Members of the PUBLIC SERVICE P.S.C. COMMISSION

I am writing this letter to let you know how very opposed to the new rate change Ky. Utilities has proposed

I can not see why a company that says it has eliminated a 100 megawatt generator would need like 15 or 20 million dollars a year. I could see a little cost increase, given the times we live in but this is absurd.

How do I get a copy of how this money is to be spent?

I hope you take a stance against such extravagant to my complaint.

PUBLIC SERVICE COMMISSION

INCREASES, most, if not close to all the residential people can't afford this. If they need that much money, why do you not have them charge the need of this INCREASE to the big electric wasters. Companies. big : small that use electric 24/7 should foot this bill, if they even need that much A yr!

I hope to get a response from you, but if I don't, I will know you are for big business instead of the public like your logo says. THANKS for you time to listen to
