PUBLIC SERVICE
COMMISSION

Kentucky Public Service Commission
211 Sower Blvd
Frankfort KY 40601

Dear Members of the Public Service Commission:

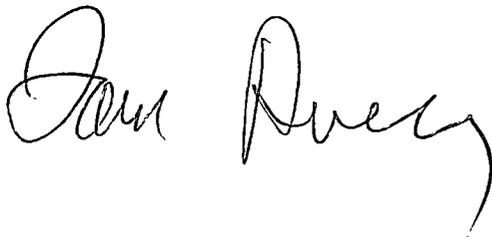

As consumers and providers of solar energy in Kentucky, we ask that you evaluate solar and other forms of renewable energy on a total cost basis, that is, on a basis that includes external costs and avoided costs to the people of Kentucky. Avoided costs of solar and other renewables include: sulfur dioxide pollution, mercury pollution, and other forms of air pollution, black lung, asthma and other health costs, road maintenance, hazardous substance protection, stream pollution, and mine safety, and the societal costs of the continuing buildup of carbon dioxide in the atmosphere.

We realize that this is a new role for the Public Service Commission and hope that you are willing to accept it. You are the state agency best positioned to begin the process of evaluating new forms of energy in relation to existing forms of energy. We know that you have the best interests in mind of the people of our state.

In the near future, we will also ask you to consider allowing access to the electrical grid for all forms of energy on a total cost basis.

Thank you for your consideration, and thank you for your continuing service in providing safe energy at the lowest possible price to the people of Kentucky.

Sincerely,
Sam Avery
