Subject: Proposed PSC Regulation 5:006 Section 7(5)(c)

Blue Grass Energy respectfully requests that the PSC review this section regarding recording meter registration for all AMR meter reading systems. At the meeting today the PSC staff stated that this new requirement was being proposed to document inspection of facilities down to the meter. Blue Grass Energy believes that rather than addressing this issue in Section 7 in the meter reading section that it would be more appropriate to address this in Section 26 regarding inspection of the utility system. Also, we would suggest that other alternatives could be used to document inspection of utility facilities rather than recording meter registration of all meters. A couple of alternatives that could be used to document inspection could be work orders or service orders that correct deficiencies or service orders that document meter changes of malfunctioning meters.

Respectively submitted,

Chris Brewer
Vice President of Power Delivery
