RE: Proposed Electric Transmission Line
Alternative Route - Route 2- Docket Number 2005-00472
Property Owner- Loetta Glenn Morris

I wish to express my concerns regarding the alternative route for the construction of a proposed electric transmission line across my property by the Kentucky Utilities Company.

These concerns have been brought to this property because this very property has already been affected by "eminent domain." The very field for the proposed transmission line already has an easement along the back to a local water district leading to the head of Rough Creek. This proposed route would mean the back of the field with an easement to a water district and the front of the field with an easement to an electric company. I believe this would be an abuse of "eminent domain."

The front of the field for proposed transmission line is frontage of the property along St. John Rd. The front corner and along Gray Lane, where the line would exit property, is the prime area for family building in the future. Also, any future plans for development of this property, already affected by the water district, could be hindered by this transmission line running across the front part of this field.

The remainder of my property across Gray Lane is affected by "eminent domain". The water district has water rights, a well, easements and a water line running across the fields. This has affected the use of the land and the financial value of the property.

This field for the proposed transmission line is bordered by Rough Creek and is the location of the head of Rough Creek. This is a very unique nature landscape that my parents, family members and others have enjoyed many years. I do not believe any of this unique nature landscape should be interrupted.

I believe this to be an unfair request to ask me to make another sacrifice for "eminent domain" on the very same property already affected by "eminent domain."

I am enclosing a copy of a letter I have written to the Kentucky Utilities Company expressing my concerns to them. I am not sure they were aware this property was already affected by "eminent domain" because no representative called as promised in the first letter I received from them.

Thank you for reviewing my concerns. I hope these concerns will be taken very seriously in considering this alternative route because they are serious to me.

Sincerely,

Loetta G. Morris

RE: Planned Transmission Line
Alternative Route - Route 2 - Docket Number 2005-00472
Property Owner - Loetta Glenn Morris

On December 1, 2005, I received a letter from Mr. Mark S. Johnson, Director-Transmission, stating I would receive a call within a few days. I did not receive a call. My phone number is listed in the local phone book - L. (for Loetta) G. (for Glenn) Morris, including my home address used in your mailings. My phone number is (270) 769-9076.

There are some very serious concerns and unique features about this property. These concerns are personal, emotional and financial.

These concerns have been brought to this property by "eminent domain." This very field, of proposed transmission route and property across Gray Lane are affected by "eminent domain." This field is affected along the back by an easement to a local water district leading to the head of Rough Creek. This proposed route would mean the back of the field with an easement by a water district and the front of the field with an easement by an electric company. I believe this would be an abuse of "eminent domain."

As stated, the remainder of my property across Gray Lane is affected by "eminent domain." The water district has water rights, a well, easements, and a water line running across the fields. SURE, this has affected the use of the land and financial value of this property.

Also, the front of the field for proposed transmission line is frontage of the property along St. John Road. The front corner and along Gray Lane, where the line would exit property, is the very area of interest to the family for building in the future. Any future plans for development of this property, already affected by the water district, could be further hindered by this transmission line. Homes cannot be built under or very near these transmission lines or on top of water wells, water lines or easements.

This property is bordered by Rough Creek and is the location of the very head of Rough Creek. This is a very unique nature landscape that my parents, family members and others have enjoyed many years. The head of Rough Creek is the beginning source of water for Rough River. None of this unique nature landscape or source of water should be interrupted.

I am asking you to consider some other alternative route. I believe this to be an unfair request and would be asking me, once again, to make another sacrifice for "eminent domain" on the very same property already affected by "eminent domain."

I write this with great concern and hope you will understand my concern and make changes in the alternative route so the transmission line would not cross my property.

Sincerely,

Loetta G. Morris
