LEAK POLICY

T

While this Utility is not required to offer a leak adjustment policy to adjust bills as a result of a water leak, this Utility chooses to provide its non-wholesale customers a leak adjustment under the following conditions:

1. The customer's bill will be based on two components. The first step will be to calculate the customer's average monthly usage over a twelve-month period. The second step will be to deduct the customer's average monthly usage (as calculated above) from the total amount of water that passed through the meter. The usage calculated in step one will be billed at the utility's regular rates, while the remaining usage will be billed at a 50% discount of what would normally have been billed so that the Utility and the customer split the difference in cost for the amount of water passing through the meter that is over and above the customer's average monthly usage calculated in step one. All water passing through the meter must be accounted and paid for by the customer. Therefore, the customer will owe the amount of his/her average bill plus 50% of the cost of the remainder of the water that passed through the meter.
2. If meter readings are not available for an entire twelve-month period, the average usage of similar customer loads shall be used for comparison purposes for the calculation.
3. Only one (1) leak adjustment will be made for a specific service location during any given twelve-month period. After the second adjustment, a plumber's statement or other proof must be given showing the lines, both inside and outside, have been replaced before any additional leak adjustments will be given at that location.
