

STATE OF GEORGIA

COUNTY OF FULTON

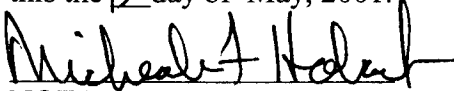

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared Alphonso J. Varner, BellSouth Telecommunications, Inc., being by me first duly sworn deposed and said that:

He is appearing as a witness before the Kentucky Public Service Commission in "Investigation Concerning the Propriety of InterLATA Services by BellSouth Telecommunications, Inc. Pursuant to the Telecommunications Act of 1996," KY PSC Case No. 2001-105, and if present before the Commission and duly sworn, his direct testimony would be set forth in the annexed transcript consisting of /// pages and 5 exhibit(s).

Alphonso J. Varner

SWORN TO AND
SUBSCRIBED BEFORE ME
this the 15th day of May, 2001.

NOTARY PUBLIC

My Commission expires:

MICHEALE F. HOLCOMB
Notary Public, Douglas County, Georgia
My Commission Expires November 3, 2001

1 BELLSOUTH TELECOMMUNICATIONS, INC.
2 DIRECT TESTIMONY OF ALPHONSO J. VARNER
3 BEFORE THE KENTUCKY PUBLIC SERVICE COMMISSION
4 CASE NO. 2001-105
5 MAY 18, 2001

6
7 Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELLSOUTH
8 TELECOMMUNICATIONS, INC. ("BELLSOUTH") AND YOUR BUSINESS
9 ADDRESS.

10
11 A. My name is Alphonso J. Varner. I am employed by BellSouth as Senior Director
12 in Interconnection Services. My business address is 675 West Peachtree Street,
13 Atlanta, Georgia 30375.

14
15 Q. PLEASE PROVIDE A BRIEF DESCRIPTION OF YOUR BACKGROUND AND
16 EXPERIENCE.

17
18 A. I graduated from Florida State University in 1972 with a Bachelor of Engineering
19 Science degree in systems design engineering. I immediately joined Southern
20 Bell in the division of revenues organization with the responsibility for preparation
21 of all Florida investment separations studies for division of revenues and for
22 reviewing interstate settlements.

23
24 Subsequently, I accepted an assignment in the rates and tariffs organization with
25 responsibilities for administering selected rates and tariffs including preparation

1 of tariff filings. In January 1994, I was appointed Senior Director of Pricing for the
2 nine-state region. I was named Senior Director for Regulatory Policy and
3 Planning in August 1994. In April 1997, I was named Senior Director of
4 Regulatory for the nine-state BellSouth region, and I accepted my current
5 position in March 2001.

6
7 Q. HOW IS YOUR TESTIMONY ARRANGED?

8
9 A. My testimony is divided into the following sections:

- 10
11 I. Executive Summary
12 II. Interim Service Quality Measurements (“Interim SQM”)
13 III. BellSouth’s Response to Third Party Test
14 IV. BellSouth’s proposed Permanent Service Quality Measurements
15 (“Permanent SQM”) and Self-Effectuating Enforcement Mechanism
16 (“SEEM”) or Penalty Plan
17

18 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

19
20 A. The purpose of my testimony is to do the following:

- 21
22 • Describe the Interim SQM that BellSouth will use in this proceeding to
23 prove that BellSouth provides nondiscriminatory performance for
24 Competitive Local Exchange Carriers (“CLECs”) in Kentucky.
25 • Respond to a few of the small number of “not satisfied” and “not complete”

1 items from the third party test conducted in Georgia by KPMG. Mr. Pate
2 describes how that test was favorable for BellSouth, and responds to the
3 few “not satisfied” items that I do not address.

- 4 • Describe BellSouth’s proposed Permanent SQM and SEEM and explain
5 why the Kentucky Public Service Commission (“Commission”) should
6 adopt BellSouth’s Permanent SQM and SEEM.

7
8 ***I. EXECUTIVE SUMMARY***

9
10 Q. PLEASE PROVIDE AN EXECUTIVE SUMMARY OF YOUR TESTIMONY.

11
12 A. As the Commission knows, BellSouth must demonstrate that it provides
13 nondiscriminatory performance to CLECs as a prerequisite to the receipt of
14 permission to compete in the interLATA market. My testimony presents the
15 Interim SQM upon which the Commission can rely in this proceeding. I also
16 explain why it is reasonable to conclude that BellSouth meets its obligations
17 under the Telecommunications Act of 1996 (“the Act”).

18
19 In addition, I propose a Permanent SQM that will provide this Commission with a
20 manageable and reasonable way to monitor BellSouth’s performance on a
21 permanent basis. Last, I explain and support BellSouth’s proposed SEEM or
22 penalty plan.

23
24 Now I would like to elaborate on each part of my testimony. In Part II, I introduce
25 BellSouth’s Interim SQM. The Interim SQM is Exhibit AJV-1 and is the same

1 SQM recently adopted by the Georgia Public Service Commission (“GPSC”).
2 BellSouth proposes that the Commission use the Interim SQM, and data
3 collected pursuant to the Interim SQM, to assess BellSouth’s compliance with the
4 competitive checklist. The Interim SQM contains more than enough data for the
5 Commission to evaluate BellSouth’s performance. Overall, the Interim SQM has
6 about 1,800 data points.

7
8 Part III of my Testimony provides detailed results of analyses conducted by
9 BellSouth on the results of KPMG’s test criteria from Georgia that are “not
10 satisfied” or “not complete” in the final report. When reviewing these analyses, it
11 is critical to remember that the test criteria discussed herein are only dealing with
12 a small fraction of the test criteria that KPMG analyzed. The overwhelming
13 majority of KPMG’s criteria were satisfied in the test. As described in Mr. Pate’s
14 testimony, 1171 tests were conducted by KPMG. Of these tests, only 20 (less
15 than 2%) were identified as “not satisfied.” KPMG did not complete work on 25
16 tests so they were rated “not complete” by KPMG. Work continues on these
17 criteria and they should ultimately fall into either the satisfied or not satisfied
18 classification. All of the remaining 1126 criteria (about 96%) were either satisfied
19 or KPMG determined that no report was required. Mr. Pate describes the test
20 conducted by KPMG in his testimony so I will not repeat that explanation here.

21
22 In Part IV of my testimony, I present BellSouth’s proposed Permanent SQM. As
23 the Commission knows, in conjunction with assessing BellSouth’s compliance
24 with its 271 obligations, the Commission will use this proceeding to establish a
25 permanent set of performance measurements for Kentucky.

1 Obviously, because the Commission will establish a Permanent SQM in this
2 proceeding, data collected in accordance with that SQM will not be available for
3 use in this proceeding. Hence, BellSouth has introduced the Interim SQM to
4 ensure that the Commission has the data it needs to determine whether
5 BellSouth is meeting the nondiscriminatory performance standard in an
6 expeditious timeframe.

7
8 The Permanent SQM is a more easily usable document than the Interim SQM.
9 The Permanent SQM provides all of the data the Commission needs in order to
10 monitor BellSouth's performance. It provides this data using fewer data points
11 than the Interim SQM, which makes the Permanent SQM a more useful tool.
12 Don't be misled by the size of the Permanent SQM. It is a comprehensive
13 document supported by a massive database. The database supporting the
14 Permanent SQM contains 2.5 Terabytes of data. The entire Internet in 1999
15 contained 3 Terabytes of data. Believe it or not, some will try to convince this
16 Commission that more data is needed. I think the facts belie any such claim.

17
18 Last, I introduce BellSouth's SEEM plan. Regarding SEEM, the Federal
19 Communications Commission ("FCC") has repeatedly said that a penalty plan is
20 not required for interLATA relief. However, the facts are that every grant of
21 interLATA relief has contained a penalty plan. As a practical matter, a penalty
22 plan appears to be required for interLATA entry and we have proposed one.
23 The SEEM proposed here is a comprehensive and generous plan. It addresses
24 every significant aspect of BellSouth's performance for CLECs. The SEEM
25 obligates BellSouth to pay up to 36% of its net revenue in Kentucky in penalties,

1 an enormous amount. There can be no doubt that this plan is more than
2 sufficient to meet any reasonable requirement for an additional performance
3 incentive.

4
5 In summary, in this proceeding, BellSouth will have shown that it is meeting its
6 obligations under the competitive checklist, and has proposed a reasonable and
7 comprehensive SQM and a generous self-effectuating penalty plan. Simply,
8 there is no reason to continue to deny consumers in Kentucky the benefits of
9 BellSouth's interLATA entry.

10
11 **II. THE INTERIM SQM**

12
13 Q. BRIEFLY DESCRIBE AN SQM DOCUMENT.

14
15 A. The Act ([§ 271, 47 U.S.C.271, Part III, subparagraph (B)] as interpreted by the
16 FCC in its First Report and Order (FCC 96-325 dated 8-8-96)), obligates
17 BellSouth to provide CLECs with nondiscriminatory access to the items specified
18 in the 14-point checklist, including Operations Support Systems ("OSS"). In
19 cooperation with the GPSC and the participating CLECs throughout BellSouth's
20 nine-state region, BellSouth has developed a comprehensive set of performance
21 measures which are collectively referred to as the SQM Plan.

22
23 Whenever performance data is produced, it must comport with a specific set of
24 requirements. The SQM defines those requirements including such parameters
25 as the service performance data to be collected, the method of calculation, the

1 amount of detail or levels of disaggregation for each measurement and the
2 applicable benchmark and/or retail analog for comparison.

3

4 Q. PLEASE DEFINE SOME OF THE TERMS THAT ARE GOING TO BE USED IN
5 THIS TESTIMONY, SUCH AS MEASUREMENT CATEGORIES,
6 MEASUREMENTS AND SUB-METRICS.

7

8 A. A measurement category is a major grouping of the measurements themselves.
9 There are a total of 11 measurement categories, including Operations Support
10 Systems/Pre-Ordering, Ordering, Provisioning, Maintenance & Repair, Billing,
11 E911, Operator Services/Directory Assistance, Database Update Information,
12 Trunk Group Performance, Collocation and Change Management.

13

14 The terms "measurements" and "measures" are used synonymously in my
15 testimony. Measurements (or measures) are sub-parts of the measurement
16 categories and include such things as "Percent Missed Installation Appointments"
17 (in the Provisioning category) and "Firm Order Confirmation Timeliness" (in the
18 Ordering category). There are a total of 75 measurements in the interim
19 BellSouth SQM, and each one falls under one of the 11 measurement
20 categories.

21

22 "Sub-metric" is the term applied to the result of disaggregating each of the
23 measurements into a multitude of sub-parts where performance data is actually
24 captured. For instance, I have identified "Order Completion Interval" as a
25 measurement in the "Provisioning" measurement category. "Order Completion

1 Interval (“OCI”)” is further broken down into sub-metrics such as “Order
2 Completion Interval – 2-wire Analog Loop, Design, dispatch.” What this means is
3 that BellSouth collects the OCI performance data for 2-wire analog loops in a
4 number of categories, including those that involve engineering design work and a
5 “dispatch”. For instance, if BellSouth reports an OCI of 3 days for a Unbundled
6 Network Element (“UNE”) 2-wire analog order from a CLEC that required design
7 work and a dispatch, the data will be grouped under this sub-metric, together with
8 all other similar data involving orders that have the same characteristics. Another
9 example of a sub-metric would be “Percent Missed Installation Appointments – 2-
10 wire Analog Loop Design.” Essentially, every missed installation appointment for
11 a CLEC order involving the installation of a 2-wire analog loop that required
12 engineering design work on the loop would be captured in this sub-metric. When
13 this disaggregation is completed, the end result is that the Interim SQM provides
14 for about 1,800 sub-metrics that quantify BellSouth’s performance for CLECs in
15 the BellSouth SQM.

16
17 To facilitate comparison to BellSouth’s performance for its retail customers,
18 approximately 700 sub-metrics quantifying BellSouth’s performance for its retail
19 customers are produced. There is a difference in the number of sub–metrics for
20 BellSouth, when compared to approximately 1,800 for the CLECs, because some
21 of the CLEC sub-metrics are recorded for diagnostic purposes only and also
22 because some of the CLEC sub-metrics are compared against benchmarks,
23 rather than BellSouth analogs. An “analog” is used when BellSouth provides a
24 comparable service to its own retail customers. When no such comparable
25 service exists, a “benchmark” is used instead of an “analog.” A benchmark is a

1 target, such as answering 85% of all calls within 45 seconds or something
2 similar. A sub-metric recorded for “diagnostic purposes only” means basically
3 that no benchmark or analog exists. It is provided as an analysis tool for CLECs.
4

5 Collectively, all of the terms described above can be referred to as performance
6 measurements.
7

8 The term “measurements” is not only used in the SQM, it is also used in
9 BellSouth’s enforcement plan, or SEEM. The measurements to which penalties
10 apply are uniquely defined under SEEM. In some cases, the measurements are
11 the same as a sub-metric in the SQM, while in other cases the SEEM
12 measurement is an aggregation of several sub-metrics in the SQM. To avoid
13 confusion, I will use the term “SEEM measurement” when referring to
14 measurements as defined under SEEM.
15

16 Q. DESCRIBE THE INTERIM SQM PURSUANT TO WHICH BELLSOUTH WILL
17 PROVIDE PERFORMANCE DATA FOR THIS PROCEEDING.
18

19 A. The Interim SQM provides a mechanism to collect performance data on the
20 processes that must be measured to support an application for interLATA
21 authority with the FCC. BellSouth has adopted a format for data presentation
22 similar to that used by Verizon to support its successful interLATA application in
23 New York. This format was found acceptable by the FCC and the Department of
24 Justice (“DOJ”). As with any other presentation of performance data, the data in
25 this format must be defined by a specific SQM. As an Interim SQM, BellSouth

1 has utilized the SQM set forth by the GPSC in its Order in Docket 7892-U, dated
2 January 12, 2001, to define the data that will be produced in a format familiar to
3 the FCC and DOJ. That SQM is attached as Exhibit AJV-1. Some of the
4 measurements required by the Georgia SQM will not be implemented until June
5 2001. Consequently, the number of measurements for which data is provided
6 will increase until June 2001. For brevity, I will refer to the presentation of data
7 according to the Interim SQM as the "FCC format."

8
9 BellSouth requests that this Commission adopt the FCC format and the
10 underlying Interim SQM, for purposes of its 271 decision and for any
11 recommendation this Commission makes to the FCC. The Interim SQM will be
12 effective until such time as BellSouth has fully implemented a Commission Order
13 establishing a Permanent SQM. See, *Application by SBC Communications, Inc.,*
14 *Southwestern Bell Telephone Company, and Southwestern Bell Communication*
15 *Services, Inc. d/b/a Southwestern Bell Long Distance Pursuant to Section 271 of*
16 *the Telecommunications Act of 1996 to Provide In-Region, InterLATA Services in*
17 *Texas*, CC Docket No. 00-65, Memorandum Opinion and Order, Released June
18 30, 2000 ("SWBT Order-TX"), para. 56, which states, "In making our evaluation
19 we will examine whether the state commission has adopted a retail analog or a
20 benchmark to measure BOC performance and then review the particular level of
21 performance the state has required."

22
23 Q. EXPLAIN THE CONTENTS OF THE INTERIM SQM DOCUMENT AND HOW
24 TO READ IT.

25

1 A. An SQM document is a comprehensive and detailed description of BellSouth's
2 performance measurements that are calculated to evaluate the quality of service
3 delivered to BellSouth's customers, both wholesale and retail. The SQM is
4 divided into eleven (11) measurement categories, each one representing a
5 different group of measurements relating to a specific area of BellSouth's service
6 performance for CLECs. For instance, Section 1 contains six (6) distinct
7 measurements dealing with access to Operations Support Systems for both pre-
8 ordering and maintenance & repair. Section 2 contains fifteen (15)
9 measurements specifically directed at all phases of the ordering process.
10 Another section deals with provisioning, and so forth. The end result is eleven
11 measurement categories totaling 75 measurements. When these measurements
12 are applied or "disaggregated" as BellSouth has proposed, there are about 1,800
13 sub-metrics reflecting the performance provided to CLECs by BellSouth.

14
15 In addition, there are three (3) appendices, A-C. Appendix A, Reporting Scope,
16 provides service groupings by categories, i.e., service order activity type, pre-
17 ordering query type, maintenance query type, etc. Appendix B, Glossary of
18 Acronyms and Terms, is just that, a glossary that provides definitions for the
19 most commonly used acronyms and terms found throughout the document.
20 Finally, Appendix C, BellSouth Audit Policy, sets forth BellSouth's audit policy for
21 both internal and external audits of performance measurements.

22
23 Q. CAN YOU ILLUSTRATE WHAT IS CONTAINED IN EACH OF THE
24 MEASUREMENTS WITHIN THE ELEVEN SECTIONS BY PROVIDING AN
25 EXAMPLE?

1 A. Yes. Please refer to the first measurement labeled "OSS-1" of Exhibit AJV-3 and
2 the material related to that measurement. As you can see, this measurement,
3 and all of the measurements, begins with a "Definition" that briefly describes
4 exactly what the measurement is designed to demonstrate. In this case, the
5 measurement calculates the average response time for queries submitted from
6 pre-ordering Interfaces, such as LENS, TAG and RNS, to certain legacy
7 systems. These queries are submitted by the CLEC and by BellSouth retail
8 representatives to assess feature availability, validate addresses or telephone
9 numbers, reserve telephone numbers, and determine appointment availability.
10
11 Following the definition are any "Exclusions" that identify certain characteristics
12 or external factors that for various reasons should be excluded from the
13 measurement. In this case there are none. However, if you look at the
14 measurement labeled "Loop Makeup – Response Time – Manual" in Exhibit AJV-
15 3, there is an example of an exclusion. Specifically, the exclusion for that
16 measurement covers electronically submitted loop makeup inquiries. Obviously,
17 it would be inappropriate to include electronically submitted inquiries in a
18 measurement of inquiries submitted manually.
19
20 Returning to my discussion of the components of the measurement labeled OSS-
21 1, next comes the "Business Rules" that describe the components of the
22 measurement and how they interact. An example that is reflected under this
23 measurement is the way the "start" and "stop" times are defined for the
24 measurement.
25

1 Under the heading of "Calculation" is the actual mathematical formula for
2 producing the measurement. This section also identifies each component of the
3 formula, e.g., in this particular case, a = Date & Time of Legacy Response and b
4 = Date & Time of Legacy Request.

5
6 The next section is labeled "Report Structure." The report structure provides a
7 definition of the key dimensions of the report. For instance, in the example of the
8 OSS Response Interval, OSS-1, OSS Response is a measurement of the
9 response interval for the aggregate of all CLECs in the BellSouth Region. As a
10 result, its report structure is a regional structure, as opposed to a CLEC-specific
11 or a product-specific structure.

12
13 Following "Report Structure" is the "Data Retained" section that describes key
14 elements of data for each measurement that are processed and retained from
15 the back-end OSSs and Legacy Systems in order to produce the reports, i.e., the
16 data must be correlated by month and there must be rules built into the structure
17 of the data that defines methods for accessing the OSS and Legacy Systems.

18
19 BellSouth proposes to retain this data for a period not to exceed 18 months. The
20 retention of this volume of data longer than 18 months would unnecessarily add
21 to the tremendous size and cost to BellSouth in data storage without materially
22 enhancing the value of the data, and, therefore, would be unreasonable and
23 overly burdensome. As I stated in my summary, the size of the database already
24 approaches the size of the Internet in 1999.

25

1 Finally, the section entitled, "SQM Disaggregation – Analog/Benchmark," defines
2 how each measurement is broken-down into sub-metrics in the report, i.e., in this
3 case, by OSS and Legacy System, and the standard to which BellSouth
4 compares each sub-metric of that measurement in order to detect disparate
5 treatment. In this case, because there is not a retail analog for this function,
6 BellSouth uses a benchmark of 95% in 6.3 seconds or less.

7
8 Q. PLEASE ILLUSTRATE HOW THE LEVEL OF DISAGGREGATION AFFECTS
9 THE NUMBER OF SUB-METRICS IN AN SQM.

10
11 A. Achieving an appropriate level of disaggregation is obviously important. Indeed,
12 reporting of the raw data frequently occurs only at this level. To illustrate, please
13 refer to the measurement P-4, Order Completion Interval (OCI) & Order
14 Completion Interval Distribution of Exhibit AJV-3. OCI measures how long it
15 takes BellSouth to install a service, once a valid service order has been
16 generated. Exhibit AJV-3 contains the SQM disaggregation and reporting level
17 for this measurement. The first line of this table shows a line for Resale
18 Residence and a retail analog of Retail Residence. This means that OCIs for
19 services to be resold to a residence customer by a CLEC (Resale Residence)
20 are compared to OCIs for services sold by BellSouth at retail to its residence
21 customers (Retail Residence). This single comparison, however, is further
22 broken down into sub-metrics of: 1) Dispatch < 10 circuits; 2) Dispatch ≥ 10
23 circuits; 3) Non-dispatch < 10 circuits; and 4) Non-Dispatch ≥ 10 circuits. These
24 additional levels of disaggregation are reflected under the Report Structure
25 section of the SQM for this measurement. Thus, there are 4 "volume" and

1 “dispatch” levels of disaggregation in this instance. There are a total of 20 lines
2 or products on the SQM Level of Disaggregation, meaning that there are
3 approximately 20 times 4 (or approximately 80) sub-metrics of BellSouth’s
4 performance for CLECs for the single measurement, P-4, Order Completion
5 Interval. In addition, BellSouth must produce another set of 80 sub-metrics
6 reflecting BellSouth’s performance for its retail customers for a total of 160 sub-
7 metrics in this case.

8
9 **III. BELLSOUTH RESPONSE TO THIRD PARTY TEST**

10
11 Q. BRIEFLY DESCRIBE WHAT IS CONTAINED IN THIS SECTION.

12
13 A. This section refers to the Georgia Third Party Testing results and BellSouth’s
14 response to those results. The testing process is described in Mr. Pate’s
15 testimony so I won’t repeat that description here. In addition, Mr. Pate discusses
16 certain of the results. The results showed that we achieved a 96% success rate.
17 There were, however, some items that were not satisfied or not complete in the
18 test. I explain some of those criteria here.

19
20 Q WHY IS THIRD PARTY TESTING USED AT ALL AS AN EVALUATION TOOL?

21
22 A. Actual live commercial results measured against the SQM provide the best tool
23 for analyzing BellSouth’s performance. Third Party Testing is used only as an
24 evaluation tool when actual commercial usage is unavailable at significant

1 volumes. When commercial volume is not available, Third Party Testing is used
2 to fill the gap.

3
4 As the FCC noted in ¶86 of the LAII Order, “[t]he most probative evidence that
5 OSS functions are operationally ready is actual commercial usage.” Continuing,
6 and referring to the Ameritech Michigan Order, the FCC noted that, in the
7 absence of commercial usage, it will consider carrier-to-carrier testing,
8 independent third-party testing, and internal testing. As commercial usage of
9 BellSouth’s OSS increases, dependence on third party testing will become
10 unnecessary.

11
12 Q. HAS THE FCC MADE OTHER OBSERVATIONS REGARDING THIRD PARTY
13 TESTING?

14
15 A. Yes, The FCC has been most instructive in its Orders, both approving and
16 denying previously filed 271 applications. BellSouth finds the following excerpt
17 particularly relevant to this proceeding:

- 18 ▪ In ¶118 of its Memorandum Report and Order in CC Docket No. 00-217,
19 released January 22, 2001, approving the Joint Application by SBC
20 Communications, Inc., Southwestern Bell Telephone Company, and
21 Southwestern Bell Communications Services, Inc., d/b/a Southwestern
22 Bell Long Distance for Provision of In-Region, InterLATA Services in
23 Kansas and Oklahoma (hereinafter referred to as “SWBT Order-KS/OK”),
24 the FCC stated, “In prior section 271 orders, we have held that third party
25 tests can provide critical information about the functionality and

1 performance of a BOC's OSS. We have not, however, stated that
2 checklist compliance cannot be proven without a third party test of an
3 applicant's OSS. Indeed, we emphasize that our analysis of an
4 applicant's OSS rests on a wide range of evidence, of which evidence
5 from third party tests is but one part. The need to rely on a third party test
6 is reduced in this instance because SWBT has established the relevance
7 of its Texas OSS. We agree with the Department of Justice that, in this
8 respect, SWBT's is a "sensible and efficient approach that can avoid the
9 delay and expense of redundant testing."
10

11 Q. WHICH "NOT SATISFIED" ITEMS FROM THE GEORGIA THIRD PARTY TEST
12 DO YOU ADDRESS?
13

14 A. In this section of my testimony, the "not satisfied" items that I address are:

- 15 • Timeliness of Functional Acknowledgement – EDI
 - 16 • Timeliness of Rejects and Clarifications – EDI
 - 17 • Timeliness of Firm Order Confirmations
 - 18 • Accuracy and Timeliness of Partially Mechanized Orders, and
 - 19 • Expected Responses – ADSL – Manual
- 20

21 When I discuss the performance metrics audit, I address the four not satisfied
22 items from that audit. The remaining "not satisfied" items are addressed by Mr.
23 Pate.
24

25 Q. WHAT IS A "NOT SATISFIED" CRITERIA IN THE THIRD PARTY TEST?

1 A. When KPMG personnel performed their testing, they retested items that did not
2 initially pass their test criteria until the item either passed the criteria, the test was
3 determined not to be needed, or the test was closed. At the close of the test any
4 items that had not passed KPMG's test criteria, and for which no further testing
5 was planned, were labeled "not satisfied" by KPMG. Where the GPSC
6 established standards for a particular measurement, KPMG used that standard to
7 determine whether the test criteria was satisfied or not. Where no GPSC
8 standard existed, KPMG established its own standard.

9
10 Q. PLEASE DESCRIBE THE TEST THAT KPMG PERFORMED FOR THE FIRST
11 ITEM: TIMELINESS OF FUNCTIONAL ACKNOWLEDGEMENT – EDI.

12
13 A. As part of its third party test, KPMG performed a normal volume performance test
14 and a peak volume performance test. The objective of these tests was to
15 evaluate BellSouth's OSS performance associated with ordering at specified
16 volumes. The normal volume performance test evaluated BellSouth's ability to
17 accurately and quickly process orders using the EDI and TAG interfaces under
18 "normal" year-end 2001 projected load conditions. The peak volume
19 performance test evaluated BellSouth's ability to accurately and quickly process
20 orders using the EDI and TAG interfaces under "peak" year-end 2001 projected
21 transaction load conditions. The projected load conditions were based on region-
22 wide load factors, as the electronic interfaces are regional in nature. The results
23 for the TAG interface satisfied the criteria; however, during these two tests,
24 KPMG found that the EDI interface did not return functional acknowledgments in
25 a timely manner for fully mechanized orders (orders that flowed through without

1 manual handling) for UNEs (O&P 3-3-1 and O&P 4-3-1). The standard applied
2 by KPMG in the test for the return of functional acknowledgments was 95% of
3 functional acknowledgments received in less than 30 minutes.

4
5 Q. YOU REFER TO O&P 3-3-1 AND O&P 4-3-1, PLEASE EXPLAIN WHAT THESE
6 REFER TO.

7
8 A. When KPMG performed its test, it assigned certain criteria using a unique
9 numbering scheme. One of the categories of the test was Ordering &
10 Provisioning, which KPMG identified as O&P in their numbering scheme. A
11 specific test within a category is identified by a specific number. For example,
12 O&P 3-3-1 and O&P 4-3-1 are assigned to a specific test by KPMG. For
13 additional information on the test, see Mr. Pate's testimony.

14
15 Q. WHAT IS A FUNCTIONAL ACKNOWLEDGEMENT IN EDI AND HOW IS IT
16 MEASURED?

17
18 A. Functional acknowledgments are transmitted between BellSouth and CLECs
19 using EDI for the purpose of notification. The receipt of any EDI transaction by
20 BellSouth or the CLEC requires an acknowledgment. The functional
21 acknowledgment indicates whether a transaction was accepted or rejected. In
22 the case of rejection, the nature of the error is also provided.
23 The timeliness of a functional acknowledgment for EDI is measured from the time
24 a document enters the EDI translator software until the functional
25 acknowledgment is transmitted to the CLEC. At the time KPMG performed the

1 normal volume performance and the peak volume performance tests, the
2 infrastructure for EDI limited the turnaround time for functional acknowledgments.
3 Specifically, the EDI architecture utilized by BellSouth's EDI system was only
4 capable of returning batches of data to CLECs within 90 minutes in a peak
5 volume environment at the time of the test. It is also worth noting that, at the time
6 of this test, no benchmark had been adopted by the Georgia Commission.
7 However, BellSouth had set its own internal standard at that time to return 75% of
8 functional acknowledgements within 90 minutes.

9
10 Q. PLEASE DESCRIBE WHETHER EDI FUNCTIONAL ACKNOWLEDGMENTS
11 ARE STILL AN ISSUE.

12
13 A. In January 2001, BellSouth upgraded the infrastructure for EDI in order to
14 shorten the response time capability of the interface. A sample of data from April
15 9 to 23, 2001 shows that average response time for functional
16 acknowledgements was 1.14 minutes, and that BellSouth was returning 100% of
17 functional acknowledgements within 30 minutes for the upgraded EDI interface.

18
19 KPMG also tested the timeliness for functional acknowledgments for EDI during
20 KPMG's functional and production volume tests for orders for UNEs. During
21 these tests, KPMG did receive timely functional acknowledgements, and the
22 evaluation criteria (O&P 1-3-1 and O&P 10-3-1) for these tests were satisfied.
23 This means that the problem that KPMG encountered was limited to the peak
24 volume test. The EDI upgrade has corrected that problem.

25

1 For these reasons, BellSouth believes that the issues raised by these "not
2 satisfied" criteria have been corrected, and that BellSouth's actual performance
3 for functional acknowledgments returned via EDI for CLECs today should not
4 have a material adverse impact on their ability to compete.

5

6 Q. PLEASE DESCRIBE THE NEXT ITEM YOU LISTED: TIMELINESS OF
7 REJECTS AND CLARIFICATIONS – EDI.

8

9 A. As previously stated, KPMG performed functional tests of EDI. One objective of
10 the test was to evaluate the functionality of BellSouth's systems in processing
11 local service requests ("LSRs") for UNEs and resale services. Specifically,
12 KPMG tested EDI to determine if this interface returned timely error information
13 (fatal rejects and auto clarifications) for fully mechanized LSRs, identified as MTP
14 O&P 1-3-2a and STP PO&P 11-3-2a in KPMG's Report. In the test, KPMG
15 required 97% of fully mechanized errors to be received within one hour.

16

17 Q. WHAT WERE KPMG'S RESULTS?

18

19 A. In the initial test of UNE orders, KPMG received 18% of fully mechanized errors
20 in one hour. During a retest of UNE orders in January 2001, performance
21 improved to 84% of fully mechanized errors received within one hour. In
22 addition, another 5% were received within two hours. For resale services,
23 KPMG's results for the initial test was 9% of fully mechanized errors received in
24 less than one hour. During KPMG's retest of resale services orders in January
25 2001, KPMG received 85% of the fully mechanized errors within one hour.

1 Another 8%, for a total of 93%, were received within two hours.

2

3 Q. WHAT WERE THE RESULTS OF BELLSOUTH'S ANALYSIS?

4

5 A. As part of its analysis on these criteria, BellSouth investigated 16 orders, 11 for
6 resale services and 5 for UNEs. BellSouth found that, although KPMG was
7 supposed to submit only orders that flowed-through BellSouth's systems in this
8 test, three of the orders fell out for manual handling, therefore delaying the return
9 of the error information. These three orders fell out because KPMG made errors.
10 Another order that KPMG believes it sent could not be located after considerable
11 searching and BellSouth believes this order may not have been sent. According
12 to BellSouth's records, BellSouth returned the error information for one of the
13 other orders within 45 minutes, which is clearly within the one-hour interval.
14 BellSouth found the error information was indeed delayed for three of the sixteen
15 orders because of EDI routing and mapping problems. These EDI routing and
16 mapping problems have been resolved by software changes.

17

18 BellSouth does agree that the remaining eight orders received delayed
19 responses. As discussed previously, in January 2001, BellSouth upgraded EDI
20 enabling it to return fatal rejects and clarifications faster. This upgrade would
21 have allowed four of the eight orders to receive timely responses had KPMG sent
22 them after the upgrade to EDI. Three of the remaining four test responses in
23 these criteria were delayed because of the downstream LEO system. At the time
24 of the test, a few CLECs were making unusual and large queries, which slowed
25 LEO's response times. In March 2001, BellSouth modified LEO so that it now is

1 able to process large queries and send faster responses. The remaining
2 response was delayed because of a LEO outage.

3
4 Given the changes BellSouth has made and the necessary modifications to
5 KPMG's test, the number of orders that would not pass KPMG's test would be
6 much lower today. These improvements are clearly evident in BellSouth's
7 commercial performance results.

8

9 Q. WHAT DOES BELLSOUTH'S COMMERCIAL PERFORMANCE
10 DEMONSTRATE?

11

12 A. BellSouth's actual commercial performance in this area shows that it is returning
13 error and clarification information to CLECs in a timely manner. For Georgia, in
14 February 2001, BellSouth returned 97.21% of the rejects for resale residential
15 LSRs, 98.28% of the rejects for resale business LSRs, 97.56% of the rejects for
16 "other" LSRs and 100% of the rejects for Local Number Portability ("LNP") within
17 one hour, exceeding the benchmark used by KPMG in the test. Also in February,
18 BellSouth returned 96.30% of the rejects for UNE combinations, which, though
19 falling slightly below the benchmark, should not have a materially adverse impact
20 on a CLEC's ability to compete.

21

22 Q. PLEASE DESCRIBE THE NEXT TEST: TIMELINESS OF FIRM ORDER
23 CONFIRMATIONS – TAG.

24

25 A. The next "not satisfied" condition concerns KPMG's functional test of the TAG

1 interface (O&P 2). One area that KPMG evaluated was whether TAG provided
2 timely firm order confirmations ("FOCs") for flow-through orders for UNEs (O&P
3 2-3-3a). The benchmark that KPMG used for this measure is that 95% of FOCs
4 for flow-through orders must be returned within three hours.

5 During a retest in January 2001, KPMG tested 45 orders in this category. Of
6 those orders, KPMG received 84% (38 orders) of FOCs for orders submitted via
7 TAG within 3 hours. The seven orders that did not receive FOCs within 3 hours
8 fell out for manual handling. In fact, FOCs for five of these seven orders were
9 received within 24 hours. These seven orders were partially mechanized orders;
10 however, KPMG treated them as fully mechanized orders. The delays in
11 providing FOCs for these orders occurred because they were designed to fall out
12 of the mechanized system for manual handling. These seven orders should have
13 been excluded from this test, as they were not fully mechanized orders and
14 KPMG's benchmark only applied to mechanized orders. Had these seven orders
15 been excluded, 100% of the FOCs for orders submitted in the test would have
16 been received within three hours.

17
18 Q. PLEASE DISCUSS WHETHER FOC TIMELINESS FOR TAG IS STILL AN
19 ISSUE.

20
21 A. Although KPMG did not perform another functional test of TAG, it did perform
22 normal volume, peak volume, and production volume tests of TAG. During these
23 tests, BellSouth returned timely FOCs via TAG. These evaluation criteria (O&P
24 3-3-4, O&P 4-3-4, and O&P 10-3-4) are satisfied in KPMG's report.

25

1 BellSouth's actual commercial performance for CLECs in this area has shown
2 significant improvement, and demonstrates that BellSouth currently is returning
3 FOCs in a timely manner. For Georgia, in February 2001, BellSouth returned
4 99.20% of the FOCs for resale residential orders, 99.42% of the FOCs for resale
5 business, 100% of the FOCs for LNP and 97.52% of the FOCs for UNE combos
6 within three hours, clearly exceeding KPMG's benchmark.
7

8 Q. PLEASE DESCRIBE THE NEXT AREA: ACCURACY AND TIMELINESS OF
9 PARTIALLY MECHANIZED ORDERS.
10

11 A. Orders for certain complex resale services and UNEs may be transmitted
12 electronically via EDI or TAG, but are designed to fall out for manual handling. In
13 order to enable CLECs to submit some complex LSRs electronically, rather than
14 by fax or mail, BellSouth designed the EDI and TAG ordering interface to accept
15 LSRs for these services. After these LSRs are transmitted to BellSouth
16 electronically, they are handled as if they had been faxed or mailed to the Local
17 Carrier Service Center ("LCSC"). These orders are sometimes referred to as
18 "partially-mechanized." KPMG's report shows 10 "not satisfied" evaluation
19 criteria for tests involving partially mechanized orders. The "not satisfied" criteria
20 for partially mechanized orders can be divided into two areas: accuracy and
21 timeliness. I will discuss both areas.
22

23 Q. PLEASE DESCRIBE HOW PARTIALLY MECHANIZED ORDERS ARE
24 HANDLED.
25

1 A. Partially mechanized orders are processed by service representatives in
2 BellSouth's LCSC just like manually-submitted orders. The LCSC now consists
3 of three locations due to the volume of orders. For the year 2000, the LCSC
4 processed an average of 99,122 manual and partially mechanized LSRs per
5 month.

6
7 As of April 1, 2001, there were 1033 BellSouth employees in the LCSC, including
8 the 919 service representatives who process the manual and partially
9 mechanized LSRs. From December 1998 through November 2000, the LCSC
10 more than doubled its trained service representative headcount (i.e. 130%
11 increase) to the 919 that are employed today. BellSouth has continuously
12 increased the work force and productivity of the LCSC to meet actual and
13 forecasted demand, increasing complexity of the orders being worked, and
14 tighter processing requirements, such as the benchmarks for returning FOCs,
15 rejects, and clarifications.

16
17 Q. HOW HAS BELLSOUTH ADDRESSED IMPROVEMENT IN THIS AREA?

18
19 A. As a result of the LCSC's growth in personnel, the increased complexity of the
20 orders handled by the LCSC service representatives, and the tighter benchmarks
21 for performance, BellSouth recognized the need to improve the accuracy and
22 timeliness of its handling of partially-mechanized orders. BellSouth has
23 established a group within the LCSC to improve accuracy and timeliness, which
24 is called the "Quality and Accuracy Team" which is now composed of
25 approximately 35 people. The purpose of the team is to support the LCSC in

1 achieving higher levels of accuracy that lead to increased efficiency, improved
2 flow through, increased customer satisfaction, and fewer complaints, expedites,
3 and escalations. For example, the team has helped the LCSC improve the
4 handling of LSRs that drop out for manual handling due to errors. The LCSC
5 monitors the progress of these LSRs using a daily report. From September 1,
6 2000, when the team began its work, to March 28, 2001, there were 92% fewer
7 LSRs on the daily report. Currently, the average number of days it takes to clear
8 them is 4 or less.

9
10 The team identifies problems by closely monitoring the work at the LCSC and
11 looking for trends. If, for example, repeat problems are caused by an LCSC
12 service representative, the representative will be coached by the team. If the
13 problems are caused by a CLEC, the team works with that CLEC's customer
14 service manager who will contact the CLEC and propose corrections.

15
16 Another way to increase accuracy and timeliness for partially mechanized orders
17 is to reduce the amount of manual handling involved in processing them.

18 Although not always practical, the surest solution, of course, is to increase the
19 number of LSRs that flow through the systems rather than fall out for manual
20 handling. With this in mind and as a result of the Georgia Commission's Order of
21 January 12, 2001 in Docket No. 7892-U, BellSouth and the CLECs formed a
22 cooperative "flow through improvement task force." The objective of the task
23 force is to enhance the flow through of electronic orders, document those
24 enhancements, and develop a schedule for implementing the enhancements.
25 The task force is operating as a subcommittee of the Change Control Process

1 ("CCP") as discussed in Mr. Pate's testimony. The CLECs and BellSouth first
2 discussed the formation of the task force at the regularly-scheduled monthly
3 status meeting of the CCP on February 28, 2001. The first meeting of the task
4 force occurred on March 19, 2001.

5
6 Q. WHAT DOES BELLSOUTH'S RECENT PERFORMANCE INDICATE
7 REGARDING ACCURACY AND TIMELINESS FOR PARTIALLY-MECHANIZED
8 ORDERS?

9
10 A. If BellSouth does not fulfill orders accurately and timely, then it will be reflected in
11 the Accuracy of the Billing, measured by Invoice Accuracy. According to
12 BellSouth's performance measurements results for Invoice Accuracy, these
13 partially mechanized issues do not have a disproportionate impact on CLEC
14 customers. The invoice accuracy results for February 2001 were better for
15 CLECs than for BellSouth's retail end users, yielding 99.70% accuracy.

16
17 Q. PLEASE DESCRIBE THE NEXT TEST: EXPECTED RESPONSES – ADSL –
18 MANUAL.

19
20 A. KPMG performed a functional evaluation of the pre-ordering and ordering
21 processes for xDSL products as delivered to CLECs through BellSouth's manual
22 processes (PO&P 12). Specifically, KPMG tested BellSouth's ability to provide
23 the expected responses (PO&P 12-2-1). KPMG's standard is that 99% of the
24 expected responses should be received by the CLEC.

25

1 Q. WHAT WERE KPMG'S RESULTS OF THIS TEST?

2

3 A. Of the 1,006 total transactions that KPMG submitted, 951 (94.5%) received the
4 appropriate responses from BellSouth. Specifically, KPMG submitted 447 pre-
5 order loop makeup service inquiries and LSR service inquiries to BellSouth's
6 Complex Resale Support Group ("CRSG") via e-mail. KPMG received 417
7 acknowledgments (93%) for these transactions. In addition, KPMG sent 559
8 total pre-order loop make-up service inquiries and LSR service inquiries via
9 facsimile. Of the 275 loop makeup service inquiries that KPMG submitted via
10 facsimile, 252 (92%) received the subsequent expected responses (confirmation
11 or error) from BellSouth. As a result, KPMG issued Exception 134. For the 284
12 LSR service inquiries that KPMG submitted via facsimile, 282 (99%) received the
13 expected responses (FOCs, rejects, or clarifications), which met KPMG's
14 standard.

15

16 Q. WHAT DID BELLSOUTH FIND REGARDING KPMG'S RESULTS?

17

18 A. In Exception 134, KPMG identified 55 transactions where they did not receive the
19 expected response. BellSouth's investigation of those 55 pre-order loop makeup
20 service inquiries and LSR service inquiries that KPMG claimed did not receive
21 the expected responses is as follows:

22

- 23 • Three of the inquiries, purchase order numbers X1P16, X002A10019, and
24 X031A10117, were acknowledged.
- 25 • One transaction was recalled before BellSouth could do anything with it.

- 1
- Twenty-two of the inquires were rejected. Because KPMG should have considered a rejection to be an acknowledgment that BellSouth received the inquiry, KPMG should not have expected additional acknowledgments for the 22 transactions that BellSouth rejected. BellSouth believes that it handled these 22 transactions correctly. Nevertheless, on March 22, 2001, BellSouth changed its process. Now when BellSouth sends an e-mail rejection, it also states that it is acknowledging the inquiry.
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- Four inquires, that KPMG state were not acknowledged, according to BellSouth's records were never received by BellSouth.
- 9
- On six inquires KPMG erroneously expected a FOC. BellSouth disagreed because these orders were rejected back to KPMG. Because KPMG did not resolve these errors and return the orders to BellSouth, KPMG should not have expected FOCs. BellSouth believes that it handled these 6 inquiries correctly.
- 10
- 11
- 12
- 13
- 14
- Two of the loop makeup service inquiries for which KPMG expected FOCs were never received by BellSouth according to BellSouth records.
- 15
- 16
- Two loop makeup service inquiries were labeled "version 01." When a CLEC issues an LSR, the CLEC assigns a Purchase Order Number ("PON"). If the LSR must be modified, the CLEC will simply increment the version number instead of issuing a new PON. BellSouth's records show that it did not receive these, although KPMG may have sent them as "version 00".
- 17
- 18
- 19
- 20
- 21
- 22
- BellSouth investigated 13 loop makeup service inquiries for which KPMG received the makeup information, but no prior FOC from the LCSC. On 12 inquiries BellSouth erroneously sent the loop makeup information to
- 23
- 24
- 25

1 KPMG before the LCSC sent the corresponding FOCs. 1 loop makeup
2 service inquiry was cancelled by the LCSC because the LCSC returned
3 the related LSR to KPMG for clarification. Because KPMG had not
4 resolved the problems with the LSR in a timely manner, the LCSC properly
5 canceled it. This process is outlined in the LEO Guide, volume 1. On
6 February 5, 2001, BellSouth changed its process whereby the loop
7 makeup information is not sent to a CLEC until after the FOC has been
8 generated. This resolved the issues encountered in handling these
9 orders.

- 10 • Finally, KPMG believed that 2 LSR service inquiries should have received
11 subsequent responses (FOCs, clarifications, or rejects) from BellSouth.
12 BellSouth disagreed because it sent KPMG a clarification for one LSR
13 service inquiry. As discussed above, because KPMG should have
14 considered a clarification to be an acknowledgment that BellSouth
15 received the inquiry, KPMG should not have expected an acknowledgment
16 for this inquiry. BellSouth's records show that it did not receive the other
17 LSR service inquiry, although KPMG may have sent it with a different
18 version number.

19
20 Q. WHAT DOES BELL SOUTH'S ANALYSIS INDICATE?

21
22 A. After analyzing these 55 transactions, BellSouth believes that only 12
23 transactions, the 12 inquiries for which the CRSG sent the loop makeup
24 information to KPMG before the LCSC sent the corresponding FOCs, did not
25 receive the expected responses. Therefore, 98.81% of the transactions received

1 the expected responses, which, rounded, meets KPMG's standard. In addition,
2 BellSouth believes that the changes and modifications it has made for handling
3 the responses to these inquiries should prevent any material adverse impact on
4 competition.

5

6 Q. TURNING TO THE "NOT COMPLETE" CRITERIA FROM KPMG'S TEST, WHAT
7 DOES YOUR TESTIMONY ADDRESS?

8

9 A. Now, I will address the criteria labeled as "not complete" by KPMG. All of these
10 criteria were in the part of the test dealing with performance measurements.

11

12 Q. WHAT ARE "NOT COMPLETE" CRITERIA?

13

14 A. A "not complete" occurred, when the third party test was closed, but some test
15 criteria had not been completed by KPMG. Work continues on those criteria and
16 KPMG is expected to issue a supplemental report indicating whether these
17 remaining criteria were satisfied.

18

19 Q. PLEASE DESCRIBE THE FIRST THREE "NOT COMPLETE" CRITERIA THAT
20 YOU ADDRESS: PERCENT REJECTED SERVICE REQUESTS, REJECT
21 INTERVALS AND FIRM ORDER CONFIRMATION TIMELINESS.

22

23 A. The first set of "not complete" conditions concern the Ordering and Provisioning
24 Performance Measures Evaluation (O&P – 7). This evaluation provided for "(1)

1 Calculation and Reporting Validation, and (2) Data Comparison, for ordering and
2 provisioning-related SQMs produced by BellSouth.”

3
4 For O&P 7-1-3 (Percent Rejected Service Requests), O&P 7-2-3 (Reject
5 Interval), and O&P 7-3-3 (Firm Order Confirmation Timeliness), KPMG compared
6 Hewlett Packard-provided data to the corresponding BellSouth raw data for the
7 months of August 2000 – November 2000. KPMG found discrepancies in time
8 stamps for LSRs Sent/Received, Reject/Clarification Requested, and FOC for the
9 TAG and EDI interfaces and issued Draft Exceptions 176 and 178 to BellSouth.

10
11 Draft Exception 176 identified six discrepancies for the EDI interface. BellSouth
12 responded to the exception on March 12, 2001:

- 13
- 14 • Two discrepancies were due to incorrect test procedures on the part of
 - 15 KPMG.
 - 16 • Four discrepancies were unresolved, as information identifying the causes
 - 17 of the delays was no longer available. Because of this, BellSouth
 - 18 requested KPMG to test the most recent month's data.
- 19

20 Draft Exception 178, based on October 2000 and November 2000 data, identified
21 a total of nineteen discrepancies for the EDI and TAG interfaces. BellSouth
22 responded to the exception on March 23, 2001 as follows:

- 23
- 24 • Eleven discrepancies were due to incorrect test procedures on the part of
 - 25 KPMG. For example, KPMG sent multiple instances of the same

1 PON/version combination. Only one instance is permitted. Another
2 example was where KPMG was not available to resolve the data when
3 BellSouth had it ready, but KPMG recorded the time when they received it.

- 4 • Three discrepancies were due to errors in BellSouth data. BellSouth was
5 not accurately capturing the timestamp when FOCs were sent manually.
6 Corrective measures were implemented in January 2001.
- 7 • Five discrepancies were unresolved, as information identifying the causes
8 of the delays was no longer available.

9
10 For each case where historical information was available for analysis, BellSouth
11 either found no discrepancies in time stamps, or implemented corrective
12 measures to address the issues.

13
14 Q. CAN YOU EXPLAIN WHETHER RESPONDING TO OCTOBER 2000 DATA IN
15 MARCH 2001 IS A REASONABLE TIMEFRAME?

16
17 A. Data is not available until some time after the end of the data month. KPMG first
18 must assimilate and review the data to determine if a problem occurred. If so,
19 KPMG issues an observation. If KPMG believes a problem exists, it issues a
20 Draft Exception and allows BellSouth time to review the process and/or data to
21 determine the cause and take corrective action. In many instances, BellSouth
22 and KPMG can resolve the issue and the Draft Exception will be cleared and goes
23 away. However, in some instances, KPMG and BellSouth may disagree on the
24 resolution. If so, KPMG will file the Exception with the GPSC and BellSouth will
25 simultaneously file a response to the Exception with the GPSC. If, at a later

1 time, KPMG agrees with and/or accepts BellSouth's response, KPMG will amend
2 the Exception filed with the GPSC. Sometimes this process can be resolved
3 more quickly than others.

4

5 Q. PLEASE DESCRIBE THE "NOT COMPLETE" CRITERIA FOR THE TWO
6 MEASURES: AVERAGE JEOPARDY NOTICE INTERVAL AND PERCENTAGE
7 OF ORDERS GIVEN JEOPARDY NOTICES (O&P 7-6-3).

8

9 A. This set of "not complete" conditions concern O&P 7-6-3 (Average Jeopardy
10 Notice Interval and Percentage of Orders Given Jeopardy Notices). In this test,
11 KPMG issued Exception 128 for one service order in the month of October 2000,
12 where the KPMG-collected value for "completion date" did not match the
13 BellSouth-reported value. BellSouth submitted a response to this exception on
14 March 13, 2001.

15

16 BellSouth concluded that this discrepancy was due to a business rule in the
17 "Service Order Control System ("SOCS") daily fixed fielded extract," a standard
18 extract of data from SOCS that feeds all downstream systems. In certain
19 instances, the final disposition of a service order is not updated in the extract to
20 allow the appropriate changes in PMAP.

21

22 Q. EXPLAIN WHAT STEPS BELLSOUTH HAS TAKEN TO RESOLVE THIS ISSUE.

23

24 A. To resolve this issue, BellSouth is in the process of building another extract from
25 SOCS that duplicates the original one but removes all business rules and extracts

1 every service order in SOCS each time it is run. An initial estimate for completing
2 this work is under development, and implementation is expected to take a
3 minimum of eight weeks.
4

5 Q. WHAT WAS THE OBJECTIVE OF THE NEXT SECTION OF NOT COMPLETE
6 CRITERIA: DATA COLLECTION AND STORAGE VERIFICATION AND
7 VALIDATION REVIEW (PMR 1)?
8

9 A. This “not complete” condition concerns the Data Collection and Storage
10 Verification and Validation Review (PMR 1). The objective of this review was to
11 evaluate the key policies and procedures for collecting and storing both the raw
12 data that BellSouth uses to create SQM reports and the preliminary data that
13 BellSouth uses to produce the raw data.
14

15 Q. PLEASE DESCRIBE KPMG’S ASSERTION THAT BELLSOUTH DID NOT
16 PROVIDE SUFFICIENT DATA FOR CREATING HISTORICAL SQM REPORTS.
17

18 A. This “not complete” condition is identified as PMR 1-2-1 in the Report. KPMG
19 reported that BellSouth did not provide sufficient data for re-creating any prior
20 month's historical SQM report. It suggested that the raw data, early-stage data,
21 and the SQM reports be retained for a sufficient length of time to support any
22 audits that might be required by the GPSC. KPMG reported its findings in
23 Exception 79.
24

25 Q. WHAT WAS BELLSOUTH’S RESPONSE TO KPMG’S FINDINGS?

1 A. BellSouth provided its latest response to this exception on March 6, 2001, in
2 which it proposed the following data retention policy:

3 "It is the policy of BellSouth Performance Measurements to retain the
4 early-stage data for a period of eighteen months to facilitate detailed
5 audits of PMAP reports. 'Early-stage data' is defined as that which is
6 extracted from source systems (CABS, CRIS, EXACT, WFA, SOCS,
7 LMOS, etc.) and maintained as ASCII flat files for the purpose of
8 generating SQM reports. 'Early-stage' data is further defined as source
9 system data that is transmitted manually for said purpose. The
10 mechanical flat files and the manual files of early-stage data will be
11 retained for a period of eighteen months."

12
13 BellSouth will retain PMAP raw data for a minimum of three years. 'PMAP
14 raw data' is defined as that which is available for download for the current
15 month from the BellSouth website. Further, BellSouth will retain for three
16 years the monthly aggregate database, i.e., that which has been
17 processed and normalized from raw data, and the resources necessary to
18 re-create the SQM reports from that database.

19
20 BellSouth believes that implementation of this policy, combined with current data
21 retention practices, allows a full and complete opportunity to audit BellSouth's
22 performance results in a meaningful way.
23

1 Q. PLEASE DESCRIBE THE NEXT AREA WHERE TEST RESULTS ARE NOT
2 COMPLETE: METRICS DEFINITION DOCUMENTATION AND
3 IMPLEMENTATION VERIFICATION AND VALIDATION REVIEW (PMR 2).

4
5 A. Next, KPMG had “not complete” conditions in the Metrics Definition
6 Documentation and Implementation Verification and Validation Review (PMR 2).
7 This review evaluated the definitions of the SQMs and the associated
8 descriptions of the calculations in the October 22, 1999, version of BellSouth's
9 Georgia SQM documentation.

10
11 Q. WHAT WERE THE FIRST SET OF FINDINGS UNDER PMR 2?

12
13 A. The first group of findings was identified as PMR 2-2-3, 2-2-4, 2-21-3 and 2-21-4.
14 In Exception 133, KPMG found that BellSouth did not compute its OSS Interface
15 Availability SQM in accordance with the definitions and business rules that
16 appear in the Service Quality Measurements Georgia Performance Reports
17 (SQM Reports) for Pre-Ordering and Maintenance and Repair.

18
19 Q. WHAT ENHANCEMENTS HAS BELL SOUTH MADE TO TRACK AND
20 MEASURE OSS PERFORMANCE?

21
22 A. BellSouth agreed that the definitions and business rules in the Georgia SQMs for
23 Interface Availability (OSS-2 and OSS-3) were not worded such that the intended
24 interpretation was clear. BellSouth has rewritten the definitions and business
25 rules and has submitted them to KPMG for their review. Once closure on this

1 exception is reached, BellSouth will incorporate the clarified definitions and
2 business rules into the SQM, which will satisfactorily close this test.

3
4 Further, BellSouth indicated that an internal analysis of performance data
5 revealed that not all assets had been appropriately mapped to Renaissance
6 Enterprise Management (“REM”), the tool used to compile trouble report data.
7 BellSouth subsequently corrected January data and implemented the following
8 plan of action to ensure future compliance:

- 9
- 10 • Completed detailed review of REM assets and linkages to applications
 - 11 • Established additional linkages, where appropriate
 - 12 • Established procedure for reporting transport outages directly associated
13 with specific applications
 - 14 • Enhanced Project Management Organization (“PMO”) to better manage
15 the internal change control process
 - 16 • Dedicated resources to manage business requirements
 - 17 • Established a process for monthly review of REM assets
 - 18 • Established a process for periodic internal audits
 - 19 • Established a process for monthly reconciliation of CLEC-reported and
20 REM-reported outages.

21
22 Q. PLEASE EXPLAIN THE OTHER GROUP OF “NOT COMPLETE” CRITERIA
23 UNDER PMR 2.

24

1 A. The next criteria are identified as PMR 2-4-2, 2-4-3, 2-5-2 and 2-5-3. In
2 Exception 122, KPMG stated that "Definitions and Business Rules in the Service
3 Quality Measurements Georgia Performance Reports (SQM Reports) are
4 incomplete or inaccurate for the FOC Timeliness and Reject Interval Ordering
5 Service Quality Measurements."
6 KPMG indicated that the time stamps from EDI, LENS, and TAG should be used
7 in the calculation of these measurements as per the business rules. However,
8 KPMG found that the time stamps from the LEO system are used in such
9 calculations. Program change requests have been scheduled that will enable
10 BellSouth to capture time stamps from EDI, LENS, and TAG for calculation of the
11 FOC and reject intervals. These program change requests are scheduled for
12 implementation on June 1, 2001. Even though the time stamps are moved such
13 that responses will take longer, BellSouth expects to meet the performance
14 benchmark.

15
16 Q. PLEASE DESCRIBE THE METRIC DATA INTEGRITY VERIFICATION AND
17 VALIDATION REVIEW (PMR 4) OF THE KPMG REPORT.

18
19 A. KPMG had "not complete" criteria on the Metrics Data Integrity Verification and
20 Validation Review (PMR 4). This review evaluated the accuracy and
21 completeness of the SQM raw data produced by BellSouth during recent months.
22 The evaluation also assessed the adequacy and completeness of the related
23 data transfer process and the internal controls on the processes.

24
25 Q. FOR PMR 4-1-1, KPMG STATED THAT THE RAW DATA USED IN THE

1 CALCULATION OF BELLSOUTH SQM REPORTS ARE NOT ACCURATELY
2 DERIVED FROM OR SUPPORTED BY THEIR COMPONENT EARLY-STAGE
3 DATA. CAN YOU EXPLAIN THESE DISCREPANCIES?
4

5 A. One "not complete" criterion is identified as PMR 4-1-1 in the Report. In
6 Exception 89.3, KPMG stated that "raw data used in the calculation of BellSouth
7 SQM reports are not accurately derived from or supported by their component
8 early-stage data" for OSS Response Interval – Pre-Ordering.
9

10 BellSouth provided an amended response to this exception on February 23,
11 2001. It was determined that the discrepancies were due to invalid negative
12 numbers generated by middleware used by LENS, TAG, RNS, and ROS to
13 produce the measure. Source system teams are currently working to correct or
14 eliminate generation of these invalid values. BellSouth estimates that
15 implementation of the required changes will be completed by third quarter 2001.
16

17 Although BellSouth does not dispute these discrepancies, the magnitude of the
18 differences is minute, as demonstrated in the table below.
19

Discrepancy Grouping	<u>Difference</u>
Total Number of Accesses	0.021%
Total Access Time in Milliseconds	0.060%
Total Number of Access > Six Seconds	0.068%

20

1 The small differences reflected in the above table should not have a material
2 impact on competitors or competition.

3

4 Q. WHAT WERE KPMG'S FINDINGS AND BELLSOUTH'S RESPONSE ON THE
5 NEXT SET OF NOT COMPLETE CRITERIA UNDER PMR 4?

6

7 A. The next set of "not complete" criteria is identified as PMR 4-3-1, 4-3-2,
8 4-4-1, 4-4-2, 4-5-1 and 4-5-2 in the Report. KPMG stated in Exception 131 that
9 "BellSouth's raw data used in the calculation of the BellSouth Ordering SQM
10 reports is not accurately derived from or supported by its component early-stage
11 data" for Percent Rejected Service Requests, Reject Interval, and FOC
12 Timeliness.

13

14 In a response provided to KPMG on February 23, 2001, BellSouth clarified 23 of
15 the 24 PON discrepancies with valid business and technical explanations. The
16 remaining PON discrepancy was due to the inability of BellSouth's performance
17 measurement system to properly capture FOC timestamps for orders in LEO with
18 manual FOCs. A program change was implemented on February 1, 2001 to
19 address this issue. KPMG is reevaluating these test criteria, using data for
20 February 2001. An amended response was sent on April 30, 2001, that
21 fundamentally responded to all the re-evaluating of this test criteria.

22

23 For the month tested, October 2000, only 0.97% of the LSRs received in LEO
24 were given a manual FOC. Therefore, the impact on reported results and on
25 local competitors is negligible.

1 Q. WHAT WERE KPMG'S FINDINGS AND BELLSOUTH'S RESPONSE ON ITEM
2 PMR 4-13-1?

3

4 A. KPMG could not replicate the BellSouth-reported SQMs for Percent Provisioning
5 Troubles within 30 Days of Service Order Activity, as stated in Exception 86.1.
6 Therefore, it could not validate the accuracy and completeness of the associated
7 raw data, as defined by PMR 4-13-1. Upon successful closure of Exception 86.1,
8 KPMG will reevaluate this test criterion.

9

10 Change requests to correct the irregularities associated with Percent
11 Provisioning Troubles within 30 Days of Service Order Activity in PMAP were
12 implemented in March 2001. KPMG successfully replicated November 2000 and
13 December 2000 data by simulating the programming changes. Retesting will be
14 conducted on a recent month's data.

15

16 Q. WHAT WERE KPMG'S FINDINGS AND BELLSOUTH'S RESPONSE ON PMR
17 4-38-1 AND 4-39-1?

18

19 A. The next set of "not complete" criteria is PMR 4-38-1 and 4-39-1. In Exception
20 89.2, KPMG states that "raw data used in the calculation of BellSouth SQM
21 reports are not accurately derived from or supported by their component early-
22 stage data" for the Trunk Group Service Report and the Trunk Group Service
23 Detail.

24

1 For the test month of September 1999, BellSouth and KPMG results for the
2 CLEC aggregate and BellSouth Retail varied an average of 1.72% and 1.21%,
3 respectively. These discrepancies, therefore, should have no material impact on
4 local competition.

5
6 KPMG found that BellSouth-reported derived raw data values do not agree with
7 the KPMG-calculated values for these measurements. BellSouth implemented a
8 program change in January 2001, to address the cause of the discrepancies
9 identified.

10
11 Q. PLEASE DESCRIBE THE LAST AREA: CALCULATION AND REPORTING
12 VERIFICATION AND VALIDATION REVIEW (PMR 5) WHERE NOT
13 COMPLETE CRITERIA REMAIN.

14
15 A. The last set of "not complete" criteria involved the Calculation and Reporting
16 Verification and Validation Review (PMR 5). This review evaluated the accuracy
17 of the information produced by BellSouth's SQM report production processes. In
18 this evaluation, KPMG determined whether BellSouth's SQM calculations were
19 accurately reported for the aggregate of all CLECs and for BellSouth retail in
20 October 1999. KPMG based its evaluations on the raw data and computation
21 instructions provided by BellSouth. This evaluation complemented the related
22 Performance Measures Evaluation conducted under the *Master Test Plan*, which
23 focused on the SQMs reported for the KPMG test CLEC for all months of the
24 transaction-testing period.

25

1 Q. WHAT WERE KPMG'S COMMENTS AND BELLSOUTH'S RESPONSE IN THIS
2 AREA?

3

4 A. The "not complete" criterion is PMR 5-11-2 in KPMG's Report. KPMG stated in
5 Exception 86.1 that it could not replicate "BellSouth's reported SQM." This
6 included Percent Provisioning Troubles within 30 days of Service Order Activity in
7 the provisioning non-trunks category for the CLEC Aggregate and BellSouth
8 Retail.

9

10 Program change requests to correct the irregularities associated with Percent
11 Provisioning Troubles within 30 Days of Service Order Activity in PMAP were
12 implemented in March 2001. KPMG successfully replicated November 2000 and
13 December 2000 data by simulating the programming changes. Retesting will be
14 conducted on a recent month's data.

15

16 Q. PLEASE DESCRIBE THE STATISTICAL EVALUATION OF TRANSACTIONS
17 TEST METRICS INCLUDED IN THE KPMG SUPPLEMENTAL TEST REPORT.

18

19 A. Section F of the Supplemental Test Plan Final Report addresses KPMG's test to
20 evaluate BellSouth's service performance for KPMG's test CLEC using statistical
21 methods to compare BellSouth's performance for CLECs' standards established
22 in July 2000 by the Georgia PSC. The actual data tested was for the months of
23 December 1999 and January – February 2000. Obviously, the standards were
24 set about six months after the data was collected. As a result, not surprisingly,

1 this comparison revealed issues that have been addressed and corrected over
2 time, as will be shown below.

3
4 Table VIII-6.1 in Section F.2.3 of the Report provides a Test Cross-Reference for
5 the criteria used in the metrics evaluation with Table VIII-6.3 in Section F.3.1
6 providing the result and comments for that evaluation. My comments will
7 address the sections that are listed with “Not Satisfied” results. Table VIII-6.4 of
8 the Report provides the Detail of Results for Resale criteria. Table VIII-6.5
9 shows the Detail of Results for UNE evaluation. Table VIII-6.6 provides the Detail
10 of Results (Other). I will refer to the appropriate item number of each section
11 from the report with my comments.

12
13 KPMG listed their results in 10 groupings (6-1-1 to 6-1-4, 6-2-1 to 6-2-4, and 6-3-
14 1 to 6-3-2 with 6-3-2 not completed) and established their own criteria that 90%
15 of the individual tests would have to meet or exceed the standards effective in
16 Georgia in July 2000 to receive a satisfied for the test section. Even with the
17 retroactive application of the July 2000 standards, BellSouth successfully
18 satisfied five (5) of the nine (9)-completed categories that have been reported.
19 The five categories that BellSouth received a satisfied rating were: 1) Resale –
20 Ordering; 2) Resale - Maintenance & Repair; 3) Resale – Billing; 4) UNE –
21 Maintenance & Repair, and 5) UNE - Billing. The following paragraphs will
22 demonstrate that BellSouth significantly has improved its overall performance in
23 the remaining four categories (PMR 6-1-2, 6-2-1, 6-2-2, and 6-3-1) since the
24 evaluations were conducted over a year ago. These four categories are
25 currently designated as “not complete” in KPMG’s report. As a result, the

1 previous findings of KPMG should not significantly impact a CLEC's ability to
2 compete.

3
4 Q. PLEASE DESCRIBE THE RESALE – PROVISIONING (PMR 6-1-2)
5 COMPARISON INCLUDED WITH THIS REVIEW.

6
7 A. For Category PMR 6-1-2, 14 of the 28 tests were listed as Below Standard in this
8 section. The 14 items are as follows:

- 9
- 10 • Items 10, 11, and 13 – These criteria evaluated the Order Completion
11 Interval for Residence Resale in the Non-Dispatch category. BellSouth
12 has determined that these orders were receiving a dispatch interval,
13 instead of the non-dispatch interval they should have received. This will
14 be addressed in the next system update currently scheduled for June 2,
15 2001. In the interim period until the system update can be implemented,
16 the majority of these orders are being updated on a manual basis, with
17 February 2001 data showing a significant improvement to a 1.7 day
18 average for the CLECs compared with a 1.0 for BellSouth.
 - 19 • Items 15 – 20 compared the Average Jeopardy Notice Interval for
20 Residence and Business Resale to a benchmark of greater than or equal
21 to 48 hours. When KPMG conducted functional testing, BellSouth
22 provided timely jeopardy notifications on the EDI and TAG interfaces.
23 These results are reflected in O&P 1-3-5, 2-3-5, V-A-17, V-B-17, which
24 satisfied the standard. BellSouth is currently meeting this benchmark for
25 February 2001 for all Residence and Business Resale orders.

- 1 • Items 24 – 26 compared the percent jeopardies for Residence Resale to
2 the BellSouth Residence and Business analog from the July 2000 Order.
3 BellSouth currently is meeting this measurement for February 2001 with
4 the percentage of Residence orders receiving jeopardies at 0.92%
5 compared with the BellSouth retail analog of 1.46%.
- 6 • Item 29 is for Residence Resale Dispatch Missed Installation
7 Appointments. BellSouth currently is meeting this measurement for
8 February 2001 with the percentage of Residence missed orders at 7.22%
9 compared with BellSouth analog at 11.64%.
- 10 • Item 30 compared the Residence Resale Non Dispatched Missed
11 Installation Appointments for the test CLEC in January 2000 with the July
12 2000 retail analog. While there was only one (1) missed test CLEC order
13 out of 14, the statistical score showed an out of parity condition as a result
14 of the low volume of CLEC orders. In February 2001, the comparison was
15 0.18% for CLEC aggregate and 0.05% for BellSouth. In other words,
16 BellSouth successfully completed over 99.8% of the scheduled orders for
17 all CLECs and BellSouth retail in this category.

18

19 Q. PLEASE DESCRIBE THE RESULTS FOR THE UNE – ORDERING
20 COMPARISON (6-2-1) FROM THIS REPORT.

21

22 A. For Category PMR 6-2-1, the items in this category with unsatisfactory results (2,
23 4, 6-9, 16, 17, 19, and 21) were in the Partially Mechanized category. Since
24 February 2000, BellSouth has taken action to improve its performance in this
25 area in order to improve the timeliness and meet the benchmarks of 85% within

1 24 hours for the average reject interval and 85% within 36 hours for FOC used by
 2 KPMG. The following Georgia data for February 2001 shows that BellSouth is
 3 meeting KPMG's benchmark for all of these test items.

4
 5 • Reject Interval

6

7	<u>Item</u>	<u>Product</u>	<u>February 2001 Data</u>
8	2	2W Analog Loop-Design	90.77%
9	4	2W Analog Loop Non-design	100%
10	6	Loop + Port Combo	87.87%
11	7	Switch Ports	No Orders
12	8	2W Analog INP Loop-Design	No Orders
13	9	2W Analog INP Loop-Non-Design	No Orders

14
 15 • Firm Order Confirmation

16	16	2W Analog Loop-Design	No Orders
17	17	2W Analog Loop Non-design	No Orders
18	19	Loop + Port Combo	88.27%
19	21	Switch Ports	No Orders

20
 21 Q. PLEASE DESCRIBE THE UNE – PROVISIONING (PMR 6-2-2) COMPARISON
 22 INCLUDED WITH THIS REVIEW.

23
 24 A. For category PMR 6-2-2, KPMG determined that the following items did not meet
 25 their criteria:

- 1 ▪ Items 22, 23, 25, 26 are Order Completion Interval comparisons for Non-
2 Dispatched orders. The BellSouth retail analog of Residence and
3 Business contains a large quantity of switch-based orders. Approximately
4 70% of the BellSouth non-dispatched orders are switch-based orders and
5 complete within one day. Beginning with March 2001 data, switch-based
6 orders will be disaggregated for comparison in this category. In addition,
7 for loop and port combinations, an incorrect scheduling matrix was
8 corrected in February 2001. This should bring the OCI for loop and port
9 combinations into parity with the BellSouth retail analog.
- 10 ▪ Items 31 and 40 compare the percent jeopardies for loop and port
11 combinations and analog loops to the BellSouth residence and business
12 analog from the July 2000 Order. The loop and port combinations met the
13 ordered analog in February 2001 with the percent jeopardies for the CLEC
14 aggregate at 0.40% compared with the BellSouth retail analog of 1.83%.
- 15 ▪ Items 42 - 52 compared the Average Jeopardy Notice Interval for loop and
16 port combinations, switch ports, and analog loops to a benchmark of
17 greater than or equal to 48 hours. BellSouth currently is meeting this
18 benchmark for February 2001 for all orders in these categories.
- 19 ▪ Items 53 – 60 are for Missed Installation Appointments for Non-Dispatch
20 orders in the loop and port combinations / switch port areas. In February
21 2001, the comparison was 0.10% for CLEC aggregate and 0.05% for
22 BellSouth. In other words, BellSouth successfully completed over 99.9%
23 of the scheduled orders for all CLECs and BellSouth retail in this category.
- 24

1 The following February 2001 data shows BellSouth is meeting parity for the
2 majority of these test items.

3

4 Order Completion Interval

5

6 <u>Item</u>	<u>Product</u>	<u>February 2001 Data</u>	
7	22/23/25	Loop + Port Combo-Non-Design	4.39 CLEC / 0.96 BST
8	26	Switch Ports Non-Design	No Orders
9	<u>Jeopardy</u>		
10	31	Loop + Port Combo	0.56% CLEC / 1.59% BST
11	40	2W Analog Loop Non-Design	7.28% CLEC / 1.59% BST

12 Jeopardy Notice Interval

13	42/43	Loop + Port Combo	100%> 48 Hours
14	44-46	Switch Ports	No Orders
15	47/48	UNE Other Non-Design	No Orders
16	49/50	2W Analog Loop Design	100%> 48 Hours
17	51/52	2W Analog Loop Non-Design	100%> 48 Hours

18 Missed Installation Appointments

19	53/56/59	Loop + Port Combo Non-Design	0.10% CLEC/0.05%BST
20	54/57/60	Switch Ports Non-Design	No Orders

21

22 Q. PLEASE DESCRIBE THE RESULTS FOR THE OTHER (BILLING) (PMR 6-3-1)
23 COMPARISON FROM THIS REPORT.

24

1 A. Item 1 compared the Usage Data Delivery Completeness for the test CLEC to
 2 the regional results for BellSouth. The January 2000 results were approximately
 3 1% difference between the test CLEC at 99% and BellSouth retail at 100%. The
 4 same difference existed in the February 2000 data but due to the smaller sample
 5 size was given an 'at standard' rating. In February 2001, the CLEC aggregate
 6 results exceeded the BellSouth retail analog with a 99.5% for the CLEC and
 7 99.2% for the BellSouth analog.

8
 9 Items 4 – 6 compared the timeliness of the data delivery with items 7 and 8
 10 comparing the average interval for that delivery. While February 2001 indicates
 11 a less than equity situation, BellSouth has investigated that problem and has
 12 traced it to an 800 billing issue that has now been resolved.

13

<u>Item</u>	<u>SQM</u>	<u>February 2001 Data</u>
1	Usage Data Delivery Comp	99.50% CLEC / 99.19% BST
4/5/6	Usage Data Delivery Time	97.14% CLEC / 97.60% BST
7/8	Mean Time to Deliver Usage	3.71 day CLEC / 2.61 day BST

18

19 Q. WHAT WOULD BE THE STATUS OF THESE TESTS IF THEY USED
 20 FEBRUARY 2001 DATA AS THE COMPARISONS?

21

22 A. If all of these tests were rerun with February 2001 data as the basis for the
 23 results, 37 of the 53 Below Standard tests would be considered At Standard.
 24 Those 37 tests would have satisfied the Resale Provisioning (PMR 6-1-2) and
 25 UNE Ordering (PMR 6-2-1) sections. Of the remaining 16 tests, 7 would be

1 satisfied with the OCI change for switch-based orders and DSAP matrix that
2 would satisfy the UNE Provisioning (PMR 6-2-2) criteria. The Billing section
3 (PMR 6-3-1) should be satisfied with April 2001 results that implemented the 800
4 billing updates.

5
6 Q. WITH REGARD TO THE KPMG TEST, WHAT DOES YOUR TESTIMONY
7 DEMONSTRATE?

8
9 A. First, I need to reiterate that I address about 3% of the test criteria. Of all 1171
10 criteria in the test, about 2% (20) were “not satisfied” and about 2% (25) were
11 “not complete”. At least some of the “not complete” items will be closed as
12 satisfied. The remaining criteria were either satisfied or KPMG did not issue a
13 finding on the test.

14
15 My testimony shows that many of the conditions that caused the few not satisfied
16 items have been corrected. Consequently, the small number of not satisfied
17 criteria would be even smaller today. Also, the “not complete” analyses indicate
18 that a considerable number of these criteria will be closed as satisfied.

19 For the items addressed in my testimony, there can be no doubt that KPMG’s
20 tests show that BellSouth has no deficiencies that would create a material
21 adverse impact on competition.

22
23 **IV: BELLSOUTH’S PERMANENT SQM AND SEEM.**

24
25 Q. WHAT ROLE DOES THE PERMANENT SQM HAVE IN THIS PROCEEDING?

1 A. The appropriate service quality measures to be reported by BellSouth are those
2 contained in BellSouth's Permanent SQM, which I have attached as Exhibit AJV-
3 2. BellSouth's measurements are the result of several years of work with
4 direction provided by state commissions, the FCC, and DOJ, plus input from
5 various CLECs. This SQM is more than adequate to allow the Commission and
6 the CLECs to monitor BellSouth's performance and to determine that BellSouth
7 is providing nondiscriminatory service to CLECs in Kentucky. As previously
8 discussed, data captured pursuant to the proposed Permanent SQM will not be
9 available for use in this proceeding and, consequently, the Commission should
10 rely on the Interim SQM for purposes of making a recommendation regarding
11 BellSouth's interLATA entry application.

12
13 Q. HOW DOES BELLSOUTH'S PERMANENT SQM DIFFER FROM THE INTERIM
14 SQM?

15
16 A. First, either the Interim or Permanent SQM will provide the Commission all of the
17 data it needs to monitor BellSouth's performance for CLECs. However, the
18 principal benefit of the Permanent SQM is that data will be provided in a much
19 easier-to-use form than the Interim SQM. The main drawback to the Interim SQM
20 is that it provides the data in a far too disaggregated detailed fashion. For
21 example, the Interim SQM contains about 1,800 sub-metrics while the
22 Permanent SQM contains approximately 1,200 sub-metrics. Aside from three
23 out of 75 measurements that are excluded from the Permanent SQM, all of the
24 same transactions are reflected in both SQMs. The Interim SQM provides a
25 much finer level of detail than the Commission will probably need in order to

1 perform meaningful analyses. The Permanent SQM provides the data in a much
2 more usable grouping while not detracting from the Commission's ability to
3 monitor performance.

4
5 The differences between the Permanent and Interim SQMs fall into the following
6 four categories:

- 7 1. Differences in measurements reflected;
- 8 2. Differences in levels of product disaggregation;
- 9 3. Differences in retail analogs/benchmarks; and
- 10 4. Differences in measurements included in SEEM.

11
12 I describe each of these differences in more detail later. However, I believe the
13 differences in no way hinder the Commission's ability to determine whether
14 BellSouth is performing appropriately under either SQM. The Permanent SQM is
15 simply easier to use.

16
17 Q. WHY DID BELLSOUTH EXCLUDE FOUR MEASUREMENTS CONTAINED IN
18 THE INTERIM SQM FROM THE PERMANENT SQM?

19
20 A. These measurements, and brief explanations of why BellSouth does not believe
21 these measurements are necessary, are as follow:

- 22
23 1. % Completions/Attempts w/o Notice or < 24 Hours Notice. Basically, CLECs
24 requested this measurement because sometimes BellSouth works a CLEC
25 order without giving what the CLEC considers to be appropriate notice. The

1 CLECs' requested measure is an example of a measurement of a portion of
2 the ordering and provisioning process. It attempts to combine FOC
3 timeliness, % installation appointments met and OCI into one measurement.
4 Because the issue here is to measure parity, it is difficult to see how this
5 measurement captures any information about the level of service BellSouth
6 provides to the CLEC.

7
8 BellSouth currently has five separate provisioning measurements
9 (Provisioning P1 – P5) that deal with order completion intervals, held orders
10 and completion notices. These measures provide sufficient information for
11 determining how well BellSouth is doing in this area of provisioning.

- 12
13 2. Bona Fide Requests processed in 30 business days. – The Interim SQM has
14 measurements reflecting the percentage of BFRs processed within thirty days
15 and the percentage of quotes provided for BFRs within certain intervals.
16 However, during the period of January 2000 through October 2000, BellSouth
17 received only seven BFRs from CLECs across the entire region. While
18 BellSouth could report its performance with respect to BFRs on a manual
19 basis, it is impossible to draw any conclusions about BellSouth's performance
20 based upon such a limited number of transactions. Therefore, BellSouth
21 does not believe it appropriate or reasonable to add these measurements at
22 this time.

- 23
24 3. BFR Quotes provided in X days. See response to 2 above.
25

1 4. Service Order Accuracy. There is no practical way to produce this
2 measurement. It can only be produced by an extensive manual process
3 which would be unreliable. Samples or universes of orders would have to be
4 selected and reviewed manually to determine whether errors existed. It is
5 inappropriate to create a measurement that can't be produced reliably.

6
7 Q. ARE THERE OTHER DIFFERENCES IN THE LIST OF MEASUREMENTS
8 BETWEEN THE TWO SQMs?

9
10 A. Yes. There are five other measurements that appear in the Interim SQM that are
11 not in the Permanent SQM. These measurements are:

- 12
- 13 • O-13 LNP Percent Rejected Service Request
- 14 • O-14 LNP Reject Interval
- 15 • O-15 LNP Firm Order Confirmation
- 16 • P-12 LNP Percent Missed Installation Appointments
- 17 • P-14 LNP Total Service Order Cycle Time

18
19 In this case, the performance data is not omitted from the Permanent SQM, it is
20 simply reflected differently. Instead of showing this data as a separate
21 measurement for LNP, the data is simply reflected for LNP as a disaggregated
22 product under another measurement. For example, measurement O-13 is
23 included under measurement O-7, Percent Rejected Service Requests.

24 Following is a list of where the data for these measurements in the Interim SQM
25 appear in the Permanent SQM:

- 1 • O-13 LNP included in O-7
- 2 • O-14 LNP included in O-8
- 3 • O-15 LNP included in O-9
- 4 • P-12 LNP included in P-3
- 5 • P-14 LNP included in P-10

6 No data is omitted by excluding these LNP measurements.

7

8 Q. PLEASE EXPLAIN THE DIFFERENCES IN PRODUCT DISAGGREGATION
9 BETWEEN THE INTERIM AND PERMANENT SQM.

10

11 A. The first area of difference involves 2-Wire Analog Loops. In the Permanent
12 SQM, 2-Wire Analog Loops are disaggregated two ways based on whether
13 engineering work is required (i.e., Non-Design or Design). In addition to these
14 two levels of disaggregation, the Interim SQM further disaggregates 2-Wire
15 Analog Loops into four additional categories as follows:

16

- 17 • 2-Wire Analog Loops w/INP Design
- 18 • 2-Wire Analog Loops w/INP Non-Design
- 19 • 2-Wire Analog Loops w/LNP Design
- 20 • 2-Wire Analog Loops w/LNP Non-Design

21 These four additional classifications are unnecessary for the following reasons:

22

23 BellSouth has hardly any interim number portability (“INP”). Thus, little if any
24 data will appear in the two INP classifications required by the Interim SQM. For
25 LNP, BellSouth provides data for LNP as a separate category. The data in the

1 LNP category allows the Commission to monitor performance on LNP orders.
2 These additional 2-Wire Analog Loop disaggregations will not help the
3 Commission monitor performance.

4
5 The next difference is that the INP standalone category was not included in the
6 Permanent SQM. As stated earlier, little, if any data would exist for this category
7 since BellSouth provides hardly any INP.

8
9 The last product difference is that the Permanent SQM adds two categories:

- 10 • UNE Digital Loops smaller than DS1; and
- 11 • UNE Digital Loops – DS1 or larger.

12
13 Q. WHAT IS THE PURPOSE OF DISAGGREGATING MEASUREMENTS?

14
15 A. Disaggregation provides CLECs with a separate view of performance for a
16 specific part of BellSouth's business. To illustrate, in some measurements,
17 residence results are shown separate from business results. In some
18 measurements, another common level of disaggregation is by product. For
19 example, results for 2-wire analog loops are shown separately from ISDN loops.
20 The rationale for a specific level of disaggregation should be a determination that
21 such detail is necessary to evaluate nondiscriminatory performance. The most
22 common way to assess this need is to determine whether a unique retail analog
23 or benchmark is needed for a specific product separate from all other products.
24 Another consideration should be the volume of transactions that would be

1 reflected for the specific product. If the volume is low, the additional
2 disaggregation provides no significant additional information.

3
4 Levels of disaggregation have been the principal sources of growth and
5 complexity in the SQM. Adding new levels of disaggregation have as much
6 effect on measurement production as adding new measurements.

7
8 Q. WHY SHOULDN'T FURTHER DISAGGREGATION BE REQUIRED? WON'T
9 MORE INFORMATION HELP THE COMMISSION ASSESS WHETHER
10 BELL SOUTH IS PROVIDING NONDISCRIMINATORY SERVICE?

11
12 A. As I have said, the level of disaggregation is a very important component of
13 BellSouth's SQM or, for that matter, any other measurement system. It is
14 extremely important in determining whether the measurement report is a useful
15 tool in identifying discriminatory treatment or simply, a collection of unnecessary
16 data. There are 66 measurements identified in the "Table of Contents" of
17 BellSouth's Permanent SQM. Data for these measurements are collected based
18 on sub-metrics defined by levels of disaggregation for each measurement. The
19 end result is the breakdown of these 66 measurements into the approximately
20 1,200 sub-metrics of performance for CLECs actually produced by BellSouth. As
21 you can see, the disaggregation level can generate a tremendous number of
22 sub-metrics if it is not handled properly. BellSouth's proposal provides more than
23 a sufficient number of sub-metrics to detect any nondiscriminatory treatment.
24 Further disaggregation will result in tremendous amounts of additional data with
25 no appreciable value.

1 Q. CAN CLECs FURTHER DISAGGREGATE THE DATA PROVIDED BY
2 BELLSOUTH IF THEY ARE NOT SATISFIED WITH THE DISAGGREGATION
3 THAT BELLSOUTH PROVIDES?
4

5 A. Yes, if the comparison of results does not require a unique BellSouth retail
6 analog. BellSouth makes available the raw data utilized for many of the
7 measurements and a comprehensive raw data user manual. This data and the
8 user manual allow the CLECs to build customized reports and further
9 disaggregate reports based on individual CLEC needs. I know of no other local
10 exchange company that provides similar tools to the CLEC community.
11

12 Q. PLEASE EXPLAIN THE DIFFERENCES IN RETAIL ANALOGS OR
13 BENCHMARKS BETWEEN THE INTERIM AND PERMANENT SQMS.
14

15 A. A comparison of the differences in retail analogs or benchmarks between the two
16 SQMs is provided in Exhibit 5. Exhibit 5 also contains the rationale for each
17 difference. As you can see on the Exhibit, the differences actually make the
18 Permanent SQM a more useful and reasonable document.
19

20 Q. WILL THE PROPOSED PERMANENT SQM BE MORE MANAGEABLE THAN
21 THE INTERIM SQM?
22

23 A. Yes. While there is no doubt that the Interim SQM is more than adequate for a
24 Commission to determine whether nondiscriminatory access is being provided to
25 the CLECs, BellSouth believes it is too detailed to use in Kentucky on a

1 permanent basis. Event though the Permanent SQM is less detailed than the
2 interim, it contains a massive amount of data, i.e., approximately 1,200 sub-
3 metrics representing CLEC performance and an additional 600 sub-metrics
4 representing BellSouth retail performance. In certain instances, sub-metrics are
5 reported at the individual CLEC level and are also aggregated into totals for all
6 CLECs in the state. As can be seen from the scope of the “measurement
7 categories” I have identified above, every area of BellSouth’s operations is
8 addressed, and in some cases, the same activity is measured multiple times and
9 in several different ways. However, the Interim SQM contains significantly more
10 sub-metrics.

11
12 In fact, the Permanent SQM may already be too large for a Commission to use it
13 effectively. This is a point that the Commission should not take lightly. In
14 evaluating the adequacy of BellSouth’s Permanent SQM, the Commission should
15 assess it relative to the purpose for which it is being created. In particular, the
16 SQM should be sized, in terms of its scope and complexity, to permit the
17 Commission to analyze the data for determining compliance with the Act. The
18 key point here is that too much data renders the reports useless for their
19 intended purpose.

20
21 Now, the CLECs will no doubt continue to ask for more measurements or
22 changes to existing ones. If past experience is any teacher, they will propose
23 thousands upon thousands of additional sub-metrics. Essentially, if allowed to
24 have their way, they will simply paralyze the process and make the entire issue
25 of service quality measurements unworkable.

1 BellSouth is not suggesting that the Commission should not consider what the
2 CLECs have to say. BellSouth merely suggests that, based on prior experience,
3 the CLECs may ask for things that simply cannot be accomplished in any
4 reasonable time and that have no significant incremental benefit in terms of
5 determining whether BellSouth is providing nondiscriminatory treatment.

6
7 Q. HOW IS DATA FOR BELLSOUTH'S PERMANENT SQM COLLECTED AND
8 HOW ARE THE RESULTS REPORTED?

9
10 A. As I mentioned earlier in my testimony, BellSouth has been involved in
11 developing an SQM for several years as a result of work being done in states
12 such as Louisiana and Georgia. In connection with the development of the SQM,
13 in early 1998, BellSouth began designing a system that could be used to collect,
14 process, and report performance data to correspond to the performance
15 measurements reflected in the SQMs. This system is called BellSouth's PMAP.
16 PMAP was fully deployed in March 1999, and it has since been continually
17 enhanced. Importantly, PMAP is designed to work with BellSouth's SQM.
18 Additions or modifications to BellSouth's SQM require corresponding
19 enhancements and changes to PMAP.

20
21 I wish to make it clear that BellSouth is not saying that it has developed a system
22 to collect data that only relates to its Permanent SQM. However, everyone
23 should recognize that with any SQM, whether it is BellSouth's, the CLECs' or
24 someone else's, the data has to be collected and if it can't be done electronically,
25 there is simply no way to gather all of the data that has to be analyzed and

1 reported. As other states have given BellSouth direction regarding the
2 appropriate SQM to use, BellSouth's data collection process has been adapted
3 to those measures. BellSouth's collection process can be modified to collect
4 additional (or different) data, but each change requires modifications to PMAP.
5 The practical effect of adopting a plan with 75,000 or more sub-metrics, which is
6 what the CLECs have proposed in other states, must be considered and weighed
7 in terms of the data collection problems against the incremental benefit the
8 additional sub-metrics would provide.

9
10 Q. HAS BELLSOUTH'S WORK IN DEVELOPING PMAP BEEN RECOGNIZED BY
11 ANY INDEPENDENT ENTITIES?

12
13 A. Yes. PMAP is recognized as a leading data collection and reporting system. It
14 was nominated for the 2000 Computerworld Smithsonian Award, which
15 recognizes outstanding accomplishments in the computing field. The following
16 language was cited in the nomination of PMAP for this award: "BellSouth's PMAP
17 data warehouse represents an extraordinary accomplishment in transferring
18 legacy system data elements into meaningful performance measurement
19 information for its wholesale customers and regulators. BellSouth sets the
20 industry standard for performance measurement data management."

21
22 BellSouth has made a tremendous commitment to PMAP. Currently, there are in
23 excess of 200 full-time personnel dedicated exclusively to the PMAP system,
24 which includes development, maintenance, testing, etc. BellSouth continues to
25 augment this work group, as necessary.

1 The PMAP system is extremely complex. This complexity is created by the
2 sheer size of the database, multiple data sources feeding PMAP and the
3 programming necessary to produce measurement reports.
4

5 Q. CAN YOU DESCRIBE THE SIZE OF THE DATABASE?
6

7 A. Yes. For example, 86 million records composing 110 Gigabytes of data had to
8 be transported and processed to produce March 2001 data. To put this in
9 perspective, one page of my testimony would require about 2 Kilobytes of
10 storage. PMAP, therefore, processes the equivalent of 55 million pages each
11 month. In other words, considering that a typical case of copy paper contains 8
12 packages of 500 sheets each, totaling 4,000 sheets, PMAP processes
13 approximately the equivalent of 13,750 cases of paper each month.
14

15 In addition to monthly processing, data must be stored for multiple months in the
16 PMAP database. The current PMAP database is approximately 2.5 Terabytes in
17 size. This translates to 1.25 billion pages of text documents or the equivalent of
18 312,500 cases of paper. To put this into perspective, a 1999 study by Sarnoff
19 Corporation on behalf of the US government put the size of the entire Internet in
20 1999 at approximately 3 Terabytes (<http://www.wavexpress.com/faq.html>).
21 Obviously because of the already enormous size of the database, the addition of
22 any new reporting requirements must be carefully evaluated to insure that they
23 provide real value.
24

1 Lastly, and most importantly, BellSouth's performance measurements have
2 nearly exhausted the capability of the existing PMAP system. As a result,
3 BellSouth is implementing a next generation PMAP platform (PMAP-NG) which is
4 currently in development. When implemented, PMAP-NG will start processing
5 the data on a daily basis as opposed to taking a snapshot of all the data once a
6 month and then processing that data over a two-week period, which is what
7 PMAP does currently. Consequently, BellSouth estimates that PMAP-NG will
8 process 1,250 million records composing over 400 Gigabytes of data and the
9 PMAP-NG database is estimated to be 4.5 Terabytes in size.

10
11 Q. WHAT IS BELLSOUTH CURRENTLY USING PMAP TO DO?

12
13 A. Currently, PMAP is being updated to generate performance reports based on the
14 SQM adopted in Georgia which defines the Interim SQM. These reports are
15 available to CLECs across BellSouth's region. PMAP is used to maintain the raw
16 data files used to generate such reports. Reports are produced on a CLEC-
17 specific and CLEC-aggregate basis for each BellSouth state and on a regional
18 basis, with applicable information concerning BellSouth's retail performance. The
19 raw data maintained in PMAP is CLEC-specific and allows each CLEC to drill
20 down to the individual service order or the individual trouble ticket. Each CLEC
21 can download its raw data file and create a spreadsheet to assess its
22 performance data.

23
24 Q. PLEASE DESCRIBE THE COMPLEXITY OF SOME OF THE PROCESSES
25 FOR ACCUMULATING DATA IN PMAP.

1 A. PMAP data feeds come from many disparate information systems that use
2 different operating platforms, data structures, and identifier codes. Moving the
3 data from one database to another is not a straightforward task. For example,
4 the data structures for one database may use a “day-month-year” format while
5 another uses a “month-day-year” format. If there are 5 million records that must
6 be moved from one database to the other, every one of the records must have its
7 date structure changed before it is read into the other database. Similarly, if a
8 record’s time stamp in one system uses a time stamp that goes down to
9 milliseconds, while another uses hundredths of a second, the time stamp must
10 be converted to a common format before moving it into the new database. In
11 PMAP, multiple checks such as these must be performed on all 86 million
12 records before the data can be transported into the PMAP database.

13
14 In addition, many performance reports require correlating bits and pieces of data
15 from different groups and their associated systems within BellSouth. As an
16 example, consider the work groups that perform the functions of Ordering,
17 Provisioning, and Maintenance & Repair. Data that is important to the Ordering
18 group may be largely irrelevant to the Provisioning and the Maintenance and
19 Repair groups. An example is the time stamp on the receipt of the Local Service
20 Request (LSR) and the completion date on the Service Order. The LSR receipt
21 time stamp is a key piece of information for the Ordering group since this group is
22 measured on Firm Order Confirmation intervals and this measurement depends
23 on the time the LSR is received. The LSR time stamp is not meaningful to the
24 Provisioning Group and it is not relevant to one of the major systems used by the
25 Provisioning Group, the SOCS. This is because the Provisioning Group and

1 SOCS operate on a Service Order, not an LSR. Conversely, the Service Order
2 completion date (date when service is installed) is not captured by the systems of
3 the Ordering Group. Yet, both the LSR receipt time stamp and the Service Order
4 Completion date are required for the measurement of Total Service Order Cycle
5 Time. Complication arises from the need to properly identify and extract these
6 key bits and pieces of data from each system and associate them so that correct
7 information can be provided. As an additional example, the identification of a
8 certain type of product might require the extraction of characters 89-93 out of a
9 110-character Provisioning code and cross-referencing it against characters 20-
10 22 of a 40 character Ordering code before the final product identification can be
11 made. These are but a few examples of the ever-increasing list of complexities
12 associated with accumulating data for PMAP.

13
14 Q. DOES THIS COMPLEXITY HAVE ANY IMPACT ON BELLSOUTH'S POSITION
15 THAT "CHANGES", IF THEY HAVE TO BE MADE, SHOULD ONLY BE MADE
16 WHERE THE CHANGE PROVIDES A SIGNIFICANT INCREMENTAL
17 IMPROVEMENT IN ASSESSING NON-DISCRIMINATORY PERFORMANCE?
18

19 A. Certainly. Because of the complexity associated with making changes in
20 BellSouth's PMAP system, it becomes both extremely costly and time consuming
21 for BellSouth to implement any ordered changes. As I stated previously, the
22 purpose of performance measurements is to provide this Commission with
23 sufficient data to decide whether or not BellSouth is providing nondiscriminatory
24 treatment to the CLECs. To require BellSouth to absorb the cost and
25 development time to make changes in PMAP, simply to appease the CLECs,

1 without thoroughly analyzing whether such changes significantly improve this
2 Commission's ability to determine disparate performance, is both unreasonable
3 and not consistent with the requirements of the Act.
4

5 Q. PLEASE ELABORATE FURTHER ON THE IMPACTS OF ADDING NEW
6 PERFORMANCE MEASURES OR MODIFYING EXISTING MEASURES IN
7 TERMS OF PMAP.
8

9 A. Whenever a new performance measurement or level of disaggregation is added
10 to the BellSouth SQM or when the existing SQM is modified, corresponding
11 changes must be made to PMAP as I have just indicated. In most cases, a
12 modification to a measurement has the same effect as a new measurement.
13 Each existing measurement represents the requirements in a state commission's
14 order. Since state commission requirements may vary from state to state,
15 modifying a measurement in one state and not in the other states in BellSouth's
16 region necessitates the duplication of measurements in PMAP based on the
17 ordered differences. Each new or modified performance measurement also
18 necessitates the development of new viewing formats on BellSouth's web-site.
19 What may appear to be a simple request to add or modify a measurement nearly
20 always involves a much larger effort. The impacts to PMAP of adding or
21 modifying the SQMs can be roughly categorized along three dimensions: (i)
22 development impacts; (ii) operational impacts; and (iii) system impacts, which I
23 will discuss in more detail below.
24

25 Q. DESCRIBE WHAT YOU MEAN BY THE DEVELOPMENT IMPACTS.

1 A. The development impacts address the requirements definition, software
2 development, and unit/system testing that must occur from end-to-end to report
3 the new information required by a new performance measure. Generating a new
4 performance measurement or modifying an existing measurement would impact
5 the PMAP system from a development standpoint in the following manner
6 (assuming the data is not currently warehoused in the PMAP database): (i) the
7 measurement or enhancement must be designed in sufficient detail to identify the
8 data required for the measure; (ii) once the required data has been determined,
9 the source systems (e.g., LEO, LON, SOCS, etc.) containing the data must be
10 identified; (iii) the source system programmers must modify the programs that
11 extract the data from their database and place it into a file available to PMAP; (iv)
12 the automated extract computer programs that PMAP uses to
13 acquire/reformat/transform the above source system file must be modified; (v)
14 the computer programs that group, transform, and aggregate the data in a
15 meaningful manner must be created and any interdependencies identified and
16 validated; (vi) the audit trail processing that tracks record counts as the data
17 moves through the various stages of PMAP must be modified; (vii) the computer
18 programs which search the databases and build the reports must be created; and
19 (viii) the new reports must be unit tested for accuracy, and then system tested in
20 a stepwise manner (regression testing) to ensure the changes have not
21 adversely affected the existing reports.

22
23 Q. WHAT ARE THE OPERATIONAL IMPACTS?
24

1 A. Operational impacts are concerned with how the processing cycle is impacted by
2 the addition of computer processing routines. Generating a new performance
3 measurement or modifying an existing measurement would affect the PMAP
4 system from an operational standpoint in the following manner: (i) the impacts to
5 the current time-constrained processing window must be evaluated (i.e., can
6 BellSouth still produce all reports within the current window and still report
7 monthly results in a reasonable period of time); (ii) the production processes,
8 such as job processing order, processing automation programs, and integrity
9 checks must be evaluated and modified; (iii) service level agreements with the
10 source data owners must be arranged so that BellSouth can receive the data in a
11 timely manner; and (iv) the bandwidth of the current data network to allow
12 BellSouth to move all the information across the existing network in a timely
13 manner must be assessed.

14
15 Q. DESCRIBE THE SYSTEM IMPACTS.

16
17 A. The system impacts address requirements for additional disk space, database
18 changes, processor loading, system reporting, security and staffing. Generating
19 a new performance measurement or modifying an existing measurement would
20 impact the PMAP system from a systems standpoint in the following manner: (i)
21 the Development, Test, and Production databases must be modified to provide
22 new space in the databases to place the new data; (ii) data storage requirements
23 must be reviewed to ensure that BellSouth has available disk storage capacity for
24 both the data itself and any mirrored data; (iii) the database and web security
25 tables must be updated to reflect who should have access to the new reports; (iv)

1 system loading assessments must be made to see whether the extra report
2 processing requires the addition of more processors so that processing windows
3 can be met; (v) the tape backup system must be examined to ensure that the
4 data can be safely backed up in a timely manner; and (vi) an assessment must
5 be made of the labor resources required to perform the new development.

6
7 Q. HOW SHOULD THE COMMISSION VIEW CHANGES TO THE SQM?

8
9 A. All that BellSouth is suggesting is that the Commission should take into account
10 the fact that the process we are talking about is incredibly complex. The CLECs
11 have been represented in every state proceeding that has brought the SQM to its
12 present position. Now they are simply going from state to state, taking another
13 bite at the apple and trying to get subsequent commissions to give them
14 something that another commission would not. There may be CLECs in this
15 proceeding that did not participate in Louisiana or Georgia, but it is impossible to
16 claim, given the level of participation by CLECs in those proceedings, that their
17 interests were not adequately represented. Given all the various components
18 and requirements for valid ongoing delivery of performance data and reports
19 described above, this Commission should only add new measurements or modify
20 existing ones if absolutely necessary.

21
22 Q. WHAT WOULD BE THE IMPACT IN TERMS OF PRODUCING RESULTS IF
23 SIGNIFICANT CHANGES ARE MADE IN THE PRESENT SQM?

24

1 A. Changes to PMAP are made in scheduled releases and these releases are
2 limited in size to allow the necessary time not only for development of the
3 software changes, but also time for significant testing to assure that the new
4 release will not negatively impact performance data that is already being
5 produced. It is unrealistic and unreasonable to assume that any change can be
6 made in PMAP to accommodate new measures or modify existing
7 measurements in 30 days, 60 days or even 90 days. BellSouth must be allowed
8 sufficient time to evaluate, develop, test and schedule any new measures or
9 measurement modifications that impact the PMAP system. In evaluating any
10 proposed changes, the Commission should evaluate whether the change results
11 in an incremental benefit that aids in the detection of discriminatory treatment,
12 versus the delay that will occur in obtaining such reports. There is clearly a
13 trade-off.

14
15 Again, it is not BellSouth's intent to try to argue that the process has advanced to
16 a point where no changes can be made. That is not the case. BellSouth will do
17 what it is lawfully directed to do, but it wants to insure that all parties involved
18 understand that this is not a simple process or one that is accomplished
19 overnight.

20

21 Q. WHERE, WHEN, AND IN WHAT FORMAT SHOULD BELLSOUTH
22 PERFORMANCE DATA AND REPORTS BE MADE AVAILABLE?

23

24 A. Performance reports are currently available electronically on a monthly basis via
25 BellSouth's web-site at <https://pmap.bellsouth.com>. Further, BellSouth commits

1 to having these reports posted by the 30th day of the month for the preceding
2 month's activity in HTML format. Data pursuant to the Permanent SQM will be
3 made available on the same PMAP website.
4

5 Today, there are over 70 operational CLECs in Kentucky. There are 105 specific
6 reports per CLEC included in the BellSouth SQM that are posted on the
7 BellSouth web site and 129 BellSouth retail and CLEC aggregate level reports
8 (data for the aggregate of all CLECs). A report contains performance data for
9 multiple related sub-metrics. If all 70 CLECs were to request reports each
10 month, this would equate to 70 CLECs times 105 reports (7,350 reports) plus the
11 129 aggregate reports for a total of 7,479 reports posted on a monthly basis in
12 Kentucky. Supporting these reports is the huge volume of underlying raw data
13 used to calculate the individual sub-metrics including 18 months of historical
14 source data. BellSouth makes every effort to validate the reports before posting.
15 Given this kind of volume, and the purpose of performance data, BellSouth
16 believes posting on the 30th day of the month is more than reasonable.
17

18 With regard to the raw data, the web-site I mentioned does allow CLECs to
19 access electronically the raw data underlying those reports to the extent such
20 reports are derived from BellSouth's PMAP. The format of this raw data is a flat
21 file that can quickly be imported into a spreadsheet or a database management
22 program for further analysis and processing by the CLEC. These reports will
23 include the highest profile ordering, provisioning, and maintenance & repair
24 measurements in which CLECs generally are interested, including, but not limited
25 to: FOC Timeliness, Reject Interval, Percent Missed Installation Appointments,

1 Average Completion Interval & Order Completion Interval Distribution, Missed
2 Repair Appointments, Customer Trouble Report Rate, and Maintenance Average
3 Duration.

4
5 While every performance report is available electronically, BellSouth does not
6 have the capability to make available electronically the raw data that does not
7 reside in PMAP. The measurements that reflect the Speed of Answer in the
8 Ordering Center and Speed of Answer in the Maintenance Center are good
9 examples. These measurements reflect the time during which a call is in queue
10 until a BellSouth representative answers the call. These work centers are
11 regional in nature and serve all CLECs, which means that hundreds of thousands
12 of calls are received in these centers each month. Although each call is
13 individually timed and the averages for the month are posted in the SQM reports,
14 it is not possible to electronically identify each and every CLEC call underlying
15 these SQM reports.

16
17 Q, WHEN SHOULD ALL THE MEASUREMENTS PROPOSED BY BELLSOUTH IN
18 EXHIBIT AJV-2 BE AVAILABLE?

19
20 A. Assuming that the Commission issues an order adopting the Permanent SQM
21 proposed by BellSouth in this proceeding, BellSouth will produce all data and
22 measurements in conformance with BellSouth's proposal by the end of fourth
23 quarter 2001.

24

1 Q. SHOULD A REVIEW PROCESS BE INSTITUTED TO CONSIDER REVISIONS
2 TO THE PERFORMANCE MEASUREMENTS THAT ARE ORDERED BY THIS
3 COMMISSION?
4

5 A. Yes. During the first two years of implementation, BellSouth proposes to
6 participate in six-month review cycles starting six months after the date the
7 Commission order in this proceeding is implemented by BellSouth. A
8 collaborative work group, which will include BellSouth, interested CLECs and the
9 Commission will review the SQM for any desired additions, needed deletions or
10 other modifications. After two years from the date of the order, the review cycle
11 may, at the discretion of the Commission, be reduced to an annual review.
12

13 These reviews are not the exclusive means to address changes in the SQM.
14 From time-to-time, BellSouth could be ordered by the Commission to modify or
15 amend the SQM or enforcement measurements if experience indicated that a
16 change was required. Nothing will preclude any party from participating in any
17 proceeding involving BellSouth's SQM or enforcement measures or from
18 advocating that those measures be modified.
19

20 Q. SHOULD PERIODIC THIRD-PARTY AUDITS OF SQM DATA AND REPORTS
21 BE REQUIRED?
22

23 A. Yes, within reason. BellSouth believes that third-party audits of the SQM data
24 and reports are appropriate and, as such, has included in its SQM as Appendix
25 C, a BellSouth audits policy. However, BellSouth's measurement data is

1 produced by a regional system and managed by the same regional organization.
2 Therefore, to the extent possible, audits should be conducted regionally since
3 many of the processes and programs are the same from state to state.
4

5 Q. HOW OFTEN SHOULD AUDITS BE CONDUCTED, AND HOW SHOULD THE
6 AUDIT SCOPE BE DETERMINED?

7
8 A. As stated in Appendix C of the Permanent SQM, "If requested by a Public
9 Service Commission or by a CLEC exercising contractual audit rights, BellSouth
10 will agree to undergo a comprehensive audit of the current year aggregate level
11 reports for both BellSouth and the CLEC(s) for each of the next five (5) years
12 (2001-2005), to be conducted by an independent third party auditor....
13 BellSouth, the PSC and the CLECs shall jointly determine the scope of the audit."
14

15 Q. IF PERIODIC THIRD-PARTY AUDITS ARE REQUIRED, WHO SHOULD BE
16 REQUIRED TO PAY THE COST OF THE AUDITS?

17
18 A. Again, as Appendix C of the Permanent SQM provides, BellSouth proposes that
19 "the cost shall be borne 50% by BellSouth and 50% by the CLECs." The CLEC's
20 half of the cost could be shared by all CLECs participating in the audit. Because
21 the audit is for the benefit of the CLECs, it seems reasonable that they help pay
22 for it.
23

24 Q. WHO SHOULD SELECT THE THIRD-PARTY AUDITOR IF A THIRD-PARTY
25 AUDIT IS REQUIRED?

1 A. As stated in Appendix C of the Permanent SQM, BellSouth proposes that “the
2 independent third party auditor shall be selected with input from BellSouth, the
3 PSC, if applicable, and the CLEC(s).” Again, the parties with a real interest in the
4 audit should participate not only in paying for the audit, but in selecting the
5 auditor. This certainly includes BellSouth and the CLECs, and BellSouth would
6 welcome the Commission’s assistance in selecting an auditor.

7

8 Q. SHOULD A CLEC HAVE THE RIGHT TO AUDIT OR REQUEST A REVIEW BY
9 BELL SOUTH FOR ONE OR MORE SELECTED MEASURES WHEN IT HAS
10 REASON TO BELIEVE THE DATA COLLECTED FOR A MEASURE IS
11 FLAWED OR THE REPORT CRITERIA FOR THE MEASURE IS NOT BEING
12 ADHERED TO?

13

14 A. No, such a request is unnecessary. An audit is not needed to validate the data
15 collected for a measure. BellSouth provides the CLECs with the raw data
16 underlying many of BellSouth’s SQM reports as well as a user manual on how to
17 manipulate the data into reports. The CLECs can use this raw data to validate
18 the results in the BellSouth SQM reports posted every month on the BellSouth
19 web site. In addition, please recall that an annual audit will be performed.

20

21 **Enforcement Mechanisms – SEEM**

22

23 Q. WHAT IS THE PURPOSE OF A SELF-EFFECTUATING ENFORCEMENT
24 MECHANISM?

25

1 A. The FCC has made it clear that the primary, if not sole, purpose of a voluntary
2 self-effectuating enforcement mechanism is to guard against Regional Bell
3 Operating Company (RBOC) “backsliding” after the RBOC begins to provide
4 interLATA services. That is, the mechanism provides additional incentives to
5 ensure that the RBOC continues to provide nondiscriminatory performance after
6 it has received the so-called “carrot” of long distance approval.

7
8 Nothing in the Act requires a self-effectuating enforcement plan. The FCC has
9 acknowledged as much in its orders. In its August 1996 Local Competition
10 Order, the FCC notes that several carriers advocated performance penalties.
11 *See Local Competition Order, 11 FCC Rcd at 15658 [¶ 305].* The FCC did not
12 adopt such performance penalties in the Local Competition Order. Instead, the
13 FCC acknowledged the wide variety of remedies available to a CLEC when it
14 believes it has received discriminatory performance in violation of the Act; see
15 *FCC’s Local Competition Order ¶ 129, 11 FCC Rcd. at 15565 (emphasizing the*
16 *existence of sections 207 and 208 FCC complaints for damages, as well as*
17 *actions under other laws and common law).* The FCC “encourage[d]” the States
18 only to adopt reporting requirements for ILECs. *Id.*

19
20 Furthermore, in its October 13, 1998 Order regarding BellSouth’s Section 271
21 application for Louisiana, the FCC reiterated that the existence of such an
22 enforcement plan is not a pre-requisite to compliance with the competitive
23 checklist, but rather is a factor that the FCC will consider in assessing whether
24 the RBOC’s entrance into the interLATA market would serve the “public interest.”
25 See FCC’s Louisiana II Order, at ¶363 and n.1136. The FCC stated that

1 “evidence that a BOC has agreed in its interconnection agreements to
2 performance monitoring” (including performance standards, reporting
3 requirements, and appropriate self-executing enforcement mechanisms) “would
4 be probative evidence that a BOC will continue to cooperate with new entrants,
5 even after it is authorized to provide in-region, interLATA services.” Id. at ¶¶363-
6 64. As a practical matter, every grant of interLATA authority to date has required
7 an enforcement mechanism. BellSouth is proposing such a plan here.
8 More recently, in its order approving Bell Atlantic’s entry into long distance in
9 New York, the FCC analyzed Bell Atlantic’s performance plan “solely for the
10 purpose of determining whether the risk of post-approval non-compliance is
11 sufficiently great that approval of its section 271 application would not be in the
12 public interest.” Bell Atlantic Order, at ¶433 n.1326.

13
14 Q. DOES THE COMMISSION HAVE AUTHORITY TO ORDER IMPLEMENTATION
15 OF A SELF-EFFECTUATING REMEDY PLAN WITHOUT BELLSOUTH’S
16 CONSENT?

17
18 A. Although I am not a lawyer, and this issue will ultimately have to be addressed by
19 lawyers who can explain the legal reasoning behind it, my understanding is that it
20 is not appropriate for a state commission to order BellSouth to implement a self-
21 executing remedy plan without BellSouth’s consent. My understanding is based
22 on the fact that enforcement mechanisms are not required by the Act or by any
23 FCC rule. To the extent that any breach of contract issue should arise, there are
24 perfectly adequate state laws and regulatory authority procedures available to
25 address such situations. BellSouth’s SQMs are fully enforceable through

1 regulatory authority complaints in the event of BellSouth's failure to meet such
2 measurements.

3
4 Q. WHEN DOES BELLSOUTH PROPOSE THAT THE SEEM PLAN BE
5 IMPLEMENTED AND BECOME EFFECTIVE?

6
7 A. Under BellSouth's proposal, any necessary payment of penalties for Kentucky
8 CLECs that have incorporated the plan into their interconnection agreements will
9 commence at such time as BellSouth exercises a grant of interLATA authority in
10 Kentucky.

11
12 The FCC appears to have made implementation of enforcement mechanisms a
13 practical condition of 271 relief. The FCC believes such a plan would be an
14 additional incentive to ensure that BellSouth continues to comply with the
15 competitive checklist after interLATA relief is granted. (See Bell Atlantic New
16 York, ¶ 429-430; Southwestern Bell Texas Order, ¶ 420-421; Southwestern Bell
17 Kansas/Oklahoma Order, ¶ 269) Enforcement mechanisms and penalties,
18 however, are neither necessary nor required to ensure that BellSouth meets its
19 obligations under Section 251 of the Act, and the FCC has never indicated
20 otherwise.

21
22 In fact, the desire for long distance relief, which is an immediate goal of
23 BellSouth's, has to be viewed as a powerful incentive for a Bell Operating
24 Company ("BOC") to meet its obligations under Section 251 of the Act, including
25 providing nondiscriminatory access to its OSS. The concept of performance

1 penalties, on the other hand, has been developed as an additional incentive for
2 continued compliance after long distance authority is granted. Therefore, it is
3 appropriate that no part of the enforcement mechanism proposal take effect until
4 the plan is necessary to serve its purpose, i.e., until after BellSouth exercises a
5 grant of interLATA authority.

6
7 Q. PLEASE GIVE AN OVERVIEW OF BELLSOUTH'S PROPOSED
8 ENFORCEMENT MECHANISM.

9
10 A. BellSouth's proposed SEEM is reflected in Exhibit AJV-3. Exhibit AJV-3 includes
11 an overview of SEEM followed by Appendix A, the Fee Schedule; Appendix B,
12 the SEEM Sub-metrics; Appendix C, the Statistical Methodology; Appendix D,
13 the Technical Description; and Appendix E, the SEEM Remedy Procedure.
14 BellSouth's SEEM is designed to generate significant payments by BellSouth
15 when discriminatory performance that materially affects a CLEC's ability to
16 compete occurs. SEEM consists of two levels of enforcement mechanisms, Tier
17 1 and Tier 2. Tier 1 payments are made directly to the CLECs and Tier 2
18 payments are made to a state agency.

19
20 Q. HOW WAS THE SEEM DEVELOPED?

21
22 A. Like the SQM, SEEM has evolved over the past several years. Because the
23 purpose of SEEM was related to interLATA relief, initial impetus was created by
24 the FCC and DOJ to develop such a plan, even though the FCC could not
25 compel the creation of the plan. Over the years, the SEEM proposal was

1 developed in workshops involving CLECs, BellSouth and commission staffs,
2 principally in Louisiana, and in meetings with the FCC and DOJ.

3
4 Q. HOW ARE PENALTY PAYMENTS CALCULATED UNDER THE SEEM?

5
6 A. The method of calculating payments is illustrated in Appendix E of Exhibit AJV-3,
7 “BST SEEM Remedy Procedure.” The payment is determined by multiplying the
8 fee per transaction from Appendix A of Exhibit AJV-3 by the appropriate volume
9 of transactions. The volume of transactions is calculated as described in
10 Appendix E of Exhibit AJV-3. This is, of course, a significant difference between
11 the plan the CLECs’ usually offer, which usually includes penalties based on
12 individual measurements rather than individual transactions. We believe our
13 “transaction” based approach is significantly better because it is scalable (i.e., the
14 more transactions where disparate performance is detected, the higher the
15 penalty).

16
17 Q. HOW IS THE AFFECTED VOLUME OF TRANSACTIONS DETERMINED
18 WHERE A BENCHMARK APPLIES?

19
20 A. For those services where there is no retail analog, that is, where BellSouth does
21 not provide the same service or a comparable service in its retail operations, the
22 proper approach is to use a “benchmark”. The benchmark should be set at the
23 minimum level required to permit an efficient competitor a meaningful opportunity
24 to compete.

25

1 The affected volume is determined by a simple comparison of the performance
2 provided to the individual CLEC to the benchmark applicable to the SEEM
3 measurement. If performance does not meet the benchmark, penalties would
4 apply to the number of transactions by which BellSouth missed the benchmark.
5 For example, assume BellSouth could be late in returning no more than 10 FOCs
6 in a month to meet the material nondiscrimination benchmark. Further assume
7 that BellSouth returned 13 FOCs late in that month. BellSouth would pay a
8 penalty on 3 transactions, which is the number of missed FOCs in excess of the
9 10 defined as material nondiscriminatory performance. This number of
10 transactions by which BellSouth missed the performance standard, 3 in the
11 above example, is called the affected volume.

12

13 Q. HOW IS THE AFFECTED VOLUME OF TRANSACTIONS DETERMINED
14 WHERE A RETAIL ANALOG APPLIES?

15

16 A. For those enforcement sub-metrics where BellSouth provides a similar service to
17 its retail operations, the calculations are more complicated due to the need to
18 apply statistical tests. That is, BellSouth will measure how it performed on the
19 retail analog, and BellSouth will measure how it performed when it provided the
20 relevant service to the CLECs. If the results show that BellSouth provided better
21 service to the CLECs, the inquiry is at an end. If, on the other hand, there is a
22 question about whether BellSouth provided nondiscriminatory service, a
23 statistical analysis, described in BellSouth witness, Dr. Mulrow's testimony, would
24 be undertaken to determine whether there was actually disparate treatment and
25 whether the treatment would materially affect a CLEC's ability to compete. An

1 example of the calculation is included in Exhibit AJV-3 under "BST SEEM
2 Remedy Procedure."

3
4 Q. CAN YOU ELABORATE ON YOUR DISCUSSION OF PERFORMANCE
5 COMPARISON FOR RETAIL ANALOGS?

6
7 A. Yes, as I said earlier, to compare performance where the standard is a retail
8 analog requires use of a sophisticated statistical test, described in Dr. Mulrow's
9 testimony. The basic statistical test described therein is used to determine
10 whether any apparent discrimination is statistically significant. If it is not, then the
11 matter would be at an end. However, there is a further question if any apparent
12 difference is statistically significant. That additional question is whether the
13 perceived discrimination is material. The test for materiality that BellSouth
14 proposes is also described in Dr. Mulrow's testimony. However, in order for Dr.
15 Mulrow to conduct the test, BellSouth had to furnish Dr. Mulrow with one
16 parameter to use in his analysis. That parameter is referred to as "delta" in the
17 statistical formula.

18
19 Because it is a source of controversy, some discussion of "delta" is appropriate
20 here. In general terms, the parameter "delta" is used to establish the difference
21 in the BellSouth and CLEC statistical means that should be regarded as material.
22 In other words, the delta provides a way to determine whether a difference in
23 performance measurements indicates that a difference in performance provided
24 by BellSouth to itself and to a CLEC is material and should trigger the application
25 of penalties.

1 Q. WHY IS IT NECESSARY TO ESTABLISH A VALUE TO BE USED TO
2 DETERMINE MATERIALITY?

3

4 A. In the FCC's Bell Atlantic Order, it was noted that random variation is inherent in
5 the ILEC's process of providing interconnection and access to unbundled
6 network elements ("UNEs"). Consequently, the FCC recognized the
7 appropriateness of determining whether or not a difference is, in fact, material.
8 Remember, the standard that applies here is whether BellSouth provides service
9 in substantially the same time and manner to CLECs and itself. Without a
10 materiality component, any statistically significant difference in performance
11 would be considered substantial, which is not the case. BellSouth's use of the
12 delta takes into account this very circumstance and creates a standard to
13 determine when the variation should be treated as material.

14

15 The statistical test discussed by Dr. Mulrow cannot determine the parameter
16 delta because a pure statistical analysis will only yield a conclusion as to whether
17 or not the difference between two results is statistically significant. The fact,
18 however, that there is a statistical difference between results does not
19 necessarily mean that the difference in the two results is material. Because the
20 objective of SEEM is to detect any service differences that could affect a
21 customer's choice of service provider, a materiality measure is appropriate.

22

23 Q. WHAT DELTA VALUES DOES BELL SOUTH USE IN SEEM?

24

1 A. In the Statistician's report *Statistical Techniques For The Analysis And*
2 *Comparison Of Performance Measurement Data* filed with the testimony of Dr.
3 Mulrow in this docket, the statisticians noted that the delta values should be
4 different when evaluating individual CLEC results and CLEC Aggregate results.
5 BellSouth addresses this by using a delta value of 1.0 to evaluate individual
6 CLEC performance (Tier 1), and a delta value of 0.5 to evaluate CLEC aggregate
7 results (Tier 2).

8
9 Q. WHAT DOES THIS MEAN?

10
11 A. Using Dr. Mulrow's formulas, this means that individual CLEC results within one-
12 half standard deviation of BellSouth's results are not materially different.
13 Likewise, the delta value for Tier 2 means that a difference of results within one-
14 quarter standard deviation is not material. I say one-half and one-quarter
15 because Dr. Mulrow's formulas take the assigned delta and divide the delta in
16 half to get the number of standard deviations involved. BellSouth believes that
17 its parameter choices, based on its reasoned business judgment, are
18 appropriate.

19
20 To illustrate, suppose the average OCI for BellSouth residential services is 2
21 days with a standard deviation of one day. That means that 68% of BellSouth's
22 OCIs would fall in a range of one day and three days. Now suppose that the
23 mean for the CLECs was two days, two hours. Just looking at the two numbers,
24 assuming the difference was statistically significant, would suggest that the
25 CLECs were receiving discriminatory treatment. However, because the CLEC

1 number falls within half of a standard deviation determined by BellSouth's results,
2 the difference would not be material in my example.

3

4 Q. WHY HAS BELLSOUTH SELECTED THE VALUES FOR THE PARAMETER
5 DELTA THAT YOU HAVE DESCRIBED?

6

7 A. The values for "delta" that I have recommended are consistent with the order by
8 the Louisiana Public Service Commission in Docket U-22252, Subdocket C. The
9 Louisiana Commission after several years of proceedings, determined that delta
10 should be set at 1.0 for Tier 1 and 0.5 for Tier 2 on an interim basis in order to
11 establish historical evidence as to the appropriateness of these values for delta.
12 This is a perfectly logical approach here in Kentucky as well. As BellSouth
13 suggested above, there is no absolutely "right" delta, which means that some
14 experience will have to be gained in order to adjust it to the level that
15 appropriately balances the interests of the parties. Setting delta too low,
16 however, will simply result in a shift of money from BellSouth to the CLECs, even
17 if BellSouth is providing nondiscriminatory service to the CLECs.

18

19 Q. WHEN SHOULD THE SELECTION OF DELTA BE REVIEWED?

20

21 A. BellSouth recommends that the values of delta be reviewed after a period of six
22 months to determine their validity and to make any necessary adjustments. This
23 recommendation comes after nearly two years of workshops in Louisiana, and
24 analyses involving CLECs, BellSouth and the Louisiana Commission. Given the

1 complexity of this exercise, it would be beneficial to utilize the efforts of all parties
2 in Louisiana instead of repeating those efforts in Kentucky.

3
4 Q. CHANGING SUBJECTS, WHAT ARE THE APPROPRIATE ENFORCEMENT
5 MEASURES TO BE REPORTED BY BELL SOUTH FOR SEEM?

6
7 A. The SEEM measurements set are generally key measures in areas that affect
8 customers. This measurement set is patterned after those used in New York and
9 Texas. The New York plan resulted in a “critical” measurement set, and the
10 Texas plan identified a prioritized set of “high, medium, low” impact measures.
11 As I understand it, the New York and Texas Commissions charged the CLECs
12 with identifying the measurement set that was the most “customer impacting.”

13
14 BellSouth’s experience in providing access to IXCs, combined with the outcome
15 of prioritized measures from New York and Texas, has resulted in BellSouth
16 offering a similar key set of customer-impacting metrics. These enforcement
17 measurements are listed in the Permanent SQM, Exhibit AJV-2, and summarized
18 in Exhibit AJV-3. As an example, please refer once again to measurement P-3:
19 Percent Missed Installation Appointments in Exhibit AJV-2, and in particular the
20 SEEM sections listed for this measurement. Percent Missed Installation
21 Appointments is an indicator of BellSouth’s ability to achieve commitments to its
22 customers. The SEEM Measure table indicates that this is a Tier 1 and a Tier 2
23 measurement. Specific SEEM measurements for this SQM measurement
24 category are listed in the SEEM Disaggregation Table for 7 product categories.
25 When these product categories are compared to the retail analog, and if

1 materially disparate performance is detected, a penalty amount is calculated as
2 previously described.

3

4 Q. SHOULD THE PERFORMANCE STANDARDS TO BE APPLIED IN THE
5 REMEDY PLAN DIFFER FROM THE PERFORMANCE STANDARDS THAT
6 APPLY TO MEASURE NONDISCRIMINATORY PERFORMANCE IN THE
7 PERFORMANCE MEASUREMENT PLAN?

8

9 A. Yes, in some cases. The SEEM measurements often aggregate several SQM
10 sub-metrics, which may necessitate using a slightly different standard. Similarly,
11 where a SEEM standard is in Tier 2, it may be appropriate to use a different
12 standard from the SQM since Tier 2 is supposed to address chronic, persistent,
13 material disparity.

14

15 Q. HOW SHOULD THE COMMISSION DETERMINE THE MEASUREMENTS TO
16 INCLUDE IN AN ENFORCEMENT MECHANISM?

17

18 A. The structure of an enforcement plan should include clearly articulated, pre-
19 determined measurements and standards that encompass a comprehensive
20 range of carrier-to-carrier performance. The enforcement plan should only
21 include measurements of key outcomes where a failure to produce that outcome
22 would have a direct, significant effect on competition. The enforcement plan
23 should not include measures that are interrelated because that simply penalizes
24 BellSouth two, three or four times for the same problem, which is just not

1 appropriate. The enforcement plan clearly should not include all measurements
2 that the Commission adopts in the SQM.

3
4 Q. CAN YOU ELABORATE ON THE TREATMENT OF PERFORMANCE
5 MEASURES THAT ARE SHOWN TO BE DUPLICATIVE OF OR
6 "CORRELATED" WITH OTHER MEASURES?

7
8 A. Generally, remedies should not apply to performance measures that are shown
9 to be duplicative of or "correlated" with other measures. It would be
10 inappropriately punitive to require BellSouth to pay (at minimum) twice for the
11 same act or inaction. Attached, as Exhibit AJV-4, is a matrix which shows
12 measurements in the Permanent SQM that BellSouth feels are duplicative or are
13 correlated with other measures. While the overlap is not always absolute, the
14 measures are clearly related and, to avoid an inappropriate duplication, only one
15 of each class of interdependent measures should be used. To do otherwise
16 would subject BellSouth to the possibility of making multiple payments for the
17 same failure.

18
19 Q. ARE THERE OTHER REASONS WHY TIER 1 OF SEEM SHOULDN'T
20 INCLUDE ALL OF THE MEASUREMENTS THAT ARE IN THE SQM?

21
22 A. Yes, although the question of the interdependence of the measures is clearly a
23 very important reason, other reasons include the fact that Tier 1 payments are
24 made to individual CLECs. Thus, only those measurements that can be
25 calculated on a CLEC-specific basis can be included. In other instances, the

1 measurement is simply a diagnostic measurement or measures a process that is
2 in parity by design and obviously should not be included as a SEEM
3 measurement.

4

5 Q IS THERE ANY AUTHORITY FOR YOUR POSITION THAT SEEM SHOULD
6 NOT INCLUDE ALL MEASUREMENTS IN THE SQM?

7

8 A. Yes. The FCC rejected the argument that all measures used to monitor
9 performance be included in an enforcement plan by stating:

10 We also believe that the scope of performance covered by the Carrier-to-
11 Carrier metrics is sufficiently comprehensive, and that the New York
12 Commission reasonably selected key competition-affecting metrics from this
13 list for inclusion in the enforcement plan. We disagree with commenters who
14 suggest that additional metrics must be added to the plan in order to ensure
15 its effectiveness, and note that the New York Commission has considered
16 and rejected similar arguments. Bell Atlantic Order, at ¶439.

17

18 Q. DO SMALL UNIVERSES PRESENT ANY PARTICULAR PROBLEMS IN THE
19 KIND OF ANALYSIS YOU ARE DISCUSSING?

20

21 A. Yes, and this issue is important as it addresses the question of whether
22 benchmarks should be adjusted when universes are small, due to the fact that
23 only a limited number of transactions occurred. This is a legitimate concern
24 because it is possible that BellSouth is delivering compliant performance but the
25 compliant performance is not recognized when performance is based on small

1 universes. As an example, if a metric has a benchmark of 90%, and a CLEC has
2 9 transactions, then each of the 9 transactions must meet the standard for the
3 sub-metric. If there is just one failure, the actual performance is 88.8% (8 divided
4 by 9). BellSouth proposes a 95% Confidence Small Sample Size table as listed
5 in Exhibit AJV-3, Section E, page 42 to adjust benchmarks for a small universe.
6

7 Q. PLEASE EXPLAIN HOW THE SMALL SAMPLE SIZE TABLE WORKS.

8
9 A. The small sample size table simply identifies what the benchmark should be
10 when the number of transactions is small. For example, assume a measurement
11 normally has a 95% benchmark, but there were only five transactions in a given
12 month. In this case, missing only one transaction would result in an 80%
13 performance level. The small sample size table would adjust the benchmark
14 from 95% to 80% for a universe of 5 transactions. This is a common statistical
15 practice.
16

17 Q. YOU PREVIOUSLY STATED THERE WERE TWO TIERS OF SEEM
18 PAYMENTS. WHAT IS THE PURPOSE OF TIER 1 PAYMENTS?

19
20 A. Payments under Tier 1 are designed to compensate an individual CLEC when
21 materially discriminatory performance by BellSouth would likely harm that
22 CLEC's ability to compete. Thus, Tier 1 payments are made directly to the
23 affected CLEC each month. Where materially discriminatory performance occurs
24 in consecutive months, the Tier 1 payment per failure increases. The SEEM

1 measurements that could trigger payments under Tier 1 cover all of the key
2 outcomes that could have a material impact on a CLEC's ability to compete.

3
4 Q. PLEASE DESCRIBE THE AREAS OF PERFORMANCE ADDRESSED BY TIER
5 1 OF SEEM.

6
7 A. The areas of performance addressed are as follows:

8 Firm Order Confirmation (FOC) – A FOC is a notification to the CLEC that an
9 LSR that it sent to BellSouth has passed all of the edits and that a service order
10 to complete the request has been generated. Both timeliness and completeness
11 are measured.

12 Reject – A reject is a notice to the CLEC that an LSR did not pass an edit and
13 identifies the edit that it did not pass. Both timeliness and completeness are
14 measured.

15 Missed Installation Appointments – These measurements monitor whether
16 BellSouth completes the installation of services by the committed due date.

17 Average Order Completion Interval - These measurements monitor the amount
18 of time it takes BellSouth to install service after a FOC has been generated.

19 Coordinated Customer Conversion - These measurements track BellSouth's
20 performance in cutting over unbundled loops.

21 Provisioning Troubles within 30 Days – These measurements indicate the level
22 of accuracy on BellSouth completed orders. If a service was not installed
23 properly, the customer would likely report a trouble within the first 30 days.

24 Missed Repair Appointments – These measurements address whether BellSouth
25 is keeping committed appointments to repair customer's service.

1 Customer Trouble Report Rate – These measurements monitor whether
2 BellSouth is providing the same quality of service to CLECs that it provides to its
3 retail customers based on initial and repeated direct or referred troubles reported
4 within a calendar month.

5 Maintenance Average Duration – These measurements allow a CLEC to
6 determine if BellSouth clears troubles in equivalent time frames for CLEC
7 customers as it does for its retail customers.

8 Repeat Troubles – These measurements indicate whether BellSouth and CLEC
9 customers are experiencing recurring troubles at a disparate rate.

10 Trunk Group Performance – This measurement compares the extent to which
11 BellSouth originated calls to CLECs customers are blocked compared to calls to
12 BellSouth retail customers.

13 Collocation – This measurement monitors whether BellSouth is providing
14 collocation space by the committed due date.

15

16 Q. WHAT SEEM MEASUREMENTS DETERMINE WHETHER PAYMENTS UNDER
17 TIER 1 ARE REQUIRED?

18

19 A. The measurements to be included in Tier 1 are listed in BellSouth's SEEM,
20 attached as Exhibit AJV-3 to my testimony.

21

22 Q. WHY IS THE SET OF MEASUREMENTS YOU PROPOSE FOR TIER 1
23 APPROPRIATE?

24

1 A. The purpose of SEEM is to assess an automatic, timely and meaningful penalty
2 where significant key processes are materially disparate between BellSouth and
3 CLECs. As you can see, every key process where CLEC-specific data is
4 available that directly affects the CLECs customers is addressed by Tier 1 of
5 SEEM.

6
7 Q. SHOULD THERE BE ADDITIONAL REMEDIES FOR DISCRIMINATORY ILEC
8 PERFORMANCE THAT AFFECTS MORE THAN ONE CLEC?

9
10 A. BellSouth's proposal provides for additional remedies when BellSouth delivers
11 non-compliant performance that affects more than one CLEC over a consecutive
12 three-month period. Tier 1 applies to each individual CLEC and Tier 2 applies to
13 performance for all CLECs. Nothing further should be required. BellSouth will
14 pay every CLEC to which it has delivered non-compliant performance in a
15 particular month. Any suggestion that additional monthly penalties should apply
16 just because more than one CLEC is involved ignores the basic nature of plan,
17 which is transaction-based.

18
19 Q. WHAT IS THE PURPOSE OF TIER 2 OF SEEM?

20
21 A. Tier 2 is designed to require additional payments if materially disparate
22 performance is more widespread and persistent. Consequently, payments are
23 based on performance for the CLEC industry averaged over three months.

24

1 As with the Tier 1 structure, the Tier 2 enforcement plan should include clearly
2 articulated pre-determined measurements and standards that encompass a
3 comprehensive range of carrier-to-carrier performance. However, Tier 2
4 enforcement metrics should focus on those processes where recurring failures
5 can have a significant effect on the CLEC industry. The resulting penalty is paid
6 to the Kentucky State Treasury or other State agency as designated by this
7 Commission.

8
9 Q. PLEASE DESCRIBE FURTHER WHEN PAYMENTS UNDER TIER 2 OCCUR.

10
11 A. BellSouth's Tier 2 methodology is based on a failure in a Tier 2 sub-metric for
12 three consecutive months such as January, February, March or February, March,
13 April. BellSouth proposes that when there is an indication of materially disparate
14 treatment at the CLEC aggregate level for a Tier 2 sub-metric for three
15 consecutive months, the affected volumes for the three-month period will be
16 averaged and multiplied by the appropriate penalty fee per item to arrive at the
17 amount of the remedy. As an example, consider the 4-month period February,
18 March, April and May. Assume that the CLEC industry received service below
19 the standard for a Tier 2 sub-metric for each of these months. Using the three
20 month averaging, the affected volumes for the months of February, March and
21 April would be averaged and multiplied by the appropriate Tier 2 penalty per item
22 to arrive at a remedy amount. Then, the affected volumes for the months of
23 March, April and May would be averaged and multiplied by the appropriate Tier 2
24 penalty to arrive at the next month's remedy amount.

25

1 BellSouth strongly believes that at least three months of data should be used in
2 order to determine a pattern of persistent disparate treatment to the CLEC
3 industry. Because many factors can affect performance, use of one month's data
4 is not sufficient to determine persistent disparate treatment. Also, payments are
5 made to individual CLECs under Tier 1 each month. Tier 2 payments are in
6 addition to the Tier 1 payments.

7
8 Q. WHAT SEEM MEASUREMENTS ARE INCLUDED IN TIER 2 OF SEEM?

9
10 A. The measurements to be included in Tier 2 are noted in BellSouth's SEEM,
11 attached as Exhibit AJV-3 to my testimony.

12
13 Q. HOW WERE THE MEASUREMENTS FOR TIER 2 ESTABLISHED?

14
15 A. The basis for Tier 2 begins with Tier 1. As I stated earlier, Tier 1 addresses key
16 outcomes. All Tier 1 SEEM measurements are included in Tier 2. In addition,
17 Tier 2 adds 18 additional measurements, most of which are only measured for
18 CLECs in the aggregate.

19
20 Q. WHAT TYPE OF CAP, IF ANY, IS APPROPRIATE FOR INCLUSION IN THE
21 ENFORCEMENT PLAN?

22
23 A. Any voluntary, self-effectuating remedy plan adopted by the Commission should
24 contain an absolute monetary cap. In agreeing to a voluntary enforcement plan,
25 BellSouth or any ILEC has to balance its responsibilities to its shareholders and

1 its customers. In this case, BellSouth's customers include both CLECs and retail
2 customers. BellSouth should not be required to jeopardize its ability to fulfill its
3 responsibilities to all of these groups solely for the benefit of one group, as might
4 be the result of an un-capped plan. Again, the purpose of this voluntary
5 enforcement plan is to prevent "backsliding" when BellSouth obtains interLATA
6 relief in Kentucky. The absolute cap that BellSouth proposes would equate to
7 36% of BellSouth's net revenue in Kentucky. Clearly, this is a more than
8 adequate deterrent to "backsliding" and balances the interest of each group of
9 stakeholders.

10
11 Also, you can see that operation of enforcement mechanisms is very complex
12 and there is little experience in applying them. An absolute cap provides a fail-
13 safe to prevent the mechanisms from spiraling out of control. Such a mechanism
14 is even more necessary in these early stages of enforcement mechanism
15 implementation.

16
17 Q. IS THERE ANY PRECEDENT FOR BELL SOUTH'S PROPOSAL TO USE AN
18 ABSOLUTE CAP?

19
20 A. Yes. The FCC has now approved enforcement plans for five states and in each
21 instance has imposed an absolute cap such as the one BellSouth proposes here.

22
23 Q. YOU HAVE REFERRED TO BELL SOUTH'S PROPOSAL AS AN ABSOLUTE
24 CAP. WHAT OTHER TYPES OF CAP PROPOSALS HAVE YOU SEEN?

25

1 A. The only other proposal that I have encountered is a so-called procedural cap.
2 However, the procedural cap is not a cap at all as I will explain later.

3

4 Q. PLEASE COMPARE AN ABSOLUTE CAP TO A PROCEDURAL CAP.

5

6 A. The BellSouth enforcement plan sets an automatic financial cap (absolute cap)
7 based on a meaningful percentage of BellSouth's net revenues in Kentucky. A
8 procedural cap, on the other hand, only determines the point at which the ILEC is
9 permitted to seek relief from additional penalties from the state commission.
10 Thus, the procedural cap is not really a cap at all, but rather a threshold that must
11 be reached before the process of setting a cap begins.

12

13 A procedural cap would simply defer the determination of the absolute cap.
14 Furthermore, the proceedings, testimony, analyses, filing of evidence, and
15 hearing needed to set an absolute cap after a procedural cap has been reached
16 could take months. During this time, the penalty payments would presumably
17 continue, leading to the potential for irreversible financial damage to BellSouth.
18 For example, assume that a procedural cap is set at 36% of BellSouth's net
19 revenue and that cap is reached in September of a particular year, so BellSouth
20 asks to be relieved of any further payments. During the months that would be
21 needed to determine where the absolute cap should be set, penalties would
22 continue to accrue. If the Commission were to ultimately determine that 36% is
23 an appropriate absolute cap, how would the payments in excess of this amount
24 made during the pendency of the proceeding be recovered? (i.e., it is unlikely
25 that the CLECs would voluntarily return any excess payments.)

1 While BellSouth strongly disagrees with the concept of a procedural cap, if the
2 Commission deems this approach necessary, the Commission should structure
3 the process to reduce the prospect of irreversible financial harm to BellSouth.
4 BellSouth recommends that (1) the procedural cap or threshold should be set
5 well below what any reasonable absolute cap might be, and (2) after the
6 procedural cap is reached, penalty payments above the procedural cap should
7 be suspended until the Commission sets the absolute cap.

8
9 In any event, it is important to remember that the self-effectuating cap in the
10 enforcement plan is not an overall cap on BellSouth's liability for performance
11 failures. As the FCC has pointed out, a penalty plan is not "the only means of
12 ensuring that [the RBOC] continues to provide nondiscriminatory service to
13 competing carriers." *Bell Atlantic Order*, ¶ 435. Thus, any characterization of the
14 enforcement cap as an absolute cap on BellSouth's liability for performance
15 failures is misleading.

16
17 Q. WHAT IS THE APPROPRIATE VALUE OF AN ABSOLUTE CAP?

18
19 A. As I stated previously, BellSouth believes that the appropriate value of the
20 absolute cap should be 36% of BellSouth's net revenues resulting from its
21 Kentucky operations. This 36% cap is consistent with the cap amounts approved
22 by the FCC in approving the long distance applications of SBC-Texas and Bell
23 Atlantic and more recently in the Kansas and Oklahoma applications.

24
25 Q. FOR WHAT PERIOD SHOULD THE ABSOLUTE CAP APPLY?

1 A. BellSouth believes that an absolute cap should be applied on an annual basis.

2

3 Q. WHEN SHOULD BELLSOUTH BE REQUIRED TO MAKE PAYMENTS FOR
4 TIER 1 AND TIER 2 NONCOMPLIANCE, AND WHAT SHOULD BE THE
5 METHOD OF PAYMENT?

6

7 A. Tier 1 payments would be sent to the affected CLEC by the 15th of the second
8 month following the month for which disparate performance is detected. In other
9 words, payment would be rendered by the 15th of March for January
10 performance.

11

12 Tier 2 payments would be sent to the Kentucky State Treasury or designated
13 state agency by the 15th of the second month following the three months
14 average for which disparate performance is detected. In other words, payment
15 would be rendered by the 15th of May for January through March performance.

16

17 Q. SHOULD BELLSOUTH BE REQUIRED TO PAY INTEREST IF BELLSOUTH IS
18 LATE IN PAYING A CLEC THE REQUIRED AMOUNT FOR TIER 1?

19

20 A. Yes, at a reasonable level. BellSouth's enforcement proposal provides for the
21 payment of interest for each day BellSouth fails to make penalty payments.
22 BellSouth proposes to pay the CLEC interest calculated at six (6) percent simple
23 interest per annum for each day after the due date that BellSouth fails to pay the
24 CLEC the required amount.

25

1 Q. WHAT IS THE APPROPRIATE PROCESS FOR HANDLING TIER 1 DISPUTES
2 REGARDING PENALTIES PAID TO A CLEC?

3

4 A. If a CLEC disputes the amount paid to the CLEC under Tier 1 enforcement
5 mechanisms, BellSouth proposes that the CLEC submit a written claim to
6 BellSouth within sixty (60) days after the date of the performance measurement
7 report from which the dispute arose. BellSouth shall investigate all claims and
8 provide the CLEC with written findings within thirty (30) days after receipt of the
9 claim. If BellSouth determines the CLEC is owed additional amounts, BellSouth
10 shall pay the CLEC such additional amounts within thirty (30) days after its
11 findings along with six (6) percent simple interest per annum. However, the
12 CLEC shall be responsible for all administrative costs associated with resolution
13 of disputes that result in no actual payment being owed by BellSouth.

14

15 BellSouth further proposes that this dispute process include provisions to
16 discourage submitting frivolous disputes, where the amount in dispute is
17 negligible or where it is consistently determined that the penalty payment already
18 provided by BellSouth is correct.

19

20 Q. WHAT IS THE APPROPRIATE MECHANISM FOR ENSURING THAT ALL
21 PENALTIES UNDER TIER 1 AND TIER 2 ENFORCEMENT MECHANISMS
22 HAVE BEEN PAID AND ACCOUNTED FOR?

23

24 A. At the end of each calendar year, BellSouth will have an independent auditing
25 and accounting firm certify that all penalties under Tier 1 and Tier 2 enforcement

1 mechanisms were paid and accounted for in accordance with Generally
2 Accepted Accounting Principles.

3

4 Q. WHAT LIMITATION OF LIABILITY, IF ANY, SHOULD BE APPLICABLE TO
5 BELLSOUTH?

6

7 A. BellSouth should not be obligated for penalties under Tier 1 or Tier 2
8 enforcement mechanisms for noncompliance with a performance measurement if
9 such noncompliance was the result of any of the following: a Force Majeure
10 event; an act or omission by a CLEC that is contrary to any of its obligations
11 under its Interconnection Agreement with BellSouth; an act or omission by a
12 CLEC that is contrary to any of its obligations under the Act, Commission rule, or
13 state law; or an act or omission associated with third-party systems or
14 equipment.

15

16 Q. SHOULD REGULATORY PROCEEDINGS TO AFFIRM OR MODIFY REMEDY
17 PAYMENTS BE AUTOMATICALLY TRIGGERED WHEN THE PAYMENTS
18 EXCEED A CERTAIN AMOUNT?

19

20 A. No. BellSouth's SEEM plan is a self-executing remedy plan. Should BellSouth
21 fail to meet the specific measurements ordered, the penalties and remedies of
22 each tier become effective. As each tier is triggered, the penalties provide
23 increasing financial incentives for BellSouth to remedy these issues. To require
24 an automatic regulatory proceeding when penalty payments reach a certain
25 amount would place an unnecessary burden on both the Commission and on

1 BellSouth, and does nothing to speed up resolution of the issues. Further, there
2 are other legal remedies available to the CLECs should the issues not be
3 resolved after exhaustion of the remedies available under the two tiers.
4

5 Q. SHOULD BELLSOUTH BE PENALIZED WHEN BELLSOUTH FAILS TO POST
6 THE PERFORMANCE DATA AND REPORTS TO THE WEB SITE BY THE DUE
7 DATE?
8

9 A. No. BellSouth should not be subjected to an automatic penalty for the late
10 posting of reports. While BellSouth will make every reasonable effort to make
11 every deadline imposed upon it, with the volume of data and reports that I
12 discussed above, it would be foolish to assume that there will never be a problem
13 posting a report. However, there is little evidence that late reporting is harmful to
14 the CLECs or to the Commission. Furthermore the increasing complexity of the
15 measurements and sub-metrics, the volume of data processed and the validation
16 of reports prior to posting impose additional burdens on BellSouth that should not
17 be subjected to a penalty. Although BellSouth will make every effort to complete
18 this substantial undertaking by the due date each month, BellSouth should not be
19 automatically penalized every time it fails in this effort. Certainly, if there was
20 some systemic failure in posting reports there could be some need for
21 Commission oversight until the problem is resolved, but merely missing a filing
22 date by a day or two should not be cause for concern.
23

24 Q. WHAT IS THE APPROPRIATE DEFINITION OF "AFFILIATES" FOR
25 PURPOSES OF BELLSOUTH'S REPORTING OF PERFORMANCE RESULTS

1 IN ITS SQM REPORT?

2
3 A. The appropriate definition of the term “affiliate” is the definition in the Act. The
4 term “Affiliate” is defined in the Act as follows:

5 AFFILIATE - The term “affiliate” means a person that (directly or indirectly)
6 owns or controls, is owned or controlled by, or is under common
7 ownership or control with, another person. For purposes of this
8 paragraph, the term “own” means to own an equity interest (or the
9 equivalent thereof) of more than 10 percent. (47 U.S.C. 153(1))

10
11 Q. UNDER WHAT CIRCUMSTANCES WOULD IT BE APPROPRIATE TO
12 COMPARE BELLSOUTH'S PERFORMANCE TO ITS AFFILIATE CLEC WITH
13 BELLSOUTH'S PERFORMANCE TO OTHER CLECs?

14
15 A. The only possible BellSouth affiliate data that might be appropriately considered
16 is that which is necessary to make a meaningful, “apples-to-apples” comparison
17 between CLECs and any BellSouth affiliate that is in a position comparable to
18 that of the CLECs. It makes no sense to scrutinize data that relates to BellSouth
19 affiliates whose business is not comparable to CLEC business, for example,
20 BellSouth International’s provision of service in Venezuela. Thus, the only
21 affiliate data that might properly be considered is that which relates to a
22 BellSouth-affiliated CLEC. For example, if a BellSouth-affiliated CLEC that is
23 certified to provide local service were operating within the BellSouth ILEC’s
24 certificated service territory in a state, it would be appropriate to consider the
25 performance that BellSouth provides to this CLEC in that state. Performance

1 data for an affiliated CLEC will produce in the same manner as data for any other
2 CLEC.

3
4 Q. IN ITS ORDERS GRANTING INTERLATA AUTHORITY, HOW HAS THE FCC
5 USED AFFILIATE DATA?

6
7 A. In its Bell Atlantic New York Order, the FCC discussed basing the retail analog
8 on the performance that the BOC provides to “itself, its customers or its
9 affiliates”. At the same time, the FCC held that nondiscriminatory access had
10 been demonstrated because there was “no statistically significant difference
11 between Bell Atlantic’s provision of service to competitive LECs and its own retail
12 customers....” (emphasis added) (See Bell Atlantic New York Order, ¶ 58; see
13 *also* Southwestern Bell Kansas/Oklahoma Order, ¶ 58) In other words,
14 performance to affiliates did not play any specific role in the FCC’s comparative
15 analysis.

16 For example, the FCC found that Bell Atlantic provided nondiscriminatory access
17 to interconnection trunking because the trunking that it provides to CLECs “is
18 equal in quality to the interconnection that Bell Atlantic provides to its own retail
19 operations....” (See Bell Atlantic New York Order, ¶ 68; see *also* Southwestern
20 Bell Texas Order, ¶ 67; Southwestern Bell Kansas/Oklahoma Order, ¶ 223)

21 Likewise, the FCC found that Bell Atlantic was compliant with Checklist Item 6
22 (unbundled local switching) based upon a finding that “the features, functions and
23 capabilities of the switch [provided to the CLEC] include the basic switching
24 function as well as the same basic capabilities that are available to the incumbent
25 LEC’s customers.” (See Bell Atlantic New York Order, ¶ 343; see *also*

1 Southwestern Bell Texas Order, ¶ 339; Southwestern Bell Kansas/Oklahoma
2 Order, ¶ 242) In a third example, the FCC found that Bell Atlantic was compliant
3 with Checklist Item 7 (911 and E911) based on the conclusion that Bell Atlantic
4 had satisfied the requirement to “maintain the 911 database entries for
5 competing LECs with the same accuracy and reliability that it maintains the
6 database entries for its own customers.” (See Bell Atlantic New York Order, ¶
7 349; see *also* Southwestern Bell Texas Order, ¶ 344; Southwestern Bell
8 Kansas/Oklahoma Order, ¶ 255).

9
10 Thus, a review of these orders makes it clear that, in order to determine whether
11 a retail analog has been met, the FCC simply compared, in a statistically valid
12 manner, the performance provided to CLECs to the performance that the BOC
13 provided to its retail customers. Performance related to affiliates played no role
14 in this analysis.

15
16 Q. HAVE OTHER STATE COMMISSIONS IN BELLSOUTH’S TERRITORY
17 ADDRESSED THE ISSUE OF AFFILIATE PERFORMANCE DATA?

18
19 A. Yes. In its January 12, 2001 ruling in Docket No. 7892-U, the GPSC refused to
20 adopt a proposal for comparisons between the performance for CLECs and the
21 performance for the BellSouth affiliate, concluding that if a CLEC believes that
22 BellSouth is showing preference to its affiliate, the CLEC may file a complaint
23 with the Commission. (GPSC Order at p. 13).

24
25 On February 12, 2001, in Docket No. U-22252, Subdocket C, the Louisiana PSC

1 approved its Staff's Final Recommendation that included a proposal for a
2 possible future review of affiliate data. Thus, the Commission recommended that
3 if the activity in Louisiana of BellSouth's affiliated CLEC reaches a certain
4 threshold, then it should be reviewed in the context of future audits to determine
5 whether there is any statistically significant indication of discriminatory treatment.
6 The Staff recommended no other action at this time, and the Louisiana PSC
7 concurred.

8
9 Q. IN LIGHT OF THE ABOVE, WHAT DOES BELL SOUTH PROPOSE?

10
11 A. As with all other CLECs, BellSouth will produce measurements for its CLEC, both
12 individually and in the aggregate. The BellSouth-affiliated CLEC will receive the
13 same treatment, use the same systems, receive the same measurements and be
14 entitled to the same remedies as any other CLEC operating in BellSouth's
15 service territory. In addition, when developing the aggregate CLEC data to use
16 in determining performance for purposes of the enforcement mechanism, the
17 performance of the BellSouth-affiliated CLEC will be included. Further, BellSouth
18 will produce periodic performance results for its affiliated CLEC just as it does for
19 any other CLEC operating in its territory.

20
21 Thus, the Commission will have the necessary information to allow it to evaluate
22 BellSouth's performance to its CLEC relative to all other CLECs. Regarding what
23 it should do with this information, the Commission could reasonably adopt either
24 the Georgia approach (i.e., no action) or the Louisiana approach (i.e., using the
25 data to monitor only, at least for the time being). The Commission should not,

1 however, unnecessarily complicate the plan by prematurely attempting to tie
2 BellSouth-affiliate performance to the voluntary enforcement plan based on
3 concerns about the hypothetical occurrence of future discrimination.
4

5 Q. SHOULD BELLSOUTH'S PERFORMANCE TO ITS AFFILIATES BECOME A
6 STANDARD FOR COMPARISON WHERE THAT PERFORMANCE IS
7 SUPERIOR TO BELLSOUTH'S PERFORMANCE TO ITS RETAIL
8 CUSTOMERS?
9

10 A. No. Only in limited circumstances is BellSouth's performance to its affiliates
11 even relevant to BellSouth's performance to CLECs. In the Bell Atlantic Order,
12 the FCC set forth once again the standards that apply to determine whether a
13 BOC has met the competitive checklist in §272(c)(2)(b). Specifically, "the BOC
14 must demonstrate that it is offering interconnection and access to network
15 elements on a nondiscriminatory basis." (¶ 44). Reiterating its prior Orders, the
16 FCC stated the analysis that is required to make this determination:

17 [F]or those functions the BOC provides the competing carriers that are
18 analogous to the functions a BOC provides to itself in connection with its
19 own retail service offerings, the BOC must provide access to competing
20 carriers in 'substantially the same time and manner' as it provides to itself.
21 Thus, where a retail analog exists, a BOC must provide access equal to
22 (i.e., substantially the same as) the level of access that the BOC provides
23 itself, its customers or its affiliates, in terms of quality accuracy and
24 timeliness. For those functions that have no retail analog, the BOC must

1 demonstrate that the access it provides to competing carriers would offer
2 an efficient carrier ‘a meaningful opportunity to compete’. (*Id.*)

3
4 The satisfaction of the “meaningful opportunity to compete” standard is frequently
5 demonstrated by meeting a performance benchmark. In the Bell Atlantic case,
6 the FCC specifically approved the New York Commission’s use of performance
7 benchmarks for functions for which there are no retail analogs. (Order, ¶ 57).

8
9 Thus, the performance that BellSouth provides to itself only comes into play in
10 the context of the specific application of a retail analog. When a sub-metric is
11 based upon a benchmark, this is simply not an issue. Further, although the
12 language quoted-above discusses basing the retail analog on the performance
13 that the BOC provides to “itself, its customers or its affiliates,” the test actually
14 applied by the FCC in the Bell Atlantic case focuses almost exclusively on the
15 BOC’s retail service offerings. Specifically, in that case, the FCC held that
16 nondiscriminatory access had been demonstrated because there was “no
17 statistically significant difference between Bell Atlantic’s provision of service to
18 competitive LECs and its own retail customers . . .”(¶ 58).

19
20 Q. DOES THIS CONCLUDE YOUR TESTIMONY?

21
22 A. Yes.
