KENTUCKY POWER COMPANY

REQUEST

a. State whether Kentucky Power regularly compares the price of its coal purchases to those paid by other utilities.

b. If yes, state:

(1) How Kentucky Power's prices compare with those of other utilities for the review period. Include all prices used in the comparison in cents per MMbtu.

(2) The utilities that are included in this comparison and their locations.

RESPONSE

a. Yes. Quarterly a review meeting is held with the American Electric Power Service Corporation (AEPSC) fuel procurement team and Kentucky Power in which the delivered cost of coal is compared with several utilities using two methods. The first method compares the data over a twelve-month rolling period and the second method compares the data over annual periods back to 2000. The data is from a variety of outside sources and therefore could contain errors, as well as inconsistencies between the data provided. This comparison is done strictly to provide a point of reference and no purchasing decisions are made based on the comparison.

b. (1) and (2) The following table includes the utilities against which Kentucky Power compares its fuel prices in the quarterly meetings described above. The fuel cost data here was obtained from Velocity Suites which is a search engine that, in this case, used monthly fuel cost information from the U.S. Energy Information Agency (EIA) Form 923 for the period of November 2011 through April 2012.

This table shows that, for the companies included in the comparison, Kentucky Power has the second highest fuel costs for the review period on a cents per million British Thermal Units (MMBTU) basis. However, it should be noted that the fuel being delivered to these facilities may not be of the same quality or mixture as that being delivered to Kentucky Power. A review of the sulfur data shows that Kentucky Power purchased coal with the lowest sulfur content of all of the companies included in the comparison.

Plant Operator Name	Calculated Cents/MMBTU
Duke Energy Carolinas	381.71
Kentucky Power Co	311.21
East Kentucky Power Coop	263.70
Tennessee Valley Authority	263.18
Kentucky Utilities Co	240.11
Monongahela Power Co	233.14
Louisville Gas & Electric Co	227.18
Duke Energy Kentucky	223.90

KENTUCKY POWER COMPANY

REQUEST

State the percentage of Kentucky Power's coal, as of the date of this Order, that is delivered by:

a. Rail;

b. Truck; or

c. Barge.

RESPONSE

From November 1, 2011 through August 31, 2012, the percentage of Kentucky Power's coal by delivery method is as follows:

a. Rail: 22%

b. Truck: 78%

c. Barge: 0%

WITNESS: Kimberly K. Chilcote

KENTUCKY POWER COMPANY

REQUEST

a. State Kentucky Power's coal inventory level in tons and in number of days' supply as of April 30, 2012. Provide this information by generating station and in the aggregate.

b. Describe the criteria used to determine number of days' supply.

c. Compare Kentucky Power's coal inventory as of April 30, 2012 to its inventory target for that date for each plant and for total inventory.

d. If actual coal inventory exceeds inventory target by 10 days' supply, state the reasons for excessive inventory.

e. (1) State whether Kentucky Power expects any significant changes in its current coal inventory target within the next 12 months.

(2) If yes, state the expected change and the reasons for this change.

KENTUCKY POWER COMPANY

RESPONSE

a. As of April 30, 2012, Kentucky Power's actual coal inventory level was 438,590 tons, or 42 days of supply.

b. Days supply is determined by dividing the tons of coal in storage by the full load burn rate (tons per day).

$$\frac{\text{438,590 tons in storage as of 04/30/2012}}{\text{10,300 (full load burn rate – tons/day)}} = 42 \text{ days}$$

c. As of April 30, 2012, Kentucky Power's coal inventory was 12 days over its target.

d. Like many other utilities, Kentucky Power has been impacted by the continued economic downturn. This downturn has led to a decrease in demand for electric power, which, in turn, has led to a decrease in the burn at Big Sandy. This decrease has resulted in surplus inventory, as Kentucky Power has honored its existing contractual obligations with its coal suppliers.

e. No.

REQUEST

a. List all intersystem sales during the period under review in which Kentucky Power used a third party's transmission system.

b. For each sale listed above:

(1) Describe how Kentucky Power addressed, for FAC reporting purposes, the cost of fuel expended to cover any line losses incurred to transmit its power across the third party's transmission system; and

(2) State the line loss factor used for each transaction and describe how that line loss factor was determined.

RESPONSE

a. & b. Beginning on June 1, 2007, based on FERC Order EL06-055, PJM modified the Locational Marginal Pricing (LMP) pricing approach to calculate transmission line loss costs on a marginal basis. The new LMP calculation reflects the full marginal cost of serving an increment of load at each bus from each resource associated with an eligible energy offer. The LMP price will be the sum of three separate components: System Energy Price, Congestion Price and Loss Price. Therefore, each spot market energy customer pays an energy price that includes the full marginal cost of energy for delivering an increment of energy to the purchaser's location. Market buyers are assessed for their incremental impact on transmission line losses resulting from total load scheduled to be served from the PJM Spot Energy Market in the day-ahead energy market at the same day-ahead loss price applicable at the relevant load bus.

Market sellers are assessed for their incremental impact on transmission line losses resulting from energy scheduled for delivery in the day-ahead market at the day-ahead loss prices applicable to the relevant resource bus.

Transactions are balanced in the real-time market using the same calculation, but are based on deviation at each bus from the day-ahead using the real time loss price.

WITNESS: Lila P Munsey

Kentucky Power Company

REQUEST

Describe each change that Kentucky Power made to its methodology for calculating intersystem sales line losses during the period under review.

RESPONSE

Kentucky Power did not make any changes to its methodology for calculating intersystem sales line losses during the review period. Please see the Company's response to Item No. 21.

WITNESS: Lila P Munsey

Kentucky Power Company

REQUEST

State whether, during the period under review, Kentucky Power has solicited bids for coal with the restriction that it was not mined through strip mining or mountain top removal. If yes, explain the reasons for the restriction on the solicitation, the quantity in tons and price per ton of the coal purchased as a result of this solicitation, and the difference between the price of this coal and the price it could have obtained for the coal if the solicitation had not been restricted.

RESPONSE

No. Kentucky Power Company has not solicited bids for coal with the restriction that it was not mined through strip mining or mountaintop removal.

WITNESS: Kimberly K. Chilcote

KENTUCKY POWER COMPANY

REQUEST

Provide a detailed discussion of any specific generation efficiency improvements Kentucky Power has undertaken during the period under review.

RESPONSE

There were no generation efficiency improvements during the review period.

WITNESS: Aaron M Sink

Kentucky Power Company

REQUEST

Explain whether closures of coal mines due to decreased demand for coal could potentially lead to coal shortages that could affect reliability. Include in the explanation whether evidence of such a potential shortage exists today.

RESPONSE

The closure of coal mines due to decreased demand could potentially lead to future coal shortages which, in turn, may have an impact on reliability. However, in order for supply shortages to bring about such a result, several factors would need to occur in parallel. Notwithstanding this potential, there is no current evidence that the closures will lead to reliability problems.

Coal mine closures, mainly beginning in 2012 and widely reported through the industry, have resulted from multiple factors. The most prominent factors affecting recent mine closures are the low cost of natural gas, a decrease in generation demand because of the continued economic downturn, and decreased prices on produced coal. New supplies of low cost natural gas are displacing load that has been traditionally served by coal, exacerbating the effect of decreased generation demand on coal-fired units, particularly unscrubbed coal-fired units that are required to purchase higher-cost, lower-sulfur fuel. As an increased number of mines are idled, the supply of coal (particularly low sulfur Central Appalachian coal, or CAPP coal) has been reduced as a result of coal production costs that in many cases exceed prices the market will bear. Additionally, the price of coal has decreased in multiple regions. This has resulted in the closure and/or idling of some mines as it is not economical to continue mining.

If economic activity were to increase markedly over a short period of time resulting in significantly increased generation demand, it is possible that mines would not be able to reopen quickly enough to meet increasing demand. Delays in the reopening mines could result from an inability to replace skilled mine workers lost when a mine was closed or idled and cannot be readily replaced, or through the lapse of environmental permits that may require significant lead time to re-establish, among other factors.

If conditions such as these were to occur in parallel, it would be possible for these mine closures to cause supply shortages that could potentially affect reliability. Because fully controlled units (i.e. units retrofitted with NOx and SO2 controls) generally are able to burn a wider variety of lower-cost fuels, these units may be less vulnerable to potential supply shortages.

However, the industry today is experiencing coal mine closures due to decreased demand, yet many companies are reporting inventories that are relatively high due to decreased consumption of coal. Therefore, at this time there is no evidence that in the foreseeable future such mine closures will lead to supply shortages that may affect reliability.
