

From the Desk of Pam Castle

To: Executive Director
Kentucky Public Service Commission

Date: January 12, 2007

From: Pam Castle

Subject: Case #2007-00011

I gave you three names of people to contact IF you could not answer my questions since I thought they probably could assist you. You have a copy of the e-mail that I sent to them WITH the e-mail addresses showing. The cc's got the e-mail with the names blacked out. I do not think they would appreciate being bombarded by numerous e-mails that could happen if I had exposed their addresses. Dr. Jones did respond to say that he had not kept up in the field and could not give me current information. Dr. Radin sent a "read" response. If I remember correctly I was told YEARS ago that Dr. Radin had done something with brainwaves being used with computers years prior to my being told that. When Duke was getting ready to do some research in that area, I tried to connect Dr. Brodie, President Emeritus of Duke with Dr. Radin so they could prevent wasting time reinventing the wheel that Dr. Radin had already done. Dr. Sarfatti did not respond by e-mail or "read response". He and I had some interactions in the past. I had been told previously that he did not "suffer fools" so if he agrees to work with you to explain things, watch out. I know that he could not do that which I had been told that a physicist in Australia was doing. I don't think he liked it when I told him someone was doing that which he had told me was impossible.

I did think of a couple of other avenues that you may have in order to find the answers to some of my questions. Contact the Methodist Church hierarchy in Lexington. (Mr. Whitaker, you are there. Perhaps you would be the best person to ask them.) When this information about cell phones and cell phone towers was new to me, I faxed Al Gwinn when I saw that they were going to put a cell phone tower on top of the big Methodist Church there and suggested that based on that which I had learned, the people working there every day could be expected to have more health

issues than the norm and that once this information came out, the attendance in the church would drop. I suspect Al checked with his local experts and was assured there was no problem. UK and Kentucky State had chosen NOT to learn in this field previously when given the opportunities to do so and therefore would not have had the knowledge to address his questions if he chose to ask them.

I do NOT know how the "fix" would have been applied to the power lines or the towers or the cell phones, but I DO know that work was done in a building in the West with a device that reportedly changes the chaotic to coherent frequency. People had been sick there more than the expected norm. The company requested that the devices be placed in the building to see if they made a measurable difference. It was agreed OVERWHELMINGLY that major changes had occurred. HOWEVER, the devices were removed because the company could not risk the cost of admitting that the employees had been affected by the "sick building" because of litigation issues. The company that resided in that building DID move to another though. I had suggested amnesty for those who have been harming people with our advancements that cause harm. Their intention was not to harm the people being exposed to the advancements. Our science knowledge was just too far behind OR not allowed to surface so that the impact of new developments on people could be weighed in to the equations. I have suggested that the people who should be addressed with criminal charges of some sort rather than malpractice charges are those who knowingly blocked the knowledge from getting out not those who innocently developed or use new technology that may be CONTRIBUTING, but probably not the total cause of the conditions for which they can now be accused..

I am also aware of a study done with the changing of frequencies in the woods and the affect it had on the animals. I found it to be very interesting.

I look forward to your answers.

Thank you

Pam Castle

Cc's Same ones plus the scientists and Methodist Church
