JUL - 6 2005

PUBLIC SERVICE

COMMISSION

Case 2005-00277

Dear Ms. O'Donnell:

Please find enclosed the original and 10 copies of Fleming-Mason Energy's request for an order and certificate of public convenience and necessity.

Sincerely,

Anthony P. Overbey President & CEO

# COMMONWEALTH OF KENTUCKY BEFORE THE PUBLIC SERVICE COMMISSION

IN THE MATTER OF THE APPLICATION OF FLEMING-MASON ENERGY COOPERATIVE CORPORATION FOR AN ORDER AND CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AUTHORIZING APPLICANT TO CONSTRUCT A GARAGE, WAREHOUSE FIELDHOUSE AND REMODELING AT FLEMINGSBURG, KENTUCKY	RECEIVED  JUL - 6 2005  PUBLIC SERVICE  COMMISSION
--	--

<u>APPLICATION</u>

Case 2005-00277

Applicant, FLEMING-MASON ENERGY COOPERATIVE CORPORATION of Flemingsburg, Fleming County, Kentucky states as follows:

{Note: Fleming-Mason Energy Cooperative Corporation is abbreviated as FMECC herein.}

- 1. Applicant requests a certificate of public convenience and necessity authorizing the construction of a garage, warehouse, field house and remodeling of office facility at Flemingsburg, Kentucky, pursuant to KRS 278.020 and 807 KAR 5:001 (9).
- 2. Applicant is a Kentucky electric cooperative corporation (non-profit without capital stock) engaging in electric distribution business in Bath, Bracken, Fleming, Lewis, Mason, Robertson and Rowan counties of Kentucky under applicable state and federal laws.
- 3. That the post office address of the applicant is P.O. Box 328, Flemingsburg, Kentucky 41041.
- Applicant is a consolidated cooperative corporation whose articles of consolidation were approved by the Kentucky Public Service Commission and are on file in Case No. 2001-244 of the Kentucky Public Service Commission.

- 5. The proposed **new construction** is a warehouse, office building, service center and field house to replace the existing facilities at Flemingsburg, Kentucky. The new construction will provide facilities which will provide warehouse space for electric distribution equipment, parking and maintenance facilities for digger derrick and bucket trucks, office space for construction and operation personnel. Remodeling will provide additional space for customer service administration and engineering personnel.
- 6. Applicant proposes to finance the new construction through the use of a Rural Utilities Service loan with a term of 35 years. No rate increases will be necessary for the financing and construction of the new facilities, a discussion of the planned financing is in Exhibit A Financing.
- 7. The estimated cost of the new facilities is \$3,750,000.00.
- 8. The estimated cost of operation after the proposed facilities are completed is \$302,243.00 annually.
- 9. Copies of permits from the proper public authorities for the proposed new construction will be submitted when received from such authorities.
- 10. The proposed location of the new facilities is on existing acreage at the FMECC headquarters at Elizaville Road, Flemingsburg, Kentucky shown in Exhibit H.
- 11. A description of applicant's real estate was filed and is of record in PSC Case No. 2001-244 which is incorporated by reference herein.
- 12. Applicant files as a part of this application the following Exhibits with documents and copies attached thereto:

Exhibit	A	-	Explanation of financing
Exhibit	В	•••	Detailed cost estimation of project
Exhibit	С	-	Description of facilities to be replaced
Exhibit	D	-	Detailed income & balance sheet
Exhibit	Е	-	State of operations for 12 month period May 31,
			2004 to April 30, 2005.
Exhibit	F	-	Notes outstanding as of April 30, 2005
Exhibit	G	-	Estimated cost of maintenance and operation of (1)
			Proposed facility and (2) current facilities
Exhibit	Н	-	Project description, floor diagram, site plan and
			location map

WHEREFORE, applicant, FMECC respectfully petitions and applies to this commission for an order and certificate of public convenience and necessity authorizing the construction of a new garage, warehouse, field house and remodeling as set forth in the application and for all others orders or certificates to which this applicant may be entitled.

Respectfully submitted,

MARVIN SUIT

207 Court Square

Flemingsburg, KY 41041

ATTORNEY FOR APPLICANT

ANTHONY P. OVERBEY

PRESIDENT AND CEO

FLEMING-MASON ENERGY

COOPERATIVE CORPORATION

P. O. Box 328

Flemingsburg, KY 41041

STATE OF KENTUCKY )

COUNTY OF FLEMING )

Subscribed, sworn to and acknowledged before me Anthony P. Overbey, as President and CEO of Fleming-Mason Energy Cooperative Corporation this \_29 day of June, 2005.

NOTARY PUBLIC, KENTUCKY STATE AT LARGE

My Commission Expires:

2001 .

### **EXHIBIT A**

### FINANCING OF THE NEW FACILITY

1. 当解放化

### **FINANCING**

The Cooperative plans to finance the construction of the facility through the Rural Utilities Service (RUS). The cost is currently not included in our proposed 2003-2006 workplan. FMECC will prepare a new workplan for 2006 and financing will be included in the new work plan. The funding of the project will be through RUS's guaranteed loan program, financed by the Federal Finance Bank (FFB). The loan for the 2003-2006 workplan using the same financial forecast without the new project has been approved by RUS.

The cooperative used a variable rate in the forecast for the project, however, the decision to choose fixed vs. variable will be made at the time the loan is requested from RUS. The Cooperative will monitor interest rate trends to determine the minimal rate risk in association with our current loan portfolio.

Our long-term financial forecast projected no need for member rate increases due to financing of the new construction. A list of key assumptions and key results of the financial forecast are included.

### KEY ASSUMPTIONS

### IN FINANCIAL ANALYSIS OF NEW HEADQUARTERS OFFICE

- Estimates of consumers and usage used in the financial forecast were from the East Kentucky Power most recent forecast and approved by RUS.
- 2. A 1.50 TIER (times interest earned ratio) was selected as the basis for the study. Revenue increases were added to maintain this TIER.
- 3. G & T capital credits allocated by EKPC were not considered.
- 4. A variable interest rate was used for new loans averaging 2.50 in 2006 and increasing 0.25% per year for the ten-year study.
- 5. General Funds usage for plant was maintained at approximately their current level.
- Operations, maintenance, customer accounts, depreciation, administrative and general expenses are projected from the historical averages of 2002-2004 and the 2005 budget.
- 7. Plant expansion and plant retirement are a function of the averages of the 2003-2006 Work Plan.
- 8. Purchased power costs were from East Kentucky's most recent financial forecast average for all of the member systems.

# Fleming-Mason Energy Cooperative Corporation Comments Regarding

### Comparison of Selected Financial Information

### Item 1: T.I.E.R. Goal

The computer program used to analyze the effect on the financial performance of FMECC requires a TIER goal. The program then uses that ratio to adjust operating parameters to meet the goal. The goal used is 1.50 as that was the request of RUS.

### Item 2: Estimated T.I.E.R

The program predicts TIER and adjusts based upon plant expenses and long term debt. It shows that there is essentially no difference in TIER with or without the construction project.

### Item 3: Operating Margins (excluding G & T and Lender CC)

The program predicts margins required to meet the TIER goal. It shows that more margins are required to meet TIER as interest on long term debt increases. The program was run increasing interest rates by .25% per year. It could have been ran on fixed rate but we feel this is a more realistic approach as rates are currently rising.

# Items 4, 5, 6 and 7: Required increase per Kwh, required increase in Revenue, Average revenue per Kwh and Percent increase in Revenue to maintain a 1.5 TIER.

The program uses 1.5 as a basis for annual charges in revenue. All items show revenue requests will continue to increase either with or without the project. It shows that the effect on the percent of increase is approximately ½ percent or \$0.0002 per Kwh.

### Item 8: Interest on L. T. D.

This item displays the effect on projected long term debt of construction plans. It is run using variable interest rate on all new loans and rates measuring .25% per year.

### Item 9: Equity Ratio

This item shows there will be less than 1 % difference at the end of the forecast period and the difference declines at the end of the forecast.

### Item 10: Debt Service Coverage

This shows that FMECC will be in financial condition to service its debt either with or without the project. It shows DSC declines because it used variable interest rates that are increased each year. In reality some loans will be converted to fixed rate as conditions change.

### Item 11: General Funds at Year End

FMECC plans to continue using General Funds in the most effective manner. General Funds will be used for all items associated with the RUS approved 2003-2006 workplan.

### Item 12: New Guaranteed Loans Required

This item shows that FMECC distribution system construction plans will require approximately \$4,000,000 per year to build to new customers and upgrade the system.

DESCRIPTION OF FACILITIES TO BE REPLACED

### Description of Facilities to be Remodeled and Replaced

The existing building and associated facilities were built at 1449 Elizaville Road in 1965. There has not been any significant upgrades or renovations performed on the facility during this period. The only renovations made are the ones that were necessary for maintenance of the building. The site consists of three independent facilities. First, the main office is facing Elizaville Road and handles all the walk-in and drive-through traffic as well as member and other services to the Fleming-Mason Energy members.

The second building on the property is the warehouse. The warehouse handles all of the stocking process and is the central loading area for line personnel. This building also is occupied by the meter department and maintenance facilities. The maintenance functions performed include vehicles and electric equipment such as reclosers and transformers.

The third structure on the site is the fieldhouse. The fieldhouse is on the east end of the property and is used for company functions as well as for community events. All three buildings are showing signs of age and are in need of upgrade or relocation.

During the process of evaluating alternatives, it was determined that the warehouse must be expanded to meet the needs of the future electric needs. The warehouse was built at a time when only limited space was needed for equipment and the number of trucks was significantly less. There is no desire to relocate our office due to the proximity to Flemingsburg and the central location for the entire service area.

# ESTIMATED COST OF MAINTENANCE AND OPERATION OF (1) PROPOSED FACILITY AND (2) CURRENT FACILITIES

# FLEMING-MASON ENERGY COOPERATIVE CORPORATION

Estimated Annual Operating Costs for FMECC office.

Operations Costs	Estimated Annual Cost	Basis of Estimate
Depreciation	\$74,859	Based on value of \$3,742,930 at 50 yrs.
Insurance	\$41,588	Based on 2005 rate on \$3,742,930
Property Tax	\$10,765	Based on actual property tax rates in effect
Electric Utilities	\$36,732	Based Warehouse/Garage same as old
Water Utilities	\$ 7,355	Increased by 50%
General Maintenance	\$130,944	Increased by 50%
Total Annual Estimated Cost	\$302,243.00	

# FLEMING-MASON ENERGY COOPERATIVE CORPORATION

# Annual Operating Costs for Current FMECC Facilities

Operations Costs	5/04 – 4/05 12 month cost
Depreciation	\$15,230
Insurance	\$ 8,461
Property Taxes	\$ 559
Electric Utilities	\$24,428
Water Utilities	\$ 5,221
General Maintenance	\$87,296
Total Annual Estimated Cost	\$141,195

# PROJECT DESCRIPTION, FLOOR DIAGRAM, SITE PLAN AND LOCATION MAP

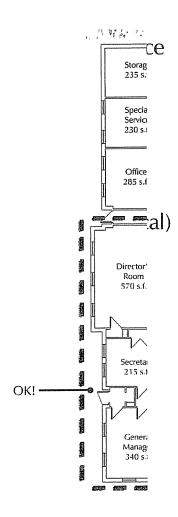

# Facility Expansion Study Fleming – Mason RECC Building Flemingsburg, Kentucky

### **Executive Summary**

The Cooperative offices and warehouse currently sit on a beautiful campus outside of Flemingsburg on KY 32. The red brick buildings were designed nearly 40 years ago and have been outgrown. Brandstetter Carroll Inc. was asked to conduct a planning study to determine how the existing office building might be expanded in order to meet today's needs. Upon interviewing staff and touring the complete facility and grounds, the Consultant found that an addition to the office building was not needed. Rather an "unpacking" and "repacking" of the office space would alleviate any overcrowding and reutilize space appropriately. The Consultant also concluded the warehouse and truck storage areas had been terribly outgrown and this became the focus for planning a "Phase One" project.

A thorough analysis of each building on the property was conducted and reviewed in graphic form with senior staff. These diagrams are included herein. The Office building will be renovated to provide a more user friendly place in which to conduct business from the perspective of both the customer and the employee. By reallocating some people and spaces, a more efficient work place has been accomplished. It was ultimately decided to demolish a portion of the warehouse facility to make way for a new trucking facility attached to a renovated office portion of the existing building. A recommendation was made to move the picnic shelter to a more pastoral setting across the property and develop the area into a more pleasant site for outdoor gatherings. An opinion of probable cost for each individual project is also included.

### **Building Analysis**

### Proposed Floor Plan

### Proposed Floor Plan

The engineering department can easily be rearn ged to create a more fluid work room. The Engineer's office will remain in its current locatin but with the addition of a door into the corridor. Dedicated storage for the department will allow for proper storage of maps and larger media.

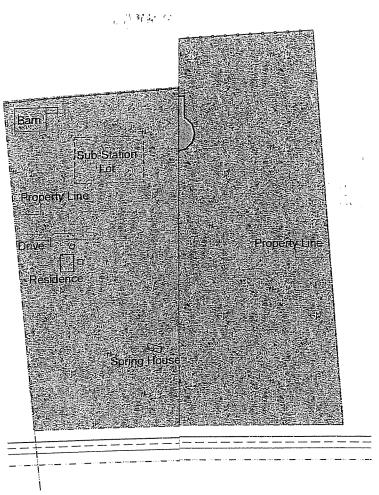

The Records Room is an added room to the builing. Centralizing storage will help to keep each department organized. This room can serve as a staff meeting room as well. The Records Room replaces the Superintendent's office.

Member Services is currently located adjacent to the lobby. This location is not considered neces ary for good customer service and has been relo ated in the building to allow for better organizati of all departments. This new space allows for a display area to be developed.

The meter storage and reading device is current located where disruption is created when meter readers come in. By relocating this function to a dedicated space out of other work areas, a bette environment for concentration is created.
