PUBLIC SERVICE  
COMMISSION

Mr. Jeff Derouen  
Executive Director  
KY Public Service Commission  
PO Box 615  
Frankfort KY 40602-0615

Re: KY PSC Case No. 2013-00279  
Fuel Adjustment Clause  
November 1, 2012 through April 30, 2013  
Salt River Electric Cooperative Corporation

Dear Mr. Derouen:

Enclosed are the originals and four (4) copies of the following with regard to the above-named case:

- Hearing Notice published in the October 2013 edition of *Kentucky Living Magazine*
- Affidavit of Mailing of Hearing Notice

Sincerely,

Kathy Brown  
Executive Assistant

## HEARING NOTICE

A public hearing will be held on Wednesday, October 16, 2013, at 10 a.m., Eastern Daylight Time, at the offices of the Kentucky Public Service Commission, 211 Sower Boulevard, Frankfort, Kentucky, to examine the application of the fuel adjustment clause of the following corporations for the period November 1, 2012, through April 30, 2013. Individuals interested in attending this hearing shall notify the Public Service Commission in writing of their intent to attend no later than October 11, 2013. If no notices of intent to attend are received by this date, this hearing will be cancelled. Written notice of intent to attend this hearing should be sent to: Executive Director, Kentucky Public Service Commission, P.O. Box 615, Frankfort, Kentucky 40602.

## The simple energy of biomass

*How the burning of wood and grass can help make electricity*

Biomass has come a long way from putting a log on a fire. But the concept behind this power source is still quite simple: burn plants or waste materials from plants or animals to heat water to create steam that spins a turbine to generate electricity.

Biomass includes fresh plant parts (trees, grasses, crops) or byproducts such as wood chips

### ENERGY BASICS

or corn stubble, plus live-stock

waste, and even landfill gas. Recent advances in technology have made it possible to use all these items much more efficiently.

In the simplest systems, fresh materials are used with few modifications. In a direct-fired system, the biomass in its original form is burned with nothing else added. Residual heat from the process can be piped off to heat buildings or reused in other ways, increasing power plant efficiencies. In a co-fired system, biomass is mixed with a fossil fuel such as coal. Burning the two fuels together can lower emissions of certain pollutants while maintaining the same amount of electricity production.

More complicated technology changes the biomass into another form to make it more useful. During gasification, superheating (but not burning) the biomass

changes it from a solid into a gas. This synthetic gas (syngas) can be used as a substitute for natural gas. During pyrolysis, biomass changes from a solid into a liquid that can be used in place of traditional fuel oil.

Anaerobic digestion is the most time-consuming method for using biomass. As bacteria (anaerobes) break down rotting plant or animal materials over days or weeks, their actions release methane gas, which can be captured and burned to make electricity. The leftover solids can often be used as compost.

An ongoing University of Kentucky/East Kentucky Power Cooperative biomass research project includes testing ways to mix dried switchgrass with coal to generate electricity at a conventional power plant. Photo: East Kentucky Power Cooperative

### THE BIOMASS ROLE IN RENEWABLE ENERGY

The U.S. has more than 15,000 megawatts (enough electricity for 7.5 million homes) of biomass generating capacity, making it the third-largest source of renewable energy behind hydropower and wind.

AFFIDAVIT OF MAILING  
OF HEARING NOTICE

Notice is hereby given that the October issue of  
*KENTUCKY LIVING*, bearing the official notice of hearing of PSC  
Case No. 2013-00279, concerning the application of the fuel adjustment clause  
from November 1, 2012, through April 30, 2013, for SALT RIVER  
ELECTRIC COOPERATIVE CORPORATION, was entered as direct mail at  
Florence, Kentucky, on September 27, 2013.
