Ms. Beth A. O'Donnell Executive Director Public Service Commission 211 Sower Boulevard Frankfort, Kentucky 40602

Case 7007-00198

Subject: Pilot Program Sampling Results in the Year 2007 for Meters Over Ten Years Old and

Request for One Year extension of the Sampling Plan

Dear Ms. O'Donnell:

The following letter report fulfills a requirement of an Order by the Commonwealth of Kentucky Public Service Commission Order (Order) dated September 30, 1997 with respect to a pilot sampling plan for water meters older than 10 years, case number 96-569. This Order was based on the application by the Kentucky American Water to deviate from 807 KAR 5:066 Section 16(1) of the Commission rules so as to extend meter life.

This year, 2007, is the last year of the sampling plan as per the Order. Because 2007 testing of the fifteen-year-old meters has proved accurate for the 4th of the 5 years required by the sampling plan, one additional year of testing (2008) is being requested. No other age meters will be tested as part of the extension.

Introduction:

Kentucky American Water had before this order kept its water meters in place for only 10 years. In the interest of saving money for their customers, in 1996 Kentucky American Water applied for keeping meters in place longer than 10 years in 1996. At issue was whether meters older than 10 years are accurate.

A statistical study by a consulting firm in 1996 of the trending of the accuracy for meters under ten years old that demonstrated that there was a high probability that meters over ten years old would be accurate. In order to assure that those meters that were kept in place over 10 years were accurate, Kentucky American Water proposed that those meters would be tested as to their accuracy by a sample pilot program. Once their accuracy was established, the program for

American Water

2300 Richmond Road Lexington, KY 40502

T +1 859 269 2386 F +1 859 268 6327 I www.amwater.com

determining the accuracy could then be discontinued. This report is the required annual report on the accuracy of meters as proposed by Kentucky American Water and established by the Commonwealth of Kentucky Public Service Commission Order with respect to Case No. 96-569 dated September 30, 1997. In that Order, the sampling plan proposed by Kentucky American Water through a report dated June 1997 by the consulting firm was accepted. Previous reports for any year discussed below are available upon request to Kentucky American Water.

Testing in 1999:

- The sampling plan was initially implemented in 1999. In the year 1999, there was one set of meters tested by the sampling plan:
- 11-year old meters installed in 1988
- The one set of 11-year old meters passed by the standard established as per the above Order.

Testing in 2000: In the year 2000, there were two sets of meters tested by the sampling plan:

- 11-year old meters installed in 1989
- 12-year old meters installed in 1988

Both sets of meters passed by the standard established as per the above Order.

Testing in 2001: There were three sets of meters tested by the sampling plan for 2001.

- 11-year old meters installed in 1990
- 12-year old meters installed in 1989
- 13-year old meters installed in 1988

All three sets of meters passed by the standard established as per the above Order.

Testing in 2002: There were four sets of meters tested by the sampling plan in 2002:

- 11-year old meters installed in 1991
- 12-year old meters installed in 1990
- 13-year old meters installed in 1989
- 14-year old meters installed in 1988

All four sets of meters passed by the standard established as per the above Order.

Testing in 2003: Meter testing was not performed in 2003 due to unforeseen personnel problems and other circumstances.

Conservatively, because no meters were fully tested as per the Sampling Plan procedures, the year 2003 was treated as a year without a test for either pass or fail for any test year. Testing in 2004: There were five sets of meters tested by the sampling plan in 2004:

- 11-year old meters installed in 1993
- 12-year old meters installed in 1992
- 13-year old meters installed in 1991
- 14-year old meters installed in 1990
- 15-year old meters installed in 1989

All five sets of meters passed by the standard established as per the above Order. The 11-yearold meters were found to be accurate overall given accurate testing for five years ending in 2004 as per the above Order. No further testing of the 11-year old meters is required.

Testing in 2005: There were four sets of meters tested by the sampling plan in 2005.

- 12-year old meters installed in 1993
- 13-year old meters installed in 1992
- 14-year old meters installed in 1991
- 15-year old meters installed in 1990

All four sets of meters passed by the standard established as per the above Order. The 12-year-old meters were found to be accurate overall given accurate testing for five years ending in 2005 as per the above Order. No further testing of the 12-year-old meters is required.

Testing in 2006: There were four sets of meters tested by the sampling plan in 2006.

- 13-year old meters installed in 1993
- 14-year old meters installed in 1992
- 15-year old meters installed in 1991
- 16-year old meters installed in 1990

All four sets of meters passed by the standard established as per the above Order. The 13-year-old meters were found to be accurate overall given accurate testing for five years ending in 2005 as per the above Order. No further testing of the 13-year-old meters is required.

Testing in 2007: Current Sample Plan

The following is a letter report of the results of the pilot sampling plan for meters older than ten years old in the year 2007. There are four sets of meters tested in the sampling plan in the current year, 2007:

- 14-year old meters installed in 1993
- 15-year old meters installed in 1992
- 16-year old meters installed in 1991
- 17-year old meters installed in 1990

This is the first year of testing of 17 year old meters. 2006 was the last year of testing 13-year old meters. Note this the last year of as specified of the sampling plan as per the above Order. A one year extension for 2008 will be discussed later for the sampling plan.

Testing Procedures 2007: The test procedures proposed by the June 1997 plan are as follows:

Currently, functioning meters are tested for low, medium and high flow rates. Meters that are stuck, are reported outside of this testing procedure since they obviously represent non-functioning meters. The current testing procedure for low, medium, and high flow rates as required by the normal accuracy testing by the Commission is performed for the meters older than 10 years.

The actual type of analysis performed to establish accuracy, as established in the June 1997 report, is a means analysis test. Meter accuracy for various flow levels will be measured by a means analysis that will be compared to the established acceptable accuracy rates for each type of test. The mean of a set of data is the same as the average.

The average for the sample for a particular age by flow test will be calculated. An average which under-registers by 1.5% or over-registers by 1.5% for the medium and the high test will be considered an indication of inaccurate meters. An average of the low test which under-registers by below 10% or over-registers by 1%, will be considered an indicator of inaccuracy.

If a meter age tests accurate for 5 years of testing without inaccuracy, the meter age is considered accurate overall with no further testing needed.

As the June 1997 sampling plan proposed, over 200 meters would be tested as to their accuracy for a particular age of meters. Four sets of over 200 meters were tested in 2007:

- 14-year old meters installed in 1993
- 15-year old meters installed in 1992
- 16-year old meters installed in 1991
- 17-year old meters installed in 1990

Exhibit I provides the detailed test for the 14-year old meters tested in 2007. Exhibit II provides data for the 15-year old meters tested in 2007. Exhibit III provides data for the 16-year old meters and Exhibit IV provides data for the 17-year old meters. Note that stuck meters and broken are treated outside the analysis.

For the means test to be undertaken, these meters were selected in a random fashion from a meter report for those meters of that age.

Test Findings:

Given the random selection of over 200 meters by age, the low, medium and high tests were performed. Once these 200 meters were tested by age, the meters were then discarded. To perform the means test, the meters that were stuck were excluded from the test as specified in the June 1997 sampling plan proposal. The results of the means test are as follows:

Table 1 K-A Sample Testing Program 2007

Sample Summary Table Mean Analysis

	Low F	low Test	Medium	Flow Test	High	Flow Test	Means	
Year of Meter	Mean	Below 10% or Above 1%	Mean	Below 1.5% or Above 1.5%	Mean	Below 1.5% or Above 1.5%	Test Accurate ?	
14- Year	96.08 %	No	100.17 %	No	100.22%	No	Yes	
15- Year	94.43 %	No	100.03 %	No	99.94%	No	Yes	
16- Year	95.47 %	No	99.39%	No	99.72%	No	Yes	
17- Year	89.63 %	Yes-Fail	99.45%	No	98.08%	Yes-Fail	No	

14-year Old Meter Accuracy:

The above results show that the means tests for the three flow tests were accurate where 100% represents full accuracy for the 14-year old meters. Because all three tests were accurate, the test for the 14-year old meters was considered accurate for 2007. Because the initial sample of over 200 sample meters tested accurately, there is no need for additional sampling. The 14-year-old meters were found to be accurate overall given accurate testing for five years ending in 2006 as per the above Order. No further testing of the 14-year-old meters is required.

15-year Old Meter Accuracy:

The above results show that the means tests for the three flow tests were accurate where 100% represents full accuracy for the 15-year old meters. Because all three tests were accurate, the test for the 15-year old meters was considered accurate for 2007. Because the initial sample of over 200 sample meters tested accurately, there is no need for additional sampling. Because the 15-year old meters have tested accurately for 4 years with the 2007 testing, there would be one more year of testing necessary.

16-year Old Meter Accuracy:

The above results show that the means tests for the three flow tests were accurate where 100% represents full accuracy for the 16-year old meters for 2007. Because all three tests were accurate, the test for the 16-year old meters was considered accurate for 2007. Because the initial sample of 200 sample meters tested accurately, there is no need for additional sampling. We do not intend to test these meters and 17-year old meters next year.

17-year Old Meter Accuracy:

The above results show that the means tests for the two of the three flow tests failed where 100% represents full accuracy for the 17-year old meters for testing in 2007. Originally, fifteen years was targeted as the meter age goal for the sampling program. The failure of the 17-year old meters will require no more testing of 17-year old meters and older.

Summary of testing results to date and future testing; the following table summarizes the Pilot Sampling Plan results to date:

											Testing
	1999	2000	2001	2002	2003	2004	2005	2006	2007	Passes	Left
11-year old	Pass	Pass	Pass	Pass	No-test	Pass	Done	Done	Done	5	Accurate
12-year old		Pass	Pass	Pass	No-test	Pass	Pass	Done	Done	5	Accurate
13-year old			Pass	Pass	No-test	Pass	Pass	Pass	Done	5	Accurate
14-year old				Pass	No-test	Pass	Pass	Pass	Pass	5	Accurate
15-year old					No-test	Pass	Pass	Pass	Pass	4	1
16-year old								Pass	Pass	2	Stop
17-year old									Fail		Stop

The 14-year old meters passed a total of five years of testing this year and therefore are considered accurate. The 15-year old meters passed this year, but require one year of additional testing to meet the five year pass criteria. The 16-year old meters passed this year, but given the 17-year old meters' failure and the program's 15-year goal, to be conservative no more testing of the 16-year old meters will be undertaken. The 17-year old meters failed and will not be tested further.

Extension Requested:

Given the expiration this year of the Order, a one year extension is hereby requested so as to provide time to test only the 15-year old meters in 2008 which have one more year of accuracy to be tested. No other meter age will be tested in 2008 under the extension. Kentucky American Water respectfully requests that a response be given by August 1, 2007 so appropriate planning can take place.

If there are any questions, please feel free to call.

Very truly yours,

KENTUCKY AMERICAN WATER
