## Kentucky Power Company

### REQUEST

Refer to Kentucky Power's Answer, numbered paragraphs 5(e) and (g). Explain why Kentucky Power states that the lamp installed on Complainant's outbuilding appears to be a mercury-vapor lamp.

### RESPONSE

The response was premised upon the visual examination of the lamp and fixture from a position outside the customer's property by a Company service technician with more than 20 years of experience installing and removing outdoor lights. Based on that examination, and his experience, the Company service technician concluded that the lamp was a mercury vapor lamp. In particular, the conclusion was premised upon the following facts:

- (a) The light emitted from the lamp (it was lit despite the fact it was daytime) was a whitish color consistent with mercury vapor light. High pressure sodium lamps emit a yellowish-tinged light;
- (b) The fixture itself was slightly larger than the high pressure sodium fixtures installed and maintained by Kentucky Power;
- (c) The top of the fixture was rounded. The tops of high-pressure sodium fixtures are flat.
- (d) All high-pressure sodium fixtures installed by Kentucky Power have a sticker on the front with the number "10" or "15." The numbers indicate the wattage of the high pressure sodium lamp to be installed. "10" signifies 100 watts; "15" signifies 150 watts. The fixture attached to the Morrison's lacked any such sticker, which is consistent with it being a mercury-vapor lamp.

**REQUEST**

Refer to Mr. and Mrs. Morrison's Response to Staff's First Request for Information, page 20, which is represented to be a picture of the bulb from the lamp over the Complainant's outbuilding. According to the Morrisons, the base of the bulb is engraved with the following : JFMAMJJASOND-1234567890-R. Confirm that the bulb appears to be a high-pressure sodium retrofit bulb for mercury vapor lamps.

**RESPONSE**

The legend JFMAMJJASOND-1234567890-R does not indicate that the bulb is a high-pressure sodium retrofit for mercury vapor fixture. The letter represent the months: J (January) F(February) M (March) ...." Together with the numbers the legend can be marked to indicate the month and year the bulb was installed. These legends appear on mercury vapor bulbs and other types of bulbs.

Further, Kentucky Power does not retrofit mercury vapor fixtures to use high-pressure sodium bulbs. Instead it replaces the mercury vapor bulb *and fixture* with a high-pressure sodium fixture and bulb. In addition, the Company's personnel did not enter the Morrison's property to view the bulb and so cannot confirm that the bulb pictured on page 20 of the Morrison's response is the same bulb that was installed in the fixture attached to the Morrison's garage.
