PUBLIC SERVICE COMMISSION

COMMONWEALTH OF KENTUCKY

BEFORE THE PUBLIC SERVICE COMMISSION OF KENTUCKY

In the Matter of:)	
)	
The Application of Kenergy Corp.)	CASE NO. 2010-00034
For Approval of Sample Meter)	
Testing Plan)	

SECOND AMENDED APPLICATION

The second amended application of KENERGY CORP. ("Kenergy") respectfully shows:

- (a) Kenergy's Response to First Data Request of Commission Staff sets forth further revisions Kenergy is willing to make to its proposed sample meter testing plan.
- (b) Consistent with said Response Kenergy submits herewith the plan it now desires to adopt, being attached as "Exhibit 1B."

WHEREFORE, Kenergy withdraws the proposed revised plan included in its first amended filing; requests that the Commission approve its sample meter testing plan attached hereto as "Exhibit 1B" and that Kenergy be authorized to adopt said plan; and Kenergy further requests that it be afforded all proper relief.

FRANK N. KING, JR

PROPOSED SAMPLE METER TESTING PLAN FOR KENERGY CORP.'S SINGLE-PHASE CLASS 200 & 320 METERS

KENERGY CORP. Henderson, Kentucky

Prepared by
Robert Hayden
Kenergy Corp.
&
Distribution System Solutions, Inc.

Revised May 3, 2010

PROPOSAL FOR SINGLE-PHASE SAMPLE METER TESTING

INTRODUCTION

Kenergy Corp is an electric distribution cooperative located in western Kentucky. Kenergy is presently on schedule with its eight-year meter testing program. By adopting a sample meter testing program, Kenergy will take a significant step towards maximizing efficiency in the single-phase meter testing area of its operation. It is the purpose of this proposal to demonstrate the methods used and the cost savings achieved in sample testing.

RULES AND REGULATIONS

Kentucky Public Service Commission (PSC) rules and regulations outline the required method and techniques of sample meter testing. Kenergy will implement the sample meter testing plan as submitted in this application.

PROCEDURE

The statistical meter sample testing will follow *American National Standard Institute ANSI/ASQC Z1.9-2003 (Sampling Procedures and Tables for Inspection).* Each test group will be randomly sampled by a computerized process. The Kenergy billing computer system will be used for this process.

The **Acceptance Quality Level** (AQL) is defined as the quality level that is the worst tolerable product average when a continuing series of lots is submitted for acceptance sampling.

Due to the $\pm 2\%$ limits, the sample groups shall be tested using an AQL of **2.5**. This value can be found in **Table A-1**. The upper and lower 2% limits require the use of the *Double Specification Limit* method as outlined in this ANSI Standard.

PROCEDURE continued on next page.

PROCEDURE (cont.)

As shown in the table below, meters will be divided into separate homogeneous groups based upon manufacturer and type. Similar meters may be further divided by serial number break points. Newly purchased and/or installed meters will be added to the proper group and will be eligible for sample testing the following year. **Table A-2** provides the Sample Size Code Letters that are then to be referenced in **Table B-3**. The "Normal Inspection" portion of the **Table B-3** is then used to determine the sample size for each test group.

METER TEST GROUPS

35	Landis & Gyr	MX	1,950	50

^{*}The maximum population of any group will not exceed 3,000.

PROCEDURE continued on next page.

PROCEDURE (cont.)

Randomly selected meters (lot) from each group will be sent to the meter shop. If damaged or non-registering meters have issues that are not a manufacturer's defect or meter was exposed to abnormal conditions these meters will be replaced by another random selection.

The meters will be tested under full load, light load and 50% power factor.

Watthour meter shall be adjusted when the error in registration exceeds 1% at either light load or full load or when the error in registration exceeds 1% at 50 percent power factor. The meter will be retired if the registration error cannot be corrected.

For each lot, calculations will be based on the Double Specification Limit Variability Unknown-Standard Deviation Method. Full Load test results will be evaluated. **Example B-4** in *ANSI/ASQC Z1.9-2003* demonstrates this calculation method. **Table B-3** is included in this proposal.

An annual report (showing each group's performance) and a copy of the manufacturer's new meter test data will be provided.

Lot performance shall be deemed acceptable if the full-load and light-load performance of the meters within the lot meet the acceptability criteria of the **ANSI** standard. When a group is classified as failed and a poorly performing sub-group can be identified for separation from the original control group, the deviate sub-group will be removed from service within a 12-month period.

If, by the removal of a specific sub-group of meters, Kenergy can demonstrate that the original control group of meters now meets the acceptability standard, the remaining meters in the original control group shall remain in service.

If a deviate sub-group of meters cannot be identified to improve the control group's accuracy, then Kenergy will remove and test the entire control group of meters within 18 months once it has failed the applicable governing standard for the control group. Subgroups of the control group may be determined by evaluating the date of original purchase, date of original manufacture, and date of remanufacture. Other methods of determining subgroups may also be used.

If Kenergy should suffer an operational hardship due to this requirement, a request for deviation may be filed.

Kenergy will sample test new meters using an Inspection Level I and an AQL 1.0.

Table A-1
AQL Conversion Table

		OL values ese ranges	Use this AQL value
_	to	0.109	0.10
0.110	to	0.164	0.15
0.165	to	0.279	0.25
0.280	to	0.439	0.40
0.440	to	0.669	0.65
0.700	to	1.09	0.1
1.10	to	1.64	1.5
1.65	to	2.79	2.5
2.80	to	4.39	4.0
4.40	to	6.99	6.5
7.00	to	10.9	10.0

ANSI **Part A7**, Sample Selection, from the standard, states that **Inspection Level**, **General II**, shall be used for the discrimination level. Unless otherwise required by the PSC, this level will be in effect for the Kenergy program.

¹The theory governing inspection by variables depends on the properties of the normal distribution and, therefore, this method of inspection is only applicable when there is reason to believe that the frequency distribution is normal.

²Sample size code letters given in body of table are applicable when the indicated inspection levels are to be used.

	,			Acc	cptance	Acceptance Quality Linuts (tightened inspection)	y Limut	s (tighte	sued ins	pection	_		

All AQL values are in percent nonconforming. T denotes plan used exclusively on tightened inspection and provides symbol for identification of appropriate OC curve.

Use first sampling plan below arrow; that is, both sample size as well as k value. When sample size equals or exceeds lot size, every item in the lot must be inspected.

COST SAVINGS/CONCLUSION

A substantial reduction in cost will be achieved by implementing the sample meter test method. Once the program is established, only a small percentage of the present labor and testing efforts will be required. This reduction results in estimated annual cost savings of approximately \$138,600.00 without compromising single-phase revenue metering accuracy.

Cost Savings to Kenergy Corp. due to a change to Sample Metering
