

COMMONWEALTH OF KENTUCKY
BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

TARIFF FILING OF JACKSON ENERGY)	CASE NO.
COOPERATIVE CORPORATION TO REVISE)	2013-00004
ITS NET METERING TARIFF)	

ORDER

On December 17, 2012, Jackson Energy Cooperative Corporation ("Jackson Energy") submitted a tariff filing setting forth certain revisions to its net metering tariff. In addition to certain "minor text changes," Jackson Energy proposes to include a provision requiring a specific amount of insurance coverage as part of the terms and conditions in the net metering application for those customers wishing to interconnect to Jackson Energy's distribution system through its net metering service. In particular, Jackson Energy seeks to impose a requirement of \$500,000 of liability insurance for a Level 1 system¹ installed by a licensed installer or \$1,000,000 of liability insurance for a Level 1 system installed by a non-licensed installer. For a Level 2 system,² Jackson Energy would also require \$1,000,000 of liability coverage. Jackson Energy proposed an effective date of January 18, 2013 for the revised net metering tariff to take effect.

¹ A Level 1 system is defined in the net metering tariff, in addition to meeting certain other conditions, as an inverter-based generating facility that has been certified by a nationally recognized testing laboratory to meet the requirements of Underwriters Laboratories Standard 1741 ("UL 1741") "Inverters, Converters, Controllers and Interconnection System Equipment for Use With Distributed Energy Resources."

² A Level 2 system is defined in the net metering tariff as either: (1) a non-inverter-based generating facility; (2) a generating facility that is not certified by a nationally recognized testing laboratory to meet the requirements of UL 1741; or (3) a generating facility that does not meet one or more of the additional conditions under Level 1.

Having reviewed the tariff filing and being otherwise sufficiently advised, the Commission finds that an investigation of the proposed revisions to Jackson Energy's net metering tariff is necessary to determine their reasonableness and that such investigation cannot be concluded prior to the proposed effective date. Consequently, pursuant to KRS 278.190(2), the Commission will suspend the effective date of the proposed revised net metering tariff for up to five months.

IT IS THEREFORE ORDERED that Jackson Energy's proposed revisions to its net metering tariff are suspended for a period of five months, up to and including June 17, 2013.

By the Commission
