Subject: your comments in case 2012-00428 - smart grid administrative case

Dear Mr. Rosen:

Thank you for your comments to the Kentucky Public Service Commission regarding the use of smart grid technology by electric utilities in Kentucky. Your comments will be placed into the case file for the Commission's consideration as it deliberates in this matter.

As you noted, the case number in this matter is 2012-00428. Please reference it in any further comments.

Records in the case are available on the PSC website at this location: http://psc.ky.gov/Home/Library?type=Cases&folder=2012 cases/2012-00428

Your comments will be posted to the file as submitted, with the following exception: as per our policy, personal information such as your e-mail address will be redacted in order to protect your privacy.

Thank you for your interest in this matter.

Andrew Melnykovych

Director of Communications Kentucky Public Service Commission 211 Sower Boulevard Frankfort, KY 40601 502-782-2564 cell:502-330-5981

Subject: PSC CASE NUMBER 2012-00428

Importance: High

Many people have read plenty of information about case 2012-00428 - smart grid administrative case and everything they have said is true as it regards to radiation and the sickening surveillance aspects which most people only think that they can tell how much you use.

However they can tell what you have plugged in (for newer appliances that have been around since the late 1980s) and for "dumb" appliances how long plugged in and where plugged in. To anyone with 1 active brain cell this is even more sickening to what the book 1984 told us about, because truth is stranger than fiction. One thing many have no idea about and research has revealed if you are within a certain distance of a "smart meter" that are set-up with wi-fi capabilities can listen in to conversations and transmit them to be recorded and stored. That is illegall no matter what ANY court or legislature says and is beyond sick. Also if you have any device pluged into an electric outlet (do not need the internet for this) that has a speaker or video camera (99.9% of speakers made in last 20 years can be turned into a microphone) or a pure microphone they can capture the audio and/or video and transmit over the "smart meter" to whatever database has access to the grid. Last time anyone checked, The Declaration of Independence declared we have a right to Life, liberty and the pursuit of happiness which then was guaranteed by the USA's Constitution, smart meters violate those very rights by spying on law abiding citizens daily (the same as cameras on every corner and many other spy devices).

The two web links below are only 2 of thousands that state only a fraction of the violations these "smart meters" illegally thrust upon people's daily lives. One of the links talks about radiation and anyone with a brain cell who knew to avoid cell phones knows that the radiation from "smart meters" is even deadlier to everyones future health.

IF ANYONE in the PSC has any morals and/or ethics and is not just going to do what the elitists wants, then they will at bare minumum give each consumer the RIGHTS WE ALREADY HAVE from the constitution of this nation to be able to opt-out of "smart meters" and get an ANALOG ELECTRIC METER at no additional cost (none of the criminal extortion plots to charge people \$30.00 a month to read the meters). You are saying but we would incur extra cost reading the old ANALOG meters, WRONG!!!

There is 1 old fashioned way to read the meters (that has been around 100 years + with 1 new way to let the company know them) and 1 new way that has been available in last 15 years. The old fashioned way is for the consumer to read the meter and verbally phone the results in, but the pencil pushing bean counters would say, that would cost too much, so for those people then the consumer reads the meter and call it in and leave the data (via phone data entry) on a electric company phone number. -or- The modern solution is to have the consumer read the meter and then go to there online electric account and enter the data on their online account on a specific day each and every month. And just as with those "smart meters" the company has to read them 1 time per year and then do adjustmens (if needed) then.

Adopting one of the two meter reading ways for analog meters would save the company money + would keep the elitist who want to spy on the internal happenings of ones household at bay (that is provided you are smart enough to say no to video cameras connected to video game systems, say no to laptops with built-in cameras and mics, say no to cell phones, so no to tv's with built in cameras and say no to satellite/cable/iptv boxes with built-in cameras).

Beyond the extra radiation they want people to have injected (not directly buy throught the air) into their bodies and the spying they want to do with these "smart meters" is they want people to continue on the slippery slope to stupidity and not knowing how to do things for themselves and to be "zombies" and rely on machines to do for them and then become incapable of surviving when machines stop working (such as kids today age 10-30 who can barely read an analog clock, who cant compute change owed to a person in their head and many more things).

DISCLOSURE / LIABILITY WAIVER - NO THREATS + NO INTIMATION + NO COERECION + NO VIOLENCE + NO ILL WILL WAS MEANT TO ANY AGENCY, GOVT, ANY PERSON AND/OR ANY ENITY. NOR COULD ANY REASONABLE PERSON, GOVT, AGENCY AND/OR ENITY COULD LOGICALLY, RATIONALLY, REASONABLELY, LEGALLY, MORALLY AND OR ETHICALLY DERIVE IT FROM THIS LETTER.

Add this case to the files on your PSC site and the public records for this site (that is if PSC can handle the facts to get out - also no twisting my words and/or editing what was wrote) as it regards admin case 2012-00428

Johnny Rosen
