ORDER

Clark Energy Cooperative, Inc. ("Clark Energy") is hereby notified that it has been named as defendant in a formal complaint deemed filed on January 17, 2017, a copy of which is attached as the Appendix to this Order.

Pursuant to 807 KAR 5:001, Section 20, Clark Energy is HEREBY ORDERED to satisfy the matters complained of or file a written answer to the complaint within ten days of the date of service of this Order.

Should documents of any kind be filed with the Commission in the course of this proceeding, the documents shall also be served on all parties of record. A party filing a paper containing personal information shall, in accordance with 807 KAR 5:001, Section 4(10), encrypt or redact the paper so that personal information cannot be read.

By the Commission

ATTEST:

Executive Director

APPENDIX

APPENDIX TO AN ORDER OF THE KENTUCKY PUBLIC SERVICE
COMMISSION IN CASE NO. 2017-00050 DATED **FEB 16 2017**

Guidelines for Review of Local Laws Affecting Nursery Operations

The Agriculture and Markets Law (AML) definition of "farm operation" [AML §301(11)] includes "crops, livestock and livestock products" as defined in AML §301(2). Section 301(2)(d) defines "horticultural specialties" to include, but not be limited to, "...nursery stock, ornamental shrubs, ornamental trees and flowers." The Department considers the production, preparation and marketing of products grown on the farm, from bare rootstock, seeds, cuttings, plugs, or other immature plants, and transplanting such products into larger containers, to be a farm operation. The Department also considers the production, preparation and marketing of woody mature plants that have been planted or healed into the ground at the nursery, or that are balled/burlapped, and cared for and grown on the property for one year or longer, to be a farm operation. The production of sod is also part of a nursery operation. A farm operation may consist of one or more parcels of owned or rented land that is contiguous or noncontiguous to each other.

Many nursery operations contain accessory buildings, such as greenhouses, for the production and sale of their agricultural products. The Department guideline entitled *Local Laws Affecting Temporary Greenhouses* should be consulted concerning such structures. Many nursery operations also sell product directly to the public. The Department guideline entitled *Local Laws Affecting Direct Farm Marketing Activities* should be consulted concerning such sales.

Local governments and growers/plant dealers should also consult with the Division of Plant Industry, Department of Agriculture and Markets, to assure compliance with State Laws. The Division of Plant Industry (<http://www.agmkt.state.ny.us/PI/PIHome.html>) is responsible for maintaining plant health, promoting integrated pest management practices, preventing the introduction of and controlling invasive species, registering nurseries and plant dealers and detecting and preventing the spread of bee diseases.

The following are some of the specific matters that the Department considers when reviewing a local law that affects nursery operations:

A. Nursery Operations as a Permitted Use

Nursery operations should be a principal permitted use in all local zoning districts located in a county adopted, State certified agricultural district, since the purpose of such districts is to encourage the development and improvement of agricultural land. Agricultural uses and structures within an agricultural district should generally not be subject to special use permits, use variances or non-conforming use requirements. Nursery operations may sell their products either retail or wholesale.

B. Product Origin

Some farmers import crops from other farms to sell at their stands to increase the diversity of products offered or to bridge periods of low supply of commodities produced on-farm. Product diversity may attract potential customers to a roadside stand or farm market. The Department believes the sale of some agricultural products grown off the farm should be allowed, but has not established a percentage of on-farm versus off-farm products for that purpose. The Department considers the facts of a particular case in making a determination whether a local law is unreasonably restrictive, but generally would view as reasonable a requirement for predominance of on-farm products. The needs of "start-up" farm operations should also be

considered. These farms often start by selling a large percentage of agricultural products grown off the farm in order to develop a customer base and maintain income while their farms are growing. Therefore, if a percentage of on-farm products were required by a locality, these farms should be allowed a reasonable period of time to meet the percentage.

The Department considers agricultural commodities produced "on-farm" to include any products that may have been produced by a farmer in his or her "farm operation" from bare rootstock, seeds, cuttings, plugs, or other immature plants, and transplanting such products into larger containers, to be a farm operation. The Department also considers the production, preparation and marketing of woody mature plants that are balled/burlapped or have been planted or healed into the ground at the nursery, and cared for and grown on the property for one year or longer, to be a farm operation. A "farm operation" may consist of a number of parcels owned or leased by that farmer throughout a town, county, or the State. The Department considers all such land as part of the farm operation.

C. Equipment Storage, Use and Maintenance

Local governments should allow farm operations within a county adopted, State certified agricultural district to store, use and maintain farm equipment for agricultural purposes in an amount and type consistent with the needs and scope of the farm operation. An on-site review of such equipment and the farm operation may be necessary to determine if the equipment is utilized for agricultural purposes as part of the farm operation.

The on-farm equipment and vehicle storage, use and maintenance, and activities of employees (e.g., parking), and the dispatching of such equipment and vehicles, which are necessary for the installation of nursery stock and plant material at a client's site, is part of a "farm operation" under certain conditions. These include that the nursery stock and plant material be produced by the farmer in the farmer's "farm operation" from bare rootstock, seeds, cuttings, plugs, or other immature plants or mature plants that have been planted in the ground at the nursery, or transplanted into larger containers, and cared for and grown on the property for one year or longer; the nursery offers a survivability guarantee for a period of at least three years (for sod, a guarantee of approximately four weeks, until it takes root); and the nursery stock and plant material is planted and cared for by staff employed by the nursery.

D. Storage and Use of Non-Plant Material

The Department has concluded that stockpiled soil and mulch are often necessary for the on-farm production, preparation and marketing of nursery stock. Soil and mulch are used on the farm to plant and care for nursery stock which is grown in the ground on the farm and to prepare the stock for sale. Soil and mulch are also sold to retail and wholesale customers for use in replanting nursery stock. Potting soil used by the nursery operation is also considered necessary for the production of horticultural plant material. Therefore, the storage, use and sale of soil, mulch and potting soil, in an amount consistent with the size and scope of the nursery, is part of the farm operation. In the Department's view, however, the sale of hardscrabble, landscape timbers, masonry for the construction of retaining walls and firewood is not necessary for the production, preparation and marketing of nursery plants and, therefore, is not part of a "farm operation."
