How Your Home Uses Energy

<i>model baseline</i>	Elec	Gas	Propane	Wood/Coal
Heating	11,800 kWh	0 kBTU	0 kBTU	0 kBTU
Cooling	1500 kWh	0 kBTU	0 kBTU	
Base	22700 kWh	0 kBTU	0 kBTU	
Total (yr)	36,000 kWh	0 kBTU	0 kBTU	0 kBTU
	35800 kWh	0 kBTU	0 kBTU	0 kBTU

Your home uses energy for heating, cooling, and base load (which is everything that is not heating or cooling).

How Your Home Could Save Energy

- Replace HVAC Heating with New HVAC Heating System.
- Replace HVAC Cooling with New HVAC Cooling System.
- Seal home to 2000 cfm50.
- Service units and seal Duct Work to 10% of fan capacity.
- Add Insulation in attic to 15" total from existing.

<u>Savings from Baseline:</u>	<u>Savings from Actuals:</u>	<u>Conversions to Fuel</u>	<u>Current Rates</u>	<u>Projected Savings (yr)</u>
5728 kWh (Elec)	5,528 kWh (Elec)	5,528 kWh	0.11 /kWh	\$608
0 kBTU (Gas)	0 kBTU (Gas)	0 therms	2.00 /Therm	\$0
0 kBTU (Propane)	0 kBTU (Propane)	0 Gal	2.50 /Gal	\$0

Based on savings from insulation and air seal only due to calibration.

Projected Avg Energy Savings (mo) \$51
before monthly HowSmart Charge

Financing

\$6,241.00 **Cost of Improvements (est):**

\$6,241.00

Utility Contribution

\$6,241 Not to Exceed Amount (90% of Savings)

\$0.00 **Kentucky Home Performance**

@ 3%
over 15 years

\$45 Monthly Charge

89% of projected savings

Next Steps

1. Sign Purchase Agreement
 2. Select contractor and schedule the job
 3. Energy Specialist returns to inspect completed work
 4. Savings begin and installments charge appears on utility bill.
- If, after operation, any of the upgrades fail, the Utility will reevaluate the work.

Acceptance:

I understand that:

Values on previous page are estimates only and are not a guarantee of savings. Energy savings are a best-effort estimation calculated using a computer model. The model takes into account previous usage and characteristics of the house to determine usage and potential savings. Actual savings will vary depending on behavior, weather events, maintenance of the efficiency improvements, and future utility rates.

The Utility has explained what I can do to reduce my energy consumption including, but no limited to: thermostat and other equipment settings, the impact of lighting changes, and additional appliance or home investments not covered under How\$martKY.

Value of the improvements (cost of work) is an estimate and will be verified with the selected contractor. Final monthly charge will be determined at the time of contractor selection. If final project cost is more than the "not to exceed" amount, then customer may opt out of the installation.

Non-payment of the charge will be treated like non-payment of the utility bill potentially resulting in disconnection of service.

The Kentucky Energy Retrofit Rider (marketed as How\$martKY) is a voluntary utility tariff that amortizes the cost of the efficiency improvement over the course of fifteen years or 75% of the expected life of the improvement (whichever is less) at a fixed interest rate. The expected cumulative cost to the customer over the course of the payback period of the improvements is as follows:

	<u>Estimate</u>	<u>Not to Exceed</u>		
Fixed Monthly Charge	\$45	\$46		
Capital Investment	\$6,241	\$6,241		
Project Fee(s)	4.50% \$281	\$281	Payback Period (years)	15
Capital Fee	0.50% \$31	\$31	Cost of Capital	3%
Total Interest over life of payback	<u>\$1,624</u>	<u>\$1,687</u>		
Total Cost over life of payback	\$8,146	\$8,209

How Your Home Uses Energy

<i>model baseline</i>		Elec	Gas	Propane	Wood/Coal
	Heating	4,700 kWh	0 kBTU	0 kBTU	0 kBTU
	Cooling	1290 kWh	0 kBTU	0 kBTU	
	Base	18000 kWh	0 kBTU	0 kBTU	
=	Total (yr)	23,990 kWh	0 kBTU	0 kBTU	0 kBTU
		23900 kWh	0 kBTU	0 kBTU	0 kBTU

Your home uses energy for heating, cooling, and base load (which is everything that is not heating or cooling).

How Your Home Could Save Energy

- Re-install R-19 insulation in floor correctly and fill in missing pieces.
- Seal Duct Work to 10% of fan capacity.
- Reduce the house air leakage to 1500 cfm50.
- 5. Air seal all accessible large penetrations in attic and crawl space with spray foam (and foam board if needed).
- 4. Air seal attic access by installing weatherstrip on top of trim pieces.
- 3. Caulk all trim on windows in family room and master bath. (Total of 8 windows.)
- 2. Air seal can lights from below with caulk or foam.
- 1. Air seal access to whirlpool motor by weatherstripping door.

<u>Savings from Baseline:</u>	<u>Savings from Actuals:</u>	<u>Conversions to Fuel</u>	<u>Current Rates</u>	<u>Projected Savings (yr)</u>
1560 kWh (Elec)	1,470 kWh (Elec)	1,470 kWh	0.11 /kWh	\$162
0 kBTU (Gas)	0 kBTU (Gas)	0 therms	2.00 /Therm	\$0
0 kBTU (Propane)	0 kBTU (Propane)	0 Gal	2.50 /Gal	\$0

Based on savings from insulation and air seal only due to calibration.

Projected Avg Energy Savings (mo) \$13
before monthly HowSmart Charge

Financing

\$2,053.50 Cost of Improvements (est):

\$410.70 Kentucky Home Performance

\$1,642.80 Utility Contribution

\$1,660 Not to Exceed Amount (90% of Savings)

@ 3%
over 15 years

\$12 Monthly Charge
88% of projected savings

Next Steps

1. Sign Purchase Agreement
 2. Select contractor and schedule the job
 3. Energy Specialist returns to inspect completed work
 4. Savings begin and installments charge appears on utility bill.
- If, after operation, any of the upgrades fail, the Utility will reevaluate the work.

Acceptance:

I understand that:

Values on previous page are estimates only and are not a guarantee of savings. Energy savings are a best-effort estimation calculated using a computer model. The model takes into account previous usage and characteristics of the house to determine usage and potential savings. Actual savings will vary depending on behavior, weather events, maintenance of the efficiency improvements, and future utility rates.

The Utility has explained what I can do to reduce my energy consumption including, but no limited to: thermostat and other equipment settings, the impact of lighting changes, and additional appliance or home investments not covered under How\$martKY.

Value of the improvements (cost of work) is an estimate and will be verified with the selected contractor. Final monthly charge will be determined at the time of contractor selection. If final project cost is more than the "not to exceed" amount, then customer may opt out of the installation.

Non-payment of the charge will be treated like non-payment of the utility bill potentially resulting in disconnection of service.

The Kentucky Energy Retrofit Rider (marketed as How\$martKY) is a voluntary utility tariff that amortizes the cost of the efficiency improvement over the course of fifteen years or 75% of the expected life of the improvement (whichever is less) at a fixed interest rate. The expected cumulative cost to the customer over the course of the payback period of the improvements is as follows:

	<u>Estimate</u>	<u>Not to Exceed</u>		
Fixed Monthly Charge	\$12	\$12		
Capital Investment	\$1,643	\$1,660		
Project Fee(s)	4.50% \$74	\$75	Payback Period (years)	15
Capital Fee	0.50% \$8	\$8	Cost of Capital	3%
Total Interest over life of payback	<u>\$427</u>	<u>\$449</u>

Value of the improvements (cost of work) is an estimate and will be verified with the selected contractor. Final monthly charge will be determined at the time of contractor selection. If final project cost is more than the "not to exceed" amount, then customer may opt out of the installation.

Non-payment of the charge will be treated like non-payment of the utility bill potentially resulting in disconnection of service.

The Kentucky Energy Retrofit Rider (marketed as How\$martKY) is a voluntary utility tariff that amortizes the cost of the efficiency improvement over the course of fifteen years or 75% of the expected life of the improvement (whichever is less) at a fixed interest rate. The expected cumulative cost to the customer over the course of the payback period of the improvements is as follows:

	<u>Estimate</u>	<u>Not to Exceed</u>		
Fixed Monthly Charge	\$4	\$11		
Capital Investment	\$520	\$1,570		
Project Fee(s)	4.50%	\$23	\$71	Payback Period (years) 15
Capital Fee	0.50%	\$3	\$8	Cost of Capital 3%
Total Interest over life of payback	<u>\$135</u>	<u>\$425</u>		
Total Cost over life of payback	\$679	\$2,066

How Your Home Uses Energy

model baseline	Elec	Gas	Propane	Wood/Coal
Heating	12,000 kWh	0 kBTU	0 kBTU	0 kBTU
Cooling	513 kWh	0 kBTU	0 kBTU	
Base	12500 kWh	0 kBTU	0 kBTU	
Total (yr)	25,013 kWh	0 kBTU	0 kBTU	0 kBTU
	24500 kWh	0 kBTU	0 kBTU	0 kBTU

Your home uses energy for heating, cooling, and base load (which is everything that is not heating or cooling).

How Your Home Could Save Energy

- Correct installation R-19 insulation in floor.
- Add Rim Joist Insulation.
- Add Crawlspace Wall Insulation.
- Replace HVAC Heating with New HVAC Heating System.
- Seal Duct Work to 10% of fan capacity.
- Install Programmable Thermostat.
- Replace HVAC Cooling with New HVAC Cooling System.
- Reduce whole house leakage to 7500 cfm50 or below.
- Add Insulation in attic to 15" total from existing.
- Replace two front doors

<u>Savings from Baseline:</u>	<u>Savings from Actuals:</u>	<u>Conversions to Fuel</u>	<u>Current Rates</u>	<u>Projected Savings (yr)</u>
5877 kWh (Elec)	5,364 kWh (Elec)	5,364 kWh	0.11 /kWh	\$590
0 kBTU (Gas)	0 kBTU (Gas)	0 therms	2.00 /Therm	\$0
0 kBTU (Propane)	0 kBTU (Propane)	0 Gal	2.50 /Gal	\$0

Based on savings from insulation and air seal only due to calibration.

Projected Avg Energy Savings (mo) \$49
before monthly How\$mart Charge

Financing

\$19,390.00	Cost of Improvements (est):	\$5,890.00	Utility Contribution
		\$6,056	Not to Exceed Amount (90% of Savings)
\$13,000.00	Customer Contribution	@ 3%	
\$500.00	Rebates - Utility	over 15	years
		\$43	Monthly Charge
		87%	of projected savings

Next Steps

1. Sign Purchase Agreement
 2. Select contractor and schedule the job
 3. Energy Specialist returns to inspect completed work
 4. Savings begin and installments charge appears on utility bill.
- If, after operation, any of the upgrades fail, the Utility will reevaluate the work.

Acceptance:

I understand that:

Values on previous page are estimates only and are not a guarantee of savings. Energy savings are a best-effort estimation calculated using a computer model. The model takes into account previous usage and characteristics of the house to determine usage and potential savings. Actual savings will vary depending on behavior, weather events, maintenance of the efficiency improvements, and future utility rates.

The Utility has explained what I can do to reduce my energy consumption including, but no limited to: thermostat and other equipment settings, the impact of lighting changes, and additional appliance or home investments not covered under How\$martKY.

How Your Home Uses Energy

model baseline	Elec	Gas	Propane	Wood/Coal
Heating	8,420 kWh	0 kBTU	0 kBTU	0 kBTU
Cooling	2700 kWh	0 kBTU	0 kBTU	
Base	9710 kWh	0 kBTU	0 kBTU	
Total (yr)	20,830 kWh	0 kBTU	0 kBTU	0 kBTU
	20700 kWh	0 kBTU	0 kBTU	0 kBTU

Your home uses energy for heating, cooling, and base load (which is everything that is not heating or cooling).

How Your Home Could Save Energy

- Caulk all gaps at windows on jambs and casings, especially dining and breakfast rooms.
Reduce house air leakage to 1400 cfm.
Reduce duct leakage to 10% of fan capacity.
Add 5.5" spray foam insulation to underside of roof deck.
Add Crawlspace Wall Insulation.
Add Rim Joist Insulation.
- Seal plumbing access panel to wall behind water heater.
- Replace door to garage with insulated, exterior rated door.

<u>Savings from Baseline:</u>	<u>Savings from Actuals:</u>	<u>Conversions to Fuel</u>	<u>Current Rates</u>	<u>Projected Savings (yr)</u>

Energy Efficiency for Everyone

Fleming-Mason Energy

A Touchstone Energy Cooperative 

Simple Things to Do to Spend Less on Energy

If you change what you do, you'll change what you get for a monthly bill.

Heating and cooling:

- Set the thermostat at a moderate temperature at the beginning of each season and leave it where you set it.
- A recommended, moderate winter temperature is 68 degrees. A moderate summer temperature is 74 degrees.

Heat pumps:

- If you have an electric heat pump, do not turn your heat pump up more than 4 degrees at a time in winter. Rapidly raising the temperature will force the heat pump to use its more expensive, auxiliary/emergency heat system to get the temperature up.
- Heat pump auxiliary heat can cost \$1.00 or more per hour whereas average heat pump operation costs 30 to 40 cents an hour.
- In summer, if you have an electric heat pump, do not lower the temperature by more than 4 degrees at a time.
- Taking care of your heat pump can help you save energy. In the fall, have a tune-up done to make sure refrigerant levels are optimum.
- Clean the coils to remove dirt so your equipment can operate efficiently.
- Regularly change the filter to help keep the coils clean.

Space heaters:

- Electric space heaters are energy hogs and are dangerous if used in the wrong place.
- Always keep space heaters at least three feet away from all flammable items such as curtains, blankets and furniture.
- Use space heaters only on level, non-flammable floor surfaces, NEVER on carpets, furniture or countertops.

Water heating:

- Set your water heater's thermostat at 120 degrees F. This temperature is plenty warm for showers and washing dishes.
- Use cold water to wash clothes whenever possible. Many of today's detergents are meant to work with cold water.

Other ways to use less electricity and spend less on energy:

- Turn off computers, lights, fans, air conditioners and televisions when they're not in use.
- Unplug appliances and electronics that use a 'phantom load' even in the *off* position. These usually have a red light glowing in the *off* position.
