Re: Investigation of Retail Competition in Natural Gas

Dear Chairman Armstrong:

I understand the Kentucky PSC is investigating retail natural gas competition in Kentucky. I further understand that presently, very few Kentucky industrial, commercial and governmental customers have the ability to buy natural gas on the open market. I support giving industrial, commercial and governmental customers in all parts of Kentucky, the option to purchase natural gas on a competitive market like other nearby states. Competition should benefit everyone and discriminate against no one.

Current utility practices discriminate against small industry, businesses and public facilities by only allowing the largest customers to purchase in a competitive market. Small businesses will lead this country out of recession and add employment, but it can't happen with excessively high utility fees and unreasonable rules. For example, the thresholds of gas usage necessary to qualify to purchase on the competitive market are unreasonably high in all five of Kentucky's gas utility areas and should be lowered. **Louisville Gas & Electric** and **Columbia Gas of Kentucky** have the highest thresholds in Kentucky. **Duke Energy** charges up to \$5,000/year to small industrial and commercial customers for administrative (meter reading) fees not charged to similar size and class Ohio customers. **Atmos Energy** and **Delta Energy** have subsidiaries selling gas to large customers, subsidized by shifting costs to smaller industrial and commercial customers that don't qualify to buy on the open market.

These are just a few examples of why I support allowing more Kentucky industrial, commercial and governmental customers to purchase gas and other services not available from the utility, on the open market at competitive prices. The Public Service Commission should update or amend the regulations and tariffs governing natural gas transportation on each utility system to allow a competitive natural gas market for industrial, commercial and governmental customers.
