

AUG 27 2018

COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION
Case No. 2018-00157

PUBLIC SERVICE
COMMISSION

In the Matter of

CMN-RUS, INC.

COMPLAINANT

v.

WINDSTREAM KENTUCKY EAST, INC.

DEFENDANT

WINDSTREAM KENTUCKY EAST, INC.'S RESPONSES
TO FIRST SET OF REQUESTS FOR INFORMATION
FROM PUBLIC SERVICE COMMISSION

In Response to the Public Service Commission's First Set of Requests for Information, Windstream Kentucky East, Inc. ("Windstream"), hereby states as follows:

1. State the number of applications for new pole attachments Windstream East has received each month for the last 12 months ending on July 31, 2018, if known, and the number of applications for new pole attachments Windstream East received each calendar year in 2015, 2016, and 2017.

ANSWER:

The number of applications for new pole attachments Windstream East has received each month for the last 12 months ending on July 31, 2018, is provided in WIN0304.

The number of applications for new pole attachments Windstream East received each calendar year in 2015, 2016, and 2017, is provided in WIN0304-305.

Witness Responsible for Responding: Joyce Latham

2. State and describe the cost to Windstream East of processing applications for new pole attachments and completing related Make-Ready work, include a breakdown

of costs to the extent possible and describe how Windstream East determined and calculated those costs.

ANSWER:

It costs Windstream \$605.13 to process applications for 1,500 poles. This only includes processing the pole application and supporting documents. A breakdown of how this number was calculated is shown in WIN0306.

It costs Windstream \$1,059.16 to process one new Make Ready invoice. A Windstream OSP Engineer, on average, costs Windstream \$75.00 per hour. A Windstream OSP Engineering Manager, on average, costs Windstream \$100.00 per hour. A contracted engineer cost's Windstream \$60 per hour, on average. It takes on average, fifteen (15) hours to perform a survey and one hour for management review of that survey and pole application and another hour to review the proposed survey from the Attacher. Windstream's estimated Engineering cost per application is between \$1,100.00 to \$1,325.00.

A construction crew (a foreman and 3 linemen) costs \$251.08 per hour. Determining the actual construction cost to Windstream in relation to a single pole or application depends on difficulty of lowering the attachments in question. Whether or not they are double dead end or in an easy straight line will change the time it takes to attach. The number of attachments on the pole also matters. Some poles have four or five attachments, while other may have a single attachment. It also depends on if the pole can be climbed or must be accessed from a bucket on a bucket truck. With all this factored, a rough estimate of an average day of production is five poles in an eight-hour time period. Meaning, it takes 40 hours to complete a full application. At \$251.08 per hour times 40 hours an application costs \$10,043.20.

When CMN fails to complete an application correctly, or fails to timely pay invoices, these costs increase and the time it takes to complete an application increases.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders, James Lloyd

3. State whether Windstream East uses a contractor to process applications for new pole attachments or to complete make-ready work and, if so:

a. Identify all such contractors used by Windstream East;

b. Describe the nature of the work related to pole attachments completed by all such contractors; and

c. Describe the amounts paid to such contractors for processing new pole attachment applications and the amounts paid for make-ready work.

ANSWER:

Yes, Windstream East does use contractors to complete make-ready.

a. Windstream East's contractors are Byers Engineering ("Byers") and Triple D Communications ("Triple D").

b. Byers Engineering engineers site surveys, performs site visits to inspect poles, compiles staking sheets and field notes, creates print drawings, and enters work packages into JobTrac.

Triple D's construction crews perform all work necessary in completing the Make Ready construction. Specifically, this includes lowering Windstream attachments, placing taller poles when required to maintain safety standards, transferring and bonding facilities. Sometimes Triple D may have to performing tree trimming or flag traffic.

c. Windstream assumes that the PSC is requesting information relevant to CMN. As of August 21, 2018, Windstream has paid Byers Engineering a total of \$40,124.70 for CMN

Make Ready Engineering. CMN has failed to timely pay for 25 Make Ready invoices that Byers has completed. The total amount of these 25 invoices is \$99,747.12.

To this point Windstream has not paid Triple D for any CMN related construction because CMN paid its first Make Ready estimate invoice on August 5, 2018. This payment was for 28 invoices for total amount of \$98,129.22.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders, James Lloyd

4. Provide copies of all contracts related to processing applications for pole attachments or completing make-ready work for all contractors identified in response to Item 3 hereinabove.

ANSWER:

Windstream East does not have any contracts with any contractors related to processing applications for pole attachments or completing make-ready work for those contractors. Windstream Supply, LLC enters into these types of contracts on behalf of Windstream Services, LLC and its subsidiaries. Windstream Supply, LLC has contracts with Triple D and Byers. Both Windstream Supply, LLC and Windstream East are subsidiaries of Windstream Services, LLC. Copies of these contracts are provided in WIN0307-871.

Witness Responsible for Responding: Joyce Latham

5. Describe the process by which Windstream East currently handles applications for pole attachments in detail by:

a. Identifying every business group, department, division, contractor, or other entity controlled by Windstream East that has a material role in processing or reviewing applications for pole attachments or the completion of make-ready work for Windstream East from the time the applications are received through the date that make-ready work is completed;

b. Describing the role of each such business group, department, division, contractor, or other entity controlled by Windstream East in processing and reviewing applications or the completion of make-ready work, including a description of the order in which each completes its role and the time it generally takes for each to complete its role;

c. Describing the role of other pole Attachers in processing and reviewing pole-attachment applications to Windstream East and completing make-ready work; and

d. Identifying any other person or entity involved in processing or reviewing pole-attachment applications to Windstream East or the completion of make-ready work and describing the role of each such other person.

ANSWER:

- a. Windstream Teams: The Permitting Team, The OSP Engineering Managers and OSP Engineers, Windstream Pole Attachment Invoicing Team
Third Party Contractors: Engineering Contractor, Construction Contractor

b. Descriptions of the Role of Each Team:

1. The Permitting Team is responsible for processing and managing pole applications. This team consists of a Manager, Supervisor, Permitting Analysts, and Permitting Coordinators. The Supervisor oversees the Permitting Team's email account and distributes the application requests to the Permitting Analysts. The Permitting Analysts then process the applications.
2. The OSP Engineering Managers and OSP Engineers receive the applications from the permitting Team, review the application and its attachments for accuracy, then assuming the application is approved, send it to the Engineering Contractor. The

Engineering Manager also is responsible for reviewing the Engineering Contractors Make Ready work once completed.

3. Windstream Pole Attachment Invoicing Team (“Invoicing Team”) processes Make-Ready invoices and payments from Attachers.
4. Engineering Contractor is hired by Windstream as a contractor to perform Make Ready engineering surveys for Windstream’s portion of the Make Ready construction.
5. Construction Contractor is hired by Windstream as a contractor to perform the Make Ready construction.

Description of the Application and Make Ready Process:

I. Initial Submission and Permitting Team Process:

Pole applications are received through the Permitting Team’s email account. Once an email is received the Permitting Team Supervisor sorts the incoming application emails into the appropriate state folders and assigns them to the applicable Permitting Analyst assigned to process that application¹.

The Permitting Team receives the application and any supporting documents included, such as job prints, pole data sheets, and/or maps, for processing. The application is processed in six steps.

First, the Permitting Analyst creates an internal ticket (“JIRA Ticket”) utilizing the information on the application received. The internal ticketing system (“JIRA”) auto assigns a Joint Use Permit Request (“JUPR”) number to that record, example: JUPR-1234. The JUPR

¹ Permitting Analysts are assigned a geographical region and typically works only applications from that region.

number is used as the Windstream's internal application number, assuming the application was approved by the OSP Engineer. If the application is rejected a ticket is not logged.

Next, the Permitting Analyst records the number of requested attachments or removals in the original application in the JIRA Ticket. This data is used for updates to the pole record counts in LeaseNet. LeaseNet is a vendor system used to maintain accurate pole attachment counts for audits and for verification of pole rental invoices processed by Windstream's Pole Attachment Invoicing Team.

Next, the Permitting Analyst, adds the JUPR number, from the JIRA Ticket, to the application form originally received. The JUPR number will be used for tracking the application throughout the process.

Next, the Permitting Analyst identifies the appropriate OSP Engineer for the pole location(s) included in the application/proposal. The OSP Engineers are assigned geographical areas that they support.

Next, the Permitting Analyst emails the Packets² to the identified OSP Engineer for review and approval or denial of the application.

Last, the Permitting Analyst emails the requesting Attacher and provides the JUPR tracking number and notification that the application has been submitted to the OSP Engineer.

II. OSP Engineering Manager and Contractor:

OSP Engineering receives the Packet from the Permitting Team. The Packet is reviewed to ensure all required information and documentation is included so that Windstream can proceed to engineering Windstream's portion of the Make Ready construction. Proper documentation means, a map of requested work location(s), the Application Form from the contract is filled out

² A Packet is a collection of documents that contains the pole application, drawings, pole data sheet, any other applicable document or information. Collectively the Packet represents what will become the Make Ready estimate.

properly, the pole data sheets are included, and a description of the work being requested (referred to by CMN as the “MetroNet Packet Number”).

The Packet is logged to the Permitting Team’s Excel Tracker. This includes the JUPR, MetroNet Packet Number, wire center, total poles on request, number of poles requiring make ready, number of poles to be set and/or replaced, the date the Permitting Team answer the request and the date sent to the Engineering Contractor.

The Packet is then emailed to the Engineering Contractor. Within the email, pole detail, location, and any other relevant information is provided. Once the Engineering Contractor receives the email and Packet, it is assigned to the Contractor’s engineers.

The Engineer obtains the necessary records from Windstream’s mapping system (“GCOMMS”) and then physically drives to the site. The Engineer checks every pole listed in the application, gathers field notes. These notes include the names of the companies attached to each pole, what work is needed for Windstream to perform its Make Ready work, the number of cables or strands that must be lowered, attachment heights of all attachments, number of drops to lower, summary of the condition of the pole, if the clearance will still be within the required height once lowered, checks down guys, anchors, and bonding, the pole number and adjacent plant. The total time spent per pole is thirty minutes depending on the complexity of the attachments.

After the site visit the Engineer draws work prints. Once the prints are prepared with all required information they are sent to the Contractor’s Engineering Assistant to enter job package into JobTrac. JobTrac is a tracking software that allows Windstream to track the details of a construction job, in this case Make Ready construction, from start to finish.

The JobTrac process includes: creating the JobTrac Number, Title, writing the narrative, entering all construction units into the pricing tab along with the Engineering Contractors cost,

attaching location map, work prints, Engineering Contractors cost sheet, joint use forms for each company that may need notification, and any other important information for crews to perform the work, filling out construction details, a schedule of work required, and creating a distribution list for that JobTrac number.

Next, the Engineering Contractor notifies Windstream OSP Engineering Manager via email that the JobTrac is ready for review. This review includes the JobTrac number, the Contractor's tracking number, the JUPR, and the MetroNet Packet number.

The Windstream OSP Engineering Manager reviews the Contractor's JobTrac entry for accuracy in comparison to the work the Engineer entered on the work prints. The OSP Engineering Manager also checks every pole on every contracting print to assure the work CMN requested is accounted for on the work prints. The Windstream OSP Engineering Manager then updates the Excel tracker with the JobTrac number, Windstream internal application number, and whether a permit is required. The Windstream OSP Engineering Manager then send email notification to the Contractor accepting or rejecting the JobTrac and Packet.

If approved, the Windstream OSP Manager emails the Windstream OSP Engineer the JobTrac number and requests it be submitted for approval in JobTrac. Windstream OSP Manager approves the job in JobTrac.

Windstream OSP Manager completes columns 10, 11, and 12 of the Pole Application form with attachment height for CMN to attach on the Windstream pole for every pole on the request, the work Windstream needs to perform at each pole, and if Windstream should bill for rent. Other information listed on Pole Application form is the JobTrac number, the amount to bill CMN for Make Ready construction, and the number of attachments that are to be lowered for each packet. The Pole Application Form is then signed by Windstream and dated.

The Windstream OSP Engineering Manager sends an email to the Invoicing Team, the Permitting Team, and OSP Engineer with the completed Pole Application form along with a summary of the Packet Number, JUPR, amount to bill, and JobTrac number. The Windstream OSP Engineer attaches the email to that JobTrac number in the JobTrac system.

The Windstream OSP Engineering Manager updates the Excel tracker with the date the JobTrac was approved, the Contractor's charges, the total Make Ready charges billed to CMN, the date the Pole Application was sent to the Permitting Team, and the number of poles processed.

III. Make Ready Billing Process:

The next step in the process is Make Ready billing. The Invoicing team receives notice of a billing request. This will either be from a direct email from the Windstream Engineer or thru a JobTrac notification.

Once the request is received, the Invoicing Team opens the job in JobTrac to pull all necessary information. This information includes: the work package, and the pricing design from the Windstream Engineer. The work package includes all documents from the Pole Application, the work prints, and the contractor's drawings, designs, and notes.

The work package and the pricing design combined will provide the account coding needed to bill the Attacher thru Windstream's billing system ("MARS").

To create the invoice the Invoicing Team opens a blank invoice entry screen in MARS. In the entry the Attacher name, Windstream entity company name, and Windstream company accounting number are added. The JobTrac number and order date is also entered. Once this information is entered into the entry the invoice can be created. This will populate an invoice number and invoice date.

Next the invoice amount and account number are added to the invoice. The account number comes from the work package. The invoice is now completed, and a copy is saved. Copies of the invoice are then sent to the Windstream Engineer, the Permitting Team, and to the Attacher.

IV. Once Payment is Received – OSP Manager and Contractor:

The Attacher has fourteen days to pay the Make Ready invoice. Once paid, a payment confirmation email is sent to the Windstream OSP Engineering Manager, the OSP Engineer and the Permitting Team.

The OSP Engineer updates the expected completion dates and distributes those expectations and information to the Contractor to begin construction.

Windstream OSP Engineering Manager then must update the Excel Tracker with the date the Make Ready invoice was paid, the date the JobTrac was distributed to the Contractor and a target completion date for the Contractor.

Typically, Windstream's contracts state the Construction Contractor has sixty (60) days to perform the Make Ready construction.

The Construction Contractor notifies Windstream once the work is completed. The Windstream OSP Engineering Manager updates the Excel tracker with the construction completion date. The Contractor then redlines the JobTrac work prints, enters units, and submits the updated JobTrac for invoice reconciliation. The Windstream OSP Engineer must inspect the updated JobTrac information at the physical site to ensure the Contractor's work meets all safety and regulatory requirements. Windstream OSP Engineer fills out an inspection form documenting the site inspection.

The Windstream OSP Engineer populates completed dates in the JobTrac, prepares any necessary change forms for auditing purposes, and completes the invoice reconciliation of the

JobTrac. The Windstream OSP Engineer sends signed copies of the Pole Application to the Permitting Team.

V. Permitting Team - Completing the Application:

Once the Permitting Team receives the signed Pole Application from the Windstream OSP Engineer, it is logged and saved to the JIRA ticket. The Permitting Analyst then closed the JIRE ticket with the date approval was received and the date approval was loaded into JobTrac.

Signed approval will be sent to the requesting Attacher. At this point, the Attacher is clear to begin construction necessary to attach to the pole.

c. Role of the Attacher

Much of the Attachers' role has been stated above. From Windstream's perspective the Attacher's responsibility is to provide the Pole Application and supporting documents. Once the Application is approved and Make Ready invoice is provided the Attacher has fourteen days to pay for the application is rejected. Once payment is received and Make Ready is completed the Attacher can perform its own construction and attach to the pole.

The role of a third party Attacher, meaning an existing Attacher, is to receive a request for Make Ready from either the new Attacher and/or Windstream. The third party Attacher is responsible for performing its Make Ready within the time frame provided for it the underlying contract with Windstream. Once the Make Ready is completed the third party Attacher must notify Windstream.

The Flow Chart shown in WIN0872 outlines the process which Windstream East currently handles applications for pole attachment.

d. All parties involved in the process are listed in the Answers to Parts a-c.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders

6. Identify and describe all policies and procedures established by Windstream East regarding how its employees and contractors are required to process applications for pole attachments or complete related make-ready work, including a description of any timelines. If those policies and procedures are written, provide a copy.

ANSWER:

a. Application Process How to Build

This guide explains the process by which Windstream accepts, inspects, and approves/rejects incoming applications for pole attachment. WIN0873-879. This process is also described in WIN0872, submitted with the Answer to Request 5.

b. Engineering Inspection Form

This form provides a template for Windstream Engineers to assess, inspect, and approve/reject incoming engineering surveys. See WIN0880-881.

c. Survey and Construction Process

Windstream's survey and construction process is detailed in the Answer to Request 5 and the documents submitted in that Response.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders

7. Provide copies of all current agreements between Windstream East and any pole Attacher regarding the procedure for processing applications for pole attachments and completing related make-ready work.

ANSWER:

Copies of all current agreements between Windstream East and any pole Attacher regarding the procedure for processing applications for pole attachments and completing related make-ready work are attached in WIN882-WIN2160 along with a list of the agreements.

Windstream is seeking confidential treatment for six complete documents responsive to this request and the rate information listed in every agreement produced pursuant to 507 KAR 5:001 Section 13 and KRS 61.878(1)(c). The six entire documents for which Windstream is seeking confidential treatment have been tendered to the PSC under seal, WIN1408-1439, WIN1440-1472, WIN1508-1540, WIN1612-1644, WIN1645-WIN1677, WIN1678-1709. The remaining agreements have been tendered with the rates redacted.

Witness Responsible for Responding: Joyce Latham

8. Provide copies of all current agreements between Windstream East and any pole owner or operator regarding the procedure for processing Windstream East's applications for pole attachments or the procedure for completing related make-ready work.

ANSWER:

Copies of all current agreements between Windstream East and any pole owner or operator regarding the procedure for processing Windstream East's applications for pole attachments or the procedure for completing related make-ready work are attached at WIN2161-3013 along with a list of the agreements.

Windstream is seeking confidential treatment for two complete documents responsive to this request and the rate information listed in every agreement produced pursuant to 507 KAR 5:001 Section 13 and KRS 61.878(1)(c). The two entire documents for which Windstream is seeking confidential treatment have been tendered to the PSC under seal, WIN2526-2564, WIN2875-2910. The remaining agreements have been tendered with the rates redacted.

Witness Responsible for Responding: Joyce Latham

9. Identify the total number of poles owned or controlled by Windstream East.

ANSWER:

Windstream East owns or controls 180,565 poles as of August 21, 2018.

Witness Responsible for Responding: Joyce Latham

10. Provide a copy of the disputed invoices sent to CMN-RUS, Inc. (CMN), by Windstream KDL, LLC referred to in CMN's complaint pertaining to the cost of make-ready work performed in Indiana.

ANSWER:

Unfortunately, CMN's struggle to pay invoices back further than January 2017. For years, CMN has consistently acted in bad faith in failing to pay its Make Ready invoices. WIN3014-3024. From January 1, 2015, to present CMN has made payments on 343 invoices out of the 449 that were invoiced. Of the 343 that were paid, 225 of those were paid late, meaning CMN paid late 65.6 percent of the time. None of those 343 invoices were in dispute.

As of this writing, CMN is past due on 106 Windstream invoices in Indiana. Of those 106, only 27 are allegedly in dispute.³ WIN3025-3051. The other 79 have not been disputed, CMN has simply failed to pay them. WIN3052-3136. The total past due amount is **\$1,254,569.04**. The total amount past due amount on undisputed invoices is **\$118,294.98**. These invoices date back to January 2017. WIN3017-3024.

Witness Responsible for Responding: Joyce Latham, James Lloyd

11. Describe the nature of the dispute regarding the invoices from Windstream KDL, LLC to CMN referred to in CMN's complaint by describing:
 - a. The nature of the work that gave rise to the invoices and who performed it;
 - b. Windstream East's understanding of why CMN is disputing the invoices;and

³ Dispute in this context being a verbal or informal dispute. CMN has not provided any detailed writing disputing the individual invoices. CMN to this point has failed to provide Windstream a bone fide dispute.

- c. Windstream East's understanding of why Windstream KDL, LLC and the other utility contend that the invoices are owed.

ANSWER:

On October 1, 2000, Cinergy Corp, The Cincinnati Gas & Electric Company, PSI Energy, The Union Light Heat & Power Company, Lawrenceburg Gas Company, and The West Harrison Gas and Electric Company and Kentucky Data Link, Inc. ("KDL"), all entered into a pole attachment and maintenance agreement (the "Fiber Agreement"). WIN3137-3251. Kentucky Data Link, Inc. was later purchased by what is now Windstream Services, LLC, which again is the parent company to Windstream East. KDL is now officially called Windstream KDL, LLC. Cinergy Corp, The Cincinnati Gas & Electric Company, and PSI Energy are all owned by Duke Energy Corporation ("Duke"). The Fiber Agreement allows KDL to attach to poles that are owned or maintained by Duke.

On February 2005, KDL and CMN entered into a pole attachment and fiber rights agreement ("CMN/Duke PAA"). WIN3152-3219. This agreement allowed CMN to attach to Duke poles through the Fiber Agreement. KDL would act as an intermediary and all costs would be paid for by CMN. After KDL was purchased in 2010, Windstream Services, LLC, through Windstream KDL, LLC, continued to honor the CMN/Duke PAA.

Duke submitted back billing invoices for Make Ready engineering and construction to Windstream in November 2016. The invoices were for make ready that occurred in Hanover, Indiana and Lafayette, Indiana. The invoices are shown in WIN3021-3132, and were previously produced in the Answer to Request No. 10.

CMN claims that Duke charged for expedited make ready construction, which would have been at a higher rate, when CMN did not request expedited make ready construction. CMN has failed to this point to resolve this issue with Duke.

On September 5, 2017, Windstream contacted Duke directly regarding the disputed invoices. Given that the invoices were in dispute and Windstream was only an intermediary between Duke and CMN, Windstream requested that Duke reserve the invoices and send them directly to CMN, thus removing Windstream from the situation. Duke responded the same day and refused to do so.

Windstream KDL, LLC is not responsible for paying these invoices due to the CMN/Duke PAA. This agreement places liability on CMN to pay the Duke invoices for Hanover and Lafayette. Section 4 of the CMN/Duke PAA states that CMN has the right to request attachment on Duke. Section 6 of the CMN/Duke PAA states CMN shall pay all invoices for make ready for attachment on Duke poles within thirty (30) days of receipt. CMN has failed to pay for the Hanover and Lafayette invoices as well as over one hundred other invoices.

Witness Responsible for Responding: Joyce Latham, James Lloyd

12. Describe the corporate relationship of Windstream East to Windstream KDL, LLC.

ANSWER:

Windstream Kentucky East, LLC, Windstream KDL, LLC, and Windstream Supply are all subsidiaries of Windstream Services, LLC.

Witness Responsible for Responding: James Lloyd

13. State whether CMN is currently submitting applications for pole attachments to Windstream East and, if so:

- a. Identify how many applications for pole attachments have been submitted during each month since CMN first submitted applications and the number of applications that have been processed as of the date of this request;
- b. Describe the rate at which Windstream East has processed the applications each month;
- c. State whether make-ready work has been completed for any of the poles for which applications have been filed;
- d. Describe the process by which and the rate at which make-ready work is being completed;
- e. Describe how costs are being allocated between all parties involved.

ANSWER:

Windstream East is currently receiving applications from CMN. Windstream East has to this point received 74 total applications from CMN.

- a. A month by month breakdown is provided at WIN3220. On average, Windstream processes the CMN application the same day it received that application.
- b. The average rate at which Windstream East processes CMN applications is 0 days. This information is provided at WIN3220. Processed in this context means applications handled and completed by the Permitting Team only. This doesn't apply to construction or engineering.
- c.-d. No Make Ready work has been completed as of August 21, 2018. While CMN began sending pole applications in March 2018, and Windstream timely invoiced for the Make Ready, CMN did not make a payment until August 5, 2018.
- e. CMN must reimburse Windstream East for all costs. See WIN3221-3223.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders, James Lloyd

14. CMN stated in its complaint that it was willing to pay for additional resources necessary for Windstream East to process a higher volume of applications for pole attachments. State whether Windstream East contends that it would be unreasonable to process applications at a rate of 1,500 during a rolling 30-day period if CMN agreed to cover additional costs incurred by CMN (excluding any make-ready work) and, if so, state why Windstream East contends that it would be unreasonable.

ANSWER:

Windstream Engineering's main function is to engineer new builds, help reengineer existing infrastructure to maintain Windstream's network, and oversee Windstream contractors in performing the construction of these builds and maintenance projects.

As a secondary function, Windstream's Engineer's coordinate and manage Make Ready design and construction. This means managing contractors as they perform the work necessary to allow *other* providers to attach facilities to Windstream poles. This also means inspecting the attachments of other providers to ensure all safety and engineering requirements are met. These requirements are set by the Federal Communications Commission ("FCC"), the Kentucky Public Services Commission ("KYPSC") and the National Electric Safety Code ("NESC"). Not following these rules may result in significant fines, or worse, the injury of a civilian. Therefore, it is imperative Windstream rely on its own internal engineers to ensure compliance.

A Windstream Pole Attachment Application ("application") contains pole data and information for twenty-five (25) poles. It takes approximately fifteen (15) hours to survey an application. A Windstream Engineering Manager then spends an hour reviewing the survey to ensure accuracy.

The chart below shows the application and pole count for the last four months:

| Nationwide: | Applications | Poles |
|----------------------|---------------------|--------------|
| March | 160 | 4,000 |
| April | 143 | 3,575 |
| May | 120 | 3,000 |
| June | 99 | 2,475 |
| | | |
| Lexington, KY | Applications | Poles |
| March | 20 | 500 |
| April | 13 | 325 |
| May | 14 | 350 |
| June | 15 | 375 |

An increase in the number of applications places a greater burden on Windstream internally. All surveys and applications must be reviewed by Windstream to ensure CMN is not illegally attaching to poles or placing poles in an unsafe or improper manner. While Windstream can have contractors hired to preform processing and construction, an increase of applications and Make Ready work means there is an increased need for review. Windstream cannot outsource the review and quality control part of the Make Ready process.

Windstream is certainly not willing to outsource this review for CMN given its recent behavior. For example, last week, a Windstream employee spotted a CMN employee standing on a Windstream cable while suspended in the air working on the CMN line. Not only is it a safety violation to stand on the cables, especially while wearing metal gaff hooks, but this pole was also in a Packet that CMN has not yet paid the Make Ready estimate for. This was a gross violation of safety regulations. See WIN3224-3223.

CMN is asking Windstream to increase its monthly pole volume by almost 500%. Attachers (as in all attachers in the Lexington market) apply to attach to about 380 poles per month. There are approximately 50 attachers in the Lexington market. If each of them demanded to attach to 1,500 poles a month Windstream would have to manage and process and survey 75,000 poles a

month. That is substantially more poles than were processed the entirety of last quarter, much less in a single month.

Therefore, given the high volume increase and CMN's failure to abide by safety guidelines, it is reasonable to hold each provider to a 300-pole limit per month. Allowing one provider to increase the per month number by 487% would place an unreasonable burden on Windstream.

Witness Responsible for Responding: James Lloyd

15. Describe in broad terms all additional costs that Windstream East contends it will incur if it is required to process applications at a rate of 1,500 during a rolling 30-day period (excluding any make-ready work).

ANSWER:

It costs Windstream \$120.00 to process 300 poles. It costs Windstream \$605.13 to process 1,500 poles. See WIN0306, attached hereto at the Response to Request 2. This is an increase of \$485.13 per 1,500 poles.

As instructed, this does not factor cost for Windstream Engineering review. This is far more time consuming and costly than the processing of applications. It is important to consider the current state of Contractor availability in Lexington. Lexington is rapidly expanding its communications network. There are five ongoing projects in Lexington: KIH, Mobilite (ATT), Crown Castle, FiberTech, and CMN. There are a limited number of contractors available and with all this construction activity delays are inevitable. Windstream does not wish to enter into an agreement with CMN that it cannot uphold.

Witness Responsible for Responding: Joyce Latham, Ashley Sanders, James Lloyd

16. Refer to page 12 of CMN's Complaint in which it makes three alternative requests for an order regarding how applications for pole attachments and related make-ready should be completed. State:

- a. Which alternative Windstream East contends would be the most reasonable and explain the basis for its contention;
- b. Whether Windstream East contends that it would be reasonable for the Commission to adopt that alternative; and
- c. If not, describe and explain what changes Windstream East contends would be necessary in order for that alternative to be reasonable.

ANSWER:

a.-c. Windstream East contends that none of these alternatives are acceptable. Windstream's standard pole attachment allows a 300-pole limit over a thirty (30) day rolling period. CMN has followed this rule in Indiana and Ohio without complaint. The irony in CMN's complaint is that through CMN's own admission, the LFUCG Project does not have to be completed until 2021. Meaning, it is possible for CMN to attach to all 12,500 poles in that timeframe at a rate of 300 poles per month. CMN could follow the terms of the Windstream Standard Pole Attachment Agreement, the 300-pole rule, and complete its project on time.

Windstream offered CMN its standard agreement from the moment CMN made Windstream aware of the project and CMN's desire to attach to Windstream poles in the Lexington area. Windstream would do this for any provider.

Witness Responsible for Responding: James Lloyd

17. Windstream East stated in its response to the complaint that the Kentucky Information Highway Project (KIH) is inherently different than CMN. State the reasons why KIH and its associated contractors are different than CMN with respect to applications for pole attachments and make-ready work.

ANSWER:

The KIH Project is the only instance where Windstream East has agreed to accept more than 300 poles in a rolling 30-day period. In the early phases of the project, the engineering and information Windstream East received from DB LLC (“KIH’s contractor”) was subpar and incomplete to the point it was apparent DB LLC had failed to adequately survey the poles in the field.

Windstream has experienced similar issues with CMN in other states. Windstream is confident it would face these same issues, if not worse, if CMN were allowed to submit more than 300 poles in a rolling 30-day period. CMN struggles to submit complete applications when submitting less than 300 poles in a 30-day period. A non-exhaustive list of examples is listed below:

| Application | Date |
|-------------------------------|-------------|
| Zionsville Feeder Ring 1H | 9/8/2017 |
| Carmel CRO54 A | 6/17/2017 |
| Brownstone A Pole Application | 5/8/2017 |
| Fishers 13b | 10/27/2017 |
| Fishers 61 | 9/23/2017 |

When surveys are submitted with incomplete data it creates time delays and increased work volume for Windstream Engineers. With the KIH Project it came to Windstream’s attention that unless Attachers, in this case KIH, sent Windstream complete information it would be impossible to complete 1,500 poles per month. CMN has shown to this point that they struggle to send

complete information and therefore the same issues will arise with the LFUCG Project. Additional delays occur when payment for the Make Ready invoices are not paid timely. This delay is expeditiously worse in the type of agreement that CMN is demanding.

The LFUCG Project is scheduled to last until 2021, making it a three-year project. The period in which KIH applied for more than 300 poles in a rolling thirty (30) day period was only eight months. The period from August 24, 2016, to April 19, 2017.

Witness Responsible for Responding: James Lloyd

18. Describe Windstream East's current agreement with KIH regarding the processing of requests for pole attachments and the completion of make-ready work (or refer to the current agreement if written). If the agreement with KIH differs from that provided by CMN with its complaint, describe why the agreement was changed and describe the circumstances under which it was changed.

ANSWER:

Windstream East's current agreement with KIH is the Windstream Standard Pole Attachment Agreement. Currently KIH cannot contractually submit more than 300 poles per thirty (30) days. The Amendment that allowed KIH to submit more than 300 poles per month has been terminated since May 2017. The agreement and amendment are shown in WIN0264-302, and provided in the Answer to Request 14 of Windstream's Responses to CMN-RUS' First Set of Requests for Information.

Witness Responsible for Responding: James Lloyd

19. Provide all correspondence with attachments, whether sent via regular mail, email, or otherwise, between CMN and Windstream East regarding or referencing the pole attachments at issue in this matter. It is not necessary to provide the correspondence between counsel after the complaint in this matter was filed.

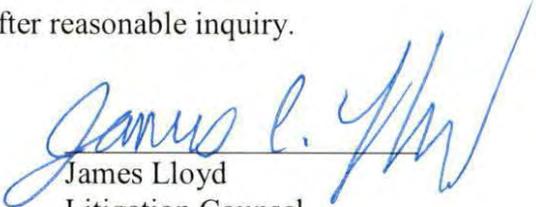

ANSWER:

All correspondence, including attachments, sent between CMN and Windstream East regarding or referencing the pole attachments at issue in this matter at attached at WIN 3226-7685

Witness Responsible for Responding:

VERIFICATION

I, James Lloyd, hereby certify that I am the person who supervised the preparation of these responses on behalf of Windstream Kentucky East, Inc., and these responses are true and accurate to the best of my knowledge, information, and belief formed after reasonable inquiry.

Master Integrator Agreement

Contract Number: #091009A10

This Master Integrator Agreement ("Agreement"), effective October 9, 2009 (the "Effective Date"), made and entered into by and between Windstream Supply, LLC, an Ohio limited liability company having its principal place of business at 13560 Morris Road, Alpharetta, Georgia 30004, on behalf of itself and its Affiliates ("Windstream"), and Byers Engineering Company, having an address of 6285 Barfield Road, Atlanta, GA 30328-4303, facsimile number 404.843.2278 ("Contractor"), sets forth the agreement whereby Contractor agrees to provide Services to Windstream according to the terms and conditions hereinafter provided. The scope of the Services and related requirements and specifications with respect to all Projects (as defined below) performed by Contractor for Windstream hereunder shall be described in writing in a statement of work, purchase order, work order, change order, plant maintenance request, emergency service request, JobTrac report, buried drop tool or a quote system report generated through Windstream's web-based procurement of infrastructure network contractor services ("PINCS") system or a similar successor system (each, a "Project Scope Agreement" or "PSA"). Each PSA shall become a part of this Agreement. Terms and conditions in a PSA shall supersede and replace any conflicting terms and conditions in this Agreement for only the specific project assignment defined in the PSA. All PSAs, exhibits and amendments to the Agreement, together with the terms and conditions of this Agreement, shall constitute and be construed as the Agreement.

ARTICLE I – CERTAIN DEFINITIONS

Except as otherwise specified herein or as the context may otherwise require, the following terms have the meanings set forth below for all purposes of this Agreement, including each PSA (as defined herein), and the definitions of such terms are equally applicable to both the singular and plural forms of such terms.

"Affiliates" shall mean, with respect to any person, entity, or enterprise, any other person, entity, or enterprise that, directly or indirectly through one or more intermediaries, Controls, is Controlled by, or is under common Control with such person, entity, or enterprise. "Control" (including the correlative terms "Controls", "Controlled by", and "under common Control with") shall mean, with respect to any person, entity, or enterprise, the power, directly or indirectly, either to (i) vote a majority of the voting shares or other voting interests in such person, entity or enterprise for the election of directors or other governing body of such person, entity or enterprise or (ii) direct or cause the direction of the management and policies of such person, entity or enterprise, whether through the ownership of voting securities, by contract, or otherwise.

"Confidential Information" shall have the same meaning as set forth in the Mutual Non-Disclosure Agreement.

"Fixed Price Project Assignment" shall mean that Contractor will assume full responsibility for the completion of the project for the fixed amount and by the date specified. As part of this responsibility, Contractor shall take any steps necessary to ensure that it meets the project objectives by the date specified. Should Contractor anticipate that the resources currently assigned to the project are not sufficient to ensure its timely completion, Contractor will supplement them as necessary at no additional cost to Windstream.

"Hours Worked" shall mean hours spent at Windstream's offices or elsewhere performing Services for Windstream. Commuting and/or travel time is expressly disallowed as "Hours Worked."

"Hourly Services Project Assignment" shall mean that Windstream will retain project management responsibilities, and Contractor will assist Windstream with specific tasks, which shall be identified on the PSA(s) if this method of Services is agreed upon by the parties. For an Hourly Services Project Assignment, Contractor will provide Windstream with an hourly rate, consistent with Contractor's current discounted rate for hourly work.

"Loss" or "Losses" shall mean all losses, liabilities, damages, and claims, and all related costs and expenses (including reasonable legal fees and disbursements and costs of investigation, litigation, settlement, judgment, interest, and penalties).

"Milestone Date" shall mean the date agreed to by Windstream and Contractor as the deadline for the completion of a particular phase of each Project.

"Mutual Non-Disclosure Agreement" shall mean that agreement, pertaining to the duties and obligations of the

Parties with respect to Confidential Information, entered into by and between the Parties prior to or contemporaneously with the Agreement.

"Party" or "Parties" shall mean Windstream, Contractor, or both.

"Project" shall mean each undertaking designated by and agreed to by Windstream and Contractor under which Contractor shall perform all of the work in substantial compliance with the specifications set forth in a PSA.

"Project Completion Notification" shall mean the written notification from Windstream upon completion of a Project.

"Project Manager" shall mean the individual assigned by each of the Parties hereto to be the focal point for communications with the other Party on a particular project assignment as set forth in a PSA.

"Project Site" shall mean the geographical location where the work for each Project shall be performed.

"Services" shall mean the work, services, Projects, assignments, and tasks Contractor shall perform pursuant to this Agreement.

"Software" shall mean the software owned or licensed to Contractor and used by Contractor in the performance of Contractor's duties and obligations under this Agreement.

"Subcontractor" shall mean a person or entity that has a contract with Contractor to perform a portion of the work required to complete a Project.

"Term" shall mean the duration of performance under this Agreement as may be set forth herein or in any PSA.

"Time and Materials Project Assignment" shall mean that Contractor will assume responsibility for Project management and will estimate the number of hours required to complete the Contractor's Services. Contractor will invoice Windstream for hours actually worked. If fewer than the estimated person hours of effort are required, then Windstream's cost will be less than the estimated charges. If more than the estimated person hours are required, Contractor will notify Windstream as soon as Contractor becomes aware of the need, and at that time, Windstream may (a) terminate this Agreement as it pertains to the Project in question by paying for the hours expended to date, (b) continue with the work up to the estimated person hours of work contracted, or (c) in accordance with Section 9.1, amend this Agreement as it pertains to the Project in question to authorize additional work.

ARTICLE II – SERVICES, SCOPE OF WORK

2.1 Services. This Agreement contains the prices and terms and conditions pursuant to which Windstream may order and Contractor shall render Services. Contractor shall perform the Services in accordance with the agreed upon PSA details, drawings and specifications and deliver the materials, if any, that are to be provided by Contractor, as described in the PSA. Unless otherwise agreed in the PSA, Contractor shall provide and pay for all expenses in connection with labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the PSA, whether or not such expenses are incorporated in the PSA. Any Services performed on behalf of Windstream by Contractor will be covered under the terms of this Agreement. The Parties may enter into additional PSAs, in which case each PSA shall be governed by and become part of this Agreement.

2.2 Scope of Work. Each PSA attached hereto, together with its exhibits and Purchase Orders, if any, will define the scope of work for a particular Project assignment under this Agreement. Each PSA will specify the Project Managers, Contractor staff assigned, type of work, skill levels provided, location and approximate length of Project assignment, hourly rates that apply, deliverables and their due dates, and completion criteria for successful completion of the Services. Additional written and detailed technical specifications for the Services may be attached to this Agreement at a later date as an additional PSA.

2.3 Work Space and Materials. Unless otherwise set forth in a PSA, Windstream agrees to provide reasonable workspace, general office supplies, and appropriate computer time for Contractor's personnel while working on Windstream's facilities. Any additional or unusual materials needed by Contractor's personnel in connection with the

performance of Services hereunder shall be provided by Contractor or as otherwise specified in the corresponding PSA.

2.4 Highest Professional Standards. Contractor and Contractor's personnel shall perform the Services set forth in each PSA using only the highest professional standards while maintaining full compliance with Windstream's technical and security standards and procedures.

2.5 Changes in Work. During the course of Contractor's performance of Services, Windstream may desire a change in the scope of the Services. No change in the PSA price shall be made for minor changes not involving extra cost. Windstream's requests for changes, other than minor changes, shall be made in writing and delivered to the Contractor's Project Manager. Project Managers from both Parties will review the proposed change and determine the effect that the implementation of the change will have on price, schedule, and other terms and conditions of the PSA in question. Upon completion of the review, any changes in price, schedule, or other terms will be documented, as the Parties select, either by an amendment to or a replacement of the PSA in question. Such agreement between the Parties shall be made prior to Contractor performing any such change. If no agreement is reached or if Contractor is not able to meet Windstream's requested demands within the time required by Windstream, Contractor will not object to the securing of another Contractor(s) by Windstream to perform similar services in the area for which Contractor has been awarded the PSA.

2.6 Acceptance. Acceptance will occur when the deliverables in a PSA meet the agreed upon tests or the acceptance criteria as described in the PSA. If the deliverables do not meet the acceptance criteria as set forth in the PSA when offered by Contractor for Windstream's acceptance, Windstream will give Contractor detailed written notification of the deficiency or non-conformance. Contractor then shall, within thirty (30) days of receipt of such written notification, either correct the deficiency or non-conformance or provide Windstream with a plan acceptable to Windstream for correcting the deficiency or non-conformance. If the deficiency or non-conformance is not corrected or if an acceptable plan for correcting such deficiency or non-conformance is not established during such period, then, upon demand by Windstream, Contractor shall refund to Windstream all fees paid by Windstream relating to Services performed under such PSA.

ARTICLE III - PERSONNEL

3.1 Subcontracting and Contractor's Employees. Contractor may subcontract specific project assignments hereunder or discrete portions of the Services only with Windstream's prior written permission. Personnel used or supplied by Contractor in the performance of any portion of the Services shall be employees or agents of Contractor and under no circumstances are such personnel to be considered employees or agents of Windstream. Contractor shall have the sole responsibility for the conduct of its employees and agents, including Subcontractors, and for payment of their entire compensation, including salary, withholding of income and social security taxes, worker's compensation, employee and disability benefits and the like. Contractor shall be responsible for all employer obligations towards all of its employees and agents, including Subcontractors, under all applicable laws.

3.2 Qualifications and Replacement. Windstream shall have the right to review and approve the qualifications of all personnel Contractor assigns to perform work under this Agreement, including Subcontractors. Windstream shall also have the right to designate that any such personnel be removed and replaced with or without cause. Contractor may also replace personnel when necessary and appropriate. Contractor agrees to maintain a consistently high skill level among all initial and replacement personnel regardless of whether the personnel were originally approved by Windstream or whether any replacement was instigated by Windstream or Contractor.

3.3 Project Managers. Within ten (10) days after the execution of each PSA, each Party will designate in writing to the other the name, business address, and telephone number of a Project Manager who will be responsible for representing that Party in all technical matters under such PSA. All transfer of deliverables and communications regarding the scope of work under such PSA will be accomplished through the Project Managers. In addition, the Project Managers will arrange and chair progress review meetings and control all changes to a PSA. Contractor will submit all of its invoices for a particular PSA through the Project Manager for such PSA. Either Party may change the person designated to be its Project Manager for any PSA at any time upon written notice to the other Party.

3.4 Hiring. Each Party agrees not to hire any employee of the other with whom such Party has contact without the prior written permission of the other Party, both during such time as the performance of Services under a PSA is pending and thereafter continuing for a period of six (6) months. This provision shall not apply to (i) Contractor's employees who have been continuously assigned to full-time Windstream servicing activities in excess of twelve (12) consecutive months, (ii) Contractor's employees designated on a PSA as available for hire, (iii) employees of either Party responding to advertisements made at job fairs, through Windstream internal communications, or in media circulated to the general public at large, or (iv) former employees, agents, or Subcontractors of Contractor.

3.5 Independent Contractor. It is expressly understood and agreed that Contractor is an Independent Contractor and that Windstream shall not be liable for any of the Contractor's acts or omissions in the performance of Services. Contractor represents and warrants that all persons it employs to do work for Windstream shall be employees of Contractor exclusively and at no time shall be authorized to act as agents, servants, or employees of Windstream.

3.6 Supervision of Project(s). Contractor shall supervise and direct each Project using Contractor's best skills and attention, and Contractor shall be solely responsible for all construction means, methods, technique, sequences and procedures relating to each Project, and Contractor shall coordinate all portions of each Project under each PSA.

3.7 Cooperation with other Contractors. Contractor agrees that Windstream may award separate contracts to other contractors to perform certain Services at a particular Project Site, and Contractor agrees to cooperate with such other contractors. Contractor also agrees to afford separate contractors a reasonable opportunity for the introduction and storage of materials and equipment at the Project Site.

3.8 Protection of Persons and Property.

- a) **Precautions.** Contractor shall at all times take reasonable precautions to protect the persons and property of others which may be on or adjacent to the Project Site from damage, loss, or injury resulting from performance under this Agreement by Contractor or any other party with whom Contractor may have subcontracted. Contractor shall not disturb or displace any protection installed by others. Any property moved or damaged by Contractor during the course of performance of Services hereunder shall be returned or repaired by Contractor, at Contractor's expense, to Windstream's satisfaction.
- b) **Clean Up.** Contractor shall keep the Project Site and surrounding area free from accumulation of waste materials or rubbish. Upon completion of the Project, and prior to final payment, Contractor shall remove from and about the Project Site, all waste materials, rubbish, Contractor's tools, construction equipment, machinery and surplus materials. Contractor shall dispose of all waste materials and rubbish in accordance with all applicable local, state and federal laws, regulations and ordinances.
- c) **Interruption of Utility Services.** Except as otherwise may be provided in the PSA, all work shall be performed by Contractor without interruption to or interference with any utility services. Contractor shall identify the type and location of all utility services on, under or near the Project Site. Contractor is responsible for all notifications to utility services prior to the commencement of work on the Project Site. Contractor shall indemnify and hold harmless Windstream for any interruption of, or damage to, utility services in breach of this Section 3.8(c).

ARTICLE IV - FEES, INVOICES, PAYMENT, CHANGES, MATERIAL, TERMINATION

4.1 Fees/Compensation. If the applicable PSA specifies that Contractor is to be compensated for work performed on an hourly basis (Time and Materials Project Assignment or Hourly Services Project Assignment), the hourly billing rates for each person engaged in providing the Services shall be as specified in the applicable PSA. For all such hourly project assignments, both the regular daily eight (8) hours and any overtime hours will be billed at the same rate for any person furnished by Contractor. If the applicable PSA specifies that Contractor is to be compensated for work performed by a fixed price (Fixed Price Project Assignment), the fixed price amount will be specified on the PSA.

4.2 Invoices/Payment. For all Fixed Price Project Assignments, Contractor shall invoice Windstream for all work performed according to the applicable PSA. For Time and Materials Project Assignments and Hourly Services Project Assignments, Contractor shall submit detailed monthly invoices for all work performed. If the PSA includes reimbursement for travel, Contractor shall invoice Windstream monthly for travel or other permitted expenses incurred in accordance with Windstream's standard travel and reimbursement policy (a copy of which will be provided to Contractor on request), and shall include receipts and supporting data for such expenses. All invoices submitted by Contractor must set forth the following information: (i) the contract number of this Agreement and number(s) of the particular PSA(s) being billed; (ii) the name(s) of the Service(s) to which the PSA(s) relate; (iii) the location(s) specified for Services to be performed; (iv) a record of expenses and receipts by individual; and (v) the number of hours worked and description of work performed by day and by individual (if hourly fees apply). Windstream shall be entitled to return incomplete invoices and to return invoices containing errors.

- a) **Payment Terms.** Pursuant to the terms of each PSA, Windstream shall issue payment of any undisputed

amount, less any retention provided for herein, within forty-five (45) days after receipt of the applicable invoice. Contractor agrees that Windstream shall receive a two percent (2%) prompt pay discount for any payments hereunder made by Windstream within fifteen (15) days after Windstream's receipt of the applicable invoice. Any prompt payment discount shall be deducted by Windstream from the invoice to which such prompt payment applies. Windstream reserves the right to pay any amounts owed to Subcontractors directly to such Subcontractors, in which case such amounts shall be deducted from any amounts owed to Contractor. Nothing contained in the preceding sentence shall be construed as:

- i) limiting the responsibilities of Contractor as to its Subcontractors,
- ii) creating any responsibilities of Windstream as to any Subcontractor, or
- iii) evidencing any control of any Subcontractor by Windstream.

Approval and payment of invoices is solely for the purposes of payment and shall not be viewed as approval or acceptance of the workmanship or materials. Upon Project completion and Windstream's final inspection and acceptance (which may occur some time after Project completion), Windstream shall pay Contractor all amounts to which Contractor is entitled. Final payment shall be invoiced by Contractor within forty-five (45) days after the date of completion of the Project. No payment shall be due to Contractor while Contractor is in default of any provision of this Agreement or any provision of a PSA covering a specific Project. Billing disputes shall not be cause for Contractor's non-performance under this Agreement.

- b) Windstream's obligation to make payment is subject to Contractor having delivered to Windstream either i) a release, in a form satisfactory to Windstream, of all liens arising out of this Agreement for Services performed and material supplied, or ii) receipts reflecting payment in full of all labor, materials, and equipment for which a lien could be filed for Services performed and material supplied, or iii) a bond, satisfactory to Windstream, indemnifying Windstream against such liens (each, a "Waiver"). Contractor shall also secure lien waivers ("Release of Liens") from each Subcontractor who has performed work on the particular phase of the Project and shall deliver a Release of Liens executed by each such Subcontractor which releases any and all claims against Windstream, including any claims against the real property at the location of the Project.
- c) Windstream may hold in reserve from all payments until final payment, an amount equal to 10% of the total due, or such greater amount as may be indicated on the PSA as retainage. Windstream may withhold such amounts as it deems appropriate to secure performance hereunder, or Windstream may, by notice to Contractor, or by listing on the PSA, require posting of bond, letters of credit, or other such security, at Windstream's discretion. Where a bond or letter of credit is indicated on the PSA, Contractor shall furnish the required bond or letter of credit to Windstream prior to commencement of any Service.

4.3 Inspection and Acceptance of Project(s). Upon completion of each Project phase or on each Milestone Date set forth in the PSA(s), Windstream shall have the right to inspect and examine Services required to be completed on each Project as of the phase or Milestone Date. In the event Windstream reasonably finds Services to be in compliance with the specifications of the PSA, Windstream may sign and deliver a **Partial Acceptance Certificate**, in substantially the form attached hereto as **Exhibit B**, relating to work completed as of the phase or Milestone Date; provided that the requisite Waiver and Release of Lien(s) have been fully executed and presented to Windstream. In the event Services do not meet the requisite specifications designated in the PSA, or in the event Contractor fails to deliver the Waiver and Release of Lien(s) required pursuant to this Agreement, Windstream shall notify Contractor that such requirements of the PSA or this Agreement have not been met.

- a) In the event Windstream notifies Contractor that the requirements of the PSA have not been met, or that the requisite Waiver and Release of Lien(s) have not been delivered, Windstream will withhold the Partial Acceptance Certificate, and Contractor shall have ten (10) days in which to meet such requirements and/or deliver such Waiver and Release of Lien(s).
- b) Upon the final completion of a Project, Windstream shall have the right to inspect and examine Services, and if Services have been completed substantially in accordance with the terms of a PSA, all Subcontractors have been paid, there are no outstanding unsettled liens, and all applicable Waiver and Release of Lien(s) have been delivered to Windstream, Windstream may issue a signed **Final Acceptance Certificate**, in substantially the form attached hereto as **Exhibit A**, or a Project Completion Notification. The Final Acceptance Certificate or Project Completion Notification shall constitute final acceptance of the Project and a waiver of all claims associated with

defective work under the PSA, except those arising from:

- i) faulty or defective work discovered after the completion date;
- ii) terms of the warranties provided herein and in the PSA(s); or
- iii) unsettled liens of Subcontractors.

4.4 Withholding of Payments.

Upon written notice by Windstream:

- a) Windstream may withhold money due for portions of any defective work which have not been corrected by Contractor within a reasonable amount of time to the satisfaction of Windstream.
- b) Windstream may withhold the costs of correcting any defective work.
- c) Windstream may withhold money due for claims that might be the subject of reimbursement to Windstream by Contractor under this or any other agreement between the Parties.
- d) If Windstream is advised that Contractor is not promptly paying Subcontractors or if Windstream is advised that employees of Contractor are not being promptly paid, Windstream may withhold such money as Windstream deems sufficient to ensure that obligations incurred by Contractor in connection with Services covered by this Agreement will be paid in full. Contractor shall pay each Subcontractor within five (5) days of any payment from Windstream to Contractor for and on account of materials furnished or work performed by each Subcontractor.

Windstream may withhold from or offset against money owed to Contractor under this Agreement any amounts Contractor owes to Windstream or a Windstream Affiliate for materials purchased from Windstream or a Windstream Affiliate.

4.5 Taxes. Contractor shall invoice Windstream and Windstream shall reimburse Contractor for any taxes actually paid by Contractor which are imposed upon Contractor by any governmental agency as a result of this Agreement with the exception of taxes based on Contractor's income, status (such as governmental licenses to perform the Services), and equity.

4.6 Materials.

- a) Contractor agrees all materials furnished by Contractor as a part of the Services, as identified in the PSA, will be purchased through Windstream, unless Windstream approves, in advance in writing, the purchase of products from other suppliers. Materials purchased through Windstream will be purchased at a rate equal to the purchase price paid for such materials by an Affiliate of Windstream and reimbursement therefor shall be subject to the prompt pay discount under Section 4.2(a) above. Contractor also understands and agrees that it is not authorized to purchase any materials through Windstream at Windstream's Affiliate's original purchase price, except for those materials required to complete Services specified in the PSA. Contractor shall identify any orders for materials to Windstream that are not required to complete Services specified in the PSA, and such materials shall be priced at the then current rates charged by Windstream.
- b) Contractor shall be responsible for the transportation, care and storage of all materials purchased from Windstream in order to comply with Contractor's obligations pursuant to the terms of this Agreement and PSA. Contractor may have the option, at Windstream's discretion, and depending on location and availability, to enter into a lease agreement with Windstream for purposes of storing materials, vehicles and supplies necessary to complete Services under the PSA. If Windstream so offers and Contractor chooses to enter into such a lease, Contractor shall execute the written lease agreement as provided by Windstream or one of its Affiliates.
- c) If Contractor chooses not to enter into a lease agreement with Windstream or one of its Affiliates or if Contractor is not given the option to enter into such a lease, Contractor shall be responsible for the storage of materials, utility vehicles, and supplies necessary to perform Services under the PSA. Contractor shall pick up and transport such material and equipment from its place of storage to the Project Site as needed. Contractor is responsible for ordering materials as necessary to fulfill its obligations under this Agreement and the PSA.
- d) Upon termination of this Agreement, Windstream may request Contractor to pick up, transport and return to a place

of storage designated by Windstream any unused materials Contractor purchased from Windstream at Windstream's Affiliate cost. Contractor may invoice Windstream for such materials as if utilized under this Agreement. In the event Contractor does not return such materials in accordance with this Section, Contractor may not invoice Windstream for reimbursement.

- e) It shall be the duty of the Contractor to inspect all material used in the performance of Services and Contractor shall not use defective material in any work to be performed hereunder. Any potentially defective materials should be returned to Windstream for inspection and warranty in accordance with Windstream policy.

4.7 Time Extensions. The time for completion of the Project set forth in the PSA shall be extended for a reasonable period of time for a delay due exclusively to causes beyond the control and without the fault of Contractor, including acts of God, and acts or omissions of Windstream with respect to matters for which Windstream is solely responsible. Contractor is responsible for requesting any extension in the time for completion of the Project and for fully documenting the justification for said extension. The exact amount of time granted for any extension shall be mutually agreed upon in writing between Windstream and Contractor.

4.8 Liquidated Damages. Should Contractor fail to complete the Project within the time agreed upon, including any Windstream approved time extensions, then Windstream shall have the right to deduct from and retain liquidated damages out of such moneys which may be due or which may become due and payable to Contractor. Contractor acknowledges that Windstream's damages in the event of a delay in Project completion are difficult or impossible to determine. Therefore, the liquidated damages amount shall be the sum of (i) the amount necessary to allow Windstream to engage another contractor to timely complete the Project (as reasonably estimated by Windstream), and (ii) the amount of Windstream's other actual damages resulting from Contractor's failure to complete the Project by the agreed time, and such sum is not intended as a penalty. If the amount due and to become due from Windstream to Contractor is insufficient to pay in full any such liquidated damages, Contractor shall pay to Windstream the amount necessary to pay such damages in full. Windstream shall promptly notify Contractor in writing of the manner in which the amounts retained, deducted, or claimed as liquidated damages were computed.

4.9 Time Sheets. Contractor shall furnish time sheets acceptable to Windstream of all work done, unless notified by Windstream that time sheets are not required. The time sheets shall be signed by the authorized representatives of Windstream and Contractor, and one copy of the time sheet shall be submitted by Contractor to Windstream. The time sheets shall be itemized in billing Windstream for work done.

4.10 Term and Termination.

a) The term of this Agreement shall begin on the Effective Date and end on the later of (a) the date that is two (2) years after the Effective Date or (b) the last date that Services are to be performed by Contractor under a PSA. Windstream may terminate this Agreement and all PSAs in its sole discretion at any time without cause by first giving verbal notice to Contractor of the effective date of termination, followed by written confirmation of said termination date to Contractor within seven (7) business days. In the event that Windstream terminates the Services under a PSA in accordance with this Section, Contractor shall be entitled to fair compensation for time and materials at a price to be negotiated in good faith by the Parties, but in no event shall the price exceed the lower of either the fixed price specified in the PSA being terminated or a price determined by Contractor's then current rates for time and materials. Contractor may not terminate any uncompleted PSA without Windstream's prior written consent. In the event that Contractor or any of its personnel or agents breach a material term of this Agreement or any PSA, Windstream may, immediately upon notice to Contractor, terminate this Agreement and all PSA(s) hereunder and, in addition, pursue any other remedies Windstream may have under this Agreement or under law. In the event of any termination of any PSA prior to the stated completion date for a Project, Windstream shall be entitled to the ownership, possession, and use of any and all work in process.

b) If Windstream terminates the Agreement under this Section 4.10, Windstream may take over the materials, tools and appliances purchased from Windstream at Windstream's Affiliate cost for use in Services, and Windstream may complete Services under the Agreement. Where Windstream completes Services under the Agreement, Contractor shall not be entitled to further payments or compensation under the Agreement (the "Unpaid Balance") until Services are completed. If the Unpaid Balance exceeds Windstream's cost and expense of completing the Services, the excess shall be paid to Contractor. If Windstream's cost and expense exceeds the Unpaid Balance, Contractor shall pay the difference to Windstream. The completion of Services by Windstream shall not terminate any other obligation of Contractor under the Agreement. If Windstream terminates this Agreement under this Section 4.10, Windstream may exercise any rights, claims, or demands, to the extent of its interest in materials furnished, which Contractor has against any third party in connection with the Agreement, and Contractor does hereby assign,

transfer, and set over unto Windstream all such rights, claims, and demands.

c) If any Project is delayed for any reason, Windstream may suspend the term of the PSA for such Project upon ten (10) days prior written notice to Contractor, for a period up to a maximum of three (3) months. If a PSA is suspended by Windstream as provided in this Section 4.10, Contractor shall be entitled to receive just and equitable compensation for any satisfactory work completed on such Project prior to the effective date of such suspension. In the event of early termination of this Agreement, or any PSA, Contractor shall take all action necessary to assure an orderly transition between Contractor and such other party as may be retained by Windstream to complete the development of the Projects, including, without limitation, timely and complete departure from the Project Sites.

d) Contractor understands and agrees that Windstream's Affiliate costs and any terms of purchase and sale from Windstream that are disclosed to Contractor are confidential. All terms of this Agreement shall apply to assure protection. Given the nature of the information and the competitive damage that would result to Windstream and its Affiliates if information contained therein is disclosed to any third party, money damages would not be a sufficient remedy for any such breach of the Agreement by Contractor, its agents or employees. In addition to all other remedies, Windstream shall be entitled to specific performance and injunctive or other equitable relief as a remedy for any such breach. Contractor, its agents and employees further agree to waive any requirement for the securing or posting of any bond in connection with such remedy.

ARTICLE V - PROPRIETARY RIGHTS

5.1 Ownership of Work Product. For all work product created under this Agreement, Contractor and its employees and agents hereby assign, cede, and grant to Windstream all rights to possession of, and all right, title, and interest, including all patent rights and copyrights and the right to prepare and exploit derivative works, in the work products created under this Agreement, in whatever form or medium captured, and in and to all physical and electronic materials, papers, and documents (including drawings), hereinafter referred to as "Products", and copies, abstracts, and summaries thereof, which may come into their possession in any manner by reason of project assignment under this Agreement. Contractor shall promptly disclose to Windstream any Products known to it or its employees by reason of project assignment under this Agreement, and all such Products that are not modifications or enhancements to Contractor-owned software shall be deemed to be works made for hire exclusively for Windstream, with Windstream having sole ownership of such Products and the sole right to obtain and to hold in its own name patents, copyrights, or such other protection as Windstream may deem appropriate to the subject matter, and any extensions or renewals thereof. Contractor agrees to give Windstream or any person designated by Windstream, at Windstream's expense, all assistance reasonably required to perfect the rights hereinabove defined, including the procurement, at Windstream's request, of written assignments and title commitments in a form acceptable to Windstream from all employees and agents assigned hereunder. The provisions of this Section do not apply to any material previously belonging to Contractor or lawfully acquired by Contractor in a manner independent of this Agreement which are used by Contractor in the performance of Services hereunder.

5.2 Enforcement. The provisions of this Article V and the Mutual Non-Disclosure Agreement may be enforced through any remedies available at law or in equity, including, without limitation, injunctive relief.

ARTICLE VI - WARRANTIES

6.1 Originality. Contractor represents, warrants, and covenants the originality of any work performed or Product delivered under this Agreement and that no portion of the Product completed on behalf of Windstream under this Agreement violates or is protected by patent, copyright, trade secret, or other intellectual property or other rights of Contractor or any third party. For purposes of this Section, Product shall not include materials or services supplied by Windstream. In addition to the indemnity described in Section 6.7 below, if an infringement claim threatens Windstream's or its Affiliates' continued use of any Products completed by Contractor on behalf of Windstream under this Agreement, Contractor shall, in the following order and at no cost to Windstream, (i) obtain the right for Windstream to continue use of such Products, (ii) repair or modify the Products so they are both non-infringing and functionally and operationally equivalent to the Products initially delivered, or (iii) provide replacement Products which are functionally and operationally equivalent to the Products. If none of the foregoing is possible, then Windstream shall have the right to terminate this Agreement immediately upon notice to Contractor and Contractor shall refund all fees paid by Windstream hereunder that relate to such Products.

6.2 Releases. Neither Contractor nor its permitted Subcontractors, nor any of their respective employees, agents, or representatives, by entering into this Agreement and performing the Services, has or will violate any consulting,

employment, non-competition, proprietary information, confidentiality, or other agreement, arrangement, understanding, or restriction between such party and a present or former employer, principal, client, or other individual or entity. Contractor shall assist Windstream in all reasonable respects to obtain releases or other necessary or desirable information or documentation regarding any of the foregoing.

6.3 Ethics. Contractor warrants that it has given no commissions, payments, kickbacks, lavish gifts, entertainment, or other things of value to any employee or agent of Windstream in connection with this Agreement and acknowledges that the giving of any such payments, gifts, entertainment, or other things of value is strictly in violation of Windstream's policy on conflicts of interest and may result in the cancellation of this Agreement and/or any or all PSA(s). Contractor must notify Windstream's Chief Financial Officer or Controller of any solicitation by any of Windstream's employees or agents for any payments, gifts, entertainment, or other things of value.

6.4 Necessary Contracts From Employees. Contractor represents, warrants, and covenants that it has or will obtain appropriate agreements with its employees and others, including any permitted Subcontractors, whose services it may require, sufficient to enable full compliance with all the provisions of this Agreement and the Mutual Non-Disclosure Agreement.

6.5 Disclaimer. EXCEPT AS EXPRESSLY STATED IN THIS AGREEMENT, NEITHER PARTY PROVIDES ANY WARRANTIES TO THE OTHER, EITHER EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

6.6 Waiver of Consequential Damages. Except for damages arising in connection with breach of obligations contained in the Mutual Non-Disclosure Agreement or claims subject to the indemnity contained in Sections 6.1, 6.7 and 7.2, neither Party shall have liability to the other with respect to their obligations under this Agreement for special, consequential (including but not limited to lost profits, lost revenue or loss of any other economic benefit), exemplary, incidental, or punitive damages even if they had been advised of the possibility of such damages.

6.7 Indemnity. (a) Contractor hereby agrees to save, protect, defend, indemnify, and hold Windstream and its Affiliates and their respective officers, directors, employees, agents, successors and assigns (each an "Indemnitee" and, collectively, the "Indemnitees") harmless from and against any and all Losses and threatened Losses arising out of (i) the negligence or intentional misconduct of Contractor, its employees, or its permitted Subcontractors, (ii) Contractor's use of Subcontractors' services if permitted hereunder, (iii) Contractor's misrepresentation of any facts to Windstream, (iv) Contractor's warranties, covenants, and agreements set forth in Articles III, IV, VI, and VII of this Agreement, and (v) any damage to property and injuries (including death) to any persons caused by Contractor, its employees, agents, or permitted Subcontractors.

(b) As conditions to Contractor's obligations under this Section, an Indemnitee shall (i) give Contractor prompt written notice of the claim, action or suit (provided that the failure by the Indemnitee to provide prompt written notice shall not relieve Contractor from any of its obligations hereunder, except to the extent Contractor is actually prejudiced thereby), (ii) reasonably cooperate with Contractor in the defense and settlement of such claim, action or suit, and (iii) give Contractor authority to control the defense of the claim, action or suit and any settlement negotiations, provided Contractor and any of its applicable insurance carriers have accepted the duty to indemnify the Indemnitee and have demonstrated to the Indemnitee's satisfaction (based upon commercially reasonable analysis) that Contractor and its applicable insurance carrier are financially capable of fully indemnifying the Indemnitee.

ARTICLE VII – INFORMATION TECHNOLOGY WARRANTIES AND INDEMNIFICATION

In the event Contractor uses or licenses to Windstream any Software in the performance of its duties and obligations under this Agreement, the provisions of this Article shall apply.

7.1 Contractor's Representations and Warranties. Contractor represents and warrants that (a) Contractor is either the owner of the Software or authorized to provide the Software in its performance of this Agreement, (b) Contractor has sufficient right, title, and interest in the Software to grant the license contemplated by this Agreement, (c) the medium containing the Software will be free from material defect, (d) the Software will perform substantially in accordance with its applicable documentation, operating instructions, and manuals, (e) Contractor shall perform its responsibilities under the Agreement in a manner that does not infringe, or constitute an infringement or violation of, third-party intellectual property rights, misappropriation of trade secret or violation of rights of privacy, attribution, or withdrawal, (f) the Software and Services shall be free from Viruses (in the event a Virus is found to have been introduced by Contractor, Contractor shall, at no additional charge to Windstream, assist Windstream in reducing the effects of the Virus and, if the Virus causes a loss of operational efficiency or loss of data, to assist Windstream to the same extent to mitigate and restore such losses; "Virus" shall mean program code or programming

instructions or set of instructions intentionally designed to disrupt, disable, harm, interfere with or otherwise adversely affect computer programs, data files or operations, or other code typically described as a virus or by similar terms, including but not limited to Trojan horse, worm, backdoor, a time bomb, software lock, drop-dead device, malicious logic, bug, error, defect or trap door), (g) Contractor shall not insert into the Software any code that would have the effect of disabling or otherwise shutting down all or any portion of the Software or Services, and, with respect to any disabling code that may be part of the Software, Contractor shall not invoke such disabling code at any time, including upon expiration or termination of this Agreement for any reason, without Windstream's prior written consent, and (h) the Software is not, and does not contain, any module or component which is open source software.

7.2 Indemnification for Infringement. (a) Contractor agrees to indemnify, defend and hold harmless the Indemnitees from and against any and all Losses and threatened Losses arising from, in connection with, or based on third-party allegations whenever made of any claims of infringement or misappropriation of any patent, trade secret, copyright, or other intellectual property rights, or moral rights related thereto based upon the Software. This indemnity shall not extend to infringement to the extent determined by a court of competent jurisdiction that such Loss (i) would not have occurred but for: (A) Contractor's compliance with Windstream's designs, processes or formulas; or (B) a modification of the Software by Windstream or a third party at the request of Windstream; or (ii) results from items not provided or approved by Contractor that contribute to a claim based on combination of such items with Software.

(b) As conditions to Contractor's obligations under this Section 7.2, an Indemnitee shall (i) give Contractor prompt written notice of the claim, action or suit (provided that the failure by the Indemnitee to provide prompt written notice shall not relieve Contractor from any of its obligations hereunder, except to the extent Contractor is actually prejudiced thereby), (ii) reasonably cooperate with Contractor in the defense and settlement of such claim, action or suit, and (iii) give Contractor authority to control the defense of the claim, action or suit and any settlement negotiations, provided Contractor and any of its applicable insurance carriers have accepted the duty to indemnify the Indemnitee and have demonstrated to the Indemnitee's satisfaction (based upon commercially reasonable analysis) that Contractor and its applicable insurance carrier are financially capable of fully indemnifying the Indemnitee.

ARTICLE VIII- INFORMATION SECURITY REQUIREMENTS

The provisions of this Article shall apply in the event Contractor shall connect to Windstream's networks or obtain, from any source, Windstream data in the performance of duties and obligations under this Agreement.

8.1 Information Security Management: General Guidance. Contractor shall have a security policy that (a) provides guidance to its personnel to ensure the confidentiality, integrity, and availability of information and systems maintained or processed by Contractor, and (b) provides express instructions regarding the steps to take in the event of a compromise or other anomalous event. The policies shall be approved by Contractor's senior management and shall provide for and contain penalties or sanctions for non-compliance. Contractor's security policy shall provide a framework for information security management within its overall organization. Contractor's policy shall address the following key points: delegation and assignment of responsibilities for security; management oversight for the policy and its deployment; means for managing security within the enterprise; policies and procedures for data confidentiality and privacy and data protection and access to, and handling of, Windstream data; and planning for incident response in the event of a breach of security or unauthorized disclosure of Windstream data.

8.2 Security and Processing Controls. Contractor shall maintain commercially reasonable standards and procedures to address the configuration, operation, and management of systems and networks (including Contractor's proprietary technology and third-party technology), services, and data owned by Windstream. Such standards and procedures shall include use of state-of-the-art, commercial or professional-grade (a) security controls, (b) identification and patching of security vulnerabilities on a commercially reasonable schedule, (c) anti-virus software and current virus definitions, (d) change control processes and procedures, (e) problem management, and (f) incident detection and management.

8.3 Notification Obligations. Commencing with the Effective Date, Contractor shall, by telephone and e-mail, notify Windstream of primary and backup contact personnel for information security issues arising under this Agreement.

8.4 Notice of Claims. Contractor shall notify Windstream of the following events without undue delay, as soon as practicable after the event:

(a) Change, including by resignation, in information security staff directly or indirectly responsible for Windstream data or Contractor's systems or networks (including the copies of Contractor's proprietary technology

and third-party technology installed thereon) that directly or indirectly support Windstream data (notice to be provided telephonically);

(b) Suspected breaches or compromises of Windstream data or Contractor's systems or networks (including the copies of Contractor's proprietary technology and third-party technology installed thereon) that directly or indirectly support Windstream data, or claims or threats thereof made by any personnel or external person (notice to be provided telephonically);

(c) Termination of any personnel for cause, where related to such personnel's potential or actual misuse or compromise of Windstream data or Contractor's systems or networks (including the copies of Contractor's proprietary technology and third-party technology installed thereon) that directly or indirectly support Windstream data (notice to be provided telephonically);

(d) Any law enforcement or administrative investigation or inquiry into suspected misuse or abuse of Contractor's systems or network (notice to be provided telephonically);

(e) Contractor's non-compliance, for a period greater than one (1) week, with any requirement under the information security requirements of this Agreement; and

(f) Retention of a new third-party technology vendor that will have responsibility for Windstream data, any system, or network (including the copies of Contractor's proprietary technology and third-party technology installed thereon) that directly or indirectly support Windstream data.

8.5 Installation and Use of Particular Windstream Information Security Technology. If Windstream shall direct, Contractor shall install and use Windstream proprietary information security technology in the performance of Contractor's duties and obligations under this Agreement. Windstream shall provide such technology to Contractor at no cost to Contractor; provided, Contractor shall not be required to install or adopt Windstream proprietary information security technology if such would result in a commercially unreasonable burden to Contractor.

8.6 Adherence to Information Security Standards/Protocols. Contractor shall adhere to general Windstream information security standards/protocols as may reasonably be specified by Windstream to Contractor in writing from time to time. In addition, Contractor shall adhere to any specific information security standards/protocols reasonably specified by Windstream pursuant to this Agreement (and changes to such standards/protocols subsequent to the Effective Date of this Agreement). A schedule containing any such specific information security standards/protocols shall be attached to each services agreement, statement of work, order, or similar part of this Agreement, as appropriate.

8.7 Information Security Policies and Procedures. Contractor shall ensure all personnel directly involved with Windstream data or Contractor's systems or networks (including the copies of Contractor's proprietary technology and third-party technology installed thereon) that directly or indirectly support Windstream data are made aware of, trained in, and are required to adhere to security policies and security practices pertaining to the handling of Windstream data. Upon Windstream's request, or where specified in this Agreement, Contractor shall provide Windstream data to and receive Windstream data from its Subcontractors only via Windstream-approved security mechanisms, and shall employ and require its Subcontractors to employ Windstream-approved security mechanisms with respect to the Windstream data (to the extent security mechanisms are not specifically identified, such vendors shall comply with the security standards of the industry standards bodies and organizations). Absent Windstream's written request or specification pursuant to this Agreement, Contractor shall not provide Windstream data to its Subcontractors or third-party technology vendors.

8.8 Information Security Assessments of Contractor Resources; Remedial Action. Contractor shall permit information security assessments to be performed by Windstream (or Windstream's representatives) on Contractor-owned, leased and/or operated resources, networks, services, software, data, information or equipment upon Contractor's consent in each instance. Such assessment may be done for the general purposes of this Agreement. Windstream shall also have the right to conduct such an assessment on Contractor's Subcontractors as Windstream may select, to be performed by Windstream on Subcontractor-owned, leased and/or operated resources, networks, services, software, data, information or equipment, upon Subcontractor consent in each instance. After each assessment, or in the event of the identification of any material security-related risk to Windstream's data by Contractor or Windstream, Contractor and/or its affected Subcontractor shall take such remedial action as Windstream may reasonably request based on industry best practices and the results of such assessment, audit, or risk identification, at no additional cost or charge to Windstream. In the event that Contractor and/or its affected Subcontractor fail to take such remedial action, Windstream shall have the right, at Windstream's sole

option, to terminate this Agreement or the affected portion of this Agreement or to require Contractor to cease use and processing of all Windstream data and to quarantine all Windstream data from exposure to or installation on Contractor's systems and networks.

8.9 Audits of Contractor Information Security. If Contractor, at its own expense, retains an independent third-party auditor to perform audits or assessments of Contractor's information security procedures, systems and network, used directly or indirectly to process Windstream data, including testing of the system of controls (SAS 70 or equivalent), appropriate systems implementation (SysTrust or equivalent), and vulnerability analysis and penetration testing, Contractor shall notify Windstream of the name of the third-party auditor and the date of the audit, and shall provide Windstream with a copy of any final reports or analyses provided to Contractor by any such third party. All such deliverables shall be deemed Confidential Information of both Contractor and Windstream. Contractor shall maintain a process for correcting control and other material deficiencies, as reasonably determined by Windstream, that have been identified in audits or assessments, including follow-up documentation providing evidence of such corrections. During the Term and for three (3) years after termination or expiration of this Agreement, Contractor shall implement and maintain backup processes sufficient to keep detailed, accurate and up-to-date accounts and records, including computer logs, of all information security activities carried out, and all costs and expenses incurred, in the performance of its information security obligations under this Agreement. Upon Windstream's request, and subject to the restrictions on Confidential Information, Contractor shall allow Windstream or its authorized representatives to examine and copy such accounts and records as Windstream determines may be relevant to information security issues and related expenses arising under this Agreement. Such examination and copying shall occur at reasonable intervals and upon reasonable notice during the Term and for three (3) years thereafter.

8.10 External Connections. If Contractor connects to Windstream's systems or network it shall comply with Windstream's "Third Party Network Connection Policy" (as published on Windstream's Intranet site and updated from time to time). Contractor shall only use the network connection ("Network Connection") for the specific lawful business purposes outlined in this Agreement. Contractor will allow only authorized employees, representatives or agents to access the Network Connection; Contractor shall be solely responsible for ensuring that such employees are not security risks. Contractor shall maintain commercially reasonable technology controls to protect the Network Connection, including firewalls, anti-virus software, security monitoring and alerting systems (i.e., intrusion detection systems), provide a business environment to be staffed and managed twenty-four (24) hours, seven (7) days a week, and supported by operations procedures, and implement and maintain remote access solutions for personnel that are designed and audited in conformity with industry best practices.

8.11 Regular Consultation. At Windstream's request, but in no event more often than once per quarter, Contractor's information security contact personnel shall meet with Windstream information security staff to discuss issues related to the obligations in this Article and information security best practices as they evolve.

8.12 Information Security-Related Termination Rights. In addition to any other termination rights under this Agreement, Windstream shall have the right to terminate this Agreement immediately on the occurrence of (a) compromise, disclosure or inappropriate use of Windstream data, (b) failure by Contractor to provide the notices of security issues required under this Agreement, (c) damages or costs incurred by Windstream because of Contractor's failure to provide Windstream with prompt access to appropriate information including logs and/or personnel in the event of a suspected breach or actual compromise of Windstream data or Contractor's systems or networks (including the copies of Contractor's proprietary technology and third-party technology installed thereon) that directly or indirectly support Windstream data; and (d) the determination by Windstream in its sole discretion, that any audit or assessment demonstrates Contractor's gross negligence or willful misconduct.

8.13 Statement of Compliance. Contractor shall provide Windstream an annual written statement certified by an officer of Contractor that it has complied with all of the security requirements of this Article.

ARTICLE IX - GENERAL PROVISIONS

9.1 Entire Agreement; Amendment. The making, execution, and delivery of this Agreement by the Parties have been induced by no representations, statements, warranties, or agreements other than those herein expressed. This Agreement, including the terms and conditions of the Mutual Non-Disclosure Agreement and including any attachment herein referenced, constitutes the entire agreement between the Parties with respect to the subject matter hereof and supersedes all prior agreements, whether written or oral, with respect to such subject matter. Except as otherwise expressly set forth in this Agreement, this Agreement may not be modified or amended except in writing signed by the Parties.

9.2 Notices. All notices, requests, demands, or other formal communications hereunder, including notices of change of address, shall be in writing, and either personally delivered, sent by certified mail or overnight mail by a nationally recognized courier, or facsimile, if to Windstream, to the Windstream Procurement Department with a copy to the Windstream Legal Department at the addresses and facsimile numbers following this paragraph, and if to Vendor, then to the applicable physical address or facsimile number first set forth above to the attention of the department, group, or section with which Windstream is then currently dealing. Notices will be deemed effective upon personal delivery or transmission by facsimile (with a transmission report confirmation), three (3) business days after mailing if sent by certified mail, or the next business day if sent overnight mail by a nationally recognized courier.

Send notices to: Windstream Supply, LLC
13560 Morris Road
Alpharetta, GA 30004
Attn: Procurement Contract Administrator
Facsimile No. 678-351-8362

With copy to: Windstream Legal Department
4001 Rodney Parham Road
Mail Stop: 1170-B1F03-71A
Little Rock, AR 72212
Facsimile No. 501-748-5172

If to Contractor: To the applicable address first set forth above to the attention of the department, group, or section with which Windstream is then currently dealing.

Notices will be deemed effective upon personal delivery, three (3) business days after mailing if sent by certified mail, or the next business day if sent overnight mail by a nationally recognized courier.

9.3 Third-party Beneficiaries. This Agreement is entered into by and between, and may be enforced only by, the Parties, and this Agreement shall not be deemed to create any rights in third parties (other than the Parties' permitted successors and assigns and any persons entitled to indemnity hereunder), including suppliers and customers of a Party, or to create any obligations of a Party to any such third parties.

9.4 Force Majeure. No Party shall be liable for any default or delay in the performance of its obligations under this Agreement if and to the extent such default or delay is from causes outside the reasonable control of a Party. Such causes may include fire, flood, earthquake, natural disasters or acts of God, terrorist acts, riots, civil disorders, freight embargoes, government action, or the like, provided the non-performing Party is without fault in causing such default or delay, and such default or delay could not have been prevented by reasonable precautions and could not reasonably be circumvented by the non-performing Party through the use of alternate sources, workaround plans or other means (including disaster recovery services, if any). However, the non-performing Party shall not be excused from its obligations to protect the other Party's Confidential Information or to provide disaster recovery and business continuity services, as may be required under this Agreement. In such event the non-performing Party shall be excused from further performance or observance of the obligations so affected for as long as such circumstances prevail and such Party continues to use commercially reasonable efforts to recommence performance or observance without delay. Any Party so delayed in its performance shall immediately notify the Party to whom performance is due by telephone (to be confirmed in writing within twenty-four (24) hours of the inception of such delay) and describe at a reasonable level of detail the circumstances causing such delay. Should any event delay the performance by a Party for thirty (30) days or more, the other Party may terminate this Agreement upon written notice to the delayed Party.

9.5 Assignment. Neither Party may assign the Agreement without the prior written consent of the other Party, which consent will not be unreasonably withheld or conditioned; consent may be conditioned upon the assigning Party's reasonable assurance that the assignee can adequately perform the assigning Party's duties and obligations in the same manner and on the same terms and conditions as the assigning Party. Notwithstanding the foregoing, either Party may make an assignment, in whole or in part, of any of its rights or obligations under this Agreement without the consent of the other Party to: (i) an Affiliate, (ii) a third party to whom the applicable business has been sold (provided the purchaser of the business provides the other Party reasonable assurance of its ability to perform under this Agreement and its financial condition), (iii) one or more successors in interest that agree to be bound by all terms and conditions of this Agreement or (iv) a third party to whom Windstream outsources work reasonably related to the subject matter hereof. Each Party shall cause its permitted assigns to be bound by the terms of this Agreement. Any attempted non-permitted assignment, transfer or delegation in contravention of this Section of the

Agreement shall be null and void. This Agreement shall inure to the benefit of the Parties and their permitted successors and assigns.

9.6 Choice of Law and Jurisdiction. THIS AGREEMENT SHALL BE CONSTRUED AND THE LEGAL RELATIONS BETWEEN THE PARTIES DETERMINED IN ACCORDANCE WITH THE LAWS OF THE STATE OF ARKANSAS, USA, WITHOUT GIVING EFFECT TO ANY CHOICE OF LAW RULES WHICH MAY DIRECT THE APPLICATION OF THE LAWS OF ANY OTHER JURISDICTION. ANY DISPUTE HEREUNDER REQUIRING JUDICIAL RESOLUTION SHALL ONLY BE MADE THE SUBJECT OF AN ACTION BROUGHT IN A COURT OF COMPETENT JURISDICTION IN PULASKI COUNTY, ARKANSAS, AND THE PARTIES EACH ACCEPT THE EXCLUSIVE JURISDICTION OF SUCH COURTS. The Parties hereto expressly exclude the application of any non-United States laws and the United Nations Convention on Contracts for the International Sale of Goods from this Agreement and any transaction that may be entered into between the Parties in connection with this Agreement.

9.7 No Other Relationship/Obligations. Neither Party shall have any right, power, or authority to assume, create, or incur any expense, liability, or obligation, expressed or implied, on behalf of the other Party, except as expressly provided herein. This Agreement is not intended to be nor shall it be construed as a joint venture, association, partnership, or other form of a business organization, agency relationship, or employment relationship.

9.8 Trademarks and Publicity. Neither Party shall have any right to use any marks, names, slogans, logos or designations of the other Party, unless otherwise agreed to in writing by such other Party. Nothing contained herein shall be deemed to grant either directly or by implication, estoppel, or otherwise, any license under any patents, copyrights, trademarks, service marks or other intellectual property rights of one Party to the other Party. In no event shall either Party issue a press release or make any public statement concerning the other without the prior written permission of the other.

9.9 Compliance with Laws; Federal Government Contracting.

(a) **Compliance Clauses.** Each Party shall, at its own cost and expense, perform its obligations under this Agreement in compliance with all applicable laws to which a Party is subject. As a supplier to the U.S. Government, Windstream is required by U.S. Government Regulations to require that all Windstream vendors, suppliers, contractors, and licensors comply with the following additional clauses: 48 CFR 52.225-13 Restrictions on Certain Foreign Purchases (Feb. 2006); and 48 CFR 52.247-64 Preference for Privately Owned U.S. Flag Commercial Vessels (Feb. 2006). For all vendor, supplier, contractor, and licensor contracts over \$10,000, the following general terms additionally apply: 48 CFR 52.222-21 Prohibition of Segregated Facilities (Feb. 1999); 48 CFR 52.222-26 Equal Opportunity (Mar. 2007); and 48 CFR 52.222-36 Affirmative-Action for Workers with Disabilities (June 1998). For all vendor, supplier, contractor, and licensor contracts over \$100,000, the following general terms additionally apply: 48 CFR 52.219-8 Utilization of Small Business Concerns (May 2004) (in all subcontracts allowing further subcontracting with third parties by the vendor, supplier, contractor or licensor); 48 CFR 52.222-35 Equal Opportunity for Special Disabled Veterans, Veterans of the Vietnam Era, and Other Eligible Veterans (Sept. 2006); 48 CFR 52.222-37 Employment Reports on Special Disabled Veterans, Veterans of the Vietnam Era, and Other Eligible Veterans (Sept. 2006); and 48 CFR 52.203-6 Restrictions on Subcontractor Sales to the Government (Sept. 2006). For contracts over \$500,000 (\$1,000,000 for construction) that allow the vendor, supplier, contractor, or licensor to further subcontract with third parties, 48 CFR 52.219-9 Small Business Subcontracting Plan (Nov. 2007) shall also apply.

(b) **Small Business Subcontracting Plan.** Pursuant to 48 CFR 52.219-9 Small Business Subcontracting Plan (Nov. 2007), if applicable, upon request by Windstream, a vendor, supplier, contractor or licensor whose contracts with Windstream (i) will total at least \$500,000 (\$1,000,000 for construction) and (ii) allow the vendor, supplier, contractor, or licensor to further subcontract with third parties, shall submit to Windstream a written Small Business Subcontracting Plan ("Subcontracting Plan") that complies with the requirements of 48 CFR 52.219-9 and addresses subcontracting with small business concerns, including small businesses, veteran-owned small businesses, service-disabled veteran-owned small businesses, HUBZone small businesses, small disadvantaged businesses, and women-owned small businesses. The Subcontracting Plan shall become an exhibit attached to this Agreement and incorporated herein by this reference. If a Subcontracting Plan is required under this Section, Windstream shall have the right, in its sole discretion, to terminate this Agreement, on written notice, if Contractor fails to properly submit or follow a Subcontracting Plan. Additionally, Contractor agrees to indemnify Windstream for any damages, of whatever nature, Windstream is required to pay under 48 CFR Part 52 if those damages result from Contractor's failure to properly submit or follow a Subcontracting Plan.

9.10 Waiver. No waiver of any provisions of this Agreement and no consent to any default under this Agreement by Windstream shall be effective unless the same shall be in writing and signed by or on behalf of Windstream. No course of dealing or failure of Windstream to strictly enforce any term, right or condition of this Agreement shall be construed as a waiver of such term, right or condition, nor shall any single or partial exercise of any such right preclude any other or further exercise thereof or the exercise of any other right. Waiver by Windstream of any default by Contractor shall not be deemed a waiver of any other default.

9.11 Construction; Severability. This Agreement has been negotiated by the Parties and their respective legal counsel and will be fairly interpreted in accordance with its terms and provisions and without any strict construction in favor of or against either Party. If any term or provision of this Agreement is found by a court of competent jurisdiction or by order of any regulatory agency to be invalid, illegal or otherwise unenforceable, the same shall not affect any of the other terms or provisions of this Agreement, but such term or provision shall be deemed modified to the extent necessary to render such term or provision enforceable, and the rights and obligations of the Parties shall be construed and enforced accordingly, preserving to the fullest permissible extent the intent and undertakings of the Parties set forth in the remainder of this Agreement. The headings used in this Agreement are for reference purposes only, and will not be deemed to limit, expand or in any way affect the interpretation of any term or provision of this Agreement.

9.12 Counterparts. This Agreement may be executed in multiple counterparts, each of which shall be deemed to be an original, but all of which together shall constitute only one document. Signatures on this Agreement which are exchanged by facsimile or other electronic means are true and valid signatures for all purposes hereunder and shall bind the Parties to the same extent as original signatures.

9.13 Cumulative Remedies. Except as otherwise expressly provided herein, all remedies provided for in this Agreement shall be cumulative and in addition to and not in lieu of any other remedies available to either Party at law or in equity.

9.14 Survival. The provisions of this Agreement which by their nature are intended to survive the termination of this Agreement shall survive termination of this Agreement and any permitted assignment of this Agreement. Upon termination of this Agreement, the provisions of the Mutual Non-Disclosure Agreement shall continue in effect in accordance with its terms and conditions.

9.15 Audit. Windstream may, upon notice to Contractor, audit any and all work or expense records of Contractor relating to this Agreement. Contractor shall have the right to exclude from such inspection any of its confidential or proprietary information which was not otherwise provided to Windstream in performance of this Agreement. Contractor further agrees to maintain its books and records relating to material and/or services provided for a period of three (3) years from the date such work was completed, and to make such books and records available to Windstream, during normal business hours, at any time or times within the three year period.

9.16 Insurance.

a) Contractor shall obtain and maintain, in full force and effect until the completion of Services and operations covered by this Agreement, such minimum insurance as will cover the obligations and liabilities of Contractor, its agents, and its employees which may arise from the operations under this Agreement. Insurance shall have limits of :

i) Commercial General Liability policy of minimum limits of:

General Aggregate \$ 3,000,000 per occurrence

Each Occurrence \$ 2,000,000 per occurrence

The policy will be endorsed to show above aggregate limits applying to "each" Project Site and will specifically state coverage applies to all operations conducted by Contractor, its employees, or agents on behalf of Windstream or subsidiary.

Where the performance of Services involves structural property, underground property, or blasting, Contractor's Commercial General Liability insurance policy shall provide coverage to the insured for legal liability arising from operations under this Agreement for property damage to include

environmental liability (1) arising out of blasting, (2) arising out of collapse of, or structural injury to, any building or structure or (3) to underground facilities and utilities.

Other general liability forms are acceptable in lieu of the Commercial General Liability Form; however they are not to be used without written approval from Windstream's Risk Management Department.

ii) Business Automobile Liability policy with minimum limits of:

| | |
|-----------------------|---------------------------|
| Bodily Injury | \$ 2,000,000 per accident |
| Property Damage | \$ 2,000,000 per accident |
| OR | |
| Combined Single Limit | \$ 2,000,000 per accident |

The policy will be issued using symbol "1 - any auto" coverage.

iii) Workers Compensation:

| | |
|-------------------------------|-------------|
| Part A - Medical Benefits | Statutory |
| Part B - Employer's Liability | \$1,000,000 |

The policy will show the state in which operation on behalf of Windstream and/or subsidiary is being conducted. For operations conducted within monopolistic (state fund) states, Contractor will furnish a certificate of compliance from the appropriate state fund administrator.

iv) Errors & Omissions (for professional services):

| | |
|-------------------|-------------------------------|
| General Aggregate | \$5,000,000 per policy period |
| Per Claim | \$5,000,000 |

OR

| | |
|-------------------|-------------------------------|
| General Aggregate | \$5,000,000 per policy period |
| Per Occurrence | \$5,000,000 |

- b) In each and every policy in (i) and (ii) of Section 9.16(a) above, Windstream Corporation and its subsidiaries shall be named an "additional insured" with respect to activities performed on behalf of Windstream and its subsidiaries.
- c) Coverage provided by the policies listed in this Section 9.16 will be issued by an insurance company, acceptable to Windstream, licensed in the state in which operations on behalf of Windstream are to be conducted. It is acceptable to use both primary and excess/umbrella policies to obtain necessary limits.
- d) Contractor will furnish to Windstream, a certificate evidencing insurance coverage under sub-sections (i), (ii), (iii) and (iv) of Section 9.16(a) above. Such certificate shall provide for a thirty (30) day prior notice to Windstream of any cancellation or material changes in coverage and shall be signed by a legal representative of the issuing insurance company.
- e) The provisions of sub-sections (i), (ii), (iii) and (iv) of Section 9.16(a) shall also apply to all Subcontractors, and Contractor shall be responsible for their compliance herewith.

9.17 OSHA Compliance. Contractor shall have full responsibility for following all the requirements of the Occupational Safety and Health Act of 1970 ("the Act") and all regulations issued under the Act, any other applicable safety procedures, and other such laws, regulations, customs, and practices as may be applicable for proper completion of work under this Agreement, without any recourse to Windstream for additional costs or time because of these requirements. Contractor agrees that it is familiar with the Act and regulations issued under the Act and all of the other laws, regulations, customs, and practices referred to above. Contractor further agrees that Windstream is not in a position to create, control, or abate any hazards associated with Services of Contractor and that Windstream is not in a position to identify any hazards associated with Services. Contractor further agrees that Windstream is relying upon Contractor to take all reasonable steps necessary to avoid or abate any hazards associated with Services. In connection therewith, Contractor will complete and sign the attached **Exhibit C - Contractor Safety Checklist**.

- a) Contractor agrees that no unauthorized persons, including representatives of government agencies, shall be allowed to enter a Project Site without prior approval of Windstream.

- b) Contractor agrees to indemnify Windstream for all citations and complaints arising under or connected with the Act and the regulations issued under the Act or any of the other laws, regulations, customs, and practices referred to above. Contractor agrees to defend Windstream against such citations and complaints at Windstream's election and to reimburse Windstream for all penalties, fines, costs, and attorneys' fees incurred by Windstream as a result of such citations and complaints.
- c) Contractor agrees to indemnify Windstream for all damages, including workers' compensation costs, sustained by Windstream as a result of any injury to any of Windstream's employees resulting from the negligence, recklessness, or willfulness of Contractor.
- d) Contractor further agrees to indemnify and hold Windstream harmless from any claims, damages, and complaints made by any employee of Contractor against Windstream based upon or arising out of any injury or illness allegedly suffered by such employee or out of any condition or hazard associated with such employee's work for Contractor and/or contact with Windstream. Such indemnification includes the duty to pay Windstream's attorneys' fees, expert fees, and costs of defense.
- e) If there is a conflict between this Section 9.17 and any other provision of this Agreement, this Section 9.17 shall govern.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed by their respective authorized representatives to be effective as of the Effective Date.

CONTRACTOR SAFETY CHECKLIST

This checklist may be completed and signed by the Contractor and reviewed by Windstream prior to Windstream executing the Agreement.

| | | |
|--------------------------|---|---------------------------|
| 1. | Name and telephone number of the Contractor's executive officer | Tim Parker, 404.497.1957 |
| 2. | Contractor's compliance identification numbers (e.g. federal, state DOT number, state fuel tax, and/or state registration numbers) | 58-1117270 |
| 3. | Contractor's DOT compliance safety rating - This is only applicable for firms who drive or own vehicles that would be regulated by the Federal or State Departments of Transportation. Indicate whether federal or state rating. | NA |
| 4. | Has the Contractor been inspected or received any citations from a Governmental agency in the last 3 years? Yes or No | No |
| 5. | Has your firm been investigated, reviewed or inspected by the EPA, IRS, OSHA, etc.? Yes or No | No |
| | If yes, attach a separate sheet explaining and itemizing each issue. | |
| 6. | Where are the Contractor's OSHA 300/101 forms maintained? Certain firms are required by law to maintain OSHA 300/101 forms. (Accident logs, Incident reports) If your firm is required, please enter the location of these forms. | NA |
| 7. | Is the Contractor familiar and in compliance with federal, state and local codes, laws, and other regulations, which affect services that may be performed for Windstream? Yes or No | Yes |
| 8. | Is the Contractor familiar and in compliance with the Federal Motor Carrier Safety Regulations? Yes or No | NA |
| | (If no, explain in the Comments section below) | |
| 9. | Is the Contractor familiar and equipped to comply with the manual on Uniform Traffic Control Devices? Yes or No | Yes |
| | (If no, explain in the Comments section below) | |
| 10. | Has the Contractor conducted all required safety training and does the Contractor have in place all required safety programs, records, and training applicable to services that may be performed for Windstream? Yes or No | Yes |
| 11. | By signing below, I certify that I have received a copy of the Windstream Pocket Safety Guide. | |

**AMENDMENT
TO
MASTER CONTRACTOR AGREEMENT FOR NETWORK SERVICES**

Between
Byers Engineering Company
and
Windstream Supply, LLC.

Windstream Contract #: 091009A10

THIS first AMENDMENT to the MASTER INTEGRATOR AGREEMENT FOR NETWORK SERVICES (the "Amendment") is entered into to be effective as of November 11, 2014 ("Effective Date"), by and between Windstream Supply, LLC., an Ohio corporation ("Windstream"), and Byers Engineering Company (hereinafter "Contractor").

WHEREAS, Windstream and Contractor entered into that certain Master Integrator Agreement for Network Services dated and effective October 9, 2009 (the "Agreement"); and

WHEREAS, Windstream and Contractor desire to amend, modify and change the Agreement as set forth herein.

NOW THEREFORE, in consideration of these premises and the mutual undertakings herein contained, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Windstream and Contractor, intending to be legally bound, hereby agree as follows:

1. Amendment.

a. Section 3 (Payment Terms) shall be amended to read as follows:

Payment Terms. Pursuant to the terms of each PSA, Windstream shall issue payment of any undisputed amount, less any retention provided for herein, within forty five (45) days after receipt of the applicable invoice by Windstream. Windstream reserves the right to pay any amounts owed to Subcontractors directly to such Subcontractors, in which case such amounts shall be deducted from any amounts owed to Contractor. Nothing contained in the preceding sentence shall be construed as:

- i) limiting the responsibilities of Contractor as to its Subcontractors,
- ii) creating any responsibilities of Windstream as to any Subcontractor, or
- iii) evidencing any control of any Subcontractor by Windstream.

Approval and payment of invoices is solely for the purposes of payment and shall not be viewed as approval or acceptance of the workmanship or materials. Upon Project completion and Windstream's final inspection and acceptance (which may occur some time after Project completion), Windstream shall pay Contractor all amounts to which Contractor is entitled. Final payment shall be invoiced by Contractor within forty five (45) days after the date of completion of the Project. No payment shall be due to Contractor while Contractor is in default of any provision of this Agreement or any provision of a PSA covering a specific Project. Billing disputes shall not be cause for Contractor's non-performance under this Agreement.

2. No Other Amendment. Except as expressly set forth herein, all of the terms and conditions of the Agreement shall remain in full force and effect, without any change whatsoever.

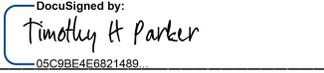

3. Counterparts. This Amendment may be executed in two (2) or more counterparts, each of which when executed and delivered shall be deemed to be an original, and all of which when taken together shall constitute one and the same instrument.

4. Capitalized Terms. Capitalized terms used herein, but not otherwise defined, shall have the meaning ascribed to them in the Agreement.
5. Conflict. In the event there is any conflict between the terms and conditions of this Amendment and the terms and conditions of the Agreement, the terms and conditions of this Amendment will prevail. The Agreement, as amended hereby, shall remain in full force and effect.
6. Entire Agreement. The Agreement, including any Exhibits or Attachments to the Agreement, and this Amendment constitute the entire agreement between the parties with respect to the subject matter hereof and supersede all previous agreements, oral or written, between the parties concerning the subject matter hereof. No modification or amendment of the terms of the Agreement or this Amendment shall be effective except by a writing executed by both parties.

IN WITNESS WHEREOF, the parties have entered into this Amendment as of the Effective Date.

**AMENDMENT 1 TO
Project Scope Agreement
for
OSP Engineering
Between
Windstream Supply, LLC
and
Byers Engineering Company**

THIS AMENDMENT TO THE PROJECT SCOPE AGREEMENT (the "Amendment") is entered into to be effective as of 3/28/2016 ("Effective Date") by **Windstream Supply, LLC**, on behalf of itself and its affiliates ("Windstream") and **Byers Engineering Company** ("Contractor"), and amends the Project Scope Agreement entered between Windstream and Contractor on March 4, 2015 (the "Agreement").

WHEREAS, Windstream and Contractor desire to amend, modify and change the Agreement as set forth herein.

NOW THEREFORE, in consideration of these premises and the mutual undertakings herein contained, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Windstream and Contractor, intending to be legally bound, hereby agree as follows:

1. Exhibit A. Exhibit A is amended to include unit rates for North Carolina and South Carolina in the attached "Exhibit A—OSP Engineering Units for North Carolina and South Carolina".
2. No Other Amendment. Except as expressly set forth herein all of the terms and conditions of the Agreement shall remain in full force and effect, without any change whatsoever.
3. Counterparts. This Amendment may be executed in one or more counterparts, each of which when executed and delivered shall be deemed to be an original, and all of which when taken together shall constitute one and the same instrument. Signatures on this Amendment which are exchanged by facsimile or other electronic means are true and valid signatures for all purposes hereunder and shall bind the Parties to the same extent as original signatures.
4. Capitalized Terms. Capitalized terms used herein, but not otherwise defined, shall have the meaning ascribed to them in the Agreement.
5. Conflict. In the event there is any conflict between the terms and conditions of this Amendment and the terms and conditions of the Agreement, the terms and conditions of this Amendment will prevail. The Agreement, as amended hereby, shall remain in full force and effect.
6. Entire Agreement. The Agreement, including any Exhibits or Attachments to the Agreement, and this Amendment constitute the entire agreement between the parties with respect to the subject matter hereof and supersede all previous agreements, oral or written, between the parties concerning the subject matter hereof. No modification or amendment of the terms of the Agreement or this Amendment shall be effective except by a writing executed by both parties.

IN WITNESS WHEREOF, the parties have entered into this Amendment as of the Effective Date.

| UNIT # | | Paid Per | DESCRIPTION | BYERS QUOTED COST - NC & SC |
|--|--------------------------|----------|---|-----------------------------|
| Exhibit A-OSP ENGINEERING UNITS for North Carolina and South Carolina | | | | |
| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | | | |
| ENGINEERING: PRIVATE EASEMENT ACQUISITION | | | | |
| EN1 | Private Easement | | PRIVATE EASEMENT ACQUISITION - SIMPLE: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoration plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery; one (1) filing/recording. Easement requirements consist of the following: (a) square footage <= 250 sq. ft.; (b) linear footage <= 100 feet; (c) # of property owners = 1; (d) # of adjacent property owners <= 2; (e) # of access points = 1; (f) scaled drawings may be required; and (g) an environmental checklist may be required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$738.00 |
| EN2 | Private Easement | | PRIVATE EASEMENT ACQUISITION - SOMEWHAT COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoration plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery; one (1) filing/recording. Easement requirements consist of the following: (a) square footage between 251 and 1,000 sq. ft.; (b) linear footage between 101 and 500 feet; (c) # of property owners = 2; (d) # of adjacent property owners either 3 or 4; (e) # of access points either 2 or 3; (f) scaled drawings may be required; (g) an environmental checklist may be required; and (h) test hole(s) 1 bore(s) required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,107.00 |
| EN3 | Private Easement | | PRIVATE EASEMENT ACQUISITION - COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoration plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery; one (1) filing/recording. Easement requirements consist of the following: (a) square footage between 1,001 and 2,500 sq. ft.; (b) linear footage between 501 and 1,000 feet; (c) # of prop. owners between 3 and 5; (d) # of adjacent property owners between 5 and 8; (e) # of access points either 4 or 5; (f) scaled drawings are required; (g) environmental checklist required; (h) test hole(s) 1 bore(s) required; (i) wetlands overlay required; and (j) plan/profile drawings are required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,415.00 |
| EN4 | Private Easement | | PRIVATE EASEMENT ACQUISITION - VERY COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoration plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery; one (1) filing/recording. Easement requirements consist of the following: (a) square footage > 2,500 sq. ft.; (b) linear footage > 1,000 feet; (c) # of property owners > 5; (d) # of adjacent property owners > 8; (e) # of access points > 5; (f) scaled drawings required; (g) environmental checklist required; (h) test hole(s) 1 bore(s) required; (i) wetlands overlay required; (j) plan/profile drawings required; (k) aerial photographs required; (l) an easement release is required; or (m) a right of trespass is required. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,743.00 |

| EN17 | Per Pole/Brace | | ENGINEER POLE/PUSH BRACE - 26-50 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$23.00 |
| EN18 | Per Pole/Brace | | ENGINEER POLE/PUSH BRACE - 51-100 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$21.00 |
| EN19 | Per Pole/Brace | | ENGINEER POLE/PUSH BRACE - >= 101 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$17.00 |
| EN20 | Per Anchor/Guy | | ENGINEER ANCHORS/GUYS: This unit is when engineering the placement/relocation/ replacement of a pole anchor or down-guy. Unit is per anchor/guy. | \$12.00 |
| EN21 | Per Pole | | ENGINEER TRANSFER OF ATTACHMENTS - 1-5 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$20.00 |
| EN22 | Per Pole | | ENGINEER TRANSFER OF ATTACHMENTS - 6-25 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$17.00 |
| EN23 | Per Pole | | ENGINEER TRANSFER OF ATTACHMENTS - 26-50 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$17.00 |
| EN24 | Per Pole | | ENGINEER TRANSFER OF ATTACHMENTS - 51-100 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$15.50 |
| EN25 | Per Pole | | ENGINEER TRANSFER OF ATTACHMENTS - >=101 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$13.00 |
| EN26 | Per Pole | | ENGINEER POLE - JOINT USE: This unit is used for a pole being placed/replaced by the power company where joint occupancy notification is required. Unit is per pole. | \$12.00 |
| ENGINEERING: DROP WIRE | | | | |
| EN31 | Per Foot | | ENGINEER DROP WIRE - PER FOOT: This unit is used for placing a section of one or more drop wire(s) (aerial or buried) from pedestal-to-pole, pole-to-pole, pedestal/pole-to-building, etc. It includes pair assignment and/or cutter of the drop(s) within a terminal/pedestal or from terminal-to-terminal. Engineering of an associated drop wire terminal is included in this unit. Unit is per foot. | \$0.57 |
| ENGINEERING: CABLE | | | | |
| EN32 | Per Foot | | OSP ENGINEERING - COPPER/FIBER CABLE - <= 1000' : This unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.57 |
| EN33 | Per Foot | | OSP ENGINEERING - COPPER/FIBER CABLE - 1001 - 5000' : This unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.49 |
| EN34 | Per Foot | | OSP ENGINEERING - COPPER/FIBER CABLE - >=5001' : This unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.39 |
| EN35 | Per Foot | | OSP ENGINEERING - CABLE - REMOVE: This unit is used when engineering the removal of copper or fiber optic cables (aerial/buried/underground). It includes all associated data and symbols required for lashing, bonding/grounding, splices, connectors, cable assignment, dampers, guards, riser/u-guards, tree-trimming, depth/cover, ties to center lines/property lines/easements/rights-of-way, typical profiles of trench sections/duct occupancy, etc. Where applicable, this unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. This unit is used for a job that is for the removal of aerial cable only. Unit is per path foot (coil and slack footage not included). | \$0.13 |
| EN36 | Per Location | | ENGINEER COMPLEMENT REASSIGNMENT - CHANGE ONLY: This unit is used when engineering a complement reassignment/change in existing copper or fiber cables (aerial/buried/underground). This unit is not utilized with the engineering of new cables. This unit includes all associated data, symbols, records required for a complement reassignment or change Unit is per splice location to be entered. | \$48.75 |
| EN37 | Per Work Order | | ENGINEER SPLICE SEQUENCE DETAIL: This unit is used when engineering a splice sequence detail in order to insure service-affecting outages will be avoided. It includes all associated data and symbols required for specifying splicing sequence. Unit is per work order. | \$85.50 |
| EN38 | Per Work Order | | Small Job Adder: This unit is used when engineering a small job for maintenance or for placement of new copper or fiber optic cables (aerial/buried/underground) less than 300' in length. Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design, repair of buried splices that are not covered under Windstream existing units. Unit is per job (coil and slack footage not included). Unit will compensate for site visit, design, drawing preparation, entry into Jobtrac including assignment of appropriate Windstream construction units. | \$500.00 |
| ENGINEERING: TERMINALS/PEDESTALS | | | | |
| EN40 | Per Terminal / Pedestal | | ENGINEER TERMINAL/PEDESTAL: This unit is used when engineering the placement of new terminals or pedestals, regardless of cable size/type (aerial/buried/underground). It includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, pair assignment, etc. When a new pedestal is proposed, the new terminal is included in the unit. Unit is per terminal/pedestal. | \$45.00 |
| EN41 | Per Building Termination | | ENGINEER MAIN DISTRIBUTION FRAME (MDF)/PAIR TERMINATIONS: This unit is used when engineering the installation of new modular connectors on either copper or fiber distribution frames, or building terminals. It includes all associated data and symbols required for pre-stubbed tails, verticals/backboards, bonds/grounds, splices, connectors, cable assignment, etc. Unit is per building termination. | \$90.00 |
| ENGINEERING: OUTSIDE PLANT EQUIPMENT HOUSINGS | | | | |
| EN45 | Per Housing | | ENGINEER OSP EQUIPMENT HOUSING - SITE VISIT REQUIRED: This unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) SAC/XCONN boxes, NGDLC cabinets and large resaper housings. All mounting types are included (i.e. pole, pad, and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where a site visit is required. Unit is per housing. | \$385.00 |
| EN46 | Per Housing | | ENGINEER OSP EQUIPMENT HOUSING - NO SITE VISIT REQUIRED: This unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) small resaper housings and MXU housings. All mounting types are included (i.e. pole, pad and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where no site visit is required. Unit is per housing. | \$185.00 |
| EN47 | Per Hub | | ENGINEERING, FIBER DISTRIBUTION HUB (FDH): This unit includes all FDH units pole-mounted, pad-mounted, and handhole-mounted with any miscellaneous handholes and conduit for risers. Information on the work print should include all hub detail information, splices/splicing detail, handhole/pad detail (3' x 3' or 4' x 4', if required), as required. Unit is per fiber distribution hub. | \$333.20 |
| ENGINEERING: PLUG-IN CARDS / SPLITTERS | | | | |
| EN48 | Per Location | | ENGINEER MISCELLANEOUS, ADD/CHANGE, REMOVE PLUG-IN CARDS/SPLITTERS: This unit is used for minor transmission additions, adding spare cards, replacing cards for items deemed non-economical to repair, transmission removals, trunk additions, adding repeaters to existing housings for HR link, and the changing out of FC to ST fiber connectors. Included are (a) analog or digital carrier equipment plug-in cards; (b) line concentrator plug-ins; or (c) remote switching cards. It also includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. | \$99.75 |

| | | | |
|--|----------------------|---|----------|
| EN49 | Per Location | FTTP - OSP ENGINEERING FOR EXISTING FIBER DISTRIBUTION HUB (FDH), ADD I CHANGE I REMOVE SPLITTER/JUMPERS: This unit is used when engineering FTTP splitters and/or jumpers at an existing FDH. It includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. | \$99.75 |
| ENGINEERING: UNDERGROUND/SUBSTRUCTURE | | | |
| EN50 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (GREATER THAN OR EQUAL TO 4" OD AND ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement/abandonment of a single, continuous section of one or more duct(s) incidental to the placement/relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. | \$0.70 |
| EN51 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (LESS THAN 4" OD, OR EQUAL TO GREATER THAN 4" OD AND NOT ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement/abandonment of a single, continuous section of one or more duct(s) incidental to the placement/relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. | \$0.46 |
| EN52 | Per Section | ENGINEER "ROD-AND-ROPE" / "ROD-AND-MANDREL" CONDUIT ROUTES: Print all conduit plans, manhole details, and cable plans required for "Rod and Rope" / "Rod and Mandrel" activities prior to engineering proposed facilities within a route. The vendor is to highlight the intended path on each plan, and estimate the path distance using Windstream records. Unit is per section (i.e. manhole-to-manhole; manhole-to-handhole; handhole-to-handhole). | \$14.40 |
| EN53 | Per Bore | ENGINEER BORE/PUSH PIPE: This unit is used when engineering the placement/relocation/replacement of a bore or pipe push necessary to facilitate placement of buried cable or conduit. This unit includes directional bores. Unit is per bore/pipe push. | \$82.00 |
| EN54 | Per Manhole | ENGINEER MANHOLE (PRECAST): This unit is used when engineering the placement/relocation/replacement/abandonment of a pre-cast manhole. The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines/easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps, etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new manhole locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately). Unit is per manhole (>= 3 feet by 5 feet). | \$125.00 |
| EN55 | Per Manhole | ENGINEER MANHOLE (CAST-IN-PLACE): This unit is used when engineering: (a) the placement of a new cast-in-place manhole; or (b) the dimensional modification or adjusting to grade of an existing cast-in-place manhole (>= 3 feet by 5 feet). The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines/easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps, etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new MH locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately). Unit is per manhole (>= 3 feet x 5 feet). | \$275.00 |
| EN56 | Per Handhole | ENGINEER HAND HOLE: This unit is used when engineering the placement/relocation/replacement/removal of pre-formed hand holes, pull boxes, or Optiped units. It includes all associated data and symbols required for specifying ties to center lines/property lines/easements/rights-of-way, etc. ROW permits and easement acquisitions are not included in this unit (billed separately). Unit is per hand hole (< 3 feet by 5 feet). | \$43.10 |
| EN57 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 1-5 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. | \$295.75 |
| EN58 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 6-25 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. | \$287.00 |
| EN59 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; >=26 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. | \$246.00 |
| EN60 | Per Manhole, Per Day | WASTE WATER REMOVAL: Unit includes removal of non-hazardous waste water by truck/trailer to an offsite location, as required. This Unit is to be used in conjunction with Manhole Surveys, when applicable. This Unit requires pre-approval by the Windstream Engineering Manager. Unit is per manhole, per day. | \$139.25 |
| ANCILLARY: HOURLY | | | |
| EN65 | Per Hour | MISCELLANEOUS ENGINEERING FOR THIRD-PARTY WORK FUNCTIONS - HOURLY: A vendor is occasionally asked to complete work which does not logically fit any other unit description and subsequently necessitates the use of an hourly rate to compensate them for time spent. This unit is intended to compensate the vendor for these anomalies. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULLTIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$48.20 |
| EN66 | Per Hour | ENGINEERING, LICENSED PROFESSIONAL ENGINEER/SURVEYOR - HOURLY: This unit is intended to cover instances requiring the use of a professional civil engineer/surveyor in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This individual must be a fully credentialed and licensed professional engineer. This individual must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$128.20 |
| EN67 | Per Hour | ENGINEERING, TWO-MAN SURVEY CREW - HOURLY: This unit is intended to cover instances requiring the use of a professional survey crew in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This crew must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. The crew rate includes compensation for tools and work equipment. No separate compensation for tools and work equipment will be provided. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$153.80 |
| Engineering: Pole Loading | | | |
| EN70 | Per Pole | POLE AUDIT - DATA REVIEW / RECONCILIATION ONLY - NO FIELD VISIT REQUIRED: This Unit is intended to compensate the vendor for time spent verifying and reconciling pole inventory and attachment data. This data is based on pole attribute information received from a pole survey and requires verification between survey data and Windstream pole inventory data. This Unit does not necessitate a field visit and is for records verification and update only. Unit is per pole. | \$3.40 |
| EN71 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 1 TO 5 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole. | \$30.00 |
| EN72 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 6 TO 25 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole. | \$24.60 |
| EN73 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 26 TO 50 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole. | \$20.50 |
| EN74 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 51 TO 100 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole. | \$18.50 |
| EN75 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - >= 101 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole. | \$12.30 |
| Engineering: Pole Loading | | | |
| EN81 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 1-5 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$15.00 |
| EN82 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 6-25 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$14.00 |
| EN83 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 26-50 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$14.00 |
| EN84 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 51-100 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$11.00 |
| EN85 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - >=101 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$11.00 |
| Engineering: Miscellaneous Job Units | | | |
| EN90 | Per Span | RECORDS VERIFICATION (COPPER OR FIBER): This unit is intended to compensate an OSP engineering vendor for time spent verifying Windstream's cable records for spare/compatible cable facilities (copper and/or fiber). The vendor deliverable includes preparation of a list of test locations and the affected copper pairs or fiber strands to be tested and tagged at each location by OSP field maintenance personnel. Unit is per copper or fiber cable span. | \$42.00 |
| EN91 | Per job | PE JOB STAMP: Cost to have work order sealed by Professional Engineer. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands. | \$410.00 |
| EN92 | Per foot | PROJECT MANAGER; COPPER/FIBER <=1000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.72 |
| EN93 | Per foot | PROJECT MANAGER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.60 |
| EN94 | Per foot | PROJECT MANAGER; COPPER/FIBER >=5001': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.51 |
| EN95 | Per foot | OSP INSPECTOR; COPPER/FIBER <=1000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.61 |
| EN96 | Per foot | OSP INSPECTOR; COPPER/FIBER <1001-5000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.39 |
| EN97 | Per foot | OSP INSPECTOR; COPPER/FIBER >=5001': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.25 |
| EN98 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <=1000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.72 |
| EN99 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.61 |

| | | | |
|-------|----------|---|--------|
| EN100 | Per foot | RESIDENT ENGINEER; COPPER/FIBER >=5001': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.51 |

Windstream Supply, LLC and
Byers Engineering Company**

Contract Number: #091009A10

THIS AMENDMENT TO THE PROJECT SCOPE AGREEMENT (the "Amendment") is entered into to be effective as of 1/19/2017 ("Effective Date") by **Windstream Supply, LLC**, on behalf of itself and its affiliates ("Windstream") and **Byers Engineering Company** ("Contractor"), and amends the Project Scope Agreement entered between Windstream and Contractor on March 4, 2015 (the "Agreement").

WHEREAS, Windstream and Contractor desire to amend, modify and change the Agreement as set forth herein.

NOW THEREFORE, in consideration of these premises and the mutual undertakings herein contained, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Windstream and Contractor, intending to be legally bound, hereby agree as follows:

1. Exhibit A. Exhibit A is amended to include unit rates for Georgia in the attached "Exhibit A—OSP Engineering Units for Georgia".
2. No Other Amendment. Except as expressly set forth herein all of the terms and conditions of the Agreement shall remain in full force and effect, without any change whatsoever.
3. Counterparts. This Amendment may be executed in one or more counterparts, each of which when executed and delivered shall be deemed to be an original, and all of which when taken together shall constitute one and the same instrument. Signatures on this Amendment which are exchanged by facsimile or other electronic means are true and valid signatures for all purposes hereunder and shall bind the Parties to the same extent as original signatures.
4. Capitalized Terms. Capitalized terms used herein, but not otherwise defined, shall have the meaning ascribed to them in the Agreement.
5. Conflict. In the event there is any conflict between the terms and conditions of this Amendment and the terms and conditions of the Agreement, the terms and conditions of this Amendment will prevail. The Agreement, as amended hereby, shall remain in full force and effect.
6. Entire Agreement. The Agreement, including any Exhibits or Attachments to the Agreement, and this Amendment constitute the entire agreement between the parties with respect to the subject matter hereof and supersede all previous agreements, oral or written, between the parties concerning the subject matter hereof. No modification or amendment of the terms of the Agreement or this Amendment shall be effective except by a writing executed by both parties.

IN WITNESS WHEREOF, the parties have entered into this Amendment as of the Effective Date.

Exhibit A—OSP Engineering Units for Georgia

| UNIT # | Paid Per | DESCRIPTION | BYERS QUOTED COST - GA |
|---|------------------|---|------------------------|
| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | | |
| ENGINEERING: PRIVATE EASEMENT ACQUISITION | | | |
| EN1 | Private Easement | PRIVATE EASEMENT ACQUISITION - SIMPLE: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage <= 250 sq. ft.; (b) linear footage <= 100 feet; (c) # of property owners = 1; (d) # of adjacent property owners <= 2; (e) # of access points = 1; (f) scaled drawings may be required; and (g) an environmental checklist may be required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$738.00 |
| EN2 | Private Easement | PRIVATE EASEMENT ACQUISITION - SOMEWHAT COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage between 250 and 1,000 sq. ft; (b) linear footage between 101 and 500 feet; (c) # of property owners = 2; (d) # of adjacent property owners either 3 or 4; (e) # of access points either 2 or 3; (f) scaled drawings may be required; (g) an environmental checklist may be required; and (h) test hole(s) 1 bore(s) required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,107.00 |
| EN3 | Private Easement | PRIVATE EASEMENT ACQUISITION - COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage between 1,001 and 2,500 sq. ft; (b) linear footage between 501 and 1,000 feet; (c) # of prop. owners between 3 and 5; (d) # of adjacent property owners between 5 and 8; (e) # of access points either 3 or 5; (f) scaled drawings are required; (g) environmental checklist required; (h) test hole(s) 1 bore(s) required; (i) wetlands overlay required; and (j) plan/profile drawings are required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,415.00 |
| EN4 | Private Easement | PRIVATE EASEMENT ACQUISITION - VERY COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (j) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage > 2,500 sq. ft; (b) linear footage > 1,000 feet; (c) # of property owners > 5; (d) # of adjacent property owners > 8; (e) # of access points > 5; (f) scaled drawings required; (g) environmental checklist required; (h) test hole(s) 1 bores required; (i) wetlands overlay required; (j) plan/profile drawings required; (k) aerial photographs required; (l) an easement release is required; or (m) a right of trespass is required. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. | \$1,743.00 |
| ENGINEERING: POLES/GUYS/ANCHORS/PUSH BRACES/ATTACHMENTS | | | |
| EN10 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 1-5 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$9.00 |
| EN11 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 6-25 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$9.00 |
| EN12 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 26-50 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$7.00 |
| EN13 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 51-100 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$7.00 |
| EN14 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - >= 101 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$7.00 |
| EN15 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 1-5 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$25.00 |
| EN16 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 6-25 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$23.00 |
| EN17 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 26-50 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$23.00 |
| EN18 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 51-100 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$21.00 |
| EN19 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - >= 101 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. | \$17.00 |
| EN20 | Per Anchor/Guy | ENGINEER ANCHORS/GUYS: This unit is when engineering the placement/relocation replacement of a pole anchor or down-guy. Unit is per anchor/guy. | \$12.00 |
| EN21 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 1-5 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$20.00 |
| EN22 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 6-25 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$17.00 |
| EN23 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 26-50 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$17.00 |

| | | | |
|--|--------------------------|--|----------|
| EN24 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 51-100 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$15.50 |
| EN25 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - >=101 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. | \$13.00 |
| EN26 | Per Pole | ENGINEER POLE - JOINT USE: This unit is used for a pole being placed/replaced by the power company where joint occupancy notification is required. Unit is per pole. | \$12.00 |
| ENGINEERING: DROP WIRE | | | |
| EN31 | Per Foot | ENGINEER DROP WIRE - PER FOOT: This unit is used for placing a section of one or more drop wire(s) (aerial or buried) from pedestal-to-pole, pole-to-pole, pedestal/pole-to-building, etc. It includes pair assignment and/or cutover of the drop(s) within a terminal/pedestal or from terminal-to-terminal. Engineering of an associated drop wire terminal is included in this unit. Unit is per foot. | \$0.57 |
| ENGINEERING: CABLE | | | |
| EN32 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - <= 1000' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.57 |
| EN33 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - 1001 - 5000' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.49 |
| EN34 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - >=5001' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). | \$0.39 |
| EN35 | Per Foot | OSP ENGINEERING - CABLE - REMOVE: This Unit is used when engineering the removal of copper or fiber optic cables (aerial/buried/underground). It includes all associated data and symbols required for lashing, bonding/grounding, splices, connectors, cable assignment, dampers, guards, riser/U-guards, tree-trimming, depth/cover, ties to center lines/property lines/easements/rights-of-way, typical profiles of trench sections/duct occupancy, etc. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. This Unit used for a job that is for the removal of aerial cable only. Unit is per path foot (coil and slack footage not included). | \$0.13 |
| EN36 | Per Location | ENGINEER COMPLEMENT REASSIGNMENT - CHANGE ONLY: This unit is used when engineering a complement reassignment/change in existing copper or fiber cables (aerial/buried/underground). This unit is not utilized with the engineering of new cables. This unit includes all associated data, symbols, records required for a complement reassignment or change. Unit is per splice location to be entered. | \$48.75 |
| EN37 | Per Work Order | ENGINEER SPLICE SEQUENCE DETAIL: This unit is used when engineering a splice sequence detail in order to insure service-affecting outages will be avoided. It includes all associated data and symbols required for specifying splicing sequence. Unit is per work order. | \$85.50 |
| EN38 | Per Work Order | Small Job Adder : This Unit is used when engineering a small job for maintenance or for placement of new copper or fiber optic cables (aerial/buried/underground) less than 300' in length. Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design, repair of buried splices that are not covered under Windstream existing units. Unit is per job (coil and slack footage not included). Unit will compensate for site visit, design, drawing preparation, entry into Jobtrac including assignment of appropriate Windstream construction units. | \$500.00 |
| ENGINEERING: TERMINALS/PEDESTALS | | | |
| EN40 | Per Terminal / Pedestal | ENGINEER TERMINAL/PEDESTAL: This unit is used when engineering the placement of new terminals or pedestals, regardless of cable size/type (aerial/buried/underground). It includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, pair assignment, etc. When a new pedestal is proposed, the new terminal is included in the unit. Unit is per terminal/pedestal. | \$45.00 |
| EN41 | Per Building Termination | ENGINEER MAIN DISTRIBUTION FRAME (MDF)/BUILDING TERMINATIONS: This unit is used when engineering the installation of new modular connectors on either copper or fiber distribution frames, or building terminals. It includes all associated data and symbols required for prestubbed tails, verticals/backboards, bonds/grounds, splices, connectors, cable assignment, etc. Unit is per building termination. | \$90.00 |
| ENGINEERING: OUTSIDE PLANT EQUIPMENT HOUSINGS | | | |
| EN45 | Per Housing | ENGINEER OSP EQUIPMENT HOUSING - SITE VISIT REQUIRED: This Unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) SAC/XCONN boxes, NGDLC cabinets and large repeater housings. All mounting types are included (i.e. pole, pad, and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where a site visit is required. Unit is per housing. | \$385.00 |
| EN46 | Per Housing | ENGINEER OSP EQUIPMENT HOUSING - NO SITE VISIT REQUIRED: This unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/ u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) small repeater housings and MXU housings. All mounting types are included (i.e. pole, pad and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where no site visit is required. Unit is per housing. | \$185.00 |
| EN47 | Per Hub | ENGINEERING, FIBER DISTRIBUTION HUB (FDH): This unit includes all FDH units pole-mounted, pad-mounted, and handhole-mounted with any miscellaneous handholes and conduit for risers. Information on the work print should include all hub detail information, splitter/splicing detail, handhole/pad detail (3' x 3' or 4' x 4', if required), as required. Unit is per fiber distribution hub. | \$333.20 |
| ENGINEERING: PLUG-IN CARDS / SPLITTERS | | | |
| EN48 | Per Location | ENGINEER MISCELLANEOUS, ADD/CHANGE, REMOVE PLUG-IN CARDS/SPLITTERS: This Unit is used for minor transmission additions, adding spare cards, replacing cards for items deemed non-economical to repair, transmission removals, trunk additions, adding repeaters to existing housings for HR link, and the changing out of FC to ST fiber connectors. Included are (a) analog or digital carrier equipment plug-in cards; (b) line concentrator plug-ins; or (c) remote switching cards. It also includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. | \$99.75 |
| EN49 | Per Location | FTTP - OSP ENGINEERING FOR EXISTING FIBER DISTRIBUTION HUB (FDH), ADD CHANGE REMOVE SPLITTER/JUMPERS: This unit is used when engineering FTTP splitters and/or jumpers at an existing FDH. It includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. | \$99.75 |
| ENGINEERING: UNDERGROUND/SUBSTRUCTURE | | | |
| EN50 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (GREATER THAN OR EQUAL TO 4" OD AND ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement /abandonment of a single, continuous section of one or more duct(s) incidental to the placement/ relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. | \$0.70 |
| EN51 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (LESS THAN 4" OD, OR EQUAL TO/GREATER THAN 4" OD AND NOT ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement /abandonment of a single, continuous section of one or more duct(s) incidental to the placement/ relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. | \$0.46 |

| | | | |
|----------------------------------|----------------------|---|----------|
| EN52 | Per Section | ENGINEER "ROD-AND-ROPE" / "ROD-AND-MANDREL" CONDUIT ROUTES: Print all conduit plats, manhole details, and cable plats required for "Rod and Rope" / "Rod and Mandrel" activities prior to engineering proposed facilities within a route. The vendor is to highlight the intended path on each plat, and estimate the path distance using Windstream records. Unit is per section (i.e. manhole-to-manhole; manhole-to-handhole; handhole-to-handhole). | \$14.40 |
| EN53 | Per Bore | ENGINEER BORE/PUSH PIPE: This unit is used when engineering the placement/relocation/replacement of a bore or pipe push necessary to facilitate placement of buried cable or conduit. This unit includes directional bores. Unit is per bore/pipe push. | \$82.00 |
| EN54 | Per Manhole | ENGINEER MANHOLE (PRECAST): This unit is used when engineering the placement/relocation/replacement/abandonment of a pre-cast manhole. The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines /easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new manhole locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately. Unit is per manhole (>= 3 feet by 5 feet). | \$125.00 |
| EN55 | Per Manhole | ENGINEER MANHOLE (CAST-IN-PLACE): This unit is used when engineering: (a) the placement of a new cast-in-place manhole; or (b) the dimensional modification or adjusting to grade of an existing cast-in-place manhole (>= 3 feet by 5 feet). The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines/easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps, etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new MH locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately). Unit is per manhole (>= 3 feet x 5 feet) | \$275.00 |
| EN56 | Per Handhole | ENGINEER HAND HOLE: This unit is used when engineering the placement/relocation/replacement/removal of pre-formed hand holes, pull boxes, or Optiped units. It includes all associated data and symbols required for specifying ties to center lines/property lines/easements/rights-of-way, etc. ROW permits and easement acquisitions are not included in this unit (billed separately). Unit is per hand hole (< 3 feet by 5 feet). | \$43.10 |
| EN57 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 1-5 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit | \$295.75 |
| EN58 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 6-25 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit | \$287.00 |
| EN59 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; >=26 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit | \$246.00 |
| EN60 | Per Manhole, Per Day | WASTE WATER REMOVAL: Unit includes removal of non-hazardous waste water by truck/trailer to an offsite location, as required. This Unit is to be used in conjunction with Manhole Surveys, when applicable. This Unit requires pre-approval by the Windstream Engineering Manager. Unit is per manhole, per day. | \$139.25 |
| ANCILLARY: HOURLY | | | |
| EN65 | Per Hour | MISCELLANEOUS ENGINEERING FOR THIRD-PARTY WORK FUNCTIONS - HOURLY: A vendor is occasionally asked to complete work which does not logically fit any other unit description and subsequently necessitates the use of an hourly rate to compensate them for time spent. This unit is intended to compensate the vendor for these anomalies. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULLTIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$48.20 |
| EN66 | Per Hour | ENGINEERING, LICENSED PROFESSIONAL ENGINEER/SURVEYOR - HOURLY: This unit is intended to cover instances requiring the use of a professional civil engineer/surveyor in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This individual must be a fully credentialed and licensed professional engineer. This individual must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$128.20 |
| EN67 | Per Hour | ENGINEERING, TWO-MAN SURVEY CREW - HOURLY: This unit is intended to cover instances requiring the use of a professional survey crew in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This crew must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. The crew rate includes compensation for tools and work equipment. No separate compensation for tools and work equipment will be provided. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. | \$153.80 |
| Engineering: Pole Loading | | | |
| EN70 | Per Pole | POLE AUDIT - DATA REVIEW / RECONCILIATION ONLY - NO FIELD VISIT REQUIRED: This Unit is intended to compensate the vendor for time spent verifying and reconciling pole inventory and attachment data. This data is based on pole attribute information received from a pole survey and requires verification between survey data and Windstream pole inventory data. This Unit does not necessitate a field visit and is for records verification and update only. Unit is per pole. | \$3.40 |
| EN71 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 1 TO 5 POLES This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole | \$30.00 |
| EN72 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 6 TO 25 POLES This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole | \$24.60 |
| EN73 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 26 TO 50 POLES This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole | \$20.50 |

| | | | |
|---|----------|--|----------|
| EN74 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - 51 to 100 POLES This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is marked as corrected and completed. Unit is per pole | \$18.50 |
| EN75 | Per Pole | POLE AUDIT 1 JOINT OWNERSHIP REVIEW - FIELD VERIFY & PROVIDE DATA CHANGES - >= 101 POLES: This unit includes (but is not limited to) the following activities: (a) on-site verification of pole data for accuracy; (b) on-site investigation of joint ownership proposals (no interaction with other utilities); and (c) make-ready surveys not resulting in a make-ready work order. The vendor must ensure all poles reviewed: (a) currently comply with all Windstream standards and NESC specifications; or (b) when found to be non-compliant, are returned with a recommendation (i.e. for repair or replacement) to bring them into conformance with all Windstream standards and NESC specifications. Once verified, if Windstream data is found to require modification, the vendor will perform all steps necessary to facilitate data corrections. THIS UNIT DOES NOT INCLUDE GRAPHICS CHANGES IN 1CGS. Once all corrections have been completed, the audit form (may vary by location) is Marked as corrected and completed. Unit is per pole | \$12.30 |
| Engineering: Pole Loading | | | |
| EN81 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 1-5 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$15.00 |
| EN82 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 6-25 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$14.00 |
| EN83 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 26-50 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$14.00 |
| EN84 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - 51-100 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$11.00 |
| EN85 | Per Pole | COST TO CALCULATE POLE LOADING ON A PER POLE BASIS - >=101 POLES: Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$11.00 |
| Engineering: Miscellaneous Job Units | | | |
| EN90 | Per Span | RECORDS VERIFICATION (COPPER OR FIBER): This unit is intended to compensate an OSP engineering vendor for time spent verifying Windstream's cable records for spare/compatible cable facilities (copper and/or fiber). The vendor deliverable includes preparation of a list of test locations and the affected copper pairs or fiber strands to be tested and tagged at each location by OSP field maintenance personnel. Unit is per copper or fiber cable span. | \$42.00 |
| EN91 | Per job | PE JOB STAMP: Cost to have work order sealed by Professional Engineer. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands | \$410.00 |
| EN92 | Per foot | PROJECT MANAGER; COPPER/FIBER <=1000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.72 |
| EN93 | Per foot | PROJECT MANAGER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.60 |
| EN94 | Per foot | PROJECT MANAGER; COPPER/FIBER >=5001': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.51 |
| EN95 | Per foot | OSP INSPECTOR; COPPER/FIBER <=1000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.61 |
| EN96 | Per foot | OSP INSPECTOR; COPPER/FIBER <1001-5000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.39 |
| EN97 | Per foot | OSP INSPECTOR; COPPER/FIBER >=5001': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . | \$0.25 |
| EN98 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <=1000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.72 |
| EN99 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.61 |
| EN100 | Per foot | RESIDENT ENGINEER; COPPER/FIBER >=5001': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. | \$0.51 |

Project Scope Agreement

For

**Project Name:
OSP Engineering
For the State(s) of**

**Arkansas, Delaware, Kentucky, Missouri, New York, Ohio,
Oklahoma, Pennsylvania, Virginia and West Virginia**

INFORMATION PROVIDED IN THIS PROJECT SCOPE AGREEMENT (AND THE ATTACHMENTS HERETO) DOES NOT RELIEVE CONTRACTOR OF ITS OBLIGATION TO OBSERVE THE HIGHEST STANDARDS OF SAFETY AND PROFESSIONALISM IN COMPLETING THE PROJECT.

This Project Scope Agreement (including the attachments hereto) describes the services to be performed by the selected Contractor, or which will be delegated by the Contractor to subcontractors under the supervision of the contractor, during the completion of the Project. Additional detail, which may include drawings and work specifications, may be provided at the time the work is being ordered.

General Project Scope Agreement Details

Location

Work will be performed at the following location(s):

All work for the Projects included in this PSA will be performed in the State(s) of **Arkansas, Delaware, Kentucky, Missouri, New York, Ohio, Oklahoma, Pennsylvania, Virginia and West Virginia**. Work can be located within any of the states/counties and Engineers may be required in multiple locations simultaneously.

This PSA covers Connect America Fund (CAF) Engineering listed as CAF1, Round 2 to be performed in 2015 only. This PSA additionally covers the Business as Usual OSP Engineering work for Three (3) Years) beginning 1/1/2015.

Services Type

These Services are (check one):

Work on Unit Basis

Project Description:

Scope of work to be performed:

Except as described herein, Contractor at its own expense, shall furnish all materials, labor, tools, machinery, vehicles, transportation, lodging, and all other facilities necessary to complete the following described Project(s) in compliance with specifications shown below and/or attached.

This PSA (Project Scope Agreement) provides the terms and conditions of an agreement to be executed between Windstream Communications and a consulting engineering firm to design telecommunications facilities.

The selected Contractor shall, consistent with sound professional practices competently render the engineering services required in this PSA.

The Telecommunications plant engineered for Windstream shall meet the specifications and criteria set forth by Windstream practices, Windstream personnel, and local rules. In addition, the following supplemental referenced specifications shall be observed:

- Occupational Safety and Health Code (latest edition)
- Applicable power and telephone pole attachment agreements
- Applicable city, county and state ordinances
- National Electric Safety Code (latest edition)
- National Electric Code (latest edition)
- Applicable government agencies for safety and health for the work force
- All Windstream Engineering and Safety Practices

Municipal, county, state or federal regulations may alter engineering specifications in some areas. If engineering specifications are altered from these standards, an additional attachment will illustrate changes.

All changes or revisions of the engineering specifications made by the Contractor must be requested in writing and approved by Windstream.

Windstream reserves the right to change or revise the engineering specifications to adapt to local conditions. In such case, the contractor shall be notified.

The purpose of this RFQ is to have contract engineering forces available to complete engineering on telecommunications jobs that have to be engineered and built quickly. The successful bidder will be expected to have engineer(s) available to perform the requested work within a week of being notified.

Contractor's Responsibilities

Responsibilities of Contractor:

Contractor Deliverables: A complete WO package in JT including a complete set of MicroStation V8i construction drawings, permit applications and supplemental drawings, Lroutes, and completed Jobtrac entries. All work will be returned to Windstream in Jobtrac unless otherwise directed.

Weekly production report showing jobs, feet engineered to date, % completed.

Contractor will need to be able to respond to emergency or restricted time frames for engineering. Jobs will need to be engineered by date requested by Windstream OSP Engineering.

Contractor will be responsible to staff accordingly, based on the attached project initiative and historical routine work data. All engineering is expected to be 100% completed (all work orders fully approved by WIN management) by established timelines set by Windstream, per each individual work order.

Contractor is to have sufficient staff located within the State(s) contracted to be able to respond to all requests for engineering services. Contractor staff resources within each State shall be sufficient to respond to engineering requests, including but not limited to on-site field engineering, within five (5) business days. Late starts beyond the five (5) days will be assessed a \$100 per day late fee. Location of Contractor staff will be dependent on the areas where Windstream has facilities in place.

This PSA covers all engineering work requested by Windstream for the contract period. This work may consist of a combination of project and routine work, including both new builds and facilities enhancements; as well as engineering related to maintenance on existing facilities. Unit rates quoted will be in effect for all work, regardless of the size of the job being engineered.

Types of Engineering: Engineering may include both Copper and Fiber, cable designs placed buried, aerial, underground or in any combination. Buried construction will consist of plowing, trenching, and boring. Aerial construction will be e-lashing to existing cables or lashing to a new 10M strand. ADSS may also be utilized in certain applications. Jobs may also require deployment of remote equipment cabinets and engineering new carrier service areas (CSAs) or broadband overlay areas. Engineer will be responsible for detailing out any make ready work required on aerial designs, including attachment heights on each pole and position numbering. Also will be required to prepare support drawings as required to submit for make ready approval. All prints will need to show existing Right of way lines, positions of existing Windstream facilities,

and horizontal and vertical alignments of all new facilities being proposed for placement as directed and documented in Windstream's standards.

Cable Requirements: Cable requirements will vary from job to job with no minimum or maximum length. Pricing will be on a unit (per foot) basis. See Method of Payment below.

Easement Requirements: Contractor will be required to review and obtain easements in the course of normal business. Surveying or additional costs related to easement acquisitions will be paid separately through prior approval by Windstream.

Permitting Requirements: Permits may or may not be required depending on the location of the work to be performed. If permits are required, drawings must be completed by the Contractor for all required permits and appropriate paperwork prepared for submittal by Windstream. Typical permits required on jobs include DOT, City, County, Forest Service, RR, Corp of Engineers, etc. The permits will be submitted to the DOT, City, County, Forest Service, RR, or others by a Windstream employee. Any required Archeological or Biological studies will be compensated separately on an individual case basis.

Highway permit requirements vary from state to state and county to county. All permits must meet the requirements of the state or local government that has jurisdiction over the road. The supporting drawings must be completed by the contractor and appropriate paperwork prepared for submittal by Windstream.

RR Permits – Each RR Company has different permitting requirements. All permits must meet the requirements of the respective RR companies and all permits must be submitted on the forms provided by the RR when applicable. Contractor will be responsible for preparing supporting drawings and appropriate paperwork prepared for submittal by Windstream.

General Notes:

Engineering Summary: Successful bidder will be staking jobs in the field and completing construction drawings in MicroStation V8i including tabulated construction units (using standard Windstream units) as well as permit drawings. Software licensing will be the Contractors obligation and expense. Contractor will create a WO in JT OSP, price the job using Windstream standard units, and attach all relevant documents to the job. A Windstream employee will initiate the job in JT and route it for approval.

The following are minimum system and/or software requirements:

- Contractor provided Laptop with firewall and virus software that is acceptable to Windstream's IT group to access the Windstream record systems
- Citrix license needed to access Windstream systems
- SQL Express Client software
- Ability to connect to the VPN to download the software
- Ability to connect to the VPN every 30 days to check out one of our 978 licenses (note that these are then removed from the pool here)
- Ability to connect to the VPN to periodically download new subsets (if becomes an issue, WIN could make these accessible externally or automatically FTP them to the target company)
- Required CAD software –Microstation V8i – to work with the DWGs or DGNs files that would be exported from G/Mobile or Windstream's current CAD system (and eventually imported into G/Comms)
- Contractors will need to provide own CAD software for print preparation and will be required to be delivered to Windstream in both .dgn and .pdf formats.
- Windstream may require Contractor to upgrade Microstation V8i to later versions as directed.

The following Windstream systems will be accessed by Contractor:

- Access to Miror to obtain customer and pair count information to be used in the designs
- G/Mobile to access G/Comms (OSP cable records), Jobtrac (OSP job software), and Miror (customer cable records)
- Engineering Contractors will be able to access these systems through a VPN connection and utilize Windstream's site licenses for each system

Contractors will be expected to provide a State P.E. stamp on designs for permits where required.

Pre-Engineering Ride: A pre-engineering ride with a Windstream employee will be performed on each job, prior to staking, to determine placing methods and additional requirements that may be applicable to that particular job. Windstream may waive this requirement on a case by case basis.

Windstream's Responsibilities

Responsibilities of Windstream:

Training on Windstream systems and practices: Training on Windstream systems and practices. Windstream will use a train the trainer approach to train the successful Engineering firm on Windstream systems and practices. After this training is completed the Engineering firm will be expected to maintain a base of trained engineering staff to respond to requests as mandated below.

Windstream Deliverables: Job number will be taken out of JobTrac to track the requests and the Location Map will be attached under the job number. Contractor will be notified by email that the work is now issued for them to engineer.

Location Maps of the work area will be provided. Contractor will be expected to access Windstream systems as required to obtain detailed information to be used in the designs along with any info known on facility sizing and construction type.

Access to JobTrac and Miror will be provided.

Deliverables

Deliverables and Due Date(s) or approximate duration of Services or time to complete:

Contract term to begin January 1, 2015 and complete December 31, 2017, but may be extended as needed.

LIQUIDATED DAMAGES

On time delivery:

For each individual project that does not meet the job completion On Time deliverables, as identified in the SLA, due to the Engineering Contractor issues, a liquidated damages fee will be assessed at 1% per business day starting with 1% up to a maximum of 15% of the total engineering labor for the entire Project. If exchanges or routes are added to the Project, there will be a discussion between Windstream and the Engineering contractor to negotiate dates. Once negotiated dates are confirmed, those dates are subject to on time delivery liquidated damages.

Per day Damages of \$100 will be assessed to the Contractor due to a late start by Contractor (beyond 5 business days as defined in Contractor Responsibilities Section)

Jeopardy codes have been established as follows for non-Engineering Contractor issues:

- Windstream Delays
- Weather issues
- Reassigned priority

Quality:

Engineering quality audits will be performed using the standard Windstream OSP audit form (attached). Scores will be based on the Engineering sections (lines 7 thru 48). The Windstream Engineering Group will audit the jobs. Scores on individual work orders of less than 95% will constitute a failed audit. A liquidated damages fee will be assessed at 10% of the total engineering cost for the individual work order, and the work order will be returned for rework. Additional Liquidated Damages fee of 10% will apply for each occurrence of a failed audit.

Quality Audit Form to be used is attached to this PSA as Exhibit B

Liquidated Damages will be assessed on all jobs awarded under this contract and each specific invoice.

Fee Basis (check one):

Unit based pricing per Units Sheet attached.

Work Facilities

Work facilities to be provided by Windstream (if any):

Work space will not be provided.

Other Requirements

Performance and Payment Bond

Contractor will be required to provide Windstream a Performance and Payment bond with a surety listed by the United States Treasury Department as an Acceptable Surety. Bond is to be issued in the amount of \$250,000.

Invoicing

Invoices must be in PDF or TIF format. Do not attach email messages. Send only one invoice per email attachment. Do not scan multiple invoices in one PDF file.

Prior to acceptance of Contractor invoices for work which the Contractor deems to be complete, Windstream OSP Engineering shall perform the following:

- Inspect and verify the accuracy of the construction drawings, permits, Lroutes and all entries in JT and attachments to JT.
- Verification of the actual engineered units
- Final approval of invoice submitted.
- Once final approval is granted, the time period for invoice payment commences, in accordance with the Payment Terms section of your Master Contract.

Contractor's invoices shall be submitted to:

WINDSTREAM ACCOUNTS PAYABLE

CID # (Contact Local OSP Engineering Manager for each area)

PO BOX 18313

LITTLE ROCK, AR 72222

Or

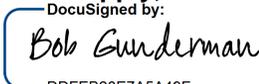

The Preferred Method:

Invoices may be submitted electronically via email to

CORP.Vendor.Invoices@windstream.com

IN WITNESS WHEREOF, the parties hereto have caused this Schedule to be executed by their respective authorized representatives effective as of the date last written below.

This is the Scorecard for rating OSP Engineering SSP work performance.
Use of all previous rating forms for this purpose is to be discontinued.

The Scorecard is designed to score and provide feedback to the Engineering SSP Contractors in each location / region. By using numerical scoring for each line item audited, a value can be established to rate the quality of the work order engineered. By combining audits in this format, a monthly summary can be generated to assist management in feedback to the contractors.

Each work order engineered by the SSP will be audited for quality upon submittal to Windstream. Windstream will review the work to insure that it meets the current requirements for work order issue. The results of this review are to be recorded on the respective number tab below. A separate Scorecard is to be submitted for each SSP Engineering Contractor in your area.

These electronic reports are to be sent monthly to the OSP Technical Support Group's Senior Analyst and Construction QA Senior Engineer. Reports are to be subject designated by : Month, Year, Contractor, and the last name of the reviewer of the order. Example: June, 2014 - Osmose - Colley. The use of this Engineering SSP Scorecard is to begin on June 1, 2014. Monthly reports are to be submitted by the first week of the following month. If there is no use of the Engineering SSP for that particular month, send a positive statement of such.

Jobs Tab:

Fill out the Region, State, Exch, Work Order Number, Type of order, Description, and Contractor under those headings. This form will autopopulate the individually numbered tabs below with this information.

Individually Numbered Audit Tabs:

Each tab relates to the Jobs Tab in respective order as input.

Not all line items will pertain to each job reviewed. The line items that do not pertain are to be left as "No" under the "Item Audited" column. Such as: "911 address" on a rural section replacement or "Cross Connect Layout" on a job not placing or changing the Cross Connect.

The reviewer is to use the drop box in the "Items Audited" column to show "Yes" for those items checked. A "Yes" will show a possible 5 points in the "Points Possible" column. The "Actual Points" column will be accessed to show either 0 or 5 (as pass or fail) for that line item. There will be no variable in the scoring. If any part of the line item is not acceptable, that is a 0/fail.

Below the last topic header is the Scoring Box that automatically shows the number of points possible, the actual points, and the percentage score of that particular work order.

A line for entry of the responsible Contract Engineer's name is below the Scoring Box.

At the end of the score sheet there is a Reviewers Comments section and a place to provide the reviewer's name and date of the review.

Final Audit Score :

The tab below for Final Audit Score will automatically total and give percentage values for all orders from the Individually Numbered tabs. Do not try to enter any information into the cells of this tab, as it contains all formulas. There is a section for Reviewer Comments and Name/Date at the bottom of this tab sheet that can be used to summarize if necessary.

| OSP ENGINEERING UNITS | | |
|--|------------------|---|
| UNIT # | Paid Per | DESCRIPTION |
| ENGINEERING: NOTES | | |
| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | |
| ENGINEERING: PRIVATE EASEMENT ACQUISITION | | |
| EN1 | Private Easement | PRIVATE EASEMENT ACQUISITION - SIMPLE: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (i) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage <= 250 sq. ft.; (b) linear footage <= 100 feet; (c) # of property owners = 1; (d) # of adjacent property owners <= 2; (e) # of access points = 1; (f) scaled drawings may be required; and (g) an environmental checklist may be required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. |
| EN2 | Private Easement | PRIVATE EASEMENT ACQUISITION - SOMEWHAT COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (i) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage between 251 and 1,000 sq. ft; (b) linear footage between 101 and 500 feet; (c) # of property owners = 2; (d) # of adjacent property owners either 3 or 4; (e) # of access points either 2 or 3; (f) scaled drawings may be required; (g) an environmental checklist may be required; and (h) test hole(s) 1 bore(s) required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. |
| EN3 | Private Easement | PRIVATE EASEMENT ACQUISITION - COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (i) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording.. Easement requirements consist of the following: (a) square footage between 1,001 and 2,500 sq. ft; (b) linear footage between 501 and 1,000 feet; (c) #of prop. owners between 3 and 5; (d) # of adjacent property owners between 5 and 8; (e) # of access points either 4 or 5; (f) scaled drawings are required; (g) environmental checklist required; (h) test hole(s) 1 bore(s) required; (i) wetlands overlay required; and (i) plan/profile drawings are required. Payment to landowner(s) for the purchase of a private easement(s) or a Right of Trespass will be the responsibility of Windstream. This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. |
| EN4 | Private Easement | PRIVATE EASEMENT ACQUISITION - VERY COMPLEX: This unit is used for acquiring the negotiated long-term right-to-use of private property easements. The unit includes (but is not limited to) the following common activities: (a) contacts with property owners; (b) accessibility and safety study; (c) title and deed searches; (d) zoning, planning and development searches; (e) tax lien/mortgage releases; (f) metes and bounds description; (g) identities of adjacent landowners; (h) building and driveway entrance permits; (i) site/construction/restoral plans; (i) required survey, description, and sketch; (k) executed easement document; (l) notarizing/witnessing documents; and (m) document delivery: one (1) filing/recording. Easement requirements consist of the following: (a) square footage > 2,500 sq. ft; (b) linear footage > 1,000 feet; (c) #of property owners > 5; (d) # of adjacent property owners > 8; (e) # of access points > 5; (f) scaled drawings required; (g) environmental checklist required; (h) test hole(s) 1 bores required; (i) wetlands overlay required; (i) plan/profile drawings required; (k) aerial photographs required; (l) an easement release is required; or (m) a right of trespass is required . This unit does NOT include the cost of: (a) the use of surveying crews; and (b) a professional engineer's "wet stamp". Unit is per private easement acquired. |
| ENGINEERING: POLES/GUYS/ANCHORS/PUSH BRACES/ATTACHMENTS | | |
| EN10 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 1-5 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN11 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 6-25 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN12 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 26-50 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |

| EN14 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - >= 101 POLES - NO FIELD VISIT: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN15 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 1-5 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN16 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 6-25 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN17 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 26-50 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN18 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - 51-100 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN19 | Per Pole/Brace | ENGINEER POLE/PUSH BRACE - >= 101 POLES - FIELD VISIT REQUIRED: This unit is when engineering the placement of a new pole, push brace or building attachment and removal of same. Unit is per pole/push brace. |
| EN20 | Per Anchor/Guy | ENGINEER ANCHORS/GUYS: This unit is when engineering the placement/relocation replacement of a pole anchor or down-guy. Unit is per anchor/guy. |
| EN21 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 1-5 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. |
| EN22 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 6-25 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. |
| EN23 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 26-50 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. |
| EN24 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - 51-100 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. |
| EN25 | Per Pole | ENGINEER TRANSFER OF ATTACHMENTS - >=101 POLES: This unit is used for engineering of transferred facilities onto the same pole or onto a different (collocated) pole. Activities include raising or lowering aerial strand, cables, aerial wire, arms, drops, pole mounted terminals, and/or guys on the same pole. This unit also applies to transfers from an existing pole to a new pole. This unit also includes all associated data and symbols required for bonds/grounds, risers/u-guards, attached grades, etc. Unit is per each new or existing pole. |
| EN26 | Per Pole | ENGINEER POLE - JOINT USE: This unit is used for a pole being placed/replaced by the power company where joint occupancy notification is required. Unit is per pole. |
| ENGINEERING: DROP WIRE | | |
| EN31 | Per Foot | ENGINEER DROP WIRE - PER FOOT: This unit is used for placing a section of one or more drop wire(s) (aerial or buried) from pedestal-to-pole, pole-to-pole, pedestal/pole-to-building, etc. It includes pair assignment and/or cutover of the drop(s) within a terminal/pedestal or from terminal-to-terminal. Engineering of an associated drop wire terminal is included in this unit. Unit is per foot. |
| ENGINEERING: CABLE | | |

|--|--------------------------|--|
| UNIT # | Paid Per | DESCRIPTION |
| ENGINEERING: NOTES | | |
| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | |
| EN32 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - <= 1000' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). |
| EN33 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - 1001 - 5000' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). |
| EN34 | Per Foot | OSP ENGINEERING - COPPER/FIBER CABLE - >=5001' : This Unit is used when engineering the placement of new copper or fiber optic cables (aerial/buried/underground). Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design. Unit is per path foot (coil and slack footage not included). |
| EN35 | Per Foot | OSP ENGINEERING - CABLE - REMOVE: This Unit is used when engineering the removal of copper or fiber optic cables (aerial/buried/underground). It includes all associated data and symbols required for lashing, bonding/grounding, splices, connectors, cable assignment, dampers, guards, riser/U-guards, tree-trimming, depth/cover, ties to center lines/property lines/easements/rights-of-way, typical profiles of trench sections/duct occupancy, etc. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. This Unit used for a job that is for the removal of aerial cable only. Unit is per path foot (coil and slack footage not included). |
| EN36 | Per Location | ENGINEER COMPLEMENT REASSIGNMENT - CHANGE ONLY: This unit is used when engineering a complement reassignment/change in existing copper or fiber cables (aerial/buried/underground). This unit is not utilized with the engineering of new cables. This unit includes all associated data, symbols, records required for a complement reassignment or change Unit is per splice location to be entered. |
| EN37 | Per Work Order | ENGINEER SPLICE SEQUENCE DETAIL: This unit is used when engineering a splice sequence detail in order to insure service-affecting outages will be avoided. It includes all associated data and symbols required for specifying splicing sequence. Unit is per work order. |
| EN38 | Per Work Order | Small Job Adder : This Unit is used when engineering a small job for maintenance or for placement of new copper or fiber optic cables (aerial/buried/underground) less than 300' in length. Work prints must conform to Windstream standards as directed by national, regional or local methods and procedures. Where applicable, this Unit also includes the design of: (a) aerial cables attached to buildings; and (b) fiber optic terminal tails. Includes showing cable abandonment/removal as part of the cable design, repair of buried splices that are not covered under Windstream existing units. Unit is per job (coil and slack footage not included). Unit will compensate for site visit, design, drawing preparation, entry into Jobtrac including assignment of appropriate Windstream construction units. |
| ENGINEERING: TERMINALS/PEDESTALS | | |
| EN40 | Per Terminal / Pedestal | ENGINEER TERMINAL/PEDESTAL: This unit is used when engineering the placement of new terminals or pedestals, regardless of cable size/type (aerial/buried/underground). It includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, pair assignment, etc. When a new pedestal is proposed, the new terminal is included in the unit. Unit is per terminal/pedestal. |
| EN41 | Per Building Termination | ENGINEER MAIN DISTRIBUTION FRAME (MDF)/BUILDING TERMINATIONS: This unit is used when engineering the installation of new modular connectors on either copper or fiber distribution frames, or building terminals. It includes all associated data and symbols required for prestubbed tails, verticals/backboards, bonds/grounds, splices, connectors, cable assignment, etc. Unit is per building termination. |
| ENGINEERING: OUTSIDE PLANT EQUIPMENT HOUSINGS | | |
| EN45 | Per Housing | ENGINEER OSP EQUIPMENT HOUSING - SITE VISIT REQUIRED: This Unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) SAC/XCONN boxes, NGDLC cabinets and large repeater housings. All mounting types are included (i.e. pole, pad, and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where a site visit is required. Unit is per housing. |

| OSP ENGINEERING UNITS | | |

| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | |
| EN46 | Per Housing | ENGINEER OSP EQUIPMENT HOUSING - NO SITE VISIT REQUIRED: This unit is used when engineering the placement of outside plant equipment housings. The unit includes all associated data and symbols required for pre-stubbed tails, risers/ u-guards, bonding/grounding, splices, connectors, cable assignment, etc. Housing types include (but are not limited to) small repeater housings and MXU housings. All mounting types are included (i.e. pole, pad and building-mounted housing types). When required, all site preparation details regarding ingress, egress, pad placement, conduit and power outlet location are included. This unit is utilized in instances where no site visit is required. Unit is per housing. |
| EN47 | Per Hub | ENGINEERING, FIBER DISTRIBUTION HUB (FDH): This unit includes all FDH units pole-mounted, pad-mounted, and handhole-mounted with any miscellaneous handholes and conduit for risers. Information on the work print should include all hub detail information, splitter/splicing detail, handhole/pad detail (3' x 3' or 4' x 4'. if required), as required. Unit is per fiber distribution hub. |
| ENGINEERING: PLUG-IN CARDS / SPLITTERS | | |
| EN48 | Per Location | ENGINEER MISCELLANEOUS, ADD/CHANGE, REMOVE PLUG-IN CARDS/SPLITTERS: This Unit is used for minor transmission additions, adding spare cards, replacing cards for items deemed non-economical to repair, transmission removals, trunk additions, adding repeaters to existing housings for HR link, and the changing out of FC to ST fiber connectors. Included are (a) analog or digital carrier equipment plug-in cards; (b) line concentrator plug-ins; or (c) remote switching cards. It also includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. |
| EN49 | Per Location | FTTP - OSP ENGINEERING FOR EXISTING FIBER DISTRIBUTION HUB (FDH), ADD I CHANGE I REMOVE SPLITTER/JUMPERS: This unit is used when engineering FTTP splitters and/or jumpers at an existing FDH. It includes loop makeup/design and all associated data and symbols required for records maintenance. Unit is per location. |
| ENGINEERING: UNDERGROUND/SUBSTRUCTURE | | |
| EN50 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (GREATER THAN OR EQUAL TO 4" OD AND ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement /abandonment of a single, continuous section of one or more duct(s) incidental to the placement/ relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. |
| EN51 | Per Foot | ENGINEERING, UNDERGROUND, CONDUIT (LESS THAN 4" OD, OR EQUAL TO/GREATER THAN 4" OD AND NOT ACCESSIBLE AT BOTH ENDS): This unit is used when engineering the placement/relocation/replacement /abandonment of a single, continuous section of one or more duct(s) incidental to the placement/ relocation/replacement/abandonment of a section of underground cable. It includes all associated data and symbols required for specifying encasement, depth/cover, ties to center lines/property lines/easements/rights-of-way, detailed profile of trench sections/duct occupancy, etc. When required, this unit also includes notation of other utilities being intersected, including profile drawings, clearances, etc. Unit is per trench foot. |
| EN52 | Per Section | ENGINEER "ROD-AND-ROPE / "ROD-AND-MANDREL" CONDUIT ROUTES: Print all conduit plats, manhole details, and cable plats required for "Rod and Rope" / "Rod and Mandrel" activities prior to engineering proposed facilities within a route. The vendor is to highlight the intended path on each plat, and estimate the path distance using Windstream records. Unit is per section (i.e. manhole-to-manhole; manhole-to-handhole; handhole-to-handhole). |
| EN53 | Per Bore | ENGINEER BORE/PUSH PIPE: This unit is used when engineering the placement/relocation/replacement of a bore or pipe push necessary to facilitate placement of buried cable or conduit. This unit includes directional bores. Unit is per bore/pipe push. |
| EN54 | Per Manhole | ENGINEER MANHOLE (PRECAST): This unit is used when engineering the placement/relocation/replacement/abandonment of a pre-cast manhole. The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines /easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new manhole locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately. Unit is per manhole (>= 3 feet by 5 feet). |
| EN55 | Per Manhole | ENGINEER MANHOLE (CAST-IN-PLACE): This unit is used when engineering: (a) the placement of a new cast-in-place manhole; or (b) the dimensional modification or adjusting to grade of an existing cast-in-place manhole (>= 3 feet by 5 feet). The unit includes all associated data and symbols required for specifying depth/cover, ties to center lines/property lines/easements/rights-of-way, racking details, rebar placing detail sheets, water stops, pulling eyes, covers, ladders, steps, etc. Manhole design shall also include terminator assignments of all new conduits leaving each wall of the manhole. ROW permits and easement acquisitions are not included in this unit (billed separately). Where required, all new MH locations are to be marked in the field (staked and painted during design stage; staking sheets are paid separately). Unit is per manhole (>= 3 feet x 5 feet). |

| UNIT # | Paid Per | DESCRIPTION |
| ENGINEERING: NOTES | | |
| ALL DRAFTING, MANHOLE SETUP AND TRAFFIC CONTROL COSTS TO BE INCLUDED WITH THE APPROPRIATE UNIT(S) | | |
| EN56 | Per Handhole | ENGINEER HAND HOLE: This unit is used when engineering the placement/relocation/replacement/removal of pre-formed hand holes, pull boxes, or Optiped units. It includes all associated data and symbols required for specifying ties to center lines/property lines/easements/rights-of-way, etc. ROW permits and easement acquisitions are not included in this unit (billed separately). Unit is per hand hole (< 3 feet by 5 feet). |
| EN57 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 1-5 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. |
| EN58 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; 6-25 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. |
| EN59 | Per Manhole | ENGINEERING, UNDERGROUND RECORDS VERIFICATIONS, MANHOLE SURVEY; >=26 HANDHOLES: Provide manhole details from a physical survey that includes existing cable routing, splice locations, type of splice closure, and a butterfly drawing of all walls to include dimensions, duct configurations and spare/occupied conditions. When required, Unit EN60 (Waste Water Removal) may be used as adders to this Unit. Unit is per manhole, based on the total number of manholes assigned to be surveyed. Manhole Setup is included in this Unit. |
| EN60 | Per Manhole, Per Day | WASTE WATER REMOVAL: Unit includes removal of non-hazardous waste water by truck/trailer to an offsite location, as required. This Unit is to be used in conjunction with Manhole Surveys, when applicable. This Unit requires pre-approval by the Windstream Engineering Manager. Unit is per manhole, per day. |
| ANCILLARY: HOURLY | | |
| EN65 | Per Hour | MISCELLANEOUS ENGINEERING FOR THIRD-PARTY WORK FUNCTIONS - HOURLY: A vendor is occasionally asked to complete work which does not logically fit any other unit description and subsequently necessitates the use of an hourly rate to compensate them for time spent. This unit is intended to compensate the vendor for these anomalies. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULLTIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. |
| EN66 | Per Hour | ENGINEERING, LICENSED PROFESSIONAL ENGINEER/SURVEYOR - HOURLY: This unit is intended to cover instances requiring the use of a professional civil engineer/surveyor in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This individual must be a fully credentialed and licensed professional engineer. This individual must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. |
| EN67 | Per Hour | ENGINEERING, TWO-MAN SURVEY CREW - HOURLY: This unit is intended to cover instances requiring the use of a professional survey crew in order to insure validation of drawings to be submitted by Windstream for approval by governmental authorities. This crew must also possess an excellent working knowledge of outside plant (OSP) design principles and telecommunications industry standards. This unit may include (but is not limited to): (a) preparation of topographic records, work order drawings and associated documentation; (b) analysis of reports; and (c) data entry into Windstream standard software applications. The crew rate includes compensation for tools and work equipment. No separate compensation for tools and work equipment will be provided. Use of this unit requires the prior written approval of the assigning Windstream manager. THIS UNIT IS NOT INTENDED TO COMPENSATE THE VENDOR FOR USE OF A FULL-TIME EMPLOYEE(S) ON A WEEKLY (OR LONGER) BASIS. Unit is per hour. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream. |
| Engineering: Pole Loading | | |
| EN70 | Per Pole | POLE AUDIT - DATA REVIEW / RECONCILIATION ONLY - NO FIELD VISIT REQUIRED: This Unit is intended to compensate the vendor for time spent verifying and reconciling pole inventory and attachment data. This data is based on pole attribute information received from a pole survey and requires verification between survey data and Windstream pole inventory data. This Unit does not necessitate a field visit and is for records verification and update only. Unit is per pole. |

| EN90 | Per Span | RECORDS VERIFICATION (COPPER OR FIBER): This unit is intended to compensate an OSP engineering vendor for time spent verifying Windstream's cable records for spare/compatible cable facilities (copper and/or fiber). The vendor deliverable includes preparation of a list of test locations and the affected copper pairs or fiber strands to be tested and tagged at each location by OSP field maintenance personnel. Unit is per copper or fiber cable span. |
| EN91 | Per job | PE JOB STAMP: Cost to have work order sealed by Professional Engineer. Use of this unit requires the prior written approval of the assigning Windstream manager and will be used only in areas or on projects as required by Windstream to meet regulatory demands |
| EN92 | Per foot | PROJECT MANAGER; COPPER/FIBER <=1000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN93 | Per foot | PROJECT MANAGER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN94 | Per foot | PROJECT MANAGER; COPPER/FIBER >=5001': Cost per foot for an OSP Project Manager. Responsibilities are to direct and manage projects during a defined duration. This Unit may and could include inspection activities as defined in the OSP Inspector Units EN95 thru EN97. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN95 | Per foot | OSP INSPECTOR; COPPER/FIBER <=1000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN96 | Per foot | OSP INSPECTOR; COPPER/FIBER <1001-5000': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN97 | Per foot | OSP INSPECTOR; COPPER/FIBER >=5001': Cost per foot for an OSP Inspector to provide onsite inspection and compliance verification of OSP construction activities. Use of this unit requires the prior written approval of the assigning Windstream manager . |
| EN98 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <=1000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. |
| EN99 | Per foot | RESIDENT ENGINEER; COPPER/FIBER <1001-5000': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. |
| EN100 | Per foot | RESIDENT ENGINEER; COPPER/FIBER >=5001': Cost per foot for an OSP Resident Engineer. Responsibilities include all activities as defined under the Project Manager and OSP Inspector roles. In addition the Resident Engineer is responsible for any additional design activities for a specific project that may be required later in the project life. Use of this unit requires the prior written approval of the assigning Windstream manager. |

Project Scope Agreement

For

Project Name:

**OSP Project Management & Inspection
Connect America Fund (CAF) Projects for the States of:**

**Alabama, Arkansas, Florida, Georgia, Kentucky, Mississippi,
Missouri, New York, North Carolina, Ohio, Oklahoma,
Pennsylvania, South Carolina and Texas**

INFORMATION PROVIDED IN THIS PROJECT SCOPE AGREEMENT (AND THE ATTACHMENTS HERETO) DOES NOT RELIEVE CONTRACTOR OF ITS OBLIGATION TO OBSERVE THE HIGHEST STANDARDS OF SAFETY AND PROFESSIONALISM IN COMPLETING THE PROJECT.

This Project Scope Agreement (including the attachments hereto) describes the services to be performed by the selected Contractor, or which will be delegated by the Contractor to Subcontractor(s) under the supervision of the Contractor, during the completion of the Project. Additional detail, which may include drawings and work specifications, may be provided at the time the work is being ordered.

General Project Scope Agreement Details

Location

Work will be performed at the following location(s):

All work for the Projects included in this PSA will be performed in the State(s) of Alabama, Arkansas, Florida, Georgia, Kentucky, Mississippi, Missouri, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, South Carolina and Texas. Work can be located within any of the States/Countries and work may be required in multiple locations simultaneously.

Services Type

These Services are (check one):

Work on Unit Basis

Project Description:

Scope of work to be performed:

This Project Scope Agreement (PSA) is to provide Project Managers and Inspectors for Windstream CAF projects. This PSA covers CAF PMI work for those projects listed as CAF 1, Round 2 only. The position will manage the process from receipt of the sales order from the Windstream OSP Engineering group. It would include managing the OSP Construction milestones, interfacing, as necessary, with the OSP Engineering Contractor as well as providing status directly to Windstream as required.

Contractor's Responsibilities

Responsibilities of Contractor:

Resource

Project Manager & Inspector: The Project Manager & Inspectors will be the single point of contact responsible for each project. This contact will reside at the PMI Contractor's facility. The Project Manager & Inspector will manage and coordinate all facets of the project(s) including, but not limited to, the following:

- Own the construction aspects of each CAF project
- Supervise OSP (outside plant) work, inclusive of fiber construction utilizing both aerial and underground construction (both rural and city construction)
- Develop and maintain relationships with third party providers and contracting resources to manage build schedules for CAF routes
- Work with various internal and external teams to provide daily and weekly updates for all aspects of project

- Coordinate the completion of make ready work
- Manage project timelines for all aspects of OSP builds, inclusive of permitting, make ready, OSP construction, and management of capital budget tied back to the project

Experience: The Project Manager & Inspector will have, at a minimum, the following additional knowledge and experience:

- PMP Certification or equivalent work experience
- Familiarity with various OEM suppliers equipment used in all type of OSP Construction projects (i.e. Fiber cable, Fiber Distribution Panels, Fiber Distribution Hubs, Fiber peds/closures, etc.)
- Knowledge of Telcordia Blue Book Manual of Construction Procedures
- Knowledge of end customer standards, where appropriate
- Knowledge of OSHA safety standards
- Knowledge of NEC/NESC standards
- Knowledge of Windstream engineering and construction practices.

Contractor Responsibilities

- Manage the Construction Contractor(s) and bill Windstream per rates schedule (as shown in Section titled “Fee Basis” below).
- Invoice Windstream on a monthly basis for Project(s) completed.
- Comply with scope of work responsibilities.
- Comply with agreed upon project timelines.
- Do not cause a negative impact on the end customer’s network service.
- Comply with customers standards.
- Comply with customers safety, procurement, and security policies.
- Ensure that the Construction Contractor(s) are in compliance with the PSA covering their specific work requirements. The PSA for Construction is attached and becomes a part of this PSA
- Perform Inspections on the construction work completed to ensure that it is in compliance with Windstream standard Construction Units.

Except as described herein, Contractor at its own expense, shall furnish all materials, labor, tools, machinery, vehicles, transportation, lodging, and all other facilities necessary to complete the Project(s) in compliance with specifications shown and/or attached.

The Telecommunications plant engineered and constructed for Windstream, hereinafter referred to, as “owner” shall meet the specifications and criteria set forth by Windstream practices, Windstream personnel, and local rules. In addition, the following supplemental referenced specifications shall be observed:

- Occupational Safety and Health Code (latest edition)
- Applicable power and telephone pole attachment agreements
- Applicable city, county and state ordinances
- National Electric Safety Code (latest edition)
- National Electric Code (latest edition)

Applicable government agencies for safety and health for the work force
All Windstream Engineering and Safety Practices

Municipal, county, state or federal regulations may alter specifications in some areas. If specifications are altered from these standards, an additional attachment will illustrate changes.

All changes or revisions of the specifications made by the Contractor must be requested in writing and approved by the owner before work is performed.

The owner reserves the right to change or revise the specifications to adapt to local conditions. In such case, the Contractor shall be notified.

Contractor Deliverables:

Deliverables for this PSA will be based on progress reports and inspection reports.

Contract Project Managers will provide weekly progress reports (or more often as requested) to Windstream management. The progress reports shall be in Excel format and include a summary for the entire project as well as detailed reports for each work order. See the attached example of this type of report. Contractor is to use a format similar to this to track Project progress. CPM's will also host a weekly call including the Contract Engineering firm, the Contract Construction firm, and Windstream management to review the project progress. The CPM will identify any areas that are behind schedule and provide suggestions for getting the project back on schedule.

Inspectors should inspect 100% of every job at the completion of all placing and splicing. Inspection can be performed prior to cutover. Inspection is to be done using standard Windstream inspection forms. Inspectors are to provide the Construction Contractor with a copy of the completed inspection forms and assign a date for correction of all deficiencies (usually two weeks). After the construction Contractor returns a signed form stating all deficiencies have been corrected, the Inspector will make a final inspection to verify completion. The Inspector will then forward all inspection documents for the project to Windstream management.

Weekly production report showing jobs, feet placed to date, % completed.

Contractor will need to be able to respond to emergency or restricted time frames for construction. Jobs will need to be completed by date requested by Windstream OSP Engineering.

Contractor will be responsible to staff accordingly based off the attached CAF Project list, understanding that all Projects are to be in compliance with the timelines that will be established by Windstream. All construction is expected to be 100% completed (all work orders fully approved by WIN management) by established timelines set by Windstream, with no work exceeding a final cut-off date as directed by Windstream Engineering.

Types of Construction: Construction may include both Copper and Fiber, cable designs placed buried, aerial, underground or in any combination. Buried construction will consist of plowing, trenching, and boring. Aerial construction will be e-lashing to existing cables or lashing to a new 10M strand. ADSS may also be utilized in certain applications. Jobs may also require deployment of remote equipment cabinets and engineering new carrier service areas (CSAs) or broadband overlay areas. Contractor will be responsible for performing any make ready work required on aerial designs, including attachment heights on each pole and position numbering.

Cable Requirements: Cable requirements will vary from job to job with no minimum or maximum length. Pricing will be on a unit (per foot) basis. See Method of Payment below.

Windstream's Responsibilities

Responsibilities of Windstream:

Authorized Windstream personnel will notify Contractor of each Project.

Training on Windstream systems and practices: Training on Windstream systems and practices. Windstream will use a train the trainer approach to train the successful Contractor on Windstream systems and practices. After this training is completed the Contractor will be expected to maintain a trained staff to respond to requests as mandated below.

Windstream Deliverables:

Access to Jobtrac and Miror will be provided.

Access to GComms will be provided, however licenses will be the Contractor's responsibility.

Windstream standard Inspection Forms will be provided.

Windstream standard Change Control Forms will be provided.

Deliverables

Deliverables and Due Date(s) or approximate duration of Services or time to complete:

Contract term to begin December 1, 2014 and complete December 31, 2015, but may be extended as needed.

LIQUIDATED DAMAGES

On time delivery - relates to Project Management:

For each individual project that does not meet the job completion On Time deliverables as identified in the SLA due to the Project Management Contractor issues, a liquidated damages fee will be assessed at 1% per business day starting with 1% up to a maximum of 15% of the total Project Management labor for the entire Project. If exchanges or routes are added to the Project, there will be a discussion between Windstream and the Project Management Contractor to negotiate dates. Once negotiated dates are confirmed, those dates are subject to on time delivery liquidated damages.

Jeopardy codes have been established as follows for non-Contractor caused issues:

- Windstream Delays
- Weather issues
- Reassigned priority
- Construction Contractor Issues

Quality – Relates to Inspection:

Windstream may, at its discretion, perform quality inspection of Project(s).

Construction quality audits will be performed using the standard Windstream OSP audit form (attached). Scores will be based on the Construction sections (lines 8 thru 20). The Windstream audit team will select the jobs to be audited and input data into the Windstream Audit. Scores on individual work orders of less than 95% will constitute a failed audit.

For each project that fails the Quality audit performed by the Windstream Audit team, estimated at 100% of total jobs in this Project, a liquidated damages fee will be assessed at 10% of the total Inspection cost for the individual work order.

Quality Audit Form to be used is attached to this PSA as Exhibit D

Liquidated Damages will be assessed on all jobs awarded under this contract and deducted from the invoice for each job.

Other Requirements

Performance and Payment Bond

Contractor will be required to provide Windstream a Performance and Payment bond with a surety listed by the United States Treasury Department as an Acceptable Surety. Bond is to be issued in the amount of \$250,000.

Fee Basis (check one):

Pricing for the work outlined in this scope will be at a Unit rate as detailed below:

See "Byers CAF PMI Awards Cost Schedule.xls" attached.

Rates quoted are inclusive of all Travel and per diem costs.

The terms of this proposal initiate upon the signature of the PSA or contract and will continue until terminated by either party with thirty days written notification. This Order will continue in effect for an initial term unless it is Cancelled or Terminated.

Work Facilities

Work facilities to be provided by Windstream (if any): Work space will not be provided.

Invoicing

10% retainage will apply to all jobs under this PSA. All invoices submitted will have 10% withheld until final closeout after construction.

Invoices must be in PDF or TIF format. Do not attach email messages. Send only one invoice per email attachment. Do not scan multiple invoices in one PDF file.

Contractor's invoices shall be submitted to:

WINDSTREAM ACCOUNTS PAYABLE

CID # **(Contact Local OSP Engineering Manager for each area)**
PO BOX 18313
LITTLE ROCK, AR 72222

Or

The Preferred Method:

Invoices may be submitted electronically via email to
CORP.Vendor.Invoices@windstream.com

Additional Information

The following documents are attached and become a part of this PSA:

- Byers CAF PMI Awards Cost Schedule.xls
- OSP Construction and Project Management Audit Form.xlsx
- OSP Construction Inspection Form
- Schedule - Units Descriptions, Price Schedule & Construction Standards.docx
- Unit Master List – OSP CAF.xlsx
- Byers Caf1r2 Final Routes – 2015 PMI.xlsx

IN WITNESS WHEREOF, the parties hereto have caused this Schedule to be executed by their respective authorized representatives effective as of the date last written below.

This is the new format for Construction Work Order Inspections.

Use of any and all existing inspections forms for this purpose is to be discontinued.

It is designed to score and provide feedback to the SSP Contractors in each location / region. By using numerical scoring for each item inspected, a value can be established for the quality of the job. By combining inspections in this format, a monthly summary can be generated to assist management in the contractor feedback.

Each local Project Manager is to complete full inspections on 8 OSP work orders each month using the individually numbered tabs below.

Each local Engineer/Outside Plant Technician is to complete full inspections on 4 work orders each month in the same manner.

These electronic monthly reports are to be sent to the OSP Technical Support group's Senior Analyst and Construction QA Senior Engineer.

Work orders to be inspected should be considered in ranking as follows:

Projects, Subdivisions, Businesses, DORs, CMRs, PMRs, and Drop.

Jobs Tab:

Fill out the Region for your particular area. Under the State heading, list appropriate State.

Under the Exch. heading list the exchange. Input the Work Order Number under that heading.

List the Type and Description under those headings (ie: BO New Entrance Cable EZ Mart).

Individually Numbered Inspection Tabs:

The form is to be filled out completely with all pertinent information. Some jobs will not have all Aerial, Buried, UG, and Remote DLC headers involved, but most will have two or three. All jobs inspected should have the Job Completion header filled out.

Populating the title block at the top of each form is required to show: State, Exchange, WO#, Contractor, Type of Job and Description. The **Jobs** tab will auto populate most info to the number tab.

There is an "Inspected by" and "date" line at the end of the form.

An area for Inspector comments is provided above the Inspector's name.

Each header is set up with possible points built into the form. The Inspector is to provide the

actual points inspected on the same line. Actual is set up to be an "All or Nothing" rating. So if there is one item wrong on the job pertaining to that line item, then the score is "0" for that line. Example: Pedestals - Loc., Depth, Plumb, Stenciled, Rock / if you find no gravel in 1 ped and all others are good, the actual point is "0".

The Inspector clicks on the "Item Audited" drop box for each line item inspected and selects yes or no.

Then the Inspector clicks on the "Actual Points" drop box for same line item and selects 0 or 5.

At the end of the individual spreadsheet is the scoring box that shows the total possible points inspected in relation to the actual inspected points. An overall percentage is calculated and shown in the scoring box.

A numbered tab on this spreadsheet is to be used for each work order inspected per month. Each work order is tallied to show the "**Final Audit Score**" for those jobs inspected.

[FOR REFERENCE ONLY]

**Unit Description, Price Schedule
and OSP Construction Standards (“Schedule”)**

**For
Wireline OSP Construction for the State(s) of**

INFORMATION PROVIDED IN THIS SCHEDULE DOES NOT RELIEVE CONTRACTOR OF ITS OBLIGATION TO OBSERVE THE HIGHEST STANDARDS OF SAFETY AND PROFESSIONALISM IN COMPLETING THE PROJECT.

This Schedule describes location and construction unit requirements for the selected Contractor, or which will be delegated by the Contractor to Subcontractors under the supervision of the Contractor, during the term of this Agreement. The attached chart (the “Units Master Spreadsheet”) defines the construction units, associated labor costs and other pricing details and is incorporated herein by this reference.

This Schedule is part of the Master Contractor Agreement for Network Services between the Parties. Any capitalized terms not defined herein shall have the meaning set forth in the Master Contractor Agreement for Network Services.

General Details

Location

Work will be performed at the following location(s):

Wireline OSP Construction activities for the State(s) of, consisting of the following exchanges:

See List of Exchanges and Construction Area Map attached

Invoicing

Contractor's invoices shall be submitted to:

CONTRACTOR to submit invoices electronically through the JobTrac contractor portal for payment.

Unit Price

Labor costs are shown on the Units Master Spreadsheet. See Units Master Spreadsheet for price details.

Freight and Handling

CONTRACTOR agrees that Windstream has set a recovery rate for freight ("Recovery Rate") for all material that is required to perform the work identified in the Statement of Work ("SOW") and that is purchased by CONTRACTOR from Windstream. The current Recovery Rate is equal to the freight percentage (%) which is charged by Windstream and which has been paid by CONTRACTOR. In addition, CONTRACTOR will receive a handling fee equal to ten percent (10%) of the cost of materials detailed on each specific work order or PSA and purchased from Windstream.

Service Commitments

Required Contractor Service Commitments

The CONTRACTOR is required to meet the following service date commitments:

- Held order jobs will be completed within ten (10) business days of receipt of work order with approved permits.
- Buried drops will be completed within five (5) business days of the CONTRACTOR'S receipt of the order.
- All routine work will be completed within thirty (30) business days, including capital and expense unless otherwise specified.

Damages for Not Meeting Service Commitments

Damages will be assessed the CONTRACTOR for jobs not meeting defined service commitment dates. Damages will be imposed at the discretion of Windstream management on a case-by-case basis. The following damage structure will be utilized for each job not meeting its service commitment.

- Buried Drop Work Orders \$100
- Held Orders (PSR) 10% of total job value
- Plant Maintenance Requests \$100
- Routine Work Orders 10% of total job value
- Line Item Work Orders 10% of total job value

Held Orders

The CONTRACTOR will notify the held order coordinator immediately if customer commitment dates cannot be met on held orders. This notification must include a new commitment date and an explanation of the cause of the delay.

The held order coordinator will inform the responsible construction supervisor when customer commitment dates will be missed. The supervisor-construction at his option may change CONTRACTOR'S estimated new commitment date.

Upon completion of the held order facilities installation, the CONTRACTOR will:

1. Complete the service initiation if all station work is complete, including termination of the drop in the network interface device ("NID") and verifying service (dial tone) at the NID.
2. Notify assignment immediately (from the site of the work) and leave the following information:
 - a. Work order number completed.
 - b. Held order customer's name.
 - c. Held order customer's telephone number
 - d. Customer **is/is not** in service.
 - e. Customer service technician ("CST") **does/does not** need to be redispached.

Contractor Administrative Requirements

CONTRACTOR will be required to maintain a permanent office and local staff within the district. Staff managing the local district office will require empowerment authority to make entire decisions on district staffing resources, unit pricing enhancements/changes and provide for overall contract management within the district.

Standard Rules of OSP Construction

0.0 PURPOSE

0.01 This document provides technical construction specifications for use by CONTRACTOR in performance of outside plant (“OSP”) construction.

0.02 The purpose of this document is to publish standard specifications required of construction contractors to follow prior to work performance. In doing so, contractors will be more prepared to determine manpower and equipment needs and in result provide more timely completion of projects. Windstream, in turn, will be more able to evaluate construction quality and compliance.

1.0 GENERAL

1.01 All work shall be done in a thorough and workmanlike manner in accordance with current Windstream practices, specifications and Rural Utility Services (“RUS”) standards and shall be subject to acceptance by Windstream. Windstream practices will be made available to the CONTRACTOR, upon request, for each work operation when required. When working on governmental right of way, all work will be performed to meet the most stringent specifications.

1.02 The CONTRACTOR shall maintain conductor polarity (tip and ring) identification at the main distributing frame, cable terminals, wire terminals, terminal blocks, and in the buried service, drop and station wiring, all in accordance with the specifications and construction drawings. CONTRACTOR is required to perform shield conductor continuity testing on all cables and cable sheath fault tests and end-to-end testing of one pair in each binder group to ensure end-to-end binder group integrity. Additional testing may be required by Windstream. All tests will conform to Windstream and RUS specifications. Fiber testing will be in accordance with established Windstream standards and local test equipment. Specific printouts of the test results will be provided to Windstream as a portion of the closing work order documents.

1.03 The CONTRACTOR may receive complete sets of construction drawings containing sufficient measurements to identify the location of all materials to be installed. In some situations, projects will not be physically staked by Windstream. These drawings may be delivered electronically.

1.04 No changes or deviations in the construction proposed on the construction drawings, plans or specifications shall be made by the CONTRACTOR without prior approval from Windstream.

1.05 Windstream will provide quality control inspections for a random number of jobs completed by the CONTRACTOR. OSP Job Evaluation Checklists provided by Windstream will be completed and when quality discrepancies occur, inspection results will be forwarded directly to the CONTRACTOR’S representative. CONTRACTOR will be given 10 workdays to correct job discrepancies. Job discrepancies not corrected within the 10-day window will be subject to damages, which will be between one (1) and five (5) percent of the job’s aggregate value, dependent on the severity of the discrepancies. **Note: Safety related or service-affecting issues may require immediate attention and the 10 workdays referenced above will not apply.**

1.06 The CONTRACTOR shall locate all underground utilities (i.e., telephone, CATV, electric, sewer, water, gas, petroleum, etc.) and obstructions (i.e., culverts, drains, field tiles, etc.) prior to construction to avoid damage to such facilities. Windstream is excluded from any liability for utility/facilities damages. The CONTRACTOR shall notify the state one-call center as prescribed by law prior to construction of all segments. The CONTRACTOR is required to

enter the locate confirmation number on the as-built prints at job completion. While the CONTRACTOR must call the one-call system to have other utilities located, the CONTRACTOR is responsible for locating Windstream facilities and cannot have the Windstream paid locate company do the locations for them.

1.07 The CONTRACTOR, at its expense, will repair any damages to Windstream cable or facilities due to the negligence of the CONTRACTOR as determined by Windstream management. The CONTRACTOR must notify the local Windstream manager or construction supervisor / inspector immediately upon facilities damage.

1.08 During construction, copper-paired cable shall not be bent in a radius less than ten times the outside diameter of the cable.

1.09 CONTRACTOR is responsible for maintaining the appropriate inventory levels of all materials required to meet customer service commitments. This includes copper cables of 300 pair and 36 fibers or less as required, and any other frequently used larger cable sizes. Depending on the specific market area, CONTRACTOR may be required to keep 1200-1500' lengths of larger pair count cables, such as 600, 900 and 1200 pair for emergency restorations. This will be determined by the local Windstream OSP Engineering Manager in conjunction with the CONTRACTOR.

1.10 The CONTRACTOR will deliver completed job documentation within five (5) business days of job completion due date. Penalties of a percentage of the jobs aggregate value between one (1) and five (5) percent, dependent on the severity of the discrepancies, may be assessed for non-compliance. Legibly marked work prints will follow these criteria:

- All placement additions shown in red.
- All removals shown in blue.
- Cable placement will be noted, including beginning and ending sequential cable numbers on all cable appearances, such as pedestals, risers, etc. When working on an aerial project, the sequentials will be shown at the beginning and end of the project and at each pole location.
- All job variations will be noted on the completed print, to include the name of the Windstream representative authorizing changes and the date of approval.
- Reference Section 13.01 d) for additional information related to Job Completion.

1.11 CONTRACTOR will be required to conduct business with Windstream utilizing electronic medium. During the job life cycle, the CONTRACTOR will be notified electronically of new jobs available to work. Utilizing appropriate security, CONTRACTOR will access Windstream's Outside Plant web site to receive all job-related information. CONTRACTOR will print all job specifications and job prints from Windstream's web site. CONTRACTOR will be required to supply computing hardware/software and print facilities of up to 11" by 17".

1.12 CONTRACTOR will reconcile all completed jobs electronically through Windstream's Outside Plant web site. All job units will be reconciled through this process, with job prints routed to local Windstream representatives for manual review. The web site will maintain an audit history of all job as-built activity. Upon reconciliation, Windstream representatives will review and approve all jobs that contain no discrepancies. CONTRACTOR and Windstream representatives will jointly resolve jobs not approved. All jobs approved by Windstream will become a CONTRACTOR invoice, submitted to Accounts Payable for payment. CONTRACTOR will have ongoing access to review reconciled jobs and all invoices submitted for payment.

1.13 The CONTRACTOR shall pay particular attention to maintaining good public relations in the performance of all work hereunder, particularly in contacts with property owners and public officials. When talking with subscribers or the public, CONTRACTOR employees will be polite and well mannered.

1.14 The CONTRACTOR shall cause construction crews to receive constant supervision by a competent person who shall be present at all times during working hours where construction is being performed. Directions and instructions given to the competent person by Windstream, including authorized agents of Windstream, shall be binding upon the CONTRACTOR. The designated competent person of each crew shall speak, read and write in English.

- Windstream will, whenever and where ever possible, maintain authorized representatives at or in the immediate vicinity of the construction site or provide to the CONTRACTOR cell phone and pager numbers to contact Windstream personnel to assist the CONTRACTOR in any way deemed necessary by either party for the orderly execution of the work and administration of Windstream-required work documents, to further assure compliance with work plans and specifications and to maintain quality of construction. The decision of Windstream shall be final as to compliance and any work rejected shall be corrected by the CONTRACTOR.
- At the request of Windstream, the CONTRACTOR shall provide a competent representative to work with Windstream's representative on the final inspection and acceptance test of plant installed.

2.0 MATERIALS; LABOR UNITS; COMPENSATION RATES

2.01 The CONTRACTOR will purchase and store all necessary materials required to perform the work.

2.02 The CONTRACTOR will purchase, receive and store material at the CONTRACTOR'S location or any other specified location. The CONTRACTOR shall be responsible for receiving and/or unloading of all materials delivered to CONTRACTOR location. The material shall include, but not be limited to, reels of cable and strand, closures, splice cases, anchors, rods, and hardware. The CONTRACTOR shall be responsible for providing a safe and secure storage area of adequate size for the receipt and storage of material. All material is subject to inspection by Windstream and any defective material will be the responsibility of the CONTRACTOR. The CONTRACTOR is fully responsible for the management of any inventory ordered for a specific Windstream job or for the anticipation of future Windstream jobs. Windstream will not pay for reel end splices.

2.03 All material to be used in construction of the Project shall be stored so as to be protected from deteriorating effects of the elements. The CONTRACTOR shall bear in mind the weather conditions that may prevail prior to the time the material is incorporated into the plant. If metallic items of material are not to be stored longer than 30 days and outdoor storage cannot be avoided, they shall be stacked on boards or timbers well above the ground line and effectively protected from the elements by a roof or tarpaulin. For brief periods only (not to exceed 30 days) these metallic materials may be stored in the open, exposed to the elements, provided they do not come into contact with the ground.

2.04 All guy strand, suspension strand, drop wire, and aerial cables used in the construction of the Project must be handled with care in the transportation, unloading, and use. These wire and

cable facilities must not be trampled upon, run over by vehicles, pulled along the ground, over fences, metal fittings or crossarms. Each coil or reel shall be inspected for cuts, kinks, or other damage. All damage shall be repaired to the satisfaction of Windstream.

2.05 “Unit” means one of the nomenclature codes (e.g., “BD3”) listed on the Units Master Spreadsheet that identifies a specific construction task and the construction methods, materials and quantities to be used for installation. “Unit Rate(s)” (excluding hourly rates) means the cost of all labor, vehicles, proper tools, supplies, transportation, implements, appliances, equipment, supervision, inspection and testing required to perform the Unit according to Windstream’s specifications. “Labor Units” are defined as the actual labor-only cost to perform a task or job and are to be billed back to Windstream as a separate line item. All Labor Units include in the price for the individual, the individual’s tools, equipment, pagers where required, and proper apparel (including personal safety equipment) necessary to perform the individual’s job functions. All necessary work that is not covered by a specific Unit code but is associated with a Unit being performed shall be considered as incidental, with the cost to be all-inclusive in the Unit Rate. The standard working hours for unit placing, splicing and other unit crewmembers will be as dictated by local management. It is expected and normal that unit crews will work in excess of 40 hours during weeks of good weather where construction operations continue for five full days. Windstream will NOT compensate these unit crewmembers on an overtime rate. Compensation will be Unit Rates only.

2.06 Payment for work at an hourly rate will be made ONLY when written or verbal explanation is provided as to the reason for the use of “hourly rate” instead of “Unit Rate”. The standard working hours for all hourly placing, splicing, CSTs and other hourly crewmembers is 8:00 AM to 5:00 PM, with one hour for lunch, five days per week, Monday through Friday. These are more specifically defined as crewmembers that, as a general rule, are utilized on an hourly basis, week in and week out and are not regular unit work crewmembers. Overtime will be paid for these CONTRACTOR(S) in the event Windstream requires that the work be extended past 40 hours. Hourly work must be pre-approved by Windstream and will require a daily time sheet signed by an appropriate Windstream employee. The CONTRACTOR shall record start time and stop time on all hourly time sheets for each job performed during a workday. Time sheets are to be recorded daily.

2.07 Vehicles or equipment that may require a mode of transport are priced to include the transport truck and/or trailer. Major tools, test equipment, safety and work area protection equipment, etc. are included in the Unit Rate for the vehicle with tools.

2.08 When awarded work is performed on an hourly basis, Windstream will pay a single hourly rate of compensation for the total approved hours worked. Windstream will not pay a premium for overtime, shift differentials, holidays, etc., except as otherwise expressly provided in this Schedule.

2.09 No hourly compensation will be made to CONTRACTOR for personnel, vehicles, tools or equipment during lunch or other breaks, or for any work delays caused by the actions of CONTRACTOR, its employees, or its agents. Windstream will pay the applicable Unit Rates to CONTRACTOR for delays caused by Windstream’s own actions when CONTRACTOR is required to remain on-site or on-call and is unable to perform other work during the delay.

2.10 **Special Compensation Consideration** – When Windstream requests CONTRACTOR to leave an existing worksite and change work schedules without advance notice, CONTRACTOR will be paid the hourly rate for travel to the new job site and for travel back to the originating

travel point. Work performed while at the jobsite will be paid at the Unit Rates set forth in this Schedule and not at the hourly rate. Labor and equipment needed in these situations will be determined by Windstream and CONTRACTOR.

2.11 Payment of overtime for emergency call outs (as set forth in Section 11) begins when CONTRACTOR's employees leave their origination location to travel to the emergency work location, continues through performance of the work and stops when CONTRACTOR's employees have completed the emergency work and returned to their origination location.

3.0 PERMITS AND REGULATIONS

3.01 The CONTRACTOR shall comply with all laws, ordinances, and regulations of all legally constituted authorities. If the CONTRACTOR observes that the plans are at variance therewith, the CONTRACTOR shall promptly notify Windstream in writing. If the CONTRACTOR performs any work knowing it to be contrary to such laws, ordinances, and regulations, and without giving such written notice to Windstream, the CONTRACTOR shall bear all costs arising therefrom.

3.02 Windstream or, as directed, the CONTRACTOR, shall obtain the necessary legal authority to occupy and open public highways in which the said work is to be performed, together with rights-of-way for work on private property, and copies of such permits and rights-of-way shall be made available to the CONTRACTOR for guidance. CONTRACTOR may be required to open and close all Department of Transportation ("D.O.T.") approved permits. Wherever practical the CONTRACTOR may be required to pickup approved D.O.T. Permits from D.O.T. locations.

3.02 Specifications, restrictions, and requirements of all property owners, state, counties, cities, villages, and townships involved must be followed at all times and in all respects.

3.04 The CONTRACTOR shall not store materials, supplies, or equipment on private property unless written permission has been obtained from the property owner.

3.05 No explosives are to be used in the performance of work under this contract without prior written approval of the company.

4.0 SAFETY

4.01 The CONTRACTOR shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the work for the protection of the following: (1) all employees on the worksite and all other persons who may be affected thereby; (2) all of the work and all materials and equipment thereon; and (3) all other property at the site or adjacent thereto.

4.02 The CONTRACTOR shall comply with all applicable laws, ordinances, rules, regulations, and orders of any public authority having jurisdiction for the safety of persons or property or to protect them from damage, injury, or loss. The CONTRACTOR shall erect and maintain, as required by existing conditions and progress of the work, all reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations, and notifying owners of adjacent utilities. The CONTRACTOR shall be responsible for the safety of the work and shall maintain all lights, guards, signs,

temporary passages, and other necessary protection and precautions for that purpose. All cones, signage, and flags will conform to Windstream practices and D.O.T. regulations.

4.03 The CONTRACTOR shall furnish competent flagmen or policemen when required to assist the flow of traffic or for the safe maneuvering of equipment and trucks and for construction work under this CONTRACT. Signs and flagman should be provided in accordance with the State Department of Transportation's regulations. Crewmembers designated as a flagman are required to carry a state approved DOT Certified Flagman Card. CONTRACTOR understands and agrees that any Unit which would require the use of flagmen or other traffic control equipment has included the cost for these services in their contracted Unit Rate. Windstream will not pay additional costs for the use of flagmen or other traffic control equipment.

4.04 Hard hats and state approved reflective vests will be worn at all job sites. The Occupational Safety and Health Administration ("OSHA") requires the wearing of safety vests by personnel when working within the highway right of way. (Federal OSHA Standards For General Industry, 1926.650 subpart P, paragraph F).

4.05 OSHA rules and regulations regarding confined space ventilation and manhole protection shall be followed at all times. Tests for oxygen deficiency and harmful gases shall be conducted in all manholes prior to entry in accordance with Windstream system practices. Testing will continue throughout all operations in manholes.

4.06 Each member of CONTRACTOR'S crew is expected to read the Windstream Pocket Safety Guide, acknowledge they understand the information and that accident prevention depends upon their cooperation. It is the CONTRACTOR'S responsibility to insure all employees have read and signed the Windstream Pocket Safety Guide and will maintain appropriate documentation.

4.07 The latest revision of the National Electrical Safety Code and the National Electrical Code shall be followed in every case except where local regulations are more stringent, in which case local regulations shall govern.

4.08 The CONTRACTOR agrees that no unauthorized persons shall be allowed to enter the work site without prior approval of Windstream. CONTRACTOR will immediately notify Windstream when any governmental agency comes on the job site. The CONTRACTOR and its Subcontractors will give access to the representatives of the Secretary of Labor or any state or local official for the purpose of inspecting or investigating or carrying out any of the duties under the Occupational Safety and Health Act of 1970 or under any state or local act affecting safety and health. The CONTRACTOR shall be responsible for any violation of any safety or health standards issued thereunder, shall immediately remedy any condition giving rise to such violations, and shall indemnify, defend and hold Windstream harmless from any penalty, fine, or liability in connection therewith. Violations will be disclosed to Windstream in an expeditious manner.

4.09 All parties associated with excavations for the conduit and manhole system shall follow safety rules and regulations to safeguard the public and workmen.

- a) Gas and oil mains shall be given special attention and precaution shall be taken to guard against the fire hazards they present. Excavations in public streets should always be checked for gas leakage, even though gas mains or sewers are not directly encountered. No flame of any sort shall be permitted around excavations when the odor of gas is

detected. Workmen shall not be allowed to smoke; and precautions shall be taken to prevent pedestrians from throwing lighted cigars, cigarettes, or burning matches into such excavations.

- b) The CONTRACTOR shall provide required shoring, warning signs, lights, no parking signs, barricades, and removal of excess water and excavating material. Flagmen and guards shall be provided where required to maintain safe conditions for the workmen and the public.
- c) Blasting will only be permitted with approval from state or local authorities and with the warning to and protection of workmen and the public.
- d) Excavations shall be closed and/or barricaded for public protection prior to leaving the job site at night with warning lights and/or guards.
- e) Accessibility to fire hydrants, fire alarm boxes, and private driveways shall be maintained using temporary bridges over trench as required.
- f) The necessary means to carry storm water away from the work shall be provided and kept free from obstructions. The CONTRACTOR shall comply with all laws, ordinances and regulations of all legally constituted authorities.

5.0 DELAYS

5.01 Windstream shall exercise due diligence to secure materials. However, work may be suspended in whole or in part for want of materials, and such delay may continue until such materials are secured. The CONTRACTOR shall be allowed a reasonable extension of time for completion of the work in view of such delay but shall not be entitled to any damages or compensation on account of it.

5.02 If the CONTRACTOR is delayed, through no fault of the CONTRACTOR, in the completion of the work, or any part of it, by any act or neglect of Windstream or by strikes, lockouts, fire, or unavoidable casualty, by the action of the public authorities or by property owners or others, or by injunction or by refusal to grant right-of-way permits, the time of completion shall be reasonably extended as directed by Windstream in view of such delay, but such delay shall not give rise to any claim on the part of the CONTRACTOR against Windstream for damages or compensation.

6.0 REPAIRS AND DAMAGES

6.01 The CONTRACTOR hereby guarantees the backfilling of all excavations and the replacement of all sidewalks, driveways, pavement bases, and surface pavements under this contract for a period of one year after the making of the final payment hereunder, and the CONTRACTOR hereby agrees to reimburse Windstream promptly upon the presentation of bills for any expense to Windstream resulting from repairs made necessary by reason of faulty backfilling or faulty work in replacing such sidewalks, driveways, pavement bases, and surface pavements. The CONTRACTOR is also responsible for any repeat compaction tests that show initial work not to specifications.

6.02 The CONTRACTOR shall be responsible for all damages, detention of material charges or storage charges which may be incurred by failure or delay in removing from any car, freight yard, or freight house any material furnished by Windstream as herein provided, and the CONTRACTOR after delivery of all material, shall be responsible for its safety and care, shall handle it at its own expense, and shall replace at its own expense any such material which may be lost or so damaged as to be unfit for use on the work.

6.03 When underground facilities are exposed, they must be protected from vandalism or damage when left unattended. The method of protection is the CONTRACTOR'S responsibility. If police protection becomes necessary through the CONTRACTOR'S selected mode of operation, this cost is the CONTRACTOR'S responsibility. In all cases the method of protection must meet Windstream's approval, and Windstream's decision will be final.

6.04 To the satisfaction of Windstream and other persons or authorities having jurisdiction, the CONTRACTOR is responsible for the permanent restoration to good condition of all private or public property including pavements, fences, gardens, shrubbery, sidewalks, pipes, driveways, dirt, or sod disturbed or damaged in the performance of work. The CONTRACTOR shall be responsible for addressing all customer complaints within 24 hours of notification. All work required associated with the customer complaint shall be completed within three (3) working days of the CONTRACTOR being notified. Any final repair of concrete and /or asphalt shall be completed within a maximum of ten (10) working days

6.05 Any property damage should be noted on the work order closing copy.

6.06 In such cases where removal of existing shrubs is necessary to gain access to the work area or to place poles and down guys, the CONTRACTOR shall, at its own expense, remove, store, and replace such shrubs.

7.0 REMOVAL OF PLANT

7.01 The CONTRACTOR shall provide all hardware and miscellaneous apparatus necessary to remove the designated Windstream Plant. Transportation, installation, removal and disposal of all construction materials shall be in accordance with all applicable local, state and federal laws and properly manifested when appropriate. The CONTRACTOR shall provide manifest, a certificate of disposal, or the method and location of disposal for all items. Empty cable reels must be removed from the Project Site each day.

7.02 All Plant removed by the CONTRACTOR, which normally has a salvage value due to recycling processes, shall be delivered to the location designated by Windstream. All salvage materials will be placed in an appropriate storage bin provided by the designated recycling company on the CONTRACTOR'S yards. The CONTRACTOR cannot accept payment for the salvageable materials that are the property of Windstream. Provisions for disposal of contractor-owned material will be made by the CONTRACTOR.

7.03 CONTRACTOR will store Windstream-owned poles and stub poles, which have been removed, at CONTRACTOR'S location. CONTRACTOR will be required to contact Windstream's designated pole disposal contractor for removal and disposal of poles. CONTRACTOR will be required to forward the pole disposal contractor's invoice for pick-up to Windstream. Windstream will be responsible for payment to the pole disposal contractor. This is the only acceptable manner in which poles shall be disposed.

7.04 Any Windstream plant, removed by the CONTRACTOR, which does not have a salvage value, shall be disposed of by the CONTRACTOR to a licensed dumpsite.

7.05 The CONTRACTOR shall pay any dumping fees associated with disposing of scrap materials.

8.0 TREE TRIMMING, CUTTING, AND DISPOSAL

8.01 TRIMMING AND CUTTING: The CONTRACTOR shall not proceed with the cutting of trees or clearing of right-of-way without notification from Windstream that proper authorization has been received from the owner of the property, and the CONTRACTOR shall promptly notify Windstream whenever any landowner objects to the trimming or felling of any trees or the performance of any other work on the owner's land in connection with the Project and shall obtain the consent of Windstream before proceeding in any such case.

8.02 DISPOSAL OF TREES, LIMBS, AND BRUSH:

- a) Property owners shall have first right to any wood cut from trees or any felled trees resulting from this Agreement.
- b) All removed limbs, brush, and cuttings, except that requested by property owners, shall be removed from the trimming areas.
- c) No cuttings or brush shall be left overnight on or about the trimming area without the consent of the public authority and/or the property owner.
- d) The CONTRACTOR is completely and solely responsible for the complete disposition of any wood, brush, or wood chips produced in the course of the work.

9.0 CONDUIT AND MANHOLES

9.01 The engineer will determine the location of all conduit and manholes and shall specify size, type, position, and depth at which they are to be constructed. The preferred choice for manholes is the precast form. The size, type, and location of all main conduit and subsidiary ducts, location of foreign structures where known, and applicable right-of-way restrictions are shown on the construction drawings. The size, type, and location of all conduit entrances and size and location of the manhole frame opening are shown on the construction drawings. (Any items not covered specifically by local engineering on construction drawings shall conform to ASTM standards in ACI 301 and 318). "ASTM" means American Standard of Testing and Materials. "ACI" means the American Concrete Institute. All work in existing manholes will be coordinated with the construction supervisor and local assignment personnel.

9.02 Backfilling next to the conduit shall be free from stones or other material which might injure the conduit or conduit joints. Stones of 3 inches in size or larger shall not be included in any part of the backfill. In tamping the backfill at the sides of the conduit, use extreme care not to damage the joints or shift the conduit structure. Backfilling and tamping alongside of the conduit shall be done in layers only an inch or two in thickness until the level of the top of the conduit is reached. Above the conduit, mechanically tamp all backfill thoroughly in 6-inch layers. Backfilling around conduit joined with mortar bandages can proceed as soon as the joints are

completed. Troweled joints shall be allowed to set at least 24 hours before backfilling. Conduit that has been encased in concrete shall not be backfilled on top of for at least 15 hrs.

9.03 Upon completion of conduit sections, a test mandrel 1/4 inch smaller in diameter than the inside diameter of the conduit shall be pulled through all single duct conduit and through two diagonally opposite ducts in multiduct conduit formations to ensure proper alignment. In addition, all conduits shall be cleaned of loose materials such as concrete, mud, dirt, stones, etc. Pull wire (type as specified by the engineer) shall be placed in conduit if so indicated by the engineer on the construction drawings. The ends of the conduit shall be sealed to prevent the entrance of foreign matter and to protect against water or gas from entering manholes or buildings. All conduit entering central offices or other buildings shall be kept plugged at all times with expandable type plugs that have been approved by the engineer. If the work extends over several days, the conduits shall be plugged at night temporarily and permanently upon completion of the work.

9.04 All concrete mix designs using specifications regarding concrete, cement, aggregate, concrete-reinforcement bars and water will follow local engineering specification or RUS specification or ASTM standards of the ACI concrete, cement, aggregate, concrete-reinforcing bars and water specifications-

9.05 Manhole walls, top and floor forms and forming work shall be accomplished in a thorough and workmanlike manner in accordance with Windstream practices.

9.06 Reinforcement shall consist of round deformed bars arranged as indicated on the construction drawings and will follow all the specifications noted above.

9.07 Concrete must be placed continuously except at construction joints, as indicated on the detail plan.

9.08 When encasing conduit, concrete must be poured toward the free end of the ducts and away from the trench sides to avoid dislodging soil and stones.

9.09 After removing the forms, all concrete surfaces should be inspected for poor joints, voids, stone pockets, tie holes, rod holes, etc. To repair these defects, the type of product to be used must be approved by the engineer prior to repair. However in the event of extreme voids (honey combing, etc.), where the structural steel is exposed upon removal of the forms and inspection, the manhole shall be demolished and a new manhole constructed per the construction drawings.

9.10 When manholes are constructed in fluid soil, the CONTRACTOR will contact Windstream Engineering regarding possible changes in design of structure(s) as well as providing adequate drainage shall be provided to prevent static water pressure on concrete until the concrete has properly hardened.

9.11 The frame shall be supported on a precast or brick collar as shown in the construction drawings. The collar shall be of sufficient height to bring the cover flush with the grade of the street or surrounding earth. Mortar shall be proportioned by volume and shall consist of one part mortar cement and three parts fine aggregate with sufficient water to make the mixture workable.

9.12 The sump or drain shall be provided as shown on the construction drawings and located as shown on the construction drawings or as directed by the inspector or the engineer. The floor

shall be graded toward the sump or drain (if cement floor is used). The sump or drain shall be at least 8 inches in diameter or 8 inches square.

9.13 Pulling-in irons shall be placed so as to extend into the manhole far enough to permit a clear opening of 3.5 inches in the eye. With a 6-inch concrete wall, the vertical legs of the irons shall be 1 inch in from the outside face of the wall. For heavier walls, the legs will be embedded deeper in the concrete of the wall.

10.0 SERVICE DROPS

10.01 Buried drop wire on customer's premises shall be installed at the depths listed in Cable Depth Requirements section on page 19 unless otherwise specified by the engineer, due to local, county or state requirements.

10.02 It will be Windstream's responsibility to obtain permission to place the service drop on the customer premises. The CONTRACTOR is responsible for notifying the landowner and obtaining permission to begin work. The CONTRACTOR will then place the service drop, check for buried utilities and other underground structures, and perform all required restoration to the satisfaction of the property owner the same day.

10.03 When specified by the engineer, the CONTRACTOR shall designate the house number or phone number in areas without house numbers on all newly installed buried service drops, within the pedestal.

10.04 Network Interface Device ("NID") station protectors shall be specified on all new service installation. Each shall be assembled and grounded to a suitable electrical ground source.

10.05 The NID shall be located on the building such as to facilitate common grounding by obtaining the best compromise between the length of drop wire run to the building and the length of ground wire run, not to exceed 35 feet.

10.06 The CONTRACTOR will notify the appropriate operations supervisor or construction supervisor / inspector immediately if customer commitment dates cannot be met on buried service drops. This notification must include a new commitment date and an explanation of the cause of the delay. Other operations personnel or the construction supervisor / inspector will be notified of this change in commitment date.

10.07 Upon completion of the buried drop facilities installation, the CONTRACTOR will on a daily basis:

- a) Complete the service initiation if all station work is complete, including termination of the drop in the NID and verifying service (dial tone) at the NID.
- b) Inform the customer that the service installation has been completed by direct communication with the customer or the use of a 'Door Knocker' (ATS-957). If the doorknocker is used, the time and date fields must be filled out and the "To install or change your service." boxes marked.
- c) Call, email, or use a voice mail box for the designated operations personnel or the construction coordinator for the applicable Windstream exchange as soon as possible and leave the following information:
 - Buried service work order customer's name.

- Buried service work order customer's telephone number.
- Customer is or is not in service.
- CST does or does not need to be re-dispatched.
- The CONTRACTOR will forward the completed buried service work order to the appropriate operations supervisor or construction coordinator within two (2) days.

10.08 Upon completion of each new service installation and/or rearrangement, the CONTRACTOR shall perform one ring back test to validate service continuity.

11.0 EMERGENCY CALL OUT

11.01 CONTRACTOR will have staff accessible via pager or wireless phone to provide response to emergency outages. Coverage for emergency service is required 24 hours daily, 7 days per week. Additionally, CONTRACTOR is required to provide an initial and ongoing updates to a CONTRACTOR calling tree that provides alternative and escalation calling to support Windstream's on call needs.

11.02 Within two hours, dependent on geographic constraints, CONTRACTOR will have on-site an initial emergency response team leader for site assessment. Additional staff required to begin preliminary work and repairs will be on-site within two hours of initial emergency notification. Failure to respond in two hours will result in the standard hourly rate being paid instead of the overtime rate. Equipment is paid at standard rate at all times.

11.03 In the event that Windstream releases placing crewmembers prior to 7:00 PM during the normal workweek, it is still the CONTRACTOR'S responsibility to provide proper coverage as is normally needed to support Windstream. No overtime will be paid in this case unless call out is made more than 3 hours after the crew has been released or call out is made after 5:00 PM.

12.0 CHECKLIST FOR CONSTRUCTION AND SPLICERS

TO BE PROVIDED BY CONTRACT FIRM:

- | | |
|--|---|
| <input type="checkbox"/> Pager/Cell Phone | <input type="checkbox"/> Picture ID badge |
| <input type="checkbox"/> Contractor Worker Information Sheet | <input type="checkbox"/> Vehicle signs |

- **DRESS CODE:**

1. Hair neat, clean, and well groomed, to include facial hair;
2. Shoes appropriate to job, and provides adequate protection from safety hazards;
3. Clothing clean, not in need of repair, free of profane, obscene, or suggestive wording, patches or designs that are deemed inappropriate in the judgment of management.

- **VEHICLE INFORMATION:**

CONTRACTOR work vehicles of the standard cab and chassis body type must be equipped with sufficient locking bins to protect Windstream's material and allow efficient access to the material. Work vehicles will be in good running condition, present a good appearance, and any vehicle and equipment used in conjunction with any activity within the right of way must be clearly marked or labeled, identifying the utility for which the work is being performed, as well as the CONTRACTOR(S) performing the work for the utility. Vehicles must bear the CONTRACTOR's name on each side in sufficient size to be easily identified. This will include all Subcontractors.

13.0 OUTSIDE PLANT JOB MANAGEMENT PROCESS

This contract will be supported by a Windstream electronically based information system to: price, approve, distribute, maintain job status, store, and invoice OSP jobs. Although all jobs will be processed through this system, some selected jobs due to their size will route their supporting job documentation through traditional means to be determined locally. As a result, all CONTRACTOR(S) selected to partner with Windstream will be required to conduct business electronically.

13.01 Job Management Process

- a) **Job Notification:** An email alert will be sent to the CONTRACTOR when a new job is available to work.
- b) **Job Distribution:** After notification, CONTRACTOR will be required to inquire and pull related job information from the Windstream OSP Job Repository. The CONTRACTOR will make copies of jobs as necessary.
- c) **Job Status Update:** During the OSP job life cycle, the CONTRACTOR will be required to post various job status milestones on the Windstream Job Repository for each job managed by the CONTRACTOR.
- d) **Job Completion:** Upon job completion, the CONTRACTOR will update the Job Repository with accurate 'as-built' information, complete and finalize job cost, and release the job to Windstream for review, approval and invoice creation. This may include the transmitting of as-built documentation via electronic means to be determined by Windstream.
- e) **Job Discrepancy Resolution:** Upon reviewing the 'as-built' vs. 'planned' job information, Windstream staff will confer with CONTRACTOR staff to resolve billing discrepancies.
- f) **Invoicing:** At an interval predetermined between Windstream and the CONTRACTOR, Windstream staff will create an invoice and submit to Windstream Accounts Payable for payment.
- g) **Payment:** Payments will be made to CONTRACTOR via EFT (Electronic Funds Transfer) facilities.

13.02 System Reference

- a) **Security:** CONTRACTOR will have access only to jobs assigned under their control. Security will be managed by Windstream corporate OSP.
- b) **Units:** Standardization, creation and management of work units is a shared responsibility between local Windstream operating companies and corporate.

- c) **Reporting:** Various reporting formats from the OSP Job Repository will be available to the CONTRACTOR as needed. This includes invoices submitted, jobs completed, job schedules, unit lists, reconciliation etc.
- d) **Online Job Retention:** Jobs will be retained on the OSP Job Repository for a minimum of 60 (sixty) days after job closing and then systematically purged.

13.03 System Requirements

- a) CONTRACTOR will be required to receive email correspondence and be capable of accessing the web pages of the Windstream OSP Job Repository. CONTRACTOR will print job specifications and other related job documentation, including job diagrams of up to 11 X 17 inches. CONTRACTOR will require access to a color scanner for submission of electronic redlines back to Windstream.
- b) CONTRACTOR(S) are required to produce and provide electronic as built construction drawings to Windstream for each completed work order in a format compatible with Windstream's current GIS technology and are responsible for acquiring the editing / red-lining software needed to fulfill this requirement.
- c) CONTRACTOR will be required to maintain current versions of the following software:
 - Microsoft Windows 2000 or later
 - Microsoft Office Professional 2000 or later (includes):
 - Word
 - Excel
 - PowerPoint
 - Access
 - Outlook E-mail
 - Microstation or Smart Sketch (for electronic submission of redlines)
 - Bentley Viewer (freeware for viewing drawings and for print generation) * Not needed if already using Microstation or Fieldview
 - Adobe Acrobat Reader
 - Microsoft Internet Explorer 6.0 or greater
 - WinZip

13.04 Ongoing Windstream Coordination

This system is intended to enhance communication related to the performance of OSP jobs. It is in no way intended to replace the personal communication that is necessary to manage day-to-day job coordination.

14.0 WINDSTREAM SPECIFICATIONS

14.01 The CONTRACTOR will complete work according to Windstream specifications. The CONTRACTOR is responsible for doing quality, safe work with the appropriate tools. The list below of Windstream practices is not all-inclusive and each practice may be modified from time to time. It is the responsibility of the CONTRACTOR to understand and abide by all current Windstream practices.

| Practice # | Name | Issue Date |
|-----------------------------|---|-------------------|
| 200-400-100 | Eye Protection | 02/85 |
| 205-700-305 | Temporary Ground Rod Description & Use | 01/87 |
| 290-050-030 | New Aerial Terminal and Pedestal Inspections | 12/88 |

Project Scope Agreement

For

Project Name:

OSP Project Management & Inspection

Connect America Fund Projects

INFORMATION PROVIDED IN THIS PROJECT SCOPE AGREEMENT (AND THE ATTACHMENTS HERETO) DOES NOT RELIEVE CONTRACTOR OF ITS OBLIGATION TO OBSERVE THE HIGHEST STANDARDS OF SAFETY AND PROFESSIONALISM IN COMPLETING THE PROJECT.

This Project Scope Agreement (including the attachments hereto) describes the services to be performed by the selected Contractor, or which will be delegated by the Contractor to Subcontractor(s) under the supervision of the Contractor, during the completion of the Project. Additional detail, which may include drawings and work specifications, may be provided at the time the work is being ordered.

General Project Scope Agreement Details

This Project Scope Agreement (“PSA”) is made pursuant to the Master Integrator Agreement entered between Windstream Supply, LLC (“Windstream”) and Byers Engineering Company (“Contractor”) with an effective date of October 9, 2009 (“Agreement”). This PSA is a part of the Agreement, and in the event of a conflict between this PSA and the Agreement, the PSA shall control with respect to the specific project(s) described herein. All capitalized terms used herein but not defined shall have the meanings ascribed to them in the Agreement.

Location

Work will be performed at the following location(s):

All work for the projects included in this PSA will be performed in the states of Georgia and Texas. Work can be located within any of the states/counties and work may be required in multiple locations simultaneously.

Services Type

These Services are (check one):

Work on Unit Basis

Project Description:

Scope of work to be performed:

This PSA is to provide Project Managers and Inspectors for Windstream Connect America Fund (“CAF”) projects (the “Project(s)”). The position will manage the process from receipt of the sales order from the Windstream OSP Engineering group. It would include managing the OSP Construction milestones, interfacing, as necessary, with the OSP Engineering Contractor as well as providing status directly to Windstream as required.

Contractor's Responsibilities

Responsibilities of Contractor:

Resource

Project Manager & Inspector: The Project Manager & Inspectors will be the single point of contact responsible for each project. This contact will reside at the Contractor’s facility. The Project Manager & Inspector will manage and coordinate all facets of the project(s) including, but not limited to, the following:

- Own the construction aspects of each CAF project
- Supervise OSP (outside plant) work, inclusive of fiber construction utilizing both aerial and underground construction (both rural and city construction)
- Develop and maintain relationships with third party providers and contracting resources to manage build schedules for CAF routes

- Work with various internal and external teams to provide daily and weekly updates for all aspects of project
- Coordinate the completion of make ready work

- Manage project timelines for all aspects of OSP builds, inclusive of permitting, make ready, OSP construction, and management of capital budget tied back to the project

Experience: The Project Manager & Inspector will have, at a minimum, the following additional knowledge and experience:

- PMP Certification or equivalent work experience
- Familiarity with various OEM suppliers equipment used in all type of OSP Construction projects (i.e. Fiber cable, Fiber Distribution Panels, Fiber Distribution Hubs, Fiber peds/closures, etc.)
- Knowledge of Telcordia Blue Book Manual of Construction Procedures
- Knowledge of end customer standards, where appropriate
- Knowledge of OSHA safety standards
- Knowledge of NEC/NESC standards
- Knowledge of Windstream engineering and construction practices.

Contractor Responsibilities

- Manage the Construction Contractor(s) and bill Windstream per rates schedule (as shown in Section titled "Fee Basis" below).
- Invoice Windstream on a monthly basis for Project(s) completed.
- Comply with scope of work responsibilities.
- Comply with agreed upon project timelines.
- Do not cause a negative impact on the end customer's network service.
- Comply with customers standards.
- Comply with customers safety, procurement, and security policies.
- Ensure that the Construction Contractor(s) are in compliance with the PSA covering their specific work requirements. The PSA for Construction is attached and becomes a part of this PSA.
- Perform inspections on the construction work completed to ensure that it is in compliance with Windstream standard Construction Units.

Except as described herein, Contractor at its own expense, shall furnish all materials, labor, tools, machinery, vehicles, transportation, lodging, and all other facilities necessary to complete the Project(s) in compliance with specifications shown and/or attached.

The telecommunications plant engineered and constructed for Windstream shall meet the specifications and criteria set forth by Windstream practices, Windstream personnel, and local rules. In addition, the following supplemental referenced specifications shall be observed:

- Occupational Safety and Health Code (latest edition)
- Applicable power and telephone pole attachment agreements
- Applicable city, county and state ordinances
- National Electric Safety Code (latest edition)

National Electric Code (latest edition)
Applicable government agencies for safety and health for the work force
All Windstream Engineering and Safety Practices

Municipal, county, state or federal regulations may alter specifications in some areas. If specifications are altered from these standards, an additional attachment will illustrate changes.

All changes or revisions of the specifications made by the Contractor must be requested in writing and approved by Windstream before work is performed.

Windstream reserves the right to change or revise the specifications to adapt to local conditions. In such case, the Contractor shall be notified.

Contractor Deliverables:

Deliverables for this PSA will be based on progress reports and inspection reports.

Contract Project Managers ("CPM") will provide weekly progress reports (or more often as requested) to Windstream management. The progress reports shall be in Excel format and include a summary for the entire project as well as detailed reports for each work order. See the attached example of this type of report. Contractor is to use a format similar to this to track Project progress. CPMs will also host a weekly call including the contract engineering firm, the contract construction firm, and Windstream management to review the project progress. The CPM will identify any areas that are behind schedule and provide suggestions for getting the project back on schedule.

Inspectors should inspect 100% of every job at the completion of all placing and splicing. Inspection can be performed prior to cutover. Inspection is to be done using standard Windstream inspection forms. Inspectors are to provide the Construction Contractor with a copy of the completed inspection forms and assign a date for correction of all deficiencies (usually two weeks). After the Construction Contractor returns a signed form stating all deficiencies have been corrected, the Inspector will make a final inspection to verify completion. The Inspector will then forward all inspection documents for the project to Windstream management.

Weekly production report showing jobs, feet placed to date, % completed.

Contractor will need to be able to respond to emergency or restricted time frames for construction. Jobs will need to be completed by date requested by Windstream OSP Engineering.

Contractor will be responsible to staff accordingly based off the attached CAF Project list, understanding that all Projects are to be in compliance with the timelines that will be established by Windstream. All construction is expected to be 100% completed (all work orders fully approved by Windstream management) by established timelines set by Windstream, with no work exceeding a final cut- off date of 12/31/14.

Types of Construction: Construction may include both copper and fiber, cable designs placed buried, aerial, underground or in any combination. Buried construction will consist of plowing, trenching, and boring. Aerial construction will be e-lashing to existing cables or lashing to a new 10M strand. ADSS fiber cabling may also be utilized in certain applications. Jobs may also require deployment of remote equipment cabinets and engineering new carrier service areas or broadband overlay areas. Contractor will be responsible for performing any make ready work required on aerial designs, including attachment heights on each pole and position numbering.

Cable Requirements: Cable requirements will vary from job to job with no minimum or maximum length. Pricing will be on a unit (per foot) basis.

Windstream's Responsibilities

Responsibilities of Windstream:

Authorized Windstream personnel will notify Contractor of each Project.

Training on Windstream systems and practices: Training on Windstream systems and practices. Windstream will use a train the trainer approach to train the successful Contractor on Windstream systems and practices. After this training is completed the Contractor will be expected to maintain a trained staff to respond to requests as mandated below.

Windstream Deliverables:

Access to Jobtrac and Miror will be provided.

Access to GComms will be provided, however licenses will be the Contractor's responsibility.

Windstream standard inspection forms will be provided.

Windstream standard change control forms will be provided.

Deliverables

Deliverables and due date(s) or approximate duration of Services or time to complete:

PSA term to begin July 1, 2014 and complete December 31, 2014, but may be extended as needed ("Term").

LIQUIDATED DAMAGES

On time delivery - relates to Project Management:

For each individual project that does not meet the job completion On Time deliverables as identified in the SLA due to the Project Management Contractor issues, a liquidated damages fee will be assessed at 1% per business day starting with 1% up to a maximum of 15% of the total Project Management labor for the entire Project. If exchanges or routes are added to the Project, there will be a discussion between Windstream and the Project Management Contractor to negotiate dates. Once negotiated dates are confirmed, those dates are subject to on time delivery liquidated damages.

Jeopardy codes have been established as follows for non-Contractor caused issues:

- Windstream Delays
- Weather issues
- Reassigned priority
- Construction Contractor Issues

Quality – Relates to Inspection:

Windstream may, at its discretion, perform quality inspection of Project(s).

Construction quality audits will be performed using the standard Windstream OSP audit form (attached). Scores will be based on the Construction sections (lines 8 thru 20). The Windstream audit team will select the jobs to be audited and input data into the Windstream audit. Scores on individual work orders of less than 95% will constitute a failed audit.

For each project that fails the quality audit performed by the Windstream audit team, estimated at 100% of total jobs in this Project, a liquidated damages fee will be assessed at 10% of the total inspection cost for the individual work order.

Quality Audit Form to be used is attached to this PSA as Exhibit A

Liquidated damages will be assessed on all jobs awarded under this PSA and deducted from the invoice for each job.

Fee Basis (check one):

Pricing for the work outlined in this scope will be at a unit rate as detailed below:

| Function | Description | Rate | Paid Per |
|--|--------------------------|------------------|----------|
| Construction Project Management | Per foot of fiber placed | \$0.09 | per foot |
| Construction Project Management | Per DLC Site | \$690.00 | per site |
| Construction Inspection | Per foot of fiber placed | \$0.07 | per foot |
| Construction Inspection | Per DLC Site | \$435.00 | per site |
| Construction Project Management and Inspection (combined cost when performed at same time) | Per foot of fiber placed | \$0.15 | per foot |
| Construction Project Management and Inspection (combined cost when performed at same time) | Per DLC Site | \$1100.00 | per site |

Rates quoted are inclusive of all travel and per diem costs.

The terms of this PSA initiate upon the last signature date below and will continue for the Term until terminated in accordance with the Agreement.

Work Facilities

Work facilities to be provided by Windstream (if any): Work space will not be provided.

Invoicing

10% retainage will apply to all jobs under this PSA. All invoices submitted will have 10% withheld until final closeout after construction.

Invoices must be in PDF or TIF format. Do not attach email messages. Send only one invoice per email attachment. Do not scan multiple invoices in one PDF file.

Contractor's invoices shall be submitted to:

**WINDSTREAM ACCOUNTS PAYABLE
CID #
PO BOX 18313
LITTLE ROCK, AR 72222**

Or

**The Preferred Method:
Invoices may be submitted electronically via email to
CORP.Vendor.Invoices@windstream.com**

Additional Information

The following documents are attached and become a part of this PSA:

- OSP Construction and Project Management Audit Form.xlsx
- Schedule - Units Descriptions, Price Schedule & Construction Standards.docx
- Unit Master List – OSP CAF.xlsx
- Caf1r2 2014 Final Routes.xlsx

IN WITNESS WHEREOF, the parties hereto have caused this PSA to be executed by their respective authorized representatives effective as of the date last written below.

Schedule #
Unit Description, Price Schedule
and OSP Construction Standards (“Schedule”)
For
Wireline OSP Construction for the State(s) of

INFORMATION PROVIDED IN THIS SCHEDULE DOES NOT RELIEVE CONTRACTOR OF ITS OBLIGATION TO OBSERVE THE HIGHEST STANDARDS OF SAFETY AND PROFESSIONALISM IN COMPLETING THE PROJECT.

This Schedule describes location and construction unit requirements for the selected Contractor, or which will be delegated by the Contractor to Subcontractors under the supervision of the Contractor, during the term of this Agreement. The attached chart (the “Units Master Spreadsheet”) defines the construction units, associated labor costs and other pricing details and is incorporated herein by this reference.

This Schedule is part of the Master Contractor Agreement for Network Services between the Parties. Any capitalized terms not defined herein shall have the meaning set forth in the Master Contractor Agreement for Network Services.

General Details

Location

Work will be performed at the following location(s):

Wireline OSP Construction activities for the State(s) of _____ consisting of the following exchanges:

See List of Exchanges and Construction Area Map attached

Invoicing

Contractor's invoices shall be submitted to:

CONTRACTOR to submit invoices electronically through the JobTrac contractor portal for payment.

Unit Price

Labor costs are shown on the Units Master Spreadsheet. See Units Master Spreadsheet for price details.

Freight and Handling

CONTRACTOR agrees that Windstream has set a recovery rate for freight ("Recovery Rate") for all material that is required to perform the work identified in the Statement of Work ("SOW") and that is purchased by CONTRACTOR from Windstream. The current Recovery Rate is equal to the freight percentage (%) which is charged by Windstream and which has been paid by CONTRACTOR. In addition, CONTRACTOR will receive a handling fee equal to ten percent (10%) of the cost of materials detailed on each specific work order or PSA and purchased from Windstream.

Service Commitments

Required Contractor Service Commitments

The CONTRACTOR is required to meet the following service date commitments:

- Held order jobs will be completed within ten (10) business days of receipt of work order with approved permits.
- Buried drops will be completed within five (5) business days of the CONTRACTOR'S receipt of the order.
- All routine work will be completed within thirty (30) business days, including capital and expense unless otherwise specified.

Damages for Not Meeting Service Commitments

Damages will be assessed the CONTRACTOR for jobs not meeting defined service commitment dates. Damages will be imposed at the discretion of Windstream management on a case-by-case basis. The following damage structure will be utilized for each job not meeting its service commitment.

- Buried Drop Work Orders \$100
- Held Orders (PSR) 10% of total job value
- Plant Maintenance Requests \$100
- Routine Work Orders 10% of total job value
- Line Item Work Orders 10% of total job value

Held Orders

The CONTRACTOR will notify the held order coordinator immediately if customer commitment dates cannot be met on held orders. This notification must include a new commitment date and an explanation of the cause of the delay.

The held order coordinator will inform the responsible construction supervisor when customer commitment dates will be missed. The supervisor-construction at his option may change CONTRACTOR'S estimated new commitment date.

Upon completion of the held order facilities installation, the CONTRACTOR will:

1. Complete the service initiation if all station work is complete, including termination of the drop in the network interface device ("NID") and verifying service (dial tone) at the NID.
2. Notify assignment immediately (from the site of the work) and leave the following information:
 - a. Work order number completed.
 - b. Held order customer's name.
 - c. Held order customer's telephone number
 - d. Customer **is/is not** in service.
 - e. Customer service technician ("CST") **does/does not** need to be redispached.

Contractor Administrative Requirements

CONTRACTOR will be required to maintain a permanent office and local staff within the district. Staff managing the local district office will require empowerment authority to make entire decisions on district staffing resources, unit pricing enhancements/changes and provide for overall contract management within the district.

Standard Rules of OSP Construction

0.0 PURPOSE

0.01 This document provides technical construction specifications for use by CONTRACTOR in performance of outside plant (“OSP”) construction.

0.02 The purpose of this document is to publish standard specifications required of construction contractors to follow prior to work performance. In doing so, contractors will be more prepared to determine manpower and equipment needs and in result provide more timely completion of projects. Windstream, in turn, will be more able to evaluate construction quality and compliance.

1.0 GENERAL

1.01 All work shall be done in a thorough and workmanlike manner in accordance with current Windstream practices, specifications and Rural Utility Services (“RUS”) standards and shall be subject to acceptance by Windstream. Windstream practices will be made available to the CONTRACTOR, upon request, for each work operation when required. When working on governmental right of way, all work will be performed to meet the most stringent specifications.

1.02 The CONTRACTOR shall maintain conductor polarity (tip and ring) identification at the main distributing frame, cable terminals, wire terminals, terminal blocks, and in the buried service, drop and station wiring, all in accordance with the specifications and construction drawings. CONTRACTOR is required to perform shield conductor continuity testing on all cables and cable sheath fault tests and end-to-end testing of one pair in each binder group to ensure end-to-end binder group integrity. Additional testing may be required by Windstream. All tests will conform to Windstream and RUS specifications. Fiber testing will be in accordance with established Windstream standards and local test equipment. Specific printouts of the test results will be provided to Windstream as a portion of the closing work order documents.

1.03 The CONTRACTOR may receive complete sets of construction drawings containing sufficient measurements to identify the location of all materials to be installed. In some situations, projects will not be physically staked by Windstream. These drawings may be delivered electronically.

1.04 No changes or deviations in the construction proposed on the construction drawings, plans or specifications shall be made by the CONTRACTOR without prior approval from Windstream.

1.05 Windstream will provide quality control inspections for a random number of jobs completed by the CONTRACTOR. OSP Job Evaluation Checklists provided by Windstream will be completed and when quality discrepancies occur, inspection results will be forwarded directly to the CONTRACTOR’S representative. CONTRACTOR will be given 10 workdays to correct job discrepancies. Job discrepancies not corrected within the 10-day window will be subject to damages, which will be between one (1) and five (5) percent of the job’s aggregate value, dependent on the severity of the discrepancies. **Note: Safety related or service-affecting issues may require immediate attention and the 10 workdays referenced above will not apply.**

1.06 The CONTRACTOR shall locate all underground utilities (i.e., telephone, CATV, electric, sewer, water, gas, petroleum, etc.) and obstructions (i.e., culverts, drains, field tiles, etc.) prior to construction to avoid damage to such facilities. Windstream is excluded from any liability for utility/facilities damages. The CONTRACTOR shall notify the state one-call center as prescribed by law prior to construction of all segments. The CONTRACTOR is required to enter the locate confirmation number on the as-built prints at job completion. While the CONTRACTOR must call the one-call system to have other utilities located, the CONTRACTOR is responsible for locating Windstream facilities and cannot have the Windstream paid locate company do the locations for them.

1.07 The CONTRACTOR, at its expense, will repair any damages to Windstream cable or facilities due to the negligence of the CONTRACTOR as determined by Windstream management. The CONTRACTOR must notify the local Windstream manager or construction supervisor / inspector immediately upon facilities damage.

1.08 During construction, copper-paired cable shall not be bent in a radius less than ten times the outside diameter of the cable.

1.09 CONTRACTOR is responsible for maintaining the appropriate inventory levels of all materials required to meet customer service commitments. This includes copper cables of 300 pair and 36 fibers or less as required, and any other frequently used larger cable sizes. Depending on the specific market area, CONTRACTOR may be required to keep 1200-1500' lengths of larger pair count cables, such as 600, 900 and 1200 pair for emergency restorations. This will be determined by the local Windstream OSP Engineering Manager in conjunction with the CONTRACTOR.

1.10 The CONTRACTOR will deliver completed job documentation within five (5) business days of job completion due date. Penalties of a percentage of the jobs aggregate value between one (1) and five (5) percent, dependent on the severity of the discrepancies, may be assessed for non-compliance. Legibly marked work prints will follow these criteria:

- All placement additions shown in red.
- All removals shown in blue.
- Cable placement will be noted, including beginning and ending sequential cable numbers on all cable appearances, such as pedestals, risers, etc. When working on an aerial project, the sequentials will be shown at the beginning and end of the project and at each pole location.
- All job variations will be noted on the completed print, to include the name of the Windstream representative authorizing changes and the date of approval.
- Reference Section 13.01 d) for additional information related to Job Completion.

1.11 CONTRACTOR will be required to conduct business with Windstream utilizing electronic medium. During the job life cycle, the CONTRACTOR will be notified electronically of new jobs available to work. Utilizing appropriate security, CONTRACTOR will access Windstream's Outside Plant web site to receive all job-related information. CONTRACTOR will print all job specifications and job prints from Windstream's web site. CONTRACTOR will be required to supply computing hardware/software and print facilities of up to 11" by 17".

1.12 CONTRACTOR will reconcile all completed jobs electronically through Windstream's Outside Plant web site. All job units will be reconciled through this process, with job prints routed to local Windstream representatives for manual review. The web site will maintain an audit history of all job as-built activity. Upon reconciliation, Windstream representatives will

review and approve all jobs that contain no discrepancies. CONTRACTOR and Windstream representatives will jointly resolve jobs not approved. All jobs approved by Windstream will become a CONTRACTOR invoice, submitted to Accounts Payable for payment. CONTRACTOR will have ongoing access to review reconciled jobs and all invoices submitted for payment.

1.13 The CONTRACTOR shall pay particular attention to maintaining good public relations in the performance of all work hereunder, particularly in contacts with property owners and public officials. When talking with subscribers or the public, CONTRACTOR employees will be polite and well mannered.

1.14 The CONTRACTOR shall cause construction crews to receive constant supervision by a competent person who shall be present at all times during working hours where construction is being performed. Directions and instructions given to the competent person by Windstream, including authorized agents of Windstream, shall be binding upon the CONTRACTOR. The designated competent person of each crew shall speak, read and write in English.

- Windstream will, whenever and where ever possible, maintain authorized representatives at or in the immediate vicinity of the construction site or provide to the CONTRACTOR cell phone and pager numbers to contact Windstream personnel to assist the CONTRACTOR in any way deemed necessary by either party for the orderly execution of the work and administration of Windstream-required work documents, to further assure compliance with work plans and specifications and to maintain quality of construction. The decision of Windstream shall be final as to compliance and any work rejected shall be corrected by the CONTRACTOR.
- At the request of Windstream, the CONTRACTOR shall provide a competent representative to work with Windstream's representative on the final inspection and acceptance test of plant installed.

2.0 MATERIALS; LABOR UNITS; COMPENSATION RATES

2.01 The CONTRACTOR will purchase and store all necessary materials required to perform the work.

2.02 The CONTRACTOR will purchase, receive and store material at the CONTRACTOR'S location or any other specified location. The CONTRACTOR shall be responsible for receiving and/or unloading of all materials delivered to CONTRACTOR location. The material shall include, but not be limited to, reels of cable and strand, closures, splice cases, anchors, rods, and hardware. The CONTRACTOR shall be responsible for providing a safe and secure storage area of adequate size for the receipt and storage of material. All material is subject to inspection by Windstream and any defective material will be the responsibility of the CONTRACTOR. The CONTRACTOR is fully responsible for the management of any inventory ordered for a specific Windstream job or for the anticipation of future Windstream jobs. Windstream will not pay for reel end splices.

2.03 All material to be used in construction of the Project shall be stored so as to be protected from deteriorating effects of the elements. The CONTRACTOR shall bear in mind the weather conditions that may prevail prior to the time the material is incorporated into the plant. If metallic items of material are not to be stored longer than 30 days and outdoor storage cannot be avoided, they shall be stacked on boards or timbers well above the ground line and effectively protected from the elements by a roof or tarpaulin. For brief periods only (not to exceed 30 days) these

metallic materials may be stored in the open, exposed to the elements, provided they do not come into contact with the ground.

2.04 All guy strand, suspension strand, drop wire, and aerial cables used in the construction of the Project must be handled with care in the transportation, unloading, and use. These wire and cable facilities must not be trampled upon, run over by vehicles, pulled along the ground, over fences, metal fittings or crossarms. Each coil or reel shall be inspected for cuts, kinks, or other damage. All damage shall be repaired to the satisfaction of Windstream.

2.05 "Unit" means one of the nomenclature codes (e.g., "BD3") listed on the Units Master Spreadsheet that identifies a specific construction task and the construction methods, materials and quantities to be used for installation. "Unit Rate(s)" (excluding hourly rates) means the cost of all labor, vehicles, proper tools, supplies, transportation, implements, appliances, equipment, supervision, inspection and testing required to perform the Unit according to Windstream's specifications. "Labor Units" are defined as the actual labor-only cost to perform a task or job and are to be billed back to Windstream as a separate line item. All Labor Units include in the price for the individual, the individual's tools, equipment, pagers where required, and proper apparel (including personal safety equipment) necessary to perform the individual's job functions. All necessary work that is not covered by a specific Unit code but is associated with a Unit being performed shall be considered as incidental, with the cost to be all-inclusive in the Unit Rate. The standard working hours for unit placing, splicing and other unit crewmembers will be as dictated by local management. It is expected and normal that unit crews will work in excess of 40 hours during weeks of good weather where construction operations continue for five full days. Windstream will NOT compensate these unit crewmembers on an overtime rate. Compensation will be Unit Rates only.

2.06 Payment for work at an hourly rate will be made ONLY when written or verbal explanation is provided as to the reason for the use of "hourly rate" instead of "Unit Rate". The standard working hours for all hourly placing, splicing, CSTs and other hourly crewmembers is 8:00 AM to 5:00 PM, with one hour for lunch, five days per week, Monday through Friday. These are more specifically defined as crewmembers that, as a general rule, are utilized on an hourly basis, week in and week out and are not regular unit work crewmembers. Overtime will be paid for these CONTRACTOR(S) in the event Windstream requires that the work be extended past 40 hours. Hourly work must be pre-approved by Windstream and will require a daily time sheet signed by an appropriate Windstream employee. The CONTRACTOR shall record start time and stop time on all hourly time sheets for each job performed during a workday. Time sheets are to be recorded daily.

2.07 Vehicles or equipment that may require a mode of transport are priced to include the transport truck and/or trailer. Major tools, test equipment, safety and work area protection equipment, etc. are included in the Unit Rate for the vehicle with tools.

2.08 When awarded work is performed on an hourly basis, Windstream will pay a single hourly rate of compensation for the total approved hours worked. Windstream will not pay a premium for overtime, shift differentials, holidays, etc., except as otherwise expressly provided in this Schedule.

2.09 No hourly compensation will be made to CONTRACTOR for personnel, vehicles, tools or equipment during lunch or other breaks, or for any work delays caused by the actions of CONTRACTOR, its employees, or its agents. Windstream will pay the applicable Unit Rates to CONTRACTOR for delays caused by Windstream's own actions when CONTRACTOR is

required to remain on-site or on-call and is unable to perform other work during the delay.

2.10 **Special Compensation Consideration** – When Windstream requests CONTRACTOR to leave an existing worksite and change work schedules without advance notice, CONTRACTOR will be paid the hourly rate for travel to the new job site and for travel back to the originating travel point. Work performed while at the jobsite will be paid at the Unit Rates set forth in this Schedule and not at the hourly rate. Labor and equipment needed in these situations will be determined by Windstream and CONTRACTOR.

2.11 Payment of overtime for emergency call outs (as set forth in Section 11) begins when CONTRACTOR's employees leave their origination location to travel to the emergency work location, continues through performance of the work and stops when CONTRACTOR's employees have completed the emergency work and returned to their origination location.

3.0 PERMITS AND REGULATIONS

3.01 The CONTRACTOR shall comply with all laws, ordinances, and regulations of all legally constituted authorities. If the CONTRACTOR observes that the plans are at variance therewith, the CONTRACTOR shall promptly notify Windstream in writing. If the CONTRACTOR performs any work knowing it to be contrary to such laws, ordinances, and regulations, and without giving such written notice to Windstream, the CONTRACTOR shall bear all costs arising therefrom.

3.02 Windstream or, as directed, the CONTRACTOR, shall obtain the necessary legal authority to occupy and open public highways in which the said work is to be performed, together with rights-of-way for work on private property, and copies of such permits and rights-of-way shall be made available to the CONTRACTOR for guidance. CONTRACTOR may be required to open and close all Department of Transportation ("D.O.T.") approved permits. Wherever practical the CONTRACTOR may be required to pickup approved D.O.T. Permits from D.O.T. locations.

3.02 Specifications, restrictions, and requirements of all property owners, state, counties, cities, villages, and townships involved must be followed at all times and in all respects.

3.04 The CONTRACTOR shall not store materials, supplies, or equipment on private property unless written permission has been obtained from the property owner.

3.05 No explosives are to be used in the performance of work under this contract without prior written approval of the company.

4.0 SAFETY

4.01 The CONTRACTOR shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the work for the protection of the following: (1) all employees on the worksite and all other persons who may be affected thereby; (2) all of the work and all materials and equipment thereon; and (3) all other property at the site or adjacent thereto.

4.02 The CONTRACTOR shall comply with all applicable laws, ordinances, rules, regulations, and orders of any public authority having jurisdiction for the safety of persons or

property or to protect them from damage, injury, or loss. The CONTRACTOR shall erect and maintain, as required by existing conditions and progress of the work, all reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations, and notifying owners of adjacent utilities. The CONTRACTOR shall be responsible for the safety of the work and shall maintain all lights, guards, signs, temporary passages, and other necessary protection and precautions for that purpose. All cones, signage, and flags will conform to Windstream practices and D.O.T. regulations.

4.03 The CONTRACTOR shall furnish competent flagmen or policemen when required to assist the flow of traffic or for the safe maneuvering of equipment and trucks and for construction work under this CONTRACT. Signs and flagman should be provided in accordance with the State Department of Transportation's regulations. Crewmembers designated as a flagman are required to carry a state approved DOT Certified Flagman Card. CONTRACTOR understands and agrees that any Unit which would require the use of flagmen or other traffic control equipment has included the cost for these services in their contracted Unit Rate. Windstream will not pay additional costs for the use of flagmen or other traffic control equipment.

4.04 Hard hats and state approved reflective vests will be worn at all job sites. The Occupational Safety and Health Administration ("OSHA") requires the wearing of safety vests by personnel when working within the highway right of way. (Federal OSHA Standards For General Industry, 1926.650 subpart P, paragraph F).

4.05 OSHA rules and regulations regarding confined space ventilation and manhole protection shall be followed at all times. Tests for oxygen deficiency and harmful gases shall be conducted in all manholes prior to entry in accordance with Windstream system practices. Testing will continue throughout all operations in manholes.

4.06 Each member of CONTRACTOR'S crew is expected to read the Windstream Pocket Safety Guide, acknowledge they understand the information and that accident prevention depends upon their cooperation. It is the CONTRACTOR'S responsibility to insure all employees have read and signed the Windstream Pocket Safety Guide and will maintain appropriate documentation.

4.07 The latest revision of the National Electrical Safety Code and the National Electrical Code shall be followed in every case except where local regulations are more stringent, in which case local regulations shall govern.

4.08 The CONTRACTOR agrees that no unauthorized persons shall be allowed to enter the work site without prior approval of Windstream. CONTRACTOR will immediately notify Windstream when any governmental agency comes on the job site. The CONTRACTOR and its Subcontractors will give access to the representatives of the Secretary of Labor or any state or local official for the purpose of inspecting or investigating or carrying out any of the duties under the Occupational Safety and Health Act of 1970 or under any state or local act affecting safety and health. The CONTRACTOR shall be responsible for any violation of any safety or health standards issued thereunder, shall immediately remedy any condition giving rise to such violations, and shall indemnify, defend and hold Windstream harmless from any penalty, fine, or liability in connection therewith. Violations will be disclosed to Windstream in an expeditious manner.

4.09 All parties associated with excavations for the conduit and manhole system shall follow safety rules and regulations to safeguard the public and workmen.

- a) Gas and oil mains shall be given special attention and precaution shall be taken to guard against the fire hazards they present. Excavations in public streets should always be checked for gas leakage, even though gas mains or sewers are not directly encountered. No flame of any sort shall be permitted around excavations when the odor of gas is detected. Workmen shall not be allowed to smoke; and precautions shall be taken to prevent pedestrians from throwing lighted cigars, cigarettes, or burning matches into such excavations.
- b) The CONTRACTOR shall provide required shoring, warning signs, lights, no parking signs, barricades, and removal of excess water and excavating material. Flagmen and guards shall be provided where required to maintain safe conditions for the workmen and the public.
- c) Blasting will only be permitted with approval from state or local authorities and with the warning to and protection of workmen and the public.
- d) Excavations shall be closed and/or barricaded for public protection prior to leaving the job site at night with warning lights and/or guards.
- e) Accessibility to fire hydrants, fire alarm boxes, and private driveways shall be maintained using temporary bridges over trench as required.
- f) The necessary means to carry storm water away from the work shall be provided and kept free from obstructions. The CONTRACTOR shall comply with all laws, ordinances and regulations of all legally constituted authorities.

5.0 DELAYS

5.01 Windstream shall exercise due diligence to secure materials. However, work may be suspended in whole or in part for want of materials, and such delay may continue until such materials are secured. The CONTRACTOR shall be allowed a reasonable extension of time for completion of the work in view of such delay but shall not be entitled to any damages or compensation on account of it.

5.02 If the CONTRACTOR is delayed, through no fault of the CONTRACTOR, in the completion of the work, or any part of it, by any act or neglect of Windstream or by strikes, lockouts, fire, or unavoidable casualty, by the action of the public authorities or by property owners or others, or by injunction or by refusal to grant right-of-way permits, the time of completion shall be reasonably extended as directed by Windstream in view of such delay, but such delay shall not give rise to any claim on the part of the CONTRACTOR against Windstream for damages or compensation.

6.0 REPAIRS AND DAMAGES

6.01 The CONTRACTOR hereby guarantees the backfilling of all excavations and the replacement of all sidewalks, driveways, pavement bases, and surface pavements under this contract for a period of one year after the making of the final payment hereunder, and the CONTRACTOR hereby agrees to reimburse Windstream promptly upon the presentation of bills for any expense to Windstream resulting from repairs made necessary by reason of faulty

backfilling or faulty work in replacing such sidewalks, driveways, pavement bases, and surface pavements. The CONTRACTOR is also responsible for any repeat compaction tests that show initial work not to specifications.

6.02 The CONTRACTOR shall be responsible for all damages, detention of material charges or storage charges which may be incurred by failure or delay in removing from any car, freight yard, or freight house any material furnished by Windstream as herein provided, and the CONTRACTOR after delivery of all material, shall be responsible for its safety and care, shall handle it at its own expense, and shall replace at its own expense any such material which may be lost or so damaged as to be unfit for use on the work.

6.03 When underground facilities are exposed, they must be protected from vandalism or damage when left unattended. The method of protection is the CONTRACTOR'S responsibility. If police protection becomes necessary through the CONTRACTOR'S selected mode of operation, this cost is the CONTRACTOR'S responsibility. In all cases the method of protection must meet Windstream's approval, and Windstream's decision will be final.

6.04 To the satisfaction of Windstream and other persons or authorities having jurisdiction, the CONTRACTOR is responsible for the permanent restoration to good condition of all private or public property including pavements, fences, gardens, shrubbery, sidewalks, pipes, driveways, dirt, or sod disturbed or damaged in the performance of work. The CONTRACTOR shall be responsible for addressing all customer complaints within 24 hours of notification. All work required associated with the customer complaint shall be completed within three (3) working days of the CONTRACTOR being notified. Any final repair of concrete and /or asphalt shall be completed within a maximum of ten (10) working days

6.05 Any property damage should be noted on the work order closing copy.

6.06 In such cases where removal of existing shrubs is necessary to gain access to the work area or to place poles and down guys, the CONTRACTOR shall, at its own expense, remove, store, and replace such shrubs.

7.0 REMOVAL OF PLANT

7.01 The CONTRACTOR shall provide all hardware and miscellaneous apparatus necessary to remove the designated Windstream Plant. Transportation, installation, removal and disposal of all construction materials shall be in accordance with all applicable local, state and federal laws and properly manifested when appropriate. The CONTRACTOR shall provide manifest, a certificate of disposal, or the method and location of disposal for all items. Empty cable reels must be removed from the Project Site each day.

7.02 All Plant removed by the CONTRACTOR, which normally has a salvage value due to recycling processes, shall be delivered to the location designated by Windstream. All salvage materials will be placed in an appropriate storage bin provided by the designated recycling company on the CONTRACTOR'S yards. The CONTRACTOR cannot accept payment for the salvageable materials that are the property of Windstream. Provisions for disposal of contractor-owned material will be made by the CONTRACTOR.

7.03 CONTRACTOR will store Windstream-owned poles and stub poles, which have been removed, at CONTRACTOR'S location. CONTRACTOR will be required to contact Windstream's designated pole disposal contractor for removal and disposal of poles.

CONTRACTOR will be required to forward the pole disposal contractor's invoice for pick-up to Windstream. Windstream will be responsible for payment to the pole disposal contractor. This is the only acceptable manner in which poles shall be disposed.

7.04 Any Windstream plant, removed by the CONTRACTOR, which does not have a salvage value, shall be disposed of by the CONTRACTOR to a licensed dumpsite.

7.05 The CONTRACTOR shall pay any dumping fees associated with disposing of scrap materials.

8.0 TREE TRIMMING, CUTTING, AND DISPOSAL

8.01 TRIMMING AND CUTTING: The CONTRACTOR shall not proceed with the cutting of trees or clearing of right-of-way without notification from Windstream that proper authorization has been received from the owner of the property, and the CONTRACTOR shall promptly notify Windstream whenever any landowner objects to the trimming or felling of any trees or the performance of any other work on the owner's land in connection with the Project and shall obtain the consent of Windstream before proceeding in any such case.

8.02 DISPOSAL OF TREES, LIMBS, AND BRUSH:

- a) Property owners shall have first right to any wood cut from trees or any felled trees resulting from this Agreement.
- b) All removed limbs, brush, and cuttings, except that requested by property owners, shall be removed from the trimming areas.
- c) No cuttings or brush shall be left overnight on or about the trimming area without the consent of the public authority and/or the property owner.
- d) The CONTRACTOR is completely and solely responsible for the complete disposition of any wood, brush, or wood chips produced in the course of the work.

9.0 CONDUIT AND MANHOLES

9.01 The engineer will determine the location of all conduit and manholes and shall specify size, type, position, and depth at which they are to be constructed. The preferred choice for manholes is the precast form. The size, type, and location of all main conduit and subsidiary ducts, location of foreign structures where known, and applicable right-of-way restrictions are shown on the construction drawings. The size, type, and location of all conduit entrances and size and location of the manhole frame opening are shown on the construction drawings. (Any items not covered specifically by local engineering on construction drawings shall conform to ASTM standards in ACI 301 and 318). "ASTM" means American Standard of Testing and Materials. "ACI" means the American Concrete Institute. All work in existing manholes will be coordinated with the construction supervisor and local assignment personnel.

9.02 Backfilling next to the conduit shall be free from stones or other material which might injure the conduit or conduit joints. Stones of 3 inches in size or larger shall not be included in any part of the backfill. In tamping the backfill at the sides of the conduit, use extreme care not to damage the joints or shift the conduit structure. Backfilling and tamping alongside of the conduit

shall be done in layers only an inch or two in thickness until the level of the top of the conduit is reached. Above the conduit, mechanically tamp all backfill thoroughly in 6-inch layers. Backfilling around conduit joined with mortar bandages can proceed as soon as the joints are completed. Troweled joints shall be allowed to set at least 24 hours before backfilling. Conduit that has been encased in concrete shall not be backfilled on top of for at least 15 hrs.

9.03 Upon completion of conduit sections, a test mandrel 1/4 inch smaller in diameter than the inside diameter of the conduit shall be pulled through all single duct conduit and through two diagonally opposite ducts in multiduct conduit formations to ensure proper alignment. In addition, all conduits shall be cleaned of loose materials such as concrete, mud, dirt, stones, etc. Pull wire (type as specified by the engineer) shall be placed in conduit if so indicated by the engineer on the construction drawings. The ends of the conduit shall be sealed to prevent the entrance of foreign matter and to protect against water or gas from entering manholes or buildings. All conduit entering central offices or other buildings shall be kept plugged at all times with expandable type plugs that have been approved by the engineer. If the work extends over several days, the conduits shall be plugged at night temporarily and permanently upon completion of the work.

9.04 All concrete mix designs using specifications regarding concrete, cement, aggregate, concrete-reinforcement bars and water will follow local engineering specification or RUS specification or ASTM standards of the ACI concrete, cement, aggregate, concrete-reinforcing bars and water specifications-

9.05 Manhole walls, top and floor forms and forming work shall be accomplished in a thorough and workmanlike manner in accordance with Windstream practices.

9.06 Reinforcement shall consist of round deformed bars arranged as indicated on the construction drawings and will follow all the specifications noted above.

9.07 Concrete must be placed continuously except at construction joints, as indicated on the detail plan.

9.08 When encasing conduit, concrete must be poured toward the free end of the ducts and away from the trench sides to avoid dislodging soil and stones.

9.09 After removing the forms, all concrete surfaces should be inspected for poor joints, voids, stone pockets, tie holes, rod holes, etc. To repair these defects, the type of product to be used must be approved by the engineer prior to repair. However in the event of extreme voids (honey combing, etc.), where the structural steel is exposed upon removal of the forms and inspection, the manhole shall be demolished and a new manhole constructed per the construction drawings.

9.10 When manholes are constructed in fluid soil, the CONTRACTOR will contact Windstream Engineering regarding possible changes in design of structure(s) as well as providing adequate drainage shall be provided to prevent static water pressure on concrete until the concrete has properly hardened.

9.11 The frame shall be supported on a precast or brick collar as shown in the construction drawings. The collar shall be of sufficient height to bring the cover flush with the grade of the street or surrounding earth. Mortar shall be proportioned by volume and shall consist of one part mortar cement and three parts fine aggregate with sufficient water to make the mixture workable.

9.12 The sump or drain shall be provided as shown on the construction drawings and located as shown on the construction drawings or as directed by the inspector or the engineer. The floor shall be graded toward the sump or drain (if cement floor is used). The sump or drain shall be at least 8 inches in diameter or 8 inches square.

9.13 Pulling-in irons shall be placed so as to extend into the manhole far enough to permit a clear opening of 3.5 inches in the eye. With a 6-inch concrete wall, the vertical legs of the irons shall be 1 inch in from the outside face of the wall. For heavier walls, the legs will be embedded deeper in the concrete of the wall.

10.0 SERVICE DROPS

10.01 Buried drop wire on customer's premises shall be installed at the depths listed in Cable Depth Requirements section on page 19 unless otherwise specified by the engineer, due to local, county or state requirements.

10.02 It will be Windstream's responsibility to obtain permission to place the service drop on the customer premises. The CONTRACTOR is responsible for notifying the landowner and obtaining permission to begin work. The CONTRACTOR will then place the service drop, check for buried utilities and other underground structures, and perform all required restoration to the satisfaction of the property owner the same day.

10.03 When specified by the engineer, the CONTRACTOR shall designate the house number or phone number in areas without house numbers on all newly installed buried service drops, within the pedestal.

10.04 Network Interface Device ("NID") station protectors shall be specified on all new service installation. Each shall be assembled and grounded to a suitable electrical ground source.

10.05 The NID shall be located on the building such as to facilitate common grounding by obtaining the best compromise between the length of drop wire run to the building and the length of ground wire run, not to exceed 35 feet.

10.06 The CONTRACTOR will notify the appropriate operations supervisor or construction supervisor / inspector immediately if customer commitment dates cannot be met on buried service drops. This notification must include a new commitment date and an explanation of the cause of the delay. Other operations personnel or the construction supervisor / inspector will be notified of this change in commitment date.

10.07 Upon completion of the buried drop facilities installation, the CONTRACTOR will on a daily basis:

- a) Complete the service initiation if all station work is complete, including termination of the drop in the NID and verifying service (dial tone) at the NID.
- b) Inform the customer that the service installation has been completed by direct communication with the customer or the use of a 'Door Knocker' (ATS-957). If the doorknocker is used, the time and date fields must be filled out and the "To install or change your service." boxes marked.

- c) Call, email, or use a voice mail box for the designated operations personnel or the construction coordinator for the applicable Windstream exchange as soon as possible and leave the following information:
- Buried service work order customer's name.
 - Buried service work order customer's telephone number.
 - Customer is or is not in service.
 - CST does or does not need to be re-dispatched.
 - The CONTRACTOR will forward the completed buried service work order to the appropriate operations supervisor or construction coordinator within two (2) days.

10.08 Upon completion of each new service installation and/or rearrangement, the CONTRACTOR shall perform one ring back test to validate service continuity.

11.0 EMERGENCY CALL OUT

11.01 CONTRACTOR will have staff accessible via pager or wireless phone to provide response to emergency outages. Coverage for emergency service is required 24 hours daily, 7 days per week. Additionally, CONTRACTOR is required to provide an initial and ongoing updates to a CONTRACTOR calling tree that provides alternative and escalation calling to support Windstream's on call needs.

11.02 Within two hours, dependent on geographic constraints, CONTRACTOR will have on-site an initial emergency response team leader for site assessment. Additional staff required to begin preliminary work and repairs will be on-site within two hours of initial emergency notification. Failure to respond in two hours will result in the standard hourly rate being paid instead of the overtime rate. Equipment is paid at standard rate at all times.

11.03 In the event that Windstream releases placing crewmembers prior to 7:00 PM during the normal workweek, it is still the CONTRACTOR'S responsibility to provide proper coverage as is normally needed to support Windstream. No overtime will be paid in this case unless call out is made more than 3 hours after the crew has been released or call out is made after 5:00 PM.

12.0 CHECKLIST FOR CONSTRUCTION AND SPLICERS

TO BE PROVIDED BY CONTRACT FIRM:

- | | |
|--|---|
| <input type="checkbox"/> Pager/Cell Phone | <input type="checkbox"/> Picture ID badge |
| <input type="checkbox"/> Contractor Worker Information Sheet | <input type="checkbox"/> Vehicle signs |

• **DRESS CODE:**

1. Hair neat, clean, and well groomed, to include facial hair;
2. Shoes appropriate to job, and provides adequate protection from safety hazards;
3. Clothing clean, not in need of repair, free of profane, obscene, or suggestive wording, patches or designs that are deemed inappropriate in the judgment of management.

• **VEHICLE INFORMATION:**

CONTRACTOR work vehicles of the standard cab and chassis body type must be equipped with sufficient locking bins to protect Windstream's material and allow efficient access to the material. Work vehicles will be in good running condition, present a good appearance, and any vehicle and equipment used in conjunction with any activity within the right of way must be clearly marked or labeled, identifying the utility for which the work is being performed, as well as the

CONTRACTOR(S) performing the work for the utility. Vehicles must bear the CONTRACTOR's name on each side in sufficient size to be easily identified. This will include all Subcontractors.

13.0 OUTSIDE PLANT JOB MANAGEMENT PROCESS

This contract will be supported by a Windstream electronically based information system to: price, approve, distribute, maintain job status, store, and invoice OSP jobs. Although all jobs will be processed through this system, some selected jobs due to their size will route their supporting job documentation through traditional means to be determined locally. As a result, all CONTRACTOR(S) selected to partner with Windstream will be required to conduct business electronically.

13.01 Job Management Process

- a) **Job Notification:** An email alert will be sent to the CONTRACTOR when a new job is available to work.
- b) **Job Distribution:** After notification, CONTRACTOR will be required to inquire and pull related job information from the Windstream OSP Job Repository. The CONTRACTOR will make copies of jobs as necessary.
- c) **Job Status Update:** During the OSP job life cycle, the CONTRACTOR will be required to post various job status milestones on the Windstream Job Repository for each job managed by the CONTRACTOR.
- d) **Job Completion:** Upon job completion, the CONTRACTOR will update the Job Repository with accurate 'as-built' information, complete and finalize job cost, and release the job to Windstream for review, approval and invoice creation. This may include the transmitting of as-built documentation via electronic means to be determined by Windstream.
- e) **Job Discrepancy Resolution:** Upon reviewing the 'as-built' vs. 'planned' job information, Windstream staff will confer with CONTRACTOR staff to resolve billing discrepancies.
- f) **Invoicing:** At an interval predetermined between Windstream and the CONTRACTOR, Windstream staff will create an invoice and submit to Windstream Accounts Payable for payment.
- g) **Payment:** Payments will be made to CONTRACTOR via EFT (Electronic Funds Transfer) facilities.

13.02 System Reference

- a) **Security:** CONTRACTOR will have access only to jobs assigned under their control. Security will be managed by Windstream corporate OSP.

- b) **Units:** Standardization, creation and management of work units is a shared responsibility between local Windstream operating companies and corporate.
- c) **Reporting:** Various reporting formats from the OSP Job Repository will be available to the CONTRACTOR as needed. This includes invoices submitted, jobs completed, job schedules, unit lists, reconciliation etc.
- d) **Online Job Retention:** Jobs will be retained on the OSP Job Repository for a minimum of 60 (sixty) days after job closing and then systematically purged.

13.03 System Requirements

- a) CONTRACTOR will be required to receive email correspondence and be capable of accessing the web pages of the Windstream OSP Job Repository. CONTRACTOR will print job specifications and other related job documentation, including job diagrams of up to 11 X 17 inches. CONTRACTOR will require access to a color scanner for submission of electronic redlines back to Windstream.
- b) CONTRACTOR(S) are required to produce and provide electronic as built construction drawings to Windstream for each completed work order in a format compatible with Windstream's current GIS technology and are responsible for acquiring the editing / red-lining software needed to fulfill this requirement.
- c) CONTRACTOR will be required to maintain current versions of the following software:
 - Microsoft Windows 2000 or later
 - Microsoft Office Professional 2000 or later (includes):
 - Word
 - Excel
 - PowerPoint
 - Access
 - Outlook E-mail
 - Microstation or Smart Sketch (for electronic submission of redlines)
 - Bentley Viewer (freeware for viewing drawings and for print generation) * Not needed if already using Microstation or Fieldview
 - Adobe Acrobat Reader
 - Microsoft Internet Explorer 6.0 or greater
 - WinZip

13.04 Ongoing Windstream Coordination

This system is intended to enhance communication related to the performance of OSP jobs. It is in no way intended to replace the personal communication that is necessary to manage day-to-day job coordination.

14.0 WINDSTREAM SPECIFICATIONS

14.01 The CONTRACTOR will complete work according to Windstream specifications. The CONTRACTOR is responsible for doing quality, safe work with the appropriate tools. The list below of Windstream practices is not all-inclusive and each practice may be modified from time to time. It is the responsibility of the CONTRACTOR to understand and abide by all current Windstream practices.

| Practice # | Name | Issue Date |
|-----------------------------|---|-------------------|
| 200-400-100 | Eye Protection | 02/85 |
| 205-700-305 | Temporary Ground Rod Description & Use | 01/87 |
| 290-050-030 | New Aerial Terminal and Pedestal Inspections | 12/88 |
| 290-050-103 | Outside Plant Aerial Work Safety Precautions | 01/77 |
| 290-050-104 | Testing Poles for Safety | 08/85 |
| 290-055-110 | Buried Plant Precautions Underground & Buried Work | 09/73 |
| 290-350-425 | Aerial Cable Vibration Damper Description & Installation | 01/75 |
| 290-350-450 | Aerial Cable Terminating Lashing Wire | 02/74 |
| 290-500-410 | Buried Cable Pedestal Installation | 08/91 |
| 290-500-415 | Buried Cable Warning Post & Decals Description & Installations | 12/87 |
| 290-550-403 | Shield Bonding - Aerial Cable Ready Access Closures | 04/85 |
| 290-610-425 | Splicing Load Coils in Cases | 02/74 |
| 290-805-400 | Bonding & Grounding Methods Suspension Strand | 12/87 |
| 290-805-402 | Bonding & Grounding Cable Sheath | 02/74 |
| 290-805-403 | Bonding Across Sheath Openings | 02/74 |
| 540-101-010 | Protection, Bonding & Grounding Requirements @ Power Generating Plants & High Voltage Substations | 01/87 |
| 540-101-021 | Electrical Protection of Aerial Cable | 03/86 |
| 540-101-031 | Electrical Protection of Buried Cable | 03/86 |
| 540-101-041 | Electrical Protection of Underground Cable | 12/86 |
| 600-000-008 | Rescue of Person From Live Wire on Ground | 12/90 |
| 600-000-025 | Work Area Protection | 08/90 |
| 600-000-040 | Confined Space Rescue | 10/91 |
| 600-000-041 | Confined Space (Manholes) Safety Precautions & Test Procedures | 10/91 |
| 600-000-045 | Pole Top Rescue | 10/91 |
| 600-000-050 | Excavation & Trenching Safety Procedures | 11/92 |
| 600-010-450 | Safety Signs & Warnings | 06/98 |
| 600-050-100 | Exposure to Heat | 02/98 |
| 600-050-150 | Exposure to Cold | 02/98 |
| 600-060-300 | Electric Shock Hazard | 02/98 |
| 600-060-500 | Power Clearance | 02/98 |
| 600-110-600 | Hantavirus/Rodent Control | 08/96 |
| 600-120-250 | Tree Trimming - Electrical Hazard | 02/96 |
| 600-130-200 | Safety Headgear | 02/98 |
| 600-140-650 | Portable Air, Power & Hydraulic Powered Tools | 02/96 |
| 600-140-700 | Chain Saws | 06/98 |
| 600-150-250 | Traffic Safety Cones Description | 02/96 |
| 600-500-005 | Trencher, Plow (Wheel & Track) Backhoe & Crawler Safety | 10/89 |
| Construction Specifications | Outside Plant technical Construction Specifications | 1998 |

| AB45-2 | | |
| AB45-3 | | |
| AB45-4 | | |
| AB45-5 | | |
| BA4 | | BA4 - BURIED PLANT STUB POLE: Consists of all labor and material for a stub pole in place. Stub poles shall be of the length and type designated by the Engineer |
| HVP | | HVP lines / facilities are present. This unit will also include all coordination necessary with power company to expedite the installation of the pole (i.e. placement of insulation wraps on lines). This unit does not include the pole top assembly units or other parts attached to the pole. This unit will be compensated for as an adder unit to be worked with, in addition to a standard pole placement unit. |
| HVPJO | | HVPJO - HIGH VOLTAGE POLE - JOINTLY OWNED ADDER: Same as Unit HVP except that the pole is jointly owned. |

PLACEMENT OF NON-ACCESSIBLE POLES: This unit consists of one (1) pole in place in a Blind Alley or other area not accessible by Derrick Truck, this pole must be set by hand or use of a blind alley pole machine. It does not include the pole top assembly units or other parts attached to the pole. Poles shall be of the height and class as designated by the Engineer. The pole plan, species of timber, kind of preservative and method of treatment are designated in this contract. The first Underline designates pole length, followed by pole class.

| | | |
|----------------------|--|--|
| POLE ROCK ADDER | | POLE ROCK ADDER: - This adder unit is to be used in conjunction with the standard pole placement units. This additional unit is for solid rock excavation, consisting of chipping, etc. including excavation, backfilling and tamping. This unit will be authorized only when field conditions at the site show the existence of solid rock at a depth which prohibits pole placement to specified depth. Authorization must be obtained prior to this units use. A suffix of JO indicates a jointly owned pole. |
| POLE ROCK ADDER (JO) | | |
| POWER ZONE ADDER | | |
| | | This unit consists of the additional labor to perform work in the power zone by certified crew(s) as required by power company. Including, but not limited to pole transfer work, placing/removing/transferring guys, and lowering and raising splices for maintenance reasons. Requires Journeymen (Class A) Power Linemen and a Safety Manager trained in Power Zone type work to be on site at all times. Safety requirements must be met. This includes but is not limited to safety equipment for trucks, trucks with insulated booms, special fire retardant clothing/vests, and safety training to comply with OSHA standards as required by local power company. |
| BC25B | | BC__ - INSTALL IDC CROSS CONNECT BLOCK: Labor and material to install one (1) IDC type cross connect block in a cross connect cabinet. B = Blue block for Distribution Pairs; G = Green Block for Feeder Pairs. Splicing of blocks will be compensated for under HC Units. |
| BC25G | | |
| BC50B | | |
| BC50G | | |
| BC25S | | BC__S - INSTALL BINDING POST CROSS CONNECT BLOCK: Labor and material to install one (1) Binding Post (Screw Terminal) type cross connect block in a cross connect cabinet. Splicing of blocks will be compensated for under HC Units. |
| BC600E | | BC600__ - INSTALL 3M 600PR X-CONN BLOCK: Labor and material needed to install a 3M 600 pair MHEM Block in a cross connect cabinet. E = Frame fully loaded with Blocks; M = Frame Only. |
| BC600M | | |
| BCQ9E | | BCQ9E - INSTALL 3M 600PR X-CONN FRAME: Labor and material needed to install a 3M 900 pair Q9E frame in a cross connect cabinet. |
| BD3 | | BD__() - PLACE PEDESTAL: Consists of a pedestal; stake mounted in place. These units include all labor and material to install pea gravel, housing numbers, route letters, load point numbers, directional and other markings of buried filled copper cable. Includes all labor and material to install bonding connectors, harnesses, and grounding connector |
| BD4 | | |
| BD5 | | |
| BD7 | | |
| BD14 | | |
| BD6000 | | |

| | | |
|----------|--|---|
| BD8000 | | all labor and material to install bonding connectors, harnesses, and grounding connector for terminating external ground wire. Addition of a "P" indicates installation on an Windstream provided precast concrete pad. |
| BD7P | | |
| BD6000P | | |
| BD8000P | | |
| BD10000P | | |
| BD3A | | BD_A() - POLE MOUNTED PEDESTAL: Same as BD__ Unit, except pedestal is pole mounted. |
| BD4A | | |
| BD5A | | |
| BD3I | | BD_I() - PEDESTAL W/INTEGRAL STAKE: Same as BD__ Unit, except pedestal is equipped with an integral stake. |
| BD4I | | |
| BD5I | | |
| BD14I | | |
| BD3J | | BD_J() - PEDESTAL IN JOINT TRENCH: Same as BD__ Unit, except pedestal will be placed in a joint trench. |
| BD4J | | |
| BD5J | | |
| BD14J | | |
| BD3ASB | | BD_ASB() -POLE MOUNTED PEDESTAL W/SPLIT BASE: Same as BD__ Unit, except pedestal is equipped with a split base and is pole mounted. |
| BD4ASB | | |
| BD5ASB | | |

| | | |
|--------------|--|--|
| BDO | | BDO() - PLACE FIBER OPTIC PEDESTAL: Consists of a buried plant fiber optic splice case housing stake mounted in place. These units include all the labor and material to install pea gravel, housing numbers, route letters, and directional and other markings of buried filled fiber optic cable. Includes all labor and material to install mounting hardware for fiber optic splice case, bonding connectors, harnesses, and grounding connector for terminating external ground wire. Suffixes in parentheses indicate State Specific pedestals: AL; FL; GA, NC and SC include the additional placement of a State Specific "Call B4 You Dig" Sticker and Fire Ant Killer; KY; NY; OH and PA include the additional placement of a State Specific "Call B4 You Dig" Sticker. |
| BDO-CWDM | | Consists of a Fiber Distribution Housing stake mounted in place. These units include all the labor and material to install pea gravel, housing numbers, route letters, placement of a "Call B4 You Dig" sticker, and directional and other markings of buried filled fiber optic cable. Includes all labor and material to install mounting hardware for fiber optic splice case, bonding connectors, harnesses, and grounding connector for terminating external ground wire. |
| BDO-CWDM(HH) | | This unit consists of the labor and materials required to install (1) CWDM pedestal, (1) Pedestal vault mount kit, and (1) buried split lid 30X48X36 handhole for Fiber Optics. Includes installation of the hand hole base, top cover, mounting hardware, and washed stone or equivalent. The amount of 1" washed stone or equivalent shall be specified by the engineer. The handhole assembly unit is rated to withstand vehicular traffic. To include installation of housing numbers, route letters, placement of a "Call B4 You Dig" sticker, and directional and other markings of buried filled fiber optic cable as well as mounting hardware for fiber optic splice case, bonding connectors, harnesses, and grounding connector for terminating external ground wire. |
| BDCEP(E) | | Consists of a Cool pedestal, stake mounted in place. This unit includes all labor and material to install pea gravel, housing numbers, route letters, directional and other markings of buried filled copper, and fiber cables. Includes all labor and material to install bonding connectors, harnesses, and grounding connector for terminating external ground wire. All copper and fiber splicing to be paid separately. Any conduits, cable, ground field, or electrical wiring, will be paid separately. Windstream Cooled to be provided by Windstream Engineering. Addition of a "P" indicates installation on a Windstream provided precast concrete pad. |
| BDCEP(E)P | | |

| | | |
|-------------------|--|--|
| BDFOAM | | Consists of the labor and materials required to install expansion foam in the bottom of a pedestal. Foam to be installed in pedestal and allowed to dry. Unit is used in cases where ped is installed before construction is complete and contractor will not be on site later to back fill and only to be used at request of Windstream Engineer as indicated on drawings. |
| BDSB(50)(50) | | <p>BDSB () () - PLACE CROSS CONNECT CABINET: Consists of an cross connect cabinet stake mounted in place. Includes all labor and materials to complete the installation.</p> <p>Included in this unit shall be the cabinet; cross-connect modules or blocks; cabinet mounting accessories; internal mounting hardware such as frames, mounting brackets, splicing ladders and talk block; grounding connector for terminating external ground wire, bonding connectors and harnesses; pea gravel; interface number and direction markings and labor and materials necessary to complete the installation. Placement of cross connect cabinets. First number in parentheses indicates feeder pair count, second number in parenthese indicates distribution pair count. Addition of a "P" indicates installation on a precast concrete pad.</p> |

| BFCR(300) | | BFCR(300) - SHORT FOOTAGE ADDER FOR BFCR: This unit will be paid in addition to the applicable BFCR or BFCR()T unit on any work order where the total as built buried footage does not exceed 300 feet per work order. This unit will be paid on a per foot basis. |
| BFCR(600) | | This unit will be paid in addition to the applicable BFCR or BFCR()T unit on any work order where the total as built buried footage is equal to or greater than 301 feet but does not exceed 600 feet per work order. This unit will be paid on a per foot basis. |
| BFCR(<1000) | | This unit will be paid in addition to the applicable BFCR or BFCR()T unit on any work order where the total as built buried footage is equal to or greater than 601 feet but does not exceed 1000 feet per work order. This unit will be paid on a per foot basis. |
| BFCR12X22 | | BFCR()X() - PLACE BURIED FILLED COPPER CABLE: Consists of one (1) foot of buried filled copper cable in place. This unit includes all material and labor for installing, ripping (where necessary as determined by the Engineer), and backfilling, except as specifically provided for in other units. Where the cable is plowed, ripping may be necessary to provide a ripped path to allow placement at the required depth, and may require more than one ripped pass. This unit will include Right of Way clearing of brush and trees up to 4" in diameter. This unit will also include the placement of cable into either new or existing pedestals or other as specified by the engineer. This unit includes any surface restoration. |

The "P" unit compensation will begin at the first exposure and extend through the last exposure. This unit must be predesignated by the engineer or agreed to by Windstream management prior to construction. |
| BFCV(1)(1.25) | | BFCV() () - PLACE VACANT DUCT: One or more vacant ducts to be placed simultaneously in the same plow or trench. The first set of parentheses shall indicate the number of ducts and the second set of parentheses indicates the inside diameter of the duct. This unit will include Right of Way clearing of brush and trees up to 4" in diameter. Addition of a "T" indicates trenched; a "J" indicates joint use trench. "D" shall indicate the placement of vacant duct with cable during the same installation as designated by an Windstream Engineer. Unit shall include termination of innerduct into handholes, pedestals or other as specified by Engineer and includes surface restoration. Includes the splicing of ducts, which must be joined together and sealed airtight using approved aluminum couplings to accommodate the future blowing of cables. All open ends of the innerduct will be sealed with sealing material approved by the Windstream Management |

| BFOR144D | | |
| BFOR192D | | |
| BFOR216D | | Consists of one (1) foot of buried filled fiber optic single jacket, single armored ribbon cable pulled inside a duct. This unit will not be used in conjunction with the placement of cables through road bores. |
| BFOR288D | | |
| BFOR144I | | |
| BFOR192I | | |
| BFOR216I | | Consists of one (1) foot of buried filled fiber optic single jacket, single armored ribbon cable placed in an open trench provided by others. This unit will also include placement of cable into either new or existing handholes, pedestals or other as specified by the engineer. |
| BFOR288I | | |
| BFOR144J | | |
| BFOR192J | | |
| BFOR216J | | Same as BFOR__J Unit Except that this cable shall be placed with the primary cable as designated by the Engineer during the same Trenching Operation. |
| BFOR288J | | |
| BFOR144JD | | |
| BFOR192JD | | |
| BFOR216JD | | |
| BFOR288JD | | |
| BFOR144T | | |

| | | |
|-----------------|--|--|
| BFOR192T | | Same as BFOR Unit except that the cable will be placed by Trenching only. |
| BFOR216T | | |
| BFOR288T | | |
| BFOR144TD | | Same as BFOR__ Unit Except that this cable shall be placed with the primary cable as designated by the Engineer during the same Trenching Operation. |
| BFOR192TD | | |
| BFOR216TD | | |
| BFOR288TD | | |
| BFO6MIC(100) | | This unit consists of the necessary labor and material to pull a 6 fiber armored pre-connectorized breakout pigtail cable in a duct. Cable to be pulled from splice point to cabinet and includes termination to the patch panel. Number in parentheses indicates the length of the breakout Cable. Splicing at handhole or pedestal to be paid under separate Units. Unit includes bonding at the pedestal or handhole. |
| BFO12MIC(100) | | |
| BFOE(42) | | BFOE(XX) - BFO CABLE EXTRA DEPTH ADDER: This unit consists of the necessary labor and equipment to install one (1) foot of buried filled fiber optic cable or innerduct to the depth specified in the parentheses. This unit will be compensated for as an adder unit to be worked with in addition to a standard BFO__ cable placement unit. |
| BFOE(48) | | |
| BFOE(54) | | |
| BFOE(60) | | |
| BFOE(66) | | |
| BFOE(72) | | |
| BFOE(42)T | | BFOE(XX)T - BFO IN TRENCH EXTRA DEPTH ADDER: This unit consists of the necessary labor and equipment to install one (1) foot of buried filled fiber optic cable or innerduct to the depth specified in the parentheses. This unit will be compensated for as an adder unit to be worked with in addition to a standard BFO__ cable placement unit. |
| BFOE(48)T | | |
| BFOE(54)T | | |
| BFOE(60)T | | |
| BFOE(66)T | | |
| BFOE(72)T | | |
| BFOID(1) (1.25) | | BFOID() () - VACANT DUCT INSIDE EXISTING DUCT: This unit consists of the necessary labor and materials to place one or more vacant innerduct(s) in a conduit. The first set of parentheses shall indicate the number of innerducts, and the second set of parentheses indicates the inside diameter of the innerduct to be placed in new or existing conduit. This unit includes rodding and cleaning of the conduit if necessary. |
| BFOID(2) (1.25) | | |
| BFOID(3) (1.25) | | |

| | | |
|------------------------|--|---|
| BFOJBF | | BFOJBF - BFO JOINT USE TRENCH W/BACKFILL ADDER: This unit provides for the labor and equipment necessary to backfill one (1) foot of trench after cable and warning tape has been placed in a trench opened by others. This unit to be paid in conjunction with BFO_J when required by Engineer. |
| BFOP | | BFOP - BFO CABLE DIFFICULT INSTALLATION ADDER: P units will be compensated when more than one utility exposure or obstacle (fences, walks, etc.) is encountered at intervals of less than 100 feet which would prohibit the normal plowing operation. The "P" unit compensation will begin at the first exposure and extend through the last exposure. This unit must be predesignated by the engineer or agreed to by Windstream management. |
| BFOV(1)(1.25)<=50 | | Consists of one or more vacant ducts to be placed simultaneously in the same plow or trench. The first set of parentheses shall indicate the number of ducts and the second set of parentheses indicates the inside diameter of the duct. This unit will include Right of Way clearing of brush and trees up to 4" in diameter. Addition of a "T" indicates Trenched; a "J" indicates joint use trench. "D" shall indicate the placement of vacant duct with cable during the same installation as designated by an Windstream Engineer. Shall include termination of innerduct into handholes, pedestals or other as specified by Engineer and includes surface restoration. Includes the splicing of ducts, which must be joined together and sealed airtight using approved aluminum couplings to accommodate the future blowing of cables. All open ends of the Innerduct will be sealed with sealing material approved by Windstream management. This unit includes the installation of plastic warning tape to be placed at 18" above the duct depth. Unit bands are divided into the total footage of the duct per work order with less than 50 units, 50-1000 units, or more than 1000 units. |
| BFOV(1)(1.25)>50<=1000 | | |
| BFOV(1)(1.25)>1000 | | |
| BFOV(2)(1.25)<=50 | | |
| BFOV(2)(1.25)>50<=1000 | | |
| BFOV(2)(1.25)>1000 | | |
| BG2(12) | | BG2(12) - INSTALL TERMINAL BLOCK: This unit consists of the necessary labor and material to install one terminal block in any size pedestal according to manufacturer and Windstream specifications. Splicing will be paid as a separate unit. Number in parentheses indicates pair count of block. A suffix of B indicates the installation of a bracket where a backboard panel is not present. |
| BG2(12)B | | |
| BG2(25) | | |
| BG2(25)B | | |
| BG22-25S | | BG22 () - BURIED LOAD COIL: This unit consists of a universal load coil assembly with a filled plastic cable stub. This unit includes the labor and materials for burying the coil, installation of bonding harness and connectors, placing cable tag and tying up of the cable stub as specified by the engineer. This coil ranges in size from 25 pr. To 600 pr. Example ζ a 25 pair coil would be shown as BG22-25. The number in parentheses indicates mH rating. This unit does not include splicing. Units suffixed with a "S" indicates the utilization of a Smooth Load Coil. |
| BG22-50S | | |
| BG22-100S | | |
| BG22-200S | | |
| BG22-300S | | |

| | | |
|---------------|--|--|
| BG22-600S | | or a Smart Load Coil. |
| BG31-200S | | This unit consists of the necessary labor and material to install a strand mounted load coil as specified by the engineer. This coil ranges in size from 25 pr. to 200 pr. The number in parentheses indicates mH rating. This unit does not include Splicing. Units suffixed with an "S" indicates the utilization of a Smart Load Coil. |
| BG34-200S | | This unit consists of the necessary labor and material to install a pole mounted load coil, including pole mount bracket and bonding as specified by the engineer. This coil ranges in size from 25 pr. to 600 pr. The number in parentheses indicates mH rating. This unit does not include splicing. Units suffixed with an "S" indicate the utilization of a Smart load coil. |
| BG34-300S | | |
| BG34-600S | | |
| BG35-1S | | This unit consists of an encapsulated, stackable load coil in-place, in buried cable housing. This unit includes all labor and material to install the coil or coils. This unit ranges in size from 1 to 25pr. Parentheses depicts load coil size. Example - a 3 pair coil would be shown as BG35-3 indicates the placement of 3 single pair load coils and Kwik Case. This unit does not include splicing. The number in parentheses indicates mH rating. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. Unit suffixed with an (E) indicates placement of a one pair load coil within an existing Kwik Case. |
| BG35-1S(E) | | |
| BGM35-1(S) | | This unit consists of an encapsulated, stackable mini load coil in-place, in buried cable housing. This unit includes all labor and material to install the coil or coils. This unit ranges in size from 1 to 25pr. Parentheses depicts load coil size. Example - a 3 pair coil would be shown as BGM35-3 indicates the placement of 3 single pair load coils and Kwik Case. This unit does not include splicing. The number in parentheses indicates mH rating. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. Unit suffixed with an (E) indicates placement of a one pair load coil within an existing Kwik Case. |

| BGM35-24(S) | | |
| BGM35-25(S) | | |
| BHC(17X30X18)T | | BHC()T - PLACE COPPER BURIED HANDHOLE: Consists of labor and material for one (1) buried handhole for Copper Cable installed in place, including the base, top cover and mounting hardware, and washed stone or equivalent. The handhole size, amount of 1" washed stone or equivalent and the installation shall be as specified by the engineer. The handhole assembly unit is rated to withstand vehicular traffic. The suffix of "T" indicates a traffic rated handhole. |
| BHC(24X36X24)T | | |
| BHC(30X48X24)T | | |
| BHC(30X48X36)T | | |
| BHC(36X60X30)T | | |
| BHC(36X60X36)T | | |
| BHC(48X60X36)T | | |
| BHC(48X96X48)T | | |
| BHF(17X30X18)T | | BHF()T - PLACE BURIED HANDHOLE: Consists of labor and material for one (1) buried handhole installed in place, including the base, top cover and mounting hardware, and washed stone or equivalent. The handhole size, amount of 1" washed stone or equivalent and the installation shall be as specified by the engineer. The handhole assembly unit is rated to withstand vehicular traffic. The suffix of "T" indicates a traffic rated handhole. |

| BHF(48x96x36)T | | |
| BHF(48x96x48)T | | |
| BM10M | | BM10M/16M : SUSPENSION STRAND ASSEMBLY UNIT: Consists of one (1) foot of 10M (10,000 lbs) or 16M (16,000 lbs.) suspension strand, supporting hardware, lashing wire, cable straps, and all other accessories required for aerial insert construction in buried plant, but excludes the buried cable. This unit will be used for short sections of aerial construction in buried plant. When such aerial inserts are required, the Engineer will specify the pole, riser guard, guy and anchor assembly units required, plus the appropriate quantity of this unit. The Contractor will be compensated for these units at their respective bid prices plus the appropriate cable units including the vertical length on the end poles. |
| BM16M | | |

| | | |
|-------|--|---|
| BM17 | | BM17 - BURIED PROTECTOR GROUND WIRE ASSEMBLY: This unit consists of the necessary labor and materials to bury one (1) linear foot of #6 AWG ground wire placed at a minimum depth of twelve (12) inches. This unit will also include termination at both ends and installation of ground wire tags. This unit shall be compensated on a per foot basis. This unit is not to be paid in conjunction with any other buried grounding assembly units. |
| BM2 | | BM2 - PEDESTAL GROUND ASSEMBLY (GROUND ROD): Consists of the necessary labor and material for the installation of a 5/8 in. x 8 foot ground rod (installed in undisturbed soil), ground rod clamp and the required length of a #6 AWG copper ground wire connected to an auxiliary grounding connector (included in the housing assembly unit) within the housing (see unit drawing BM2). |
| BM2A | | BM2A - PEDESTAL AUXILIARY GROUND ASSEMBLY: Consists of the necessary labor and material for the installation of a grounding connector to a pole ground wire and the required length of a #6 AWG copper ground wire connected to an auxiliary grounding connector (included in the housing assembly unit) within the housing. This unit also includes placement of a ground wire tag at a height of 6-12 inches above the ground line. This installation will not exceed a distance of ten (10) feet from the pole to the housing assembly unit. |
| BM2AG | | BM2AG : PEDESTAL GROUND ASSEMBLY (EXTRA LUG): Same as Unit BM2A with the addition of a grounding lug to be placed in the pedestal. This unit is to be used when terminating two (2) #6 AWG ground wires within the same pedestal. |
| BM2B | | BM2B : PEDESTAL GROUND ASSEMBLY (BRACKET): Consists of the necessary labor and materials for the installation of a bonding connector bracket within an existing housing. |
| BM2C | | BM2C : EXISTING PEDESTAL BONDING ASSEMBLY: Consists of the necessary labor and material for bonding new or existing cable in an existing facility, such as a pedestal or splice closure. This unit includes a bonding connector, a bonding harness, tie-wraps, cable tags, replacement of gravel and/or sealer, and rearrangement of existing cable. Compensation shall be paid on a per bond basis. |
| BM2D | | Consists of the necessary labor and material for re-bonding an existing cable in a new facility such as a pedestal or splice closure. This unit includes a bonding connector, a bonding harness, tie wraps, and cable tags. Compensation shall be paid on a per bond |

| | | |
|----------------------|--|---|
| BM2P | | Consists of the necessary labor and material for the installation of a bonding connector to a power company owned multi ground neutral power apparatus and the required length of a #6 AWG copper ground wire connected to an auxiliary grounding connector (included in the housing assembly unit) within the housing. Ground Wire is to be placed at a minimum of a depth of twelve (12) inches. This installation will not exceed a distance of ten (10) feet from the power apparatus to the housing assembly unit. This Unit also includes the necessary coordination with the Power Company by the Contractor. The Power Company is responsible for the termination on their equipment. |
| BM52 | | BM52 - RENUMBERING ASSEMBLY UNIT: This unit consists of the necessary labor and material to remove existing numbers and clean where necessary, and renumber an existing housing. This Unit also includes placing the national "Call B4 You Dig" sticker. |
| BM53 | | Consists of one warning post for copper cable, in place as shown on the construction drawing. This unit includes all labor and material to install the warning post. |
| BM53AWM | | This unit consists of the labor and materials required to place (1) at grade cable warning marker in place as shown on construction drawing. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM53AWMF | | This unit consists of the labor and materials required to place (1) at grade cable warning marker in place as shown on construction drawing. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM53F | | Consists of one warning post for Fiber Optic cable, in place as shown on the construction drawing. This unit includes all labor and material to install the warning post. |
| BM53GT | | This unit consists of the labor and materials required to place (1) at grade tone-able isolation point in place as shown on construction drawing. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM53GTF | | This unit consists of the labor and materials required to place (1) at grade tone-able isolation point in place as shown on construction drawing. A suffix of F indicates usage with the placement of fiber optic cable. |

Consists of one (1) lineal foot of steel pipe, with the inside diameter in inches specified in parentheses, installed in place. The number in the first set of parentheses indicates the # of pipes to be placed; the second set of parentheses indicates the pipe inside diameter. This unit includes the boring and placing of pipe and any excavation, backfilling and tamping necessary for the installation of the pipe. The pipe shall be installed at the depth specified by the Engineer. The installed pipe shall be free of any sharp projections to avoid

specified by the Engineer. The installed pipe shall be free of any sharp projections to avoid damage to the outer jacket of the buried cable or wire during its installation in the pipe. The contractor will be compensated for labor and material for the buried cable or wire under separate units. A suffix of "F" indicates fiber optic cable. Unit bands are divided into the continuous run of the bore with less than 50 units, 50-100 units, 100-200 units, 200-500 units or more than 500 units.

| BM60E | BM60E_ - EXISTING PIPE CROSSING EXPOSURE UNIT: This unit consists of labor required to expose (both ends) of an existing pipe crossing. The backfill and tamping required to restore the right-of-way back to original condition, as required. The contractor |

| | | |
|-------------------|--|--|
| BM60EF | | will be compensated for the labor and material for the installation of the buried cable under separate units. This unit is paid on a per site basis. A suffix of "F" indicates fiber optic cable. |
| BM61(2)<=50 | | <p>BM61 () - NON-PIPE CROSSING ASSEMBLY UNIT: Consists of the labor in providing a hole in soil one (1) foot in length and of a diameter in inches specified in parentheses. The depth of the hole below the surface of the ground shall be specified by the engineer. This unit includes the boring, any excavation, backfilling and tamping necessary for the installation. The contractor will be compensated for labor and material for the buried cable or wire under separate units. A suffix of "F" indicates fiber optic cable. A suffix of ">100" indicates that the bore will be greater than 100'. Unit bands are divided into the continuous run of the bore with less than 50 units, 50-100 units, 100-200 units, 200-500 units or more than 500 units.</p> |

| BM61R<=50 | | This unit consists of the necessary additional labor and equipment required to bore through solid rock. This unit is to be used in addition to either the BM60 or BM61 units when rock boring is required. This unit will only be used when pre approved by the Engineer and will be paid on a per foot basis only for that portion of the bore that is through solid rock. A sufflx of "F" indicates fiber optic cable. Unit bands are divided into continuous run of the bore with less than 50 units, 50-100 units, 100-200 units, 200-500 units or more than 500 units. |

| BM61SEB(A) | | BM61SEB - BURIED DROP BORE: This unit consists of the labor to provide a bore in soil of sufficient diameter to accommodate the SEB but not to exceed 2". The depth of the bore on private right-of-way will be the same as the SEB being placed and on public right-of-way will be as required by the specific state DOT. This unit to be paid by the linear foot. |
| BM61SEB(B) | | |
| BM65(2)P | | BM65(2)P - INSTALL SPLIT POLY GUARD: Consists of the necessary labor and material to install One (1) linear foot of split poly guard as specified by the engineer on construction drawings. A sufflx of "F" indicates fiber optic cable. |
| BM65(2)PF | | |

|---------------------|--|--|
| BM71E(36)<=50 | | <p>Consists of one (1) lineal foot of trenching, sawing, etc., measured parallel to the surface of the ground, in rock, including excavation, backfilling and tamping to place cable or wire to the depth specified. This unit will be specified by the Engineer only when field conditions at the site show the existence of rock to a depth required by the specification, which cannot be trenched, plowed or ripped. If extra depth is required, the unit shall be suffixed by "E()", where the required depth in rock shall be shown inside the parentheses. The contractor will be compensated for labor and material for the buried cable or wire under separate units. This unit also includes the removal and proper disposal of rocks as required to restore area to original grade. A suffix of "F" indicates Fiber Optic Cable. Unit bands are divided into continuous run of the saw, trench, etc. with less than 50 units, 50-100 units, 100-200 units, 200-500 units or more than 500 units.</p> |

| BM71SEB | | BM71SEB - SAWN ROCK EXCAVATING UNIT ADDER (SEB): This unit is the same as a BM71 except that the rock will be sawn to standard drop depth. |
| BM72 | | BM72 - ASPHALT ASSEMBLY UNIT ADDER: Consists of labor and material necessary to remove and restore one (1) lineal foot of asphalt pavement (where the removal does not necessitate the breaking up of concrete) measured along the route of the cable or wire. All work shall be performed as required in accordance with federal, state and/or local construction standards. (Pursuant to these federal, state and/or local standards, restoration may include the use of any base and sub-base materials such as concrete, crushed stone, etc.). The contractor will be compensated for labor and material for the buried cable or wire under the separate units. A suffix of F indicates usage with the placement of fiber optic cable. This unit will be paid in addition to the appropriate cable placement units. All materials will be local purchases and will be included in the unit pricing. |
| BM72F | | |

| | | |
|--------|--|---|
| BM73 | | BM73 - CONCRETE ASSEMBLY UNIT ADDER: Consists of the labor and material necessary to remove and restore one (1) square foot of concrete pavement (or any combination of concrete pavement and other surfacing material) where the removal necessitates the breaking up of concrete pavement, measured along the route of cable or wire. All work shall be performed as required in accordance with federal, state and/or local construction standards. (Pursuant to these federal, state and/or local standards, restoration may include the use of any base and sub-base materials such as concrete, crushed stone, etc.) The contractor will be compensated for labor and material for the buried cable or wire separate units. A suffix of F indicates usage with the placement of fiber optic cable. This unit will be paid in addition to the appropriate cable placement units. All materials will be local purchases and will be included in the unit pricing. |
| BM73F | | |
| BM77 | | BM77 - RIGHT OF WAY CLEARING UNIT: This unit consists of the labor to clear + grub heavy growth (Larger than 4" in diameter) to facilitate the placement of buried cable. This unit will only be paid when predesignated by the engineer or pre approved by Windstream Management. This unit will be compensated for on a per lineal foot basis and includes the proper disposal of all material. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM77F | | |
| BM80 | | BM80 - RISER GUARD PLACEMENT UNIT: This unit consists of the labor and materials to place a 1" x 8ft Riser guard. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM80F | | |
| BM80P | | This unit consists of the labor and materials to place a 1" x 8FT Riser guard. A suffix of (P) indicates using a plastic riser guard and (F) indicates usage with the placement of fiber optic cable. |
| BM80PF | | |
| BM81 | | BM81 - RISER GUARD PLACEMENT UNIT: This unit consists of the labor and materials to place a 2 3/16" x 8ft Riser guard. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM81F | | |
| BM81P | | This unit consists of the labor and materials to place a 3" x 8FT Riser guard. A suffix of (P) indicates using a plastic riser guard and (F) indicates usage with the placement of fiber optic cable. |
| BM81PF | | |
| BM82 | | BM82 - RISER GUARD PLACEMENT UNIT: This unit consists of the labor and materials to place a 3 3/16" x 8ft Riser guard. A suffix of F indicates usage with the placement of Fiber Optic Cable. |
| BM82F | | |
| BM82P | | This unit consists of the labor and materials to place a 4" x 8FT Riser guard. A suffix of (P) indicates using a plastic riser guard and (F) indicates usage with the placement of fiber |

| | | |
|------------------|--|---|
| BM82PF | | (1) indicates using a plastic riser guard and (F) indicates usage with the placement of fiber optic cable. |
| BM83(A) | | BM83 - RISER GUARD PLACEMENT UNIT: This unit consists of labor and material for the placement of a 7/8" x 5ft PVC pipe riser guard installed on building or pole. |
| BM83(B) | | |
| BM83T(A) | | BM83T - MOBILE HOME POST PLACEMENT UNIT: This unit consists of labor and material for the installation of a mobile home post, and placement of SEB into the channel provided. The post shall be driven with a soft metal or wooden driver so as not to damage the finish. |
| BM83T(B) | | |
| BM84SQ | | This unit consists of the labor and materials required to place (1) squirrel cap at the opening of a 3" or 4" riser guard on a pole. The cap will need to be trimmed to accommodate the size of cable going up the pole. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM84SQF | | |
| BM85ADPT | | This unit consists of the labor and materials required to place (1) U Guard adapter at the opening of a 2" - 4" riser guard at the base of a pole. In some cases the adapter will need to be trimmed to accommodate the size of cable going up the pole. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM85ADPTF | | |
| BM85BOOT | | This unit consists of the labor and materials required to place (1) U Guard boot at the opening of a 2" - 4" riser guard at the base of a pole. In some cases the boot will need to be trimmed to accommodate the size of cable going up the pole. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM85BOOTF | | |
| BM86(2)GIP(B) | | This unit consists of labor and material for the installation of a galvanized steel pipe on standoff brackets on a pole or wall. The number in parentheses indicates the diameter of the galvanized pipe. This Unit to be paid per foot. a "F" in parentheses indicates use with Fiber Optic Cable. |
| BM86(2)GIP(B)(F) | | |
| BM86(2)GIP(U) | | |
| BM86(2)GIP(U)(F) | | |

| BM86(2)STRAP(B) | | | |
| BM86(2)STRAP(B)(F) | | | |
| BM86(2)STRAP(U) | | This unit consists of labor and material for the installation of a galvanized steel pipe on standoff brackets on a pole or wall. The number in parentheses indicates the diameter of the galvanized pipe. This Unit to be paid per foot. a "F" in parentheses indicates use with Fiber Optic Cable. | |
| BM86(2)STRAP(U)(F) | | | |
| BM86(4)STRAP(B) | | | |
| BM86(4)STRAP(B)(F) | | | |
| BM86(4)STRAP(U) | | | |
| BM86(4)STRAP(U)(F) | | | |
| BM95A (2) | | | BM95A () ₂ CONNECT FROM AERIAL CBL TO SEB: Consists of the labor and material necessary to install a terminal connection from an aerial facility to a buried drop wire as specified in the BM95A special unit drawing. It will also include the mounting of the terminal housing and the termination of the cable pairs and placing of cable guard. Terminal to be located at the bottom of the pole. Numbers in parentheses indicates the terminal pair count. |
| BM95A (6) | | | |
| BM95A(2)AL | | BM95A()AL -CONNECT FROM AERIAL CA TO SEB (ALARM): Consists of the labor and material necessary to install a terminal connection from an aerial facility to a buried drop wire for use with alarm circuits as designated by the engineer. It will also include the mounting of the terminal housing and the termination of the cable pairs and placing of two (2) 1" x 8ft cable guard. Numbers in parentheses indicates the terminal pair count. This unit also includes the strapping of buried drop wire up the pole. | |
| BM95A(6)AL | | | |
| BM95B(2) | | BM95B() ₂ CONNECT FROM BURIED CA TO SEA (BOTTOM): Consists of the labor and materials necessary to provide a connection from a buried plant terminal housing to an aerial drop wire as specified in the BM95B Special Unit Drawing. Where the distance from the buried housing to the pole exceeds 10ft, the contractor will be compensated for the additional length under a SEB unit. This unit includes the necessary labor and materials to properly bond and tag cable, place cable guard, and regravol pedestal. It will also include the mounting of the terminal housing and the termination of the cable pairs. The terminal is to be located at the bottom of the pole. Number in parentheses indicates the terminal pair count. Splicing of the cable pairs within the pedestals will be paid under the HC Units. | |
| BM95B(6) | | | |
| BM95T(6) | | BM95T() CONNECT FROM BURIED CBL TO SEA (TOP): Consists of the labor and materials necessary to provide a connection from a buried plant terminal housing to an aerial drop wire as specified in the BM95T special unit drawing. Where the distance from the buried housing to the pole exceeds 10ft, the contractor will be compensated for the additional length under a SEB unit. This unit includes the necessary labor and materials to properly bond + tag cable, place cable guard, strapping of cable up pole to the terminal | |

| | | |
|--------------|--|---|
| BM95T(12) | | properly bond & tag cable, place cable guard, strapping of cable up pole to the terminal housing and regravol pedestal. It will also include the mounting of the terminal housing and the termination of the cable pairs. The unprotected terminal will be mounted at or near the point on the pole where the drop(s) attach (maintain separation from power facilities per NESC). Number in parentheses indicates the terminal pair count. Splicing of the cable pairs within the pedestals will be paid under the HC Units. |
| BM99 | | BM99; PROTECTION AND WARNING CROSSING UNIT: This unit consists of the necessary labor and material for the placement of a 2"X12"X10ft treated plank where designated by Engineering. This unit is paid on a per each basis. A suffix of F indicates usage with the placement of fiber optic cable. |
| BM99F | | |
| BM99F | | This Unit includes the labor and material required to install a busbar ground kit in a handhole, pedestal, or other location. Contractor to supply any miscellaneous materials required for mounting. |
| BMCD(1.75)A | | BMCD() -CORE DRILL UNIT: This unit consists of labor and material to core drill a 1 3/4" to 4 3/4" diameter hole through a concrete floor or wall and to properly seal hole around cable or conduit after installation. Number in parentheses indicates hole size to be cored. A suffix of "F" indicates fiber optics. |
| BMCD(1.75)B | | |
| BMCD(1.75)FA | | |
| BMCD(1.75)FB | | |

| | | |
|-------------|--|--|
| BMCD(4.75)U | | |
| BMFA | | BMFA - PLACE FIRE ANT CONTROL: This unit consists of labor and material to place Fire Ant control and Pesticide Warning Label in Unit specified by the Engineer. A suffix of "F" indicates fiber optics. |
| BMFAF | | |
| BMFD(A) | | BMFD - PLACE FIRE RETARDANT DUCT: This unit consists of all labor and materials to place One (1) foot of 1" fire retardant (Plenum) split duct. A suffix of "F" indicates fiber optics. |
| BMFD(A)F | | |
| BMFD(B) | | |
| BMFD(B)F | | |
| BMFD(U) | | |
| BMFD(U)F | | |
| BMJT(30) | | BMJT() - OPENING OF JOINT USE TRENCH: This unit will provide for the opening of a joint use trench that will allow for the depth (in inches), specified in parentheses, from the top of the last utility placed to the final grade. This unit will also include backfilling and tamping of the trench and will be paid on a per foot basis. The cable installed will be paid under the appropriate buried cable unit (material only). A suffix of "F" indicates fiber optic cable. |
| BMJT(48) | | |
| BMJT(48)F | | |
| BMJTC | | BMJTC - EXTRA CLEANUP, SEEDING AND MULCHING UNIT: This unit will provide for extra cleanup, seeding and mulching where required by the Engineer and is paid on a per lineal foot basis. All material for this unit will be provided by the contractor. A suffix of "F" indicates fiber optic cable. |
| BMJTCF | | |
| BMSB | | BMSB - high, manufactured silt screen. A suffix of "F" indicates fiber optic cable. |
| BMSBF | | |
| BMSBH | | BMSBH ₂ below the surface of the ground and each bale retained by two posts (such as a wood 2"x4") driven behind each bale of hay to a minimum depth of 14". Also the contractor must maintain the barrier until vegetation is re-established. This unit also includes the removal and proper disposal of the barrier at a time specified by the engineer and/or after the re-establishment of vegetation. This unit may be specified by the Engineer at creek or stream crossings or at any location where erosion threatens any stream, creek and/or private property. A suffix of "F" indicates fiber optic cable. |
| BMSBHF | | |
| BMSOD | | BMSOD - SOD RESTORATION UNIT: This unit is for the labor and material for sod restoration/replacement and will be paid per square foot. This is not applicable with SEB Units. A suffix of "F" indicates fiber optic cable. |
| BMSODF | | |

| | | |
|-----------------|--|---|
| BMSP4 | | This unit consists of the labor required to open a pit for a buried splice of 12 pair or larger cable. This unit is paid on a per lineal foot basis, based on the total exposed length of cable and includes the return trip to backfill, tamp and restore construction area to its original condition after all work is completed. Pit size is 4' wide at pit bottom. Pit to be exposed to a minimum of 12" below cable depth. Exposure of cables smaller than 12 pair will be compensated for using the WBM27 Unit. |
| BMSP4F | | |
| BMWL | | |
| BMWLF | | |
| CF6X22 | | CF__X__ - FIGURE 8 COPPER CABLE ASSEMBLY UNIT: Consists of one (1) foot of figure 8 copper cable in place including all supporting hardware in accordance with construction sheets. |

DOUBLE LASHED.

Consists of one (1) foot of aerial filled fiber optic cable in place including supporting messenger of galvanized steel strand, lashing wire, attachments to strand and strand in accordance with the construction sheets. Suffix of E indicates cables are lashed to existing strand. Unit bands are divided into the total footage of the cable, fiber, etc. per work order with less than 750 units, 750-3000 units, or more than 3000 units.

| | | |

| HAPS(9.5)V3M | | HAPS()V3M - INSTALL FIRE RETARDANT SINGLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant single entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HAPT(7)3M | | HAPT()3M - INSTALL TRIPLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a triple entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HAPT(9.5)3M | | |
| HAPT(12)3M | | |
| HAPT(9.5)V3M | | HAPT()V3M - INSTALL FIRE RETARDANT TRIPLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant triple entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HAPT(12)V3M | | |
| HAS(3X33) | | HAS() - AERIAL FREE BREATHING SPLICE CLOSURE: Consists of the necessary labor and material for a splice closure installed in place. Includes the material and all necessary labor to install the closure in accordance with the manufacturers and Windstream's instructions. It also includes opening the sheath or jacket of the cable, bonding of cable shields and all necessary hardware items to support the cable adjacent to the closure and to terminate the lashing wire. Bonding of additional cable entrances will be compensated for under the PM2C unit. The closure diameter and length to be placed will be indicated inside the parentheses. |
| HAS(5X33) | | |
| HAS(7X33) | | |
| HAS(9X36) | | |
| HAST(3)(10) | | This unit will also include the opening of the cable sheath and the shield bonding of (2) two cable entrances. Bonding of additional cable entrances will be compensated for under the PM2C unit. The first set of parentheses will indicate the diameter of the closure and the second set of parentheses indicates the block pair count. |
| HAST(3)(25) | | |
| HAST(5)(10) | | |
| HAST(5)(25) | | |
| HBF(2) | | HBF() - BURIED FILLED SPLICE CLOSURE ASSEMBLY: Consists of a buried splice closure and the closure manufacturer's provided encapsulating material, installed in place. Includes the material and all necessary labor to install the closure in accordance with the manufacturer's and Windstream's instructions. It also includes opening the sheath or jacket of the cable, bonding of cable shields and installing closure in a housing or handhole if necessary. Cable splicing and all excavation shall be compensated under separate units. Number in parentheses indicates pair count. □ |

| HBFO(12) | | HBFO() - BURIED FIBER SPLICE CLOSURE ASSEMBLY: Consists of a buried pressurized fiber optic splice closure and organizer installed in place in a housing or handhole if necessary. Includes the material and all necessary labor to install the closure in accordance with the manufacturers and Windstream's instructions. It also includes opening the sheath or jacket of the cable, bonding of cable shields and installing closure in a housing or handhole if necessary. Cable splicing shall be compensated under other units. Number in parentheses indicates fiber count. |
| HBFO(24) | | |
| HBFO(36) | | |
| HBFO(48) | | |
| HBFO(60) | | |

| HBFO(96)V | | |
| HBFO(144)V | | |
| HBFO(EXP)3M | | HBFO(EXP)3M - INSTALL FIBER CLOSURE CABLE ADDITION KIT: Consists of a cable addition kit installed on a buried pressurized fiber optic splice closure. Includes the material and all necessary labor to install the cable addition kit and pressure testing in accordance with the manufacturer's and Windstream's instructions. |

| | | |
|-------------------|--|--|
| HBFO(EXP)V3M | | HBFO(EXP)V3M - INSTALL FIBER CLOSURE CABLE ADDITION KIT: Consists of a cable addition kit installed on a buried fire retardant fiber optic vault splice closure. Includes the material and all necessary labor to install the cable addition kit. |
| HBFO(GRDK)3M | | HBFO(GRDK)3M - INSTALL EXTERNAL GROUND ISOLATION KIT: Consists of an external isolation ground kit installed on a buried pressurized fiber optic splice closure. Includes the material and all necessary labor to install the cable addition kit and pressure testing in accordance with the manufacturer's and Windstream's instructions. |
| HBFO(GRDK)V3M | | HBFO(GRDK)V3M - INSTALL EXTERNAL GROUND ISOLATION KIT: Consists of an external isolation ground kit installed on a buried fire retardant fiber optic vault splice closure. Includes the material and all necessary labor to install the cable addition kit. |
| | | |
| HBP(9.5X38)V | | HBP(X)V - INSTALL PREFORMED VAULT CLOSURE: Consists of the necessary labor and materials to install a Preformed stainless steel fire retardant vault closure. This unit will also include the opening of the cable sheath and the shield bonding of (2) two cable entrances. The enclosure diameter and length will be specified in parentheses. If more than (2) two cable entrances are needed, bonding of additional cables will be done under the BM2C unit. |
| HBP(12.5X38)V | | |
| HBPD(7)V3M | | HBPD()V3M ¿ INSTALL FIRE RETARDANT DOUBLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant double entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HBPD(9.5)V3M | | |
| HBPD(12)V3M | | |
| HBPS(7)V3M | | HBPS()V3M ¿ INSTALL FIRE RETARDANT SINGLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant single entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HBPS(9.5)V3M | | |
| HBPT(7)V3M | | HBPT()V3M ¿ INSTALL FIRE RETARDANT TRIPLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant triple entry end plate, when placing, replacing or rearranging the HAP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |

| HC3-5 (B)>600 | | |
| HC3-5 (U)<=100 | | |
| HC3-5 (U)>100<=300 | | HC4 () JUMPER WIRE ATTACHMENT: Consists of the labor and material for placing and terminating both ends of one (1) pair of cross-connect jumper wires on cross-connecting blocks and/or modules. This unit will include work which may be performed in cross-connect cabinets and/or CO frames. |
| HC4(A) | | |
| HC4(B) | | |
| HC4(U) | | HCMW - MAINTENANCE WINDOW ADDER: This unit will be used for the additional labor and equipment required to make copper splices during the maintenance window as directed by Engineering or Windstream Management. This unit will be paid on a per pair basis. |
| HCMW (A) | | |
| HCMW(B) | | |
| HCMW(U) | | HCT - TESTING OF EXISTING CABLE PAIRS: This unit consists of the labor, equipment and incidental material necessary for the testing and verification of one (1) existing cable pair as required by the Engineer. HCT will be paid per cable pair and includes relacing of cables in closures. No conductor splicing or capping is included in this unit. HCT will be payable on one end only of all cable pairs tested. |
| HCT (A) | | |
| HCT (B) | | |
| HCT (U) | | HCTP - TONE AND TAG: This unit consists of the labor and equipment necessary to tone |
| HCTP(A) | | |
| HCTP(B) | | |

| | | |
|--------------|--|---|
| HCTP(U) | | and tag paper/pulp cable prior to splicing. Like standard splicing units, HCTP will be paid per cable pair and will include the toning and tagging of both ends. This unit will be paid in conjunction with the appropriate splicing unit. |
| HCTP+(A) | | |
| HCTP+(B) | | |
| HCTP+(U) | | |
| HCTR(A) | | This unit consists of the labor, test equipment and material necessary for the testing, isolation, verification and repair of existing cable pairs in an cable opening as required by the Engineer. This unit is pade from frame to customer premise as determined by the engineer for any record verification. This Unit includes all splice work and will not be paid with any other Unit unless pre-approved by the Windstream Engineer. The contractor is to provide any minor materials required for this Unit. |
| HCTR(B) | | |
| HCTR(U) | | |
| HCTRHDSL2(A) | | This unit consists of the labor, test equipment and material necessary for the testing, record verification (cable pair and repeater slot), and repair of one (1) existing HDSL2 cable pair as required by the Engineer for service order activity. This unit is paid for each span section between the frame and the customer premise as determined by the Engineer. A Span Section is defined as a section from the frame to the first repeater, between any two repeaters, or from the end repeater to the customer premise or remote. The span will be classified based on the type of cable (A,B, or U) with the largest percentage of footage in that span. □ □ |
| HCTRHDSL2(B) | | |
| HCTRHDSL2(U) | | |
| HCTRHDSL4(A) | | This Unit includes all splice work, including load and bridge tap removal, and will not be paid with any other Unit unless pre-approved by the Windstream Engineer. Splicing of repeater tails, if required, will be paid with another Unit. The Contractor is to provide any minor materials required for this Unit. This Unit is to be paid based on the cable appearance at the customer premise. |
| HCTRHDSL4(B) | | |
| HCTRHDSL4(A) | | This unit consists of the labor, test equipment and material necessary for the testing, record verification (cable pair and repeater slot), and repair of two (2) existing HDSL4 cable pairs as required by the Engineer for service order activity. This unit is paid for each span section between the frame and the customer premise as determined by the Engineer. A Span Section is defined as a section from the frame to the first repeater, between any two repeaters, or from the end repeater to the customer premise or remote. The span will be classified based on the type of cable (A,B, or U) with the largest percentage of footage in that span. □ □ |
| HCTRHDSL4(B) | | |

| | | |
|--------------|--|---|
| HCTRHDSL4(U) | | This Unit includes all splice work, including load and bridge tap removal, and will not be paid with any other Unit unless pre-approved by the Windstream Engineer. Splicing of repeater tails, if required, will be paid with another Unit. The Contractor is to provide any minor materials required for this Unit. This Unit is to be paid based on the cable appearance at the customer premise. |
| HCTRPOTS(A) | | This unit consists of the labor, test equipment and material necessary for the testing, record verification and repair of one (1) existing POTS cable pair as required by the Engineer for service order activity. This unit is paid for each 1000 foot section between the frame and the customer premise as determined by the Engineer. This Unit includes all splice work, including load and bridge tap removal if required, and will not be paid with any other Unit unless pre-approved by the Windstream Engineer. The Contractor is to provide any minor materials required for this Unit. This Unit is to be paid based on the cable appearance at the customer premise. |
| HCTRPOTS(B) | | |
| HCTRPOTS(U) | | |
| HCTRSPAN(A) | | This unit consists of the labor, test equipment and material necessary for the testing, record verification (cable pair and repeater slot), and repair of two (2) existing T1 cable pairs as required by the Engineer for service order activity. This unit is paid for each span section between the frame and the customer premise as determined by the Engineer. A Span Section is defined as a section from the frame to the first repeater, between any two repeaters, or from the end repeater to the customer premise or remote. The span will be classified based on the type of cable (A,B, or U) with the largest percentage of footage in that span. |
| HCTRSPAN(B) | | |
| HCTRSPAN(U) | | |
| HCTRT1AMI(A) | | This unit consists of the labor, test equipment and material necessary for the testing, record verification (cable pair and repeater slot), and repair of two (2) existing T1 cable pairs as required by the Engineer for service order activity. This unit is paid for each span section between the frame and the customer premise as determined by the Engineer. A Span Section is defined as a section from the frame to the first repeater, between any two repeaters, or from the end repeater to the customer premise or remote. The span will be classified based on the type of cable (A,B, or U) with the largest percentage of footage in that span. This Unit includes all splice work, including load and bridge tap removal, and will not be paid with any other Unit unless pre-approved by the Windstream Engineer. Splicing of repeater tails, if required, will be paid with another Unit. The Contractor is to provide any minor materials required for this Unit. |
| HCTRT1AMI(B) | | |
| HCTRT1AMI(U) | | |
| HCV(A) | | This unit consists of the labor, equipment and incidental material necessary for ANV of one (1) existing cable pair as required by the Engineer. HCV will be paid per cable pair and includes relacing of cables in closures. No conductor splicing or capping is included in this unit. HCV will be payable on one end only of all cable pairs tested. |
| HCV(B) | | |
| HCV(U) | | |

| | | |
|----------------|--|---|
| HO1(A)<=12 | | <p>Consists of all labor and material necessary to fusion splice and test one (1) glass fiber in any cable in accordance with RUS splicing standards. The labor shall include initial splice loss measurement, splicing and stowing the spliced fiber in a fiber organizer. Attenuation loss shall be minimized to meet Windstream and/or industry standards. This unit also requires that a hard copy of the test results be posted with the as built job package. The installation of the fiber organizers shall be paid under the appropriate splice closure unit. Unit bands are divided into per splicing location (ped, closure, cross connect cabinet, or other splicing point) with less than 12 units, 12-24 units, 24-48 units, 48-96 units, 96-144 units or more than 144 units.</p> |

| HO2+(U) | | |
| HOMW(A) | | This unit will be used for the additional labor and equipment required to make fiber splices during the maintenance window as directed by Engineering or Windstream Management. This unit will be paid on a per fiber strand basis. Splicing to be paid as a separate Unit. |
| HOMW(B) | | |
| HOMW(U) | | |
| HORT(A) | | HORT - FIBER OPTIC REEL TEST: This unit consists of the labor and equipment necessary to test one (1) glass fiber in any cable for damage while on the reel in accordance with recommended industry practices in order to compare manufacturers loss specifications. This unit also requires that a hard copy of the test results be posted with the as built job package. This unit is only to be paid when the fiber optic cable is supplied by Windstream. |
| HORT(B) | | |
| HORT(U) | | |
| HUENCAP | | HUENCAP - ENCAPSULANT: Labor and Material to install up to 750 grams of encapsulant in any HU closure as designated by the Engineer. Unit to be paid on a per 750 gram basis |
| HUO(12) | | HUO() - UG FIBER SPLICE CLOSURE ASSEMBLY: Consists of an underground pressurized fiber optic splice closure and organizer installed in place. Includes the material and all necessary labor to install the closure and pressure testing in accordance with the manufacturers and Windstream's instructions. It also includes opening the sheath or jacket of the cable, bonding of cable shields and all necessary hardware items to support the cable adjacent to the closure on the cable racks in the manhole. Cable splicing shall be compensated under the appropriate splicing units. Number in parentheses indicate fiber count. |

| HUP3S(6.5) | | |
| HUP3S(9.5) | | |
| HUPD(7)3M | | HUPD()3M - INSTALL DOUBLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a double entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPD(9.5)3M | | |
| HUPD(12)3M | | |
| HUPD(12)V3M | | HUPD()V3M - INSTALL FIRE RETARDANT DOUBLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant double entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPD(9.5)V3M | | |
| HUPS(7)3M | | HUPS()3M - INSTALL SINGLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a single entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPS(9.5)3M | | |

| | | |
|--------------------------------|--|---|
| HUPS(9.5)V3M | | HUPS()V3M - INSTALL FIRE RETARDANT SINGLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant single entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPT(7)3M | | HUPT()3M - INSTALL TRIPLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a triple entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPT(9.5)3M | | |
| HUPT(12)3M | | |
| HUPT(9.5)V3M | | HUPT()V3M - INSTALL FIRE RETARDANT TRIPLE ENTRY ENDPLATE: Consists of the necessary labor and material to install a fire retardant triple entry end plate, when placing, replacing or rearranging the HUP unit. The size of the end plate will be shown in parenthesis. This will also include flash testing. |
| HUPT(12)V3M | | |
| 1 1/2-3 TON TRUCK W/TOOLS (A) | | Hourly equipment rate for 1 1/2 to 3 ton pickup truck including all required tools. Not to be used in conjunction with placement units. This unit does not include labor. A suffix of (A) designates Aerial, (B) designates Buried, (F) designated Fiber Optics, (U) designates Underground, and a suffix of (TV) indicates CATV use. |
| 1 1/2-3 TON TRUCK W/TOOLS (A)F | | |
| 1 1/2-3 TON TRUCK W/TOOLS (B) | | |
| 1 1/2-3 TON TRUCK W/TOOLS (B)F | | |

| | | |
|--------------------------------|--|--|
| LINE/DIGGER TRUCK W/TOOLS (P) | | P indicates use with pole placement. A suffix of JO indicates use with joint-owned pole placement. |
| LINE/DIGGER TRUCK W/TOOLS (U) | | |
| LINE/DIGGER TRUCK W/TOOLS (U)F | | |
| MANHOLE PACKAGE (U) | | MANHOLE PKG (INCL ALL REQUIRED SAFETY EQUIP) (U): Equipment rate per hour for manhole package as specified by Windstream. This package is to include all required safety equipment. This unit is only to be used in conjunction with call out / hourly work. A suffix of F indicates use with Fiber Optic installations. |
| MANHOLE PACKAGE (U)F | | |
| PLOW CABLE TRUCK TRAILER (B) | | PLOW, DROP INCL TRUCK AND TRAILER: Equipment rate per hour for a drop plow including truck and trailer. Not to be used in conjunction with placement units. |
| PLOW CABLE TRUCK TRAILER (B)F | | |
| PLOW DROP TRUCK TRAILER (B) | | |
| PLOW DROP TRUCK TRAILER (B)F | | |
| PORTABLE GENERATOR 6 KW (A) | | Equipment rate per hour for a 6KW portable generator, including all cords and lights. Not to be used in conjunction with placement units. A suffix of F indicates use with Fiber Optic installations. A suffix of E indicates use with installation of electronic equipment. |
| PORTABLE GENERATOR 6 KW (A)F | | |
| PORTABLE GENERATOR 6 KW (B) | | |
| PORTABLE GENERATOR 6 KW (B)F | | |
| PORTABLE GENERATOR 6 KW (E) | | |
| PUMP, WATER (B) | | Equipment rate per hour for a water pump including all hoses and required accessories. Not to be used in conjunction with other placement units. A suffix of F indicates use with Fiber Optic installations. |
| PUMP, WATER (B)F | | |
| PUMP, WATER (U) | | |
| PUMP, WATER (U)F | | |
| TAMP, DIRT MECHANICAL (B) | | TAMP, DIRT MECHANICAL (B): Equipment rate per hour for a mechanical dirt tamp of any size. Not to be used in conjunction with placement units. A suffix of (B) indicates buried, (F) indicates use with Fiber Optic installations, (U) designates Underground. |
| TAMP, DIRT MECHANICAL (B)F | | |
| TAMP, DIRT MECHANICAL (U) | | |
| TAMP, DIRT MECHANICAL (U)F | | |
| TRAILER, CABLE (A) | | TRAILER, CABLE (A): Equipment rate per hour for a cable trailer capable of handling up to a 96" reel. Not to be used in conjunction with cable placement units. A suffix of F indicates use with Fiber Optic installations. |
| TRAILER, CABLE (A)F | | |
| TRAILER, CABLE (B) | | |
| TRAILER, CABLE (B)F | | |
| TRAILER, CABLE (U) | | |

| TRAILER, POLE (JO) | | TRAILER, POLE |
| TRAILER, POLE (P) | | |
| OFNP12 | | Consists of one (1) foot of plenum rated fiber optic cable routed and placed, and secured as per Windstream Engineer's instructions. Normal installation practices for plenum rated fiber are expected should be followed. Contractor to provide misc materials such as ties |
| OFNP12(I) | | |
| OFNP24 | | |
| OFNP24(I) | | |

| | | |
|----------------|--|---|
| OFNP48 | | fiber are expected should be followed. Contractor to provide misc materials such as eye wraps, etc. Suffix of (I) indicates pulling unit inside a duct. Splicing of fiber to be paid separately. |
| OFNP48(I) | | |
| OFNP96 | | |
| OFNP96(I) | | |
| | | |
| P1-3G12(I)(A) | | P1-3G(I)- INSTALL BUILDING ENTRANCE PROTECTOR: Consists of a Building Entrance Protector (BEP) installed in place, with necessary hardware, jumper/wire terminations, stenciling and bonding and grounding of cable and BEP in accordance with the Construction Sheets. A 3G type installation indicates a BEP connected to a multi-neutral ground. The Gas Tube Protection Modules will be compensated for under separate units. If a Multi-neutral ground is not present, a ground rod should be driven and will be compensated for under the BM2 Unit. An "I" in parentheses indicates an Indoor BEP, an "O" indicates an Outdoor BEP. |
| P1-3G12(I)(B) | | |

| P1-3G100(O)(B) | | |
| P1-3G100(O)(U) | | |
| P1-MOD(A) | | P1-MOD - BUILDING ENTRANCE PROTECTION MODULE: Consists of a labor and material to install one (1) 5 pin protection module in a BEP. |
| P1-MOD(B) | | |
| P1-MOD(U) | | |
| | | |
| PC25B | | PC__ - INSTALL IDC CROSS CONNECT BLOCK: Labor and material to install one (1) IDC type cross connect block in a cross connect cabinet. B = Blue block for Distribution Pairs; G = Green Block for Feeder Pairs. Splicing of blocks will be compensated for under HC Units. |
| PC25G | | |
| PC50B | | |
| PC50G | | |

| | | |
|------------|--|--|
| PC25S | | PC__S - INSTALL BINDING POST CROSS CONNECT BLOCK: Labor and material to install one (1) Binding Post (Screw Terminal) type cross connect block in a cross connect cabinet. Splicing of blocks will be compensated for under HC Units. |
| PE1-3 | | PE_-_ - INSTALL GUY ASSEMBLY UNITS: Labor and material to install strand, hardware, guy guard and ground connection where required. For guying purposes, when a cable messenger strand is extended one or more spans to a deadend structure, the strand in each such span shall be considered as an overhead guy for the appropriate size of strand used. A PE-1 type refers to a Down Guy and a PE-2 refers to an Overhead Guy. A suffix of "G" indicates a Ground Connection is required. A suffix of "GC" indicates a Ground Connection is required using C-Tap connectors. JO indicates a joint owned pole. Compensation for PE-2 will be on a per span basis. A suffix of TV indicates Cable TV |

| PE2-4GC | | |
| PF1-5A | | PF1-5A - INSTALL EXPANDING ANCHOR ROD ASSEMBLY: Consists of labor and material to install one (1) anchor rod with expanding bust pot complete and in place, ready for attaching the guy strand. This anchor is rated for a minimum of 10,000 pounds. The suffix of "A" indicates a Twineye. |
| PF1-5A(JO) | | |
| PF1-7A | | PF3-5A - INSTALL HELIX ANCHOR ASSEMBLY UNIT: Consists of labor and material to install one (1) Helix screw anchor with rod complete and in place, ready for attaching the guy strand. This anchor is rated for a minimum of 10,000 pounds in Class 6 Soil. The suffix of "A" indicates a Tripleye. |
| PF1-7A(JO) | | |
| PF3-5A | | PF5-3A - INSTALL ROCK ANCHOR: Consists of labor and material to install one (1) anchor with rod, complete and in place, ready for attaching the guy strand. This anchor is rated for 23,000 pounds. The suffix of "A" indicates a Tripleye. |
| PF3-5A(JO) | | |
| PF5-3A | | PF7-1 - INSTALL AUXILIARY ANCHOR EYE: Labor and material to install an Auxiliary |
| PF5-3A(JO) | | |
| PF7-1 | | |

| | | |
|-------------|--|--|
| PF7-1(JO) | | Eye to an anchor Rod. |
| PG18-2 | | PG18-2 INSTALL 2 PR NON-PROTECTED TERMINAL: This unit consists of the necessary labor and material to install a 2 pair non-protected terminal, to facilitate the splicing of drop wires or inside wires. This unit can be mounted on a pole or house. |
| PG18-6 | | PG18-6- INSTALL 6 PR NON-PROTECTED TERMINAL: This unit includes all labor and material to install a 6 pair non-protected terminal, to facilitate the splicing of drop wires or inside wires. This unit can be mounted on a pole or house. |
| PG18-10 | | PG18-10- INSTALL 10PR STRAND MOUNTED TERMINAL: This unit consists of the necessary labor and material to install a ten (10) pair strand/pole mounted terminal with a 10-foot stub. Splicing will be compensated for under the HC Units. |
| PG18-10L | | PG18-10- INSTALL 10PR STRAND MOUNTED TERMINAL: This unit consists of the necessary labor and material to install a ten (10) pair strand/pole mounted terminal with a 10-foot left hand stub. Splicing will be compensated for under the HC Units. |
| PG18-25 | | PG18-25- INSTALL 25PR STRAND MOUNTED TERMINAL: This unit consists of the necessary labor and material to install a twenty-five (25) pair strand/pole mounted terminal with a 10-foot right hand stub. Splicing will be compensated for under the HC Units. |
| PG18-25L | | PG18-25- INSTALL 25PR STRAND MOUNTED TERMINAL: This unit consists of the necessary labor and material to install a twenty-five (25) pair strand/pole mounted terminal with a 10-foot left hand stub. Splicing will be compensated for under the HC Units. |
| PG31-25S | | PG31() - INSTALL STRAND MOUNTED LOAD COIL: This unit consists of the necessary labor and material to install a strand mounted load coil as specified by the engineer. This coil ranges in size from 25 pr. to 200 pr. The number in parentheses indicates mH rating. This unit does not include Splicing. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. |
| PG31-50S | | |
| PG31-100S | | |
| PG31-200(S) | | |
| PG34-25S | | PG34() - INSTALL POLE MOUNTED LOAD COIL: This unit consists of the necessary labor and material to install a pole mounted load coil, including pole mount bracket and bonding as specified by the engineer. This coil ranges in size from 25 pr. to 600 pr. The number in parentheses indicates mH rating. This unit does not include Splicing. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. |

| PG34-200S | | |
| PG34-300S | | |
| PG34-600S | | |
| PG35-1S | | PG35-1S _z INSTALL STACKABLE LOAD COIL: This unit consists of an encapsulated, stackable load coil in-place, in aerial closure. This unit includes all labor and material to install the coil or coils. This unit ranges in size from 1 to 25pr. Parentheses depicts load coil size. Example _z a 3 pair coil would be shown as PG35-3 indicates the placement of 3 |

| | | |
|---------------|--|--|
| PG35-1S(E) | | single pair load coils and Kwik Case. This unit does not include splicing. The number in parentheses indicates mH rating. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. Unit suffixed with an (E) indicates placement of a one pair load coil within an existing Kwik Case. |
| PGM35-1(S) | | This unit consists of the necessary labor and material to install a stackable, encapsulated mini load coil in an aerial terminal or closure. This unit includes all labor and material to install the coil or coils. This unit ranges in size from 1 to 25pr. Parentheses depicts load coil size. Example - a 3 pair coil would be shown as PGM35-3 indicates the placement of 3 single pair load coils and Kwik Case. This unit does not include splicing. The number in parentheses indicates mH rating. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. Unit suffixed with an (E) indicates placement of a one pair load coil within an existing Kwik Case. |

| PGM35-25(S) | | |
| PM1 | | PM1 - INSTALL POLE GROUND WIRE: Consists of labor and material to place #6 bare Copper Ground Wire up a pole - length of Ground Wire as required. Ground wire to be stapled no more than 18" apart and a 5ft coil of bare ground wire attached to the butt of the pole or, in lieu of Butt Grounding, the #6 ground wire can be attached to an existing ground rod. This unit to be paid on a per each basis. |
| PM1(JO) | | |

| | | |
|---------------|--|---|
| PM11 | | PM11 - INSTALL GUY GUARD: Consists of labor and materials to install a guy guard. |
| PM11(JO) | | |
| PM12(5) | | PM12(5) - INSTALL SIDEWALK GUY ASSEMBLY: Consists of all labor and material to install a sidewalk guy arm. The guy, guy guard and anchor assembly units will be specified separately. The length in feet of a single piece of 2 in. galvanized steel pipe shall be indicated in the parentheses. |
| PM12(5)(JO) | | |
| PM14 | | PM14 - INSTALL PUSH BRACE: Consists of labor and materials to install a Pole Push Brace Assembly. |
| PM14(JO) | | |
| PM2 | | PM2 - INSTALL POLE GROUND WIRE ASSEMBLY: Consists of labor and material to place a 5/8" x 8ft Ground Rod attached to a #6 Bare Copper Ground Wire and stapled up a pole - length of Ground Wire as required. Ground Rod to be placed in undisturbed soil and 6" below ground line. Ground wire to be stapled no more than 18" apart. This unit to be paid on a per each basis. |
| PM2(JO) | | |
| PM21C | | PM21C - CENTRAL OFFICE PROTECTOR ASSEMBLY: Consists of the necessary labor and material to install a 100 pair Central Office Protector and modules. This unit will also include all routing and strapping of the Protector tails back to the splice case as shown on the detailed drawings as specified by the Engineer. A suffix of "G" indicates the connection of #4 AWG Ground wire using compression lugs to tie bottom protector to the frame bus bar. Length of ground wire may vary depending on number of CO Protectors mounted in frame. Central Office Protector to be supplied by Windstream. |
| PM21CG | | |
| PM21F | | PM21F - FIBER OPTIC CABLE ENTRANCE: Consists of the necessary labor and materials to install a Fiber Optic Distribution Panel which includes the routing and strapping of the Fiber tails to splice case as shown on the detailed drawings as specified by the Engineer. It also includes the stenciling, bonding, and grounding of cable and BEP/Panel in accordance with the Construction Sheets. If a Multi-neutral ground is not present, a ground rod should be driven and will be compensated for under the PM2 Unit. Fiber Distribution Panel to be supplied by Windstream. |
| PM21F(12)200 | | Consists of the necessary labor and materials to install a Fiber Optic Patch Panel. This unit will also include the routing and strapping of the Fiber Breakout Cable to splice point as shown on the detailed drawings as specified by the Engineer. The number in parentheses indicates the fiber count of the panel. The number at the suffix indicates the length of the pre-terminated breakout cable in feet. |

| PM21F(144)130 | | |

| | | |
|---------------|--|--|
| PM21F(144)160 | | |
| PM2A | | PM2A - INSTALL GROUND WIRE ASSEMBLY: This labor and material unit is a Ground wire assembly for bonding aerial cable strand or support wire to electric system neutral or pole ground assembly. |
| PM2AF | | |
| PM2AC | | This labor and material unit is the same as a PM2A except that All No. 6 AWG connections to strand or to another No. 6 AWG ground wire, are to be made using Tinned Compression Connectors (C-Taps). A suffix of "F" indicates Fiber Optics. |
| PM2ACF | | |
| PM2C | | PM2C- BOND AERIAL CABLE: This unit consists of the necessary labor and material required to bond a new cable in an existing aerial closure or rebond an existing cable in a new closure. This unit will be paid for each bonding connector and harness placed. This unit covers only those bonds not covered by the placement of a new terminal/closure. A suffix of "F" indicates Fiber Optics. |
| PM2CF | | |
| PM4 | | PM4 - INSTALL CABLE EXTENSION ARM: Consists of all labor and materials to construct and install the Cable Extension Arm (Alley Arm). A suffix of A indicates a long arm. A suffix of "F" indicates Fiber Optics. |
| PM4A | | |
| PM4AF | | |
| PM4F | | |
| PM5 | | PM5 - INSTALL POLE STEPPING ASSEMBLY: Consists of all labor and materials to install Pole Steps. |
| PM5 (JO) | | |
| PM52 | | PM52 - POLE MARKING: This unit consists of all necessary labor and materials to number a new or foreign owned or existing pole in accordance with the construction drawings. A suffix of (JO) indicates a joint owned pole and (A) indicates Aerial Terminal. |
| PM52(A) | | |
| PM52(JO) | | |
| PM54(A) | | This unit consists of all necessary labor and materials to label a new or existing communications cable in accordance with the construction drawings. A suffix of (A) indicates Aerial. |
| PM6 | | PM6 - INSTALL WOOD POLE KEY: Consists of all labor and misc. materials to install a wood pole key. |
| PM6(JO) | | |
| PM6M | | Consists of all labor and materials to install one (1) metal pole key on an existing pole. A suffix of JO indicates use with joint owned poles. |
| PM6M(JO) | | |
| PM7M | | Consists of all labor and materials to install two (2) metal pole keys on a new or existing pole. A suffix of JO indicates use with joint owned poles. |
| PM7M(JO) | | |
| PM92 | | This unit provides for all labor and materials necessary to install 2 (18" minimum size) in span storage racks, to allow for the installation of a slack loop in aerial fiber. This unit does not include the cable, which will be compensated for as a normal aerial unit. |

| | | |
|----------|--|---|
| PM92ADSS | | This unit provides for all labor and materials necessary to install 2 (18" minimum size) in span storage racks, to allow for the installation of a slack loop in aerial ADSS fiber. This unit does not include the cable, which will be compensated for as a normal aerial unit. |
| PMSG | | PMSG; PLACE SQUIRREL GUARD: This unit consists of the necessary labor and materials for placement one (1) foot of aerial squirrel guard. |
| PMSG-F | | |
| PMSTRAND | | This Unit includes the labor and material required to install (1) foot of strand only. Suffix of (F) indicate fiber Optic use. |
| | | |
| R1-5(A) | | R1-5 - RIGHT OF WAY CLEARING UNIT: - Is one (1) foot in length and 5 feet in width (to be measured on one side of the pole line) of actual clearing of right-of-way. The unit applies to clearing right-of-way along new or existing telecommunications pole lines and along existing power pole lines. This includes clearing of underbrush, tree removal, and such tree trimming as may be required to leave an unobstructed right-of-way from the ground up on one side of the line of poles carrying wire or cable. The length of actual clearing shall be measured in a straight line parallel to the line between poles and across the maximum dimension of foliage cleared (not trunk) projected to the ground line. All trees and underbrush across the width of the right-of-way shall be considered to be grouped together as a single length in measuring the total length of clearing. Lengths along the right-of-way in which no trees are to be removed or trimmed or underbrush cleared shall be omitted from the total measurement. This unit includes the removal, or topping (cutting out the top of the tree so that if the remaining portions of the tree fall, they will not endanger the line) at the option of the Contractor, of danger trees outside of the right-of-way when so designated by the Engineer. (Danger trees are defined as dead or leaning trees, which, in falling, would affect the operation of the line). The Contractor shall not remove or trim shade, fruit, or ornamental trees unless so directed by the Engineer. Contractor to verify with Engineer that permission has been obtained from property owner prior to clearing of right-of-way. Contractor is also to be responsible for the proper disposal of removed material. A suffix of F indicates Fiber Optics; A suffix of TV indicates CATV |
| R1-5(A)F | | |
| R1-5(B) | | |
| R1-5(B)F | | |
| R2-5(A) | | R2-5 - RIGHT OF WAY CLEARING UNIT (BOTH SIDES): Identical with R1-5, except that width 10 feet; to be measured 5 feet on each side of the pole line. A suffix of F indicates Fiber Optics; A suffix of TV indicates CATV Coax. |
| R2-5(A)F | | |
| R2-5(B) | | |
| R2-5(B)F | | |
| R3-5(A) | | R3-5 - TRIMMING UNIT: IS one (1) foot in length and consists of the trimming of foliage and branches from trees growing on or adjacent to the right-of-way so as to provide a clearance of not less than 5 feet in all directions from telecommunications cable. This unit is measured parallel to the pole line across the maximum width of foliage trimmed. All |

| | | |
|----------------|--|--|
| R3-5(A)F | | <p>to measure parallel to the pole line across the maximum width of canopy trimmed from trees, underbrush or shrubbery across the width trimmed shall be considered to be grouped together as a single length in measuring the total length of trimming. Lengths along the right-of-way in which no trimming is performed shall be omitted from the total measurement. Any trimming included in R1 or R2 right-of-way clearing units, shall not be considered a part of the measurement of the unit. The Contractor shall not trim any shade, fruit or ornamental trees unless so directed by the Engineer. When so designated by the Engineer, a tree may be trimmed of its branches with the trunk left extending into the zone to be trimmed. Contractor is also to be responsible for the proper disposal of removed material. A suffix of F indicates Fiber Optics; A suffix of TV indicates CATV Coax</p> |
| R3-5(B) | | |
| R3-5(B)F | | |
| HDSL4CARD | | This unit includes the labor and material to place a plug in type HDSL4 card in a T1 |
| RPT(1) | | RPT(1)¿ MOUNT ENCAPSULATED T1 REPEATER: This unit includes the labor and material needed to mount one encapsulated T1 repeater to an existing stub pole or BM53T as specified by engineering. Included in this unit is the grounding of the unit, hand digging required to place 6¿ repeater tail into pedestal, securing of repeater tail in pedestal, strapping/securing repeater tail to stub/BM53T, cable tags, and the replacement of pedestal gravel or sealant. |
| RPT(12)(30)(B) | | <p>RPT()() - PLACE T1 REPEATER HOUSING: This unit consists of the necessary labor and materials to place a T1 repeater housing with a gel-filled stub, in accordance with manufacturers instructions and Windstream drawings. This unit includes mounting, placing of cable tail into pedestal, bonding, grounding and tagging of the repeater housing and cable, placing metal flex-duct, 3M pull and shrink tubing, stencilling, all stubs up pole, U-Guards and any other material required to properly install One (1) Repeater Housing. This unit also includes all excavation and backfilling required to place ground wire at a 12" minimum depth and the installation of three ground rods placed 8ft apart and Cadwelded. The first set of parenthesis indicates the housing size. The second set of parenthesis indicates the stub length. This unit will be suffixed with either A, B, or U, which indicates the type of installation (Aerial, Buried, or Underground type installation). This unit does not include splicing. Ground readings will be megged and recorded on as built documentation.</p> |

| | | |
|------------|--|--|
| RPTCARD | | RPTCARD - PLACE T1 PLUG REPEATER CARD: This unit includes the labor and material to place a plug in type repeater card in a T1 repeater housing as specified on construction prints. This unit also includes the updating of the identification card inside the Repeater Housing. |
| RPTCARD6 | | RPTCARD6 - PLACE T1 PLUG REPEATER CARD (6 SYS): This unit includes the labor and material to place a plug in type repeater card, mini repeater card adapter and four (4) gas tube protectors in a 6 position T1 repeater housing as specified on construction prints. This unit also includes the updating of the identification card inside the Repeater Housing. |
| RPTLITPROT | | RPTCARD - PLACE LIGHTNING PROTECTION KIT: This unit includes the labor and material to place a lightning protection kit in a 12, 25 and 50 position Charles Industries T1 repeater housing as specified on construction prints. This unit also includes the updating of the identification card inside the Repeater Housing. |
| SP1(B) | | This unit covers the clearing, removal and disposal of all brush, bushes, trees and stumps smaller than 4" in diameter necessary for the installation of equipment and appropriate ground field as designated by Windstream Engineer. None of the removed trees or stumps will be buried on the lot. Any trees left standing on the lot will require approval by the engineer. The diameter of the tree will be measured 24" above the ground surface. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. This Unit is not to be paid with any other lot clearing unit. |
| SP1(E) | | |
| SP1(F) | | |
| SP10(B) | | This Unit provides for the labor and material to install landscape cloth, when required by Windstream Engineer, for grass/weed control on and around the easement site. Landscape cloth will be installed prior to placing any gravel (SP7 Unit). A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per square foot of where called for by the engineer. |
| SP10(E) | | |
| SP10(F) | | |
| SP11(B) | | This unit consists of the labor and material necessary to build a retaining wall for fill dirt containment when required for leveling of the lot. The height and length of the wall will be as required to bring the lot to a grade that is suitable for equipment installation as specified by the engineer. The treated timber will be stacked and joined together to provide adequate stability for fill dirt containment. This includes the installation of back ties every 3rd row as necessary and the timbers are to be properly joined using rebar or other appropriate methods to prevent slippage of the retaining wall. This unit is to be paid per total lineal foot of timbers placed. This unit will only be used when and as specified by the engineer. |
| SP11(E) | | |

| | | |
|---------|--|---|
| SP11(F) | | Any incidental material is to be provided by the contractor. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP12(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 4' high chain link fence as required by the engineer. Posts to be concreted 2' deep and braces to be installed as required to properly secure the fence. This unit includes all material and labor to install the fence. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP12(E) | | |
| SP12(F) | | |
| SP13(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 4' high X 5' wide chain link gate as required by the engineer. The gate is to be properly secured (hinged) to existing fence terminal posts and be equipped with a lockable latch. This unit includes all material and labor to install the gate. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP13(E) | | |
| SP13(F) | | |
| SP14(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade, 11.4 gauge 4' high by 10' wide double chain link gate using (2) 5' wide sections, as required by the engineer. The gate is to be properly secured (hinged) to existing fence terminal posts and be equipped with a lockable latch and drop rod (cane assembly). Drop rod to be properly installed to secure gates when closed. This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP14(E) | | |
| SP14(F) | | |
| SP15(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 6' high chain link fence as required by the engineer. Posts are to be concreted 2' deep and braces are to be installed as required to properly secure the fence. This unit includes all material and labor to install the fence. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP15(E) | | |
| SP15(F) | | |
| SP16(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 6' high x 5' wide chain link gate as required by the engineer. The gate is to be properly secured (hinged) to existing fence terminal posts and be equipped with a lockable latch. This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates |
| SP16(E) | | |

| | | |
|---------|--|--|
| SP16(F) | | use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP17(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 6' high by 10' wide double chain link gate using (2) 5' wide sections as required by the engineer. The gate is to be properly secured (hinges) to existing fence terminal posts and be equipped with a lockable latch and drop rod (cane assembly). The drop rod is to be properly installed to secure the gates when closed. This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP17(E) | | |
| SP17(F) | | |
| SP18(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 8' high chain link fence as required by the engineer. Posts are to be concreted 2' deep and braces are to be installed as required to properly secure the fence. |
| SP18(E) | | This unit includes all material and labor to install the fence. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP18(F) | | |
| SP19(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 8' high by 5' wide chain link gate as required by the engineer. The gate is to be properly secured (hinged) to existing fence terminal posts and be equipped with a lockable latch. This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP19(E) | | |
| SP19(F) | | |
| SP2(B) | | This Unit covers the clearing, removal and disposal of all trees and stumps larger than 4" but less than 12" in diameter necessary for the installation of equipment and appropriate ground field as designated by Windstream Engineer. None of the removed trees or stumps will be buried on the lot. Any trees left standing on the lot will require approval by the Engineer. The diameter of the tree will be measured 24" above ground surface. A suffix of B indicates a copper cross connect box.. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. This unit is paid per tree or stump 4" to 12"as marked by the engineer. |
| SP2(E) | | |
| SP2(F) | | |

| | | |
|---------|--|---|
| SP20(B) | | This unit consists of the necessary labor and materials required to construct a commercial grade 11.5 gauge 8' high by 10' wide double chain link gate using (2) 5' wide sections as required by the engineer. The gate is to be properly secured (hinged) to existing fence terminal posts and is to be equipped with a lockable latch and drop rod (cane assembly). The drop rod is to be properly installed to secure the gates when closed. This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP20(E) | | |
| SP20(F) | | |
| SP21(B) | | This unit consists of the necessary labor and materials required to add 3 strands of barbed wire and angle brackets to any chain link fence or gate around an easement lot when specified by the Windstream engineer. This unit includes all material and labor to install the barbed wire. This unit is to be paid on a per lineal foot basis with each foot to include 3 strands of barbed wire and all associated hardware. This unit includes all material and labor to install the security wire. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP21(E) | | |
| SP21(F) | | |
| SP22(B) | | This unit consists of the necessary labor and materials required to construct a 4 strand barbed wire fence when specified by the Windstream engineer. The fence is to be installed using 4" X 4" treated wood corner posts with steel "T" posts in between. The barbed wire strands are to be spaced 12" apart unless specified otherwise by the Windstream engineer. Corner posts are to be concreted 2' deep and braces are to be installed as required to properly secure the fence. This unit will be paid on a per lineal foot basis and includes all material and labor to install the fence. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP22(E) | | |
| SP22(F) | | |
| SP23(B) | | This unit consists of the necessary labor and materials required to construct a 6' high dog-eared treated wood plank fence on an easement lot for concealment purposes as specified by the Windstream engineer. Posts are to be 4" X 4" treated wood and concreted 2' deep with braces to be installed as required to properly secure the fence. The fence shall have (3) 2"x4" runners with fencing planks securely attached with galvanized screws. No screw ends are to be exposed. Fencing runners are to be placed 6" from the top and bottom with a middle runner centered in between the top and bottom runners. This unit includes |
| SP23(E) | | |

| | | |
|---------|--|--|
| SP23(F) | | all material and labor to install the fence. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP24(B) | | This unit consists of the necessary labor and materials required to construct a dog-eared, treated wood plank 6' high by 5' wide gate as required by the engineer. The gate is to be properly secured (hinged) to existing fence posts and be equipped with a lockable latch. |
| SP24(E) | | This unit includes all material and labor to install the gate. A suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the |
| SP24(F) | | installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP25(B) | | This unit consists of the necessary labor and materials required to construct a dog-eared, treated wood plank 6' high by 5' wide double gate using (2) 5' wide sections as required by the engineer. The gate is to be properly secured (hinged) to existing fence posts and is to |
| SP25(E) | | be equipped with a lockable latch and drop rod (cane assembly). The drop rod is to be properly installed to secure the gates when closed. This unit includes all material and labor to install the gates. A suffix of B indicates use with the installation of a copper cross |
| SP25(F) | | connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP26(B) | | This unit consists of the necessary labor and materials required to construct a 48" high 6"x6" galvanized steel/woven wire fence on an easement lot as specified by a windstream engineer. The fence is to include 1 strand of barbed wire placed 6" above the fence. The fence is to |
| SP26(E) | | be installed using 4" x 4" treated wood corner posts with steel "T" posts in between. Corner posts are to be concreted 2' deep and braces are to be installed as required to properly secure the fence. This unit includes all material and labor to install the fence. A |
| SP26(F) | | suffix of B indicates use with the installation of a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with the installation of a fiber fed DLC. |
| SP3(B) | | This Unit covers the initial leveling and grading of site necessary for the installation of equipment or ground field as designated by the Windstream Engineer. Leveling in this Unit is defined as making the lot uniform in slope with no hills or holes and is accessible to |
| SP3(E) | | vehicles and personnel. Level or slope to be determined by Windstream Engineer. This Unit includes any compaction which may be required to bring dirt to 98% compaction or other as required by Windstream Engineer. Any additional dirt or gravel and additional leveling, grading and/or compaction required will be paid for using the SP4 or SP5 Unit. A |

| | | |
|--------|--|---|
| SP3(F) | | leveling, grading and/or compaction required will be paid for using the SP3(F) Unit. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit and is paid per square foot. |
| SP4(B) | | This Unit covers the labor and material for the installation of fill dirt. Fill dirt will be free of any large rocks, roots, grass, sod or any other foreign debris and have no more or no less moisture content than is needed for proper compaction. This Unit also includes any leveling, grading and compaction which may be required to bring dirt to 98% compaction or other as required by Windstream Engineer. Leveling in this Unit is defined as making the area uniform in slope with no hills or holes and is accessible to vehicles and personnel. Level or slope to be determined by Windstream Engineer. This Unit also includes all hauling and handling to deliver dirt to final location. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per ton. |
| SP4(E) | | |
| SP4(F) | | |
| SP5(B) | | This Unit covers the labor and material for the installation of crusher run type gravel as approved by Windstream. Gravel depth to be determined by Windstream Engineer. This Unit also includes any leveling, grading and compaction which may be required to bring gravel to 98% compaction or other as required by Windstream Engineer. Leveling in this Unit is defined as making the area uniform in slope with no hills or holes and is accessible to vehicles and personnel. Level or slope to be determined by Windstream Engineer. This Unit also includes all hauling and handling to deliver gravel to final location. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per ton. |
| SP5(E) | | |
| SP5(F) | | |
| SP6(B) | | This Unit covers the labor and material for the installation of sand to be used at any location as specified. Sand depth to be determined by Windstream Engineer. This Unit also includes any leveling which may be required by Windstream Engineer. This Unit also includes all hauling and handling to deliver sand to final location. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per ton. |
| SP6(E) | | |
| SP6(F) | | |
| SP7(B) | | This Unit covers the labor and material for the installation of washed pea gravel to be used at any location as specified. Gravel depth to be determined by Windstream Engineer. This Unit also includes any leveling which may be required by Windstream Engineer. This Unit also includes all hauling and handling to deliver gravel to final location. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per ton. |
| SP7(E) | | |
| SP7(F) | | |

|----------|--|---|
| SP8C(B)L | | This unit includes the labor and material to install the 36" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(B)M | | This unit includes the labor and material to install the 24" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(B)S | | This unit includes the labor and material to install the 15" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(E)L | | This unit includes the labor and material to install the 36" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(E)M | | This unit includes the labor and material to install the 24" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(E)S | | This unit includes the labor and material to install the 15" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

| | | |
|----------|--|---|
| SP8C(F)L | | This unit includes the labor and material to install the 36" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(F)M | | This unit includes the labor and material to install the 24" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8C(F)S | | This unit includes the labor and material to install the 15" diameter concrete culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8M(B)L | | This unit includes the labor and material to install the 36" diameter metal culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8M(B)M | | This unit includes the labor and material to install the 24" diameter metal culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8M(B)S | | This unit includes the labor and material to install the 15" diameter metal culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

| SP8M(F)S | | This unit includes the labor and material to install the 15" diameter metal culvert for a driveway when designated by a Windstrem engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. a suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

| | | |
|------------|--|---|
| SP8MFL(B)L | | This unit includes the labor and material to install a 36" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(B)M | | This unit includes the labor and material to install a 24" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(B)S | | This unit includes the labor and material to install a 15" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(E)L | | This unit includes the labor and material to install a 36" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(E)M | | This unit includes the labor and material to install a 24" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(E)S | | This unit includes the labor and material to install a 15" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

| | | |
|--------------|--|---|
| SP8MFL(F)L | | This unit includes the labor and material to install a 36" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(F)M | | This unit includes the labor and material to install a 24" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFL(F)S | | This unit includes the labor and material to install a 15" diameter flare for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. This unit is to be paid per lineal foot. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFLBR(B)L | | This unit includes the labor and material to install a 36" diameter flare with child protective bars for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFLBR(B)M | | This unit includes the labor and material to install a 24" diameter flare with child protective bars for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |
| SP8MFLBR(B)S | | This unit includes the labor and material to install a 15" diameter flare with child protective bars for a metal culvert for a driveway when designated by the Windstream engineer. The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

The culvert will be installed in accordance with State, County or Local specifications. Gravel and fill dirt will be paid in the SP4 and SP5 units. A suffix of B indicates use with a copper cross connect box. A suffix of E indicates use with electronic equipment. A suffix of F indicates use with a fiber fed DLC. |

| | | |
|-----------|--|--|
| SP9(B) | | This Unit includes labor and material to place 6" x 6" treated timbers for border around equipment as designated by Windstream Engineer. The border size will be specified by the Engineer to provide a minimum of 3' working clearance around equipment. The top of the border will be bubble levelled. Unit to be paid for a single row of timbers only - additional rows to compensate for slope will be paid using the SP11 Unit. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. Unit is paid per foot. |
| SP9(E) | | |
| SP9(F) | | |
| SPEL1(E) | | This Unit will be paid for the labor and material to install a 6"X6"X10' treated stub post for the mounting of meter base and disconnect when required and as specified by the Windstream Engineer. The post is to be set at a depth of 3' and concret3d in to provide |
| SPEL2(E) | | This Unit includes the labor and minor materials necessary to mount a windstream provided 30, 60, or 100 amp Power Pedestah with Transfer Switch on poured concrete pad. Concrete pad to be paid for under the SPPH1 Unit. This Unit also includes all necessary wire terminations. Wire to be compensated for under Service Wiring Units. Minor materials to be provided by Contractor. |
| SPEL3(E) | | This unit includes the labor and material necessary to mount a 100 amp meter base peestal with disconnect on a poured concrete pad. Concrete pad to be paid for under the SPPH1 unit. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the |
| SPEL4(E) | | This unit includes the labor and material necessary to mount a 100 amp meter base. meter base can be pole mounted, wall mounted, mounted on an H-Ficture or mounted on a power pedestal. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the |
| SPEL4A(E) | | This unit includes the labor and material necessary to mount a 200 amp meter base. meter base can be pole mounted, wall mounted, mounted on an H-Ficture or mounted on a power pedestal. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the |
| SPEL5(E) | | This unit includes the labor and materials to furnish and mount a 100 amp capacity weatherproof disconnect box. Dixconnect box to support (2) 240 volt breakers. This unit also includes all necessary wire terminations. Wire to be compensated for under Service Wiring Units. Minor materials to be provided by the contractor. |
| SPEL5A(E) | | This unit includes the labor and material to furnish and install a 30 amp breaker in a disconnect box. Disconnect box to be paid for under the SPEL5 unit. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the contractor. |

| | | |
|-----------|--|---|
| SPEL5B(E) | | This unit includes the labor and material to furnish and install a 60 amp breaker in a disconnect box. Disconnect box to be paid for under the SPEL5 unit. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the contractor. |
| SPEL5C(E) | | This unit includes the labor and material to furnish and install a 100 amp breaker in a disconnect box. Disconnect box to be paid for under the SPEL5 unit. This unit also includes all necessary wire terminations. Wire to be compensated for under service wiring units. Minor materials to be provided by the contractor. |
| SPEL6(E) | | This unit includes the labor and materials necessary to install 30 amp / 240 volt 4-wire service wiring as specified by the Engineer. Wire terminations to be compensated for under the appropriate units. Minor materials to be provided by the contractor. This unit to be paid per foot. |
| SPEL7(E) | | This unit includes the labor and materials necessary to install 60 amp / 240 volt 4-wire service wiring as specified by the Engineer. Wire terminations to be compensated for under the appropriate units. This unit to be paid per foot. |
| SPEL8(E) | | This unit includes the labor and materials necessary to install 100 amp / 240 volt 3-wire service wiring as specified by the Engineer. Wire terminations to be compensated for under the appropriate units. This unit to be paid per foot. |
| SPEL9(E) | | This unit includes the labor and materials necessary to install 200 amp / 240 volt 3-wire service wiring as specified by the Engineer. Wire terminations to be compensated for under the appropriate units. This unit to be paid per foot. |
| SPEL10(B) | | This unit includes labor and material necessary to place 1" Schedule 40 Conduit 3' deep at any location specified by the Engineer. Pull string required in all conduit. All conduit ends will be sealed or capped as required. Any incidental material is to be provided by the contractor. |
| SPEL10(E) | | |
| SPEL10(F) | | |
| SPEL11(B) | | This unit includes labor and material necessary to place 2" Schedule 40 Conduit 3' deep at any location specified by the Engineer. Pull string required in all conduit. All conduit ends will be sealed or capped as required. Any incidental material is to be provided by the contractor. |
| SPEL11(E) | | |
| SPEL11(F) | | |
| SPEL12(B) | | This unit includes labor and material necessary to place 3" Schedule 40 conduit 3' deep at any location specified by the engineer. Pull string required in all conduit. All conduit ends will be sealed or capped as required. Any incidental material is to be provided by the Contractor. |
| SPEL12(E) | | |
| SPEL12(F) | | |
| SPEL13(B) | | This unit includes labor and material necessary to place 4" Schedule 40 conduit 3' deep at any location specified by the engineer. Pull string required in all conduit. All conduit ends will be sealed or capped as required. Any incidental material is to be provided by the |
| SPEL13(E) | | |
| SPEL13(F) | | |
| SPEL14(B) | | This unit includes labor and material necessary to place a 1" Schedule 40 45 degree 24" |

| | | |
|-----------|--|--|
| SPEL14(E) | | sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL14(F) | | |
| SPEL15(B) | | This unit includes labor and material necessary to place a 1" Schedule 40 90 degree 24" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL15(E) | | |
| SPEL15(F) | | |
| SPEL16(B) | | This unit includes labor and material necessary to place a 2" Schedule 40 45 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL16(E) | | |
| SPEL16(F) | | |
| SPEL17(B) | | This unit includes labor and material necessary to place a 2" Schedule 40 90 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL17(E) | | |
| SPEL17(F) | | |
| SPEL18(B) | | This unit includes labor and material necessary to place a 3" Schedule 40 45 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL18(E) | | |
| SPEL18(F) | | |
| SPEL19(B) | | This unit includes labor and material necessary to place a 3" Schedule 40 90 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL19(E) | | |
| SPEL19(F) | | |
| SPEL20(B) | | This unit includes labor and material necessary to place a 3" Schedule 40 45 degree 48" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL20(E) | | |
| SPEL20(F) | | |
| SPEL21(B) | | This unit includes labor and material necessary to place a 3" Schedule 40 90 degree 48" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL21(E) | | |
| SPEL21(F) | | |
| SPEL22(B) | | This unit includes labor and material necessary to place a 4" Schedule 40 45 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL22(E) | | |
| SPEL22(F) | | |
| SPEL23(B) | | This unit includes labor and material necessary to place a 4" Schedule 40 90 degree 36" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL23(E) | | |
| SPEL23(F) | | |
| SPEL24(B) | | This unit includes labor and material necessary to place a 4" Schedule 40 45 degree 48" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL24(E) | | |
| SPEL24(F) | | |
| SPEL25(B) | | This unit includes labor and material necessary to place a 4" Schedule 40 90 degree 48" sweep as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPEL25(E) | | |
| SPEL25(F) | | |
| SPEL26(E) | | This unit includes labor and material necessary to place a 2" weatherhead as specified by the engineer. Any incidental material is to be provided by the contractor. |

| | | |
|-----------|--|--|
| SPEL27(E) | | This unit includes labor and material necessary to place a 3" weatherhead as specified by the engineer. Any incidental material is to be provided by the contractor. |
| SPGF1(E) | | This unit includes the labor and material required to install a 4 rod ground rod field using 5/8" X 8' copper coated steel ground rods and #2 solid , tinned copper ground wire. Ground wire will be connected to to ground rods using exothermic weld type connections. Ground filed is to be placed 2' below ground surface. Ground rods to be installed either single or double stacked as specified by the Windstream engineer. Ground rods are to be installed vertically into the ground with 8' separation. Ground field will be megged and recorded on the as-built print. If a 25 OHM objective is not met, Contractor to contact the Engineer for further instructions. This unit includes connection from the ground field to the following locations: Cross Connect Box and DLC or Remote Subscriber cabinet. See typical lot drawing for Ground Field location. Begging of the ground will be the responsibility of the contractor and a copy of the megging record will be provided to the Windstream engineer. |
| SPGF2(E) | | This unit includes the labor and material required to install an 8 rod ground rod field using 5/8" X 8' copper coated steel ground rods and #2 solid , tinned copper ground wire. Ground wire will be connected to to ground rods using exothermic weld type connections. Ground filed is to be placed 2' below ground surface. Ground rods to be installed either single or double stacked as specified by the Windstream engineer. Ground rods are to be installed vertically into the ground with 8' separation. Ground field will be megged and recorded on the as-built print. If a 25 OHM objective is not met, Contractor to contact the Engineer for further instructions. This unit includes connection from the ground field to the following locations: Cross Connect Box and DLC or Remote Subscriber cabinet. See typical lot drawing for Ground Field location. Megging of the ground will be the responsibility of the contractor and a copy of the megging record will be provided to the Windstream engineer. |
| SPGF3(E) | | This Unit includes the labor and material required to double stack a ground rod on installation as designated by the engineer. This unit is to be used in conjunction with the SPGF1, SPGF2 and/or SPGF4 units. |
| SPGF4(E) | | This unit includes the labor and material required to add an additional ground rod to the SPGF1, or SPGF2 units as specified by the engineer. Ground wire will be connected to the existing ground rods using exothermic weld type connections. This unit also includes any additional trenching required. |
| SPGF5(E) | | This unit provides labor and materials to install (1) 10' "L" shaped enhanced ground rod kit and necessary #2 solid, tinned copper ground wire up to 12' in length. Wire to be connected to the chem rod and to a single poing tround rod by exothermic weld type connectors. Chem rod to be placed at a 24" depth according to manufacturer specifications. Single point ground rod paid on seperate unit. |

| | | |
|-----------|--|---|
| SPGF6 | | This unit consists of the necessary labor and material to extend a bond to an existing ground field. Includes all labor to trench and place #2 solid tinned copper wire from existing ground field to cabinet. Also includes the termination of ground wire at both ends. Ground wire to be connected to existing ground rods using exothermic weld type connections. Includes backfilling of trench to final grade and all compaction using |
| SPPH1(B) | | This unit provides for the labor and material to pour a 4" thick FIBERGLASS REINFORCED concrete pad to support a remote subscriber cabinet or power pedestal. The top of the concrete will be bubble leveled, broom finished and be approximately 2" above grade level. The contractor is responsible for locating all cabinet mounting hardware and conduit risers in the concrete when poured. The engineer will specify outside dimensions of the pad. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates a fiber fed DLC. |
| SPPH1(E) | | |
| SPPH1(F) | | |
| SPPH10 | | This Unit provides for the labor and material to install a pre-fabricated, pad to support a NetExtend 27 DLC. Top of pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. Unit paid per each and pad measures 80" X 26" and weighs 2500 pounds. |
| SPPH11 | | This Unit provides for the labor and material to install a pre-fabricated, pad to support an ODC1000 DLC. Top of pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. Unit paid per each and pad measures 70" X 82" and weighs 1910 pounds. |
| SPPH12(E) | | This Unit provides for the labor and material to install a pre-fabricated, 80" x 96" 2500 pound pad to support an ODC2000 DLC. Top of pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. |
| SPPH13(E) | | This Unit includes labor and equipment to mount on pad, pole or H fixture a mini cabinet, up to 48 lines. Cabinet and mounting hardware to be provided by Windstream. Cabinet is to be transported upright and precautions taken to prevent bending, denting, warping or scratching. Damage to equipment will be the responsibility of the Contractor. Any incidental material is to be provided by the Contractor. |
| SPPH14(E) | | This Unit includes labor and equipment to mount on pad, pole or H fixture a mini DLC or remote subscriber cabinet, up to 200 lines. Cabinet and mounting hardware to be provided by Windstream. Cabinet is to be transported upright and precautions taken to prevent bending, denting, warping or scratching. Damage to equipment will be the responsibility of the Contractor. Any incidental material is to be provided by the Contractor. |

| | | |
|----------|--|--|
| SPPH15L | | This unit includes labor and material necessary to place (1) long bale lock on a remote cross cabinet, power ped, or other enclosure that requires a lock. Contractor to coordinate lock selection with operations in specific area. Lock to be installed at time of product placement as a one time charge. |
| SPPH15S | | This unit includes labor and material necessary to place (1) short bale lock on a remote cross cabinet, power ped, or other enclosure that requires a lock. Contractor to coordinate lock selection with operations in specific area. Lock to be installed at time of product placement as a one time charge. |
| SPPH2(B) | | This unit provides for the labor to install a small pre-fabricated, Windstream furnished, pad to support a small remote subscriber cabinet of up to 500 lines, cross connect cabinet, or power pedestal. The top of the pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. |
| SPPH2(E) | | |
| SPPH2(F) | | |
| SPPH3(B) | | This unit provides for the labor to install a large pre-fabricated, Windstream furnished, pad to support a small remote subscriber cabinet over 500 lines, cross connect cabinet or power pedestal. The top of the pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with installation of electronic equipment. A suffix of F indicates a fiber fed DLC. |
| SPPH3(E) | | |
| SPPH3(F) | | |
| SPPH4(E) | | This unit includes labor and equipment to mount on pad pole or H fixture a small DLC or remote subscriber cabinet up to 500 lines. Cabinet and mounting hardware to be provided by Windstream. The Cabinet is to be transported upright and precautions are to be taken to prevent bending, denting, warping or scratching. Damage to equipment will be the responsibility of the contractor. Any incidental material is to be provided by the contractor. |
| SPPH5(E) | | This unit includes labor and equipment to mount on pad, pole or H fixture a large DLC or remote subscriber cabinet, up to 500 lines. Cabinet and mounting hardware to be provided by Windstream. Cabinet is to be transported upright and precautions taken to prevent bending, denting, warping or scratching. Damage to equipment will be the responsibility of the contractor. Any incidental material is to be provided by the contractor. |
| SPPH6(E) | | This unit consists of the labor and material necessary to construct an H fixture for mounting of a small DLC or remote subscriber cabinet. The posts are to be set at a depth of 3' and concreted in to provide stability. This unit also includes all coated flex duct and fittings necessary for cable and electrical installation. Any incidental material is to be provided by the contractor. |

| | | |
|--------------|--|--|
| SPPH7(B) | | This unit consists of the labor and material necessary to install a vehicle guard post to protect equipment mounted at any equipment site. The guard post is to be a 4" round galvanized steel pipe, concrete filled, and installed at a height of 4' above ground level, 3' deep and concreted in place to insure full equipment protection. The post is to be painted gloss yellow with an appropriate exterior meta paint. A suffix of B indicates a copper cross connect box. A suffix of E indicates use with the installation of electronic equipment. A suffix of F indicates a fiber fed DLC. |
| SPPH7(E) | | |
| SPPH7(F) | | |
| SPPH8 | | This unit consists of the necessary labor and material to install a 2' X 2' concrete flex mat. Top of pad will be bubble leveled and set at grade level. Flex mat to be placed on top of landscape cloth. Landscape to be paid under a separate Unit. |
| SPPH9 | | This Unit provides for the labor and material to install a pre-fabricated, pad to support a NetExtend 17 or 22 DLC. Top of pad will be bubble leveled and be approximately 2" above grade level. This includes all labor and any incidental materials associated with pad footings. Unit paid per each and pad measures 70" X 82" and weighs 1910 pounds. |
| SPWOMP(L) | | This unit consists of the necessary labor and material to install an outside cabinet mounting post. Includes all labor to install post to a depth of 48" from final grade, backfill, and all compaction using mechanical tamps. Post must be bubble leveled and plumb upon completion. Placing of conduits, grounding, and mounting of cabinet to be paid under separate units. A S, M, or L in parentheses indicates Small, Medium or Large mounting post |
| SPWOMP(M) | | |
| SPWOMP(S) | | |
| UD(1X1)V | | UD(__X__)V- PULL INNERDUCT IN CONDUIT: This unit consists of the necessary labor and materials to place one or more vacant innerduct(s) in a conduit. The parentheses for the UD unit shall indicate the number of innerducts followed by the inside diameter of the innerduct to be placed in new or existing conduit, including rodding and cleaning of the existing conduit if necessary. UD(__X__X__) - UNDERGROUND CONDUIT ASSEMBLY UNITS: Consists of one (1) foot of single or multiduct conduit in place. This unit includes all material and labor for the placement of the conduit to the depth indicated in the specifications and plugging the duct at both ends. The assembly unit is defined as follows: The number of conduits placed horizontally, and vertically, and the inside diameter, shall be indicated in the parentheses. The color of the conduits will be specified. The required depth shall be measured from top |
| UD(1X1.25)V | | |
| UD(1X2)V | | |
| UD(1X3)V | | |
| UD(2X1.25)V | | |
| UD(1X1X1) | | |
| UD(1X1X1.25) | | |
| UD(1X1X2) | | |
| UD(1X1X3) | | |
| UD(1X1X4) | | |
| UD(1X2X1) | | |
| UD(1X2X1.25) | | |
| UD(1X2X2) | | |
| UD(1X2X4) | | |

| | | |
|-------------|--|--|
| UD(1X3X1) | | The color of the conduits will be specified. The required depth shall be measured from top of pipe to final grade. |
| UD(1X3X4) | | |
| UD(1X4X1) | | |
| UD(2X2X4) | | |
| UD(2X3X4) | | |
| UD(30) | | UD() - UNDERGROUND CONDUIT DEPTH ADDER: This unit is an adder for the necessary labor and equipment to place conduit at the depth (from top of pipe to final grade) indicated in parentheses. |
| UD(36) | | |
| UD(48) | | |
| UD(60) | | |
| UD(3X1.25)V | | UD(__X__)V- PULL INNERDUCT IN CONDUIT: This unit consists of the necessary labor and materials to place one or more vacant innerduct(s) in a conduit. The parentheses for the UD unit shall indicate the number of innerducts followed by the inside diameter of the innerduct to be placed in new or existing conduit, including rodding and cleaning of the existing conduit if necessary. |
| UD(3X3X4) | | UD(__X__X__) - UNDERGROUND CONDUIT ASSEMBLY UNITS: Consists of one (1) foot of single or multiduct conduit in place. This unit includes all material and labor for the placement of the conduit to the depth indicated in the specifications and plugging the duct at both ends. The assembly unit is defined as follows: The number of conduits placed horizontally, and vertically, and the inside diameter, shall be indicated in the parentheses. The color of the conduits will be specified. The required depth shall be measured from top of pipe to final grade. |
| UD-A | | UD-A - UG CONDUIT PAVED/CONCRETE SURFACE ADDER: This unit consists of an adder for the necessary labor to remove and restore paved or concrete surfaces. All work shall be performed as required in accordance with federal, state and/or local construction standards in effect at the time of bid date. Materials for this unit will be paid separately. |
| UD-B | | UD-B - UNDERGROUND CONDUIT CONCRETE BASE ADDER: This unit consists of an adder for the necessary labor to provide a concrete base for the conduit assembly unit as determined by the Engineer. (Concrete base will be 3 in. in thickness for the width of the trench.) Materials for this unit will be paid separately. |
| UD-C | | UD-C - UNDERGROUND CONDUIT CONCRETE COVER ADDER: This unit consists of an adder for the necessary labor to provide a concrete cover for the conduit assembly unit as determined by the Engineer. (The concrete cover shall have a minimum thickness of 3 in. and shall be at least as wide as the conduit.) Materials for this unit will be paid |
| UD-E | | UD-E - UG CONDUIT CONCRETE ENCASUREMENT ADDER: This unit consists of an adder for the necessary labor to encase the conduit in concrete. (Encasement shall consist of a 2 inch minimum cover over the conduit(s), a minimum of 1-1/2 in. at the sides and a minimum of 2 in. for the base.) Materials for this unit will be paid separately. |

| | | |
|------------|--|---|
| UD-S | | UD-S - UNDERGROUND CONDUIT SAND ENCASMENT ADDER: This unit consists of an adder for the necessary labor to encase the conduit in sand. (Encasement shall consist of a 4 in. cover over the conduit(s), a minimum of 1-1/2 in. at the sides and a minimum of 3 in. for the base.) Materials for this unit will be paid separately. |
| UD445(36) | | UD445(36) PVC SCH 40, 45 DEGREE BEND: This unit includes all labor and material to place a 45 degree PVC bend. The number in parenthesis indicates the radius in inches. A Suffix of "E" indicates conduit encased in concrete. |
| UD445(36)E | | |
| UD445(48) | | UD445(48) PVC SCH 40, 45 DEGREE BEND: This unit includes all labor and material to place a 45 degree PVC bend. The number in parenthesis indicates the radius in inches. A Suffix of "E" indicates conduit encased in concrete. |
| UD445(48)E | | |
| UD490(36) | | UD490(36) PVC SCH 40, 90 DEGREE BEND: This unit includes all labor and material to place a 90 degree PVC bend. The number in parenthesis indicates the radius in inches. A Suffix of "E" indicates conduit encased in concrete. |
| UD490(36)E | | |
| UD490(48) | | UD490(48) PVC SCH 40, 90 DEGREE BEND: This unit includes all labor and material to place a 90 degree PVC bend. The number in parenthesis indicates the radius in inches. A Suffix of "E" indicates conduit encased in concrete. |
| UD490(48)E | | |
| UDM(1X2) | | Consists of one (1) foot of vacant single or multiduct Maxcell fabric innerduct in place as per manufacturer specifications. This unit includes all material and labor for the placement of the innerduct inside existing conduit and rodding and cleaning of the existing conduit as well as pumping and blowing of manhole if necessary. The assembly unit is defined as follows: The number of cells placed and the minimum conduit inside diameter shall be |
| UDM(2X2) | | |
| UDM(2X3) | | |
| UDM(3X3) | | |
| UDM(3X4) | | |
| UF25X24 | | UF(---X--) - UF COPPER CABLE ASSEMBLY: Consists of 1 foot of underground filled copper cable installed in underground conduits and manholes/handholes/buildings. This unit also consists of setting up the cable within the manhole, providing and placing cable supports and cable rack hooks, pulling-in wires, duct seals or plugs, cable tags, and rodding and cleaning of ducts all as required in accordance with the detailed plans and specifications. This unit includes bonding together of all closures, but does not include cable closure assemblies or cable splicing. The length of cable for compensation purposes is determined by measuring the distances paralleling the cable plus the vertical lengths of cable installed on supporting structures. This unit shall include the cleaning out and/or pumping out of manholes when specified by the Engineer. The splicing and |

|----------------|--|--|
| UF1800X24 | | and/or pumping out of manholes when specified by the Engineer. The splicing and closures will be compensated for under separate units. |
| UF2100X24 | | |
| UF2400X24 | | |
| UF3000X26 | | |
| UG34-25S | | UG34 () - PLACE UNDERGROUND LOAD COIL: This unit consists of a universal load coil assembly with a filled plastic cable stub. This unit includes the labor and materials for placing the coil, placing cable tag, opening of the cable sheath, bonding and tying up of the cable stub as specified by the engineer. This coil ranges in size from 100 pr. To 600 pr. Example - a 100 pair coil would be shown as UG34-100. The number in parentheses indicates mH rating. Units suffixed with a "S" indicates the utilization of a Smart Load Coil. |
| UG34-50S | | |
| UG34-100S | | |
| UG34-200S | | |
| UG34-300S | | |
| UG34-600S | | |
| UHC(17X30X18)T | | UH__ () - UNDERGROUND HANDHOLE ASSEMBLY UNITS:- Consists of labor and material for one (1) underground handhole installed in place, including the base, top cover and mounting hardware, and washed stone or equivalent. The handhole size, amount of 1" washed stone or equivalent and the installation shall be as specified by the engineer. The handhole assembly unit is rated to withstand vehicular traffic. The suffix of "T" indicates a traffic rated handhole. A UHC type is to be used with Copper Cable; A UHF with Fiber Optic Cable |
| UHC(24X36X24)T | | |
| UHC(30X48X36)T | | |
| UHC(30x48x24)T | | |
| UHC(36x60x36)T | | |
| UHC(48x96x48)T | | |
| UHF(17X30X18)T | | UH__ () - UNDERGROUND HANDHOLE ASSEMBLY UNITS:- Consists of labor and material for one (1) underground handhole installed in place, including the base, top cover and mounting hardware, and washed stone or equivalent. The handhole size, amount of 1" washed stone or equivalent and the installation shall be as specified by the engineer. The handhole assembly unit is rated to withstand vehicular traffic. The suffix of "T" indicates a traffic rated handhole. A UHC type is to be used with Copper Cable; A UHF with Fiber Optic Cable. |
| UHF(24X36X24)T | | |
| UHF(30X48X36)T | | |
| UHF(30x48x24)T | | |
| UHF(36x60x36)T | | |
| UHF(48x96x48)T | | |
| UM2C | | UM2C- BOND UNDERGROUND CABLE: This unit consists of the necessary labor and material required to bond a new cable in an existing underground closure or rebond an existing cable in a new closure. This unit will be paid for each bonding connector and harness placed. This unit covers only those bonds not covered by the placement of a new terminal/closure. |
| UMFCD | | UMFCD; LOWER MANHOLE FRAME AND COVER DOWN ; This unit includes the labor, equipment and material required to lower a manhole frame and cover to new grade. This unit will be paid per foot. Example ; to lower 6 inches would be .5 UMFCD. Material to be paid separately requiring supporting documentation of purchase. |

| | | |
|-------------|--|---|
| UMFCU | | UMFCU ₁ RAISE MANHOLE FRAME AND COVER UP: This unit includes the labor, equipment and material required to raise a manhole frame and cover to new grade. This unit will be paid per foot. Example ₁ to raise 6 inches would be .5 UMFCU. Material to be paid separately requiring supporting documentation of purchase. |
| UMRFC | | UMRFC ₁ REPLACE MANHOLE FRAME AND COVER: This unit includes the labor, equipment and material required to replace a frame and cover on an existing manhole. Material to be paid separately requiring supporting documentation of purchase. |
| UO12 | | UO___ - UNDERGROUND FILLED FIBER OPTIC CABLE: Consists of one (1) foot of underground filled fiber optic cable installed in underground conduit and manholes/handholes/building. This unit also consists of setting up the cable within the manhole, providing and placing cable supports and cable rack hooks, pulling-in wires, duct seals or plugs, cable tags, and rodding and cleaning of ducts, all as required in accordance with the detailed plans and specifications. This unit includes bonding together of all closures, but does not include cable closure assemblies or cable splicing. The length of cable for compensation purposes is determined by measuring the distances paralleling the cable plus the vertical lengths of cable installed on supporting structures. This unit shall include the cleaning out and/or pumping out of manholes when specified by the Engineer. The splicing and closures will be compensated for under separate units. |

| UO36 | | |
| UO48 | | |
| UO60 | | |
| UO72 | | |
| UO96 | | |
| UO144 | | |
| UO(192) | | |
| UO(216) | | |
| UO(288) | | |
| UO48ADSS | | Consists of one (1) foot of underground ADSS fiber optic cable installed in underground conduit and manholes/handholes/building. This unit also consists of setting up the cable within the manhole, providing and placing cable supports and cable rack hooks, pulling-in wires, duct seals or plugs, cable tags, and rodding and cleaning of ducts, all as required in accordance with the detailed plans and specifications. This unit does not include cable closure assemblies or cable splicing. The length of cable for compensation purposes is determined by measuring the distances paralleling the cable plus the vertical lengths of cable installed on supporting structures. This unit shall include the cleaning out and/or pumping out of manholes when specified by the Engineer. The splicing and closures will be compensated for under separate units. |
| UO96ADSS | | |
| UO144ADSS | | |
| UO216ADSS | | |
| UO288ADSS | | |
| UOFNR24ADSS | | Consists of one (1) foot of underground ADSS fiber optic non conductive plenum riser cable installed in underground conduit and manholes/handholes/building. This unit also consists of setting up the cable within the manhole, providing and placing cable supports and cable rack hooks, pulling-in wires, duct seals or plugs, cable tags, and rodding and cleaning of ducts, all as required in accordance with the detailed plans and specifications. This unit does not include cable closure assemblies or cable splicing. The length of cable for compensation purposes is determined by measuring the distances paralleling the cable |
| UOFNR48ADSS | | |

| | | |
|-------------|--|--|
| UOFNR96ADSS | | plus the vertical lengths of cable installed on supporting structures. This unit shall include the cleaning out and/or pumping out of manholes when specified by the Engineer. The splicing and closures will be compensated for under separate units. |
| UOR(144) | | Same as UO Unit except that this Unit covers the placement of buried dry tube fiber optic single jacket, single armored ribbon cable. |
| UOR(192) | | |
| UOR(216) | | |
| UOR(288) | | |
| UOML | | UOML - FIBER OPTIC MAINTENANCE LOOP: Labor for placement of Maintenance loop/Coil in manhole. Length shall be specified by Engineer. Unit will be paid on a per |
| | | |
| WADSSSLACK | | This unit consists of the labor required to move slack from existing slack coil or snowshoes to new location where the slack is needed. This unit will not be paid in conjunction with any WEC1 unit. Unit to be paid on a per span basis. |
| WBA | | WBA - STRAIGHTEN STUB POLE: This unit consists of the labor required to straighten a stub pole of any size, including any excavation and tamping. |
| WBD | | WBD - RELOCATE EXISTING PEDESTAL: This unit consists of all necessary labor and incidental materials necessary to relocate or transfer an existing pedestal within the same excavation within 10 feet of its original location. This unit also includes the installation new pea gravel, replacing any missing cover securing bolt, and applying a Warning Buried Cable Route or Joint Trench adhesive label over the standard manufacturer label where applicable. This unit will also include the disconnecting and reconnecting of existing |
| WBDGR | | This unit consists of the labor necessary to access an existing pedestal for grooming purposes for span lines or special circuits only. This unit will only be used in conjunction with the grooming of existing plant as specified by the Windstream Engineer. This Unit is to be paid per pedestal. The Contractor is to provide any minor materials required for this |
| WBFC | | WBFC - MOVE BURIED COPPER CABLE: This unit consists of the labor and material to move a buried Copper cable when cutting of the existing cable is required to place it in a pedestal. This unit will include the transferring or rearrangement of Riser Cables. This unit does not include any splicing, bonding or excavation work. This unit is payable per each per location. A suffix of "TV" indicates CATV use. |
| WBFO | | WBFO - MOVE BURIED FIBER OPTIC CABLE: This unit consists of the labor and material to move a buried Fiber Optic cable when cutting of the existing cable is required to place it in a enclosure. This unit will include the transferring or rearrangement of Riser Cables. This unit does not include any splicing, bonding or excavation work. This unit is payable per each per location. |

| | | |
|--------------|--|--|
| WBG18 | | WBG - REARRANGEMENT OF TERMINAL BLOCK OR LOAD COIL - This labor and materials unit provides for the transfer of existing terminal blocks and/or modular load coil assembly with existing mounting brackets (if applicable), from an existing pedestal to a new pedestal, including the necessary labor and materials to place mounting screws, ties, etc. This unit will be compensated on a per each basis. This unit does not include any splicing. Suffix of "18" indicates a Terminal Block; suffix of "35" indicates a Load Coil. |
| WBG35 | | |
| WBHF | | WBHF - EXPOSE HANDHOLE: This unit consists of the labor and material required to |
| WBM27 | | WBM27 - LOWER/REROUTE EXISTING CABLES OR SEB: This unit consists of the necessary labor and material to lower and/or reroute existing cable(s) or drop(s) to standard cable/drop depth. This unit will be compensated on a per foot basis, and includes all excavation, the trenching and rerouting of the existing cable(s) and/or wire(s), backfilling and surface restoration. Applicable cable, pedestal and splicing units will be specified separately. A suffix of "F" indicate Fiber Optics. |
| WBM27F | | |
| WBM27E(36) | | WBM27E()- LOWER/REROUTE EX CA OR SEB/EXTRA DEPTH: This unit is the same as the WBM27 unit, except the cable is to be reburied at a greater than normal depth. The required depth of the relocated cable will be shown in parentheses. Example - WBM27E(48) would require that the cable be reburied at a depth of 48 inches. This is a stand alone unit and will not be paid in addition to the WBM27 unit. A suffix of "F" indicates Fiber Optics. |
| WBM27E(48) | | |
| WBM27E(48)F | | |
| WBM27E(60) | | |
| WBM27E(60)F | | |

| WBM27E(96)F | | |
| WBM27E(108) | | |
| WBM27E(108)F | | |
| WBM27E(120) | | |
| WBM27E(120)F | | |
| WBM27E(132) | | |
| WBM27E(132)F | | |
| WBM27E(144) | | |
| WBM27E(144)F | | |
| WBM27E(156) | | |
| WBM27E(156)F | | |
| WBM27E(168) | | |

| | | |
|---------------|--|---|
| WBM27E(168)F | | |
| WBM27E(180) | | |
| WBM27E(180)F | | |
| WBM32 | | WBM32 - REARRANGE CARRIER UNIT: This unit consists of the labor and material required to rearrange or transfer a Carrier unit from one pole or post to another. This unit will also include the rearrangement of any associated guards, cables and grounds. |
| WBM32-DAML | | |
| WBM80 | | WBM80/81/82: REMOVE AND REATTACH CABLE GUARD - These units consist of the labor and material required to remove and reattach a cable guard. A suffix of "F" indicates Fiber Optics. |
| WBM80F | | |
| WBM81 | | |
| WBM81F | | |
| WBM82 | | |
| WBM82F | | |
| WBM83 | | WBM83: REMOVE AND REATTACH BURIED DROP GUARD - This unit consists of the labor and material required to remove and reattach a buried drop guard on a building or |
| WBM84SQ | | This unit consists of the labor required to remove and reattach a squirrel cap. A suffix of "F" indicates Fiber Optics. |
| WBM84SQF | | |
| WBM85ADPT | | This unit consists of the labor required to remove and dispose of a U Guard adapter. A suffix of "F" indicates Fiber Optics. |
| WBM85ADPTF | | |
| WBM85BOOT | | This unit consists of the labor and materials required to place (1) U Guard adapter at the opening of a 2" - 4" riser guard at the base of a pole. In some cases the adapter will need |
| WBM85BOOTF | | |
| WBM95 | | WBM95: REARRANGE OR TRANSFER OF BM95 TERMINAL - This unit consists of the labor and material required to rearrange or transfer any BM95 to another location. This will include the guard, cable and terminal. |
| WC1 | | WC1 - MOVE AERIAL CABLE ATTACHMENT: This unit consists of the labor and material required to move one cable attachment on a pole from one location to another on the same pole, or to a different pole, placed in the same location. This unit will include resagging as necessary. This unit includes the removal of all associated hardware and any required hardware for move. This unit will not be paid in conjunction with any "X" units. This unit is paid per strand. A suffix of "F" indicates Fiber Optics. |
| WC1F | | |
| WCW | | WCW- DELASH EXISTING CABLE: This unit consists of the labor and material to de-lash an existing cable and temporarily support it until it can be removed at a later time. The removal of the old cable will be compensated for under the XX unit. A suffix of "F" indicates Fiber Optics. This unit is to be paid on a per foot basis. |
| WCWF | | |
| WEC1<=150 | | This unit consists of the labor and material to re-lash cable to an existing strand. This |
| WEC1>150<=350 | | |

| | | |
|-----------------|--|---|
| WEC1>350 | | includes the removal of the old lashing wire. This unit is to be paid on a per foot basis. Unit bands are divided into the total footage of the cable, fiber, etc. per work order with less than 150 units, 150-350 units, or more than 350 units. |
| WEC1F<=150 | | |
| WEC1F>150<=350 | | |
| WEC1F>350 | | |
| WHA | | WHA - REENTER AERIAL FREE-BREATHING CLOSURE: This unit consists of the labor and material required to reenter an aerial free-breathing closure. This may require removing the terminal and reattaching it, adding additional washers where cables are |
| WHAGR | | This unit consists of the labor necessary to access an existing aerial free-breathing closure for grooming purposes on span lines or special circuits only. This unit will only be used in conjunction with the grooming of existing plant as specified by the Windstream Engineer. This Unit is to be paid per closure. The Contractor is to provide any minor materials required for this Unit. |
| WHAP | | WHAP - ENTER AND PRESSURE TEST EXISTING CLOSURE: This unit includes the labor and materials to remove and reinstall any existing aerial closure and air pressure testing. Placement of end plate to be paid separately. This unit shall also include air pressure buffering, if required. |
| WHAPO | | WHAPO - REMOVE AND REINSTALL AERIAL FO SPLICE CASE: This unit will include the labor and materials to remove and reinstall an existing aerial fiber optic splice case and air pressure testing. Placement of new end plate to be paid separately. |
| WHBFO | | WHBFO - REMOVE AND REINSTALL BURIED FO SPLICE CASE: This unit will include the labor and materials to remove and reinstall an existing buried fiber optic splice case and air pressure testing. Placement of new end plate to be paid separately. |
| WHC1(A)<=5 | | This unit is identical to the HC-1 unit, except it pertains to the splicing or rearrangement of working cable pairs. Compensation is per each cable pair and is to be used at the direction of the Engineer. Contractor is to monitor each pair prior to rearrangement and test upon completion of rearrangement to avoid any interruption to customer service. This unit includes the removal of existing splice connectors. Unit bands are divided into per splicing location (ped, closure, cross connect cabinet, or other splicing point) with less than 5 units, 5-15 units, 15-75 units, 75-600 units, or more than 600 units. |
| WHC1(A)>15<=75 | | |

| WHC1(U)>75<=600 | | |

| | | |
|-----------------|--|---|
| WHC2(A) | | WHC-2- REARRANGE CABLE PAIR - This unit consists of the labor and material required to un-terminate and re-terminate an HC-2 unit. Contractor is to monitor each pair prior to rearrangement and test upon completion of rearrangement to avoid any interruption to customer service. |
| WHC2(B) | | |
| WHC2(U) | | |
| WHC3(A)<=5 | | This unit is identical to the HC-3 unit, except it pertains to the splicing or rearrangement of working cable pairs. Compensation is per each cable pair and is to be used at the direction of the Engineer. Contractor is to monitor each pair prior to rearrangement and test upon completion of rearrangement to avoid any interruption to customer service. This unit includes the removal of existing splice connectors. Unit bands are divided into splicing location (ped, closure, cross connect cabinet, or other splicing point) with less than 5 units, 5-15 units, 15-75 units, 75-600 units, or more than 600 units. |

| WHC3(U)>5<=15 | | |
| WHC3(U)>600 | | |
| WHC3(U)>75<=600 | | |
| WHC4(A) | | WHC-4 - REARRANGE CABLE PAIR: This unit consists of the labor and material required to un-terminate and re-terminate an HC-4 unit. Contractor is to monitor each pair prior to rearrangement and test upon completion of rearrangement to avoid any interruption to |
| WHC4(B) | | |
| WHC4(U) | | |
| WHO1(A) | | WHO - REARRANGE WORKING FIBER: This unit includes labor and materials to handle, break, resplice and place in splice tray one single working fiber. This unit is paid on a per fiber basis and includes all testing required by Windstream. |
| WHO1(B) | | |
| WHO1(U) | | |
| WHUO | | This unit will include the labor and materials to remove and reinstall any existing underground closure and air pressure testing. This unit shall also include the pumping out of manholes, if required. |
| WHUP | | WHUP - REMOVE AND REINSTALL UG PRESSURIZED CLOSURE: This unit will include the labor and materials to remove and reinstall any existing underground closure and air pressure testing. Placement of new end plate to be paid separately. This unit shall also include the pumping out of manholes and air pressure buffering, if required. |
| WP1(A) | | WP1 - REARRANGE BUILDING PROTECTOR: This unit consists of the labor and material required to rearrange a building protector from one location on a building to another. This unit also includes rebonding and reterminating of cable, the regrounding of |
| WP1(B) | | |

| | | |
|------------|--|--|
| WP1(U) | | the protector and transferring station wires and/or jumpers as required. |
| WPE1 | | WPE1 - TRANSFER DOWN GUY: This unit consists of all labor and any incidental materials required for the rearrangement or transfer of an existing down guy. This unit includes all rearrangement work required at the top and bottom of a guy. This unit is paid on a per each basis and includes rebonding. |
| WPE1(JO) | | |
| WPE2 | | WPE2 - TRANSFER OVERHEAD GUY: This unit consists of all labor and any incidental materials required for the rearrangement or transferring of a single, existing overhead guy. This unit includes all rearrangement work at either end of the overhead guy. This unit is paid on a per each basis and includes rebonding. |
| WPE2(JO) | | |
| WPEAGRAVEL | | Labor and Material to instal ten (10) pounds of pea gravel in any cabinet or closure as designated by the Windstream Engineer. This unit also includes retagging of cables as identified by the Engineer. This unit is not to be paid in addition to new placement units for pedestals, cross-connects or any other units that include pea gravel. |
| WPG18 | | WPG__ - REARRANGE LOAD COIL ASEMBLY: This unit consist of all labor and incidental materials required for the rearrangement, transfer or repositioning of a stackable load coil assembly from one aerial closure to another or a single pole mounted or strand mounted load coil or terminal and its associated hardware. This unit does not include |
| WPG31 | | |
| WPG34 | | |
| WPG35 | | |
| WPM11 | | WPM11 - TRANSFER GUY GUARD: This unit consists of the labor required to transfer a guy guard from one guy to another. |
| WPM11(JO) | | |
| WPM12 | | WPM12 TRANSFER SIDEWALK GUY ASSEMBLY: This unit consists of the necessary labor and material to transfer an existing sidewalk guy assembly from one location on a pole to another, or from one pole to another, in the same location. |
| WPM12(JO) | | |
| WPM14 | | WPM 14 - TRANSFER OF PUSH BRACE ASSEMBLY: Labor and miscellaneous material to transfer push brace accessories and push pole when changing out a existing pole or push brace pole. |
| WPM14(JO) | | |
| WPM2A | | WPM2A TRANSFER GROUND CONNECTION: This unit consists of the labor required to transfer either one, or both ends of a ground wire assembly for bonding aerial cable strand or support wire to electric system neutral or pole ground assembly. |
| WPM2AF | | |
| WPM4 | | WPM4 - REARRANGE CABLE EXTENSION ARM: Consists of all labor and incidental materials to rearrange or transfer the Cable Extension Arm (Alley Arm). A suffix of A indicates a long arm. |
| WPM4A | | |

| | | |
|--------------|--|--|
| WPM92 | | WPM92 TRANSFER FIBER OPTIC SNOWSHOE: This unit consists of the labor required to rearrange two (2) in-span storage racks (snowshoes). This also includes the reinstallation of the fiber cable in storage racks, retying and tagging of the cable. |
| WPOLE | | WPOLE STRAIGHTEN POLE: This unit consists of the labor required to straighten a pole, including any excavation and tamping. |
| WPOLE(JO) | | WPOLE(JO) STRAIGHTEN POLE: This unit consists of the labor required to straighten a pole, including any excavation and tamping. |
| WPOLE-AB | | This unit consists of the labor required to straighten a blind alley pole, including any excavation and tamping. |
| WPOLE-AB(JO) | | |
| WRPTR(A) | | WRPTR - TRANSFER REPEATER HOUSING: This unit consists of the labor and incidental materials for the transferring and rearrangement of a repeater housing, repeater stubs, riser guard and grounds at pole change-out situations. |
| WRPTR(B) | | |
| WRPTR(U) | | |
| XXADDSSCABLE | | This unit consists of the labor to remove and properly dispose of any sized aerial non supported ADSS Fiber Optic Cable. This will also include the removal and disposal of any associated closures, snowshoes, or hardware. This unit is paid on a per foot basis. |
| XXBA | | XXBA - REMOVAL OF STUB POLE: This unit consists of the labor to remove and properly dispose of any size stub pole and, if applicable, any attached warning signs associated with the pole. This unit requires that the pole be completely removed from the ground and includes any surface restoration. A suffix of F indicates Fiber Optic Cable. |
| XXBA(F) | | |
| XXBD | | XXBD - PEDESTAL REMOVAL: This unit includes all labor for the removal and proper disposal of any size pedestal. This unit also includes, where applicable, cutting of dead cables below ground line and surface restoration. This unit also includes the removal of any associated grounding. |
| XXBDS(A) | | XXBDS/XXPDS - CROSS CONNECT CABINET REMOVAL: This unit includes all labor for the removal and proper disposal of any size Cross Connect Cabinet. This unit also includes, where applicable, cutting of dead cables below ground line and surface restoration. |
| XXBDS(B) | | |
| XXBDS(U) | | |
| XXBFC | | XXBFC - REMOVAL OF BURIED COPPER CABLE: This unit consists of the labor to remove and properly dispose of any pair count Buried Copper Cable Risers and, if applicable, any associated hardware. This unit is paid on a per foot basis. |
| XXBFO | | XXBFO - REMOVAL OF BURIED FIBER OPTIC CABLE: This unit consists of the labor to remove and properly dispose of any size Buried Fiber Optic Cable Risers and, if applicable, any associated hardware. This unit is paid on a per foot basis. |

| | | |
|------------|--|--|
| XXBFOI | | REMOVAL OF BURIED FIBER OPTIC CABLE IN DUCT: This unit consists of the labor to remove and properly dispose of any size Buried Fiber Optic Cable. This unit is paid on a per foot basis. |
| XXBG | | XXBG - REMOVAL OF LOAD COIL: This unit will include the necessary labor for removal and proper disposal of up to 25 pair stackable/encapsulated load coils and mounting brackets from a buried plant housing. Any splicing units involved with this unit will be paid separate. |
| XXBG18 | | XXBG18 - REMOVE PEDESTAL MOUNTED TERMINAL BLOCK: This unit includes the labor for removal and proper disposal of any size pedestal mounted terminal block. Any splicing units involved with this unit will be paid separate. |
| XXBHF(B) | | XXBHF- REMOVE BURIED HANDHOLE FOR FIBER: This unit consists of the labor required to remove and properly dispose of any size buried Fiber Handhole. This unit will also include removal of any dead cables and splice closures at the discretion of the engineer. This unit also includes Surface Restoration. |
| XXBHF(U) | | |
| XXBM31 | | XXBM31- REMOVE DIGITAL LINE CONCENTRATOR (DLC): This unit consists of the labor required to remove and properly dispose of any size Digital Line Concentrator, associated hardware, bonds and grounding and the cutting of dead cables. |
| XXBM53 | | XXBM53- REMOVE WARNING SIGN OR POST: This unit consists of the labor required to remove and properly dispose of any type buried Cable Warning Sign or Post. This unit also includes Surface Restoration. A suffix of F indicates Fiber Optics. |
| XXBM53F | | |
| XXBM80(B) | | XXBM80/81/82/83 - REMOVE CABLE GUARDS: This unit consists of the labor required to remove and properly dispose of any size cable/drop guards and associated hardware. A suffix of F indicates Fiber Optics. |
| XXBM80(B)F | | |
| XXBM80(U) | | |
| XXBM80(U)F | | |
| XXBM81(B) | | |
| XXBM81(B)F | | |
| XXBM81(U) | | |
| XXBM81(U)F | | |
| XXBM82(B) | | |
| XXBM82(B)F | | |
| XXBM82(U) | | |
| XXBM82(U)F | | |
| XXBM83(A) | | |
| XXBM83(B) | | |

| | | |
|-------------|--|--|
| XXBM83T | | XXBM83T - REMOVE MOBILE HOME POST: This unit consists of the labor required to remove and properly dispose of any Mobile Home Post and associated hardware. This unit also includes cutting dead cable below ground line. |
| XXBM84SQ | | This unit consists of the labor required to remove and dispose of a squirrel cap. A suffix of "F" indicates Fiber Optics. |
| XXBM84SQF | | |
| XXBM85ADPT | | This unit consists of the labor required to remove and dispose of a U Guard adapter. A suffix of "F" indicates Fiber Optics. |
| XXBM85ADPTF | | |
| XXBM85BOOT | | This unit consists of the labor and materials required to remove (1) U Guard boot. A suffix of F indicates usage with the placement of fiber optic cable. |
| XXBM85BOOTF | | |
| XXBM95 | | XXBM95 - REMOVE BM95: This unit consists of the labor required to remove and properly dispose of any type/size BM95 Unit. This unit will include the removal of any terminal, cable guards and associated hardware and grounds. This unit also includes Surface |
| XXBMCS | | XXBMCS - REMOVAL OF CABLE STUB: This unit will include the necessary labor for removal and proper disposal of any size cable stub. Any splicing units involved with this unit will be paid separately. |
| XXCF | | XXCF - REMOVE AERIAL FIGURE 8 COPPER CABLE: This unit consists of the labor required to remove and properly dispose of any pair count and gauge Figure 8 self supporting Copper Cable. This will also include the removal and disposal of any associated closures/terminals, hardware, bond and grounds. This unit is paid on a per foot |
| XXCO | | This unit consists of the labor required to remove and properly dispose of any size lashed Fiber Optic Cable and Strand. This will also include the removal and disposal of any associated closures, snowshoes, hardware, bond and grounds. This unit is paid on a per foot basis. |
| XXCOE | | XXCOE - REMOVE AND DELASH AERIAL FIBER OPTIC CABLE - This unit consists of the labor required to delash, remove and properly dispose of any size aerial Fiber Optic Cable and retain the strand. This will also include the removal and disposal of any associated closures, snowshoes and hardware. This unit is paid on a per foot basis. |
| XXCW | | XXCW - REMOVE AERIAL LASHED COPPER CABLE - This unit consists of the labor required to remove and properly dispose of any pair count and gauge lashed aerial Copper Cable and Strand. This will also include the removal and disposal of any associated closures/terminals, hardware, bond and grounds. This unit is paid on a per foot basis. |
| XXCWE | | XXCWE - REMOVE AND DELASH AERIAL COPPER CABLE - This unit consists of the labor required to delash, remove and properly dispose of any pair count and gauge aerial Lashed Copper Cable and retain the strand. This will also include the removal and disposal of any associated hardware. |

| | | |
|----------|--|--|
| XXCWIRE | | XXCWIRE - REMOVE C-WIRE - This unit consists of the labor required to remove and properly dispose of Rural Distribution Wire (C-Wire). This will also include the removal and disposal of any associated hardware, terminals and Bridle Wire. This unit is paid on a per foot basis. |
| XXDW | | XXDW - REMOVE AERIAL FIG 8 NON-SHIELDED COPPER CA: This unit consists of the labor required to remove and properly dispose of any pair count and gauge Non-Shielded Figure 8 self supporting Copper Cable. This will also include the removal and disposal of any associated closure/terminals, hardware, Bridle Wire, bond and grounds. |
| XXHA | | XXHA - REMOVE AERIAL FREE-BREATHING CLOSURE: This unit consists of the labor required to remove and properly dispose of any size aerial free-breathing closure. This unit is not to be used in conjunction with any cable removal units. |
| XXHAP | | XXHAP - REMOVE AERIAL PRESSURIZED CLOSURE: This unit consists of the labor required to remove and properly dispose of any size aerial pressurized closure. This unit is not to be used in conjunction with any cable removal units. Suffix of "O" indicates Fiber Optic Closure. |
| XXHAPO | | XXHAP - REMOVE AERIAL PRESSURIZED CLOSURE: This unit consists of the labor required to remove and properly dispose of any size aerial pressurized closure. This unit is not to be used in conjunction with any cable removal units. Suffix of "O" indicates Fiber Optic Closure. |
| XXHBFO | | XXHBFO - REMOVE BURIED FIBER OPTIC CLOSURE: This unit consists of the labor required to remove and properly dispose of any size buried fiber optic closure. This unit is not to be used in conjunction with any cable removal units. |
| XXHC(A) | | This unit includes the labor to trim out and properly dispose of any type copper splice connector, spliced pair, or load coil. Some trim outs may not include removal of the connectors. Bridge Taps or Half Taps may be trimmed out without the removal of the connector. This unit is to be paid on a per pair basis. This unit will not be paid in conjunction with another splicing unit. Re-splicing if necessary will be paid with a separate unit only when called for by the engineer. |
| XXHC(B) | | |
| XXHC4(A) | | XXHC4 - REMOVE CROSS CONNECT JUMPERS: Includes the labor for removal and proper disposal of cross connect jumpers in a cross-connect box or frame. |
| XXHC4(B) | | |
| XXHUO | | XXHUO - REMOVE UNDERGROUND FIBER OPTIC CLOSURE: This unit consists of the labor required to remove and properly dispose of any size underground fiber optic closure. This unit is not to be used in conjunction with any cable removal units. |

| | | |
|-----------------|--|--|
| XXHUP | | XXHUP - REMOVE UNDERGROUND COPPER CABLE CLOSURE: This unit consists of the labor required to remove and properly dispose of any size underground copper cable closure. This unit is not to be used in conjunction with any cable removal units. |
| XXLEADSLEEVE(A) | | XXLEADSLEEVE - REMOVAL OF LEAD SLEEVES: This unit consists of all necessary labor to remove and properly dispose of any size lead sleeve. This unit will not be paid in conjunction with cable removal units. This unit is paid per each. |
| XXLEADSLEEVE(U) | | |
| XXP1(A) | | XXP1 - REMOVE BUILDING ENTRANCE TERMINAL: This unit consists of the labor required to remove and properly dispose of any size Building Entrance Terminal. This will also include the removal and disposal of any associated hardware, modules, bond and grounds. |
| XXP1(B) | | |
| XXP1(U) | | |
| XXPDS(A) | | XXBDS/XXPDS - CROSS CONNECT CABINET REMOVAL: This unit includes all labor for the removal and proper disposal of any size Cross Connect Cabinet. This unit also includes, where applicable, cutting of dead cables below ground line and surface |
| XXPE1 | | XXPE1 - REMOVE DOWN GUY: This unit consists of the labor required to remove and properly dispose of any size Down Guy and associated hardware and grounding. This unit also includes the removal and disposal of guy guards, when applicable. JO indicates Joint Ownership Pole. |
| XXPE1(JO) | | |
| XXPE2 | | XXPE2 - REMOVE OVERHEAD GUY: This unit consists of the labor required to remove and properly dispose of any size Overhead Guy and associated hardware and grounding. JO indicates Joint Ownership Pole. This unit is to be paid on a per span basis. |
| XXPE2(JO) | | |
| XXPF | | XXPF - REMOVE ANCHOR ROD: This unit consists of the labor required to remove and properly dispose of any size Anchor Rod and/or auxiliary eye. JO indicates a joint owned pole. |
| XXPF(JO) | | |
| XXPG18 | | XXPG18 - REMOVE AERIAL TERMINAL BLOCK: This unit consists of the labor required to remove and properly dispose of any size Pole or Strand Mounted Aerial Terminal Block and associated hardware. |
| XXPG31 | | XXPG31/32/34/35 - REMOVE AERIAL LOAD COIL: This unit consists of the labor required to remove and properly dispose of any size aerial Load Coil and associated hardware. |
| XXPG32 | | |
| XXPG34 | | |
| XXPG35 | | |
| XXPM11 | | XXPM11 - REMOVE EXISTING GUY GUARD: This unit consists of the labor required to remove and properly dispose of an existing guy guard. This unit will not be used in conjunction with the Down Guy Removal Units. JO indicates a joint owned pole. |
| XXPM11(JO) | | |

| | | |
|---------------|--|--|
| XXPM12 | | XXPM12 - REMOVE SIDEWALK GUY ASSEMBLY: This unit consists of the labor required to remove and properly dispose of a sidewalk Guy Assembly, guy strand, associated hardware, bonds and grounds. JO indicates a joint owned pole. |
| XXPM12(JO) | | |
| XXPM4 | | XXPM4 - REMOVE EXTENSION ARM ASSEMBLY: This unit consists of the labor required to remove and properly dispose of a Cable Extension Arm (Alley Arm) and Associated Hardware. A suffix of A indicates a long arm. |
| XXPM4A | | |
| XXPM5 | | XXPM5 - REMOVE POLE STEP ASSEMBLY: This unit consists of the labor required to remove and properly dispose of a Pole Step Assembly and associated hardware. JO indicates a joint owned pole. This unit is paid on a per pole basis. |
| XXPM5(JO) | | |
| XXPM52 | | XXPM52 - REMOVE POLE TAG: This unit consists of the labor required to remove and properly dispose of any type of Windstream identification tags, letters and numbers and Associated Hardware. This unit is not to be paid in addition to a Pole Removal. |
| XXPM52(JO) | | |
| XXPMCS | | XXPMCS - REMOVAL OF CABLE STUB: This unit will include the necessary labor for XXPM5G - REMOVE SQUIRREL GUARD: This unit consists of the labor required to remove and properly dispose of any size and type of Squirrel Guard and Associated Hardware. A suffix of "F" indicates Fiber Optics. This unit is to be paid on a per foot basis |
| XXPMSG | | |
| XXPMSGF | | |
| XXPOLE | | XXPOLE - REMOVE POLE: This unit consists of the labor to remove and properly dispose of any size pole. Includes XXPM52. Suffix of AB indicates removal and disposal of a Pole located in a Blind Alley or other area not accessible by digger truck. JO indicates Joint Owned Pole. This unit requires that the pole be completely removed from the ground and includes surface restoration. |
| XXPOLE(JO) | | |
| XXPOLE(JO)-AB | | XXPOLE - REMOVE POLE: This unit consists of the labor to remove and properly dispose of any size pole. Includes XXPM52. Suffix of AB indicates removal and disposal of a Pole located in a Blind Alley or other area not accessible by digger truck. JO indicates Joint Owned Pole. This unit requires that the pole be completely removed from the ground and includes surface restoration. |
| XXPOLE-AB | | |
| XXRPT(A) | | XXRPT - REMOVE REPEATER HOUSING: This unit consists of the labor required to remove and properly dispose of any Repeater Housing and Associated Cable, Cable Guards, grounding and hardware. |
| XXRPT(B) | | |
| XXRPT(U) | | |
| XXSP11(B) | | This unit consists of the labor necessary to remove and properly dispose of a treated wood retaining wall. The unit also includes any surface restoration necessary to return the site to the appropriate grade. The cost for any incidental materials is the responsibility of the |
| XXSP11(E) | | |
| XXSP11(F) | | |
| XXSP9(B) | | This unit consists of the labor necessary to remove and properly dispose of a treated wood |

| | | |
|-------------|--|--|
| XXSP9(E) | | barrier. The unit also includes any surface restoration necessary to return the site to the appropriate grade. The cost for any incidental materials is the responsibility of the |
| XXSP9(F) | | |
| XXSPEL1(E) | | This unit consists of the labor to remove and properly dispose of any size stub post and if applicable any attached warning signs associated with the post. This unit requires that the post be completely removed from the ground and includes any surface restoration. |
| XXSPEL10(B) | | This unit provides for the removal and proper disposal of any size exposed, above ground conduit, including weatherhead and any other miscellaneous material. This includes the clean up of any scraps and screws. |
| XXSPEL10(E) | | |
| XXSPEL10(F) | | |
| XXSPEL2(E) | | This unit provides for the labor and any incidental materials required to remove a properly dispose of any type of power pedestal or meter base. This unit also includes the cutting of conduits/wire below ground level and capping or sealing off conduit and any restoration necessary to return the site to the appropriate grade. The cost for any incidental materials is the responsibility of the contractor. |
| XXSPEL5(E) | | This unit provides for the labor and any incidental materials required to remove electrical service from an existing DLC, remote subscriber cabinet, cross connect or power pedestal. This unit also includes the removal of an independant surge arrestor when applicable, all wiring from the commercial power source to the equipment, all above ground conduit, disconnect and associated hardware. The cost for any incidental materials is the responsibility of the contractor. |
| XXSPEL5A(E) | | This unit provides for the labor required to remove and properly dispose of any size breaker from service. |
| XXSPEL6(E) | | This unit provides for the labor required to remove and properly dispose of any service wiring from service. |
| XXSPPH1(B) | | This unit provides for removing and properly disposing of a poured in place concrete pad of any size. The unit also includes the cutting of conduits at ground level, capping and any restoration necessary to return the site to the appropriate grade. Fill material, if required, will be paid with the SP4 or SP5 units. |
| XXSPPH1(E) | | |
| XXSPPH1(F) | | |
| XXSPPH2(B) | | This unit provides for removing and properly disposing of a small pre-fabricated pad from an existing equipment site. The unit also includes the cutting of conduits at ground level, capping, and any restoration necessary to return the site to the appropriate grade. Fill material, if required, will be paid with the SP4 or SP5 units. |
| XXSPPH2(E) | | |
| XXSPPH2(F) | | |
| XXSPPH3(B) | | This unit provides for removing and properly dispersing of a large pre-fabricated pad from an existing equipment site. Also includes the cutting of conduits at ground level and capping and any restoration necessary to return the site to the appropriate grade. Fill |
| XXSPPH3(E) | | |

| | | |
|-------------|--|--|
| XXSPPH3(F) | | material, if required, will be paid with the SP4 or SP5 units. |
| XXSPPH4(E) | | This unit provides for removing and properly disposing of a small (under 500 line) DLC, remote subscriber cabinet or fiber cabinet from an existing equipment site. |
| XXSPPH4(F) | | |
| XXSPPH5(E) | | This unit provides for removing and properly disposing of a large (over 500 line) DLC, remote subscriber cabinet, or fiber cabinet from an existing equipment site. |
| XXSPPH5(F) | | |
| XXSPPH6(E) | | This unit consists of the labor necessary to remove and properly dispose of an H fixture. The unit also includes the cutting of conduits/wire below ground level, capping or sealing of conduit and any surface restoration necessary to return the site to the appropriate grade. The cost for any incidental materials is the responsibility of the contractor. |
| XXSPPH7(B) | | This unit consists of the labor necessary to remove and properly dispose of a vehicle guard post. The unit also includes the cutting of conduits/wire below ground level, capping or sealing of conduit and the surface restoration necessary to return the site to the appropriate grade. The cost for any incidental materials is the responsibility of the contractor. |
| XXSPPH7(E) | | |
| XXSPPH7(F) | | |
| XXSPSW10(B) | | This unit consists of the labor and any incidental materials required to remove and properly dispose of a chain link fence, gates and posts of varying heights. The unit also includes the removal of any security wire, where applicable. This unit also includes any surface restoration to return the site to the appropriate grade. The disposal of the fence materials and any incidental materials will be the responsibility of the contractor. |
| XXSPSW10(E) | | |
| XXSPSW10(F) | | |
| XXSPSW12(B) | | This unit consists of the labor and any incidental materials required to remove and properly dispose of any type of wire fence, gates and posts of varying heights. This unit also includes any surface restoration to return the site to the appropriate grade. The disposal of the fence materials and any incidental materials will be the responsibility of the contractor. |
| XXSPSW12(E) | | |
| XXSPSW12(F) | | |
| XXSPSW13(B) | | This unit consists of the labor and any incidental materials required to remove and properly dispose of any wood fence, gates and posts of varying heights. This unit also includes any surface restoration to return the site to the appropriate grade. The disposal of the fence materials and any incidental materials will be the responsibility of the contractor. |
| XXSPSW13(E) | | |
| XXSPSW13(F) | | |
| XXSTRAND | | XXSTRAND - REMOVAL OF STRAND: This unit consists of all necessary labor to remove and properly dispose of any size strand, associated hardware, bonds and grounds. This unit will not be paid in conjunction with cable removal units. This unit is paid per foot. |

| | | |
|-------------|--|--|
| XXTEMPCABLE | | XXTEMPCABLE - REMOVE TEMPORARY CABLE: This unit consists of the labor required to remove any size and gauge Cable that has been placed to provide temporary service. This unit will be paid on a per foot basis, from pedestal to pedestal or pedestal to building. A suffix of "TV" indicates CATV Coax Cable. |
| XXTEMPWIRE | | This unit consists of the labor required to remove all wire(s) that have been placed to provide temporary service. This unit is not to be paid in conjunction with the SEB-CO unit. This unit will be paid on a per foot basis for the extent of the temporary wire(s) and is only paid once per location. |
| XXUF | | XXUF - REMOVE UNDERGROUND CABLE: This unit consists of the labor required to remove and properly dispose of any pair and gauge underground cable and associated hardware, including closures and resealing of ducts. |
| XXUG | | XXUG - REMOVE UNDERGROUND LOAD COIL: This unit consists of the labor required to remove and properly dispose of any size underground Load Coil and associated |
| XXUMCS | | XXUMCS - REMOVAL OF CABLE STUB: This unit will include the necessary labor for removal and proper disposal of any size cable stub. Any splicing units involved with this unit will be paid separately. |
| XXUO | | This unit consists of the labor required to remove and properly dispose of any pair underground fiber cable and associated hardware, including closures and resealing of ducts. |
| | | |
| XZBDS(A) | | XZBDS/XZPDS - REMOVE AND RETAIN CROSS CONNECT CABINET: This unit includes all labor for the removal, retention and transportation of of any size Cross Connect Cabinet. The removed material will be transported to and stored in a location to be designated by the owner. This unit also includes, where applicable, cutting of dead cables below ground line and surface restoration. All stored material to be tagged with information including job number that the property was removed from. This unit is not to be used in conjunction with any XX Units. |
| XZBDS(B) | | |
| XZBDS(U) | | |
| XZPDS(A) | | |
| XZBHF | | XZBHF - REMOVE + RETAIN BURIED FIBER HANDHOLE: This unit consists of the labor required for the removal, retention, safe transportation and proper handling of any size buried Fiber Handhole. The removed material will be transported to and stored in a location to be designated by the owner. This unit will also include removal of any dead cables and splice closures at the discretion of the engineer. This unit also includes Surface Restoration. All stored material to be tagged with information including job number that the property was removed from. This unit is not to be used in conjunction with |

| | | |
|------------|--|---|
| XZBM31 | | XZBM31- REMOVE + RETAIN DLC: This unit consists of the labor required for the removal, retention, safe transportation and proper handling of any size Digital Line Concentrator, associated hardware, bonds and grounding and the cutting of dead cables. The removed material will be transported to and stored in a location to be designated by the owner. All stored material to be tagged with information including job number that the property was removed from. This unit is not to be used in conjunction with any XX Units. |
| XZBM32 | | XZBM32 / DAML - REMOVE + RETAIN CH HOUSING UNIT: This unit consists of the labor required for the removal, retention, safe transportation and proper handling of any pairgain type channel housing/repeater housing/cabinet and associated hardware, bonds, grounding and cable. This unit will also include surface restoration. The removed material will be transported to a location to be designated by the owner. All stored material to be tagged with information including job number that the property was removed from. |
| XZBM32DAML | | |
| XZPOLE | | XZPOLE - REMOVE + RETAIN POLE: This unit consists of the labor required for the removal, retention, safe transportation and proper handling of any size Pole and associated hardware. JO indicates Joint Owned Pole. This unit requires that the pole be completely removed from the ground and includes surface restoration. The removed material will be transported to and stored in a location to be designated by the owner. All stored material to be tagged with information including job number that the property was removed from. |
| XZPOLE(JO) | | |
| XZRPT | | XZRPT - REMOVE + RETAIN REPEATER HOUSING: This unit consists of the labor required for the removal, retention and transportation of any size Repeater Housing, associated hardware, Cable Guards, Bonds and Grounding. The removed material will be transported to and stored in a location to be designated by the owner. A suffix of "1" indicates a single, encapsulated T1 Repeater. All stored material to be tagged with information including job number that the property was removed from. This unit is not to be used in conjunction with any XX Units. |
| XZRPT(1) | | |
| XZSPEL2(E) | | This unit provides for the labor and any incidental materials required to remove any time of power pedestal or meter base. The unit also includes the cutting of conduits/wire below ground level and capping or sealing of conduit and any restoration necessary to return the site to appropriate grade. The meter base or power pedestal is to be returned to the local Windstream warehouse. The cost for any incidental materials is the responsibility of the contractor. |

| | | |
|------------|--|--|
| XZSPEL5(E) | | This unit provides for the labor and any incidental materials required to remove electrical service from an existing DLC, remote subscriber cabinet, cross connect or power pedestal. Also includes the removal of an independant surge arrestor when applicable, all wiring from the commercial power source to the equipment, all above ground conduit, disconnect and associated hardware. The disconnect is to be returned to the local Windstream warehouse. The cost for any incidental materials is the responsibility of the contractor. |
| XZSPPH2(B) | | This unit provides for removing a small pre-fabricated pad that supports small cabinets of up to 500 lines from an existing equipment site. The unit also includes the cutting of conduit/wire below ground level, capping or sealing the conduit and any restoration necessary to return the site to the appropriate grade. The removed pad will be returned to the local Windstream warehouse. Fill material, if required, will be paid with the SP4 or SP5 units. The cost for any incidental materials is the responsibility of the contractor. All returned material to be tagged with information including job number that the property was removed from. |
| XZSPPH2(E) | | |
| XZSPPH2(F) | | |
| XZSPPH3(B) | | This unit provides for removing a large pre-fabricated pad that supports large cabinets of over 500 lines from an existing equipment site. The unit also includes the cutting of any conduits/wire below ground level, capping or sealing of conduit, and any restoration necessary to return the site to the appropriate grade. The removed pad will be returned to teh local Windstream warehouse. Fill material, if required, will be paid with the SP4 or SP5 units. The cost for any incidental materials is the responsibility of the contractor. All returned material to be tagged with information including the job number that the property was removed from. |
| XZSPPH3(E) | | |
| XZSPPH3(F) | | |
| XZSPPH4(E) | | This unit provides for removing a small (under 500 lines) DLC, remote subscriber cabinet or fiber cabinet from an existing equipment site. The removed cabinet is to be returned to the local Windstream warehouse. All returned material is to be tagged with information including the job number that the property was removed from. |
| XZSPPH4(F) | | |
| XZSPPH5(E) | | This Unit provides for removing a large (over 500 line) DLC, Remote Subscriber Cabinet or Fiber Cabinet from an existing equipment site. The removed cabinet will be returned to the local Windstream warehouse. All returned material to be tagged with information including job number that the property was removed from. |
