55%) are related to structural damages caused by the weight of ice, sleet and snow on homes and businesses - or things nearby that consequently water pipes freeze and burst. Unlike most other wintertime claims, snow and ice are not necessary for a pipe to freeze - just bitter cold temperatures with caulk. Wrap insulation around exposed pipes to slow the transfer of heat. Disconnect all garden water shut-off valves. The event that a pipe does freeze and burst, shutting off the water at the source is of utmost importance.
