

Ms. O'Donnell,

P 5C (page

2005-00207

I am strongly opposed to the above application submitted by EKP. I do not believe that a study of the effects of this power line on endangered species was adequate. Furthermore, I do not believe that we should cede our precious land - land with more power lines and poles. CPS system are greatly hazardous to power lines. We have a responsibility to protect where our food comes from. ^{5/15/05} Mac Parsberg

Dear Ms. Elizabeth O'Donnell,

I am a farmer, Yukon is well aware of soil & the effects of what type of soil will tolerate poles etc. due to the soil is hard & many soil holes in this area, not suitable for large poles. We have been wanting to get the CPS to use for our farming operation and with the magnetic field this will not let the CPS generator farm equipment cannot get around the poles. Thanks Davey Parsberg
