To: Cummins, Carol J (PSC) <carol.cummins@ky.gov>

We can't seem to get an answer out of them either. We will proceed with the complaint forms.

Thank you for your help!

North Manchester advised that they installed a pressure recorder for three days. The pressure stayed at 26 psi. North Manchester has further advised that they will present the information at their board meeting on November 4th to discuss buying a pump.

We spoke to North Manchester. The pressure at the house was 36 psi. The pressure at the trailer was 26 psi. We have asked them to install a pressure recorder for two days to determine the average pressure. The pressure should be 30 psi at the meter. North Manchester has advised the trailer also sits up on a hill.

We will advise once the results are provided.

I'm sorry to keep emailing, but I just spoke with my husband who said that the lady at North Manchester Water just told him that they checked the pressure at our house and it had 36 psi (which is the house with the pump on it) and that there was 26 psi at the meter itself. So, the guys checked the house with the pump on it and not the house with the problem that needs to be fixed. We have two meters, ours and my moms, and they checked ours at the house (with the pump). They're going about this completely underhanded, telling you guys one thing and doing another. I honestly don't believe there is even 26 pounds at the meter because she would still get pretty good pressure if she did. We had a licensed plumber check the pressure less than a month ago and it had 6 psi at her meter. If at all possible, we need to have someone other than an associate of North Manchester Water come out and check the psi at her meter.

We requested that North Manchester check the pressure at your meter. This morning, the pressure was 36 psi, which is above the 30 psi required. North Manchester further advised your house is on a hill, which is why they offered \$500 toward a pump.

If the law requires that they keep no less than 30 psi at the meter, but we only get 6, how is this legal? We didn't get this at our old meter either, which now belongs to my mother-in-law. She didn't show at the meeting because she couldn't afford to be additional cost of the pump herself. If the state requires 30 psi, and we aren't getting that, then shouldn't it be fixed?

Thank you for contacting the Commission regarding North Manchester Water Association. We contacted North Manchester and received the following response:

In regards to Brandon Swafford the board agreed to pay for him a pump up to \$500 because he didn't have 30 psi where he built his new house. He agreed and signed a contract which I have attached a copy of. His mother in law had sent her son in to speak with us about wanting us to buy her a pump as well. He spoke to our field supervisor Jerry Rice, and he told him that he would need to come to the next board meeting which was on Oct. 7th and meet with the board about purchasing one for her. They never showed up to the

board meeting nor have they called back and spoke to anyone else about the issue.

The contract (attached) is signed by you and states the following:

North Manchester Water Association agrees to provide a pump for the customer up to the amount of \$500. I Brandon Swafford agree to maintain any and all maintenance thereafter including leaks, and all maintenance to any parts provided by North Manchester Water Association.

Utility Name: North Manchester Water Association
State the nature of your concern: My wife, mother-in-law and I, have contacted the North Manchester Water Association on numerous occasions over the last 2 1/2 years due to low pressure at our meters. I have two meters with North Manchester Water Association. One runs to my mother-in-law's home, the other to mine. The pressure at both of these meters is never above 6 psi; they have been tested several times. We've filed several complaints, but are always told there's nothing they can do. When we built our new home this year, we had to purchase a pump and a tank, and were out almost \$2,000.00 out of pocket for this. My mother-in-law is an elderly, sick, 76-year-old woman with a limited income and she cannot afford this. She usually has to leave her home in order to take showers and we are forced to pack water to her house just to flush her toilets. We are at our wits end and we don't know what else to do. When our power goes out this winter, we won't have any water at all because the pump runs on electric. But most importantly, my mother-in-law is sick and on a limited income, and they refuse to help her. By law, this company is required to keep no less than 30 psi at these meters, and there is never more than 6 psi. Please help!!!!

Have you contacted the utility about the problem: Yes
