

We don't need no 35% rate hike on
Power bills

RECEIVED

JAN 11 2010

PUBLIC SERVICE
COMMISSION

If the power company get this rate hike past , low income people won't be able to afford it, because through the summer and winter months people already pay two or three hundred dollars or more a month for power. Now were looking at 75 to 110 dollar more on their bill and it just don't stop there . Their food , gas , and medical prices and other expenses go up . It's hard enough to make it in this state when their aren't many jobs , especially in eastern part of Kentucky . Where they have shut down or laid off the coal working people . We need jobs brought into eastern Kentucky . We need good paying jobs here like factory jobs like Kellogg's . We need more work like cars , bakery's and furniture factories and

not make it worse wanting more gambling . It's additive like smoking and drinking . Some people would spend their last dime for it. I hope our governor , congressmen , senators, judge elative and other elected officials will see how hard enough it is already in eastern Kentucky . We already have to pay 1 dollar or more just for one tomato , almost four dollars for a gallon of milk, three to four a pound of grapes and other food prices it also make it hard on gas and other expansive to , so take in consideration for the poor and the middle class to . It would raise more than electric bill .

Thank you Trampes Howell , Linda Howell , Maggie Hensley , Jackie Coleman and Paulette Coleman
