HAND DELIVERED

Mr. Jeff Derouen Executive Director Public Service Commission 211 Sower Boulevard Frankfort, Kentucky 40602 RECEIVED

JAN 12 2009

PUBLIC SERVICE COMMISSION

Re: PSC Case No. 2008-00410

Dear Mr. Derouen:

Please find enclosed for filing with the Commission in the above-referenced case an original and five copies of the responses of Big Sandy RECC to the Commission Staff's Initial Data Request, dated December 19, 2008.

Very truly yours,

Albert A. Burchett

Attorney

BIG SANDY RURAL ELECTRIC COOPERATIVE CORPORATION PSC CASE NO. 2008-00410 INITIAL DATA REQUEST RESPONSE

COMMISSION STAFF'S INITIAL DATA REQUEST DATED 12/19/08 REQUEST 1

RESPONSIBLE PERSON:

Ann F. Wood

COMPANY:

Big Sandy Rural Electric Cooperative Corporation

Request 1. Provide the workpapers, spreadsheets, etc. which show the calculation of the increase, by individual wholesale rate schedule, in Big Sandy's cost of power from East Kentucky Power Cooperative, Inc. that Big Sandy is proposing to flow through to its customers. Include a brief narrative description of the data being provided.

Please see page 2 of this response. EKPC multiplied the projected wholesale billing units for all members for the test year by the EKPC existing rates to determine revenue before the rate increase. The revenue increase was then proportioned to EKPC rate classes in order to develop proposed rates. After the proposed wholesale rates were developed, the new rates were applied to the same projected billing units proportionally among all rate classes. These rates were then applied to the projected wholesale billing units of each member system, in order to determine their proportionate share of EKPC's revenue requirements.

Please note that the wholesale increase on page 2 totals \$1,592,612, and is higher than the retail increase of \$1,591,999 as filed in the pass-through application dated October 31, 2008 (Exhibit 3, Page 1 of 5). This slight under recovery is a result of rounding.

BIG SANDY RURAL ELECTRIC COOPERATIVE CORPORATION PSC CASE NO. 2008-00410 INITIAL DATA REQUEST RESPONSE

COMMISSION STAFF'S INITIAL DATA REQUEST DATED 12/19/08
REQUEST 2

RESPONSIBLE PERSON:

James C. Lamb, Jr./Ann F. Wood

COMPANY:

Big Sandy Rural Electric Cooperative Corporation

Refer to Exhibit 3 of the application. The billing analysis shows various rate schedules with escalation percentages applied to the billing determinants. Explain the need for the escalation percentages and provide workpapers, spreadsheets, etc. for the calculation of the percentages, as well as a narrative explanation of how the percentages were determined.

Response 2. Since EKPC is using a forecasted test period, the increase is calculated based on projected billing determinants. In order to appropriately match retail rates to the forecasted test year used for wholesale rates, an escalation factor was used. The escalated data was applied to Residential and Small Commercial classes only due to the wide variance and unpredictable nature of the Large Commercial/Industrial class.

The Attachment shows the escalation percentages calculated by the Resource Planning Department of EKPC and the supporting calculations.

EKPC prepares a load forecast by working jointly with its member systems in preparing their individual load forecasts. Factors considered in preparing the forecasts include national, regional, and local economic performance, appliance saturations and

efficiencies, population and housing trends, service area industrial development, electric price, household income, and weather. Each member system reviews the preliminary forecast for reasonability.

The general steps followed by EKPC in developing its load forecast are summarized as follows:

EKPC subscribes to Global Insight, Inc., in order to analyze regional economic performance. Global Insight provides EKPC projections for population, employment, and income as well as other variables.

EKPC prepares a preliminary forecast for each of its member systems for each classification using monthly data as reported on the Rural Utilities Services (RUS) Form 7, which contains publicly available retail sales data for member systems. These include: residential, seasonal, small commercial, public buildings, large commercial, and other. EKPC's sales to member systems are then determined by adding distribution losses to total retail sales. Seasonal peak demands are determined by applying peak factors for heating, cooling, and water heating to energy.

The supplementary spreadsheets in the Attachment contain the data resulting from the above-described process. The growth rates for energy sales, winter peak demand, and customers are based upon the monthly forecasts for the test period.
