Kentucky Power Company

REQUEST

With respect to Workpaper S-2, page 1 of 3, Lines 1 and 2, please provide (a) the methodology employed in determining the interest rate on the two Global Notes Payable to Parent Company, (b) copies of all legal documentation regarding the Notes, and (c) copies of correspondence between Kentucky Power and AEP regarding the Notes.

RESPONSE

Please see attached work papers.

WITNESS Errol K. Wagner

KPSC Case No. 2005-00341 AG 1st Set Data Requests Item No. 208 Page 2 of 9

May 10, 2001 \$60,000,000 AEP Notes 6.501% due 2006

The pricing of the Kentucky Power promissory note from AEP was based on the cost of the debt when the note was issued to Kentucky Power. The note was priced this way because AEP is required to conduct its business with subsidiaries on a cost basis and is in accordance with the orders of the Commission and in accordance with the Public Utility Holding Company Act of 1935.

The rate compared favorably to what Kentucky could have done on its own at that time for a deal with similar terms and tenor. At the time the notes were issued, investors were pricing large, liquid deals that were Lehman Index eligible more favorably to non-index eligible transactions. Smaller deals that don't qualify are more expensive. Some examples of similar transactions in the market place at that period were as follows:

<u>Company</u>	<u>Ratings</u>	Amount	Yield	Comments
DTE Energy	Baa2/BBB	\$500 MM	6.49%	Large issue, no call
Jersey Central	A2/A+	\$150 MM	6.45%	High rated, mortgage bonds
FPL Group	A2/A+	\$500 MM	6.248%	Large issue, high rated
TXU Corp	Baa3/BBB	\$800 MM	6.498%	Large issue

Please note the above comparable deals would also have paid .125% underwriting fees for a five-year transaction and other issuance costs, which were not charged to Kentucky Power. The cost of the call, or being able to optionally redeem all or part of the issuance without penalties, which Kentucky Power received for free was approximately .35% bps. In fact, Kentucky Power did redeem \$20 million in these promissory notes in 2005 without penalties.

January 1, 2004 \$20,000,000 AEP Notes 5.25% due 2015

The pricing of the Kentucky Power promissory note from AEP was based on the coupon of the notes as when issued by AEP. The attached market pricing that we received for a Kentucky Power transaction was 5.40% including underwriting fees.

Indiana Michigan Power/ Kentucky Power Unsecured Notes: Baa2/BBB

Fixed Rate Promissory Note

\$60,000,000

May 10, 2001

For value received, the undersigned promises to pay to the order of American Electric Power Company ("AEP"), at 1 Riverside Plaza, Columbus, Ohio, the sum of Sixty Million Dollars (\$60,000,000) on May 15, 2006, and to pay interest thereon from the date hereof to maturity at the fixed rate of 6.501% per annum. Interest on the Note will be payable semi-annually on May 15 and November 15 of each year, beginning November 15, 2001. All payments hereunder shall be made in lawful money of the United States and in immediately available funds. Interest shall be calculated on the basis of a year of 360 days.

The Note may be prepaid at any time.

The undersigned agrees to pay all expenses of enforcement, including collection costs and reasonable attorneys' fees in case default is made in the payment of this Note or the Advance evidenced hereby.

This Note shall be construed according to and governed by the laws of the State of Ohio.

KENTUCKY POWER COMPANY

KPSC Case No. 2005-00341 AG 1st Sot Data Requests No. 208

AEP: America's Energy Partner®

Date: April 8, 2005

Subject: Kentucky Power Intercompany Note Redemption

From: Stephan T. Haynes

To: Wendy Hargus

In conjunction with AEP's redemption of \$550 million of its 6.125% Senior Notes, Series A due May 15, 2006; Kentucky Power plans to redeem <u>\$20 million</u> of its 6.501% Fixed Rate Promissory Notes on April 15, 2005 due to AEP, Inc. The current balance outstanding is \$60 million due May 15, 2006. The Promissory Note provides that "the Note may be prepaid at any time".

I hereby give notice to redeem <u>\$20 million</u> of Kentucky Power's intercompany note due 2006 on April 15, 2005.

CC: Renee Hawkins Paulette Henry Doreen Hohl John Huneck Jana Soward Pamela Sutton-Hall

KPSC Case No. 2005-00341 AG 1st Set Data Requests Item No. 208 Page 7 of 9

KENTUCKY POWER COMPANY \$20,000,000 5.25% Senior Notes due June 1, 2015

Stated Maturity: June 1, 2015

Interest Rate: 5.25%

Issue Date: January 1, 2003

Principal Amount: \$20,000,000

KENTUCKY POWER COMPANY, a corporation duly organized and existing under the laws of the State of Kentucky (herein referred to as the "Company", which term includes any successor corporation thereto) for value received, hereby promises to pay to AMERICAN ELECTRIC POWER COMPANY, INC. or permitted registered assigns, the principal amount specified above (the "Principal Amount") on the stated maturity specified above (the "Stated Maturity"), and to pay interest on said Principal Amount from the original issue date specified above (the "Original Issue Date") or from the most recent interest payment date (each such date, an "Interest Payment Date") to which interest has been paid or duly provided for, semi-annually in arrears on June 1 and December 1 in each year, commencing June 1, 2004, at the interest rate per annum specified above (the "Interest Rate"), until the Principal Amount shall have been paid or duly provided for. Interest shall be computed on the basis of a 360-day year of twelve 30-day months.

The interest so payable, and punctually paid or duly provided for, on any Interest Payment Date shall be paid to the person in whose name this Note shall have been registered at the close of business on the regular record date with respect to such Interest Payment Date, which shall be the May 15 or November 15, as the case may be, immediately preceding such Interest Payment Date.

If any Interest Payment Date, any redemption date or Stated Maturity is not a Business Day, then payment of the amounts due on this Note on such date will be made on the next succeeding Business Day, and no interest shall accrue on such amounts for the period from and after such Interest Payment Date, redemption date or Stated Maturity, as the case may be, with the same force and effect as if made on such date.

Redemption

This Note may not be redeemed by the Company prior to the Stated Maturity while any or all of American Electric Power Company, Inc.'s \$300,000,000 5.25% Senior Notes, Series D due June 1, 2015 (the "AEP Senior Notes") are outstanding.

Transfer

This Note may not be assigned or transferred except to an obligor of the AEP Senior Notes.

Modification

This Note shall not be modified in any material respect except in the event (and to the extent of) any such modification to the terms of the AEP Senior Notes.

No recourse shall be had for the payment of the principal of or the interest on this Note, or for any claim based hereon, or otherwise in respect hereof, against any incorporator, stockholder, officer or director, past, present or future, as such, of the Company or of any predecessor or successor corporation, whether by virtue of any constitution, statute or rule of law, or by the enforcement of any assessment or penalty or otherwise, all such liability being, by the acceptance hereof and as part of the consideration for the issuance hereof, expressly waived and released.

IN WITNESS WHEREOF, the Company has caused this Note to be executed as of the date written above.

Item No. 215

With reference to page 13, lines 7-12, please provide an assessment of the relative riskiness of Kentucky Power Company, AEP, and the Electric Group.

Response

Overall, AEP could be considered somewhat more risky than the Electric Group. Kentucky Power shares some of the risk characteristics of each, but is considerably smaller, which adds to its risk. From a financial risk perspective, the risk of Kentucky Power is closer to AEP than the Electric Group because Kentucky Power has much more financial leverage than the Electric Group.

KPSC Case No. 2005-00341 AG 1 St Set Data Request Item No. 216 Page 1 of 2

Consensus Forecast Of 2005 GDP Growth Rose This Month

omestic Commentary Consensus estimates of real and current dollar GDP growth in 2005 rose this month as analysts reacted to an oward revision in the pace of Q4 2004 growth and signs that growth in Q1 of this year will surpass earlier expectations. Based on our March 2^{nd} and 3^{rd} survey results, the consensus now predicts real GDP will increase 3.7% in calendar year 2005, 0.1 of a percentage point better than a month ago. Growth in nominal GDP is now put at 5.8% this year, 0.2 of a point better than in February. Real GDP on a fourth quarter-over-fourth quarter basis (Q4/Q4) is expected to expand by 3.6% this year compared with growth of 3.9% in 2004. Increased optimism about the pace of business investment, corporate profits and the residential construction were the primary contributors to the upward revision in this month's forecast of GDP growth in 2005.

Real GDP grew at an upwardly revised rate of 3.8% in Q4 of last year, closely in line with the average quarterly pace in 2004 and 0.7 of a point faster than was initially estimated by government statisticians. While growth in real personal consumption expenditures (PCE) was revised downward, the drop was more than offset by upward revisions to inventories, business investment and exports.

More recently, data for January and February suggest healthy growth continued in the early months of this year. While real PCE fell 0.2% in January due to a sharp pullback in vehicle sales, the level of consumption remained comfortable above its Q4 average due to the outsized gain of 0.9% registered in December. Moreover, auto sales edged up in February -- thought not by much – and same-store retail sales were robust, likely fed by healthy levels of federal income tax refunds and the continued improvement in job growth. Indeed, nonfarm payrolls jumped by 262,000 in February, almost double the revised January 'ncrease of 132,000. The unemployment rate nevertheless rebounded by 0.2 of a point to 5.4% as more people began to look for work.

Elsewhere, manufacturing output increased a solid 0.5% in January depite a 1.9% decline in the production of autos and auto parts and the capacity utilization rate for manufacturing rose to its highest level since December 2000. The Institute of Supply Management's (ISM) index of activity in the factory sector did slip again in February, falling to 55.3%, its lowest level since last July. However, the ISM reports that the February level of its index was consistent with real GDP growth of 4.6%. Moreover, many analysts suspect the slide in the ISM index since it peaked in January 2004 is largely explained by an adjustment in business inventory levels that is close to being completed. As a result, they predict the index will soon bottom near current levels and resume its cyclical upturn.

Continued strength in business investment further bolsters the case for renewed strength in manufacturing activity. Investment in equipment and software rose at an upwardly revised pace of 18% in Q4 of last year and early data suggest Q1 growth may be similarly robust. Non-defense and non-aircraft orders for capital goods rose 2.9% and 3.4%, respectively in January and December while shipments of non-defense and non-aircraft capital goods increased 3.7% in January after rising 3.1% in December. The January jump in non-defense and non-aircraft shipments left this series growing at almost a 21% annualized rate above its Q4 average. It's likely that remarkably steady GDP growth over the past year is alleviating corporate boardroom jitters about the economy, and combined with good growth in corporate profits, spurring stepped-up demand for business equipment.

Early 2005 activity in the service sector also looks solid. The ISM's index of activity in the non-manufacturing (service) sector rose to 59.8 in February, near its average of 61.9 over the last 12 months. Moreover, the employment sub-index jumped a large 7.4 points to its highest level since the series inception in 1997. The new orders sub-index rose 1.1 points to 61.6, the high end of the tight range it has maintained over the past year.

Residential construction activity has also surprised on the upside of late. Housing starts unexpectedly jumped 4.7% in January to a record an-

GREEN indicates the Blue Chip

nualized rate of 2.159 million units. Moreover, the rise came on top of an upwardly revised gain of 14.4% in December. Starts of singlefamily homes rose a more modest 2.7% in January, but still increased to a record high rate of 1.760 million units. While new and existing home sales fell in January, some of the drop was likely attributable to a massive 40.3% drop in new home sales in Midwestern states where winter storms raged.

Reflecting the generally upbeat data of late the consensus now predicts real GDP will grow at an annualized rate of 3.7% in Q1 of this year, 0.2 of a point faster than was estimated a month ago. A growth rate of 3.6% is predicted in the two following quarters – the Q3 estimate up 0.1 of a point from a month earlier. Real GDP growth in Q4 will slow to 3.4%, down 0.1 of a point from the February estimate.

As for the mix of economic growth this year, real PCE is expected to expand at annualized rates of 3.0% in Q1, 3.2% in Q2 and Q3 and 3.1% in Q4. In calendar year 2005, real PCE is expected to increase 3.4% versus the 3.8% rise registered last year. Sales of autos and trucks are expected to total 17.0 million units versus 17.3 million in 2004. Housing starts will total 1.86 million units this year, the estimate up slightly from a month ago but still 4.6% below the 2004 total. Supporting PCE growth will be a 3.4% calendar year increase in real disposable personal income (DPI) that compares with growth of 3.5% in 2004, Nonresidential fixed investment (business structures, equipment and software) is now predicted to record growth of 9.9% this year, 1.1 percentage points better than was estimated a month ago and just 0.7 of a point less than in 2004. Solid demand by consumers and businesses is expected to keep factories humming and produce a 4.0% rise in total industrial production this year versus the 4.1% gain in 2004. The real net export deficit will widen by a further 5.4% this year to \$615.9 billion, according to the consensus.

Somewhat inexplicably, consensus forecasts of inflation this year went unaltered this month despite bigger than expected increases in some of the January data and sharp gains in crude oil and gasoline prices over the past several weeks. The consensus continued to predict the Consumer Price Index will rise 2.5% in calendar year 2005 and increase 2.2% on a Q4/Q4 basis versus respective jumps of 2.7% and 3.4% last year. The GDP price index is predicted to rise 2.0% during the calendar year and 1.9% Q4/Q4. However, the core "finished goods" Producer Price Index surged 0.8% in January. That marked the biggest monthly gain since December 1998 and left the series rising at its fastest y/y pace since November 1995. While the core Consumer Price Index rose a relatively tame 0.2% in January, the y/y rate of increase rose to 2.3%, the highest level since August 2002. Moreover, the core PCE deflator jumped an even larger 0.3% in January.

The consensus continues to predict that the Federal Reserve -- confronted with above-trend growth, somewhat slower productivity and possible further rises in core inflation – will continue to tighten monetary policy over the coming year. Officials are expected to hike the federal funds rate target by another 100 to 125 basis points to 3.50%-3.75% by the end of 2005.

International Commentary After contracting in the final three quarters of 2004, Japan's economy is expected to resume growing in Q1 of this year and post calendar year growth of 1.2%. The consensus forecast of 2005 GDP growth in the Eurozone slipped again this month and now stands at 1.6%. Canadian GDP will grow 3.0% this year, says the consensus (see pages 6 and 7 for international forecasts).

Special Questions This issue contains our latest long-range survey results. On page 14 are forecasts for all the variables found on pages 2 and 3 for the years 2007 through 2011 and an average for the five-year period 2012-2016. Page 15 compares our most recent survey results with those obtained last October and the latest estimates of the Bush Administration and the Congressional Budget Office.

Recent Developments:

Total retail sales fell 0.3% in January versus a revised 1.1% surge in December as a big drop in vehicle sales offset strength at clothing and department stores - powered most likely by consumers use of holiday gift cards. Vehicles sales fell 3.3% during the month - the biggest decline since last June - following a 4.0% surge in December that was prompted by attractive year-end rebate and financing incentives. Sales excluding vehicles, however, rose a strong 0.6% in January following a December rise of 0.3%. Apparel store sales jumped 1.8% in January versus declines in the two prior months. In contrast, sales at furniture and home furnishing stores slipped another 0.9%, marking a third consecutive monthly drop. It's likely that total retail sales in February will post a relatively solid gain. Though unit sales of light vehicles rose by a relatively modest 0.5% in February, chain store sales were pretty good, with particular strength during the final week of the month. Signs of continued improvement in the labor markets and strong start to the federal tax refund season appear to be underpinning consumer spending. The recent sharp spike upward in gasoline prices, however, may cool consumer spending in March.

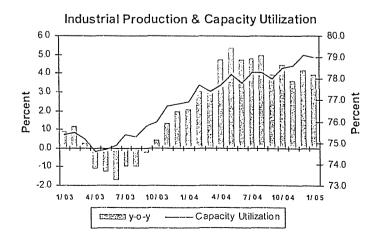

Housing Starts Powered Ahead In January Even As Home Sales Fell

Non-Auto Total Retail Sales Looked Pretty Good In January And February

Housing starts unexpectedly jumped 4.7% in January to a record annualized rate of 2.159 million units. The gain left total starts 11.6% above their year ago level. Moreover, the rise came on top of an upwardly revised gain of 14.4% in December. Starts of single-family homes rose a more modest 2.7% to a record high rate of 1.760 million units, but the gain was limited to the south where a 20% surge occurred, most likely at least partially attributable to unseasonably mild weather. Singlefamily starts in January were up 12.5% from a year earlier. Multifamily starts soared 14.1% during the month, but the gain merely served to lift the annualized rate back to its October level. Sales of new single-family homes fell 9.2% in January. A massive 40.3% drop in the winter-storm battered Midwest led the decline. Sales were down 4.2% from a year earlier. Existing home sales slipped by a smaller 0.5% in January, the second straight drop, and were up 12.5% from a year ago. The recent jump in mortgage rates, if sustained, may cool some of the speculative activity in the housing market, but rates may have to rise much higher to really put a serious dent in this sector.

Total Industrial Production In January Hurt By Drops In Utility And Mining Output

Total industrial production was unchanged in January following its 0.7% surge in December. The softness, however, primarily resulted from a 3.1% drop in utility output (due to unseasonably warm weather) and a 0.3% decline in mining output. Manufacturing activity increased a solid 0.5% following a 0.4% rise in the prior month Leading activity in the factory sector, production of high-tech goods jumped 1.5%, leaving the y/y gain at 18.1%. . Manufacturing output excluding high-tech rose 0.4% in January, despite a 1.9% decline in the production of autos and parts with solid advances registered by clothing and machinery output. Excluding autos, factory output rose 0.7%. In early March, two major domestic vehicle producers announced production cutbacks due to soft sales, so production from this sector may continue to weigh on overall industrial activity unless sales rebound. The February decline in the manufacturing workweek and the February reversal of the sharp rise in January ISM's production index likely signals that overall industrial production in February was on the soft side, despite an expected bounce back in utility and mining and mining output.

MARCH 10, 2005 BLUE CHIP ECONOMIC INDICATORS 9

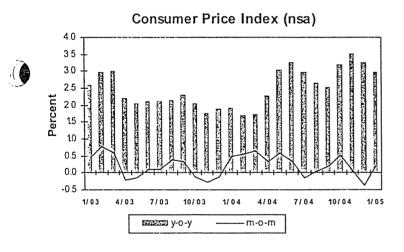

Trade Deficit Eased In December, But Swelled More Than 24% In 2004

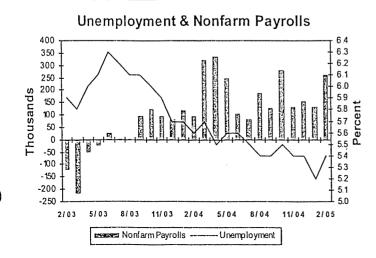

The goods and services trade deficit shrank by \$2.93 billion or 4.9% in December to \$56.4 billion. For all of 2004, however, the deficit totaled a record \$617.7 billion, or 24.4% larger than in 2003. That marked the sharpest widening of the trade deficit since the 43.7% surge from 1999 to 2000. The narrowing of the deficit in December resulted from a 3.2% rise in exports that more than offset a 0.1% rise in imports. For the year, however, exports grew just 12.3% while imports increased 16.3%. Goods exports rose 4.4% in December while goods imports rose 0.1% while for all of 2004 goods exports increased 13.3% while imports registered a rise of 16.9%. Holding down imports in December was a 5% decline in the quantity of total barrels of petroleum product plus a 11%. The latter represented the biggest month/month decline in the average price paid per barrel for crude oil imports since January/February 1991. Since then, petroleum prices have rebounded, as have it appears, volume imports of petroleum products. The U.S. trade deficit with China swelled to a record \$162 billion.

Core Consumer Price Inflation Continues To Creep Upward 8 Y.

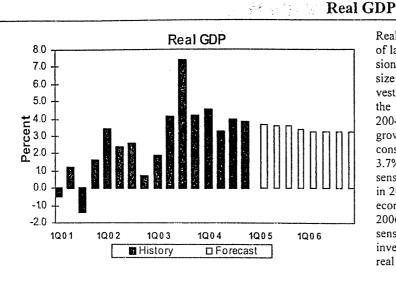

The consumer Price Index rose a modest 0.1% in January, dropping the y/y rate of increase back to 3.0% from 3.3% in December. However, the CPI excluding food and energy prices increased by 0.2% for a fourth consecutive month pushing the y/y rate of change to 2.3%, the highest level since August 2002. Holding down the increase in the overall CPI in January was a 1.1% decline in energy prices that came on the heels of a 1.3% decline in December. Energy prices since then, however, have rebounded, and by early March, gasoline prices were sharply higher than at the start of this year. Exerting upward pressures on prices at the consumer level are surging prices at the producer level. The core finished goods PPI jumped 0.8% in January, the largest increase since December 1998 and on a y/y basis was increasing at its fastest pace since November 1995. The core intermediate goods PPI also rose 0.8% in January and its y/y rate of increase rose to its highest level since September 1981. If more of these outsized gains in prices at the producer level get passed on into consumer prices, financial markets and Fed officials are likely to get nervous.

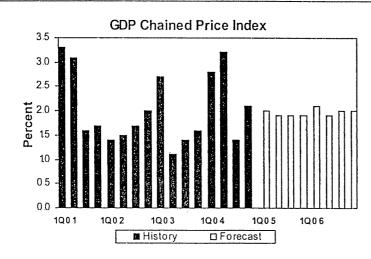

February Job Growth Post Its Biggest Gain Since October

Nonfarm payrolls rose by 262,000 in February, almost double the revised January increase of 132,000. The unemployment rate nevertheless rebounded by 0.2 of a point to 5.4% as more people began to look for work. While gains in payrolls were broad-based, unseasonably mild weather likely played a hand in boosting job creation figures for the month. Manufacturing payrolls increased by 20,000 in February, reversing the decline in January. About half that increase reflected autoworkers return to work from temporary layoffs. Moreover, a couple of major automakers recently announced production cutbacks for March and in Q2 that will dampen payroll increases in this sector. Construction payrolls surged by 30,000 after being unchanged in January when bad weather delayed building projects. Private service producing payrolls rose 174,000 and government payrolls increased 33,000. total private workweek was unchanged at 33.7 hours in February but the factory workweek fell 0.2 of an hour though factory overtime hours rose by 0.1 of a point. Average hourly earnings were unchanged in February and up just 2.5% over the past year.

Quarterly U.S. Forecasts:

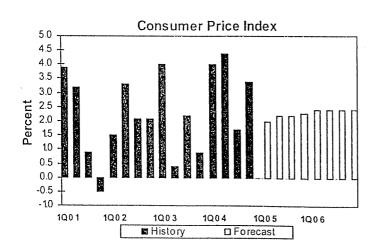

Real GDP grew at an upwardly revised annualized rate of 3.8% in O4 of last year rather than the 3.1% originally estimated. An upward revision in the pace of inventory accumulation, a downward revision in the size of the net export deficit and an upward revision in business investment offset a downward revision in personal consumption to boost the Q4 growth rate. Left unchanged was the annual growth rate for 2004 of 4.4%, the best performance since 1999. However, real GDP growth on a Q4/Q4 basis was revised up by 0.2 of a point to 3.9%. The consensus now estimates that real GDP will grow at annualized rate of 3.7% in Q1 of this year, 3.6% in Q2 and Q3 and 3.4% in Q4. The consensus now predicts real GDP will grow 3.7% on a calendar year basis in 2005, 0.1 of a point better than a month ago, and 3.4% in 2006. The economy is expected to grow 3.6% and 3.3%, respectively in 2005 and 2006, on a Q4/Q4 basis. Upward revisions over the past month in consensus predictions of growth in business investment and residential investment largely account for the increase in the consensus estimate of real GDP growth this year.

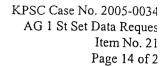

Chained-GDP Price Index

The GDP Price Index rose at an upwardly revised annualized rate of 2.1% in Q4 bringing the calendar year increase to 2.2%, the fastest advance since 2001. On a Q4/Q4 basis, it was up by an unrevised 2.4%. Driving the pick up in inflation during Q4 was a 2.5% rate of increase in the personal consumption deflator; nearly double its 1.3% rate in Q3 Largely accounting for the increase was an unusual 0.1% rise in the deflator for durable goods; the first such increase in at least four years. For the year, the overall PCE deflator was up 2.2%. The price index for durable goods did fall 2.0% last year, but that was smaller than the declines of 3.4% in 2003 and 2.7% in 2002. The price index for nonresidential business investment rose 0.8% in 2004 the first increase in some time. While prices for business equipment and software fell again, the deflator declined just 0.4% versus a decline of 1.2% in 2003 and 1.9% in 2002. The price index for business structures rose 4.9%, reflecting sharp increases in the cost of building materials. The consensus looks for the GDP price index to rise 2.0% in calendar years 2005 and 2006 and post Q4/Q4 growth of 1.9% and 2.0%, respectively.

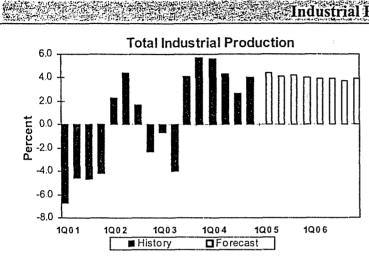

Consumer Price Index

The Consumer Price Index rose at a seasonally-adjusted annualized rate of 3.4% in the final quarter of last year versus 1.7% in Q3, 4.4% in Q2 and 4.0% in Q4. On a calendar year basis in 2004, the CPI was up 2.7% and increased 3.4% on a Q4/Q4 basis. The calendar year increase was the biggest since the 2001 rise of 2.8%. The CPI was up 3.0% on a 12month basis in January, down from the 3.3% rate in December and the 3.5% rate in November. Holding increases down during the last two months were declines in energy prices that have been reversed since then. Indeed, by early March gasoline prices had risen to record levels. The core CPI that excludes food and energy prices was up 2.3% on a 12-month basis in January, the quickest y/y rate of growth since August 2002. While consensus forecasts of inflation in calendar year 2005 and 2006 did not rise this month, the sharp rebound in energy prices of laid poses upside risks to the inflation outlook. So, too, does the continued sharp rise in prices at the producer level and the slowing of productivity growth. The consensus says the CPI will increase 2.5% this year and 2.3% in 2006 on a calendar year basis and rise 2.2% and 2.4%, respectively on a Q4/Q4 basis.

MARCH 10, 2005 BLUE CHIP ECONOMIC INDICATORS 11

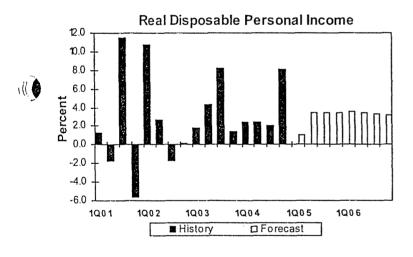

uarterly U.S. Forecast

Industrial Production

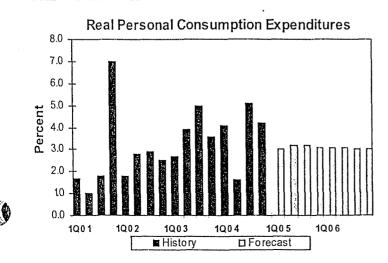

Total industrial production grew at a downwardly revised annualized rate of 4.0% in Q4 of last year, while manufacturing production expanded at a 4.3% pace. For all of last year, total production was up 4.1% versus no growth in 2003 and contractions of 0.3% in 2002 and 3.6% in 2001. Manufacturing output rose 4.7% last year versus no growth in 2003 and contractions of 0.4% in 2002 and 4.2% in 2001. The consensus looks for annualized growth in industrial production of 4.4% in the current quarter. However, an unchanged reading for production in January combined with soft vehicle sales in January and February that recently prompted two leading two major domestic producers to announce production cutbacks for March and beyond hint that reaching that target may be tough. The consensus now looks for total industrial production to rise 4.1% in calendar year 2005 and 3.9% in 2006, both estimates down 0.1 of a point from a month ago. Industrial production is expected to increase 4.2% and 3.8%, respectively, on a Q4/Q4 basis in 2005 and 2006 compared with 4.1% in 2004.

Real Disposable Personal Income The second

Disposable personal income (DPI) jumped at a downwardly revised annualized rate of 10.9% in Q4 of last year, the sharp increase largely attributable to the \$32 billion (\$99.4 billion annualized) special dividend paid by Microsoft to its shareholders in December. Real DPI rose at a downwardly revised rate of 8.1% rate versus 2.0% in Q3. For the year, disposable income was up 5.8% versus 4.2% in 2003 and real DPI increased 3.5% versus 2.3% in 2003. The payout of the special dividend accounted for more than 80% of the record 3.7% jump in personal income during December. Excluding it, real personal income would have been up 0.6% in December versus 0.4% in November and 0.8% in October. The payback came in January when DPI plunged 2.6% and real DPI fell 2.8%. Excluding the effects of the Microsoft payout, DPI would have increased 0.5% in January. Nevertheless, real DPI is predicted to grow just 1.1% in Q1 before rebounding at annualized rates averaging 3.5% during the remaining three quarters of the year. Real DPI is now expected to increase 3.4% in 2005 versus 3.5% in 2003 and to expand by 3.5% in 2006.

Real Personal Consumption Expenditures

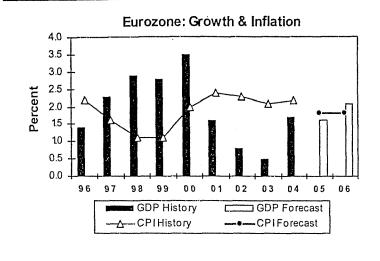

Real personal consumption expenditures rose at a downwardly revised though still strong annual rate of 4.2% in Q4 of last year versus the even more robust 5.1% advance in Q3. While growth in consumption of durable goods (which account for about 15% of spending) slowed as expected due to fewer vehicle sales, they still managed to rise at a rate of 3.1% versus 17.2% in Q3. Moreover, faster growth in consumption of nondurable goods of 6.1% versus 4.7% in Q3 helped make up for the slower consumption of durable goods. Consumption of services (which account for about 55% of total consumption) rose at a 3.4% rate, the best performance since Q2 2002. For the year, real PCE expanded by 3.8% versus 3.3% in 2003 and the biggest increase since 2000. Real PCE is expected to slow in the near term following back-to-back strength Q3 and Q4 of last year. Real PCE growth of 3.0% is foreseen in Q1 followed by rates averaging 3.2% over the remainder of the year. For all of 2005, real PCE is expected to expand by 3.4%, 0.4 of a percentage point less than last year and 0.1 of a point less than a month ago. In 2006, real PCE will increase 3.1% says the consensus.

International Forecasts:

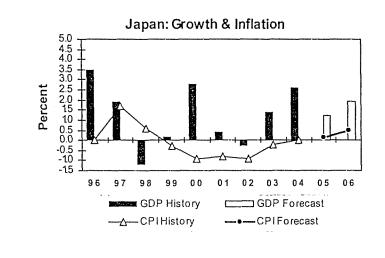

KPSC Case No. 2005-00341 AG 1 St Set Data Request Item No. 217 Page 15 of 23

Eurozone

Real GDP grew at a disappointing rate of just 0.2% (q/q) in the final quarter of last year, the smallest increase since Q2 2003. Holding down overall activity in the currency zone during the quarter were contractions in the rate of real GDP growth in Germany (-0.2%), Italy (-0.3%) and the Netherlands (-0.1%). Real GDP growth in France and Spain during Q4, on the other hand, rose 0.7% and 0.8%, respectively. During calendar year 2004, real GDP in the zone rose just 1.7% versus 4.4% in the U.S., but still the best performance since 2000. Continuing to constrain GDP growth in many of the zone's economies was poor consumer spending due to worries about high levels of unemployment. German joblessness hit a post World War II high in February. A strong euro and high oil prices also continue to dampen growth. The lack of year-end momentum recently prompted the European Central Bank to cut its forecast of real GDP growth this year from 1.9% to 1.6% that happens to be the current consensus prediction of growth. Real GDP growth of 2.1% is predicted for 2006. Consumer prices are predicted (perhaps optimistically) to increase 1.8% in both 2005 and 2006.

Japan

The economy stumbled last year, contracting in the final three quarters of the year as export growth faltered and consumer spending slumped. Real GDP fell at an annual rate of 0.8% in Q2, 1.1% in Q3 and 0.5% in Q4. However, robust growth of 5.8% in Q1 was enough to real GDP up 2.6% in calendar year 2004 versus 1.4% in 2003 and a contraction of -0.3% in 2002. The economy appears to have stabilized as 2004 came to an end and most analysts believe real GDP will expand during the first half of 2005. Household spending was up sharply in January and job gains were strong. Factory production in January registered its biggest advance in nine months and retail sales its largest increase in six years. Providing a lift to consumer spending are signs that downward pressure on wages is subsiding to an extent due to stepped up hiring and bigger bonus payments. There are nonetheless concerns that a recovery in consumer spending may be limited by rising pension contributions and government plans to cancel income-tax rebates to cut growth in the nation's public debt. The consensus sees 1.2% real GDP growth this year and 1.9% in 2006.

Canada

Overall economic growth slowed sharply in the final quarter of last year though domestic demand remained strong. The rate of real GDP growth slipped to 1.7% from 3.4% in Q3, leaving it up 2.7% for the year. Virtually all of the deceleration resulted from a second consecutive quarterly decline in exports due to the 30% rise in the value of the Canadian dollar versus its U.S. counterpart over the past three years. Final domestic demand in Q4 actually rose at an annual rate of 4.4%, the best performance since Q1 of last year. Business investment was similarly strong, growing at a 9.3% rate, also the best gain since the initial quarter of 2004. While exporters will continue struggling as they adjust to the appreciation of the currency, demand for commodities remains strong, corporate profits are rising, job growth is pretty good and government spending is set to accelerate. As a result, the rate of real GDP growth is likely to rebound nicely in the first half of this year, prompting the Bank of Canada to resume its tightening of policy sometime in Q2. The consensus now predicts real GDP will expand by 3.0% in 2005 and 3.1% in 2006.
