Question No. 2-2

Responding Witness: Christopher M. Garrett

- Q-2-2. To the extent not otherwise clearly identified in the Subaccount Detail data provided in response to request 2-1, identify each and every credit item associated with a regulatory asset, including, but not limited to the Winter Wind Storm Regulatory Asset (as identified in KU's attachment to its response to KCTA's Request 1-20 in Case No. 2009-00548).
- A-2-2. See the response to Question No. 2-1.

Question No. 2-3

Responding Witness: Robert M. Conroy

- Q-2-3. In response to KCTA Request Number 1-1, KU provided Conroy Exhibit M4 from Case No. 2012-00221. Conroy Exhibit M4 provides data as of October 31, 2009. Please confirm that this is a typographical error and provide the accurate date for the data provided.
- A-2-3. The referenced date on pages 2 and 4 of 4 in the attachment to KCTA 1-1 should have been March 31, 2012.

Supplemental Data Requests
Dated February 6, 2015**

Question No. 2-5

Responding Witness: Christopher M. Garrett

- Q-2-5. Provide all records that reflect KU's investment in minor appurtenances. For purposes of this question, minor appurtenances include, but are not limited to, aerial cable clamps, pole top pins, and all other appurtenances and hardware that are not poles or major appurtenances.
- A-2-5. "Minor appurtenances" is not a plant category used by KU. Minor items such as aerial cable clamps, pole top pins, and other such items are not retirement units of property, and therefore KU does not maintain accounting for these items. The costs of minor items are spread across applicable units of property on a project-by-project basis. The requested information is not available.

**Response to Kentucky Cable Telecommunications Association's
Supplemental Data Requests
Dated February 6, 2015**

Question No. 2-6

Responding Witness: Robert M. Conroy

- Q-2-6. Are the costs of minor appurtenances (as defined in Request 2-5) excluded from the KU pole-cost figures used in Conroy Exhibit M4?
- A-2-6. The costs of the minor items referenced in Question No. 2-5, to the extent that they may have been spread to the pole categories identified in Conroy Exhibit M4, have not been excluded. The costs of minor items are spread across applicable units of property on a project-by-project basis. Any of the spread costs that are included in the pole categories are immaterial to the overall amount included in pole-cost figures used in Conroy Exhibit M4.

Question No. 2-7

Responding Witness: Robert M. Conroy

- Q-2-7. If the answer to the preceding request is anything other than an unqualified yes, please provide data to support that response, including identification of the specific account or subaccount the costs of minor appurtenances have been booked to, and the amounts of such costs booked to the identified account or subaccount.
- A-2-7. See the response to Question No. 6.

Question No. 2-8

Responding Witness: Robert M. Conroy

- Q-2-8. According to Mr. Seelye's Rebuttal Testimony in Case No. 2009-00548, the costs for aerial cable clamps, pole top pins "and other such items that relate to connecting conductors to poles" are recorded by KU in Account No. 365 and No. 368. Please provide evidence that this is the case.
- A-2-8. Items such as those listed are not retirement units of property, and therefore KU does not maintain accounting for these items. The cost of all minor items is spread across applicable units of property on a project-by-project basis. The requested information is not available.

Question No. 2-9

Responding Witness: Christopher M. Garrett

Q-2-9. For each of the following items, indicate whether KU has investment for the items in Account 364:

Anchors,

Head arms,

Strain insulators,

Pole plates,

Excavation and backfill, including disposal of excess material,

Extension arms,

Foundations,

Guards,

Insulator pins and suspension bolts,

Paving,

Permits for construction,

Pole steps and ladders,

Racks,

Railings,

Reinforcing and stubbing,

Settings,

Shaving, painting, gaining roofing, stenciling and tagging,

- A-2-9. The costs, as applicable, for these items have been spread to units of property in Account 364 and to units of property in other accounts. Minor items such as those listed are not retirement units of property. The costs of minor items are spread across applicable units of property on a project-by-project basis.

**Response to Kentucky Cable Telecommunications Association's
Supplemental Data Requests
Dated February 6, 2015**

Question No. 2-10

Responding Witness: Christopher M. Garrett

- Q-2-10. For each of the items in the previous data request for which KU has investment in Account 364, please indicate whether all of the investment in such items is included in any or all of the following subaccounts: "brackets", "cross arms", "fence", "guy" and "platforms".
- A-2-10. The costs of the minor items listed in the previous data request are allocated proportionally across applicable retirement units of property on a project-by-project basis. Therefore, a percentage of the costs of these minor items are spread to the items listed as well as items in accounts other than Account 364.

Question No. 2-11

Responding Witness: Robert M. Conroy

- Q-2-11. Are the “installed cost” figures on page 1 of Conroy Exhibit M4 based on gross or net investment?
- A-2-11. Consistent with the use of a levelized carrying charge rate—as opposed to a nonlevelized carrying charge rate—the installed cost figures represent gross plant in service values.

KENTUCKY UTILITIES COMPANY

CASE NO. 2014-00371

**Response to Kentucky Cable Telecommunications Association's
Supplemental Data Requests
Dated February 6, 2015**

Question No. 2-12

Responding Witness: Robert M. Conroy

- Q-2-12. With regard to Conroy Exhibit M4, please explain (separately for each item) the basis for KU to have applied the “rate of return,” “depreciation sinking fund,” and “income tax” components of its carrying charge, each of which contains inputs under regulatory and/or accounting practice based on net book costs, to gross pole costs without either netting those figures to reflect depreciation and accumulated deferred taxes or applying an adjustment for the ratio of net to book costs. As part of this response, provide any and all support for KU’s application for inputs based on net book costs to gross investment cost figures.
- A-2-12. Consistent with the principles of financial economics, a capital recovery factor must be applied to gross investment and not net investment. Calculating carrying charges by applying a capital recovery factor to net investment (gross less accumulated depreciation) rather than gross investment would result in charges that significantly under-recover carrying cost over the life of the property. The capital recovery factor CRF is equal to the rate of return i plus the sinking fund depreciation factor S , as follows:

$$\begin{aligned} CRF &= i + S \\ &= i + \frac{i}{(1+i)^n - 1} \\ &= \frac{i(1+i)^n}{(1+i)^n - 1} \end{aligned}$$

To calculate an equal-payment series (or “annuity”), the capital recovery factor CRF must be multiplied by the original investment and not the net investment. This method is also used to calculate mortgage payments. In calculating a mortgage payment, for example, the capital recovery factor is applied to the original investment and not recalculated periodically by applying the capital recovery to the depreciated investment.

Multiplying the rate of return i and the sinking fund depreciation factor S individually by the gross investment is therefore equivalent to multiplying the capital recovery factor by the gross investment, as follows:

$$\begin{aligned} CRF \times \text{Gross Investment} &= (i + S) \times \text{Gross Investment} \\ &= (i \times \text{Gross Investment}) + (S \times \text{Gross Investment}) \end{aligned}$$

Multiplying the income tax component is simply a gross-up of the return component for income taxes.

Question No. 2-13

Responding Witness: Robert M. Conroy

- Q-2-13. With regard to Conroy Exhibit M4, and comparing to the comparable exhibit in Case No, 2009-00548, please provide a detailed explanation (separately for each item) along with supporting cost and continuing property records data, of the reduction in quantity of 40 foot poles from 142,251 poles to 132,480 poles and the corresponding increase in total installed costs from \$78,741,981 to \$83,496,635, and the reduction in the quantity of 45 foot poles from 63,914 to 61,269 poles and the corresponding increase in total installed costs from \$48,216,502 to \$54,544,545.
- A-2-13. See attached. The reduction in quantity for both the 40' and 45' poles is due to the normal retirement process of older assets being retired. The increase in total installed costs for both the 40' and 45' poles is the result of the retirement of less expensive earlier vintage poles offset by the addition of new poles which are more expensive due to increases in the cost of materials and labor.

KENTUCKY UTILITIES COMPANY

CASE NO. 2014-00371

**Response to Kentucky Cable Telecommunications Association's
Supplemental Data Requests
Dated February 6, 2015**

Question No. 2-14

Responding Witness: Christopher M. Garrett

- Q-2-14. With regard to responses to KCTA Request Number 1-6 to 1-9, please provide a detailed explanation (separately for each item), along with the supporting cost data, of the increase in average bare pole cost between March 31, 2012 and October 31, 2014, for 40 and 45 foot poles, respectively.
- A-2-14. See attached for a listing of costs by vintage for the total investment in 40 and 45 foot poles. These amounts include spread costs for minor items which are not retirement units of property and are spread across applicable units of property on a project-by-project basis. Bare pole costs excluding these spread costs are not available. Note: The attached listings include the costs for all jurisdictions served by KU.

Question No. 2-31

Responding Witness: Robert M. Conroy / Counsel

Q-2-31. According to Mr. Seelye's Rebuttal Testimony in Case No. 2009-00548, he believes KU has been using a levelized rate since the early 1980s. Please provide any and all data to support that statement, including, but not limited to, KU's pole rate calculations and supporting work papers pertaining to the early 1980s.

A-2-31. Mr. Seelye is not a witness in this proceeding. KCTA was an intervener in Case No. 2009-00548; its opportunity to probe the evidence offered by Mr. Seelye was in that proceeding, not this proceeding.

That aside, the Company may no longer possess the requested information, which is over 30 years old, and if and to the extent it exists, it is located off-site in boxes that are not readily searchable within the time allow to respond to this request.

Based on information and belief, the Company believes KU has been using a levelized rate since the early 1980s.

Question No. 2-33

Responding Witness: Robert M. Conroy

- Q-2-33. Please identify any and all other jurisdictions of which KU is aware where the “levelized carrying charge approach,” as applied by KU, has been used to determine a CATV pole attachment rate, including the use of a sinking fund methodology for calculating depreciation and a rate of return based on net book cost, along with any supporting documentation.
- A-2-33. KU is not aware of jurisdictions other than Kentucky that have approved the above-described approach to determine CATV pole-attachment rates; however, FERC continues to accept the levelized gross plant methodology for calculating carrying charges.¹ Also, FERC continues not to permit entities to switch carrying-charge methodologies absent extraordinary circumstances.²

Question No. 2-34

Responding Witness: Christopher M. Garrett

- Q-2-34. Please indicate whether there are vintages of pole plant remaining in service that are older than 35 years. If the answer is anything other than an unqualified no, please identify the percentage of KU's pole plant in service associated with these older vintages of plant.
- A-2-34. KU's percentage of pole plant remaining in service that is older than 35 years as of December 31, 2014 is 3.82%.
