RE: Case No. **2012-00222** – Opposition to **LG & E's** Proposed Rate Increases and Improper Structure

Dear Commissioners:

I am a residential customer of LG&E. I write to oppose LG&E's rate increases on electric and gas service. Present rates are fair, just and reasonable. In these difficult times, LG&E already enjoys a secure and generous rate of return on its capital.

If any increase is due, I oppose increasing the monthly service charge. LG&E wants to raise the monthly electric service charge by 53% (from \$8.50 to \$13.00) and the kWh price by only 3.7% (from 7.242 cents to 7.513 cents).

It wants to raise the monthly gas service charge by 24% (from \$12.50 to \$15.50) and lower the CCF (hundred cubic feet) price by 6.4% (from \$.62023 to \$.58025).

Any rate increase should be put on the unit of energy ("volumetric pricing"), not the monthly service charge. LG&E already enjoys a monopoly and guaranteed profit. It doesn't need a higher monthly service charge. Increasing the monthly base charge instead of the kWh or CCF price:

- Unfairly and unjustly lowers the returns of prior private investors in efficiency;
- Unreasonably discourages future private investments in efficiency;
- Unreasonably rewards wasteful users of energy;
- Unjustly and unfairly impacts those who use energy sparingly (i.e. – the poor, the elderly and the efficiency-minded), and;
- Unreasonably impairs deployment of renewables and distributed generation.

In short, LG&E's proposed structure is bad public policy. It's also unnecessary - a utility with grant of monopoly and guaranteed profit need not employ such a structure. I ask the Commission to deny it, either after hearing or in any proposed settlement.

Very truly yours,

Signature

Dear Commissioners:

I am a residential customer of LG&E. I write to oppose LG&E's rate increases on electric and gas service. Present rates are fair, just and reasonable. In these difficult times, LG&E already enjoys a secure and generous rate of return on its capital.

If any increase is due, I oppose increasing the monthly service charge. LG&E wants to raise the monthly electric service charge by 53% (from \$8.50 to \$13.00) and the kWh price by only 3.7% (from 7.242 cents to 7.513 cents).

It wants to raise the monthly gas service charge by 24% (from \$12.50 to \$15.50) and lower the CCF (hundred cubic feet) price by 6.4% (from \$.62023 to \$.58025).

Any rate increase should be put on the unit of energy ("volumetric pricing"), not the monthly service charge. LG&E already enjoys a monopoly and guaranteed profit. It doesn't need a higher monthly service charge. Increasing the monthly base charge instead of the kWh or CCF price:

- Unfairly and unjustly lowers the returns of prior private investors in efficiency;
- Unreasonably discourages future private investments in efficiency;
- Unreasonably rewards wasteful users of energy;
- Unjustly and unfairly impacts those who use energy sparingly (i.e. – the poor, the elderly and the efficiency-minded), and;
- Unreasonably impairs deployment of renewables and distributed generation.

In short, LG&E's proposed structure is bad public policy. It's also unnecessary - a utility with grant of monopoly and guaranteed profit need not employ such a structure. I ask the Commission to deny it, either after hearing or in any proposed settlement.

Very truly yours,

Signature

If any increase is due, I oppose increasing the monthly service charge. LG&E wants to raise the monthly electric service charge by 53% (from \$8.50 to \$13.00) and the kWh price by only 3.7% (from 7.242 cents to 7.513 cents).

It wants to raise the monthly gas service charge by 24% (from \$12.50 to \$15.50) and lower the CCF (hundred cubic feet) price by 6.4% (from \$.62023 to \$.58025).

Any rate increase should be put on the unit of energy ("volumetric pricing"), not the monthly service charge. LG&E already enjoys a monopoly and guaranteed profit. It doesn't need a higher monthly service charge. Increasing the monthly base charge instead of the kWh or CCF price:

- Unfairly and unjustly lowers the returns of prior private investors in efficiency;
- Unreasonably discourages future private investments in efficiency;
- Unreasonably rewards wasteful users of energy;
- Unjustly and unfairly impacts those who use energy sparingly (i.e. – the poor, the elderly and the efficiency-minded), and;
- Unreasonably impairs deployment of renewables and distributed generation.

In short, LG&E's proposed structure is bad public policy. It's also unnecessary - a utility with grant of monopoly and guaranteed profit need not employ such a structure. I ask the Commission to deny it, either after hearing or in any proposed settlement.

Very truly yours,

Any rate increase should be put on the unit of energy ("volumetric pricing"), not the monthly service charge. LG&E already enjoys a monopoly and guaranteed profit. It doesn't need a higher monthly service charge. Increasing the monthly base charge instead of the kWh or CCF price:

- Unfairly and unjustly lowers the returns of prior private investors in efficiency;
- Unreasonably discourages future private investments in efficiency;
- Unreasonably rewards wasteful users of energy;
- Unjustly and unfairly impacts those who use energy sparingly (i.e. – the poor, the elderly and the efficiency-minded), and;
- Unreasonably impairs deployment of renewables and distributed generation.

In short, LG&E's proposed structure is bad public policy. It's also unnecessary - a utility with grant of monopoly and guaranteed profit need not employ such a structure. I ask the Commission to deny it, either after hearing or in any proposed settlement.

Very truly yours,

RE: Case No. 2012-00222 – Opposition to LG & E's Proposed Rate Increases and Improper Structure

Dear Commissioners:

I am a residential customer of LG&E. I write to oppose LG&E's rate increases on electric and gas service. Present rates are fair, just and reasonable. In these difficult times, LG&E already enjoys a secure and generous rate of return on its capital.

If any increase is due, I oppose increasing the monthly service charge. LG&E wants to raise the monthly electric service charge by 53% (from \$8.50 to \$13.00) and the kWh price by only 3.7% (from 7.242 cents to 7.513 cents).

It wants to raise the monthly gas service charge by 24% (from \$12.50 to \$15.50) and lower the CCF (hundred cubic feet) price by 6.4% (from \$.62023 to \$.58025).

Any rate increase should be put on the unit of energy ("volumetric pricing"), not the monthly service charge. LG&E already enjoys a monopoly and guaranteed profit. It doesn't need a higher monthly service charge. Increasing the monthly base charge instead of the kWh or CCF price:

- Unfairly and unjustly lowers the returns of prior private investors in efficiency;
- Unreasonably discourages future private investments in efficiency;
- Unreasonably rewards wasteful users of energy;
- Unjustly and unfairly impacts those who use energy sparingly (i.e. – the poor, the elderly and the efficiency-minded), and;
- Unreasonably impairs deployment of renewables and distributed generation.

In short, LG&E's proposed structure is bad public policy. It's also unnecessary - a utility with grant of monopoly and guaranteed profit need not employ such a structure. I ask the Commission to deny it, either after hearing or in any proposed settlement.

Very truly yours,
