PUBLIC SERVICE
COMMISSION

To whom it may concern:

I am writing to submit testimony and request intervention to the proposed construction of wireless communications facility at the Welcome Rd site in Morgantown Kentucky, docket number 2017-00369. The building of such a tower will hinder the ability for me to resell my home in the future as well as lowering the value of my home and property that this tower impedes upon visually. Along with the possibility of property depreciation, studies have shown EMF (electric and magnetic fields) also referred to as RADIATION , emitting towers such as cell towers, are hazardous to health and are therefore a tremendous concern for myself and my family. The construction of this cellular tower is for the benefit of New Cingular wireless PCS alone and is at the expense of surrounding home and land owners. Families purchase homes in rural communities for a reason. So that they do not have to sit on their back porch and see huge ugly metal towers in their backyards instead of nature. If the construction of this tower is approved and is given permission to advance, I require notification so that I may contact an attorney on my rights as a homeowner and family that will be directly affected by its construction.
