APPLICATION OF JACKSON PURCHASE ENERGY CORPORATION FOR AN ADJUSTMENT IN RATES

CASE No. 2007-00116

#### PREFILED TESTIMONY OF G. KELLY NUCKOLS ON BEHALF OF JACKSON PURCHASE ENERGY CORPORATION

#### Summary of Testimony

Mr. Nuckols testifies to the last general rate case, declining TIER, appropriate TIER, increased wholesale power costs, increase in operational costs, changes and restatement of Rules and Regulations, and involvement of JPEC's Board of Directors.

| 1  | 01  | Mould you state your name and buriness address?                                         |
|----|-----|-----------------------------------------------------------------------------------------|
| 1  | Q1. | Would you state your name and business address?                                         |
| 2  | A1. | G. Kelly Nuckols, Post Office Box 4030, Paducah, KY 42002                               |
| 3  |     |                                                                                         |
| 4  | Q2. | What is your occupation?                                                                |
| 5  | A2. | President and CEO of Jackson Purchase Energy Corporation (JPEC)                         |
| 6  |     |                                                                                         |
| 7  | Q3. | How long have you been in your present position?                                        |
| 8  | A3. | I was employed June 1997 as President and CEO.                                          |
| 9  |     |                                                                                         |
| 10 | Q4. | What is your professional and educational background?                                   |
| 11 | A4. | I graduated from Western Kentucky University in 1971 with a B.S. in Electrical          |
| 12 |     | Engineering Technology. I was employed by Warren Rural Electric Cooperative from 1970   |
| 13 |     | to 1992 in various positions in the engineering area, serving as Manager of Engineering |
| 14 |     | from 1985 until 1992. In 1992, I served as Manager of Engineering and Operations at     |
| 15 |     | Four County Electric Membership Cooperative in Burgaw, N.C. From 1993 to 1996, I was    |
| 16 |     | employed as General Manager of Tri-County Electric Membership Cooperative in            |
| 17 |     | Lafayette, TN. During late 1996 and early 1997, I was employed as Senior Engineer by    |
| 18 |     | Patterson & Dewar Engineers, Inc. of Norcross, GA. From June 1997 to present, I have    |
| 19 |     | held the position of President and CEO of JPEC, in Paducah, KY. In 1976, I obtained my  |
| 20 |     | MBA from Western Kentucky University. I am a licensed Professional Engineer in the      |
| 21 |     | Commonwealth of Kentucky, as well in other states.                                      |
| 22 |     |                                                                                         |
| 23 | Q5. | Have you appeared before the Kentucky Public Service Commission and given testimony     |
| 24 |     | in electric rate cases?                                                                 |
| 25 | A5. | Yes, I have.                                                                            |
| 26 | Q6. | Are you familiar with the contents of the Application of JPEC which has been filed with |
| 27 |     | this Commission to commence this Case?                                                  |
|    | 1   |                                                                                         |

| 1  | A6.  | Yes.                                                                                       |
|----|------|--------------------------------------------------------------------------------------------|
| 2  |      |                                                                                            |
| 3  | Q7.  | Please state whether the statements of facts contained in this Application are true.       |
| 4  | A7.  | Yes, to the best of my knowledge and belief the statements of facts contained in this      |
| 5  |      | Application are true.                                                                      |
| 6  |      |                                                                                            |
| 7  | Q8.  | Are you familiar with the business records and tariffs submitted in this Application as    |
| 8  |      | exhibits which are filed with and form a part of this Application of this Case?            |
| 9  | A8.  | Yes, my testimony is in full support of this Application. I have worked with Bill Edwards, |
| 10 |      | Gary Stephens and Tom Kandel all of CFC and with employees of JPEC in the preparation      |
| 11 |      | and review of these exhibits, and I am familiar with them. In my opinion, the material     |
| 12 |      | contained in this Application is correct.                                                  |
| 13 |      |                                                                                            |
| 14 | Q9.  | When was the last General Rate Application filed by JPEC?                                  |
| 15 | A9.  | The last General Rate Application filed by JPEC was in 1997, in Case 1997-224. The Test    |
| 16 |      | Period for that Case was the year ending December 31, 1996.                                |
| 17 |      |                                                                                            |
| 18 | Q10. | What is the purpose of JPEC's Application to this Commission?                              |
| 19 | A10. | To seek an increase in JPEC's rates in an amount necessary to obtain a TIER of 2.0 and     |
| 20 |      | to seek approval of restated Rules and Regulations. JPEC expects the additional revenue    |
| 21 |      | to provide sufficient revenue to assure adequate operating margins.                        |
| 22 |      |                                                                                            |
| 23 | Q11. | What considerations were given to increase the rates and charges of JPEC?                  |
| 24 | A11. | The joint mortgage agreements require JPEC attain a TIER ratio of 1.25 based on an         |
| 25 |      | average of two of the three most current years. The TIER for the Test Year, excluding      |
| 26 |      | G&T Capital Credits was 0.96. JPEC's TIER has decreased consistently from 1.94 in 2003,    |
| 27 |      | to 1.89 in 2004, to 1.72 in 2005 and 0.96 in 2006, the Test Year. Factoring the effects of |
| ļ  |      |                                                                                            |

1 Test Year adjustments without an increase in revenues would result in a projected TIER 2 for 2007 of only 0.69. 3 JPEC's Modified Debt Service Coverage (MDSC) has likewise decreased consistently from 4 2.02 in 2003, to 2.00 in 2004, to 1.90 in 2005 and 1.22 in 2006. 5 6 Have other factors contributed to JPEC being unable to comply with the joint mortgage Q12. 7 requirements? 8 A12. JPEC has experienced an increase in the overall cost of its wholesale power. In 2003 the 9 average cost per kWh was \$0.03488, in 2004 the cost had increased to \$0.03511, in 2005 10 the cost had increased further to \$0.03528 and in 2006, the Test Year; the cost per kWh 11 had increased to \$0.03602. 12 JPEC's last general rate case before the Commission was nearly ten years ago and many 13 items have increased in cost over this ten year period. The day-to-day operational costs 14 have increased significantly as result of dramatic increases in items such as gasoline, 15 diesel fuel, purchase price of transportation equipment, and basic materials used in 16 construction of substations and distribution lines (copper, aluminum and other metals). 17 18 Q13. With the declining financial ratios and increasing power costs, why did JPEC choose this 19 time to file this Application? 20 A13. As a member-owned electric cooperative, JPEC first sought relief by cost control and cost 21 reduction. Only after a great deal of consideration has JPEC's Board of Directors agreed 22 that a general increase in its rates and charges is necessary. 23 Q14. What is the Test Year used by JPEC for its data compiled to the Commission in this Case? 24 A14. The twelve months ending December 31, 2006, was selected as the Test Year. The 25 management and Board of Directors of JPEC review the operations and TIER on a 26 monthly basis. Noting the steady decline in margins and TIER, the Board of Directors

| 1  |      | authorized an Application to be prepared to increase rates and charges to obtain a TIER       |
|----|------|-----------------------------------------------------------------------------------------------|
| 2  |      | of 2.0.                                                                                       |
| 3  |      |                                                                                               |
| 4  | Q15. | Do the proposed increases in rates and charges among the various rate classes for JPEC        |
| 5  |      | members in this Application provide for a fair and equitable allocation for the increase?     |
| 6  | A15. | Total revenue was increased by \$3,554,064 or 9.50%, based on normalized expenses.            |
| 7  |      | JPEC, in conjunction with CFC, performed a Cost of Service Study, and rates were              |
| 8  |      | increased based on those results. I believe a fair, just and reasonable allocation has been   |
| 9  |      | made to the various rate classes.                                                             |
| 10 |      |                                                                                               |
| 11 | Q16. | In your opinion, are the proposed rates requested in this Application necessary to            |
| 12 |      | maintain the financial integrity of JPEC?                                                     |
| 13 | A16. | Yes.                                                                                          |
| 14 |      |                                                                                               |
| 15 | Q17. | Has JPEC's Board of Directors been involved with revisions in the submitted Schedule of       |
| 16 |      | Rates as submitted in this Application?                                                       |
| 17 | A17. | JPEC's Board of Directors, fulfilling their fiduciary obligations and responsibilities to the |
| 18 |      | member-owned cooperative, has been actively involved with JPEC's management team in           |
| 19 |      | this Application. JPEC's Board of Directors is committed to the concept of gradual            |
| 20 |      | movement of JPEC's tariffs toward cost-of-service based rates.                                |
| 21 |      |                                                                                               |
| 22 | Q18. | Has JPEC modified, amended and updated its Rules and Regulations as filed in this             |
| 23 |      | Application?                                                                                  |
| 24 | A18. | JPEC has rewritten its Rules and Regulations in an effort to make those Rules and             |
| 25 |      | Regulations more understandable by its Member/Owners. Many of the existing Rules and          |
| 26 |      | Regulations are proposed to be readopted without change.                                      |

We believe that much of the current language is difficult to read as word usage has 1 2 changed over the years and the Rules and Regulations have been revised on a piece-3 meal basis. 4 What types of changes have been made to the Rules and Regulations as filed in the 5 Q19. 6 Application? Many of the Rules and Regulations are outdated and are not applicable in today's 7 A19. changing energy environment. JPEC has changed the reference of customer or consumer 8 to Member, as JPEC is a cooperative and customers are first and foremost Members-9 10 Owners. 11 12 Has JPEC included a Member Bill of Rights? Q20. Yes, JPEC has also included a Members Bill of Rights, again reflecting the member 13 A20. 14 ownership of JPEC. 15 Has JPEC's Board of Directors been involved with the revision of JPEC's Rules and 16 Q21. 17 Regulations as submitted in this Application? JPEC's Board of Directors and management team have spent many hours in the revisions 18 A21. 19 of the Rules and Regulations as submitted in this Application. On November 8, 2007, in a 20 special meeting, the Board of Directors reviewed the Rules and Regulations, as well as 21 the Schedule of Rates, prior to the submission of this Application. Some of the revisions 22 incorporated in the Rules and Regulations are the direct result of JPEC Member's discussions with individual board members. 23 24 Has JPEC included in this Application any adjustments in the Non-Recurring Fees and 25 Q22. 26 Charges? 27 A22. No.

| 1  |      |                                                                                          |
|----|------|------------------------------------------------------------------------------------------|
| 2  | Q23. | Do any of the proposed changes in Rules and Regulations as included in this Application  |
| 3  |      | have a potential impact on the rates and charges of JPEC Members?                        |
| 4  | A23. | The changes are expected to have minimal impact, as the underground, meter pole,         |
| 5  |      | movement of JPEC facilities and levelized billing are voluntary to the Members. Other    |
| 6  |      | changes are documenting the procedures as they presently exist, such as franchise fees   |
| 7  |      | and tampering fees.                                                                      |
| 8  |      |                                                                                          |
| 9  | Q24. | What additional information can you provide on the proposed changes and restatement      |
| 10 |      | of the Rules and Regulations?                                                            |
| 11 | A24. | JPEC has submitted to the Commission in a letter dated November 14, 2007, a brief        |
| 12 |      | summary of the proposed changes. The letter is Attachment A of this testimony.           |
| 13 |      |                                                                                          |
| 14 | Q25. | What will be the impact to the Members in the proposed changes and restatement of the    |
| 15 |      | Rules and Regulations?                                                                   |
| 16 | A25. | The cost to the Member should be revenue neutral to both the Member and JPEC, as in      |
| 17 |      | the analysis of the proposed underground extension.                                      |
| 18 |      | In a majority of the other proposed changes, the Member receiving the benefit will be    |
| 19 |      | expected to bear the costs, in lieu of those charges being socialized among all Members. |
| 20 |      | All the Members should not be expected to bear the additional expenses for the Member    |
| 21 |      | who elects to tamper with their meter and/or service and must be disconnected and later  |
| 22 |      | reconnected at the transformer.                                                          |
| 23 |      |                                                                                          |
| 24 | Q26. | Does this conclude your testimony in this Case?                                          |
| 25 | A26. | Yes, it does.                                                                            |
|    |      |                                                                                          |

| 1      | The undersigned has prepared the foregoing direct testimony and swears that it is true and |
|--------|--------------------------------------------------------------------------------------------|
| 2<br>3 | correct to the best of his knowledge and belief.                                           |
| 4      | G. Kelly Nuckols                                                                           |
| 5      | STATE OF KENTUCKY                                                                          |
| 6      | COUNTY OF McCRACKEN                                                                        |

MS ELIZABETH O'DONNELL EXECUTIVE DIRECTOR PUBLIC SERVICE COMISSION OF KENTUCKY 211 SOWER BOULEVARD FRANKFORT KY 40602

VIA FAX AT: 502-564-3460

Re: Case No. 2007-00116

Dear Ms. O'Donnell:

Pursuant to the staff's request during informal conference held yesterday morning, our client has provided confirmation of all changes in the revised Rules and Regulations tariffs which either include rates or could impact rates. The changes are outlined as follows:

- Section 13, provides that the Member shall be responsible for special installation necessary for service requirements other than that required for standard voltage;
- Section 16, proposes "Levelized Billing" as a replacement for the current "Budget Billing" plan. This change, as to the member, is intended to be revenue neutral;
- Section 20, provides for the collection of costs associated with emergency services performed by JPEC on a Member's equipment;
- Section 26, provides for collection of franchise fees as imposed by local governments;
- Section 29, provides that a Member shall be responsible for the entire cost associated with moving JPEC facilities when done solely at the request of the member for the member's convenience. Previously JPEC shared the cost of the relocation with the Member/Applicant. The exact impact of this section is unknown as fees will vary depending on the circumstances surrounding the move of the equipment;
- Section 31- G, provides for the collection of any costs incurred by JPEC, including usage charges, in disconnecting an unauthorized service;
- Section 35- B, JPEC provides for a contribution-in-aid of construction to JPEC where a Member does not provide the termination (meter) pole;

Attachment A

Ms. Elizabeth O'Donnell Page 2 November 14, 2007

- Section 36, JPEC requires the Member/Applicant to install an approved conduit system for installation of JPEC's wires rather than collecting the underground differential as set forth in 807 KAR 5:041 Section 21, (5) (b). Based on present costs, this change is intended to be revenue neutral;
- Section 37, when service previously disconnected for non-payment is reconnected at the transformer, JPEC will charge a fee equal to its actual costs instead of tariffed non-recurring fees;
- Within Rate Schedule "D" Commercial and Industrial Demand Less than 3,000 kW, JPEC proposes to have a minimum billing demand based on greater of:
  - 1. Actual demand;
  - 2. Actual demand adjusted for power factor;
  - 3. 60% of contract amount; or
  - 4. 60% of highest previous 12 months.

The minimum billing provision was inadvertently removed in Case No. 1997-224; and

• In Rate Schedule "OL" Outdoor Lighting, lights will only be installed on existing facilities. The member shall provide or be charged for JPEC's actual costs for poles and wiring where JPEC is requested to install a light on new facilities used solely for purposes of mounting a light. Further, on fixtures which are used for the sole purpose of mounting an outdoor light, JPEC will be responsible only for maintenance of the fixture (i.e. the lamp, ballasts, globe, and photocells).

This is a brief review of the changes included in Rules and Regulations and in Rate Schedules that are not included in newspaper publication. We will attempt to get the side-by-side comparisons to you as soon as practicable for your review and convenience.

Please do not hesitate to contact me if you need additional information or have questions.

Sincerety. Melissa D. Yates

Attorney for Jackson Purchase Energy Corporation ("JPEC")

APPLICATION OF JACKSON PURCHASE ENERGY CORPORATION FOR AN ADJUSTMENT IN RATES

CASE No. <u>2007-00116</u>

### PREFILED TESTIMONY OF CHARLES "CHUCK" G. WILLIAMSON III ON BEHALF OF JACKSON PURCHASE ENERGY CORPORATION

#### Summary of Testimony

Mr. Williamson testifies to the appropriate TIER, rate base, rate base related normalizing adjustments, depreciation and changes to budget billing of Jackson Purchase Energy Corporation.

| 1  | Q1. | What is your name and business address?                                                    |
|----|-----|--------------------------------------------------------------------------------------------|
| 2  | A1. | My name is Charles "Chuck" G. Williamson III. My business address is 2900 Irvin Cobb       |
| 3  |     | Drive, Paducah, KY 42003.                                                                  |
| 4  |     |                                                                                            |
| 5  | Q2. | By whom are you employed, and in what capacity?                                            |
| 6  | A2. | I am employed by Jackson Purchase Energy Corporation (JPEC) in the capacity of Vice        |
| 7  |     | President of Finance and Administration. I have served in that capacity since my           |
| 8  |     | employment with the Corporation in October, 1999.                                          |
| 9  |     |                                                                                            |
| 10 | Q3. | What is your educational background and experience?                                        |
| 11 | A3. | I graduated from the University of Kentucky with a BS degree in Accounting in December,    |
| 12 |     | 1981. I am a CPA licensed in Kentucky continuously since March, 1984. As a qualification   |
| 13 |     | of holding a CPA license I have completed in excess of 60 hours of continuing              |
| 14 |     | professional education during each two year license period. I am also a graduate of the    |
| 15 |     | NRECA Robert I. Kabot Management Internship Program.                                       |
| 16 |     |                                                                                            |
| 17 | Q4. | Have you testified before the Kentucky Public Service Commission (Commission) before?      |
| 18 | A4. | I have testified before the Commission, but not in a general rate case as our last one was |
| 19 |     | concluded in 1998.                                                                         |
| 20 |     |                                                                                            |
| 21 |     | Involvement with Application                                                               |
| 22 |     |                                                                                            |
| 23 | Q5. | What involvement have you had in this application?                                         |
| 24 | A5. | I am testifying in support of the entire application. I have worked extensively with Mr.   |
| 25 |     | Edwards, Mr. Stephens, Mr. Kandel and Mr. Nuckols in preparation of this entire            |
| 26 |     | application. I am familiar with each Exhibit and I support the information contained and   |
| 27 |     | conclusions reached in all parts of the application.                                       |
|    | 1   |                                                                                            |

#### Exhibit H-2 Direct Testimony of Charles "Chuck" G. Williamson III Page 3 of 12

1 2 Are you familiar with the testimony and related exhibits of Mr. William K. Edwards? Q6. 3 A6. I am familiar with his testimony and exhibits and support the same. I was extensively involved in supplying much of the underlying normalization data. I support this data as 4 5 well. 6 7 Are you familiar with the testimony and related exhibits of Mr. Gary C. Stephens? Q7. 8 I am familiar with his testimony and exhibits and support the same. I was extensively A7. 9 involved in supplying much of the underlying data. I support this data and the rate study 10 so far as my knowledge and expertise. 11 12 Q8. Are you supporting any specific information in this application? 13 Yes, I am supporting Exhibit G, Schedule 2 and Exhibit G, Schedules 4 through 19. I A8. 14 supplied underlying data for the Cost of Service Study, Depreciation Study and 15 information for many of the other Exhibits and schedules. 16 17 Appropriateness of Increase and Rate Design 18 19 Q9. Why was a TIER of 2.0 requested with this application? 20 A9. The financial condition of JPEC has deteriorated substantially since our last general rate 21 case in 1998. The 2.0 TIER was selected in order to meet debt service obligations, 22 provide for operating costs and maintain the minimum joint mortgage agreement 23 requirements, and provide adequate margins for the foreseeable future. 24 25 Q10. In your opinion, are the adjusted rates requested in this case by JPEC necessary to 26 maintain the financial integrity of the cooperative?

1 A10. The Financial exhibits as shown in the application indicate the adjusted rates included in 2 the Application are necessary to maintain the financial well being of the cooperative. 3 4 Q11. What considerations were given to increase the rates and charges of JPEC? 5 A11. Our mortgage documents require that JPEC maintain a TIER of above 1.25 based on the 6 average of two of the three most current years. We did not achieve a TIER above this 7 level in 2006, and our budget forecast for 2007 without a rate increase would not meet 8 this level. Additionally, based on the normalized test year we had a calculated MDSC of 9 1.21 (1.23 unadjusted.) Both figures are below the 1.35 required by CFC. 10 11 Q12. Would you briefly describe the procedures used to arrive at the proposed increase in 12 rates and charges? 13 We have witnessed a continued trend of increased operating costs. Our wholesale power A12. 14 costs have increased on a mega Watt hour basis. As a cooperative, we are especially 15 reluctant to increase charges to our Members, however we also have an obligation to them to keep the Cooperative financially healthy. In addition, the rate adjustment 16 17 process carries a cost in both dollars and in staff resources, which leads us to delay rate 18 relief as long as possible. In order to minimize expense, when the rate adjustment was 19 determined necessary, we sought assistance from our lenders (RUS and CFC) with key 20 portions of the application. 21 22 Are you familiar with the proposed increase in rates and how that increase was allocated? 013. 23 A13. Yes, having worked extensively in the process, I believe the increase is fair, just and 24 reasonable and the allocation to rate classes is also fair, just and reasonable. 25 26 Q14. How was the proposed increase of revenues of \$3,554,064 allocated to rates? 27 A14. CFC and JPEC prepared a Cost of Service Study and based its rate design on this study.

| 1  | A19. | JPEC presented the study in PSC Case 2002-485. With that case JPEC utilized the            |  |  |  |  |  |
|----|------|--------------------------------------------------------------------------------------------|--|--|--|--|--|
| 2  |      | services of RUS to perform the study for distribution assets and JPEC performed an in-     |  |  |  |  |  |
| 3  |      | house study on general assets. It was requested for general assets JPEC be allowed to      |  |  |  |  |  |
| 4  |      | depreciate on an individual asset basis. The Commission granted those requests effective   |  |  |  |  |  |
| 5  |      | 1/1/2003 with the stipulation that an additional study be performed before the earlier of  |  |  |  |  |  |
| 6  |      | a general rate case or the passage of five years.                                          |  |  |  |  |  |
| 7  |      |                                                                                            |  |  |  |  |  |
| 8  | Q20. | Did JPEC comply with this order?                                                           |  |  |  |  |  |
| 9  | A20. | With this application RUS has again been engaged to perform the depreciation study on      |  |  |  |  |  |
| 10 |      | distribution assets. Because RUS will not testify before state commissions, JPEC has       |  |  |  |  |  |
| 11 |      | requested that Thomas E. Kandel from CFC provide testimony on that portion of the          |  |  |  |  |  |
| 12 |      | study.                                                                                     |  |  |  |  |  |
| 13 |      |                                                                                            |  |  |  |  |  |
| 14 | Q21. | Did JPEC perform a study on general assets?                                                |  |  |  |  |  |
| 15 | A21. | With PSC Case 2002-485 JPEC was granted permission to depreciate general assets on         |  |  |  |  |  |
| 16 |      | an individual asset basis. I have reviewed disposition records for general assets and find |  |  |  |  |  |
| 17 |      | that the lives ordered in 2002-485 are consistent with the actual lives of the general     |  |  |  |  |  |
| 18 |      | assets. JPEC is not requesting an adjustment of rates on general assets.                   |  |  |  |  |  |
| 19 |      |                                                                                            |  |  |  |  |  |
| 20 | Q22. | Are you familiar with the RUS depreciation study?                                          |  |  |  |  |  |
| 21 | A22. | RIS and JPEC jointly performed the 2006 depreciation study. My staff provided the base     |  |  |  |  |  |
| 22 |      | information used in the study. I reviewed that information and I reviewed the study and    |  |  |  |  |  |
| 23 |      | its methodology.                                                                           |  |  |  |  |  |
| 24 |      |                                                                                            |  |  |  |  |  |
| 25 | Q23. | Do you agree with the findings of the study and the testimony of Mr. Kandel?               |  |  |  |  |  |
| 26 | A23. | Yes.                                                                                       |  |  |  |  |  |
| 27 |      |                                                                                            |  |  |  |  |  |
|    | 1    |                                                                                            |  |  |  |  |  |

#### Exhibit H-2 Direct Testimony of Charles "Chuck" G. Williamson III Page 7 of 12

Q24. Are there any unique or special accounting practices that you wish to elaborate on?
 A24. JPEC has a couple of items that affect depreciation that are different from other
 cooperatives. Specifically, JPEC utilizes a modified vintage method for its continuing plant
 records and it also records an estimated removal cost for "special equipment." Both are
 long standing practices at JPEC.

7 Q25. What is the modified vintage method to which you refer?

6

15

22

A25. The modified vintage method refers to a system whereby the oldest continuing property records (CPR) (typically the least cost unit) are retired first. This method is similar to the familiar concept of First In, First Out (FIFO) often used in accounting for inventory. Under this system, in each CPR group, JPEC maintains annual counts and costs by calendar year for each CPR. Units for the time period prior to March, 1989 are combined into one pool or group. To my understanding most other cooperatives use an average cost method for each of their CPR's.

16 Q26. How can modified vintage method affect depreciation?

17 A26. To the extent that units are retired at a lower cost, removal costs (which are negative net 18 salvage costs) become a relatively higher percentage of the asset retired. This is of 19 particular concern where the removal cost is relatively high. Poles are an asset of this 20 type, with removal costs approaching or exceeding the cost at which the asset was 21 placed into service many years ago.

23 Q27. Can you explain this with a simple illustration?

A27. I can with some simplified assumptions. Assume the following hypothetical facts: A cooperative has just two items in the pole account, the first a pole with an original cost of \$100 and the second a pole with an original cost of \$900. Further assume that removal cost for a pole is \$100. If a pole is removed from plant records using modified vintage

#### Exhibit H-2 Direct Testimony of Charles "Chuck" G. Williamson III Page 8 of 12

methodology (FIFO), the removal cost percentage is 100% (\$100 removal divided by \$100 asset retired). However, in this same circumstance, if a pole is retired using the average cost method, the removal cost percentage is only 20% (\$100 removal divided by \$500 asset retired).

6 Q28. What is the "special equipment" referred to above?

7 A28. The term "special equipment" refers to equipment for which RUS allows special 8 accounting. Special equipment includes transformers, meters, regulators and other 9 similar items. Under RUS accounting, on other assets the cost of the first installation of 10 the asset is allowed to be capitalized. If one of these other assets is moved to another 11 location, those costs are expenses as incurred. Because of the nature of special 12 equipment, they tend to be relocated more frequently and it can be difficult in the field to determine whether a special equipment item is being originally installed or merely 13 14 moved. With these concerns in mind, RUS allows a cooperative to capitalize the 15 estimated initial installation cost upon purchase.

16

17

18

20

21

22

1

2

3

4

5

What accounting entries are made to record this estimated initial installation? Q29.

When the special equipment is purchased, an entry is made to decrease (credit) A29. 19 operation expense and to increase (debit) asset cost by the amount of the estimated installation labor. When the item is installed in the field or moved the workers charge all their time to expense.

23 How common is the usage of special equipment accounting? Q30.

24 To the best of my knowledge special equipment accounting is nearly universal in the A30. 25 cooperative accounting world. In the past RUS required it, but it has recently allowed 26 cooperatives to elect out of this method. I am not aware of any cooperatives which have 27 elected to opt out of this treatment.

| 1  |      |                                                                                          |
|----|------|------------------------------------------------------------------------------------------|
| 2  | Q31. | How does JPEC record retirement costs on special equipment?                              |
| 3  | A31. | JPEC records retirement costs on special equipment by increasing (debit) removal costs   |
| 4  |      | (also know as negative net salvage) and decreasing (credit) operation labor for the      |
| 5  |      | estimated cost of removal. The actual labor in the field is recorded as an operations    |
| 6  |      | expense.                                                                                 |
| 7  |      |                                                                                          |
| 8  | Q32. | How does this treatment differ from other cooperatives' treatment of special equipment   |
| 9  |      | removal costs?                                                                           |
| 10 | A32. | To the best of my knowledge very few cooperatives have a removal cost associated with    |
| 11 |      | their special equipment. JPEC has consistently applied this method for many years and    |
| 12 |      | believes that its application of such has sound theoretical basis.                       |
| 13 |      |                                                                                          |
| 14 | Q33. | How does this affect depreciation costs on special equipment?                            |
| 15 | A33. | Because depreciation rates have a component which recognizes estimated removal costs,    |
| 16 |      | JPEC's depreciation rates must be higher to provide for removal costs.                   |
| 17 | Q34. | Is it possible for JPEC to discontinue the process of recording removal costs on special |
| 18 |      | equipment?                                                                               |
| 19 | A34. | It is possible to discontinue the process, however this would result in inconsistent     |
| 20 |      | accounting treatment from period to period. Further, if this component were removed      |
| 21 |      | from depreciation it would need to be recovered through additional normalization of      |
| 22 |      | operation expense.                                                                       |
| 23 |      |                                                                                          |
| 24 | Q35. | Please explain how additional operation expense would result from this change?           |
| 25 | A35. | If labor were not charged to removal of special equipment that labor would instead be    |
| 26 |      | charged to operations expense.                                                           |
| 27 |      |                                                                                          |
|    | 1    |                                                                                          |

#### Levelized Billing Program

3 Q36. Is JPEC requesting a change to its budget billing program with this application?

A36. JPEC is requesting a change from budget billing to a levelized billing plan.

Q37. What considerations went into requesting this change?

A37. First and foremost, JPEC is required by Kentucky statute to offer a budget billing plan to its Members. Members desire a budget plan that is easy to understand and to utilize. Additionally, JPEC and public entities desire that the Member receives clear information about their usage. Increased usage and its consequences are sometimes not apparent to the Member under the traditional budget billing program.

13 Q38. Would you explain the existing budget billing program?

14 Under the existing program a Member signs up for the program and a budget payment A38. 15 amount is calculated based upon their total estimated usage for the twelve month future 16 period. That calculated amount is divided into an equal monthly amount and becomes the 17 Member billed amount for the following eleven months. The Member is only allowed to sign up for budget billing effective with the November billing. Each month, the Member 18 19 receives a bill which indicates the actual consumption amount and corresponding charge 20 for that consumption, but is required to pay the budget amount. Payment of a budget 21 amount over the actual consumption results in a credit entry to the account while payment of a budget amount under the actual consumption results in a debit entry. With 22 23 the twelfth bill, in October, the Member receives either a bill for an amount due or a 24 check for the difference between the dollars paid and the true consumption. JPEC 25 monitors the Members' balances and may occasionally change a budgeted payment 26 amount if it appears there may be a large settlement amount.

8

9

10

11

- 1 Q39. Would you explain the proposed levelized billing program?
- 2 A39. Under the new program, a Member's budget payment amount is computed by using a 3 rolling twelve month average consumption. This payment amount is increased or 4 decreased by one twelfth of the amount of any over or under billed amount as a result of 5 this program. As with the previous program, the Member's actual consumption and the 6 charge based on actual consumption are disclosed on the bill. The billed amount, 7 however, is the average referred to above. This billed amount will change slightly from 8 month-to-month as the preceding month 12 months prior disappears from the calculation 9 and is replaced with current month data. The Member may sign up for the program at 10 anytime rather than only in the fall. There is no settlement month; the program continues 11 until the Member terminates service or asks to be taken off the plan. At that time a bill is 12 sent or a refund may be tendered for any accumulated under or over payment.
- 13

14

### Q40. What are the advantages of the new program?

15A40.There are several. First, with this program there is no "nasty" surprise for the Member at16the end of the twelve months as may occur under the current program. Second, the17Member may sign up for the program at any time of the year. Finally, this proposed18program allows the Member to budget their bill while the program better sends the19consumption message than the old program. The program merely readjusts to a more20appropriate amount with each billing.

21

22

- Q41. Does this conclude your testimony?
- 23 A41. Yes.

### APPLICATION OF JACKSON PURCHASE ENERGY CORPORATION FOR AN ADJUSTMENT IN RATES

CASE No. <u>2007-00116</u>

### PREFILED TESTIMONY OF WILLIAM K. EDWARDS ON BEHALF OF JACKSON PURCHASE ENERGY CORPORATION

### Summary of Testimony

Mr. Edwards testifies to the appropriate TIER, rate base, rate base related normalizing adjustments, and return on equity required by the Jackson Purchase Energy Corporation.

| 1<br>2<br>3 |            | Direct Testimony of<br>William K. Edwards                                        |
|-------------|------------|----------------------------------------------------------------------------------|
| 4           | Q.         | What is your name and business address?                                          |
| 5           | <b>A</b> . | My name is William K. Edwards. My business address is 2201 Cooperative Way,      |
| 6           |            | Herndon, Virginia 20171.                                                         |
| 7           |            |                                                                                  |
| 8           | Q.         | By whom are you employed, and in what capacity?                                  |
| 9           | А.         | I am employed by the National Rural Utilities Cooperative Finance Corporation    |
| 10          |            | (CFC) as an economist and Vice President of Regulatory Affairs. In that capacity |
| 11          |            | I am responsible for regulatory issues of cooperatives before the FERC and state |
| 12          |            | regulatory commissions.                                                          |
| 13          |            |                                                                                  |
| 14          | Q.         | What is your educational background and experience?                              |
| 15          | А.         | I received a BS degree in Business with a concentration in economics from        |
| 16          |            | Christopher Newport College of the College of William & Mary in 1977, and a      |
| 17          |            | MA degree in economics from Old Dominion University in 1979. My major            |
| 18          |            | fields of study included mathematical economics, econometrics, and               |
| 19          |            | microeconomics. I completed a number of courses toward a Ph.D. in economics      |
| 20          |            | from the Virginia Polytechnic Institute & State University. From 1979 to 1982, I |
| 21          |            | worked for the firm of Ernst & Ernst (now Ernst & Young) as a consultant         |
| 22          |            | principally in the Washington Utility Group. From 1982 to 1985, I was employed   |
| 23          |            | by Mississippi Power & Light Company (Entergy - Mississippi) as a supervisor     |

| 1  |    | responsible for rate research. From January 1986 until early 1995 I was employed      |
|----|----|---------------------------------------------------------------------------------------|
| 2  |    | by Central Louisiana Electric Company, Inc. as Manager of Rate Research and           |
| 3  |    | subsequently as Director of Rates. In that capacity I was responsible for             |
| 4  |    | regulatory affairs, regulatory accounting, rate design, cost of service studies, rate |
| 5  |    | administration, and the attendant litigation associated with regulatory issues        |
| 6  |    | before both the Louisiana Public Service Commission, and the Federal Energy           |
| 7  |    | Regulatory Commission. Since 1996, I have been employed by CFC. A more                |
| 8  |    | comprehensive history of my experience is contained in the attached Exhibit           |
| 9  |    | WKE-1.                                                                                |
| 10 |    |                                                                                       |
| 11 | Q. | What is the purpose of your testimony?                                                |
| 12 | А. | The purpose of my testimony is to support the reasonableness of the 2.0 Net TIER      |
| 13 |    | request of the company.                                                               |
| 14 |    |                                                                                       |
| 15 |    | National Rural Utilities Cooperative Finance Corporation (CFC)                        |
| 16 |    |                                                                                       |
| 17 | Q. | What is CFC?                                                                          |
| 18 | А. | The National Rural Utilities Cooperative Finance Corporation (CFC) is a lending       |
| 19 |    | company. It was incorporated as a private, not-for-profit cooperative association     |
| 20 |    | under the laws of the District of Columbia in April 1969. The principal purpose       |
| 21 |    | of CFC is to provide its members with a dependable source of low cost capital and     |
| 22 |    | state-of-the-art financial products and services. CFC provides its members with a     |

| 1  |    | source of financing to supplement the loan programs of the Rural Utilities Service |
|----|----|------------------------------------------------------------------------------------|
| 2  |    | (RUS) an agency of the United States Department of Agriculture. CFC will also      |
| 3  |    | lend 100% of the loan requirement for those members electing not to borrow from    |
| 4  |    | RUS. CFC is owned by and makes loans primarily to its rural utility system         |
| 5  |    | members to enable them to acquire, construct and operate electric distribution,    |
| 6  |    | transmission, and generation related facilities. CFC also provides guarantees to   |
| 7  |    | its members for tax-exempt financings of pollution control facilities and other    |
| 8  |    | properties constructed or acquired by its members, debt in connection with certain |
| 9  |    | leases and various other transactions.                                             |
| 10 |    |                                                                                    |
| 11 |    | As of May 31, 2007, CFC had 1,544 members, including 830 distribution systems      |
| 12 |    | and 69 generation and transmission systems operating in 49 states and four U.S.    |
| 13 |    | territories.                                                                       |
| 14 |    |                                                                                    |
| 15 | Q. | How does CFC obtain the funds it lends to cooperative utilities?                   |
| 16 | А. | CFC functions as both a borrower and a lender of funds. As a lender, CFC makes     |
| 17 |    | short and long-term loans to its member systems. As security for its long-term     |
| 18 |    | loans, CFC receives a first mortgage on its borrowers' facilities. These mortgages |
| 19 |    | and related mortgage notes are in turn used as security for CFC collateral trust   |
| 20 |    | bonds issued in the public capital market. Through the sale of such bonds as well  |
| 21 |    | as commercial paper and other debt instruments, CFC obtains capital on behalf of   |
| 22 |    | its member borrowers. In this role CFC acts as a borrower.                         |

| 1  |    |                                                                                       |
|----|----|---------------------------------------------------------------------------------------|
| 2  | Q. | Is Jackson Purchase Energy Corporation ("JPEC") a member of CFC?                      |
| 3  | А. | Yes. JPEC is a member of CFC and has the following loans as of December 31,           |
| 4  |    | 2006 totaling: (1) approximately \$836,677 in long-term debt, (2) a short-term line   |
| 5  |    | of credit for \$5 million that has not been drawn upon at this time.                  |
| 6  |    |                                                                                       |
| 7  | Q. | In what ways does JPEC differ from an investor-owned utility ("IOU")?                 |
| 8  | А. | The main difference between an IOU and an electric cooperative, other than size,      |
| 9  |    | is its form of ownership and governance. In the IOU, stockholders own the equity      |
| 10 |    | of the utility, and ratepayers (the customers) are not entitled to the benefits of    |
| 11 |    | equity holders. The governance of IOU typically is comprised of a Board of            |
| 12 |    | Directors separate from the customers of the utility. Therefore, there is an implicit |
| 13 |    | conflict of interest associated with IOU. Specifically, the interests of the equity-  |
| 14 |    | owners are different from the interests of the customers. Historically, in light of   |
| 15 |    | this implicit conflict, the vertically integrated structure of most IOUs, as well as  |
| 16 |    | the presence of strong economies of scale and scope, IOUs have been regarded as       |
| 17 |    | monopolies whose goal is to maximize profits to the stockholders at the expense       |
| 18 |    | of their customers. As such, State and Federal governments have instituted rate       |
| 19 |    | regulation to protect the interests of customers.                                     |
| 20 |    |                                                                                       |
| 21 |    | In a cooperative, the customers own the equity. Hence, the benefits/costs of being    |

22 an equity holder belong to the customer. These benefits include not-for-profit and

| 1  |    | tax-exempt status, a return of excess margins, and the opportunity to have lower      |
|----|----|---------------------------------------------------------------------------------------|
| 2  |    | rates. In a cooperative, the Board of Directors is comprised of customers that are    |
| 3  |    | democratically elected. As such, the conflict present with IOUs is not present        |
| 4  |    | with cooperative structures because the customers and equity-owners are the           |
| 5  |    | same. A rate increase filed with a state commission by a cooperative has already      |
| 6  |    | faced the scrutiny of the Board of Directors who are customers of that cooperative    |
| 7  |    | and who specifically represent the interests of other equity-owners.                  |
| 8  |    |                                                                                       |
| 9  |    | Regulators should be mindful that, as a result of the cooperative structure, there is |
| 10 |    | no incentive to maximize profits or to otherwise charge a profit on sales to its      |
| 11 |    | members more than what is needed to operate the utility. Indeed, should               |
| 12 |    | customers of cooperatives become convinced that a specific rate increase or other     |
| 13 |    | action is unnecessary or otherwise unduly prejudicial; they have as their remedy      |
| 14 |    | the ability to democratically replace the Board of Directors and/or senior            |
| 15 |    | management.                                                                           |
| 16 |    |                                                                                       |
| 17 | Q. | What are CFC's general loan policies?                                                 |
| 18 | А. | For distribution utilities, CFC offers three basic types of loans. These are: (1)     |
| 19 |    | long-term secured loans made concurrently with the RUS; (2) 100% CFC loans            |
| 20 |    | made exclusively from CFC funds; and (3) short-term loans similar to a line of        |
| 21 |    | credit. CFC offers long-term loans with maturities of up to 35 years,                 |
| 22 |    | intermediate-term loans with maturities of up to five years, and line of credit       |

| 1  | loans. Long-term and intermediate-term loans are available at fixed or variable           |
|----|-------------------------------------------------------------------------------------------|
| 2  | interest rates while line of credit loans are available only at a variable interest rate. |
| 3  | Long-term loans are generally secured by a first mortgage lien on all assets and          |
| 4  | revenues of the borrower. Intermediate-term loans may be secured or unsecured             |
| 5  | and line of credit loans are generally unsecured. On line of credit loans with a          |
| 6  | maturity of more than one year, the outstanding balance is generally required to be       |
| 7  | paid down to zero for five consecutive days during each year. CFC makes loans             |
| 8  | to borrowers on a concurrent basis with RUS (generally 70% RUS/30% CFC) and               |
| 9  | will also make 100% loans to borrowers electing not to borrow from RUS.                   |
| 10 | CFC requires, as a minimum a 1.35 Modified Debt Service Coverage ("MDSC")                 |
| 11 | ratio, and the appropriate security. By contrast, JPEC's major creditor, the              |
| 12 | Department of Agriculture's Rural Utilities Service ("RUS") requires as a                 |
| 13 | minimum a 1.25 times net TIER ratio, a 1.10 Operating TIER ratio, and a 1.25              |
| 14 | Debt service Coverage ("DSC") ratio (see 7 CFR § 1710.114).                               |
| 15 |                                                                                           |
| 16 | It is important for the Commission to understand that these requirements are              |
| 17 | minimum default requirements and failure to meet them may likely disqualify               |
| 18 | JPEC from receiving future loans. If many systems operated close to these                 |
| 19 | minimums, CFC may have difficulty raising new capital in the financial markets            |
| 20 | and therefore may be unable to fund those cooperatives, and distribution                  |
| 21 | cooperatives with minimal TIER/MDSC ratios would likely be out of compliance              |
| 22 | periodically as margins fluctuate below these minimums.                                   |

| 2                                |          | Normalizing Adjustments for Revenues                                                                                                                                                                                                                                                                                                                                                            |

4 With respect to financial evaluations, CFC has devised a list of key financial 5 ratios that are used to supplement its credit decisions. The "Key Ratio Trend 6 Analysis" (KRTA) provides a generalized and quick method for credit analysts to 7 preliminarily evaluate a cooperative. The KRTA, reviews of audit reports, 8 evaluations of prospective financial models and their underlying assumptions, and 9 discussions with management regarding financial performance form the basis of 10 CFC's evaluation. In Exhibit WKE-2, I have listed the relevant KRTA ratios 11 employed by CFC for; (1) JPEC, (2) the Commonwealth of Kentucky and (3) the 12 electric distribution cooperative industry as a whole for the last five calendar years 13 (2002-2006). I have prepared several graphs below illustrating the different 14 measures of coverage ratios for JPEC contrasted against the median value of the 15 vast majority of the distribution cooperatives in the United States, and the median 16 value for the distribution cooperatives in Kentucky. The JPEC data contained in 17 these graphs are based on the as booked 2006 financial statements unadjusted for 18 any normalizing test year adjustments.
