PUBLIC SERVICE
COMMISSION

Dear Ms. O'Donnell,

I am writing to express my concerns about the Proposed East Kentucky Power Cooperative Wilson-Aberdeen-Morgantown Junction Transmission Project (Case No. 2005-00207).

The proposed project will cross the only bottom land field on my farm. It will split my neighbors bottom land farm in half putting future restrictions on the use of our land. There are archaeological sites that are still under study in this corridor. It appears there have been no studies of the environmental and cultural impact of this line.

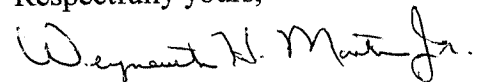

It appears that no efforts have been made to use existing right of ways and that the company is purposely crossing prime farm land to make it easier and more cost effective for them. There is plenty of hill land and less productive areas to run the line in the county and we request that the corridor be reconsidered.

I am requesting that the necessary environmental and cultural impact studies be done prior to approving this project and every consideration be given to running the line through less productive land. I am also requesting a public hearing and the opportunity to speak on the project. Please put me on the list to receive correspondence concerning any developments with the project. Please send to: Weymouth Martin Jr.

5960 Logansport Road
Morgantown, KY 42261

Thank you in advance for your consideration of my concerns.

Respectfully yours,

Weymouth H. Martin Jr.
