Case: 2007-00134

COMMENTS: I farm for a living, I must use
what is available. Where I have cattle
in Franklin Co. on Woodlake Rd, KAW project
will directly involve 7 acres; The rest of the
land will be involved because of lack of
water since cattle will not get to trough
because of trench construction. Hay production
will suffer just as much as the drought
because of the construction then the hay
field. Drawing an income from agriculture
I understand the need for water. I feel the
crunch on money before others do. So I
look for Best solutions for the least amount
money. I am in favor of the Louisville Water
project. because why waste money when
some one says buy this. If this is true
then please tell the other people you are
not in favor of saving money
