624 at Winchester with 500 MCM Cu equipment.	5/30/2006
395	Remove the 5% reactor from the Kenton-Rodburn 138 kV line.	11/30/2006
508	Construct 8 miles of 138 kV line from Virginia City to AEP's Clinch River substation using 556 kcm ACSR conductor.	11/30/2006
552	Install a 138/69 kV, 120 MVA transformer at Virginia City.	11/30/2006
394	Open the KU-EKPC Goddard 138 kV interconnection.	11/30/2006
206	Replace the 600A disconnects associated with breaker 102-614 at Fawkes with 1200A equipment.	11/30/2006
299	Replace the Spencer Road 138/69 kV, 33 MVA transformer with a 93 MVA transformer. (Use the transformer removed from West Cliff). Operate the two transformers at Spencer Road in parallel.	5/30/2007
338	Increase the maximum operating temperature of the 266 kcm ACSR conductor in the Boyle County-Danville #1 section of the Boyle County-West Cliff 69 kV line from 176F to 212F.	5/30/2007
333	Replace the 600A disconnects associated with breaker 101-634 at Boyle County (Boyle County-Danville North 69 kV line) with 1200A equipment.	5/30/2007
58	Replace the 600A air break switch 677-605 at Wilmore with a 1200A switch.	5/30/2007
464	Increase the maximum verified operating temperature of the AO Smith Tap-Camargo section of the Spencer Road-Clark County 69 kV line to 212F.	5/30/2007
221	Replace the 397 kcm ACSR conductor in the Sylvania-Parker Seal section of the Clark County-Winchester 69 kV line with 795 kcm ACSR conductor.	5/30/2007
439	Construct 1.5 miles of 69 kV line from Lebanon Industrial to Lebanon City using 397 kcm ACSR conductor. Serve Lebanon City on this radial from Lebanon.	5/30/2007
531	Increase the maximum verified operating temperature of the Green River (9-724) to Ohio County (85-724) 138 kV line from 160F to 170F.	5/30/2007
223	Replace the 600A bus and line CTs associated with breaker 199-624 at Winchester with 1200A equipment.	5/30/2007
324	Replace the 4/0 Cu wire at Buchanan associated with the Buchanan-West High Tap section of the Lexington Plant-Pisgah 69 kV line with 300 MCM Cu equipment.	5/30/2007
315	Replace the 4/0 Cu wire associated with the air-break switch 847-615 in the Lexington Plant-Buchanan section of the Lexington Plant-Pisgah 69 kV line with 300 MCM Cu equipment.	5/30/2007
387	Close switch 609-605 at Delaplain to operate the Delaplain-Delaplain Tap 69 kV line section normally-closed. Install a 28.8 MVAR capacitor at Delaplain.	5/30/2007
231	Replace the Spencer Road 138/69 kV, 56 MVA transformer with a 93 MVA transformer.	5/30/2007
228	Change the setting of the 600A bus-side CT associated with breaker 18-614 at Spencer Road from 400A to 600A.	5/30/2007
233	Replace the 600A disconnects 199-624B and 199-624L at Winchester with 1200A disconnects.	5/30/2007
292	Construct 1.6 miles of 69 kV line from Ewington to AO Smith using 397 kcm ACSR conductor. Operate Ewington and AO Smith radially from Spencer Road.	5/30/2007

PROJ	DESCRIPTION	NEEDDATE
347	Increase the setting of the meter CT associated with breaker 68-634 at Bonds Mill (Bonds Mill-North Springfield EKPC) from 600A to 800A.	5/30/2007
495	Install a 12.0 MVAR capacitor at Olin Corp.	5/30/2007
364	Increase the maximum operating temperature of the 636 kcm ACSR conductor in the Mill Creek-Manslick 138 kV line (circuit 3834) from 176F to 180F.	5/30/2007
509	Install a 69 kV, 33.0 MVAR capacitor at Rogersville.	5/30/2007
528	Increase the summer emergency capability of the metering and relaying CTs at Middletown associated with circuit 4543 to at least 1915 A.	5/30/2007
360	Replace the 556 kcm ACSR conductor in the Fawkes KU-Fawkes EKPC Tap section of the Fawkes-Lake Reba Tap 138 kV line with 795 kcm ACSR.	11/30/2007
362	Increase the maximum operating limit of the 266 kcm ACSR conductor in the Lake Reba-Waco section of the Lake Reba-West Irvine 69 kV line from 176F to 212F.	11/30/2007
504	Replace the 600A disconnects at Eastwood associated with the 6658 Tap-Eastwood section of circuit 6658 with 1200A equipment.	11/30/2007
502	Replace the 600A meter CT at Etown associated with breaker 34-614 (Etown-Tharp EKPC 69 kV line) with equipment with a winter emergency capability of at least 967A.	11/30/2007
540	Replace the 600A breaker 20-604 at Finchville associated with the Finchville-Shelbyville 69 kV line with 1200A equipment.	11/30/2007
287	Replace breaker 18-614 at Spencer Road with a 1200A breaker.	11/30/2007
487	Replace the 161 kV, 800A wave trap associated with the Lake Reba Tap 161/138 kV transformer.	11/30/2007
486	Replace the 1200A meter CT at Fawkes associated with the Fawkes-Fawkes EKPC 138 kV line with 1600A equipment.	11/30/2007
484	Replace the 1200A wave trap at Fawkes associated with the Fawkes-Lake Reba Tap 138 kV line with 1600A equipment.	11/30/2007
286	Convert the Middletown-Ford 69 kV line to 138 kV	5/30/2008
385	Install a 69 kV, 10.8 MVAR capacitor at Metal & Thermit.	5/30/2008
327	Replace the 300 MCM Cu wires associated with breaker 34-614 at Etown with 500 MCM Cu equipment.	5/30/2008
186	Reconductor the Dix Dam-Wilmore Tap section of the Dix Dam-Higby Mill 69 kV line with 556 kcm ACSR conductor.	5/30/2008
204	Increase the CT ratio at Seminole for the Seminole to Floyd to Locust 69 kV line (6647) to 1200A.	5/30/2008
567	Install a 138/69 kV 150 MVA transformer at Ford	5/30/2008
202	Increase the maximum operating temperature of the 397.5 kcm ACSR conductor in the Pineville to Pineville #722 section of the Pineville to Middlesboro 69 kV line to 100C.	5/30/2008
134	Increase the rating of the Taylor County - Mile Lane section of the Taylor County to Green County 69 kV line by increasing the maximum operating temperature of the 266.8 kcm ACSR conductor to 212F.	5/30/2008
130	Reset the breaker CT on the transformer side of breaker 135-608 at Clark County from 600A to 1200A.	5/30/2008
219	Replace the West Cliff 138/69 kV, 93 MVA transformer with a 120 MVA transformer.	5/30/2008
529	Increase the summer emergency rating of the terminal equipment at Trimble County and Middletown associated with the Trimble County-Middletown 345 kV line (circuit 4541) to at least 1947A.	5/30/2008
507	Install a 69 kV, 18.0 MVAR capacitor at Middlesboro #780.	5/30/2008
492	Install a 69 kV, 42.0 MVAR capacitor at Farley.	5/30/2008
534	Change the 1200A CT settings at Paddys Run associated with the Paddys West-Paddys Run 138 kV line (circuit 3828) to at least 1500A.	5/30/2008
561	Replace the W Irvine 161/69 kV transformer with a 90 MVA unit.	9/30/2008
560	Build 3 mi of 161 kV line from W Irvine to the Lake Reba Tap-Delvinta line using 556 ACSR conductor to loop Lake Reba Tap-Delvinta into W Irvine.	9/30/2008

PROJ	DESCRIPTION	NEEDDATE
542	Replace the 600A breaker 20-634 at Finchville associated with the Finchville-Bardstown 69 kV line with 1200A equipment.	11/30/2008
485	Replace the 500 MCM Cu bus at Fawkes associated with the Fawkes-Lake Reba Tap 138 kV line with 750 MCM Cu bus or equivalent.	11/30/2008
499	Replace the 1200A breaker 213-608 at Boonesboro North associated with the Boonesboro North 138/69 kV transformer with a 1600A breaker.	11/30/2008
217	Replace the 69 kV, 600A switch 312-625 at Clinch Valley with a 1200A switch.	11/30/2008
460	Replace the 397 kcm ACSR conductor in the Laurel County EKPC-Hopewell section of the Laurel County EKPC-Sweet Hollow 69 kV line using 556 kcm ACSR.	5/30/2009
459	Replace the 397 kcm ACSR conductor in the Fawkes-Richmond South section of the Fawkes-Okonite 69 kV line using 556 kcm ACSR conductor.	5/30/2009
535	Replace the 1000 MCM Cu terminal equipment at Paddys Run associated with the Paddys West-Paddys Run 138 kV line (circuit 3828) with equipment with a summer emergency rating of 1733A or higher.	5/30/2009
343	Replace the 397 kcm ACSR conductor in the Tyrone-Florida Tile Tap section of the Tyrone-Bonds Mill 69 kV line with 556 kcm ACSR conductor.	5/30/2009
340	Replace the 397 kcm ACSR conductor in the Florida Tile Tap-Lawrenceburg section of the Tyrone-Bonds Mill 69 kV line with 556 kcm ACSR conductor.	5/30/2009
526	Increase the maximum verified operating temperature of the 795 kcm ACSR conductor in the UK Medical Center-Higby Mill 69 kV line from 140F to 145F.	5/30/2009
461	Increase the maximum unverified operating temperature of the 397 kcm ACSR conductor in the Elihu-Somerset #3 section of the Elihu (96-624)-Somerset North 69 kV line from 176F to 212F.	5/30/2009
335	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the North Madison EKPC-Spears B section of the Fawkes-Higby Mill 69 kV line from 150F to 155F.	5/30/2009
462	Install a third 138/69 kV, 60 MVA transformer at Carrollton.	5/30/2009
465	Change the setting of the bus CT at Boyle County associated with the Boyle County-Danville North 69 kV line from 600A to at least 800A.	5/30/2009
474	Increase the maximum operating temperature of the 795 MCM AA conductor in the Watterson-Nachand 69 kV line (circuit 6667) from 176F to 212F.	5/30/2009
205	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the Bardstown-Bardstown Industrial Tap section of the Bardstown-East Bardstown EKPC 69 kV line from 80C to 100C.	5/30/2009
520	Change the CT settings associated with breaker 155-714 at Bardstown (Bardstown-Brown CT) from 600A to 800A.	5/30/2009
244	Replace the 750 kcm CU line wire at West Cliff and the 750 kcm CU bus and line wire at Dix Dam associated with the West Cliff-Dix Dam 69 kV line with 1000 kcm CU equipment.	5/30/2009
523	Increase the maximum operating temperature of the Fawkes Tap-Lake Reba Tap section of the Fawkes-Lake Reba Tap 138 kV line from 176F to 212F.	5/30/2009
241	Increase the maximum operating temperature of the 397 kcm ACSR conductor in the Etown to Etown #4 section of the Etown to Hodgenville EKPC 69 kV line to 212F.	5/30/2009
463	Increase the maximum operating temperature of the #2 1X Cu conductor in the Lawrence Tap-Lawrence section of the Carrollton-Eminence 69 kV line from 176F to 212F.	5/30/2009
73	Reconductor the Horse Cave Tap 69 kV line with 397.5 kcm ACSR conductor.	5/30/2009
50	Replace the 800A wave trap associated with breaker 152-724 at Brown North (Brown North-Pisgah 138 kV) with a 1200A wave trap.	5/30/2009
64	Replace the 500 kcm Cu bus associated with breaker 66-734 at Higby Mill with 750 kcm Cu.	5/30/2009
452	Install a 69 kV, 64.8 MVAR capacitor at Dahlia.	5/30/2009

PROJ	DESCRIPTION	NEEDDATE
136	Increase the maximum operating temperature of the 2/0 Cu conductor in the West Frankfort - Clay Village -Shelbyville East sections of the West Frankfort to Shelbyville 69 kV line to 212F.	5/30/2009
527	Increase the maximum operating temperature of the 556 kcm ACSR conductor in the Mercer County-Lebanon section of the Brown Plant-Lebanon 138 kV line from 176F to 212F.	5/30/2009
189	Replace the 600A switch 639-625 at Lawrenceburg with a 1200A switch.	5/30/2009
536	Increase the maximum operating temperature of the 3/0 ACSR conductor in the Paris 12 kV-Millersburg section of the Paris(21-634)-Millersburg (23-604) 69 kV line from 135F to 140F.	5/30/2009
543	Replace the 954 kcm ACSR line riser at Lake Reba Tap associated with the Lake Reba Tap-JK Smith 138 kV line with 1272 kcm ACSR or equivalent equipment.	11/30/2009
539	Replace the 600A disconnects at Carrollton associated with the Carrollton-Lockport 138 kV line with 1200A or higher equipment.	11/30/2009
410	Change the setting of the bus CT on breaker 65-624 at Tyrone from 600A to 800A.	11/30/2009
490	Change the CT settings at Fawkes and Richmond associated with the Fawkes-Richmond 69 kV line from 800A to 1000A.	11/30/2009
72	Replace 1200A breaker 176-714 at Loudon Avenue with 1600A equipment.	11/30/2009
153	Replace the Pineville 161/69 kV, 93 MVA transformer with a 120 MVA unit.	11/30/2009
44	Replace the 800A wave trap associated with breaker 43-714 at Lebanon with a 1200A wave trap.	11/30/2009
409	Change the setting of the 161 kV bus CT associated with breaker 162-804 at Lake Reba Tap from 600A to 800A.	11/30/2009
541	Increase the CT settings associated with breaker 101-604 at Boyle County (Boyle County-Lancaster 69 kV) from 600A to 800.	11/30/2009
185	Change the setting of the 1200A line CT on breaker 71-624 at Imboden from 600A to 800A.	11/30/2009
218	Construct approximately 43 miles of 345 kV line from Mill Creek to Hardin County using bundled 954 kcm ACSR conductor.	12/30/2009
438	Construct a 138 kV line between Etown and Hardin County using 795 kcm ACSR conductor.	12/30/2009
380	Construct 11.8 miles of 138 kV line between West Lexington and Higby Mill using 556 kcm ACSR conductor.	12/30/2009
400	Construct 10.2 miles of 138 kV line between West Frankfort and Tyrone using 795 kcm ACSR conductor.	12/30/2009
402	Reconductor the Ghent-Owen County Tap section of the Ghent-Scott County 138 kV line using 954 kcm ACSR conductor.	12/30/2009
181	Install two 345 kV line exits at Trimble Co and build 2.8 miles of double circuit 345 kV line to Cinergy's Ghent to Speed 345 kV line.	12/31/2009
446	Construct a 69 kV circuit from Middletown to Collins using the open circuit on the Middletown to Ford double-circuit towers.	5/30/2010
367	Install a fourth 345/138 kV, 450 MVA transformer at Middletown.	5/30/2010
524	Replace the 500 MCM CU terminal equipment at Hardinsburg associated with breaker 184-724 (Hardinsburg-Hardin County 138 kV) with 750 MCM CU equipment.	5/30/2010
183	Replace the 300 kcm Cu transformer wires associated with breakers 96-608 and 96-618 at Elihu with 500 kcm Cu wires.	5/30/2010
246	Replace the 500 kcm CU bus and line wire at Etown associated with the Hardin County-Etown 138 kV line with 750 kcm CU equipment.	5/30/2010
425	Replace the 138/69 kV, 112 MVA transformer at Higby Mill between breakers 66-708 and 66-608 with a 150 MVA transformer.	5/30/2010

PROJ	DESCRIPTION	NEEDDATE
375	Replace the 1033 kcm ACSR conductor in the Northside-Jeffersonville Jct. section of the Northside-Beargrass 138 kV line (circuit 3882) with bundled 954 kcm ACSR conductor.	5/30/2010
339	Increase the maximum operating temperature of the 795 kcm ACSR conductor in the P&G-Race Street section of the Lexington Plant-Race Street 69 kV line from 130F to 135F.	5/30/2010
332	Increase the maximum operating temperature of the 556 kcm ACSR conductor in the Brown North-Tyrone 138 kV line from 176F to 212F.	5/30/2010
180	Install a second 345/138 kV, 450 MVA transformer at Hardin County.	5/30/2010
544	Change the setting of the overload relaying at Dixie associated with the Algonquin-Dixie 138 kV line (circuit 3812) from 640A to at least 800A.	5/30/2010
252	Replace breaker 127-638 at Haefling associated with the Haefling 138/69 kV transformer with 1600A equipment. Reset the low-side transformer CT to 1300A.	5/30/2010
477	Reconductor the 266 kcm ACSR conductor in the Lake Reba-Waco section of the Lake Reba-West Irvine 69 kV line with 397 kcm ACSR conductor.	11/30/2010
152	Construct 3.5 miles of 69 kV line from Pineville #722 to the Pineville to Calloway section of the Pineville to Rocky Branch 69 kV line using 556 kcm ACSR conductor. Operate Pineville #722 from the Pineville to Calloway 69 kV line section.	11/30/2010
207	Increase the maximum operating temperature of the 266 kcm ACSR conductor in the Somerset EKPC to Somerset South section of the Somerset EKPC-Sewellton EKPC 69 kV line to 100C.	5/30/2011
12	Install a 69 kV, 42.0 MVAR capacitor at Danville North.	5/30/2011
97	Upgrade the maximum operating temperature of the conductor in the Carrolton to Metal Thermistor section of the Carrollton to Owen Co 69 kV line from 176F to 212F.	5/30/2011
87	Replace the 69kV, 600A switch 834-625 at Danville East with 1200A equipment.	5/30/2011
178	Install a 138/69 kV, 120 MVA transformer at Hardin County.	5/30/2011
124	Install a 69 kV, 33.0 MVAR capacitor at Shun Pike.	5/30/2011
24	Replace the 138-69 kV, 112 MVA transformer at Danville North with a 150 MVA transformer.	5/30/2011
356	Replace the 161/69 kV, 56 MVA transformer at Taylor County with a 90 MVA unit.	5/30/2011
235	Replace the 266 kcm ACSR conductor in the Parkers Mill Tap-Parkers Mill section of the line tapping the Pisgah-Lexington Plant 69 kV line with 397 kcm ACSR conductor.	5/30/2011
245	Reconductor the 266 kcm ACSR conductor in the Etown-Etown #5 69 kV line section using 397 kcm ACSR conductor.	5/30/2011
500	Install a 69 kV, 33.0 MVAR capacitor at Clark County.	5/30/2011
480	Install a 69 kV, 18.0 MVAR capacitor at Cynthiana South.	5/30/2011
399	Increase the capability of the terminal equipment at Mill Creek associated with circuit 3855 to at least 600A.	5/30/2011
556	Install three 138 kV breakers at Knob Creek.	5/30/2011
397	Construct 2 miles of 138 kV line from the Mill Creek-Kosmos Cement 138 kV line to Knob Creek. Rebuild 0.5 miles of 195.7 ACSR in the Mill Creek-Kosmos Cement 138 kV line using 795 ACSR conductor.	5/30/2011
163	Construct 4.0 miles of 138 kV line from Middletown to Bluegrass Parkway using 1272 kcm ACSR conductor.	5/30/2012
85	Increase the maximum thermal operating limit of the Kentucky State Hospital-Danville East section of the West Cliff-Boyle County 69 kV line to 212 degrees F.	5/30/2012
222	Replace the 138/69 kV, 93 MVA transformer at Clark County with a 150 MVA transformer.	5/30/2012
372	Replace the 1033 kcm ACSR conductor in the Northside-Beargrass 138 kV line (circuit 3883) with bundled 954 kcm ACSR conductor.	5/30/2012
460	Replace the 800A wave trap at Tyrone associated with the Brown North-Tyrone 138 kV line with a 1200A wave trap.	5/30/2012

PROJ	DESCRIPTION	NEEDDATE
345	Increase the maximum operating temperature of the 266 kcm ACSR conductor in the Greensburg-Campbellsville EKPC section of the Green County EKPC-Taylor County 69 kV line from 176F to 200F.	5/30/2012
381	Install 138 kV breakers at Pisgah and install a second Pisgah 138/69 kV, 112 MVA transformer. (Use transformer removed from Higby Mill).	5/30/2012
135	Install 138 kV breakers on the Lebanon 138-69 kV transformers.	5/30/2012
550	Install a 138 kV line exit at Middletown for the Middletown-Bluegrass Parkway 138 kV circuit.	5/30/2012
325	Increase the maximum operating temperature of the 266 kcm ACSR conductor in the Etown-Etown #2 Tap section of the Etown-Rogersville 69 kV line to 212F.	5/30/2012
13	Install a 138/69 kV, 150 MVA transformer at Danville North.	5/30/2012
151	Replace the 161-69 kV, 56 MVA transformer at Beattyville with a 90 MVA unit.	11/30/2012
168	Energize the second Brown North-Pineville 345 kV circuit.	11/30/2012
174	Reconductor the 266 kcm ACSR conductor in the Adams to Toyota South 138 kV line with 556 kcm ACSR conductor.	5/30/2013
120	Install a second 345/138 kV, 450 MVA transformer at Brown North	5/30/2013
210	Replace the 600A disconnects associated with breaker 66-644 at Higby Mill with 1200A disconnects.	5/30/2013
314	Increase all terminal equipment at Loudon Avenue associated with the Avon EKPC-Loudon Avenue 138 kV line with 1600A or higher equipment.	5/30/2013
426	Reconductor the Avon EKPC-Loudon Avenue 138 kV line using bundled 556 kcm ACSR conductor.	5/30/2013
203	Increase the CT ratios at Oxmoor and Breckenridge for the Oxmoor to Breckenridge 69 kV line (6653) to 1200A.	5/30/2013
516	Replace the 266 kcm ACSR conductor in the Rosine Jct.-Caneyville Jct. section of the Ohio County-Leitchfield 69 kV line with 556 kcm ACSR conductor.	5/30/2013
200	Increase the maximum operating temperature of the 636 kcm ACSR conductor in the Oxmoor to Breckenridge 69 kV line (6653) to 100C.	5/30/2013
14	Construct 19 miles of 138 kV line from Brown CT to Danville North using 954 kcm ACSR conductor.	5/30/2013
190	Reconductor the 266 kcm ACSR conductor in the Green County EKPC-Greensburg KU section of the Green County EKPC-Taylor County 69 kV line using 397 kcm ACSR conductor.	5/30/2013
417	Replace the Rogersville 138/69 kV, 93 MVA transformer with a 120 MVA transformer.	5/30/2014
416	Increase the maximum operating temperature of the 392.5 ACAR conductor in the Upper Mill Creek-Riverport 69 kV line section (circuit 6678) from 176F to 200F.	5/30/2014
70	Replace the 600A air break switches 677-615 (at Wilmore) and 449-605 (at Shun Pike) with 1200A switches.	5/30/2014
412	Replace the West Frankfort 138/69 kV, 93 MVA transformer with a 120 MVA transformer.	5/30/2014
388	Replace the 266 kcm ACSR conductor in the Adams-Delaplain Tap section of the Adams-Millersburg 69 kV line with 397 kcm ACSR conductor.	5/30/2014
75	Replace the 600A disconnects associated with breaker 101-604 (Boyle County-Lancaster 69 kV line) at Boyle Co with 1200A equipment.	5/30/2014
127	Install a third 138/69 kV, 112 MVA transformer at Cane Run Switching Station. (Use spare transformer stored at the EOC).	5/30/2014
344	Replace the 266 kcm ACSR conductor in the Spencer Road-AO Smith Tap-Camargo sections of the Spencer Road-Clark County 69 kV line with 397 kcm ACSR conductor.	5/30/2014
336	Increase the maximum operating temperature of the 266 kcm ACSR conductor in the Kentucky River-Spears A section of the Fawkes-Higby Mill 69 kV line from 176F to 180F.	5/30/2014
316	Replace the bundled 1/0 Cu conductor in the Lexington Plant-Buchanan section of the Lexington Plant-Pisgah 69 kV line with 556 kcm ACSR conductor.	5/30/2014
112	Replace the 138/69 kV, 93 MVA transformer at Bardstown with a 120 MVA transformer.	5/30/2014

PROJ	DESCRIPTION	NEEDDATE
93	Replace the Lansdowne 138-69 kV, 112 MVA transformer with a 150 MVA unit.	5/30/2014
420	Change the setting of the bus and line CTs associated with breaker 68-634 at Bonds Mill from 600A to 800A.	11/30/2014

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 23

Responding Witness: Mark S. Johnson

Q-23. Is your utility researching or considering methods of increasing transmission capacity of existing transmission routes? If yes, discuss those methods.

A-23. Yes. The Transmission Lines Group of LG&E/KU is responsible for evaluating and determining the maximum thermal rating for transmission line conductors ranging from 69kv to 500kv. This process begins with the Transmission Planning Group identifying a need for an increase in the thermal rating of a line. The plan and profiles are reviewed and updated with any relocations, revisions, or new crossing to produce an accurate model to check clearances. When evaluating the maximum thermal rating of existing lines the National Electric Safety Code (NESC) is used as a minimum standard. If a conductor's clearance will not meet NESC requirements at the specified thermal rating requested by Transmission Planning, several alternatives are considered. Ground to conductor clearance issues account for most of the problems identified in this evaluation process. Replacing existing structures with taller structures can correct the problems and be economically viable, but it depends on the number and type of structures involved. Single pole and H-frame structures constructed with wood poles lend themselves to replacement more readily than lattice steel towers and steel poles. Another solution is to increase the tension of the existing conductor, which translates into less sag in the conductor and increased ground clearance. The LG&E/KU transmission system is primarily constructed with ACSR, ACAR, and AA conductor. If the operating temperature for these aluminum conductors reaches 212 degrees Fahrenheit or greater, the conductor will begin to anneal. When planning studies indicate that the conductor in a line will be overloaded, a request is made to install a higher capacity conductor. In the past the preferred option would have been a standard ACSR conductor, but a new type of conductor, called Aluminum Conductor, Steel Supported (ACSS) is becoming more widely available. ACSS can provide higher current capacity with less sag, while not exceeding the loading criteria of the original conductor. These characteristics of this type of conductor mean that in many cases the structures will not have to be changed for height or strength requirements, which translates into a significant savings.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 24

Responding Witness: Mark S. Johnson

Q-24. Provide copies of any reports prepared by your utility or for your utility that analyze the capabilities of the transmission system to meet present and future needs for import and export of capacity.

A-24. In response to Executive Order 2001-771, Commission Staff conducted an engineering evaluation of the electric transmission system in Kentucky. This study revolved around a computerized electric flow analysis model, which performed under the Staff's direction by utility engineers. The model was reviewed and expanded by Commonwealth Associates, Inc. ("CAI"), an independent electrical engineering consultant. The expanded study included review of the impact of 24 proposed power plants that were not affected by Executive Order 2001-771. A copy of the report was attached to the Commission's December 20, 2001 order in Administrative Case No. 387.

This report is still fairly current because it studied the time period it provided a comprehensive analysis of Kentucky's transmission adequacy as impacted by power plant additions over the next several years. A number of these planned additions have since been cancelled due to market conditions. The Commission therefore can continue to rely on this study to reach any conclusions about transmission adequacy in the current proceeding.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 25

Responding Witness: Mark S. Johnson

Q-25. Provide the following transmission energy data forecast for the years 2005 through 2025.

a. Total energy received from all interconnections and generation sources connected to your transmission system.

b. Total energy delivered to all interconnections on your transmission system.

c. Peak demand for summer and winter seasons on your transmission system.

A-25. LG&E/KU operate a single Transmission System so the response below is the same for both the KU and LG&E data responses.

a. LG&E and KU are operated as one NERC Control Area. Data exists for 2004 only. The statistics below are total sources for the single Control Area:

Tie Lines Received (GWH)	13,936,201
Net Generation LG&E (GWH)	17,317,537
Net Generation KU (GWH)	17,103,548
Total Sources (GWH)	48,357,286

b. LG&E and KU are operated as one NERC Control Area. Data exists for 2004 only. The amount of energy delivered at the interconnections of the single Control Area was 15,613,467 GWH(s).

c. Transmission Load forecasts only go out as far as 2016 and contain the loads within the Control Area for LG&E/KU. No forecast exists for 2017-2025.

	Winter	Summer
2005	5647	6696
2006	5754	6811
2007	5896	6951
2008	5974	7125
2009	6142	7272
2010	6223	7383
2011	6388	7556
2012	6500	7662
2013	6574	7859
2014	6768	7993
2015	6890	8159
2016	6972	8292

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 26

Responding Witness: Paul G. Thomas

Q-26. Provide the yearly System Average Interruption Duration Index ("SAIDI") and the System Average Interruption Frequency Index ("SAIFI"), excluding major outages, by feeder for each distribution substation on your system for the last 5 years.

A-26. See the attached spreadsheet (filed with a Petition for Confidential Treatment) for KU circuit SAIDI and SAIFI performance, excluding Major Events ("ME"), for years 2000 through 2004, which provides a listing of all outages assigned to a particular feeder.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 27

Responding Witness: Paul G. Thomas

Q-27. Provide the yearly SAIDI and SAIFI, including major outages, by feeder for each distribution substation on your system for the last 5 years. Explain how you define major outages.

A-27. LG&E has not tracked the impact of major outage events on SAIDI and SAIFI during the last 5 years. Beginning in November 2004, with the introduction of a new Outage Management System ("OMS"), LG&E does now track the impact of these major outage events by feeder for distribution substations. LG&E's new OMS is a component of GEMINI. For more information on GEMINI, see LG&E's response to Question No. 2.

A major outage is defined as a major outage event where restoration exceeds 24 hours in duration.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 28

Responding Witness: Paul G. Thomas

Q-28. What is an acceptable value for SAIDI and SAIFI? Explain how it was derived.

A-28. Acceptable SAIDI or SAIFI values are difficult to derive for a number of reasons. For example, reporting criteria, data availability, and degree of automation among utilities can produce significant differences in SAIDI and SAIFI values for equivalent reliability performance. Because of these differences among utilities, reliability performance is meaningfully measured by evaluating SAIDI and SAIFI values over time.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 29

Responding Witness: Paul G. Thomas

Q-29. Provide the yearly Customer Average Interruption Duration Index (CAIDI") and the Customer Average Interruption Frequency Index ("CAIFI"), including and excluding major outages, on your system for the last five years. What is an acceptable value for CAIDI and CAIFI? Explain how it was derived.

A-29. See attached spreadsheet (filed with a Motion for Confidential Treatment) setting forth LG&E CAIDI, excluding major outage events ("ME"). CAIDI, including major outage events ("ME"), for LG&E is unavailable for reasons noted in the response to Question No. 27.

CAIFI is unavailable for years 2000 through 2004. Historical outage data and previous reliability reporting processes utilized prior to the implementation of LG&E's OMS during 2004 was not capable of reporting CAIFI.

Acceptable CAIDI or CAIFI values are difficult to derive for a number of reasons. For example, reporting criteria, data availability, and degree of automation among utilities can produce significant differences in CAIDI and CAIFI values for equivalent reliability performance. Because of these differences among utilities, reliability performance is meaningfully measured by evaluating CAIDI and CAIFI values over time.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 30

Responding Witness: Paul G. Thomas

Q-30. Identify and describe all reportable distribution outages from January 1, 2003 until the present date. Categorize the causes and provide the frequency of occurrence for each cause category.

A-30. See the reported distribution outages for LG&E as attached.

ASE NO.2005-00090, A.30

LG&E PSC Reportable Distribution Outages

Report Number	Outage Date and Time	Location	Outage Cause	Case Summary	Customers Affected	Date and Time Restored
N/A	4/20/03 8:00 PM	Louisville, KY Jefferson Co. Metro Area	Storm/ Lightning/ High Winds	Beginning Easter Sunday (04/20/03) and continuing into Monday (04/21/03), high winds combined with severe lightning caused outages throughout the LG&E service area.	27,000	4/21/2003 23:00
N/A	5/5/03 4:08 AM	Louisville, KY Jefferson Co. Metro Area	Storm/ Lightning/ High Winds	Several rounds of severe thunder storms moved through the Midwest United States and into Kentucky beginning early Monday morning (05/05/03) and continued through Wednesday (05/07/03).	28,875	5/7/2003 18:00
03-E-Outage-2	8/2/2003 3:00	Louisville, KY Jefferson Co.	Storm/ Lightning/ High Winds	On August 2, 2003 at approximately 3:00am, strong damaging winds accompanied by severe lightning swept through the LG&E service territory in Louisville and Jefferson County, Kentucky. Damage from the wind and lightning and resulting outages were reported across the entire Louisville Metro area. Gusty winds throughout the day also caused scattered outages.	13,000	8/3/2003 19:00
03-E-Outage-3	8/22/03 5:00 PM	Louisville, KY Jefferson Co.	Storm/ Lightning/ High Winds	On August 22, 2003 at approximately 5:00pm, strong winds accompanied by severe lightning and heavy rain, swept through the LG&E service territory in Louisville and Jefferson County, Kentucky. Damage from the wind, lightning and heavy rain resulted in outages that were reported across the entire Louisville Metro area and parts of the surrounding counties of Oldham, Hardin and Meade.	11,000	8/23/03 8:00 PM
04-E-013	5/19/04 4:00 PM	Louisville, KY Jefferson Co. Metro Area	Storm/ Lightning	On May 19, 2004 at approximate 4:00pm a strong thunderstorm moved through the Louisville Metro area and surrounding LG&E service territories. Most damage was isolated to the Louisville Metro area.	5,000	5/20/04 4:33 AM
04-E-014	5/25/04 3:00 PM	Louisville, KY All of LG&E Service Territory	Major Storm, Including Tornadoes	Over a period of eight consecutive days from May 25th through June 2nd, turbulent weather which included four major storms containing tornadoes, straight-line winds, and severe thunderstorms, wreaked havoc across all of Kentucky. These severe storms caused widespread damage and flooding in LG&E Energy's service areas. Restoration efforts were continuous; as one event neared completion another storm hit causing additional customer outages. This pattern repeated several times. The most intense weather occurred on May 30, 2004.	191,009	6/2/04 11:59 PM
04-E-017	7/5/04 5:00 PM	Louisville, KY All of LG&E Service Territory	Storm/ Lightning/ High Winds	On July 5, 2004 at 5:00pm, LG&E's service territory in the Louisville Metro area experienced a severe thunderstorm with lightning and high winds in excess of 50mph. Prior to restoration of all customers related to the initial storm, a second severe thunderstorm struck the Louisville Metro area on Tuesday July 6, 2004 at 3:00pm.	31,500	7/7/04 11:00 PM
04-E-018	7/6/04 3:00 PM	Louisville, KY All of LG&E Service Territory	Storm/ Lightning/ High Winds	On July 5, 2004 at 5:00pm, LG&E's service territory in the Louisville Metro area experienced a severe thunderstorm with lightning and high winds in excess of 50mph. Prior to restoration of all customers related to the initial storm, a second severe thunderstorm struck the Louisville Metro area on Tuesday July 6, 2004 at 3:00pm.	10,500	7/7/04 11:00 PM

Attachment to Question No. 30
Thomas

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 31

Responding Witness: Mark S. Johnson / Paul G. Thomas

Q-31. Does your utility have a distribution and/or transmission reliability improvement program?

a. How does your utility measure reliability?

b. How is the program monitored?

c. What are the results of the system?

d. How are proposed improvements for reliability approved and implemented?

A-31. The reliability of the transmission system is measured in terms of SAIDI – Excluding Major Events and TFOR. TFOR (Transmission Forced Outage Rate) is internally developed to quantify the effective unavailability (percent) of the transmission network due to unplanned outages. It is similar to the EFOR used by generation. The SAIDI Target for 2005 is 10 and the TFOR Target is 0.2%. Actual values for the last few years are shown below.

Year	SAIDI	TFOR
1997	6.644	
1998	14.001	
1999	8.879	
2000	4.804	
2001	6.730	0.249%
2002	6.774	0.111%
2003	4.640	0.226%
2004	12.031	0.117%

Projects are recommended to maintain the adequacy of the transmission system and to replace obsolete and failed equipment.

LG&E has undertaken several initiatives to help improve system reliability. For example, in August 2003, LG&E created a reliability engineering group with a Director of Electric Reliability to lead the efforts in this area. Reliability improvement initiatives are now coordinated through this centralized group in order to increase focus on system performance. LG&E has also increased vegetation management funding in support of this strategy. An employee communication initiative was also adopted to enhance response efforts.

a. Reliability is measured by SAIDI and SAIFI.

b. Reliability is monitored by monthly reports of system outage data and reliability performance metrics, SAIDI and SAIFI.

c. Tree-related SAIDI and SAIFI have improved by 67% and 48% compared to 2003, respectively. Response time as measured by CAIDI has improved by 20%. It is important to note that in late 2004, LG&E implemented an OMS system. Previous to the installation of OMS, LG&E utilized a reporting process that relied upon a manual reporting process. Other utilities which have implemented OMS systems have seen increased SAIDI and SAIFI values, and LG&E expects to experience this trend as well.

d. Reliability improvement initiatives are reviewed and approved by the Director of Reliability. Operation center managers are responsible for the implementation of approved initiatives.

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 32

Responding Witness: Mark S. Johnson / Paul G. Thomas

Q-32. Provide a summary description of your utility's:

a. Right-of-way management program. Provide the budget for the last 5 years.

b. Vegetation management program. Provide the budget for the last 5 years.

c. Transmission and distribution inspection program. Provide the budget for the last 5 years.

A-32. For the Companies' transmission system:

a, b.

The Transmission vegetation management program is based on a minimum 5 year cycle. There are exceptions, such as: lines requiring mowing, urban areas (bucket trimming), and other sensitive areas. All work is performed by contractors. Work methods involve aerial treatment, mowing, and manual ground crews.

The transmission budget for the past 5 years was approximately $10 million for KU and $2.5 million for LGE.

c. Transmission line inspection is performed by:

Aerial patrol consists of 4 patrols per year. Every line inspected at least 3 times during the year. Expenditure is approximately $250,000 per year.

Ground patrols are performed 2 times per year on lines that can not be inspected aerially. Expenditure is approximately $40,000 per year.

Ground line inspection and treatment of wood poles is on a 10 year schedule. Expenditure is approximately $275,000 per year.

Climbing inspection runs on the same schedule as the ground line inspection. Expenditure is approximately $ 75,000 per year.

LG&E Right of Way and Inspection Costs 2000-2004

	2000	2001	2002	2003	2004
ROW	-	-	390,090	309,872	265,592
Inspections	-	-	80,426	145,878	42,680

For the Companies' distribution system:

a. The distribution right-of-way management program includes a facility inspection program and a vegetation management program as described in (b) and (c).

b. The distribution vegetation management program includes inspection of LG&E's overhead lines. It is a centrally managed and supervised by one forestry manager and two utility arborists. Two contract tree companies provide the resources to trim trees and apply herbicides.

Distribution Actual $ for Last Five Years (filed with a Petition for Confidential Treatment):

	2004	2003	2002	2001	2000
Total $	[redacted]				

c. The distribution facilities are inspected as required by regulation 807 KAR 5:006 Section 25 - Inspection of Systems. LG&E inspection of overhead and underground facilities every two years. Network underground facilities are inspected every six months. Each operation center is responsible for scheduling inspections, completing work requests, and maintaining records.

Distribution Inspection Actual $ for Last Five Years (filed with a Petition for Confidential Treatment):

[redacted]					

LOUISVILLE GAS AND ELECTRIC COMPANY

RESPONSE TO INFORMATION REQUESTED IN APPENDIX B OF THE COMMISSION'S ORDER DATED MARCH 10, 2005 IN ADMINISTRATIVE CASE NO. 2005-00090

Question No. 33

Responding Witness: Mark S. Johnson / Paul G. Thomas

Q-33. Explain the criteria your utility uses to determine if pole or conductor replacement is necessary. Provide costs/budgets for transmission and distribution facilities replacement for the years 2000 through 2025.

A-33. The Transmission Line section uses a variety of resources to determine its pole and conductor replacement criteria. The basic program for pole replacement is the ground line inspection and treatment program in conjunction with a climbing inspection program. Poles and cross arms are designated for replacement when they are identified as falling below acceptable condition and strength requirements. This program is augmented by the aerial inspection program and walking inspection program. These programs are outlined in response to Question No. 32 part c. Conductor replacements are initiated by either being in poor mechanical condition identified through a poor operating history or an infrared inspection or as a result of increase loads requiring larger conductors. The average annual capital budget to replace existing facilities (without upgrades) is approximately $2,500,000 for KU and $650,000 for LG&E.

All distribution poles and conductors are inspected during the required 2 year inspection program. Poles determined to be defective are scheduled in the work management system to be replaced or reinforced. Conductors are replaced when damaged or when the conductor loading is projected to exceed capacity. The current distribution business plan projects the budget through a three-year period (2005 - 2007). LG&E does not budget for amounts beyond this timeframe.

Distribution Pole and Conductor Replacement Cost/Budget 2000 – 2007
