Lexington, KY 40502

Dear Public Service Commission

I received recently a letter from Kentucky Utilities along with my bill payment indicating that Kentucky Utilities intends to increase my electric bill by almost double what I already pay-an increase of about 13.54%. Plus, they plan to raise the deposit from \$135.00 to \$160.00-a 19% increase.

While this may not seem much on paper, it would be more to me considering that I would have to deduct more from my salary to pay for my electric, which my salary only comes just above minimum wage. This move would make it a little more of a struggle for me to keep living in the apartment that I have. I do not see the need for Kentucky Utilities to raise their prices when they serve to 77 counties in Kentucky plus five counties in Virginia, pushing the total number of users over 500,000.

I am opposed to this rate increase and would like to continue paying the same rate as I have been for the past almost 3 months that I have lived in my apartment. I enjoy the services Kentucky Utilities has to offer and at such affordable rates. Thank you for taking the time to read my concern.

Sincerely

Adam Conner
