

Kentucky Power Company

REQUEST

Follow-up to Question 180. The two generally accepted methodologies used to divide transformer costs into demand and customer components are the "Minimum System" method and the "Zero-Intercept" method. It was unclear from the information provided which method was used in the Company's Cost of Service study, and where in the TACOS software these calculations were made.

- a. Please state which methodology was used to separate transformer costs into demand and customer components.
- b. Please provide all inputs, calculations, assumptions and workpapers used to divide transformer costs into demand and customer components.
- c. Please show where in the TACOS software and TACOS software output summaries these calculations and outputs are shown.

RESPONSE

- a. The Company did not use the Minimum System or the Zero Intercept method. As stated on page 10 of the testimony of Witness Foust, transformer accounts were classified solely as demand but split into primary and secondary voltage functions.
- b. Please see response to (a) above. Attached are the workpapers which show the split between secondary and primary.

- c. The "Methods" sheet shows the split between primary and secondary. On the first DIST_TRANSF line on the "Methods" sheet, the allocator listed in the fourth column should be CPD instead of SECDEM. This results in a change in the cost of service that is not material. A revised cost of service reflecting this change along with revised reports that make up Exhibit LCF-1 are included on the attached CD. The output is included in the totals for Distpri and Distsec on page 10 of Exhibit LCF-1.

WITNESS – Larry C. Foust

Kentucky Power Corporation
 Rate Case as of June 30, 2005
 CPR Listing of Property Account 368 - Transformers
 Allocation between Primary & Secondary

		26.92%	73.08%

Subtotal of Descriptions Shown Above: 84,685,196.24
 Grand Total of Property Class 84,835,341.25
 Difference (150,145.01)

Note: Difference is due to 467 lines of data representing a total of 150,145 in investment.

NOTE: Per discussion with Larry (Joe) Pemberton, Manager of Distribution Support for KYPCo, for cost recovery purposes all transformers should be assigned to secondary customers, as these devices are necessary to step down power for delivery to secondary customers.

Kentucky Power Company

REQUEST

Follow-up to Question 180. The two generally accepted methodologies used to divide service line costs into demand and customer components are the “Minimum System” method and the “Zero-Intercept” method. It was unclear from the information provided which method was used in the Company’s Cost of Service study, and where in the TACOS software these calculations were made.

- a. Please state which methodology was used to separate service line costs into demand and customer components.
- b. Please provide all inputs, calculations, assumptions and workpapers used to divide service line costs into demand and customer components.
- c. Please show where in the TACOS software and TACOS software output summaries these calculations and outputs are shown.

RESPONSE

- a. The Company did not use the Minimum System or the Zero Intercept method. As stated on page 10 of the testimony of Witness Foust, service line accounts were classified solely as customer.
- b. There are no workpapers.
- c. The “Methods” sheet shows the allocation to the customer classification. The output is included in the total for Customer on page 10 of Exhibit LCF-1.

WITNESS – Larry C. Foust

Kentucky Power Company

REQUEST

Follow-up to Question 181. In Question 181, information on the development of each "allocator" was requested. The information provided was for the "Allocators" sheet in the TACOS software, but no information on the derivation of "Allocation Method" allocators, found on pages 11-20 of Mr. Foust's Exhibit LCF-1 was provided. These were the actual allocators used to allocate costs between rate classes in the Cost of Service Study, found on pages 2-10 of Mr. Foust's Exhibit LCF-1. For each of the "Allocation Methods" found on pages 11-20 of Mr. Foust's Exhibit LCF-1, please provide all calculations, assumptions and workpapers used to derive each allocator.

RESPONSE

The allocation methods found on pages 11-20 of Exhibit LCF-1 are defined on the "Methods" sheet or are a total shown on the "Totals" sheet. Each line that makes up the total can be found in the third column of the "Accounts" sheet and would be allocated based on its method for each line. The fourth column of the "Methods" sheet shows the allocator that was used to derive the percentages. The allocators are defined on the "Allocators" sheet. Support for the "Allocators" sheet has already been provided. Workpapers supporting the split shown on the "Methods" sheet for the distribution methods were provided in response to AG Request Nos. 67 and 68. Support for the split for the TRANS_TOTAL lines are attached. There are no other workpapers, assumptions or calculations.

WITNESS – Larry C. Foust

EHV And 138 Kv Investment
By Jurisdiction and Voltage Level as of 12/31/2004

Kentucky Power Company

REQUEST

Follow-up to Question 181. Please provide a step-by-step example of how the Cost of Service Study produces the "Allocation Method" allocators found on pages 11-20 of Mr. Foust's Exhibit LCF-1. Please provide a step-by-step example of how each final allocator was produced, for the following "Allocation Methods", and show the source in the cost of service for each input and each intermediate step:

- a. "EXP_OM_DIST"
- b. "LABOR_M"
- c. "RB_GUP_EPIS_G"
- d. "RB_GUP"
- e. "REV"
- f. "TDOMX"

RESPONSE

- a. Please see page 2 for EXP_OM_DIST.
- b. Please see page 3 for LABOR_M.
- c. Please see page 4 for RB_GUP_EPIS_G.
- d. Please see page 5 for RB_GUP.
- e. Please see page 6 for REV.
- f. Please see page 7 for TDOMX.

WITNESS – Larry C. Foust

Kentucky Power Company

REQUEST

Follow-up to Question 199. In the response to part (c), totals for the test year are given for power bought from and sold to the AEP pool, in terms of both MWh and dollars (four figures). Then in page 4 through 27 of this response, monthly sheets are provided of sales to and from the AEP pool. It is difficult to see how these annual totals correspond to the monthly figures provided. Please provide all calculations use to derive the annual totals and show where on the monthly sheets figures were taken that were used in the calculations.

RESPONSE

Page 2 of this response provides the monthly data that result in the annual totals reported on AG-1-199(c). The data are excerpted from the monthly Interchange Power Statements submitted in response to KIUC-1-36. Please refer to pg.2 of those statements, bottom half, across numeral I., along the KPCO row. These are the figures requested in AG-1-199(c) with regard to the Company and the AEP pool. The "From Pool" MWh column, along with the corresponding \$ charges, covers the sum of: the Company's obligation to covers its MLR share of the AEP physical off-system sales, its capacity payment obligation (being a capacity deficit company), and primary energy, if any, receipts from the other AEP operating companies to cover its internal load obligations. The "To Pool" MWh column, along with the corresponding \$ credits, covers the sum of: the Company's actual contribution to the AEP physical off-system sales, and primary energy, if any, deliveries to the pool for the other AEP operating companies' internal load obligations. It should also be noted that what is reported on that pg. 2 is aggregated from pgs. 3,4, & 5 of the Interchange Power Statements (IPS). One can follow the flow of this information, as explained on every page.

Pages 4 through 27 in AG-1-199 were submitted in connection with part (b) of that request that pertained to "invoices" from AEP to Kentucky Power. As the response stated, there are no invoices as such, however those pages are received monthly from

AEP to facilitate the Company's computation of its fuel factor and filing with the KPSC. Some of the parameters described above (e.g., the Company's obligation to provide its MLR share of off-system sales inasmuch as there is no fuel used) are not pertinent to a fuel factor, that is the reason it might give the appearance of a disconnect, however all data come from the same sources, albeit for different applications.

WITNESS – Errol Wagner

Note: (1) From page 2 of Actual Interchange Power Statements

Kentucky Power Company

REQUEST

Follow-up to Question 199. In pages 4 through 27 of this response, monthly sheets are provided showing sales to and from the AEP pool.

- a. Please provide the full name of each abbreviated "Transaction Type" shown on these sheets, along with an explanation of each type transaction.
- b. Please explain what is contained in "AEP Pool Primary Purchases"
- c. Please explain what is contained in "AEP Pool Sales"
- d. Please explain what is contained in "Interruptible Buy/Through"
- e. Please explain what is contained in "Bookouts/Options" as well as why these numbers are so large compared to the "AEP Pool" figures.

RESPONSE

a. Abbreviations for both Purchases & Sales: LT-CAP= Long Term Capacity; RESCAP= Reserve Capacity; DY-2F & DY-F = Daily Firm; DY2NF & DY-NF= Daily Non-Firm; YR-F= Yearly Firm; MO-F=Monthly Firm; HR2NF & HRNF = Hourly Non-Firm; EXP-CONG = PJM Explicit Congestion; IMP-CONG = PJM Implicit Congestion ; SPOT-ENG = PJM Spot Market Energy; ARS-EMERG = ECAR Automatic Reserve Sharing (Emergency, administered by ECAR); CMP-UPR = Company Unit Power.

For responses (b) through (d), reference will be made to the Interchange Power Statement (IPS) (see response to AG-2-72) for easier identification.

(b) AEP Pool Primary Purchases = The Company's energy needs from the AEP pool to make up for its internal load requirements (IPS, pg. 8).

(c) AEP Pool Sales (Primary/Economy) = The opposite of (b) : The Company provides energy for the other AEP operating companies' internal requirements needs (IPS, pgs. 8-

9). Please note that the primary/economy reconciliation is performed hourly, thus a given operating company can be both a buyer and a seller on a monthly aggregate basis.

(d) Interruptible Buy/Through = A special class of interruptible customers that chose to pay a price that AEP pays to non-affiliated entities for purchases in order not to be interrupted (IPS, pg.5). Please note that the Company does not have such a customer (it used to have), thus it provides its share of the purchases to the pool, and gets reimbursed for them.

(e) Bookouts/Options = Included in the Company's System Sales Tracker, however these are transactions that occur outside the AEP zone, thus there are no generation resources coming into the AEP zone when purchases, or going out when sales; or they could outright be "booked out". The Company does not have an answer as to their magnitude. Whatever their magnitude is for a given month, the Company reports it.

Witness: Errol Wagner

Kentucky Power Company

REQUEST

Follow-up to Question 199. In response (c), \$81,876,025 was bought from the AEP pool. In the Cost of Service Study, Exhibit LCF-1, page 5 of 20, "Purchased Power Demand" was shown to be \$70,249,303 and "Purchased Power Energy" was shown to be \$96,186,225, for a total purchased power cost of \$166,435,528, over twice as high as the response to Question 199(c). Please reconcile these differing figures and state which one is correct?

RESPONSE

Both figures are correct. They cover entirely different contexts. Request AG-1-199 pertained exclusively to the AEP pool, and the response was appropriately centered around the AEP pool. Besides the AEP pool purchases, the Company also incurs the Rockport demand and energy charges. For purposes of the AEP pool, the Rockport #1 & #2 Unit Power Purchases are considered a Company asset, but the Company has to cover for them separately. Exhibit LCF-1, pg 5 of 20, includes the Rockport purchases, in addition to the pool ones.

In addition, purchases of bookouts/options are directly assigned to each AEP operating company, including the Company, on an MLR basis, thus they count as purchases but without the involvement of physical generation resources that would necessitate an AEP pool reconciliation (see response to AG-2-73(e)). Those purchase transactions are included in Exhibit LCF-1, pg.5 of 20, but not in the response to AG-1-199.

Witness: Errol Wagner

Kentucky Power Company

REQUEST

Follow-up to Question 199. In response (c), \$42,814,233 was sold to the AEP pool. In the Cost of Service Study, Exhibit LCF-1, page 5 of 20, "System Sales" Demand was shown to be \$20,094,132 and "System Sales" Energy was shown to be \$105,379,475, for a total purchased power cost of \$125,473,607, nearly three times as high as the response to Question 199(c). Please reconcile these differing figures and state which one is correct?

RESPONSE

Both figures are correct. (It is assumed that in the fourth line of the request "purchased power cost" was meant to read "system sales revenues"). Please refer to the response to AG-2-74 with regard to bookouts/options, and also to AG-2-73(e). What is true with regard to purchases, is also true with regard to sales as to the direct MLR assignment to each AEP operating company, including the Company, thus not requiring AEP pool reconciliation. Those sales transactions are included in Exhibit LCF-1, pg. 5 of 20, but not in the response to AG-1-199.

Witness: Errol Wagner

Kentucky Power Company

REQUEST

Follow-up to Question 199. In Volume II, Section V, Workpaper S-4, page 30, an Adjusted Test Year AEP Pool Capacity Cost of \$37,871,324 is calculated. In the Cost of Service Study, Exhibit LCF-1, page 5 of 20, "Purchased Power Demand" was shown to be \$70,249,303. Please reconcile these differing figures and state which one is correct?

RESPONSE

Both figures are correct. As explained in the response to AG-2-74, the Rockport #1 and #2 Unit Power Purchases are considered a Company asset for AEP pool purchases, thus both the response to AG-1-199 and Workpaper S-4, pg.30 in Section V treat it as such; however, inasmuch as the Company has to cover for the expenses of those purchases on its own, they are included in Exhibit LCF-1 pg. 5 of 20.

WITNESS – Errol Wagner
