d/b/a VERIZON WIRELESS)
FOR ISSUANCE OF A CERTIFICATE OF PUBLIC) CASE NO.: 2017-00128
CONVENIENCE AND NECESSITY TO CONSTRUCT)
A WIRELESS COMMUNICATIONS FACILITY)
IN THE COMMONWEALTH OF KENTUCKY)
IN THE COUNTY OF PULASKI)

SITE NAME: SOMERSET WT RELO

* * * * *

**APPLICATION FOR
CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY
FOR CONSTRUCTION OF A WIRELESS COMMUNICATIONS FACILITY**

Rural Cellular Corporation d/b/a Verizon Wireless ("Applicant"), by counsel, pursuant to (i) KRS §§ 278.020, 278.040, 278.650, 278.665, and other statutory authority, and the rules and regulations applicable thereto, and (ii) the Telecommunications Act of 1996, respectfully submit this Application requesting issuance of a Certificate of Public Convenience and Necessity ("CPCN") from the Kentucky Public Service Commission ("PSC") to construct, maintain, and operate a Wireless Communications Facility ("WCF") to serve the customers of Verizon Wireless with wireless communications services.

In support of this Application, Applicant respectfully provides and states the following information:

1. The complete names and addresses of the Applicant is Rural Cellular Corporation d/b/a Verizon Wireless, having an address of 2421 Holloway Road, Louisville,

KY 40299.

2. Applicants propose construction of an antenna tower for communications services, which is to be located in an area outside the jurisdiction of a planning commission, and Applicants submit this application to the PSC for a certificate of public convenience and necessity pursuant to KRS §§ 278.020(1), 278.040, 278.650, 278.665, and other statutory authority.

3. The Amended and Restated Articles of Incorporation filed with the Minnesota Secretary of State and the Certificate of Authority issued by the Kentucky Secretary of State for Rural Cellular Corporation are attached as part of **Exhibit A**. Applicant is in good standing in the state in which they are organized and are authorized to transact business in Kentucky.

4. Verizon Wireless operates on frequencies licensed by the Federal Communications Commission ("FCC") pursuant to applicable FCC requirements. A copy of the Verizon Wireless' FCC license to provide wireless services is attached to this Application or described as part of **Exhibit A**, and the facility will be constructed and operated in accordance with applicable FCC regulations. Verizon Wireless will build, own and manage the tower and tower compound and place its equipment building, antennas, radio electronics equipment and appurtenances.

5. The public convenience and necessity require the construction of the proposed WCF. The construction of the WCF will bring or improve Verizon Wireless' services to an area currently not served or not adequately served by the Applicant by increasing coverage or capacity and thereby enhancing the public's access to innovative

and competitive wireless communications services. The WCF will provide a necessary link in Verizon Wireless' communications network that is designed to meet the increasing demands for wireless services in Kentucky's wireless communications service area. The WCF is an integral link in the Verizon Wireless' network design that must be in place to provide adequate coverage to the service area.

6. To address the above-described service needs, Applicants propose to construct a WCF at 1170 Bourbon Road in Somerset, Kentucky (37°02'20.56" North latitude, 84°38'42.26" West longitude), on a parcel of land located entirely within the county referenced in the caption of this application. The property on which the WCF will be located is owned by S & C Land Company, LLC pursuant to a Deed recorded at Deed Book 957, Page 59 in the office of the Pulaski County Clerk. The proposed WCF will consist of a 100-foot tall tower, with an approximately 5-foot tall lightning arrestor attached at the top, for a total height of 105-feet. The WCF will also include concrete foundations and a shelter or cabinets to accommodate the placement of Verizon Wireless' radio electronics equipment and appurtenant equipment. Verizon Wireless' equipment cabinet or shelter will be approved for use in the Commonwealth of Kentucky by the relevant building inspector. The WCF compound will be fenced and all access gate(s) will be secured. A description of the manner in which the proposed WCF will be constructed is attached as **Exhibit B** and **Exhibit C**.

7. A list of utilities, corporations, or persons with whom the proposed WCF is likely to compete is attached as **Exhibit D**.

8. The site development plan and a vertical profile sketch of the WCF signed

and sealed by a professional engineer registered in Kentucky depicting the tower height, as well as a proposed configuration for the antennas has also been included as part of **Exhibit B**. As shown on this exhibit, the site has been designed to accommodate the co-location of future antennas.

9. Foundation design plans signed and sealed by a professional engineer registered in Kentucky and a description of the standards according to which the tower was designed are included as part of **Exhibit C**.

10. Applicant has considered the likely effects of the installation of the proposed WCF on nearby land uses and values and has concluded that there is no more suitable location reasonably available from which adequate services can be provided, and that there are no reasonably available opportunities to co-locate Verizon Wireless' antennas on an existing structure. When suitable towers or structures exist, Applicants attempt to co-locate on existing structures such as communications towers or other structures capable of supporting Applicants' facilities; however, no other suitable or available co-location site was found to be located in the vicinity of the site.

11. A copy of the Determination of No Hazard to Air Navigation issued by the Federal Aviation Administration ("FAA") is attached as **Exhibit E**.

12. A copy of the application for Kentucky Airport Zoning Commission ("KAZC") Approval to construct the tower is attached as **Exhibit F**.

13. A geotechnical engineering firm has performed soil boring(s) and subsequent geotechnical engineering studies at the WCF site. A copy of the geotechnical engineering report, signed and sealed by a professional engineer registered in the Commonwealth of

Kentucky, is attached as **Exhibit G**. The name and address of the geotechnical engineering firm and the professional engineer registered in the Commonwealth of Kentucky who supervised the examination of this WCF site are included as part of this exhibit.

14. Clear directions to the proposed WCF site from the County seat are attached as **Exhibit H**. The name and telephone number of the preparer of **Exhibit H** are included as part of this exhibit.

15. Applicants, pursuant to a written agreement, have acquired the right to use the WCF site and associated property rights. A copy of the agreement or an abbreviated agreement recorded with the County Clerk is attached as **Exhibit I**.

16. Personnel directly responsible for the design and construction of the proposed WCF are well qualified and experienced. The tower and foundation drawings for the proposed tower submitted as part of **Exhibit C** bear the signature and stamp of a professional engineer registered in the Commonwealth of Kentucky. All tower designs meet or exceed the minimum requirements of applicable laws and regulations.

17. The identities of each person directly responsible for design and construction of the proposed tower are included in tower and foundation design plans attached as part of **Exhibit B** and **Exhibit C**. Construction of the tower will be under the supervision of Applicants.

18. As noted on the Survey attached as part of **Exhibit B**, the surveyor has determined that the site is not within any flood hazard area.

19. **Exhibit B** includes a map drawn to an appropriate scale that shows the

location of the proposed tower and identifies every owner of real estate within 500 feet of the proposed tower (according to the records maintained by the County Property Valuation Administrator). Every structure and every easement within 500 feet of the proposed tower or within 200 feet of the access road including intersection with the public street system is illustrated in **Exhibit B**.

20. Applicants have notified every person who, according to the records of the County Property Valuation Administrator, owns property which is within 500 feet of the proposed tower or contiguous to the site property, by certified mail, return receipt requested, of the proposed construction. Each notified property owner has been provided with a map of the location of the proposed construction, the telephone number and address of the PSC, and has been informed of his or her right to request intervention. A list of the notified property owners and a copy of the form of the notice sent by certified mail to each landowner are attached as **Exhibit J** and **Exhibit K**, respectively.

21. Applicants have notified the applicable County Judge/Executive by certified mail, return receipt requested, of the proposed construction. This notice included the PSC docket number under which the application will be processed and informed the County Judge/Executive of his/her right to request intervention. A copy of this notice is attached as **Exhibit L**.

22. Notice signs meeting the requirements prescribed by 807 KAR 5:063, Section 1(2) that measure at least 2 feet in height and 4 feet in width and that contain all required language in letters of required height, have been posted, one in a visible location on the proposed site and one on the nearest public road. Such signs shall remain posted for at

least two weeks after filing of the Application, and a copy of the posted text is attached as **Exhibit M**. Notice of the location of the proposed facility has been published in a newspaper of general circulation in the county in which the WCF is proposed to be located.

23. The general area where the proposed facility is very sparsely populated with more than 700' separating the proposed tower from the nearest residence.

24. The process that was used by Verizon Wireless' radio frequency engineers in selecting the site for the proposed WCF was consistent with the general process used for selecting all other existing and proposed WCF facilities within the proposed network design area. Verizon Wireless' radio frequency engineers have conducted studies and tests in order to develop a highly efficient network that is designed to handle voice and data traffic in the service area. The engineers determined an optimum area for the placement of the proposed facility in terms of elevation and location to provide the best quality service to customers in the service area. A radio frequency design search area prepared in reference to these radio frequency studies was considered by the Applicant when searching for sites for its antennas that would provide the coverage deemed necessary by Verizon Wireless. A map of the area in which the tower is proposed to be located which is drawn to scale and clearly depicts the necessary search area within which the site should be located pursuant to radio frequency requirements is attached as **Exhibit N**.

25. The tower must be located at the proposed location and proposed height to provide necessary service to wireless communications users in the subject area. A report prepared by a radio frequency engineer that describes the need for the proposed facility is attached as **Exhibit O**.

26. All Exhibits to this Application are hereby incorporated by reference as if fully set out as part of the Application.

27. All responses and requests associated with this Application may be directed to:

David A. Pike

ARTICLES OF AMENDMENT
OF
RURAL CELULAR CORPORATION

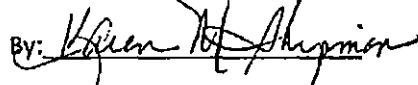

May 13, 2011

Pursuant to Section 302A.139 of the Minnesota Business Corporation Act, the undersigned domestic corporation (the "Corporation") hereby certifies as follows:

1. The name of the Corporation is Rural Cellular Corporation.
2. By virtue of the filing of the Articles of Merger filed with the Department of State on August 6, 2008 and the approval of the Plan of Merger set forth as Exhibit A thereto, the Corporation has adopted an amendment to its Articles of Incorporation (the "Articles") providing that the Articles are amended and restated so as to read in their entirety as set forth in Exhibit A hereto.
3. This amendment restating the Articles correctly sets forth without change the corresponding provisions of the Articles as previously amended.
4. This amendment has been adopted pursuant to chapter 302A of the Minnesota Business Corporation Act.

IN WITNESS WHEREOF, the Corporation has duly executed these Articles of Amendment as of the date first set forth above.

RURAL CELLULAR CORPORATION

By: 

Name: Karen M. Shipman

Title: Assistant Secretary

Exhibit A

**AMENDED AND RESTATED ARTICLES OF INCORPORATION
OF
RURAL CELLULAR CORPORATION**

The following amended and restated articles have been duly adopted by Rural Cellular Corporation, a Profit Business Corporation organized and existing under Chapter 302A of the laws of the State of Minnesota:

ARTICLE I – BUSINESS NAME

Name of Corporation is: Rural Cellular Corporation

ARTICLE II – REGISTERED OFFICE AND AGENT

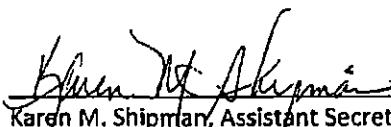

The Registered Office Address of the Corporation is: 100 South Fifth Street, Suite 1075, Minneapolis, MN 55402

The Registered Agent at the above address is: C T Corporation System Inc.

ARTICLE III – SHARES

The Corporation is authorized to issues a total of 1,000 shares at \$0.01 par value per share.

I, the undersigned Assistant Secretary of the Corporation, certify as of this 13 day of May, 2011, that I am authorized to sign these articles and that the information in these articles is true and correct. I also understand that if any of this information is intentionally or knowingly misstated that criminal penalties will apply as if I had signed these Articles under oath.

GENERAL NOTES

BASIS OF BEARING IS GPS OBSERVATIONS COMPLETED ON MARCH 1, 2016.

NO SEARCH OF PUBLIC RECORDS HAS BEEN COMPLETED BY POD GROUP TO DETERMINE ANY DEFECTS AND/OR AMBIGUITIES IN THE TITLE OF THE PARENT PARCEL.

THIS SURVEY IS FOR THE PROPOSED LEASE AREA, THE PROPOSED ACCESS & UTILITY EASEMENT AND ONLY A PARTIAL BOUNDARY SURVEY OF THE PARENT TRACT HAS BEEN PERFORMED.

A PORTION OF THIS SURVEY WAS CONDUCTED BY METHOD OF RANDOM TRAVERSE WITH SIDE SHOTS. UNADJUSTED CLOSURE FOR THIS TRACT EQUALS 0.06', FOR A PRECISION OF 1:48,333 AND HAS NOT BEEN ADJUSTED.

THIS PROPERTY IS SUBJECT TO ANY RECORDED EASEMENTS AND/OR RIGHTS OF WAY SHOWN HEREON OR NOT.

THE PROPOSED LEASE AREA, THE PROPOSED ACCESS & UTILITY EASEMENT AND PARENT PARCEL SHOWN HEREON ARE NOT LOCATED IN A 100-YEAR FLOOD PLAIN PER FLOOD HAZARD BOUNDARY MAP, COMMUNITY-PANEL NUMBER 21199C0292C, DATED JULY 22, 2010. THE PROPOSED LEASE AREA IS LOCATED IN ZONE X.

THIS DRAWING IS NOT INTENDED FOR LAND TRANSFER.

TOWER DESIGN NOTES

1. Tower designed for Exposure C to the TIA-222-G Standard.
2. Tower designed for a 90 mph basic wind in accordance with the TIA-222-G Standard.
3. Tower is also designed for a 30 mph basic wind with 0.75 in ice. Ice is considered to increase in thickness with height.
4. Deflections are based upon a 60 mph wind.
5. Tower Structure Class II.
6. Topographic Category 3 with Crest Height of 130.00 ft
7. TOWER RATING: 98.6%

ALL REACTIONS

	Client Verizon Wireless	Designed by tkrou

Tower Input Data

There is a pole section.

This tower is designed using the TIA-222-G standard.

The following design criteria apply:

Basic wind speed of 90 mph.

Structure Class II.

Exposure Category C.

Topographic Category 3.

Crest Height 130.00 ft.

Nominal ice thickness of 0.7500 in.

Ice thickness is considered to increase with height.

Ice density of 56 pcf.

A wind speed of 30 mph is used in combination with ice.

Temperature drop of 50 °F.

Deflections calculated using a wind speed of 60 mph.

A non-linear (P-delta) analysis was used.

Pressures are calculated at each section.

Stress ratio used in pole design is 1.

Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

Options

Consider Moments - Legs	Distribute Leg Loads As Uniform	Treat Feedline Bundles As Cylinder
Consider Moments - Horizontals	Assume Legs Pinned	Use ASCE 10 X-Brace Ly Rules
Consider Moments - Diagonals	✓ Assume Rigid Index Plate	✓ Calculate Redundant Bracing Forces
Use Moment Magnification	✓ Use Clear Spans For Wind Area	✓ Ignore Redundant Members in FEA
✓ Use Code Stress Ratios	✓ Use Clear Spans For KL/r	✓ SR Leg Bolts Resist Compression
✓ Use Code Safety Factors - Guys	✓ Retension Guys To Initial Tension	✓ All Leg Panels Have Same Allowable
Escalate Ice	✓ Bypass Mast Stability Checks	Offset Girt At Foundation
Always Use Max Kz	✓ Use Azimuth Dish Coefficients	Consider Feedline Torque
Use Special Wind Profile	✓ Project Wind Area of Appurt.	Include Angle Block Shear Check
Include Bolts In Member Capacity	✓ Autocalc Torque Arm Areas	Poles
✓ Leg Bolts Are At Top Of Section	✓ SR Members Have Cut Ends	✓ Include Shear-Torsion Interaction
✓ Secondary Horizontal Braces Leg	Sort Capacity Reports By Component	Always Use Sub-Critical Flow
Use Diamond Inner Bracing (4 Sided)	✓ Triangulate Diamond Inner Bracing	Use Top Mounted Sockets
Add IBC .6D+W Combination

Pole Mat & Pier Foundation Design

Order/Quote Number: SO23778
 Part Number: 345622
 Tower Model: NTP 45" x 100'
 Company: Verizon Wireless
 Site: LV Somerset WT - Pulaski Co., KY

Tower Reactions (Factored)	
Shear:	39,649 kips
Moment:	2600,724 ft-kips
Weight:	30,464 kips
Compression:	30,464 kips
Uplift:	0.000 kips

Site Details	
Soil Type:	Clay ▼
Soil Unit Weight (Backfill):	120pcf
Allowable Bearing Pressure:	7000 psf
Factor of Safety:	2
Ultimate Bearing Pressure:	14,000 psf
Bearing Pressure Type:	Net Bearing Pressure ▼
Angle of Internal Friction:	0 degrees
Cohesion:	2500 psf
Sliding Friction Coefficient:	0.3
Frost Depth (Neglected):	2.5 ft
Min. Bearing Depth:	4 ft
Water Depth:	998 ft
Rock Depth:	5.5 ft
Passive Pressure Coefficient:	1.00
Active Pressure Coefficient:	1.00

Design Dimensions	
Pole Base Outside Diameter:	45.125 in
Pole Wall Thickness:	0.3125 in
Pier Extension:	0.5 ft
Pier Diameter:	6 ft
Depth:	5.5 ft
Pad Thickness:	1.75 ft
Pad Width:	21.5 ft
Eccentricity:	0.00 ft
Anchor Bolt Circle Diameter:	52 in
Embedment Plate Diameter:	57 in
Embedment Plate ID:	47 in
Distance to Concrete Edge:	10.75 ft

Notes

- Foundation design is based on the Geotechnical Report dated 06/30/2016, by Power of Design Group, LLC; Project No. 16-7955.

- Groundwater was not encountered during the geotechnical investigation.

- Hard rock conditions were encountered about 5.5 feet bgs in the geotechnical investigation (see geo report for details). The contractor should anticipate difficult excavation below this depth and be prepared with the necessary equipment to remove such material in order to create a level bearing surface. The depth to rock material may vary across the foundation footprint. The entire footing shall bear on leveled, competent rock or bear on a layer of lean concrete (2000 psi) placed in direct contact with competent rock. Proper drainage shall be provided to avoid a bathtub effect.

- This mat design assumes an ultimate bearing capacity of 14000 psf (allowable bearing capacity of 7000 psf) based on the geotechnical report. The bearing surface shall be inspected prior to concrete placement.

ADDITIONAL NOTES	
- Foundation design is based on the Geotechnical Report dated 06/30/2016, by Power of Design Group, LLC; Project No. 16-7955.	
- Groundwater was not encountered during the geotechnical investigation.	
- Hard rock conditions were encountered about 5.5 feet bgs in the geotechnical investigation (see geo report for details). The contractor should anticipate difficult excavation below this depth and be prepared with the necessary equipment to remove such material in order to create a level bearing surface. The depth to rock material may vary across the foundation footprint. The entire footing shall bear on leveled, competent rock or bear on a layer of lean concrete (2000 psi) placed in direct contact with competent rock. Proper drainage shall be provided to avoid a bathtub effect.	
- This mat design assumes an ultimate bearing capacity of 14000 psf (allowable bearing capacity of 7000 psf) based on the geotechnical report. The bearing surface shall be inspected prior to concrete placement.	
- During placement, concrete shall be suitably consolidated. Proper curing methods shall be used directly following concrete placement as established by the contractor. Concrete shall develop a minimum compressive strength of 2500 psi prior to backfill and compaction operations, and backfill shall be compacted to a minimum moist unit weight of 120 pcf.

Notes

- Foundation design is based on the Geotechnical Report dated 06/30/2016, by Power of Design Group, LLC; Project No. 16-7955.
- Groundwater was not encountered during the geotechnical investigation.
- Temporary steel casing or drilling slurry may be required for installation of the drilled pier. A clean-out bucket should be used to remove any cuttings and loose soils in the bottom of the shaft excavation.
- Concrete shall be placed by tremie methods if there is more than 1 inch of water or drilling fluid at the bottom of the shaft excavation or if water infiltration exceeds a rise of 1/4" per minute.
- Shaft excavation will require high power and high torque rock drilling equipment to progress through the existing limestone. A series of progressively larger rock augers may be needed to ream out a small pilot hole.

Problem Title

Job Number: S023778

Client: Verizon Wireless

Engineer: JLM

Description: FDN NO: 345622

Program Options

Engineering units are US Customary Units: pounds, inches, feet

345622.LPile.lp6o

Basic Program Options:

This analysis computes pile response to lateral loading and will compute nonlinear moment-curvature and nominal moment capacity for section types with nonlinear properties.

Computation Options:

- Analysis does not use p-y multipliers (individual pile or shaft only)
- Analysis assumes no shear resistance at pile tip
- Analysis for fixed-length pile or shaft only
- No computation of foundation stiffness matrix values
- Report pile response for full length of pile
- Analysis assumes no loading by soil movements acting on pile
- No p-y curves to be computed and reported for user-specified depths

Solution Control Parameters:

- Number of pile increments = 100
- Maximum number of iterations allowed = 500
- Deflection tolerance for convergence = 1.0000E-05 in
- Maximum allowable deflection = 100.0000 in

Pile Response Output Options:

- Values of pile-head deflection, bending moment, shear force, and soil reaction are printed for full length of pile.
- Printing Increment (nodal spacing of output points) = 1

Pile Structural Properties and Geometry

Total Number of Sections	=	1
Total Pile Length	=	16.50 ft
Depth of ground surface below top of pile	=	0.50 ft

Pile dimensions used for p-y curve computations defined using 2 points.
p-y curves are computed using values of pile diameter interpolated over
the length of the pile.

Point	Depth X ft	Pile Diameter in
1	0.00000	72.0000000
2	16.50000	72.0000000

Input Structural Properties:

Pile Section No. 1:

Section Type	= Drilled Shaft (Bored Pile)
Section Length	= 16.5000000 ft
Section Diameter	= 72.0000000 in

345622.LPile.lp6o

Ground Slope Angle	=	0.000 degrees
	=	0.000 radians
Pile Batter Angle	=	0.000 degrees
	=	0.000 radians

Soil and Rock Layering Information

The soil profile is modelled using 3 layers

Layer 1 is soft clay, p-y criteria by Matlock, 1970

Distance from top of pile to top of layer	=	0.50000 ft
Distance from top of pile to bottom of layer	=	3.50000 ft
Effective unit weight at top of layer	=	100.00000 pcf
Effective unit weight at bottom of layer	=	100.00000 pcf
Undrained cohesion at top of layer	=	250.00000 psi
Undrained cohesion at bottom of layer	=	250.00000 psi
Epsilon-50 at top of layer	=	0.10000
Epsilon-50 at bottom of layer	=	0.10000

Layer 2 is stiff clay with water-induced erosion

Distance from top of pile to top of layer	=	3.50000 ft
Distance from top of pile to bottom of layer	=	6.50000 ft
Effective unit weight at top of layer	=	120.00000 pcf
Effective unit weight at bottom of layer	=	120.00000 pcf
Undrained cohesion at top of layer	=	2500.00000 psi
Undrained cohesion at bottom of layer	=	2500.00000 psi
Epsilon-50 at top of layer	=	0.00700
Epsilon-50 at bottom of layer	=	0.00700
Subgrade k at top of layer	=	100.00000 pci
Subgrade k at bottom of layer	=	100.00000 pci

Layer 3 is weak rock, p-y criteria by Reese, 1997

Distance from top of pile to top of layer	=	6.50000 ft
Distance from top of pile to bottom of layer	=	17.00000 ft
Effective unit weight at top of layer	=	135.00000 pcf
Effective unit weight at bottom of layer	=	135.00000 pcf
Uniaxial compressive strength at top of layer	=	278.00000 psi
Uniaxial compressive strength at bottom of layer	=	278.00000 psi
Initial modulus of rock at top of layer	=	27800. psi
Initial modulus of rock at bottom of layer	=	27800. psi
RQD of rock at top of layer	=	75.00000 %
RQD of rock at bottom of layer	=	75.00000 %
k_rm of rock at top of layer	=	0.0005000
k_rm of rock at bottom of layer	=	0.0005000

(Depth of lowest soil layer extends 0.50 ft below pile tip)

Loading Type

Static loading criteria were used when computing p-y curves for all analyses.

Pile-head Loading and Pile-head Fixity Conditions

Number of loads specified = 2

Load No.	Load Type	Condition 1	Condition 2	Axial Thrust Force, lbs
1	1	V = 52865. lbs	M = 41611584. in-lbs	40619.
2	1	V = 9701.00000 lbs	M = 7585140. in-lbs	25387.

V = perpendicular shear force applied to pile head

M = bending moment applied to pile head

y = lateral deflection relative to pile axis

S = pile slope relative to original pile batter angle

R = rotational stiffness applied to pile head

Axial thrust is assumed to be acting axially for all pile batter angles.

Computations of Nominal Moment Capacity and Nonlinear Bending Stiffness

Axial thrust force values were determined from pile-head loading conditions

Number of Pile Sections Analyzed = 1

Pile Section No. 1:

Dimensions and Properties of Drilled Shaft:

Length of Section	=	16.5000000 ft
Shaft Diameter	=	72.0000000 in
Concrete Cover Thickness	=	3.0000000 in
Number of Reinforcing Bars	=	31 bars
Yield Stress of Reinforcing Bars	=	60.0000000 ksi
Modulus of Elasticity of Reinforcing Bars	=	29000. ksi
Gross Area of Shaft	=	4071.50407905 sq. in.
Total Area of Reinforcing Steel	=	24.49000000 sq. in.
Area Ratio of Steel Reinforcement	=	0.60 percent
Edge-to-Edge Bar Spacing	=	5.57594093 in
Rebar Offset	=	0.000000 in

Axial Structural Capacities:

Nom. Axial Structural Capacity = 0.85 Fc Ac + Fy As	=	15229.248 kips
Tensile Load for Cracking of Concrete	=	-1765.129 kips
Nominal Axial Tensile Capacity	=	-1469.400 kips

Reinforcing Bar Dimensions and Positions Used in Computations:

Concrete Properties:

Compressive Strength of Concrete	=	4.00000000 ksi
Modulus of Elasticity of Concrete	=	3604.99653259 ksi
Modulus of Rupture of Concrete	=	-0.47434164 ksi
Compression Strain at Peak Stress	=	0.00188627
Tensile Strain at Fracture of Concrete	=	-0.00011537
Maximum Coarse Aggregate Size	=	0.75000000 in

Number of Axial Thrust Force Values Determined from Pile-head Loadings = 2

Number	Axial Thrust Force kips
1	25.387
2	40.619

Definitions of Run Messages and Notes:

C = concrete in section has cracked in tension.

Y = stress in reinforcing steel has reached yield stress.

T = ACI 318-08 criteria for tension-controlled section met, tensile strain in reinforcement exceeds 0.005 while simultaneously compressive strain in concrete more than than 0.003. See ACI 318-08, Section 10.3.4.

Z = depth of tensile zone in concrete section is less than 10 percent of section depth.

Bending Stiffness (EI) = Computed Bending Moment / Curvature.

Position of neutral axis is measured from edge of compression side of pile.

Compressive stresses and strains are positive in sign.

Tensile stresses and strains are negative in sign.

Axial Thrust Force = 25.387 kips

Concrete Stress ksi	Max Steel Curvature rad/in.	Bending Moment in-kip	Bending Stiffness kip-in ²	Depth to N Axis in	Max Comp Strain in/in	Max Tens Strain in/in	Max

Summary of Results for Nominal (Unfactored) Moment Capacity for Section 1

Moment values interpolated at maximum compressive strain = 0.003
or maximum developed moment if pile fails at smaller strains.

Load No.	Axial Thrust kips	Nominal Mom. Cap. in-kip	Max. Comp. Strain
1	25.387	45755.897	0.00300000
2	40.619	46171.291	0.00300000

Note note that the values of moment capacity in the table above are not factored by a strength reduction factor (phi-factor).

In ACI 318-08, the value of the strength reduction factor depends on whether the transverse reinforcing steel bars are spirals or tied hoops.

The above values should be multiplied by the appropriate strength reduction factor to compute ultimate moment capacity according to ACI 318-08, Section 9.3.2.2 or the value required by the design standard being followed.

Computed Values of Pile Loading and Deflection
for Lateral Loading for Load Case Number 1

Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head	=	52865.000 lbs
Applied moment at pile head	=	41611584.000 in-lbs
Axial thrust load on pile head	=	40619.000 lbs

Depth	Deflect.	Bending	Shear	Slope	Total	Bending	Soil Res.
-------	----------	---------	-------	-------	-------	---------	-----------

* This analysis makes computations of pile response using nonlinear moment-curvature relationships.

The above values of total stress are computed for combined axial and bending stress in elastic

sections and do not equal actual stresses in concrete and steel in the range of nonlinear bending.

Output verification: Computed forces and moments are within specified convergence limits.

Output Summary for Load Case No. 1:

Pile-head deflection	=	1.3302301 inches
Computed slope at pile head	=	-0.0172338 radians
Maximum bending moment	=	45114288. inch-lbs
Maximum shear force	=	-712003. lbs
Depth of maximum bending moment	=	79.2000000 inches below pile head
Depth of maximum shear force	=	150.4800000 inches below pile head
Number of iterations	=	106
Number of zero deflection points	=	1

Computed Values of Pile Loading and Deflection for Lateral Loading for Load Case Number 2

Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head	=	9701.000 lbs
Applied moment at pile head	=	7585140.000 in-lbs
Axial thrust load on pile head	=	25387.000 lbs

Depth Soil Spr. X Es*h inches lb/inch	Deflect. Distrib. y Lat. Load inches lb/inch	Bending Moment in-lbs	Shear Force lbs	Slope radians	Total Stress psi*	Bending Stiffness 1b-in^2	Soil Res. p 1b/in

* This analysis makes computations of pile response using nonlinear moment-curvature relationships.

The above values of total stress are computed for combined axial and bending stress in elastic

sections and do not equal actual stresses in concrete and steel in the range of nonlinear bending.

Output Verification: Computed forces and moments are within specified convergence limits.

Output Summary for Load Case No. 2:

Pile-head deflection	=	0.0135469 inches
Computed slope at pile head	=	-0.0001911 radians
Maximum bending moment	=	8319452. inch-lbs
Maximum shear force	=	-117220. lbs
Depth of maximum bending moment	=	81.1800000 inches below pile head
Depth of maximum shear force	=	132.6600000 inches below pile head
Number of iterations	=	9
Number of zero deflection points	=	1

Summary of Pile Response(s)

Definitions of Pile-head Loading Conditions:

Load Type 1: Load 1 = Shear, lbs, and Load 2 = Moment, in-lbs
 Load Type 2: Load 1 = Shear, lbs, and Load 2 = Slope, radians
 Load Type 3: Load 1 = Shear, lbs, and Load 2 = Rotational Stiffness, in-lbs/radian
 Load Type 4: Load 1 = Top Deflection, inches, and Load 2 = Moment, in-lbs
 Load Type 5: Load 1 = Top Deflection, inches, and Load 2 = Slope, radians

Load Case	Load Type	Pile-head Condition 1	Pile-head Condition 2	Axial Loading	Pile-head Deflection	Maximum Moment
Maximum Shear	Shear	V(lbs) or Rotation	in-lb, rad., or in-lb/rad.	lbs	inches	in-lbs
No. 1	No. 1	y(inches)				
lbs	radians

**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:	Antenna Tower Somerset
Location:	Somerset, KY
Latitude:	37-02-20.56N NAD 83
Longitude:	84-38-42.26W
Heights:	1111 feet site elevation (SE) 105 feet above ground level (AGL) 1216 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure would have no substantial adverse effect on the safe and efficient utilization of the navigable airspace by aircraft or on the operation of air navigation facilities. Therefore, pursuant to the authority delegated to me, it is hereby determined that the structure would not be a hazard to air navigation provided the following condition(s) is(are) met:

As a condition to this Determination, the structure is marked/lighted in accordance with FAA Advisory circular 70/7460-1 L, Obstruction Marking and Lighting, a med-dual system - Chapters 4,8(M-Dual),&12.

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

- At least 10 days prior to start of construction (7460-2, Part 1)
 Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

See attachment for additional condition(s) or information.

Any height exceeding 105 feet above ground level (1216 feet above mean sea level), will result in a substantial adverse effect and would warrant a Determination of Hazard to Air Navigation.

This determination expires on 12/15/2017 unless:

- (a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.
- (b) extended, revised, or terminated by the issuing office.
- (c) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is subject to review if an interested party files a petition that is received by the FAA on or before July 15, 2016. In the event a petition for review is filed, it must contain a full statement of the basis upon which it is made and be submitted to the Manager, Airspace Policy & Regulation, Federal Aviation Administration, 800 Independence Ave, SW, Room 423, Washington, DC 20591.

This determination becomes final on July 25, 2016 unless a petition is timely filed. In which case, this determination will not become final pending disposition of the petition. Interested parties will be notified of the grant of any review. For any questions regarding your petition, please contact Airspace Regulations & ATC Procedures Group via telephone -- 202-267-8783 - or facsimile 202-267-9328.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

Any failure or malfunction that lasts more than thirty (30) minutes and affects a top light or flashing obstruction light, regardless of its position, should be reported immediately to (877) 487-6867 so a Notice to Airmen (NOTAM) can be issued. As soon as the normal operation is restored, notify the same number.

This aeronautical study considered and analyzed the impact on existing and proposed arrival, departure, and en route procedures for aircraft operating under both visual flight rules and instrument flight rules; the impact on all existing and planned public-use airports, military airports and aeronautical facilities; and the cumulative impact resulting from the studied structure when combined with the impact of other existing or proposed structures. The study disclosed that the described structure would have no substantial adverse effect on air navigation.

An account of the study findings, aeronautical objections received by the FAA during the study (if any), and the basis for the FAA's decision in this matter can be found on the following page(s).

A copy of this determination will be forwarded to the Federal Communications Commission (FCC) because the structure is subject to their licensing authority.

If we can be of further assistance, please contact Kerrylene Yarber, at (202) 267-3215. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2016-ASO-6895-OE.

Additional information for ASN 2016-ASO-6895-OE

Aeronautical Study Number 2016-ASO-6895-OE

Abbreviations

AGL - above ground level

MSL - mean sea level

RWY - runway

VFR - visual flight rules

IFR - instrument flight rules

nm - nautical mile

Part 77 - Title 14 Code of Federal Regulations (CFR) Part 77, Objects Affecting Navigable Airspace

1. LOCATION OF PROPOSED CONSTRUCTION

This proposal is for a 105-foot above ground level (AGL), 1,216 feet above mean sea level (MSL), antenna, to be located approximately 7,337 feet (1.21 nm) east of the RWY 05 end at Lake Cumberland Regional Airport (SME), in Somerset, KY. The SME airport elevation is 911 feet MSL.

2. OBSTRUCTION STANDARDS EXCEEDED

The structure is identified as an obstruction under the following Part 77 standard:

Section 77.19(a): The surface of a takeoff and landing area of an airport or any imaginary surface established under 77.17, 77.19, or 77.23. This proposed structure would exceed the SME horizontal surface by 139 feet.

3. EFFECT ON AERONAUTICAL OPERATIONS

a. The impact on arrival, departure, and en route procedures for aircraft operating under VFR: The antenna structure would exceed the SME Part 77 conical surface by 31 feet.

b. The impact on arrival, departure, and en route procedures for aircraft operating under IFR: None.

c. The impact on all planned public-use airports and aeronautical facilities: Investigation complete, no comments were received.

d. The cumulative impact resulting from the proposed construction or alteration of a structure when combined with the impact of other existing or proposed structures: Investigation complete, no public comments received.

4. CIRCULATION AND COMMENTS RECEIVED

The proposal was circulated for public comment on May 3. The public comment period ended on June 9 and no responses were received.

5. DETERMINATION - NO HAZARD TO AIR NAVIGATION

It is determined that the proposed construction would not have a substantial adverse effect on the safe and efficient use of navigable airspace by aircraft.

6. BASIS FOR DECISION

Part 77 establishes standards for determining obstructions to air navigation. A structure that exceeds one or more of these standards is presumed to be a hazard to air navigation unless the obstruction evaluation study determines otherwise. Just because a proposed structure exceeds a Part 77 surface does not automatically make it a hazard.

In this case, the proposed antenna would exceed the SME horizontal surface by 139 feet and penetrate the VFR conical traffic pattern airspace by 31 feet; however, there are no IFR effects. No comments were received objecting to the proposal. There is an existing 96 foot AGL (1,216 MSL) water tower at the same height AMSL, located in close proximity to the proposed structure, currently equipped with red lights and paint. The incorporation of obstruction marking and lighting will mitigate the Part 77 conical and horizontal surface penetrations by making the antenna visible to pilots.

7. CONDITIONS

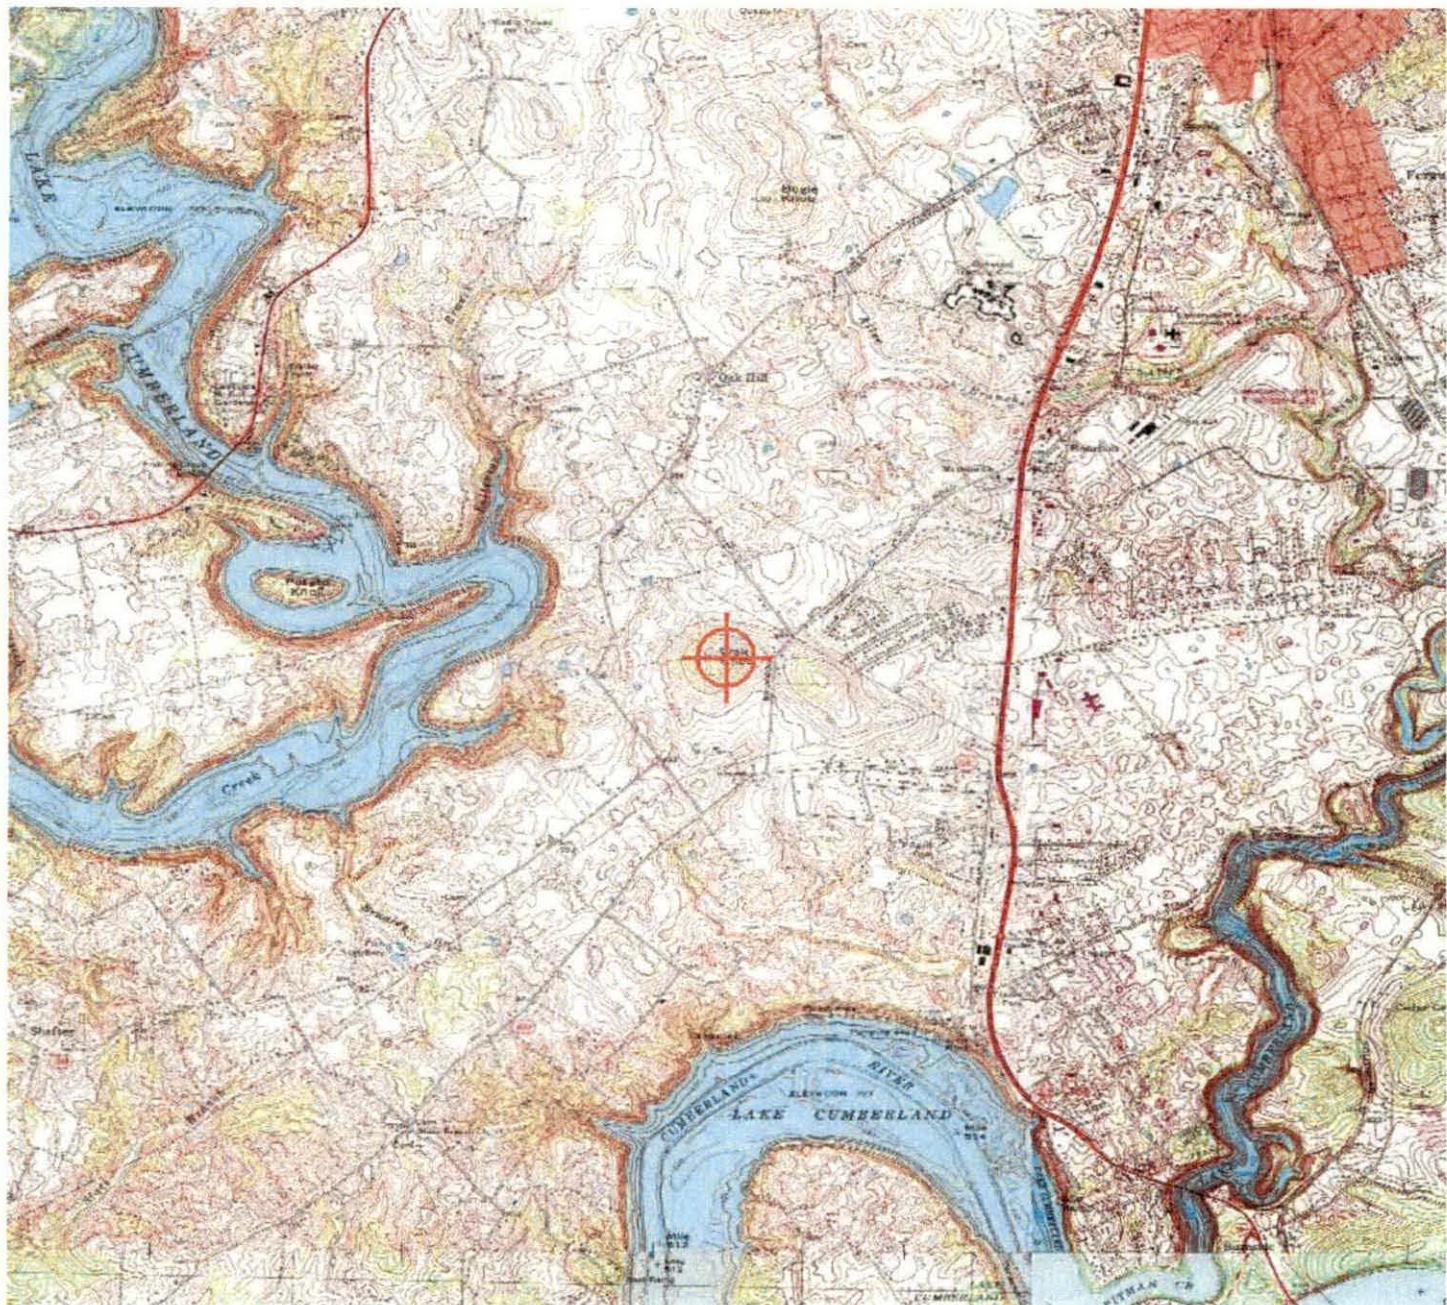

This structure shall be marked and lighted as outlined in chapters 4, 8 (Medium Dual), and 12, of Advisory Circular AC 70/7460-1L. The advisory circular is electronically available online at the following link: http://www.faa.gov/documentLibrary/media/Advisory_Circular/AC_70_7460-1L.pdf.

The proponent is required to notify the Lake Cumberland Regional Airport Manager at telephone number, 606-679-7908, three business days prior to starting construction. Additionally, the proponent is required to file FAA form 7460-2, Part 2, Actual Construction Notification, using the OE/AAA website (<http://oeaaa.faa.gov>), within five days after the structure reaches its greatest height. The Actual Construction Notification will be the source document for the FAA, detailing the structure's height, site location and elevation, and construction completion date to map on aeronautical charts and update the national obstruction database.

Dear Ms. Harper:

Attached is our geotechnical engineering report for the referenced project. This report contains our findings, an engineering interpretation of these findings with respect to the available project characteristics, and recommendations to aid design and construction of the tower, shelter or platform foundations.

We appreciate the opportunity to be of service to you on this project. If you have any questions regarding this report, please contact our office.

Cordially,

A handwritten signature in blue ink that reads "Mark Patterson".

Geotechnical Report
PROPOSED 100' MONOPOLE TOWER w/ 5' LIGHTNING ARRESTOR
Site Name: **LV Somerset WT Relo**
1170 Bourbon Road, Somerset, Pulaski County, Kentucky
N37° 02' 20.56" W84° 38' 42.26"
POD Project No. 16-7955

1. PURPOSE AND SCOPE

The purpose of this study was to determine the general subsurface conditions at the site of the proposed tower by drilling two borings and to evaluate this data with respect to foundation concept and design for the proposed tower. Also included is an evaluation of the site with respect to potential construction problems and recommendations dealing with quality control during construction.

2. PROJECT CHARACTERISTICS

Verizon Wireless is proposing to construct a monopole tower and either an equipment shelter or platform at N37° 02' 20.56", W84° 38' 42.26", 1170 Bourbon Road, Somerset, Pulaski County, Kentucky. The site located on Watt Knob in the southwest Somerset near the Cumberland River. A water tower is located at the top of Watt Knob and the proposed lease area is adjacent to the east. The proposed lease area will be 10,000 square feet and will be accessed by an existing gravel road running east to Bourbon Road. The proposed tower elevation is about EL 1111 and there is about 10 feet change in elevation across the proposed lease area. Surface water will run off to the southeast. The area is suburban. The proposed tower location is shown on the Boring Location Plan in the Appendix.

3. SUBSURFACE CONDITIONS

The subsurface conditions were explored by drilling two test borings near the base of the proposed tower. The Geotechnical Soil Test Boring Logs, which are included in the Appendix, describes the materials and conditions encountered. A sheet defining the terms and symbols used on the boring logs is also included in the Appendix. The general subsurface conditions disclosed by the test boring are discussed in the following paragraphs.

The proposed lease area is located at the near the top of Watt Knob, one of the several in the Somerset area, named Pilots Knob, about 100 feet higher than the surrounding area. According to the Kentucky Geological Survey, Kentucky Geologic Map Information Services, the site is underlain by the Upper Mississippian age Kidder Limestone member. There is low karst potential for the Kidder member, however the site is surrounded by highly karst limestone formation with a number of sinkholes mapped within one-half mile of the site.

The borings encountered about 4 inches of topsoil at the existing ground surface. Below the topsoil, the borings

encountered clay (CH) of high plasticity to auger refusal between 5.6 and 6.5 feet. The SPT N-values in the clay were between 13 and 32 blows per foot (bpf) generally indicating a stiff to hard consistency. Auger refusal is defined as the depth at which the boring can no longer be advanced using the current drilling method.

The refusal material was cored in Boring 1 from 6.5 to 16.5 feet below the ground surface. Limestone that was continuous, hard, moderately weathered and light gray to weathered brown was encountered. The recovery of the rock core was 92 percent and the RQD value was 75 percent. These values generally represent excellent quality rock from a foundation support viewpoint.

Observations made at the completion of soil drilling operations indicated the boring to be dry. It must be noted, however, that short-term water readings in test borings are not necessarily a reliable indication of the actual groundwater level. Furthermore, it must be emphasized that the groundwater level is not stationary, but will fluctuate seasonally.

Based on the limited subsurface conditions encountered at the site and using Table 1615.1.1 of the 2013 Kentucky Building Code, the site class is considered "B". Seismic design requirements for telecommunication towers are given in section 1622 of the code. A detailed seismic study was beyond the scope of this report.

4. FOUNDATION DESIGN RECOMMENDATIONS

The following design recommendations are based on the previously described project information, the subsurface conditions encountered in our borings, the results of our laboratory testing, empirical correlations for the soil types encountered, our analyses, and our experience. If there is any change in the project criteria or structure location, you should retain us to review our recommendations so that we can determine if any modifications are required. The findings of such a review can then be presented in a supplemental report or addendum.

We recommend that the geotechnical engineer be retained to review the near-final project plans and specifications, pertaining to the geotechnical aspects of the project, prior to bidding and construction. We recommend this review to check that our assumptions and evaluations are appropriate based on the current project information provided to us, and to check that our foundation and earthwork recommendations were properly interpreted and implemented.

4.1. Proposed Tower

Our findings indicate that the proposed monopole tower can be supported on drilled piers or on a common mat foundation.

4.1.1. Drilled Piers

The following table summarizes the recommended values for use in analyzing lateral and frictional resistance for the various strata encountered at the test boring. It is important to note that these values are estimated based on the standard penetration test results and soil types, and were not directly measured. The all values provided are ultimate values and appropriate factors of safety should be used in conjunction with these values. If the piers will bear deeper than about 16 feet, a deeper boring should be drilled to determine the nature of the deeper material.

Depth Below Ground Surface, feet	0 -3	3 - 6	38 - 40
Ultimate Bearing Pressure (psf)		14,000	110,500
C Undrained Shear Strength, psf	500	2500	20,000
Ø Angle of Internal Friction degrees	0	0	0
Total Unit Weight, pcf	120	120	135
Soil Modulus Parameter k, pci	30	100	2000
Passive Soil Pressure, psf/one foot of depth		3000 + 40(D-3)	13,000 + 45(D-3)
Side Friction, psf		200	1000

Note: D = Depth below ground surface (in feet) to point at which the passive pressure is calculated.

It is important that the drilled piers be installed by an experienced, competent drilled pier contractor who will be responsible for properly installing the piers in accordance with industry standards and generally accepted methods, without causing deterioration of the subgrade. The recommendations contained herein relate only to the soil-pier interaction and do not account for the structural design of the piers.

4.1.2. Mat Foundation

The tower could be supported on a common mat foundation bearing on the silty clay about 4 feet can be designed using a ultimate bearing pressure of 14,000 pounds per square foot may be used. This value may be increased by 30 percent for the maximum edge pressure under transient loads. A friction value of 0.30 may be used between the concrete and the clay soil. The passive pressures given for the drilled pier foundation may be used to resist lateral forces.

It is important that the mat be designed with an adequate factor of safety with regard to overturning under the maximum design wind load.

4.2. Equipment Platform

An equipment platform may be supported on shallow piers bearing in the natural clay and designed for a net allowable soil pressure of 2,500 pounds per square foot. The piers should bear at a depth of at least 30 inches to minimize the effects of frost action. All existing topsoil or soft natural soil should be removed beneath footings.

4.3. Equipment Building

If an equipment building support on a slab is chosen in place of the equipment platform, it may be supported on shallow spread footings bearing in the natural clay soil and designed for a net allowable soil pressure of 3,000 pounds per square foot.

The footings should be at least ten inches wide. If the footings bear on soil they should bear at a depth of at least 36 inches to minimize the effects of frost action. All existing topsoil or soft natural soil should be removed beneath footings.

The floor slab for the new equipment building can be supported on firm natural soils or on new compacted structural fill. Existing fill may be left in place below the slab if the owner can accept the possibility of greater than normal settlement and cracking. This risk can be reduced if the underlying subgrade is properly proof-rolled and any unstable areas disclosed by the proof-roll are improved as necessary.

Floor slabs must be supported on at least 4-inch layer of relatively clean granular material such as gravel or crushed stone containing not more than 10 percent material that passes through a No. 4 sieve. This is to help

distribute concentrated loads and equalize moisture conditions beneath the slab. Provided that a minimum of 4 in. of granular material is placed below the slab, a modulus of subgrade reaction (k_{30}) of 110 lbs/cu.in. can be used for design of the floor slabs.

4.4. Drainage and Groundwater Considerations

Good site drainage must be provided. Surface run-off water should be drained away from the tower and platform and not allowed to pond. It is recommended that all foundation concrete be placed the same day the excavation is made.

At the time of this investigation, groundwater was not encountered. Therefore, no special provisions regarding groundwater control are considered necessary for shallow foundations. Any seepage should be able to be pumped with sumps.

5. GENERAL CONSTRUCTION PROCEDURES AND RECOMMENDATIONS

It is possible that variations in subsurface conditions will be encountered during construction. Although only minor variations that can be readily evaluated and adjusted for during construction are anticipated, it is recommended the geotechnical engineer or a qualified representative be retained to perform continuous inspection and review during construction of the soils-related phases of the work. This will permit correlation between the test boring data and the actual soil conditions encountered during construction.

5.1 Drilled Piers

The following recommendations are recommended for drilled pier construction:

- Clean the foundation bearing area so it is nearly level or suitably benched and is free of ponded water or loose material.
- Make provisions for ground water removal from the drilled shaft excavation. While groundwater was not encountered during the soil drilling, some significant seepage may be encountered. The drilled pier contractor should have pumps on hand to remove water from the drilled pier.
- Specify concrete slumps ranging from 4 to 7 inches for the drilled shaft construction. These slumps are recommended to fill irregularities along the sides and bottom of the drilled hole, displace water as it is placed, and permit placement of reinforcing cages into the fluid concrete.
- Retain the geotechnical engineer to observe foundation excavations after the bottom of the hole is leveled, cleaned of any mud or extraneous material, and dewatered.
- Install a temporary protective steel casing to prevent side wall collapse, prevent excessive mud

and water intrusion in the drilled shaft.

- § The protective steel casing may be extracted as the concrete is placed provided a sufficient head of concrete is maintained inside the steel casing to prevent soil or water intrusion into the newly placed concrete.
- § Direct the concrete placement into the drilled hole through a centering chute to reduce side flow or segregation.

5.2 Fill Compaction

All engineered fill placed adjacent to and above the tower foundation should be compacted to a dry density of at least 95 percent of the standard Proctor maximum dry density (ASTM D-698). This minimum compaction requirement should be increased to 98 percent for any fill placed below the tower foundation bearing elevation. Any fill placed beneath the tower foundation should be limited to well-graded sand and gravel or crushed stone. The compaction should be accomplished by placing the fill in about 8 inch (or less) loose lifts and mechanically compacting each lift to at least the specified minimum dry density. Field density tests should be performed on each lift as necessary to insure that adequate moisture conditioning and compaction is being achieved.

Compaction by flooding is not considered acceptable. This method will generally not achieve the desired compaction and the large quantities of water will tend to soften the foundation soils.

5.3 Construction Dewatering

If groundwater is encountered in the shallow foundations, it should be minor and can be handled by conventional dewatering methods such as pumping from sumps.

Most likely groundwater will be encountered in the drilled pier excavations deeper than 20 feet and it may be difficult to dewater since pumping directly from the excavations could cause a deterioration of the bottom of the excavation. If the pier excavations are not dewatered, concrete should be placed by the tremie method.

6 FIELD INVESTIGATION

Two soil test boring was drilled near the base of the proposed tower. Split-spoon samples were obtained by the Standard Penetration Test (SPT) procedure (ASTM D1586) in all test borings. Boring 1 and Boring 2 encountered auger refusal between 5.6 and 6.5 feet. A rock core of the refusal material was taken in Boring 1 from 6.5 to 16.5 feet. The

split-spoon samples were inspected and visually classified by a geotechnical engineer. Representative portions of the soil samples were sealed in glass jars and returned to our laboratory.

The boring log is included in the Appendix along with a sheet defining the terms and symbols used on the logs and an explanation of the Standard Penetration Test (SPT) procedure. The log present visual descriptions of the soil strata encountered, Unified System soil classifications, groundwater observations, sampling information, laboratory test results, and other pertinent field data and observations.

7 WARRANTY AND LIMITATIONS OF STUDY

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices. This warranty is in lieu of all other warranties, either express or implied. POD Group is not responsible for the independent conclusions, opinions or recommendations made by others based on the field exploration and laboratory test data presented in this report.

A geotechnical study is inherently limited since the engineering recommendations are developed from information obtained from test borings, which depict subsurface conditions only at the specific locations, times and depths shown on the log. Soil conditions at other locations may differ from those encountered in the test borings, and the passage of time may cause the soil conditions to change from those described in this report.

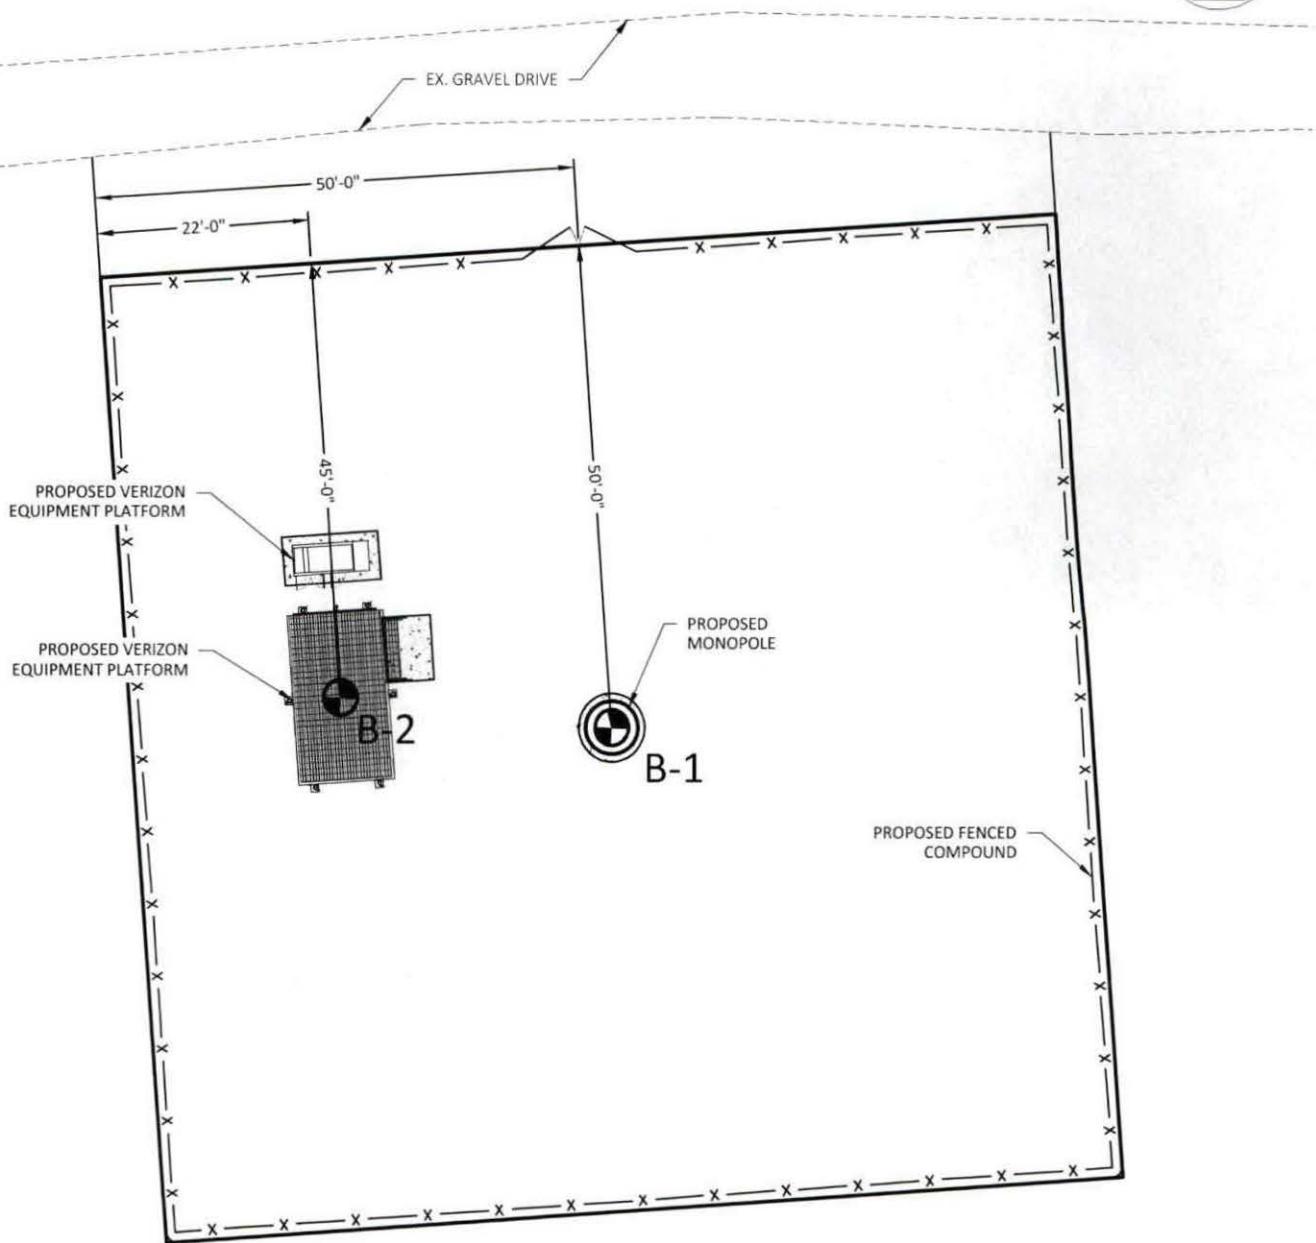

The nature and extent of variation and change in the subsurface conditions at the site may not become evident until the course of construction. Construction monitoring by the geotechnical engineer or a representative is therefore considered necessary to verify the subsurface conditions and to check that the soils connected construction phases are properly completed. If significant variations or changes are in evidence, it may then be necessary to reevaluate the recommendations of this report. Furthermore, if the project characteristics are altered significantly from those discussed in this report, if the project information contained in this report is incorrect, or if additional information becomes available, a review must be made by this office to determine if any modification in the recommendations will be required.

Over 50	Very Dense	Over 31	Hard	8+	Silts & Clays	Less than 0.075 mm

The **STANDARD PENETRATION TEST** as defined by ASTM D 1586 is a method to obtain a disturbed soil sample for examination and testing and to obtain relative density and consistency information. A standard 1.4-inch I.D./2-inch O.D. split-barrel sampler is driven three 6-inch increments with a 140 lb. hammer falling 30 inches. The hammer can either be of a trip, free-fall design, or actuated by a rope and cathead. The blow counts required to drive the sampler the final two increments are added together and designate the N-value defined in the above tables.

ROCK PROPERTIES

ROCK QUALITY DESIGNATION (RQD)		ROCK HARDNESS		
Percent RQD	Quality	Very Hard:	Rock can be broken by heavy hammer blows.	
0-25	Very Poor	Hard:	Rock cannot be broken by thumb pressure, but can be broken by moderate hammer blows.

LAND LEASE AGREEMENT

This Land Lease Agreement (the "Agreement") made this _____ day of _____, 20_____, between S & C Land Company, LLC, a Kentucky limited liability company, with a mailing address at P.O. Box 983, Somerset, Kentucky 42502, hereinafter designated LESSOR and Rural Cellular Corporation d/b/a Verizon Wireless with its principal offices at One Verizon Way, Mail Stop 4AW100, Basking Ridge, New Jersey 07920 (telephone number 866-862-4404), hereinafter designated LESSEE. LESSOR and LESSEE are at times collectively referred to hereinafter as the "Parties" or individually as the "Party."

WITNESSETH

In consideration of the mutual covenants contained herein and intending to be legally bound hereby, the Parties hereto agree as follows:

1. GRANT. In accordance with this Agreement, LESSOR hereby grants to LESSEE the right to install, maintain and operate its communications equipment ("Use") upon the Premises (as hereinafter defined), which are a part of or all of that real property owned, leased or controlled by LESSOR at Bourbon Road, Somerset, Pulaski County Kentucky 42503 (the "Property"). The LESSOR's Property is legally described on Exhibit "A" attached hereto and made a part hereof. The leased Premises are part or all of the Property and are approximately 10,000 square feet (the "Lease Area") and a non-exclusive easement ("Easement", as defined herein) for access and utility services, as shown in detail on Exhibit "B" attached hereto and made a part hereof, and are legally described on Exhibit "C" attached hereto and made a part hereof. For the avoidance of doubt, "Property" refers to the LESSOR's interest in the Easement and the LESSOR's fee interest in the Lease Area, and "Premises" refers to the LESSEE's interest in the Easement and the LESSEE's leasehold interest in the Lease Area.

2. INITIAL TERM. This Agreement shall be effective as of the date of execution by both Parties ("Effective Date"). The initial term of the Agreement shall be for 5 years beginning on the first day of the month following the Commencement Date (as hereinafter defined). The "Commencement Date" shall be the earlier of (i) the first day of the month after LESSEE begins construction activity (excluding due diligence review and/or testing) or (ii) the first day of the month following the date which is one calendar year following execution of this Agreement by LESSOR.

3. EXTENSIONS. This Agreement shall automatically be extended for 4 additional 5 year terms unless LESSEE terminates it at the end of the then current term by giving LESSOR written notice of the intent to terminate at least 3 months prior to the end of the then current term. The initial term and all extensions shall be collectively referred to herein as the "Term".

4. RENTAL.

(a). Rental payments shall begin on the Commencement Date and be due at a total [REDACTED] paid in equal monthly installments on the first day of the month, in advance, to LESSOR at P.O. Box 983, Somerset, KY 42502 or to such other person, firm, or place as LESSOR may, from time to time, designate in writing at least 30 days in advance of any rental payment date by notice given in accordance with Paragraph 20 below. LESSOR and LESSEE acknowledge and agree that the initial rental payment shall not be delivered by LESSEE

until 60 days after the Commencement Date. Upon agreement of the Parties, LESSEE may pay rent by electronic funds transfer and in such event, LESSOR agrees to provide to LESSEE bank routing information for such purpose upon request of LESSEE.

Commencing on the fifth (5th) annual anniversary of the Commencement Date, and on each fifth (5th) annual anniversary thereafter during the Term, annual rental for each such additional five (5) year term shall be increased by an amount equal [REDACTED] of the annual rental payable with respect to the immediately preceding five (5) year term.

(b). For any party to whom rental payments are to be made, LESSOR or any successor in interest of LESSOR hereby agrees to provide to LESSEE (i) a completed, current version of Internal Revenue Service Form W-9, or equivalent; (ii) complete and fully executed state and local withholding forms if required; and (iii) other documentation to verify LESSOR's or such other party's right to receive rental as is reasonably requested by LESSEE. Rental shall accrue in accordance with this Agreement, but LESSEE shall have no obligation to deliver rental payments until the requested documentation has been received by LESSEE. Upon receipt of the requested documentation, LESSEE shall deliver the accrued rental payments as directed by LESSOR.

(c). [REDACTED]

(d). [REDACTED]

5. ACCESS. LESSEE shall have the non-exclusive right of ingress and egress from a public right-of-way, 7 days a week, 24 hours a day, over the Property to and from the Lease Area for the purpose of installation, operation and maintenance of LESSEE's communications equipment over or along a thirty (30) foot wide right-of-way ("Easement"), which is depicted on Exhibit "B". LESSEE may use the Easement for the installation, operation and maintenance of wires, cables, conduits and pipes for all necessary electrical, telephone, fiber and other similar support services. In the event that it is necessary, LESSOR agrees to grant LESSEE or the support services provider additional non-exclusive easements for the right to install such services on, through, over and/or under the Easement, provided

the location and terms of such easements and services shall be reasonably approved by LESSOR. All such additional easements must be located within the above referenced Easement. LESSOR shall have no responsibility for maintenance of the Easement.

6. **CONDITION OF PREMISES.** LESSOR shall deliver the Premises to LESSEE in a condition ready for LESSEE's Use and clean and free of debris. LESSOR represents and warrants to LESSEE that, to best of their knowledge and belief, as of the Effective Date, the Premises are (a) in compliance with all Laws; and (b) in compliance with all EH&S Laws (as defined in Paragraph 24)

7. **IMPROVEMENTS.** The communications equipment including, without limitation, one (1) one-hundred foot (100') tall monopole tower structure (but not to exceed an overall height of 110' above ground level), antennas, conduits, fencing and other screening shall be at LESSEE's expense and installation shall be at the discretion and option of LESSEE. LESSEE shall have the right to replace, repair, add or otherwise modify its communications equipment, tower structure, antennas, conduits, fencing and other screening or other improvements or any portion thereof and the frequencies over which the communications equipment operates, whether or not any of the communications equipment, antennas, conduits or other improvements are listed on any exhibit. Lighting on the tower must be limited to the minimum hazard marking requirements imposed by the Federal Aviation Administration (FAA) or any successor agency. Upon payment of Additional Rent as set forth in Paragraph 4(c), herein, and with written notice to LESSOR, LESSEE may collocate the communications equipment of carriers other than LESSEE or of other telecommunication users, on the tower. For the avoidance of doubt, it is expressly agreed that only one (1) monopole tower shall be permitted on the Lease Area of the Premises, and that the only type of tower permitted on Lease Area of the Premises shall be a monopole tower.

8. **GOVERNMENT APPROVALS.** LESSEE's Use is contingent upon LESSEE obtaining, at its sole expense, all of the certificates, permits and other approvals (collectively the "Government Approvals") that may be required by any Federal, State or Local authorities (collectively, the "Government Entities") as well as a satisfactory soil boring test, environmental studies, or any other due diligence LESSEE chooses that will permit LESSEE's Use, such due diligence all at LESSEE's sole expense. LESSOR shall cooperate with LESSEE in its effort to obtain such approvals and shall take no action which would adversely affect the status of the Premises with respect to LESSEE's Use.

9. **TERMINATION.** LESSEE may, unless otherwise stated, immediately terminate this Agreement upon written notice to LESSOR in the event that (i) any applications for such Government Approvals should be finally rejected; (ii) any Government Approval issued to LESSEE is canceled, expires, lapses or is otherwise withdrawn or terminated by any Government Entity; (iii) LESSEE determines that such Government Approvals may not be obtained in a timely manner; (iv) LESSEE determines any structural analysis is unsatisfactory; (v) LESSEE, in its sole discretion, determines the Use of the Premises is obsolete or unnecessary; (vi) with 3 months prior notice to LESSOR, upon the annual anniversary of the Commencement Date; or (vii) at any time before the Commencement Date for any reason or no reason in LESSEE's sole discretion.

10. **INDEMNIFICATION.** Subject to Paragraph 11, each Party shall indemnify and hold the other harmless against any claim of liability or loss (including reasonable attorneys' fees and other costs and expenses) from personal injury or property damage resulting from or arising out of the negligence or willful misconduct of the indemnifying Party, its employees, contractors or agents, except to the extent such claims or damages may be due to or caused by the negligence or willful misconduct of the other Party, or its employees, contractors or agents. The indemnified Party will provide the indemnifying

Party with prompt, written notice of any claim covered by this indemnification; provided that any failure of the indemnified Party to provide any such notice, or to provide it promptly, shall not relieve the indemnifying Party from its indemnification obligation in respect of such claim, except to the extent the indemnifying Party can establish actual prejudice and direct damages as a result thereof. The indemnified Party will cooperate appropriately with the indemnifying Party in connection with the indemnifying Party's defense of such claim. The indemnifying Party shall defend any indemnified Party, at the indemnified Party's request, against any claim with counsel reasonably satisfactory to the indemnified Party. The indemnifying Party shall not settle or compromise any such claim or consent to the entry of any judgment without the prior written consent of each indemnified Party and without an unconditional release of all claims by each claimant or plaintiff in favor of each indemnified Party. In addition, LESSEE shall full indemnify, defend and hold LESSOR harmless against any other claims (including reasonable attorneys' fees and other costs and expenses) alleged to have resulted from or arising out of the use or occupancy of the Premises, Easement or Property by LESSEE, its employees, contractors or agents, all subject to the prompt notice, cooperation, defense, settlement and compromise provisions set forth above.

11. INSURANCE.

a) LESSEE shall maintain commercial general liability insurance with limits not less than \$2,000,000 for injury to or death of one or more persons in any one occurrence and \$2,000,000 for damage or destruction in any one occurrence. LESSEE shall include LESSOR as an additional insured. The Parties hereby waive and release any and all rights of action for negligence against the other Party which may hereafter arise on account of damage to the Premises or the Easement, resulting from any fire, or other casualty which is covered under "Causes of Loss - Special Form" property damage insurance or for the kind covered by standard fire insurance policies with extended coverage regardless of whether or not, or in what amounts, such insurance is now or hereafter carried by the Parties, even if any such fire or other casualty shall have been caused by the fault or negligence of the other Party. These waivers and releases shall apply between the Parties and they shall also apply to any claims under or through either Party as a result of any asserted right of subrogation. All such policies of insurance concerning the Premises or the Easement shall waive the insurer's right of subrogation against LESSOR.

b) INTENTIONALLY DELETED.

c) LESSOR agrees that LESSEE may self-insure against any loss or damage which could be covered by a commercial general liability insurance policy.

12. LIMITATION OF LIABILITY. Except for indemnification pursuant to Paragraphs 10 and 24, a violation of Paragraph 29, or a violation of law, neither Party shall be liable to the other, or any of their respective agents, representatives, or employees for any lost revenue, lost profits, loss of technology, rights or services, incidental, punitive, indirect, special or consequential damages, loss of data, or interruption or loss of use of service, even if advised of the possibility of such damages, whether under theory of contract, tort (including negligence), strict liability or otherwise.

13. INTERFERENCE.

(a). LESSEE agrees that LESSEE will not cause interference that is measurable in accordance with industry standards to LESSOR's equipment. LESSOR agrees that LESSOR and other occupants of the Property will not cause interference that is measurable in accordance

with industry standards to the then existing equipment of LESSEE. LESSEE shall indemnify LESSOR, pursuant to the provisions of Paragraph 10, for any radio frequency interference that is caused by the Use or by the use of collocated equipment of equipment located on other properties, including, without limitation, equipment located on the nearby water tower.

(b). Without limiting any other rights or remedies, if interference occurs and continues for a period in excess of 48 hours following notice to the interfering party via telephone to LESSEE'S Network Operations Center (at (800) 224-6620/(800) 621-2622) or to LESSOR at (506) 678-8887, the interfering party shall or shall require any other user to reduce power or cease operations of the interfering equipment until the interference is cured.

(c). The Parties acknowledge that there will not be an adequate remedy at law for noncompliance with the provisions of this Paragraph and therefore the Parties shall have the right to equitable remedies such as, without limitation, injunctive relief and specific performance.

14. REMOVAL AT END OF TERM. Upon expiration or within 90 days of earlier termination, LESSEE shall remove all communications equipment, including the tower (except footings), regardless of ownership, and restore the Premises to its original condition, reasonable wear and tear and casualty damage excepted. In restoring the Premises, LESSEE shall ensure that all footings are located below the finish grade of the Premises. LESSOR agrees and acknowledges that the communications equipment shall remain the personal property of LESSEE and LESSEE shall have the right to remove the same at any time during the Term, whether or not said items are considered fixtures and attachments to real property under applicable laws. If such time for removal causes LESSEE to remain on the Premises after expiration or earlier termination of the Agreement, LESSEE shall pay rent at the then existing monthly rate or on the existing monthly pro-rata basis if based upon a longer payment term, until the removal of the communications equipment is completed.

15. HOLDOVER. If upon expiration of the Term the Parties are negotiating, in good faith, a new lease or a lease extension, then this Agreement shall continue during such negotiations on a month to month basis at the rental in effect as of the date of the expiration of the Term. In the event that the Parties are not in the good-faith process of negotiating a new lease or lease extension and LESSEE holds over after the expiration or earlier termination of the Term, then LESSEE shall pay rent at the then existing monthly rate or on the existing monthly pro-rata basis if based upon a longer payment term, plus twenty-five percent (25%), until the removal of the communications equipment is completed.

16. RIGHT OF FIRST REFUSAL. If at any time after the Effective Date, LESSOR receives a bona fide written offer or letter of intent from any person or entity that is in the business of owning, managing or operating communications facilities or is in the business of acquiring landlord interests in agreements relating to communications facilities, to purchase fee title, an easement, a lease, a license, an ownership interest in Lessor, or any other interest in the Property or any portion thereof or to acquire any interest in this Agreement, or an option for any of the foregoing, LESSOR shall provide written notice to LESSEE of said offer ("LESSOR's Notice"). LESSOR's Notice shall include the prospective buyer's name, the purchase price being offered, any other consideration being offered, the other terms and conditions of the offer, a description of the portion of and Interest in the Property and/or this Agreement which will be conveyed in the proposed transaction, and a copy of any letters of intent or form agreements presented to LESSOR by the third party offeror. LESSEE shall have the right of first refusal to meet any bona fide offer of sale or transfer on the terms and conditions of such offer or by

effectuating a transaction with substantially equivalent financial terms. If LESSEE fails to provide written notice to LESSOR that LESSEE intends to meet such bona fide offer within thirty (30) days after receipt of LESSOR's Notice, LESSOR may proceed with the proposed transaction in accordance with the terms and conditions of such third party offer, in which event this Agreement shall continue in full force and effect and the right of first refusal described in this Paragraph shall survive any such conveyance to a third party. If LESSEE provides LESSOR with notice of LESSEE's intention to meet the third party offer within thirty (30) days after receipt of LESSOR's Notice, then if LESSOR's Notice describes a transaction involving greater space than the Property, LESSEE may elect to proceed with a transaction covering only the Property or the Premises and the purchase price shall be pro-rated on a square footage basis. Further, LESSOR acknowledges and agrees that if LESSEE exercises this right of first refusal, LESSEE may require a reasonable period of time to conduct due diligence and effectuate the closing of a transaction on substantially equivalent financial terms of the third party offer. LESSEE may elect to amend this Agreement to effectuate the proposed financial terms of the third party offer rather than acquiring fee simple title or an easement interest in the Property or Premises. For purposes of this Paragraph, any conveyance by direct conveyance to a person or entity that is not in the business of owning, managing or operating communications facilities or in the business of acquiring landlord interests in agreements relating to communications facilities, any conveyance to a family member of Stephen D. Merrick or Kimberly Merrick, and any conveyance to a trust for the benefit of family members of Stephen D. Merrick or Kimberly Merrick shall not be considered a sale for which LESSEE has any right of first refusal.

17. **RIGHTS UPON SALE.** Should LESSOR, at any time during the Term, decide (i) to sell or otherwise transfer all or any part of the Property or Premises, or (ii) to grant to a third party by easement or other legal instrument an interest in and to any portion of the Property or Premises, such sale, transfer, or grant of an easement or interest therein shall be under and subject to this Agreement and any such purchaser or transferee shall recognize LESSEE's rights hereunder. In the event that LESSOR completes any such sale, transfer, or grant described in this Paragraph without executing an assignment of the Agreement whereby the third party agrees in writing to assume all obligations of LESSOR under this Agreement, then LESSOR shall not be released from its obligations to LESSEE under this Agreement, and LESSEE shall have the right to look to LESSOR and the third party for the full performance of the Agreement.

18. **LESSOR'S TITLE.** LESSOR covenants that LESSEE, on paying the rent and performing the covenants herein, shall peaceably and quietly have, hold and enjoy the Premises.

19. **ASSIGNMENT.** Without any approval or consent of the other Party, this Agreement may be sold, assigned or transferred by either Party to (i) any entity in which the Party directly or indirectly holds a majority equity or similar interest; (ii) any entity which directly or indirectly holds a majority equity or similar interest in the Party; or (iii) any entity directly or indirectly under common control with the Party. LESSOR may assign this Agreement or cause its ownership interests to be conveyed or assigned to Stephen D. Merrick or Kimberly Merrick, to any of the children of Stephen D. Merrick and Kimberly Merrick, or to any entity in which Stephen D. Merrick, Kimberly Merrick and/or one of their family members directly or indirectly holds a majority equity or similar interest. LESSEE may assign this Agreement to any entity which acquires all or substantially all of LESSEE's assets in the market defined by the FCC in which the Premises is located by reason of a merger, acquisition or other business reorganization without approval or consent of LESSOR. As to other parties, this Agreement may not be sold, assigned or otherwise transferred without the written consent of the other Party, which such consent will not be unreasonably withheld, delayed or conditioned. LESSEE may sublet, sub-lease or sub-license the Premises in LESSEE's sole discretion conditioned upon the payment by LESSEE of Additional Rent as set

forth in Paragraph 4(c), above. No change of stock ownership, partnership interest or control, or transfer upon partnership or corporate dissolution of LESSEE shall constitute an assignment hereunder.

20. **NOTICES.** Except for notices permitted via telephone in accordance with Paragraph 13, all notices hereunder must be in writing and shall be deemed validly given if sent by certified mail, return receipt requested or by commercial courier, provided the courier's regular business is delivery service and provided further that it guarantees delivery to the addressee by the end of the next business day following the courier's receipt from the sender, addressed as follows (or any other address that the Party to be notified may have designated to the sender by like notice):

LESSOR: S & C Land Company, LLC
attn.: Stephen D. Merrick
P.O. Box 983
Somerset, KY 42502

LESSEE: Rural Cellular Corporation
d/b/a Verizon Wireless
180 Washington Valley Road
Bedminster, New Jersey 07921
Attention: Network Real Estate

Notice shall be effective upon actual receipt or refusal as shown on the receipt obtained pursuant to the foregoing.

21. **SUBORDINATION AND NON-DISTURBANCE.** Within 15 days of the Effective Date, LESSOR shall obtain a Non-Disturbance Agreement, as defined below, from its existing mortgagee(s), ground lessors and master lessors, if any, of the Property or Premises. At LESSOR's option, this Agreement shall be subordinate to any future master lease, ground lease, mortgage, deed of trust or other security interest (a "Mortgage") by LESSOR which from time to time may encumber all or part of the Property or Premises; provided, however, as a condition precedent to LESSEE being required to subordinate its interest in this Agreement to any future Mortgage covering the Property or Premises, LESSOR shall obtain for LESSEE's benefit a non-disturbance and attornment agreement for LESSEE's benefit in the form reasonably satisfactory to LESSEE, and containing the terms described below (the "Non-Disturbance Agreement"), and shall recognize LESSEE's rights under this Agreement. The Non-Disturbance Agreement shall include the encumbering party's ("Lender's") agreement that, if Lender or its successor-in-interest or any purchaser of Lender's or its successor's interest (a "Purchaser") acquires an ownership interest in the Property or Premises, Lender or such successor-in-interest or Purchaser will honor all of the terms of the Agreement. Such Non-Disturbance Agreement must be binding on all of Lender's participants in the subject loan (if any) and on all successors and assigns of Lender and/or its participants and on all Purchasers. In return for such Non-Disturbance Agreement, LESSEE will execute an agreement for Lender's benefit in which LESSEE (1) confirms that the Agreement is subordinate to the Mortgage or other real property interest in favor of Lender, (2) agrees to attorn to Lender, and to subsequent owners, if Lender becomes the owner of the Property or Premises and (3) agrees to accept a cure by Lender of any of LESSOR's defaults, provided such cure is completed within the deadline applicable to LESSOR. In the event LESSOR defaults in the payment and/or other performance of any mortgage or other real property interest encumbering the Property or Premises, LESSEE, may, at its sole option and without obligation, cure or correct LESSOR's default and upon doing so, LESSEE shall be subrogated to any and all rights, titles, liens and equities of the holders of such

mortgage or other real property interest and LESSEE shall be entitled to deduct and setoff against all rents that may otherwise become due under this Agreement the sums paid by LESSEE to cure or correct such defaults.

22. **DEFAULT.** It is a "Default" if (i) either Party fails to comply with this Agreement and does not remedy the failure within 30 days after written notice by the other Party or, if the failure cannot reasonably be remedied in such time, if the failing Party does not commence a remedy within the allotted 30 days and diligently pursue the cure to completion within 90 days after the initial written notice, or (ii) LESSOR fails to comply with this Agreement and the failure interferes with LESSEE's Use and LESSOR does not remedy the failure within 5 days after written notice from LESSEE or, if the failure cannot reasonably be remedied in such time, if LESSOR does not commence a remedy within the allotted 5 days and diligently pursue the cure to completion within 15 days after the initial written notice. The cure periods set forth in this Paragraph 22 do not extend the period of time in which either Party has to cure interference pursuant to Paragraph 13 of this Agreement.

23. **REMEDIES.** In the event of a Default, without limiting the non-defaulting Party in the exercise of any right or remedy which the non-defaulting Party may have by reason of such default, the non-defaulting Party may terminate this Agreement and/or pursue any remedy now or hereafter available to the non-defaulting Party under the Laws or judicial decisions of the state in which the Premises is located. Further, upon a Default, the non-defaulting Party may at its option (but without obligation to do so), perform the defaulting Party's duty or obligation. The costs and expenses of any such performance by the non-defaulting Party shall be due and payable by the defaulting Party upon invoice therefor. If LESSEE undertakes any such performance on LESSOR's behalf and LESSOR does not pay LESSEE the full undisputed amount within 30 days of its receipt of an invoice setting forth the amount due, LESSEE may offset the full undisputed amount due against all fees due and owing to LESSOR under this Agreement until the full undisputed amount is fully reimbursed to LESSEE.

24. **ENVIRONMENTAL.** LESSEE and all other tower users shall conduct their business in compliance with all applicable laws governing the protection of the environment or employee health and safety ("EH&S Laws"). LESSEE shall indemnify and hold harmless the LESSOR from all claims resulting from LESSEE's or any other tower user's violation of any applicable EH&S Laws or to the extent that LESSEE or other tower user causes a release of any regulated substance to the environment. LESSOR shall indemnify and hold harmless LESSEE from all claims resulting from the violation of any applicable EH&S Laws or a release of any regulated substance to the environment, except to the extent resulting from the activities of LESSEE. LESSEE shall not be responsible for any environmental condition or issue except to the extent resulting from LESSEE's or other tower user's specific activities and responsibilities. In the event that LESSEE encounters any hazardous substances that do not result from its activities or the activities of another tower user, LESSEE may relocate its facilities to avoid such hazardous substances to a mutually agreeable location or, if LESSEE desires to remove at its own cost all or some the hazardous substances or materials (such as soil) containing those hazardous substances, LESSOR agrees to sign any necessary waste manifest associated with the removal, transportation and/or disposal of such substances.

25. **INTENTIONALLY DELETED.**

26. **CONDEMNATION.** If a condemnation of any portion of the Premises impairs LESSEE's Use, LESSEE may terminate this Agreement. LESSEE may on its own behalf make a claim against the condemning authority in any condemnation proceeding involving the Premises for losses related to

LESSEE's communications equipment, relocation costs and, specifically excluding loss of LESSEE's leasehold interest, any other damages LESSEE may incur as a result of any such condemnation.

27. **APPLICABLE LAWS.** During the Term, LESSEE shall maintain the Premises and the Easement in compliance with all applicable laws, EH&S Laws, rules, regulations, ordinances, directives, covenants, easements, consent decrees, zoning and land use regulations, and restrictions of record, permits, building codes, and the requirements of any applicable fire insurance underwriter or rating bureau, now in effect or which may hereafter come into effect (including, without limitation, the Americans with Disabilities Act and laws regulating hazardous substances) (collectively "Laws"). For the avoidance of doubt, LESSEE shall, in respect to the condition of the Premises and the Easement, and at LESSEE's sole cost and expense, comply with (i) all Laws relating solely to LESSEE's specific and unique nature of use of the Premises; and (ii) all building codes requiring modifications to the Premises due to the improvements being made by LESSEE in the Premises. LESSEE shall not use blasting techniques before, during or after the Term, regardless of whether such blasting is permissible by law.

28. **TAXES.**

(a). LESSOR shall invoice and LESSEE shall pay any applicable transaction tax (including sales, use, gross receipts, or excise tax) imposed on the LESSEE and required to be collected by the LESSOR based on any service, rental space, or equipment provided by the LESSOR to the LESSEE. LESSEE shall pay all personal property taxes, fees, assessments, or other taxes and charges imposed by any Government Entity that are imposed on the LESSEE and required to be paid by the LESSEE that are directly attributable to the LESSEE's equipment or LESSEE's use and occupancy of the Premises. Payment shall be made by LESSEE within 60 days after presentation of a received bill and/or assessment notice which is the basis for such taxes or charges. LESSOR shall pay all ad valorem, personal property, real estate, sales and use taxes, fees, assessments or other taxes or charges that are attributable to LESSOR's Property or any portion thereof imposed by any Government Entity. LESSEE shall pay to LESSOR all increases in ad valorem, personal property, real estate, sales and use taxes, fees, assessments or other taxes or charges, with the exception of such taxes, fees, assessments or charges based on gross or net income of LESSOR, that are directly attributable to LESSEE's Use of the Premises and Easement (or any portion thereof) as may be imposed by any Government Entity. Payment shall be made by LESSEE to LESSOR within 60 days after presentation of a received bill and/or assessment notice which is the basis for any such increase.

(b). LESSEE shall have the right, at its sole option and at its sole cost and expense, to appeal, challenge or seek modification of any tax assessment or billing for which LESSEE is wholly or partly responsible for payment. LESSOR shall reasonably cooperate with LESSEE at LESSEE's expense in filing, prosecuting and perfecting any appeal or challenge to taxes as set forth in the preceding sentence, including but not limited to, executing any consent, appeal or other similar document. In the event that as a result of any appeal or challenge by LESSEE, there is a reduction, credit or repayment received by the LESSOR for any taxes previously paid by LESSEE, LESSOR agrees to promptly reimburse to LESSEE the amount of said reduction, credit or repayment. In the event that LESSEE does not have the standing rights to pursue a good faith and reasonable dispute of any taxes under this paragraph, LESSOR will pursue such dispute at LESSEE's sole cost and expense upon written request of LESSEE.

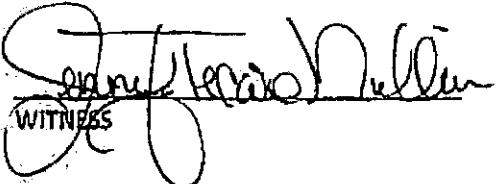

29. NON-DISCLOSURE. The Parties agree this Agreement and any information exchanged between the Parties regarding the Agreement are confidential. The Parties agree not to provide copies of this Agreement or any other confidential information to any third party without the prior written consent of the other or as required by law, unless otherwise allowed under this Agreement. If a disclosure is required by law, prior to disclosure, the Party shall notify the other Party and cooperate to take lawful steps to resist, narrow, or eliminate the need for that disclosure. Notwithstanding the foregoing, LESSOR may, without prior written consent of LESSEE, disclose this Agreement and its terms to any person or entity that is in the business of owning, managing or operating communications facilities or is in the business of acquiring landlord interests in agreements relating to communications facilities

30. INTENTIONALLY DELETED.

31. MISCELLANEOUS. This Agreement contains all agreements, promises and understandings between the LESSOR and the LESSEE regarding this transaction, and no oral agreement, promises or understandings shall be binding upon either the LESSOR or the LESSEE in any dispute, controversy or proceeding. This Agreement may not be amended or varied except in a writing signed by all Parties. This Agreement shall extend to and bind the heirs, personal representatives, successors and assigns hereto. The failure of either party to insist upon strict performance of any of the terms or conditions of this Agreement or to exercise any of its rights hereunder shall not waive such rights and such party shall have the right to enforce such rights at any time. The performance of this Agreement shall be governed, interpreted, construed and regulated by the laws of the state in which the Premises is located without reference to its choice of law rules. Except as expressly set forth in this Agreement, nothing in this Agreement shall grant, suggest or imply any authority for one Party to use the name, trademarks, service marks or trade names of the other for any purpose whatsoever. LESSOR agrees to execute a Memorandum of this Agreement, which LESSEE may record with the appropriate recording officer, at its sole expense. The provisions of the Agreement relating to indemnification from one Party to the other Party shall survive any termination or expiration of this Agreement.

[Signature page follows. The remainder of this page is intentionally blank.]

IN WITNESS WHEREOF, the Parties hereto have set their hands and affixed their respective seals
the day and year first above written.

**Notice of Proposed Construction of
Wireless Communications Facility
Site Name: Somerset WT Relo**

Dear Landowner:

Rural Cellular Corporation d/b/a Verizon Wireless filed an application with the Kentucky Public Service Commission ("PSC") to construct a new wireless communications facility on a site located on 1170 Bourbon Road, Somerset, KY 42503 ($37^{\circ} 02' 20.56''$ North latitude, $84^{\circ} 38' 42.26''$ West longitude). The proposed facility will include a 100-foot tall antenna tower, plus a 5-foot lightning arrestor and related ground facilities. This facility is needed to provide improved coverage for wireless communications in the area.

This notice is being sent to you because the Pulaski County Property Valuation Administrator's records indicate that you may own property that is within a 500' radius of the proposed tower site or contiguous to the property on which the tower is to be constructed. You have a right to submit testimony to the Kentucky Public Service Commission ("PSC"), either in writing or to request intervention in the PSC's proceedings on the application. You may contact the PSC for additional information concerning this matter at: Kentucky Public Service Commission, Executive Director, 211 Sower Boulevard, P.O. Box 615, Frankfort, Kentucky 40602. Please refer to docket number 2017-00128 in any correspondence sent in connection with this matter.

We have attached a map showing the site location for the proposed tower. Verizon Wireless' radio frequency engineers assisted in selecting the proposed site for the facility, and they have determined it is the proper location and elevation needed to provide quality service to wireless customers in the area. Please feel free to contact us toll free at (800) 516-4293 if you have any comments or questions about this proposal.

Sincerely,
David A. Pike
Attorney for Applicants

enclosure

Driving Directions to Proposed Tower Site

1. Beginning at the Pulaski County Judge Executive's Office, located at 100 N. Main Street in Somerset, Kentucky, head south on N. Main Street and travel approximately 1.0 miles.
2. Continue onto KY-2292/Monticello St. and travel approximately 2.3 miles.
3. Continue onto W. Bourbon Road and travel approximately 1.5 miles. The site is located at 1170 Bourbon Road.
4. The site coordinates are
 - a. North $37^{\circ} 02' 20.56''$
 - b. West $84^{\circ} 38' 42.26''$

RE: Notice of Proposal to Construct Wireless Communications Facility
Kentucky Public Service Commission Docket No. 2017-00128
Site Name: Somerset WT Relo

Dear Judge Kelley:

Rural Cellular Corporation d/b/a Verizon Wireless filed an application with the Kentucky Public Service Commission ("PSC") to construct a new wireless communications facility on a site located at 1170 Bourbon Road, Somerset, KY 42503 (37° 02' 20.56" North latitude, 84° 38' 42.26" West longitude). The proposed facility will include a 100-foot tall antenna tower, plus a 5-foot lightning arrestor and related ground facilities. This facility is needed to provide improved coverage for wireless communications in the area.

You have a right to submit comments to the PSC or to request intervention in the PSC's proceedings on the application. You may contact the PSC at: Executive Director, Public Service Commission, 211 Sower Boulevard, P.O. Box 615, Frankfort, Kentucky 40602. Please refer to docket number 2017-00128 in any correspondence sent in connection with this matter.

We have attached a map showing the site location for the proposed tower. Verizon Wireless' radio frequency engineers assisted in selecting the proposed site for the facility, and they have determined it is the proper location and elevation needed to provide quality service to wireless customers in the area. Please feel free to contact us with any comments or questions you may have.

Sincerely,
David A. Pike

RE: Legal Notice Advertisement
Site Name: Somerset WT Relo

Dear Ad Department:

Please publish the following legal notice advertisement in the next edition of *The Commonwealth Journal*:

NOTICE

Rural Cellular Corporation d/b/a Verizon Wireless has filed an application with the Kentucky Public Service Commission ("PSC") to construct a new wireless communications facility on a site located at 1170 Bourbon Road, Somerset, KY 42503 (37° 02' 20.56" North latitude, 84° 38' 42.26" West longitude). You may contact the PSC for additional information concerning this matter at: Kentucky Public Service Commission, Executive Director, 211 Sower Boulevard, P.O. Box 615, Frankfort, Kentucky 40602. Please refer to docket number 2017-00128 in any correspondence sent in connection with this matter.

After this advertisement have been published, please forward a tearsheet copy, affidavit of publication, and invoice to Pike Legal Group, PLLC, P. O. Box 369, Shepherdsville, KY 40165. Please call me at (800) 516-4293 if you have any questions. Thank you for your assistance.

Sincerely,

Aaron L. Roof

Re: Radio Frequency Need Report for New Communications Facility
Applicant: Rural Cellular Corporation d/b/a Verizon Wireless
Wireless Telecommunications Facility Uniform Application
Site location: 1170 Bourbon Road, Somerset, KY 42503

Verizon Wireless Site Name: Somerset Water Tank Relo

Dear Commissioners,

Verizon Wireless appreciates this opportunity to elaborate on the need for a wireless service facility in Pulaski County and explain why the proposed site was chosen to remedy a significant service coverage gap in this part of Pulaski County. The Verizon Wireless name given to this project is Somerset Water Tank Relo.

It should be noted that Verizon Wireless antennas are currently located on the water tank next to the proposed tower. The water tower's owner is not willing to extend the lease for antenna placement, so Verizon Wireless antennas must be relocated to the proposed new tower to eliminate the significant wireless network service gap that will be created in Pulaski County and would negatively affect substantial numbers of wireless users throughout the area. Verizon Wireless radio frequency engineers have worked hard to identify the optimum location and height at which antennas should be placed to connect with the existing network in order to provide mobile services, accommodate growing customer demand, avoid interference with other wireless communications sites, and close this growing service coverage gap. The objective is to provide coverage to Burnside Road, KY-80, KY 90, and a number of other roads in the area.

Before proposing this new tower site, Verizon Wireless first evaluated whether any existing towers or other tall structures might be technically feasible for coverage purposes, and suitable for collocation. There are no existing communication towers located within the area where a new wireless

service facility must be located to correct the service gap in this area of Pulaski County.

Applicant evaluated the parcels in the geographic area where a new wireless service facility is required and determined that a new tower at an overall height of 105' on Bourbon Road is the optimum location and height to provide wireless services, connect with the existing network in order to accommodate growing customer demand, avoid interference with other wireless communication sites, and close the growing service gap.

As a public utility, Verizon Wireless provides an essential service to individuals and businesses within Pulaski County, Kentucky, subject to the jurisdiction of the Federal Communications Commission (FCC). Verizon Wireless is licensed by the FCC to build and operate a wireless communications network in Pulaski County, Kentucky. Our licenses include, among others, the 700 MHz band, and the 2100 MHz or AWS band. The different performance characteristics of these two frequency bands are important to an understanding of what it is that Verizon Wireless is seeking to accomplish with this site, and are discussed below.

National statistics compiled by the FCC indicate that more than 70% of E-911 calls to police and fire departments are now made using wireless phones. That percentage grows each year. For many Americans, the ability to call E-911 for help in an emergency is one of the main reasons they own a wireless phone. Other wireless E-911 calls come from "Good Samaritans" reporting traffic accidents, crimes or other emergencies. The prompt delivery of wireless E-911 calls to public safety organizations benefits the public by promoting safety of life and property. The public relies on wireless communications for emergency access to law enforcement and public safety services. Many police departments also rely on wireless data services between patrol cars and law enforcement databases. Wireless data services help police departments utilize their limited resources more effectively to better protect the public. It is in the public's interest to ensure that robust and reliable emergency voice and data services remain available to everyone in our service areas. 700 and 2100 MHz frequencies right now are now data and VoLTE (Voice over LTE).

A U.S. Government Semi-Annual Report on Wireless Substitution shows that as of December 2015, 48.3% of all American homes have abandoned the older wireline service entirely, and instead rely exclusively on wireless phones to make emergency 911 and other calls. The report also shows that as of December 2015, 57.7% of all American children live in households without a landline phone. This empirically demonstrates that the Applicant provides essential mobile services to individuals and businesses within Pulaski County. The public requires reliable and state-of-the-art communications infrastructure to deliver expected service. Empirical data demonstrates that large numbers of people have "cut the cord" on traditional wireline service and

now rely exclusively on wireless services to connect to the national telephone system. The U.S. Government report confirms that wireless communication is the primary communications channel for more than one third of the general population. This dependence upon the availability of wireless service by a significant proportion of the population clearly demonstrates a public need for ensuring the availability of reliable wireless services, including travelers and residential areas of Pulaski County.

Background. The Verizon Wireless communication system, and indeed all carriers' wireless communications systems, rely on an overlapping and interconnected network of individual antenna sites. Individual sites, like the one under consideration here, consist of antennas mounted on a support structure. The radios and other electronic equipment that are needed to make wireless communications work are typically located at the base of the antenna support structure. These antenna sites transmit and receive wireless communications signals to and from mobile wireless handsets or similar devices.

Individually, these communications facilities have a limited coverage area. The extent of the coverage depends on several factors, including antenna height, local topography, proximity and height of other adjacent antenna installations, and localized customer usage demands. When linked electronically to form a network however, individual antenna sites operate to deliver a seamless wireless communications service to individuals, businesses, and government. The "seamless" part is important, even crucial, to understanding the need for this site. Without overlapping coverage, calls can't get through, or be completed. The locations of antenna sites are therefore carefully thought out, and selected to be located as far apart as is consistent with the number of customers in the service area, while still being close enough to "hand off" a motorist's call from one wireless service facility to the next, without dropping the call.

To be effective, any new wireless service facility must first be integrated into the existing network, so that it can transmit, receive, and offload calls to and from its siblings without interference. The requirement that any new site must be able to perform a call "handoff", as when a motorist drives from one coverage area into another, is absolutely essential. If a call cannot be handed off, the site is useless as a network component.

This brings us to consideration of the proposed Somerset Water Tank Relo site. This wireless service facility is intended to address two pressing service problems; problems that cannot be solved merely by re-engineering our existing antenna sites: the 700 and the 2100 AWS capacity and coverage problem

700 MHz Capacity and Coverage Problem. The first problem is one of capacity. Briefly put, although other existing antenna sites were able to serve this area in the past, they can no longer do so efficiently because the number of customers has grown enormously over the past few years. As problems go, a large and

growing customer base is a good one to have, but it also means that local demand for wireless services is starting to exceed the capacity of our existing sites in this area to handle. Customers from this area are now reporting that during peak use times they can't connect to the network, or reflexively that calls to customers within this service area are not getting through. This means that this geographic area is no longer being served effectively.

Call Blocking. When a wireless network reaches the maximum number of connections it can handle at one time, the service area is saturated, and new calls can't get through. This is known as "Call Blocking". Call blocking most often occurs during high demand periods, such as emergencies and social events, but as the customer base in a given area grows, call blocking starts to occur more often, even daily, especially during high-demand periods. The logical solution to cure call blocking is to add capacity by adding more carriers or call channels. In this case, the existing cells surrounding this area have already had the maximum number of radios added; however this has not kept up with demand. The demand for wireless service continues to increase, and adding more radios is no longer possible. Simply put, the cell sites surrounding this area have become saturated. Adding capacity to relieve call blocking in areas where the existing cell sites are at their maximum capacity requires more extensive measures, such as cell splitting, or band hopping.

Cell Split. A cell split does exactly what the phrase implies: it splits an existing coverage area in half, so that the network can redirect calls away from existing, overloaded sites, to the new cell site instead. By dividing the call volume among a larger number of sites, the call volume processed by each individual antenna site is reduced to a level that the equipment can effectively manage during peak call periods, thereby enabling everyone's calls to be completed, without blocking or interruption.

Band Hopping. The second capacity enhancement measure is band hopping. When a site reaches its capacity limit on an existing band (in this case 700MHz), it may be possible to redirect new calls to a different band, provided an alternate frequency band is available, and provided sufficient reserve capacity exists in that alternate frequency band. In this case, Verizon Wireless has another licensed frequency band available (this is the AWS band centered at 2100 MHz). Although this band is available in this area, the reserve capacity of this 2100 MHz band is limited, making "frequency hopping" of limited use to relieve the call blocking. (The 2100 MHz band is particularly limited in its ability to provide in-building penetration, and its effective range at any given power level is half that of the 700 MHz frequencies.)

700 and 2100 MHz AWS Coverage Problem: The huge increase in demand for wireless services, in particular the exponential increase in demand for mobile data services, requires the use of all of the applicant's licensed frequencies in

this area, which in this instance means both the 700 MHz and 2100 MHz frequency bands.

The problem is that the 2100 MHz or "AWS" band has less "propagation power" compared to the 700 MHz band. The 2100 MHz wavelength is physically shorter than the 700 MHz wavelength. In practice, shorter wavelength frequencies provide much less coverage (about 40%) than the older 700 MHz bands. In many cases, the 2100 MHz band is so limited in terms of propagation power that only persons who are in a direct line-of-site to the antennas will be able to connect to the national telephone system. In order to create a network using the 2100 MHz frequency band, the antenna sites must therefore be physically closer to each other than sites in the 700 MHz network in order to perform call handoffs between cells. Because this frequency band has to be able to "see" its service area, the coverage area for each 2100 MHz cell must be physically smaller for the network to interconnect, and to provide the same level of reliability that lower frequency bands provide.

The 2100 MHz frequencies can have a performance disadvantage, in that these frequencies could have a limited ability to provide in-building penetration. Depending on building construction (whether wood, or brick, or steel), 2100 MHz frequencies typically experience more signal degradation compared to in-building penetration by 700 MHz frequencies. The in-building penetration problem is a critical design and performance issue.

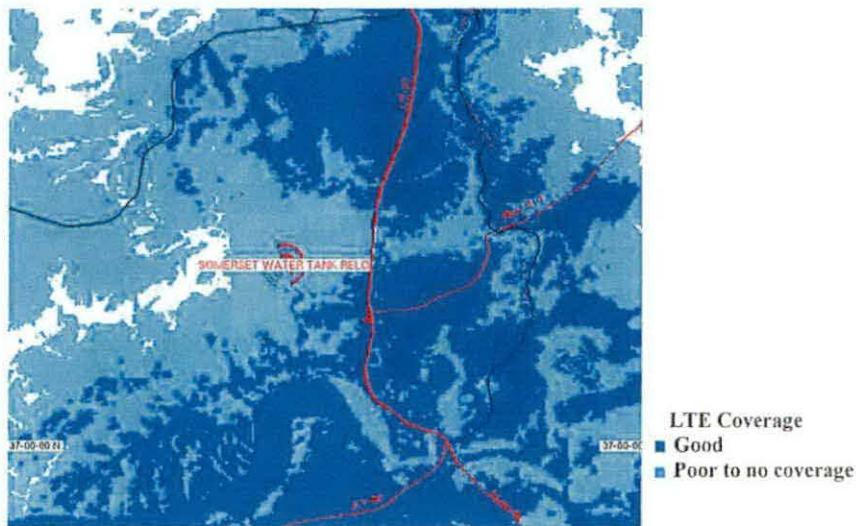

In the case, the existing Verizon Wireless network was originally designed for 700 MHz, and the cell sites in this area are therefore too far away from one another to implement an effective 2100 MHz network by just adding 2100 MHz antennas to these sites. In this case, overlaying 2100 MHz antennas to allow "band hopping" simply won't work.

Finally, one final – indeed critical – system performance limitation must be kept clearly in mind in any discussion of wireless service facility location. The relative coverage limits of signals sent by the cell sites in different frequency bands are important design criteria. However, these signals are only one side of the communications link. The thing that must be kept in mind is the extremely weak signals from cell phones and other mobile data devices, which provide the return link in the signal path. The power levels of these return signals are limited by federal law to a maximum of 0.6 watts for the older "feature" phones (i.e. – dumb phones), and to 0.25 watts of power for today's LTE smart phones. These weak return signals must also penetrate whatever materials a vehicle or buildings are made of, in order to communicate with the network. This as much as any other reason is why cell sites must be located within the area proposed to be served.

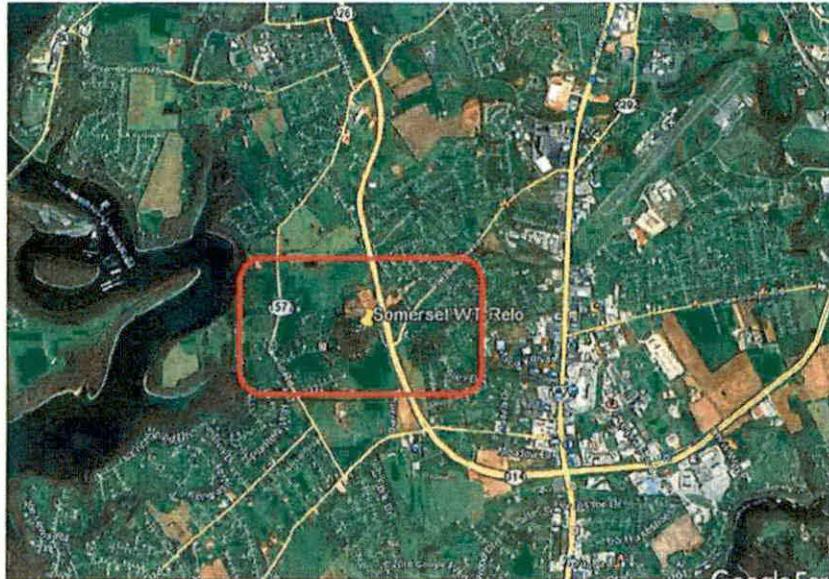

The inherent limitations in the physics of electromagnetic signal propagation and absorption in these frequency bands are unalterable facts. In the case of Somerset Water Tank Relo these limitations and the implementation of the

technical solutions discussed above will require construction of a new wireless service facility. To accomplish this, the Applicant is proposing the Somerset Water Tank Relo site. This new wireless service facility is critical to our efforts to relieve call blocking and dropping by closing the growing service capacity and coverage gap in this part of the county, and to restoring reliable wireless service to the people living, working, and traveling through this area.

The Proposed Somerset Water Tank Relo Site. A significant wireless network service gap exists in Pulaski County which negatively affects substantial numbers of wireless users throughout the area. Shown below is a coverage plot demonstrating the gap in coverage:

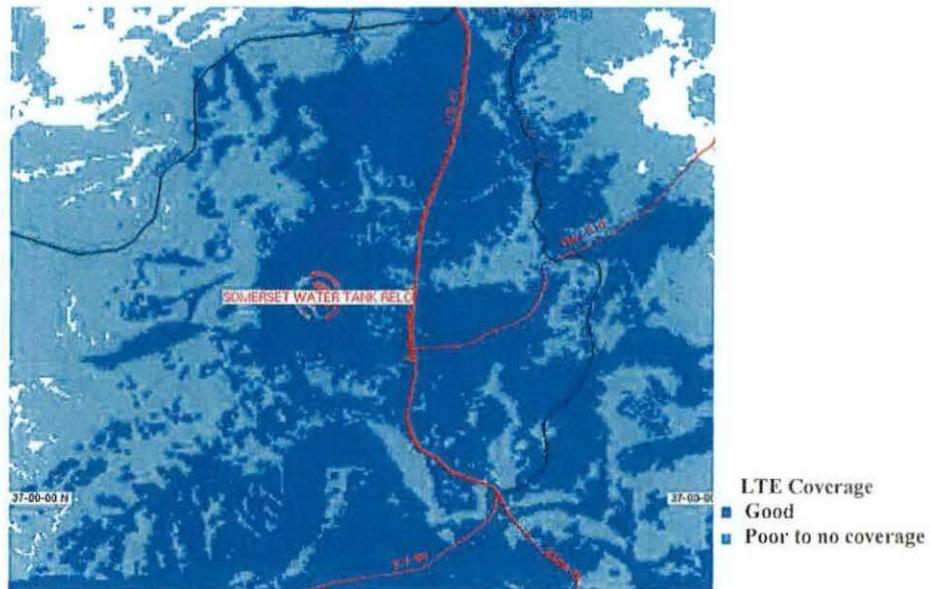

Verizon Wireless radio frequency engineers have worked hard to identify the optimum location and height at which antennas should be placed to connect with the existing network in order to provide mobile services, accommodate growing customer demand, avoid interference with other wireless communications sites, and close this growing service coverage and capacity gap. A map indicating where a new facility must be located to close this growing service coverage and capacity gap is shown below:

LV SOMERSET WT RELO – New Build SARF Map

The Search for Existing Tall Structures. Before proposing this new tower site, Verizon Wireless first evaluated whether any existing towers or other tall structures might be technically feasible for coverage purposes, and suitable for collocation. Verizon Wireless is committed to collocation and regularly locates its equipment on existing towers and buildings. Collocation on existing tall structures saves time and money compared to building a new tower. Reciprocally, Verizon Wireless encourages in-bound collocation on its towers by third-party applicants, offering tower space on a first come, first served basis, at competitive, non-discriminatory rents, so long as such shared use does not interfere with any other tower tenant's equipment or operations, and provided the applicant's equipment is installed in accordance with the requirements of the Kentucky Building Code, and maintained in accordance with the requirements of the Federal Communications Commission. There are no existing communication towers located within the area where a new wireless service facility must be located to correct the service gap in this area of Pulaski County. Antenna placement on any existing FCC-registered tower would not resolve the service gap.

Optimum Location The coverage plot shown below depicts the improvement in coverage that will result from a new wireless service facility at the proposed location:

This site is the optimum location to close the service coverage and capacity gap in this area. This location offers sufficient geographic separation from existing cellular towers for the effective handoff of wireless traffic to and from existing sites, and to close the service gap in the surrounding area. Changing the proposed site's location will alter the signal propagation path, and will materially compromise the coverage area needed to provide wireless services to the residences and motorists in the surrounding area, and to close the service coverage gap.

Confirmation of Continued Regulatory Compliance. The applicant affirms that the wireless service facility proposed at this site has been designed and will be constructed and operated in accordance with all federal, state and local regulations applicable to such facilities. Verizon Wireless affirms it and its licensed operating units will operate exclusively within the frequencies and service areas licensed to it by the Federal Communications Commission. Verizon Wireless further affirms that it will operate its wireless service facility in conformance with all applicable federal requirements for controlling public and worker exposure to radiofrequency energy.

The proposed wireless service facility is needed to provide an essential public service to wireless communication users in Pulaski County that cannot be established in any other manner. The construction and integration of this site into Verizon Wireless' existing network will provide or improve access to mobile voice and wireless data services previously degraded or unavailable, and support Homeland Security through enhanced 911 services. Finally, it will allow the service gap in this area to be closed.

Sincerely,

Jalil Arbabshirani
Radio Frequency Engineer
Verizon Wireless
