Subject: Kentucky American Water and the City of Lexington
Auto forwarded by a Rule

I am 62 years old and have lived in Lexington all my life. Most of my adult life there has been many years when there is a discussion on the availability of water for Lexington. In 1999 Kentucky American proposed building a pipeline to the Ohio River. This was turned-down by the Urban County Council because of complaints from Woodford County residents' fears for disturbing the springs and water source. I-64 was built through Woodford County and the springs were not disturbed. All of this is leading up to my point that a pipeline should be built to the Ohio River and the water question put to rest. No one in the Lexington has enough foresight or long-term planning ability to adequately predict how much water we will need in the foreseeable future. With the growth of Central Kentucky to include Frankfort and the surrounding area, are we going to quit campaigning to bring in more industry? Let's do the sensible thing and start long-range planning. Build the pipeline to the Ohio River.
