PUBLIC SERVICE
COMMISSION

RESPONSE TO DATA REQUEST

1. I have stated with plenty of specificity the problem I have with the billing from your company. I have spoke with numerous people at your company and no one would deny the fact that this was out of the ordinary, but no one has been able to help in any way. As I have stated in the past, this bill I received a few days after I sold this house was approx 150% of the highest bill I ever had while living in this house for 3 ½ years with 5 kids and a wife running in and out every* day. My wife does not work out side the home, so she was always home with the air set around 71 degrees in the summer. I do not have copies of past bills but to the best of my memory, the highest bill I remember was around \$300. Given these parameters, it would be impossible to use that much more electricity in an empty house set on 77 degrees during the month in question. You ask me if this was billed in accordance with filed tariffs and regulations. How can an individual answer that question? All I can tell you is It doesn't add up. I also asked each person I spoke with at Kentucky Utilities if they would pay this bill given these circumstances and not one person said "Yes I Would".
2. I am in the automotive business. I would have no way of knowing if the meter was defective or not, but I would like someone to give me a LEGITAMATE explanation as to how my electric consumption can go from \$70 to \$500 in one month under the same circumstances. Also the new owners of the home have not had a bill anywhere near this amount since taking possession of the home. Again, it doesn't add up.
