I hereby make a motion and request to intervene in this issue of the proposed rate increase. The rates are already high enough. In fact too high with the environmental charge that was tacked to the bills previously which i did not see a letter saying they were going to do that in my bills. People on a low fixed income as i am cannot afford extra cost to electric at this time. Especially, since we are not getting a cost of living increase this year as well as next. We need our money for other things like food and necessities and paying housing or rent payments. With today's economy, now is not the time to add more out of pocket expense to those who are losing their homes and businesses going under. I have been advised by legal counsel to send you this certified letter. And that it is the first step should it be necessary to file a class action lawsuit on behalf of myself and the other customers of Kentucky Utilities. Shame on large corporations who want to hurt their customers in these trying times. No wonder we are in the mess we are in now. Greed for money. Take from the poor and needy and give to the rich and make them richer. Or pay for projects that the government is supposed to cover. The government is giving electric companies stimulus money to rebuild and modernize their power grids and your charging customers for rebuilding things for environmental? If the government is paying you for it, why are we paying for it? I feel this charge should also be abolished. I would not argue paying more if our economy was good, and people on low income SSI and SSDI received cost of living increases to cover the extra expense in their budgets. But not now!
