Comments:

Meade County Water does not provide a quality of water that is worth a 27% increase. The water is so full of calcium that it's eating through the pipes of my home which is not old enough for this type of damage. The calcium is so bad it eats through copper. I have had multiple repairs in my front yard in the last 2 years alone that have cost me thousands! I would suggest fixing the quality of water before asking for more money. Your community has to save their money to have their yards dug up for pipe repairs with the hard water provided. I suggest a water softener. The community may be more agreeable to the increase.
