

STATE OF GEORGIA

COUNTY OF FULTON

BEFORE, ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared W. Keith Milner, who being by me first duly sworn, deposed and said that:

He is appearing as a witness before the Kentucky Public Service Commission in "Investigation Concerning the Propriety of InterLATA Services by BellSouth Telecommunications, Inc. Pursuant to the Telecommunications Act of 1996," KY PSC Case No. 2001-105, and if present before the Commission and duly sworn, his direct testimony would be set forth in the annexed transcript consisting of 116 pages and 9 exhibit(s).

W. Keith Milner

SWORN TO AND SUBSCRIBED BEFORE ME this
15th day of May, 2001.

NOTARY PUBLIC

MICHEALE F. HOLCOMB
Notary Public, Douglas County, Georgia
My Commission Expires November 3, 2001

1 BELLSOUTH TELECOMMUNICATIONS, INC.
2 DIRECT TESTIMONY OF W. KEITH MILNER
3 BEFORE THE KENTUCKY PUBLIC SERVICE COMMISSION
4 CASE NO. 2001-105
5 MAY 18, 2001

6
7 Q. STATE YOUR NAME, YOUR BUSINESS ADDRESS, AND YOUR POSITION WITH
8 BELLSOUTH TELECOMMUNICATIONS, INC. (“BELLSOUTH”).

9
10 A. My name is W. Keith Milner. My business address is 675 West Peachtree Street,
11 Atlanta, Georgia 30375. I am Senior Director - Interconnection Services for BellSouth. I
12 have served in my present position since February 1996.

13
14 Q. PLEASE SUMMARIZE YOUR BACKGROUND AND EXPERIENCE.

15
16 A. My business career spans over 30 years and includes responsibilities in the areas of
17 network planning, engineering, training, administration, and operations. I have held
18 positions of responsibility with a local exchange telephone company, a long distance
19 company, and a research and development company. I have extensive experience in all
20 phases of telecommunications network planning, deployment, and operations in both the
21 domestic and international arenas.

22
23 I graduated from Fayetteville Technical Institute in Fayetteville, North Carolina, in 1970,
24 with an Associate of Applied Science in Business Administration degree. I graduated
25 from Georgia State University in 1992 with a Master of Business Administration degree.

1 Q. HAVE YOU TESTIFIED PREVIOUSLY BEFORE ANY STATE PUBLIC SERVICE
2 COMMISSION?

3

4 A. I have previously testified before the state Public Service Commissions in Alabama,
5 Florida, Georgia, Kentucky, Louisiana, Mississippi, and South Carolina, the Tennessee
6 Regulatory Authority, and the North Carolina Utilities Commission on the issues of
7 technical capabilities of the switching and facilities network, the introduction of new
8 service offerings, expanded calling areas, unbundling, and network interconnection.

9

10 Q. HOW IS YOUR TESTIMONY ARRANGED?

11

12 A. My testimony is divided into the following sections:

13 Part A: Executive Summary: Pages 2 to 14.

14 The Executive Summary Section contains an overview of the network-related
15 offerings BellSouth makes available to Competitive Local Exchange Carriers
16 (“CLECs”) through BellSouth’s approved interconnection agreements and
17 Statement of Generally Available Terms and Conditions (“SGAT”).

18 Part B: Comprehensive Discussion of the Availability of Network-Related Offerings to
19 CLECs: Pages 14 to 116.

20 Part B contains an extensive discussion of the availability of required offerings in
21 Commission-approved interconnection agreements.

22

23 PART A: EXECUTIVE SUMMARY

24

25 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY TODAY?

1 A. The purpose of my testimony is to document the means by which BellSouth satisfies the
2 network requirements of the Competitive Checklist set forth in Section 271(c)(2)(B) of
3 the Telecommunications Act of 1996 (“Act”). In doing so, I will describe the network-
4 related offerings that BellSouth makes available to CLECs in Kentucky through
5 BellSouth’s approved interconnection agreements and SGAT.

6

7 Q. HOW IS YOUR TESTIMONY ORGANIZED?

8

9 A. I discuss each checklist item in order. Within my discussion of various checklist items, I
10 introduce affidavits from a number of BellSouth subject matter experts on the topics of
11 (A) collocation; (B) access to poles, ducts, conduits and rights-of-way; (C) operator
12 services and directory assistance (“OS/DA”); (D) white pages listings; (E) Local Number
13 Portability (“LNP”); and (F) 911 and E911.

14

15 Q. WHAT WILL YOUR TESTIMONY DEMONSTRATE?

16

17 A. My testimony will demonstrate that BellSouth currently is in compliance with all the
18 network requirements of the competitive checklist. Moreover, I will show that BellSouth
19 has a legal obligation to provide required offerings in Commission-approved
20 interconnection agreements. In addition to the interconnection agreements cited herein,
21 Exhibit CKC-3 to the testimony of Cynthia Cox sets forth the citations to various
22 interconnection agreements that evidence BellSouth’s legally binding obligations to
23 provide the network requirements of the competitive checklist. BellSouth refers the
24 Commission to CKC-3 as evidence of BellSouth’s checklist compliance. The Kentucky
25 Public Service commission issued an Advisory Opinion in Case No. 96-608 on July 8,

1 1999, in which the Commission found that BellSouth satisfied seven of the fourteen
2 checklist items. I will reference this decision as appropriate when I discuss each item.

3
4 Q. WHERE CAN THE COMMISSION FIND ADDITIONAL TECHNICAL
5 INFORMATION ON THE OFFERINGS DISCUSSED HEREIN?

6
7 A. BellSouth provides detailed administrative information, technical information, and
8 procedures for ordering facilities and services in a number of guides, technical service
9 descriptions, and manuals, all of which are available on BellSouth's Internet website at
10 (<http://www.interconnection.bellsouth.com/guides/guides.html>) and
11 (http://www.interconnection.bellsouth.com/products/tech_ref.html). This website is
12 available to the Commission should the Commission desire additional detail on any of the
13 offerings discussed herein.

14
15 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
16 COMPLIANCE WITH CHECKLIST ITEM 1: INTERCONNECTION?

17
18 A. As of March 31, 2001, BellSouth had provisioned 8,820 trunks interconnecting its
19 network with the networks of CLECs in Kentucky (that is, trunks from CLECs' switches
20 to BellSouth's switches). In its nine-state region, BellSouth had installed 421,220 trunks
21 from CLECs' switches to BellSouth's switches as of that same date. As of March 31,
22 2001, BellSouth had provided 203,850 two-way trunks (including transit trunks) to a total
23 of 92 CLECs across BellSouth's nine-state region. In Kentucky, BellSouth has provided
24 3,783 two-way trunks (including transit trunks) to 16 CLECs who also have ordered and
25 been provided trunk groups to BellSouth's local tandem switches.

1 In Kentucky, as of March 31, 2001, BellSouth had completed 198 physical collocation
2 arrangements, with two (2) in progress, for over 20 different CLECs, of which 141 are
3 cageless physical collocation arrangements. Physical collocation arrangements were
4 established in 30 different central offices out of a total of 178 central offices in Kentucky
5 as of March 31, 2001. As of March 31, 2001, there were 5,303 physical collocation
6 arrangements in place for CLECs throughout BellSouth's nine-state region. Of these,
7 3,353 were cageless physical collocation arrangements. An additional 161 physical
8 collocation arrangements were in progress for over 43 different CLECs as of March 31,
9 2001.

10
11 In Kentucky, as of March 31, 2001, there were two (2) virtual collocation arrangements
12 in progress, however there were two (2) virtual collocation arrangements in service
13 located in one (1) BellSouth central office. Across BellSouth's nine-state region, over 40
14 different CLECs have requested and BellSouth had provided 361 virtual collocation
15 arrangements with construction of an additional 26 arrangements underway as of March
16 31, 2001.

17
18 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
19 COMPLIANCE WITH CHECKLIST ITEM 2: NONDISCRIMINATORY ACCESS TO
20 NETWORK ELEMENTS?

21
22 A. As of March 31, 2001, BellSouth had 14,635 loop and port combinations in place for
23 CLECs in Kentucky and 303,257 such combinations in place for CLECs across
24 BellSouth's nine-state region. In addition, BellSouth had 23 loop and transport
25 combinations in place for CLECs in Kentucky.

1 BellSouth has also provided over 80 access terminals to CLECs in its nine-state region
2 for the purpose of gaining access to sub-loop elements.

3

4 Q. WHAT EVIDENCE DOES BELL SOUTH HAVE THAT INDICATES IT IS IN
5 COMPLIANCE WITH CHECKLIST ITEM 3: ACCESS TO POLES, DUCTS,
6 CONDUITS, AND RIGHTS-OF-WAY?

7

8 A. As of May 4, 2001, CLECs in Kentucky had executed with BellSouth 43 license
9 agreements and 102 license agreements region-wide, (both state-specific and multi-state)
10 that allow them to attach their facilities to BellSouth's poles and to place their facilities in
11 BellSouth's ducts and conduits. Since July 1997, BellSouth has received 49 requests in
12 Kentucky for access to poles, ducts, conduits, and rights-of-way from seven (7) CLECs
13 with no requests being denied. Similarly, CLECs have leased approximately 195,000
14 feet of conduit space in BellSouth's nine-state region as a result of CLEC requests, of
15 which 3,500 feet are in Kentucky. The Kentucky Commission has previously ruled that
16 BellSouth satisfies this checklist requirement (Advisory Opinion, page 5).

17

18 Q. WHAT EVIDENCE DOES BELL SOUTH HAVE THAT INDICATES IT IS IN
19 COMPLIANCE WITH CHECKLIST ITEM 4: LOCAL LOOP?

20

21 A. As of March 31, 2001, in Kentucky, BellSouth had provisioned 364 two-wire
22 Asymmetrical Digital Subscriber Line ("ADSL") loops; and one (1) two-wire High Bit
23 Rate Digital Subscriber Line ("HDSL") loop to over ten (10) different CLECs in
24 Kentucky. As of the same date, BellSouth had provisioned within its region 14,102 two-

1 wire ADSL loops, 451 two-wire HDSL loops, and 46 four-wire HDSL loops to over 90
2 different CLECs.

3
4 While CLECs in Kentucky have not purchased unbundled sub-loop elements, BellSouth
5 has provided over 500 unbundled sub-loop elements across its nine-state region.

6
7 BellSouth has no dark fiber arrangements in place in Kentucky; however, BellSouth has
8 ten (10) dark fiber arrangements in place in two (2) other states within BellSouth's nine-
9 state region.

10
11 As of April 1, 2001, BellSouth had provisioned 2,542 line sharing arrangements across
12 BellSouth's nine-state region and 166 line sharing arrangements in Kentucky.

13
14 In February 2001, CLECs made 4,283 mechanized Loop Makeup ("LMU") inquiries
15 region-wide. In Kentucky, CLECs made 116 mechanized LMU inquiries. From
16 November 2000 through February 2001, CLECs made 549 manual LMU inquiries
17 region-wide, with none in Kentucky.

18
19 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
20 COMPLIANCE WITH CHECKLIST ITEM 5: LOCAL TRANSPORT?

21
22 A. As of March 31, 2001, BellSouth had provided 228 dedicated local transport trunks to
23 CLECs in Kentucky. BellSouth has provided 10,907 dedicated trunks providing
24 interoffice transport to CLECs in its nine-state region as of that same date.

25

1 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
2 COMPLIANCE WITH CHECKLIST ITEM 6: LOCAL SWITCHING?

3
4 A. As of March 31, 2001, BellSouth had two (2) unbundled switch ports in service in
5 Kentucky. Region-wide, BellSouth had 388 unbundled switch ports in service as of that
6 same date. Additionally, in connection with its combined loop/port combination offering,
7 BellSouth had 14,365 switch ports in service in Kentucky and 303,257 in service
8 regionally.

9
10 BellSouth offers two methods of customized routing to CLECs: Advanced Intelligent
11 Network (“AIN”) and Line Class Codes (“LCCs”). BellSouth has tested both methods
12 and both currently are available.

13
14 To date, no CLEC has requested BellSouth’s AIN method of customized routing.
15 BellSouth stands ready to provide the AIN method upon request. BellSouth has provided
16 the LCC method of customized routing to one CLEC in Georgia. No CLEC in Kentucky
17 has requested this method of customized routing; BellSouth, however, stands ready to
18 provide it.

19
20 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
21 COMPLIANCE WITH CHECKLIST ITEM 7: 911/E911, DIRECTORY ASSISTANCE
22 AND OPERATOR CALL COMPLETION?

23
24 A. As of March 31, 2001, CLECs had requested and BellSouth had provided 96 E911
25 trunks for CLECs in Kentucky. In its nine-state region, BellSouth had 4,400 trunks in

1 service connecting CLECs' switches with BellSouth's E911 arrangements as of that same
2 date. In Kentucky, 13 CLECs were sending mechanized updates to BellSouth for
3 inclusion in the 911 database as of March 31, 2001; and in BellSouth's nine-state region,
4 66 CLECs were doing so as of that same date.

5
6 As of March 31, 2001, CLECs in Kentucky had 65 directory assistance trunks in place
7 between those CLECs' switches and BellSouth's Directory Assistance ("DA") platform.
8 In BellSouth's nine-state region, there were 2,929 such directory assistance trunks in
9 place serving CLECs. In BellSouth's nine-state region, 30 CLECs were purchasing
10 Directory Assistance Access Service ("DAAS") and 41 CLECs were purchasing
11 Directory Assistance Call Completion ("DACC") from BellSouth as of March 31, 2001.

12
13 As of March 31, 2001, five (5) service providers were using BellSouth's Kentucky
14 subscriber listings, via Directory Assistance Database Service ("DADS"), to provide DA
15 service and third party listing data to end users. Nine (9) service providers were using
16 DADS across BellSouth's nine-state region as of that same date. As of March 1, 2001,
17 two (2) service providers in the region were using Direct Access to Directory Assistance
18 Service ("DADAS") to provide the service to CLECs.

19
20 As of March 31, 2001, BellSouth had provided CLECs in Kentucky with 59 operator
21 services trunks. Across its nine-state region, BellSouth had provided CLECs with 2,903
22 operator services trunks as of that same date. In Kentucky, BellSouth had provided
23 CLECs with two (2) verification trunks as of March 31, 2001. Across its nine-state
24 region, BellSouth had provided CLECs with 503 verification trunks as of that same date.

25

1 BellSouth offers four service levels of branding to CLECs when CLECs order Directory
2 Assistance and/or Operator Call Processing. The options are: BellSouth branding,
3 unbranded, custom branding, and self-branding. Unbranded, custom branding, and self-
4 branding are all provided via customized routing. BellSouth will complete its
5 deployment of Originating Line Number Screening (“OLNS”) in Kentucky by July 13,
6 2001.

7
8 Q. WHAT EVIDENCE DOES BELL SOUTH HAVE THAT INDICATES IT IS IN
9 COMPLIANCE WITH CHECKLIST ITEM 8: WHITE PAGES LISTINGS?

10
11 A. BellSouth has long made its white pages listing capabilities available to independent
12 LECs and other service providers. Because methods and procedures have been in place
13 to allow other carriers access to BellSouth’s white pages listing capabilities for many
14 years, the necessary methods and procedures pursuant to which CLECs may obtain such
15 listings are business as usual for BellSouth. The Kentucky Commission has previously
16 ruled that BellSouth satisfies this checklist requirement (Advisory Opinion, page 6).

17
18 Q. WHAT EVIDENCE DOES BELL SOUTH HAVE THAT INDICATES IT IS IN
19 COMPLIANCE WITH CHECKLIST ITEM 9: NUMBER ADMINISTRATION?

20
21 A. The Kentucky Commission has previously ruled that BellSouth satisfies this checklist
22 requirement (Advisory Opinion, p 7). At this time, Bellsouth was performing the central
23 office code assignment function. At this time, BellSouth no longer performs this
24 function. NeuStar assumed all North American Numbering Plan Administrator
25 (“NANPA”) responsibilities on November 17, 1999 when the Federal Commissions

1 Commission ("FCC") approved the transfer of Lockheed-Martin's Communication
2 Industry Service division to NeuStar.

3
4 As to its responsibilities, BellSouth has responded to CLEC concerns about accurate and
5 timely activation of NXX codes by establishing, effective May 15, 1998, its NXX
6 activation Single Point of Contact ("SPOC") to provide assistance to CLECs and
7 Independent LECs. The NXX SPOC processes requests for NXX activity coordination,
8 and provides information concerning BellSouth's architecture arrangements, assistance in
9 trouble resolution for code activation, and assistance in preparing the Code Request. If a
10 CLEC or independent LEC intends to interconnect directly with BellSouth, or if
11 interconnection arrangements with BellSouth are already in place, the CLEC or
12 independent LEC should send to BellSouth a courtesy copy of its Central Office Code
13 Request in conjunction with the submission of its CO Code Request to the NANPA
14 (NeuStar). If the CLEC gives BellSouth a copy of its Central Office Code Request,
15 BellSouth is better able to activate the Central Office Code in BellSouth's network.

16
17 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
18 COMPLIANCE WITH CHECKLIST ITEM 10: ACCESS TO DATABASES AND
19 ASSOCIATED SIGNALING?

20
21 A. BellSouth's signaling service is available as evidenced by the fact that, as of May 7,
22 2001, ten (10) CLECs had directly connected to BellSouth's signaling network in
23 Kentucky.

24

1 BellSouth's region-wide Line Information Database ("LIDB") processed more than 1.5
2 billion queries from CLECs and others during the period from January 1997 through
3 February 2001.

4
5 As of April 1, 2001, BellSouth has over 70 Calling Name ("CNAM") database
6 customers, consisting of both CLEC and independent LECs, across BellSouth's nine-state
7 region.

8
9 BellSouth has offered independent LECs and other service providers, access to its Toll
10 Free Number database for years. The necessary methods and procedures for obtaining
11 such access by CLECs are business as usual for BellSouth. Moreover, the availability of
12 these services is evidenced by the fact that, from January 1997 through March 31, 2001,
13 CLECs and other service providers across BellSouth's nine-state region completed
14 approximately 8.2 billion queries to BellSouth's Toll Free Number database. The
15 Kentucky Commission has previously ruled that BellSouth satisfies this checklist
16 requirement (Advisory Opinion, page 7).

17
18 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
19 COMPLIANCE WITH CHECKLIST ITEM 11: SERVICE PROVIDER NUMBER
20 PORTABILITY?

21
22 A. The Kentucky Commission has previously ruled that BellSouth satisfies this checklist
23 requirement (Advisory Opinion, page 8). At the time, BellSouth was utilizing interim
24 Number Portability. BellSouth ported 2,456 lines in Kentucky using Interim Number
25 Portability ("INP"). However, as of May 2, 2001, BellSouth had converted 1,236 (50%)

1 of those lines to Local Number Portability (“LNP”). In its region, BellSouth ported
2 117,010 numbers, of which 107,773 (92%) have been converted to LNP as of that same
3 date.

4
5 BellSouth continued to offer INP in each central office in Kentucky until LNP was
6 implemented, which began in December 1998. As of March 31, 2001, BellSouth had
7 ported 26,613 business directory numbers and 110 residence directory numbers in
8 Kentucky using LNP. In its nine-state region, BellSouth has ported 1,113,649 business
9 and 133,703 residence directory numbers as of March 31, 2001, which confirms the
10 availability of LNP.

11
12 Q. WHAT EVIDENCE DOES BELL SOUTH HAVE THAT INDICATES IT IS IN
13 COMPLIANCE WITH CHECKLIST ITEM 12: LOCAL DIALING PARITY?

14
15 A. BellSouth's interconnection arrangements do not require any CLEC to use access codes
16 or additional digits to complete local calls to BellSouth customers. Neither are BellSouth
17 customers required to dial any access codes or additional digits to complete local calls to
18 the customers of any CLEC.

19
20 While BellSouth is unable to determine the full extent of CLEC dialing policies,
21 BellSouth is not aware of any complaints from CLEC customers that they are required to
22 dial any access codes or additional digits to complete local calls. The Kentucky
23 Commission has previously ruled that BellSouth satisfies this checklist requirement
24 (Advisory Opinion, pages 8-9).

25

1 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
2 COMPLIANCE WITH CHECKLIST ITEM 13: RECIPROCAL COMPENSATION?

3

4 A. Reciprocal compensation arrangements are provided for in BellSouth's interconnection
5 agreements as well as through its SGAT. The Kentucky Commission has previously
6 ruled that BellSouth satisfies this checklist requirement (Advisory Opinion, page 10).
7 However, reciprocal compensation is discussed further in the testimony of Cynthia Cox.

8

9 Q. WHAT EVIDENCE DOES BELLSOUTH HAVE THAT INDICATES IT IS IN
10 COMPLIANCE WITH CHECKLIST ITEM 14 RESALE OF THE INCUMBENT
11 LEC'S RETAIL TELECOMMUNICATIONS SERVICES AT A DISCOUNT?

12

13 A. As of March 31, 2001, there were 121,031 units being resold by CLECs in Kentucky
14 while 3,002,701 were being resold throughout BellSouth's region.

15

16 PART B: COMPREHENSIVE DISCUSSION OF THE AVAILABILITY OF
17 NETWORK-RELATED OFFERINGS TO CLECS.

18

19 **CHECKLIST ITEM 1: INTERCONNECTION**

20

21 Q. GENERALLY DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST
22 ITEM 1.

23

24 A. According to the FCC, interconnection refers "to the physical linking of two networks for
25 the mutual exchange of traffic." *Local Competition Order*, ¶ 176. Checklist Item 1

1 obligates BellSouth to provide CLECs access to points of interconnection that are equal
2 in quality (as defined by 47 C.F.R. § 51.331) to what BellSouth provides itself, and that
3 meet the same technical criteria and standards used in BellSouth's network for a
4 comparable arrangement, except where a CLEC requests otherwise. 47 U.S.C. §
5 251(c)(2)(C) and (D) and 47 C.F.R. § 51.305(a)(3), (4).¹ As detailed below, BellSouth's
6 interconnection agreements and its Kentucky SGAT fully satisfy this mandate.

7
8 Checklist item 1 has three requirements. First, BellSouth must provide interconnection at
9 any technically feasible point in the carrier's network. Second, BellSouth must provide
10 CLECs with interconnection that is at least equal in quality to that provided by BellSouth
11 to itself. Third, BellSouth must provide interconnection on rates, terms and conditions
12 that are just, reasonable and nondiscriminatory.

13
14 **POINTS OF INTERCONNECTION**

15
16 Q. DOES BELLSOUTH PROVIDE INTERCONNECTION AT ANY TECHNICALLY
17 FEASIBLE POINT?

18
19 A. Yes. Local interconnection is available at any technically feasible point in BellSouth's
20 network, including meet point interconnection arrangements, on terms and conditions that
21 are just, reasonable and nondiscriminatory. 47 U.S.C. § 251(c)(2); 47 C.F.R. §
22 51.305(a)(2); *see* Interconnection Agreement between BellSouth and e.spire

¹ *See also, Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket Nos. 96-98 & 95-185, 11 FCC Rcd 15499, 15614 (1996) (“Local Competition Order”), modified on recon., 11 FCC Rcd 13042 (1996), vacated in part on other grounds sub nom. Iowa Utils. Bd. V. FCC, 120 F. 3d 753 (8th Cir. 1997), cert. granted sub nom. AT&T Corp. v. FCC, 118 S. Ct. 879 (1998).

1 Communications, Inc. (“e.spire Agmnt”), GTC-A, § 7.0; ATT.1. Consistent with FCC
2 rules, BellSouth makes interconnection available at the following points: line-side of the
3 local end office switch; trunk-side of the local end office switch; trunk interconnection
4 points for local end office and tandem switches; central office cross-connect points; out-
5 of-band signal transfer points; and the points of access to unbundled elements. *See*
6 Interconnection Agreement Between BellSouth and NewSouth Communications, Corp.
7 (“NewSouth Agmnt”), Att. 3, § 1.2. CLECs have the option to interconnect at only one
8 technically feasible point in each LATA. *See* NewSouth Agmnt. Att.3, § 1.2. In cases in
9 which dual entrance points are available in a given central office building, and space is
10 available, BellSouth will make dual entry facilities available to CLECs. *See* NewSouth
11 Agmnt., Att. 4, § 5.2.1. Moreover, a CLEC may request, via the Bona Fide Request
12 (“BFR”) process, to utilize another interconnection point when it is determined to be
13 technically feasible.² *See* NewSouth Agmnt., Att. 3, § 1. BellSouth will provide ordering
14 and provisioning of interconnection services that is equal to the ordering and provisioning
15 services BellSouth provides to itself. *See* NewSouth Agmnt., Att. 6.

16
17 **MEANS OF INTERCONNECTION**

18
19 Q. WHAT MEANS OF INTERCONNECTION DOES BELLSOUTH OFFER?

20
21 A. BellSouth offers the following means of interconnection: (1) physical collocation; (2)
22 virtual collocation; (3) assembly point arrangements; (4) fiber optic meet arrangements;
23 and (5) interconnection via purchase of facilities from the other party. *See* e.spire

² The BFR process, and the intervals associated with it, are addressed in the testimony of Cynthia Cox.

1 Agmnt., Att. 3, §§ 1.1; 1.11; 1.8; Att. 4; SGAT, § I.C. BellSouth provides equal-in-
2 quality interconnection on terms and conditions that are just, reasonable, and
3 nondiscriminatory in accordance with the requirements of Sections 251(c)(2) and
4 252(d)(1). Moreover, a CLEC may request, via the BFR process, to utilize another
5 means of interconnection when it is determined to be technically feasible. *See e.spire*
6 *Agmnt., Att. 3, § 1.1.*

7
8 Q. DESCRIBE MULTIPLE TANDEM ACCESS (MTA).

9
10 A. BellSouth MTA provides for LATA-wide BellSouth transport and termination of CLEC-
11 originated local and BellSouth transported intraLATA traffic by establishing a Point of
12 Interconnection at a BellSouth access tandem with routing through multiple BellSouth
13 access tandems as required. The terms and conditions for such offering are set forth in
14 interconnection agreements. *See NewSouth Agmnt., Att. 3, § 1.9.*

15
16 **INTERCONNECTION TRUNKS**

17
18 Q. DESCRIBE THE TRUNKING ARRANGEMENTS AVAILABLE TO CLECS FOR
19 ROUTING TRAFFIC.

20
21 A. BellSouth provisions, maintains, and repairs interconnection trunks for CLECs in a
22 manner that is equal in quality to the way in which BellSouth provisions trunks for its
23 own services. 47 C.F.R. § 51.305(a)(3); *see also* NewSouth Agmnt., Att. 3. BellSouth
24 designs its interconnection facilities to meet the same technical criteria and service
25 standards that are used within its own network. *See e.spire Agmnt., Att. 3, §§ 3.2 – 3.3.*

1 BellSouth offers CLECs various options to route local/intraLATA toll traffic and transit
2 traffic over separate trunk groups or over a single trunk group. *See* e.spire Agmnt., Att.
3 3; NewSouth Agmnt., Att. 3.

4
5 First, BellSouth provisions local/intraLATA toll trunks for traffic between CLEC end
6 users and BellSouth end users or Wireless Service Providers and vice versa. Local traffic
7 or local/intraLATA toll traffic may be delivered at the BellSouth local tandem, the
8 BellSouth access tandem, or the BellSouth end office. Local/intraLATA toll trunks may
9 use multi-frequency (“MF”) or Signaling System 7 (“SS7”) signaling and may be one-
10 way or two-way. *See* e.spire Agmnt., Att. 3, § 2; NewSouth Agmnt., Att. 3, § 2.6. In
11 addition, BellSouth provides transit trunks for traffic between a CLEC and a third party
12 such as an Independent Company, Interexchange Carrier, or another CLEC (i.e., where a
13 BellSouth end user is not involved). Transit trunk groups are generally two-way trunks,
14 but may be built as one-way trunks. They may use MF or SS7 signaling. Transit
15 intraLATA toll traffic from the CLEC must be delivered to the BellSouth access tandem.
16 Transit local traffic may be delivered to the BellSouth access tandem or to the BellSouth
17 local tandem. *See* e.spire Agmnt., Att. 3.

18
19 If the CLEC chooses, additional trunk groups may be established for operator services,
20 directory assistance, emergency services and intercept. *See* e.spire Agmnt., Att. 3.

21
22 Q. ARE CLECS PURCHASING INTERCONNECTION TRUNKS?

23
24 A. Yes. As of March 31, BellSouth had provisioned 8,820 trunks interconnecting its
25 network with the networks of CLECs in Kentucky (that is, trunks from CLECs’ switches

1 to BellSouth's switches). In its nine-state region, BellSouth had installed 421,220 trunks
2 from CLECs' switches to BellSouth's switches as of that same date. As of March 31,
3 2001, BellSouth had provided 203,850 two-way trunks (including transit trunks) to a total
4 of 92 CLECs across BellSouth's nine-state region. In Kentucky, BellSouth has provided
5 3,783 two-way trunks (including transit trunks) to 16 CLECs who also have ordered and
6 been provided trunk groups to BellSouth's local tandem switches.

7
8 Q. HOW DO CLECS REQUEST INTERCONNECTION TRUNKS?

9
10 A. CLECs request interconnection trunks by submitting an Access Service Request ("ASR")
11 to BellSouth's Interconnection Purchasing Center ("IPC"). BellSouth established the IPC
12 during the second quarter of 1998 to facilitate BellSouth's handling of ASRs submitted
13 by the CLECs and payment of CLECs' reciprocal compensation charges. The IPC
14 receives ASRs from the CLECs, captures information required for Carrier Access Billing
15 System ("CABS") billing purposes, screens the ASR for accuracy, and routes the ASR
16 via the Telcordia (formerly Bell Communications Research, Inc. or "Bellcore") Exchange
17 Access Control and Tracking ("EXACT") System to BellSouth's Circuit Capacity
18 Management ("CCM") center. The BellSouth CCM Center establishes the trunk group
19 identification for new trunk groups or increases the trunk quantities in BellSouth's
20 mechanized systems in the case of trunk augmentations. The ASR is then forwarded via
21 EXACT to BellSouth's Circuit Provisioning Group ("CPG"). The CPG is responsible for
22 issuing required trunk and facilities orders to BellSouth's Network Infrastructure Support
23 Center ("NISC"), which prepares required switch translations, and BellSouth's Local
24 Interconnection Switching Center ("LISC"), which coordinates the testing and turn-up of
25 the trunks. The LISC forwards the orders to BellSouth's Work Management Center

1 (“WMC”) and BellSouth’s Field Work Groups (“FWGs”) for testing and turn-up of the
2 trunks. *See* BellSouth’s Local Interconnection and Facility Based Ordering Guide.

3
4 From July 1999 through March 2001, BellSouth's IPC processed 152 orders from CLECs
5 for interconnection trunks in Kentucky and processed 6,920 orders from CLECs across
6 BellSouth's nine-state region.

7
8 Q. HOW DOES BELLSOUTH PROCESS ITS OWN TRUNK AUGMENTATIONS TO
9 BELLSOUTH’S POINT OF INTERCONNECTION WITH CLECS?

10
11 A. For trunks originating on BellSouth’s network and terminating on the CLEC’s network,
12 the process for establishing and augmenting trunks is the same as the CLEC process to
13 establish interconnection trunks with BellSouth, except for the billing. The CCM issues
14 an “external” ASR to the CLEC and an “internal” ASR to the IPC. The IPC screens the
15 “internal” ASR for accuracy, and routes the ASR via the EXACT System to the CCM
16 Center. The CCM Center establishes the trunk group identification for new trunk groups
17 or increases the trunk quantities in BellSouth’s mechanized systems in the case of trunk
18 augmentations. The ASR is then forwarded via EXACT to the CPG. The CPG is
19 responsible for issuing required trunk and facilities orders to the NISC, which prepares
20 required switch translations, and BellSouth’s LISC, which coordinates the testing and
21 turn-up of the trunks. The LISC forwards the orders to BellSouth’s Work Management
22 Center and BellSouth’s Field Work Groups for testing and turn-up of the trunks.

23
24 Q. DISCUSS BELLSOUTH’S PROCESS FOR FORECASTING THE NUMBER OF
25 TRUNKS REQUIRED TO PROVIDE INTERCONNECTION SERVICES.

1 A. All trunk forecasting and servicing for CLEC local and intraLATA toll trunk groups is
2 based upon the same industry standard objectives that BellSouth uses for its own trunk
3 groups. BellSouth uses the standard objective of two (2) percent overall call blocking
4 during the time-consistent average busy hour in the busy season which consists of one (1)
5 percent blocking from the end office to the local tandem and one (1) percent blocking
6 from the local tandem to the end office. When an access tandem serves as the
7 intermediary switch, the standard objective is one and one-half (1.5) percent overall
8 blocking during the time-consistent average busy hour in the busy season. This consists
9 of one-half (.5) percent blocking on the common transport trunk group from the end
10 office to the access tandem and one (1) percent blocking from the access tandem to the
11 end office.

12
13 BellSouth's forecasting process is designed to determine the amount of traffic that will be
14 handled by each central office, and the number of trunks that will be required to carry
15 that traffic during the forecast period (normally 5 years). BellSouth's General Trunk
16 Forecast (the "GTF") is maintained daily and includes forecasts both for BellSouth traffic
17 and CLEC traffic.

18
19 Twice a year, the BellSouth LISC initiates written requests for forecasts from all CLECs
20 who have a presence in any of the nine BellSouth states. The forecasting periods cover
21 January - June and July - December. The LISC provides the CLECs' forecasts to the
22 BellSouth CCM Centers in each state. The CLEC forecasts are necessary in order to
23 incorporate the CLEC's requirements into BellSouth's GTF.

24

1 To prepare the GTF, BellSouth begins with the number of trunks currently in service.
2 BellSouth then calculates a growth factor (that is, the percentage of growth expected over
3 the next forecast period as well as anticipated growth in traffic that may be generated by
4 new services.) This data is measured using “busy hour” information, measured and
5 gathered using a BellSouth system, the Network Information Warehouse, that conforms
6 with national industry standards. BellSouth also adjusts for planned network
7 rearrangements, such as switch replacements, relocations, or additions. The growth
8 factor is then applied to the trunks currently in service.

9
10 As CLECs interconnect to BellSouth’s network, the transitioning of traffic from
11 BellSouth to the CLEC often requires more trunks than would normally carry the traffic
12 in question when BellSouth was the sole provider of service. The purpose of the CLEC
13 forecast is to identify locations and estimated quantities to be used in developing factors
14 to account for these transitional effects in the network. After BellSouth’s growth factor is
15 applied to the trunks in service, BellSouth applies these transitional factors. After these
16 adjustments for growth and transitional factors are taken into account, BellSouth’s
17 forecast is reflected in the GTF.

18
19 Q. DISCUSS THE FORECASTING RESPONSIBILITIES OF BELLSOUTH AND THE
20 CLECS.

21
22 A. BellSouth and the CLECs are jointly responsible for forecasting, monitoring, and
23 servicing all two-way trunk groups between the two networks. *See* NewSouth Agmnt.,
24 Att. 3, § 3.6. BellSouth is responsible for forecasting, monitoring, and servicing the one-
25 way trunk groups terminating to CLECs. CLECs are responsible for forecasting,

1 monitoring and servicing the one-way trunk groups to BellSouth, including terminating,
2 transit, operator services, directory assistance, and E911 trunks. *See e.spire Agmnt., Att.*
3 *3, § 3.6.* Standard trunk traffic engineering methods are used as described in Bellcore
4 document SR-TAP-000191, Trunk Traffic Engineering Concepts and Applications or as
5 otherwise mutually agreed to by the parties.

6
7 BellSouth will use its best efforts in conjunction with the CLEC to create the most
8 effective and reliable interconnected telecommunications network. *See e.spire Agmnt.,*
9 *Att. 3, § 3.1.* BellSouth and the CLEC will meet periodically for the purpose of
10 exchanging non-binding forecasts of their traffic and volume requirements for
11 interconnection. *See NewSouth Agmnt., Att. 3, § 3.6.* Forecast meetings may be face-to-
12 face, or by video or audio conference. *See SGAT, §XVII.B; XVII.C.*

13
14 In addition to, and not in lieu of, the required non-binding forecasts, BellSouth and the
15 CLEC may negotiate a binding forecast that commits the forecast provider to purchase,
16 and the forecast recipient to provide, a specified volume to be utilized as set forth in the
17 binding forecast. The terms of such a binding forecast will be negotiated and may
18 contain provisions regarding price, quantity, and liability for failure to perform. *See ICG*
19 *Agmnt., Att. 3; SGAT, § XVII.D.*

20
21 Q. DISCUSS BELLSOUTH'S PROCESS FOR FORECASTING SWITCH CAPACITY
22 NEEDS.

23
24 A. BellSouth forecasts its switch capacity needs based on two inputs – the GTF and the
25 access line forecast. As described above, the GTF is created using CLEC inputs. Thus,

1 CLEC plans are taken into account both in BellSouth's trunk forecasting and in its switch
2 planning and forecasting processes. For most switches, the capacity managers generally
3 schedule additions of trunk terminations to be completed and available for service by the
4 time the currently installed trunk capacity reaches 97 percent utilization.

5
6 Some specific switches have been identified as candidates for trunk relief when the
7 installed trunk capacity reaches 90 percent utilization. Candidate offices are those offices
8 that meet the following criteria:

- 9 • End office digital switches
- 10 • Switches with 100 trunking DS1s currently installed (a DS1 contains 24 voice
11 channels)
- 12 • Switches with growth of at least 75 trunking DS1s per year

13 Those offices that are candidates for relief at 90 percent are larger offices typically
14 serving business customers, and likely to also have high usage between CLEC's switches
15 and BellSouth's switches.

16 For tandem switches, the capacity managers schedule additions of trunk terminations to
17 be completed and available for service by the time the currently installed trunk capacity
18 reaches 85 percent utilization.

19
20 An addition of trunk terminations is scheduled to complete when the switch has reached
21 its targeted trunk utilization percentage. In other words, BellSouth does not wait until
22 that utilization percentage has been reached before triggering the addition. Once the
23 capacity manager has determined the anticipated target exhaust date for a switch, the
24 capacity manager subtracts an appropriate amount of time from that exhaust date to allow
25 for the equipment addition to be engineered, manufactured, shipped, and installed in the

1 switch. Thus, BellSouth initiates the addition of trunk terminations well in advance of
2 the targeted exhaust date. As discussed earlier, CLECs inform BellSouth of their
3 anticipated traffic growth through the routine exchange of traffic forecasts.

4
5 Q. DOES BELLSOUTH MAKE INTERCONNECTION TRUNKS AVAILABLE ON A
6 NONDISCRIMINATORY MANNER?

7
8 A. Yes. BellSouth's performance data for interconnection trunks will be discussed in the
9 performance data testimony of Alphonso Varner.

10
11 **FIBER-MEET**

12
13 Q. DESCRIBE THE FIBER-MEET ARRANGEMENT.

14
15 A. "Fiber-Meet" is an interconnection arrangement whereby the parties physically
16 interconnect their networks via an optical fiber interface (as opposed to an electrical
17 interface) at which one party's facilities, provisioning, and maintenance responsibility
18 begins and the other party's responsibility ends (i.e., at a Point of Interface). If a CLEC
19 elects to interconnect with BellSouth pursuant to a fiber-meet arrangement, the CLEC
20 and BellSouth shall jointly engineer and operate such. See e.spire Agmnt., Att. 3, § 1.11;
21 NewSouth Agmnt., Att. 3, § 1.11.

22
23 **COLLOCATION**

1 Q. DOES BELLSOUTH MAKE SPACE AVAILABLE IN ITS PHYSICAL
2 STRUCTURES TO FACILITATE THE INTERCONNECTION OF ITS NETWORK
3 FACILITIES WITH THOSE OF CLECS?
4

5 A. Yes. Collocation is a process pursuant to which BellSouth permits CLECs to contract for
6 space in BellSouth's premises so that CLECs may interconnect their network facilities
7 with BellSouth's network facilities. BellSouth premises include land owned, leased, or
8 controlled by BellSouth as well as any BellSouth network structure on such land housing
9 network facilities. *See e.spire Agmnt., Att. 4, § 1.2.* BellSouth offers a variety of
10 collocation arrangements as described below. Where technically feasible, BellSouth will
11 make physical collocation available in any BellSouth structure that houses network
12 facilities and has space available for collocation.
13

14 Q. DESCRIBE BELLSOUTH'S PHYSICAL COLLOCATION OFFERINGS.
15

16 A. BellSouth will provide to a CLEC at the CLEC's request, on a first-come, first-served
17 basis, physical collocation under the same terms and conditions available to similarly
18 situated carriers and on terms and conditions that are just, reasonable and non-
19 discriminatory. 47 C.F.R. § 52.323 (f); SGAT, § II.A.7. Where sufficient space exists,
20 CLECs can physically collocate in BellSouth premises to terminate CLEC cables on their
21 own equipment. Physical Collocation is available at Central Offices, Serving Wire
22 Centers, and at Remote Sites and may be offered in the following types: Caged, Shared
23 (including shared cages), Cageless, or Adjacent. *See e.spire Agmnt., Att. 4; NewSouth*
24 *Agmnt., Att. 4.*
25

1 With physical collocation, equipment ownership, operation, maintenance and insurance
2 are the responsibility of the collocator or its approved agent. BellSouth permits the
3 collocation of any type of equipment that is directly related to and thus necessary,
4 required, or indispensable for interconnection to BellSouth's network or for access to
5 unbundled network elements in the provision of telecommunications services. *See*
6 NewSouth Agmnt., Att. 4, § 1.3. In addition, BellSouth permits the physical collocation
7 of microwave facilities when technically feasible for interconnection to BellSouth's
8 network or for access to UNEs in the provision of telecommunications services. *See*
9 SGAT, Attach. I. With physical collocation, BellSouth provides an interconnection point
10 or points, physically accessible by both BellSouth and the requesting CLEC, at which the
11 fiber optic cables carrying the CLEC's circuits enter BellSouth's premises. 47 C.F.R. §
12 51.323 (d)(1); NewSouth Agmnt., Att. 4, § 1.3. BellSouth will provide at least two
13 interconnection points at each premise where there are at least two such interconnection
14 points available and where capacity exists. *See* e.spire Agmnt., Att. 4, § 5.2.1. For
15 purposes of collocation, the interconnection point is the point at which the CLEC enters
16 BellSouth's premises, namely the manhole or the cable vault. *See* e.spire Agmnt., Att. 4,
17 § 5.2.

18
19 Physical Collocation is a negotiated contract arrangement in all BellSouth states for the
20 placement of collocator-owned facilities and equipment in BellSouth central premises.
21 The terms and conditions pursuant to which BellSouth offers physical collocation are set
22 forth in detail in the Affidavit of Wayne Gray, Attachment A; *see* also, NewSouth
23 Agmnt., Att. 4.

24
25 Q. IS BELL SOUTH PROVIDING PHYSICAL COLLOCATION IN KENTUCKY?

1 A. Yes. In Kentucky, as of March 31, 2001, BellSouth had completed 198 physical
2 collocation arrangements, with two (2) in progress, for over 20 different CLECs, of
3 which 141 are cageless physical collocation arrangements. Physical collocation
4 arrangements were established in 30 different central offices out of a total of 178 central
5 offices in Kentucky as of March 31, 2001. As of March 31, 2001, there were 5,303
6 physical collocation arrangements in place for CLECs throughout BellSouth's nine-state
7 region. Of these, 3,353 were cageless physical collocation arrangements. An additional
8 161 physical collocation arrangements were in progress for over 43 different CLECs as
9 of March 31, 2001. Exhibit WKM-1 is a summary of physical and virtual collocation
10 arrangements currently in place or in progress in Kentucky and in BellSouth's nine-state
11 region.

12
13 Q. DOES BELLSOUTH HAVE PROVISIONING INTERVALS FOR PHYSICAL
14 COLLOCATION?

15
16 A. Yes. On August 10, 2000, the FCC issued its Collocation Reconsideration Order setting
17 forth default intervals for physical collocation where state regulatory authorities had not
18 established such intervals. On December 1, 2000, BellSouth filed with the FCC a
19 Petition for Conditional Waiver. On February 20, 2001, the FCC held that the intervals
20 in the New York Section 271 decision would be the default intervals applicable to
21 BellSouth. Consequently, BellSouth will comply with the FCC's default intervals until
22 such time as the Commission establishes permanent intervals. BellSouth has filed an
23 updated tariff with the Kentucky Public Service Commission to reflect the collocation
24 intervals ordered by the FCC in its recent Memorandum Opinion and Order, CC Docket
25 No. 98-147, released February 20, 2001. BellSouth will provision physical collocation in

1 76 business days under ordinary conditions and 91 business days under extraordinary
2 conditions. These intervals are contingent on the CLEC's provision of a collocation
3 forecast.

4
5 Q. DESCRIBE BELLSOUTH'S VIRTUAL COLLOCATION OFFERING.

6
7 A. Upon request of the CLEC, or when space is not available for physical collocation,
8 BellSouth offers virtual collocation in accordance with the existing BellSouth FCC Tariff
9 Number 1, Section 20, "Virtual Expanded Interconnection Service", as contemplated by
10 Paragraph 826 of the *Local Competition Order*, 11 FCC Rcd at 15912. Virtual
11 collocation provides for the placement of collocator-owned transmission equipment and
12 other facilities in BellSouth central offices for interconnection to the BellSouth network.
13 Such equipment must be necessary for the provision of telecommunications services and
14 may include, but not be limited to, optical terminating equipment and multiplexers,
15 digital subscriber line access multiplexers ("DSLAMs"), routers, asynchronous transfer
16 mode ("ATM") multiplexers, and remote switching modules. Virtual collocation
17 arrangements may interconnect to designated BellSouth tariffed services, local
18 interconnection trunks and/or unbundled network elements. BellSouth will provide
19 virtual collocation in a manner that permits CLECs to combine UNEs. With virtual
20 collocation, BellSouth provides an interconnection point or points, physically accessible
21 by both BellSouth and the requesting CLEC, at which the fiber optic cables carrying the
22 CLEC's circuits enter BellSouth's premises. 47 C.F.R. § 51.323(d)(1). BellSouth will
23 perform all maintenance and repair on virtual collocation equipment once the collocator
24 requests such work. BellSouth will install, maintain and repair collocated equipment in
25 the same manner as BellSouth provides for its own equipment. The terms and conditions

1 pursuant to which BellSouth provides virtual collocation are set forth in detail in the
2 Affidavit of Wayne Gray, Attachment A.

3
4 Q. IS BELLSOUTH PROVIDING VIRTUAL COLLOCATION IN KENTUCKY?

5
6 A. Yes. In Kentucky, as of March 31, 2001, there were two (2) virtual collocation
7 arrangements in progress, however there were two (2) virtual collocation arrangements in
8 service located in one (1) BellSouth central office. Across BellSouth's nine-state region,
9 over 40 different CLECs have requested and BellSouth had provided 361 virtual
10 collocation with construction of an additional 26 arrangements underway as of March 31,
11 2001. Exhibit WKM-1 is a summary of physical and virtual collocation arrangements
12 currently in place or in progress in Kentucky and in BellSouth's nine-state region.

13
14 Q. DOES BELLSOUTH HAVE INTERVALS FOR VIRTUAL COLLOCATION?

15
16 A. Yes. Neither the FCC nor the Commission has established provisioning intervals for
17 virtual collocation. Notwithstanding that fact, BellSouth will provide virtual collocation
18 in 50 calendar days from receipt of a Bona Fide Firm Order ("BFFO") under ordinary
19 circumstances and 75 calendar days from receipt of a BFFO under extraordinary
20 circumstances.

21
22 **OTHER INTERCONNECTION METHODS**

23
24 Q. DOES BELLSOUTH OFFER MEANS OTHER THAN COLLOCATION FOR
25 INTERCONNECTION?

1 A. Yes. BellSouth also offers assembly point arrangements. Assembly point arrangements
2 allow a CLEC to combine UNEs without physical or virtual collocation. *See* SGAT, §
3 II.D.1. The assembly point is a cross connection device to which BellSouth will deliver
4 UNEs requested by CLECs using the arrangement. In this arrangement, BellSouth will
5 supply all of the equipment required by the CLEC to access UNEs.

6
7 BellSouth makes physical collocation available in compliance with its SGAT and
8 applicable interconnection agreements. Moreover, BellSouth is providing
9 interconnection at the local tandem. *See e.spire Agmnt., Att. 3, § 1.10.* A CLEC may
10 select either basic or enhanced local tandem interconnection. Basic local tandem
11 interconnection allows CLECs to terminate traffic to BellSouth’s end office switches and
12 wireless service provider switches within the area served by the tandem. Enhanced local
13 tandem interconnection adds the ability to terminate traffic to other CLEC and
14 independent company switches in the area served by the tandem. *See NewSouth Agmnt.,*
15 *Att. 3, §§ 1.5; 1.10; SGAT, § I.A.5.* As of March 31, 2001, BellSouth has provided 120
16 local tandem interconnection trunks to one (1) CLEC in Kentucky.

17

18 **CHECKLIST ITEM 2: NONDISCRIMINATORY ACCESS TO NETWORK ELEMENTS**

19

20 Q. GENERALLY DESCRIBE BELLSOUTH’S COMPLIANCE WITH CHECKLIST
21 ITEM 2.

22

23 A. BellSouth meets the requirements of Checklist Item 2 if it offers access and
24 interconnection that includes “[n]ondiscriminatory access to network elements in
25 accordance with the requirements of Section 251(c)(3) and 252(d)(1).” 47 U.S.C. §

1 271(c). Section 251(c)(3) requires BellSouth to provide CLECs with nondiscriminatory
2 access to UNEs at any technically feasible point on rates, terms and conditions that are
3 just, reasonable, and nondiscriminatory. This section also requires BellSouth to provide
4 UNEs in a manner that allows CLECs to combine such elements in order to provide a
5 telecommunications service. As detailed below, BellSouth's interconnection agreements
6 and its Kentucky SGAT satisfy these obligations. BellSouth's provision of access to
7 Operations Support Systems ("OSS") functions is described in the testimony of Ron Pate,
8 filed concurrently herewith.

9
10 As required by 47 C.F.R. § 51.307, BellSouth provides to a requesting CLEC (for the
11 provision of telecommunications service) nondiscriminatory access to network elements
12 on an unbundled basis at any technically feasible point which is at least equal in quality
13 to the access BellSouth provides to itself. *See* NewSouth Agmnt., GTC-A, § 4.0. These
14 network features provide the CLEC access to all features, functions and capabilities of
15 the network elements in a manner that allows the CLEC to provide any
16 telecommunications service that the network element is capable of providing. Each
17 network element BellSouth provides to CLECs is at a level of quality and performance
18 that is at least equal to that which BellSouth provides to itself. *See* e.spire Agmnt., GTC-
19 A, § 4.0.

20
21 BellSouth shall provide ordering and provisioning of UNEs to CLECs that are equal in
22 quality to the ordering and provisioning services BellSouth provides to itself or any other
23 CLEC. *See* NewSouth Agmnt., Att. 6, § 1.1. As required by the FCC, and as set forth in
24 its interconnection agreements and its SGAT, BellSouth makes available

1 nondiscriminatory access to the following unbundled elements at Total Element Long
2 Run Incremental Cost (“TELRIC”) rates approved by the Commission:

- 3
- 4 Local loop, including sub-loops and the high frequency portion of the loop
- 5 Loop concentration in BellSouth central offices
- 6 Simple Loop + Port Combinations
- 7 Loop + Transport Combinations
- 8 Network Interface Device (“NID”)
- 9 Local switching capability
- 10 Tandem switching capability
- 11 Interoffice transmission facilities
- 12 Digital cross connection capability
- 13 Signaling networks and call-related databases
- 14 Operations support systems functions
- 15 Local channel
- 16 Channelization
- 17 Dark fiber
- 18 Loop conditioning

19

20 *See* NewSouth Agmnt., Att. 2. BellSouth also provides access to the facilities or
21 functionality of network elements separately from access to other network elements and
22 for a separate charge. 47 C.F.R. § 51.307(d). BellSouth will utilize its best efforts to
23 obtain coextensive third party intellectual property rights for CLECs using UNEs.

24

1 Requesting CLECs are entitled to exclusive use of an unbundled network element, and to
2 the use of its features, functions, or capabilities, for a set period of time. 47 C.F.R. §
3 51.309(c). BellSouth, however, retains ownership of the facility and remains obligated to
4 maintain, repair or replace the network element as necessary.

5
6 CLECs may provide telecommunications services wholly through BellSouth's UNEs,
7 without using any facilities of its own. The terms and conditions pursuant to which
8 BellSouth provides access to UNEs are offered equally to all requesting CLECs. 47
9 C.F.R. § 51.313(a). Moreover, as discussed more fully in the testimony of Cynthia Cox,
10 filed concurrently herewith, the "Most Favored Nation" clause in BellSouth's
11 interconnection agreements and the provisions of 47 U.S.C. § 252(i) allow a CLEC to
12 adopt terms, conditions and prices of another CLEC's contract in accordance with the
13 FCC's rules. *See NewSouth Agmnt., GTC-A, § 16.0.*

14
15 With the exception of the NID, the minimum set of network elements is required
16 separately by the checklist and therefore will be discussed in later sections of my
17 testimony. The NID, however, will be discussed in this section, as will UNE
18 combinations.

19
20 Q. DESCRIBE THE NID OFFERING.

21
22 A. The NID is a cross-connect device used to connect BellSouth's loop facilities to a
23 customer's inside wiring. The NID contains connection points to which the service
24 provider and the end user customer each make their connections. *See NewSouth Agmnt.,*
25 *Att. 2, § 4.0.* When the CLEC provides its own facilities, the CLEC will provide its own

1 NID and thereby interface to the customer's inside wire through the customer chamber of
2 the BellSouth NID. 47 C.F.R. § 51.319(2). This method of access has been referred to as
3 the "NID-to-NID" method, in that the CLEC connects its NID to the BellSouth NID and
4 thereby gains connectivity between the CLEC's loop and the customer's inside wire. As
5 a second method, a CLEC may connect its loop directly to any available spare terminal in
6 the BellSouth NID and thereby gain access to the customer's inside wire. 47 C.F.R. §
7 51.319(2); *see also* NewSouth Agmnt., Att. 2, § 4.0. Any upgrades or rearrangements to
8 the NID required by the CLEC are performed by BellSouth based on time and materials
9 charges. In situations in which no spare terminals are available in the BellSouth NID, the
10 CLEC may remove BellSouth's loop from BellSouth's NID in order to terminate the
11 CLEC's loop to BellSouth's NID. *See* e.spire Agmnt., Att. 2, § 4.0. As of March 31,
12 2001, no CLEC had requested an unbundled NID in Kentucky or anywhere in
13 BellSouth's nine-state region.

14
15 Where a CLEC obtains local loops as a UNE from BellSouth, BellSouth also provides the
16 NID. BellSouth connects the drop wire, where present, between the loop distribution
17 facilities and the NID at no additional charge to the CLEC. *See* NewSouth Agmnt., Att.
18 2, § 2.2.1.

19
20 At multiple dwelling units or multiple-unit business premises, BellSouth will provide,
21 where technically feasible, a Single Point of Interconnection ("SPOI") that is suitable for
22 use by multiple carriers. *See* SGAT, § II.

1 Q. HAS BELLSOUTH PROVIDED ACCESS TERMINALS TO CLECS IN KENTUCKY
2 AND IN ITS NINE-STATE REGION FOR THE PURPOSE OF GAINING ACCESS
3 TO SUB-LOOP ELEMENTS?
4

5 A. No. BellSouth has not provisioned any such access terminals to CLECs in Kentucky
6 because none have been requested; however, BellSouth has provisioned over 80 access
7 terminals across its nine-state region. Access terminals are available to CLECs via the
8 SGAT, § IV.
9

10 Q. MAY A CLEC TEST THE UNES IT IS OBTAINING FROM BELLSOUTH PRIOR TO
11 TURNING UP A CUSTOMER'S SERVICE?
12

13 A. Yes. Each CLEC may perform testing of its UNEs using whatever methods it deems
14 appropriate in light of its network configuration. BellSouth will provide UNEs to each
15 CLEC's collocation arrangement at the specified level of quality. BellSouth has tested
16 and confirmed its ability to provide UNEs to requesting CLECs.
17

18 Q. DESCRIBE BELLSOUTH'S CROSS-CONNECT OFFERING.
19

20 A. Cross connections are the facility by which BellSouth extends its network to the point of
21 access selected by a CLEC, as described above. The FCC's *Local Competition Order*
22 required incumbent LECs to provide such facilities and stated that the LEC could recover
23 the costs associated with providing cross connections. Cross connections are wires or
24 fibers or equipment that connect one piece of equipment to another on a semi-permanent
25 basis. For instance, some cross connections are made by a simple pair of copper wires

1 called a jumper. Different loop options require different types of cross connections. In
2 fact, several cross connections may be required for many of the options. BellSouth offers
3 the following types of loop cross connects:

- 4 • Cross connect to Digital Cross-connect System (“DCS”)
- 5 • Cross connect to Multiplexer/Interoffice transport
- 6 • Cross connect to collocation arrangement
- 7 • Cross connect to switch port

8 In addition, BellSouth offers the choice of three types of cross connects with subloop
9 elements. The applicable cross connects are as follows:

- 10 • Two wire
- 11 • Four wire
- 12 • Dark fiber

13 Cross connections must also be used with Unbundled Dedicated Transport (“UDT”). The
14 dedicated transport cross connects are the equipment needed to connect the interoffice
15 dedicated transport transmission facilities to the point of access.

16 The following cross connects are available with UDT:

- 17 • Voice grade 2-Wire
- 18 • Voice grade 4-Wire
- 19 • Digital 56/64 Kilobits per second (Kbps)
- 20 • DS1
- 21 • DS3
- 22 • OC3
- 23 • OC12
- 24 • OC48 (Only between BellSouth offices)
- 25 • Dark fiber

1 Q. DESCRIBE BELLSOUTH'S DIGITAL CROSS CONNECT OFFERING.

2

3 A. A DCS is an electronic device that provides the capability of rearranging circuits on high-
4 speed facilities without the need to de-multiplex the signals. Without DCS, signals
5 cannot be exchanged between high-speed circuits without returning all of the circuits to
6 analog electrical signals. BellSouth offers DCS in conjunction with the unbundled
7 dedicated transport element with the same functionality that is offered to interexchange
8 carriers or with additional functionality as provided in a BellSouth/CLEC interconnection
9 agreement. 47 C.F.R 51.319 (d)(2)(iv); *See* e.spire Agmnt., Att. 2, § 8.1.1(4).

10

11 BellSouth provides CLECs three types of port DCS configurations as follows:

- 12 • DS0 channel port termination.
- 13 • DS1 channel port termination.
- 14 • DS3 channel port termination.

15

16 A CLEC may utilize BellSouth's Management Terminal Interface ("MTI") through the
17 use of a computer terminal on the CLEC's premises to access a database maintained by
18 BellSouth to reconfigure the CLEC's Dedicated Transport facilities. A CLEC may use
19 the MTI to directly access and control the CLEC's 45 Megabits per second (Mbps)
20 facilities or 1.544 Mbps facilities or 64 Kbps facilities or unbundled dedicated transport,
21 subtending channels, and internodal facilities (i.e., the facilities that connect a DCS in
22 one central office with a DCS in another central office).

23

24 CLECs remotely access the database by using a computer terminal on the CLEC's
25 premises in conjunction with the CLEC's facilities or BellSouth Unbundled Loops or

1 Dedicated Transport elements (Entrance Facility and/or Interoffice Transport), or in
2 conjunction with a local telephone line with a seven-digit or ten-digit telephone number.

3 CLECs may use DCS to perform the following functions:

- 4 • Routing/Rerouting - The routing feature allows a CLEC to select the routes that will
5 be used to connect circuits between DCSs. The CLEC may control the route
6 selection process by various parameters according to the CLEC's needs. A CLEC
7 may also reroute circuits from a failed internodal facility to a working one.
- 8 • Renaming-A CLEC may rename its circuits and facilities.
- 9 • Scheduled Command Definition – A CLEC may specify circuit reconfiguration on
10 special days, e.g., payday, holidays.
- 11 • Transaction Log – A CLEC is provided a database log that contains every transaction.
12 These transactions include reconfiguration, scheduling, macro development, alarm
13 surveillance, and attempted transactions.
- 14 • Scheduled Command Summary Screen – A CLEC may view the status of its
15 reconfiguration reservations.
- 16 • Macro Command/Network Modeling – A CLEC may initiate, with one command,
17 multiple two-point cross connections. The CLEC can build separate network macros,
18 such as daytime macros, nighttime macros, and disaster recovery macros and invoke
19 their activation or switch from one to the other.
- 20 • Perform real-time configuration management and alarm surveillance.
- 21 • Electronically cross-connect and route traffic in order to:
 - 22 • Alleviate congestion
 - 23 • Isolate faults
 - 24 • Change routing logic
 - 25 • Monitor network performance

- Pre-arrange and automatically switch to backup facilities for disaster recovery

BellSouth provides the cross connects necessary to extend Dedicated Transport facilities to points of access designated by the CLEC. 47 C.F.R. § 51.319(d)(2)(iii). In addition to the standard arrangements, the CLEC may request new or additional unbundled transport elements via the BFR process.

COMBINATIONS OF UNES

Q. GENERALLY DESCRIBE BELLSOUTH'S COMBINATION OFFERINGS.

A. BellSouth provides access to UNES in a manner that allows requesting carriers to access preexisting combinations of network elements as well as to combine UNES for themselves. *See* NewSouth Agmnt., Att. 2. BellSouth provides CLECs a variety of means by which CLECs may combine network elements, including caged, cageless, and shared collocation, *see* NewSouth Agmnt., Att. 4, and an Assembly Point arrangement. *See* SGAT, § II.D.1. BellSouth also offers other technically feasible methods of combining UNES via the BFR process. *See* NewSouth Agmnt., GTC-A, § 6.0. Each of these options is described more fully in my testimony on checklist item 1, and collocation is described more fully in the Affidavit of Wayne Gray, attached hereto as Attachment A.

Q. DOES BELLSOUTH OFFER PREEXISTING COMBINATIONS OF UNES TO CLECS?

1 A. Yes. Except upon request, BellSouth will not separate requested network elements where
2 such elements are, in fact, currently combined in BellSouth's network to the location the
3 CLEC wants to serve. *See* SGAT, § II.D (3).

4
5 The rates for these UNE combinations are addressed in the testimony of Cynthia Cox.
6 Ms. Cox also addresses the conditions pursuant to which BellSouth offers the Enhanced
7 Extended Link ("EEL").

8
9 The ordering mechanism for preexisting combinations is discussed in the testimony of
10 Ron Pate.

11
12 Q. MAY CLECS COMBINE UNES THEMSELVES?

13
14 A. Yes. BellSouth provides access to UNEs in a manner that allows requesting carriers to
15 combine those elements. CLECs may use either physical collocation (including caged,
16 shared cage, cageless, and adjacent, where space is not available), virtual collocation
17 arrangements, *see* NewSouth Agmnt., Att. 4, or assembly point arrangements, SGAT, §
18 II.D.1, to combine UNEs. In addition, CLECs may request other technically feasible
19 methods of combining UNEs through the BFR process. *See* NewSouth Agmnt., GTC-A,
20 § 6.0.

21
22 The UNE combination is effectuated as follows: BellSouth will wire each UNE to the tie
23 cable and pair running between BellSouth's distributing frame and the CLEC's
24 collocation arrangement as designated by the CLEC on its UNE order. For example, both
25 the loop and the switch port are terminated on the Main Distribution Frame ("MDF")

1 within the BellSouth central office. Upon request of the CLEC, BellSouth will wire the
2 loop to the tie cable and pair facility designated on the unbundled loop order. Likewise,
3 BellSouth will wire the unbundled switch port to the tie cable and pair designated on the
4 unbundled switch port order. In the case of physical collocation, BellSouth's wiring of
5 the UNEs to the tie cable and pair interconnection facilities designated by the CLEC
6 correlates to the pre-designated positions on the interconnection point (that is,
7 BellSouth's distributing frame) serving the collocation arrangement. The CLEC may
8 complete the combination via connections within its collocation arrangement either
9 manually or electronically, at the election of the CLEC. These connections within the
10 CLEC's collocation arrangement may be pre-wired or established on an as-needed basis
11 at the election of the CLEC. To facilitate UNE combinations using virtual collocation,
12 the CLEC may employ any of several options that include, but are not limited to: pre-
13 wired terminations on the CLEC's transmission equipment; use of the CLEC's electronic
14 digital cross-connection facilities or other means of performing cross-connections
15 remotely; or connections on a per request basis.

16
17 An example of using pre-wired terminations might include the CLEC's arranging the pre-
18 wiring of connector block "position 100" to "position 200", "position 101" to "position
19 201" and so forth. Should the CLEC wish to combine two elements, such as the
20 combining of an unbundled loop with an unbundled switch port, the CLEC would
21 specify the BellSouth cable and pair assignment correlating to "position 100" on the
22 unbundled loop order and would specify the BellSouth cable and pair assignment
23 correlating to "position 200" on the unbundled switch port order. With "position 100"
24 and "position 200" having been pre-connected, the UNEs would thus be combined once

1 BellSouth completes its connection of each of the UNEs ordered to the designated
2 interconnection facility cable and pair assignments.

3
4 Q. IT APPEARS THAT THE DISTRIBUTION FRAME IS AN ESSENTIAL
5 COMPONENT OF A CLEC'S ABILITY TO COMBINE UNES. CAN BELLSOUTH
6 ACCOMMODATE THE CLECS' DEMAND FOR DISTRIBUTING FRAME
7 CONNECTOR BLOCKS?

8
9 A. Yes. BellSouth can fully accommodate demand for new distributing frame connector
10 blocks for CLECs. While space on distributing frames is a finite resource, this is not a
11 consequence of local competition. Because of increasing retail demand, BellSouth has
12 for many years been faced with the possible exhaustion of space on distributing frames
13 within its central offices. This increasing demand is evidenced by the fact that in 1992,
14 there were over 970,000 access lines in Kentucky; through December 2000, there were
15 over 1.25 million access lines in Kentucky, a more than 25 percent increase in eight (8)
16 years. BellSouth has always effectively met the challenges of increased demand -- a fact
17 no party contests. For example, in the years 1999-2000, BellSouth completed 43
18 additions to its conventional main distribution frames and COSMIC main distribution
19 frames in Kentucky. Also, BellSouth has never denied any CLEC's request for a UNE
20 because of a lack of main distribution frame connector blocks. BellSouth likewise will
21 continue to make needed additions to its distributing frames on a nondiscriminatory basis,
22 as with other facilities such as switches and loop facilities, to accommodate CLECs'
23 needs.

24

1 Q. HAS BELLSOUTH PROVIDED CLECS WITH PREEXISTING UNE
2 COMBINATIONS?

3

4 A. Yes. As of March 31, 2001, BellSouth had 11,239 loop and port combinations in place
5 for CLECs in Kentucky and 303,257 such combinations in place for CLECs across
6 BellSouth's nine-state region. In addition, BellSouth had 23 loop and transport
7 combinations in place for CLECs in Kentucky.

8

9 Q. DESCRIBE THE MEANS BY WHICH CLECS MAY COMBINE INDIVIDUAL UNES
10 OBTAINED FROM BELLSOUTH WITH THE CLEC'S OWN FACILITIES.

11

12 A. A CLEC may also use its physical collocation arrangement to combine UNES that the
13 CLEC acquires from BellSouth with the CLEC's own equipment or facilities. BellSouth
14 will extend UNES to a CLEC's physical collocation arrangement and will terminate those
15 UNES in such a way as to allow the CLEC to provide any cross connections or other
16 required wiring within the collocation arrangement in order to effect the combination. In
17 such an arrangement, the CLEC is responsible for making any necessary cross
18 connections within the physical collocation arrangement, for example, by making cross
19 connections at a frame or cross connection block within the physical collocation
20 arrangement. As noted above, the CLEC may choose to "pre-wire" these connections in
21 anticipation of BellSouth's providing the UNES, thereby eliminating the need to establish
22 these connections during the customer cutover process.

23

24 For example, BellSouth will deliver both unbundled loops and unbundled dedicated
25 transport facilities to the CLEC's collocation arrangement. The CLEC is then free to

1 cross-connect the loop and transport facilities in any manner it chooses. Similarly,
2 BellSouth will deliver unbundled loops and unbundled switch ports to any CLEC's
3 collocation arrangement and, again, the CLEC may cross-connect the unbundled loop and
4 unbundled switch port in any manner the CLEC desires.

5
6 In order to combine network elements in their collocation arrangements, CLECs will use
7 the same types of cross-connections that BellSouth regularly uses thousands of times
8 every day in its retail operations. When BellSouth connects a new customer to its
9 network, it uses cross-connections to combine facilities, just as CLECs may do. In its
10 retail operations, BellSouth regularly uses multiple cross-connections between loops and
11 switch ports, as well as on Intermediate Distribution Frames ("IDF"), and provides high
12 quality transmission performance on the resulting service. CLECs' use of
13 cross-connections to combine network elements into an operational network is a routine
14 part of local telephone operations and precisely analogous to the manner in which
15 BellSouth establishes service to a customer premises not previously served by its own
16 network.

17
18 **CHECKLIST ITEM 3: ACCESS TO POLES, DUCTS, CONDUITS, AND RIGHTS-OF-WAY**

19
20 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 3.

21
22 A. Section 271(c)(2)(B)(iii) of the Act requires BellSouth to provide nondiscriminatory
23 access to poles, ducts and conduits and rights-of-way to CLECs when requested. The
24 FCC found that BellSouth had met all requirements for Checklist Item 3 in the *Second*
25 *Louisiana Order*. In its 1999 Advisory Opinion in Case No. 96-608, the Commission

1 found BellSouth in compliance with this checklist item. In Section III of the SGAT, and
2 in various negotiated and arbitrated agreements, *see* NewSouth Agmnt., Att. 8, BellSouth
3 continues to offer nondiscriminatory access to poles, ducts, conduits and rights-of-way in
4 a timely fashion as discussed in the Affidavit of Linda Kinsey, Attachment B.

5
6 Q. ARE CLECS USING BELLSOUTH'S POLES, DUCTS, CONDUITS, AND RIGHTS-
7 OF-WAY?

8
9 A. Yes. As of May 4, 2001, CLECs in Kentucky had executed with BellSouth 43 license
10 agreements and 102 license agreements region-wide, (both state-specific and multi-state)
11 that allow them to attach their facilities to BellSouth's poles and to place their facilities in
12 BellSouth's ducts and conduits. Since July 1997, BellSouth has received 49 requests in
13 Kentucky for access to poles, ducts, conduits, and rights-of-way from seven (7) CLECs
14 with no requests being denied. Similarly, CLECs have leased approximately 195,000
15 feet of conduit space in BellSouth's nine-state region as a result of CLEC requests of
16 which 3,500 feet are in Kentucky.

17
18 **CHECKLIST ITEM 4: LOCAL LOOP**

19
20 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 4.

21
22 A. Checklist Item 4 requires that BellSouth provide local loop transmission from the central
23 office to the customer's premises, unbundled from local switching or other services. 47
24 U.S.C. § 271(c)(2)(B)(iv). BellSouth provides nondiscriminatory access to local loop

1 transmission on an unbundled basis and has procedures in place for the ordering,
2 provisioning, and maintenance of unbundled loops.

3
4 Q. DESCRIBE THE UNBUNDLED LOOPS BELLSOUTH MAKES AVAILABLE TO
5 CLECS.

6
7 A. The local loop network element is defined as a dedicated transmission facility between a
8 distributing frame (or its equivalent) in a BellSouth central office and the loop
9 demarcation point at an end user customer's premises. The local loop network element
10 includes all features, functions and capabilities of the transmission facility, including dark
11 fiber and attached electronics (except those electronics used for the provision of advanced
12 services, such as DSLAMs), and loop conditioning. 47 C.F.R. § 51.319(a). BellSouth
13 allows CLECs to access unbundled loops at any technically feasible point. BellSouth
14 provides CLECs access to unbundled local loops in a manner that allows an efficient
15 competitor a meaningful opportunity to compete.

16
17 BellSouth makes the following loop types available to CLECs and has provided the
18 following quantities in Kentucky as of March 31, 2001:

- 19 • SL1 voice grade loops (1)
- 20 • SL2 voice grade loops (3,621)
- 21 • 2-wire ISDN digital grade loops (534)
- 22 • 2-wire ADSL loops (364)
- 23 • 2-wire HDSL loops (1)
- 24 • 4-wire HDSL loops (0)
- 25 • 4-wire DS-1 digital grade loops (575)

- 1 • 56 or 64 Kbps digital grade loops (0)
- 2 • UCL (Long and Short) loops (234)
- 3 • DS3 Loops (0)
- 4 • UCL-ND (0)

5

6 CLECs may purchase additional loop types through the BFR process. BellSouth provides
7 access to loops at any technically feasible point with access to all features, functions, and
8 capabilities unbundled from other UNEs; without any restrictions that impair use by
9 CLECs; for a CLEC's exclusive use; and in a manner that enables CLECs to combine
10 loops with other UNEs. *See* NewSouth Agmnt., Att. 2. Moreover, BellSouth offers local
11 loop transmission of the same quality and same equipment and technical specifications
12 used by BellSouth to service its own customers.

13

14 Q. ARE CLECS PURCHASING UNBUNDLED LOOPS FROM BELLSOUTH?

15

16 A. Yes. As of March 31, 2001, BellSouth had provisioned 5,330 unbundled loops to over
17 ten (10) CLECs in Kentucky. In BellSouth's nine-state region, BellSouth had
18 provisioned 353,992 unbundled loops as of that same date.

19

20 Q. DOES BELLSOUTH OFFER UNBUNDLED LOOPS SERVED BY INTEGRATED
21 DIGITAL LOOP CARRIER (IDLC) TECHNOLOGY?

22

23 A. Yes. Integrated Digital Loop Carrier ("IDLC") is a special version of DLC that does not
24 require the host terminal in the central office (sometimes referred to as the Central Office
25 Terminal or "COT"), but instead terminates the digital transmission facilities directly into

1 the central office switch. The design of IDLC technology means that it is impossible to
2 separate the loop from the switch because the switch performs the control and functions
3 normally performed by the host terminal. In the Texas decision, the FCC found that “the
4 BOC must provide competitors with access to unbundled loops regardless of whether the
5 BOC uses integrated digital loop carrier (IDLC) technology or similar remote
6 concentration devices for the particular loops sought by the competitor.” *SWBT*, ¶ 248.
7 BellSouth provides access to such IDLC loops via the following methods:

8
9 Alternative 1: If sufficient physical copper pairs are available, BellSouth will
10 reassign the loop from the IDLC system to a physical copper pair.

11
12 Alternative 2: Where the loops are served by Next Generation Digital Loop
13 Carrier (“NGDLC”) systems, BellSouth will “groom” the integrated loops to form
14 a virtual Remote Terminal (“RT”) set-up for universal service (that is, a terminal
15 which can accommodate both switched and private line circuits). “Grooming” is
16 the process of arranging certain loops (in the input stage of the NGDLC) in such a
17 way that discrete groups of multiplexed loops may be assigned to transmission
18 facilities (in the output stage of the NGDLC). Both of the NGDLC systems
19 currently approved for use in BellSouth’s network have “grooming” capabilities.

20 Alternative 3: BellSouth will remove the loop distribution pair from the IDLC and
21 re-terminate the pair to either a spare metallic loop feeder pair (copper pair) or to
22 spare universal digital loop carrier equipment in the loop feeder route or Carrier
23 Serving Area (“CSA”). For two-wire ISDN loops, the universal digital loop
24 carrier facilities will be made available through the use of Conklin BRITeMux or
25 Fitel-PMX 8uMux equipment.

12
13
14
15
16
17
18
19
20
21
22
23
24
25

Alternative 4: BellSouth will remove the loop distribution pair from the IDLC and re-terminate the pair to utilize spare capacity of existing Integrated Network Access (“INA”) systems or other existing IDLC that terminates on DCS equipment. BellSouth will thereby route the requested unbundled loop channel to a channel bank where it can be de-multiplexed for delivery to the requesting CLEC or for termination in a DLC channel bank in the central office for concentration and subsequent delivery to the requesting CLEC.

Alternative 5: When IDLC terminates at a peripheral capable of serving “side-door/hairpin” capabilities, BellSouth will utilize this switch functionality. The loop will remain terminated directly into the switch while the “side-door/hairpin” capabilities allow the loop to be provided individually to the requesting CLEC.

Alternative 6: If a given IDLC system is not served by a switch peripheral that is capable of side-door/hairpin functionality, BellSouth will move the IDLC system to switch peripheral equipment that is side-door capable.

Alternative 7: BellSouth will install and activate new Universal DLC (“UDLC”) facilities or NGDLC facilities and then move the requested loop from the IDLC to these new facilities. In the case of UDLC, if growth will trigger activation of additional capacity within two years, BellSouth will activate new UDLC capacity to the distribution area. In the case of NGDLC, if channel banks are available for growth in the CSA, BellSouth will activate NGDLC unless the DLC enclosure is a cabinet already wired for older vintage DLC systems.

1 Alternative 8: When it is expected that growth will not create the need for
2 additional capacity within the next two years, BellSouth will convert some
3 existing IDLC capacity to UDLC.
4

5 *See e.g. NewSouth Agmnt., Att. 2.*
6

7 Because certain circuits cannot be supported via an IDLC system in those instances
8 where NGDLC is installed, BellSouth normally reserves some NGDLC capacity to
9 support those special service circuits (both its own and those of CLECs) through a
10 universal DLC arrangement based on site-specific forecasts. BellSouth does not reserve
11 loops served by NGDLC for its own purposes, and does not restrict CLEC access to
12 BellSouth loops. BellSouth will construct the facilities necessary to provide unbundled
13 loops to requesting CLECs in the small number of cases in which none of these methods
14 is viable through the special construction process. *See NewSouth Agmnt., Att. 2, § 2.2.1.*
15

16 Q. DESCRIBE BELLSOUTH'S UNIVERSAL DIGITAL CARRIER LOOP OFFERING.
17

18 A. BellSouth provides CLECs the Universal Digital Carrier ("UDC") capable loop. This
19 loop gives CLECs the ability to arrange the individual channels of an ISDN line such that
20 it appears to the end user to be a single channel of 144 Kbps. Some CLECs have referred
21 to such an arrangement as ISDN Digital Subscriber Line ("IDSL") service.
22

23 Q. DOES BELLSOUTH OFFER LOOP CONDITIONING?
24

1 A. Yes. BellSouth offers loop conditioning in accordance with applicable FCC rules and
2 orders. Loop conditioning is defined as the removal from the loop of any devices that
3 may diminish the capacity of the loop to deliver high-speed switched wireline
4 telecommunications capability, including xDSL service. BellSouth provides loop
5 conditioning for unbundled loops, whether or not BellSouth offers advanced services to
6 the end-user on that loop. *See* SGAT, § IV.F. BellSouth's loop conditioning offer is
7 described fully in the testimony of Wiley (Jerry) G. Latham.

8

9 Q. ARE CLECS PURCHASING LOOP CONDITIONING?

10

11 A. Yes. Through March 2001, no CLECs in Kentucky made requests for loop conditioning;
12 however, across BellSouth's region as of that same date there were a total of 59 requests.

13

14 Q. DOES BELLSOUTH OFFER SUB-LOOP ELEMENTS IN COMPLIANCE WITH
15 CHECKLIST ITEM 4?

16

17 A. Yes. In addition to the unbundled loops themselves, BellSouth offers CLECs
18 nondiscriminatory access to sub-loop elements. *See* NewSouth Agmnt., Att. 2, § 6.0. A
19 sub-loop unbundled network element is an existing portion of the loop that can be
20 accessed at accessible points on the loop. An accessible point on the loop is where
21 technicians can access the copper wire or fiber within the cable without removing a splice
22 case to reach the wire or fiber within. This includes any technically feasible point near
23 the customer premises (such as the pole or pedestal, the NID, or minimum point of entry
24 ("MPOE") to the customer's premises), the feeder distribution interface ("FDI"), the
25 MDF, remote terminals, and various other terminals. BellSouth offers loop

1 concentration/multiplexing as a sub-loop element. BellSouth also provides unbundled
2 access to the sub-loop elements loop feeder, loop distribution, intrabuilding network
3 cable, and network terminating wire. Details about how these sub-loop elements are
4 provided may be found at BellSouth's Interconnection website:

5 <http://www.interconnection.bellsouth.com/products/unes.html>

6
7 Q. ARE CLECS PURCHASING SUB-LOOP ELEMENTS?

8
9 A. Yes. While CLECs in Kentucky have not purchased unbundled sub-loop elements,
10 BellSouth has provided over 500 unbundled sub-loop elements across its nine-state
11 region.

12
13 Q. DOES BELL SOUTH PROVIDE ACCESS TO DARK FIBER?

14
15 A. Yes. BellSouth also provides access to unused transmission media, which in some cases
16 is referred to as "dark fiber". *See e.spire Agmnt., Att. 2, § 14.* BellSouth provides dark
17 fiber in the subscriber loop segment of the network and in the dedicated interoffice
18 transport segment of the network as a UNE when the CLEC has collocation space in a
19 central office housing a BellSouth tandem or end office switch. BellSouth uses
20 standardized forms to allow a CLEC to determine dark fiber availability via a service
21 inquiry and to order dark fiber via a local service request. BellSouth will use its best
22 efforts to confirm the availability of dark fiber within ten (10) business days of receipt of
23 a service inquiry. BellSouth will use its best efforts to provide dark fiber to the CLEC
24 within thirty (30) business days from the receipt of a complete, accurate and error-free
25 local service request. BellSouth will either grant the request, and issue an appropriate

1 lease, or deny the request. Availability is limited by fibers in use by BellSouth or its
2 customers, maintenance spares, number of defective fibers present, and the number of
3 fibers for which BellSouth has specific documented plans within a two-year period.
4 BellSouth has, where appropriate, executed non-disclosure agreements and agreed to
5 share documents with CLECs in order to demonstrate BellSouth's specific documented
6 plans. To exercise its right of revocation, BellSouth must demonstrate that the subject
7 dark fiber is needed to meet BellSouth's bandwidth requirements or the bandwidth
8 requirements of another local service provider. BellSouth's dark fiber interoffice service
9 terminates on a standard Light Guide Cross-connect ("LGX") termination at both ends.
10 The dark fiber subscriber loop service terminates on a standard LGX in the subscriber's
11 Serving Wire Center. A collocation cross-connect is used to provide connectivity
12 between the dark fiber and the CLEC's collocation space. *See, e.spire Agmnt., Att. 2, §*
13 *14.*

14
15 Q. ARE CLECS PURCHASING DARK FIBER?

16
17 A. Yes. BellSouth has no dark fiber arrangements in place in Kentucky. BellSouth has ten
18 (10) dark fiber arrangements in place in two (2) other states within BellSouth's nine-state
19 region.

20
21 Q. DOES BELLSOUTH OFFER CLECS LINE SHARING?

22
23 A. Yes. BellSouth provides CLECs with access to the high frequency portion of the local
24 loop as a UNE in compliance with the FCC's *Line Sharing Order*. The high frequency of
25 the loop is defined as the frequency range above the voice band on a copper loop facility

1 carrying analog circuit-switched voice band transmissions where the incumbent LEC is
2 the voice provider. *See* SGAT, § IV. BellSouth will provide requesting carriers access to
3 the high-frequency portion of the loop at the remote terminal location as well as at the
4 central office. Line Sharing is discussed in the testimony of Tommy G. Williams.

5
6 Q. ARE CLECS PURCHASING LINE SHARING?

7
8 A. Yes. As of April 1, 2001, BellSouth had provisioned 2,542 line sharing arrangements
9 across BellSouth's nine-state region and 166 line sharing arrangements in Kentucky.

10
11 Q. DOES BELLSOUTH PROVIDE ACCESS TO LOOP MAKEUP (LMU)
12 INFORMATION?

13
14 A. Yes. BellSouth provides CLECs access to information regarding a given loop's
15 characteristics, including loop length, wire gauge, loop medium (copper or fiber), and
16 information regarding any bridged tap, load coil, or repeaters present on the loop.
17 Manual access to LMU information is described in the testimony of Wiley (Jerry) G.
18 Latham. *See* also SGAT, § IV. BellSouth's electronic pre-ordering and ordering
19 interfaces have been enhanced to provide electronic access to loop makeup information
20 and electronic ordering of ADSL-capable loops, HDSL-capable loops, and UCLs.
21 Electronic access to LMU information is described in the testimony of Ron Pate.

22
23 Q. ARE CLECS ACCESSING LOOP MAKEUP INFORMATION?

24

1 A. Yes. In February 2001, CLECs made 4,283 mechanized LMU inquiries region-wide. In
2 Kentucky, CLECs made 116 mechanized LMU inquiries. From November 2000 through
3 February 2001, CLECs made 549 manual LMU inquiries region-wide, none of which
4 were in Kentucky.

5

6 Q. DOES BELLSOUTH PROVIDE XDSL LOOPS TO CLECS?

7

8 A. Yes. As discussed earlier, BellSouth provides CLECs with various types of xDSL loops
9 including the 2-wire ADSL, the 2-wire and 4-wire HDSL, 2-wire ISDN and Unbundled
10 Copper Loops. *See* NewSouth Agmnt., Att. 2, § 2.0. Finally, BellSouth offers
11 nondiscriminatory access to loop makeup information so that CLECs can determine
12 whether or not existing loop facilities can support the desired xDSL service. BellSouth's
13 xDSL loops, line conditioning and loop qualification offerings are discussed in detail in
14 the testimony of Wiley (Jerry) G. Latham.

15

16 Q. ARE CLECS ORDERING XDSL LOOPS?

17

18 A. Yes. As of March 31, 2001, in Kentucky, BellSouth had provisioned 364 two-wire
19 ADSL loops and one (1) two-wire HDSL loop to over ten (10) different CLECs in
20 Kentucky. As of the same date, BellSouth had provisioned within its region 14,102 two-
21 wire ADSL loops, 451 two-wire HDSL loops, and 46 four-wire HDSL loops to over 90
22 different CLECs.

23

24 Q. DOES BELLSOUTH FACILITATE LINE SPLITTING?

25

1 A. Yes. BellSouth will work cooperatively with CLECs to develop rates, methods and
2 procedures to operationalize a process whereby two CLECs, one being a provider of
3 voice services and the other being a provider of data services may provide service over
4 the same loop. *See* SGAT, § II.B.9. Line Splitting is discussed in detail in the testimony
5 of Tommy Williams.

6

7 Q. ARE CLECS ORDERING LINE SPLITTING?

8

9 A. No, not at this time. As stated above, however, BellSouth will facilitate line splitting for
10 any CLEC that requests it.

11

12 **HOT CUTS**

13

14 Q. GENERALLY DESCRIBE THE PROCESS KNOWN AS A “HOT CUT.”

15

16 A. Hot cuts involve the conversion of an existing BellSouth customer to the network of a
17 competitor by transferring the customer’s in-service loop over to the CLEC’s network.
18 BellSouth has established hot cut procedures that ensure accurate, reliable, and timely
19 cutovers.

20

21 Q. DESCRIBE THE LOOP CUTOVER PROCEDURES ESTABLISHED BY
22 BELL SOUTH TO ENSURE ACCURATE AND TIMELY CUTOVERS.

23

24 A. BellSouth has implemented three hot cut processes, two involving coordination at the
25 time of the hot cut between BellSouth and the requesting CLEC and one process that

1 does not involve such coordination. The two processes for coordinated loop cutovers are
2 a time-specific cutover, and a non-time-specific cutover. With a time-specific cutover, a
3 CLEC can set a specific date and time for a loop conversion by ordering and paying for
4 time specific order coordination. Under this option, BellSouth commits to use best
5 efforts to complete the conversion as specified by the CLEC at the ordered date and time.
6 *See NewSouth Agmnt., Att. 2, § 2.2.2.* If unforeseen circumstances occur during the
7 provisioning process which may cause the date or time of the conversion to be in
8 jeopardy, BellSouth notifies CLEC as soon as the jeopardy is identified to allow the
9 CLEC to respond to its customer as appropriate.

10
11 Under the second option, the CLEC may request non-time specific coordination from
12 BellSouth. Under this option, BellSouth and a CLEC mutually establish a date for the
13 conversion but do not pick a specific conversion time at the time BellSouth receives the
14 CLEC's local service request. Then, 24 to 48 hours in advance of the date of the
15 conversion, BellSouth and the CLEC mutually set a time for the conversion. Like time-
16 specific coordination, if unforeseen circumstances occur that may jeopardize BellSouth's
17 ability to perform the conversion, BellSouth notifies the CLEC as soon as the jeopardy is
18 identified.

19
20 As a third option, the CLEC may prefer no coordination of any kind between BellSouth
21 and the CLEC at the time of the hot cut. The CLEC merely specifies the date upon which
22 it wishes BellSouth to perform its cutover activities and BellSouth notifies the CLEC
23 once the hot cut is complete.

24
25 Q. DESCRIBE IN MORE DETAIL THE PROCESS FOR COORDINATED CUTOVERS.

1 A. Coordinated loop cutovers involve a number of steps. Exhibit WKM-2 shows, pictorially
2 and with a brief narrative, the various work steps involved in a typical coordinated loop
3 cutover. These photographs were taken in BellSouth's Norcross, Georgia, central office;
4 however, the work steps are identical in all nine states in BellSouth's region. Briefly, the
5 work steps involved are as follows:

- 6 • The BellSouth central office technician receives a call from the Customer
7 Wholesale Interconnection Network Services (CWINS) Center to begin cutover
8 and asks for the cable pair number of the loop to be cutover. This is shown on
9 page 1 of Exhibit WKM-2.
- 10 • The technician types the cable pair number into a database to find the loop
11 cutover work order number. This is shown on page 2 of Exhibit WKM-2.
- 12 • The technician retrieves a copy of the work order for the unbundled loop. This is
13 shown on page 3 of Exhibit WKM-2.
- 14 • The technician in the BellSouth central office responds to the BellSouth UNE
15 Center's request to initiate coordination of the overall cutover of service from
16 BellSouth to the CLEC. This is shown on page 4 of Exhibit WKM-2.
- 17 • The technician then verifies that the correct loop has been identified for cutover.
18 This is done using a capability referred to as Automatic Number Announcement
19 Circuit ("ANAC"). The technician plugs a test set onto the loop and dials a
20 special code. The telephone number associated with that loop is played audibly.
21 This is shown on page 5 of Exhibit WKM-2.
- 22 • Next, the technician locates the existing jumper on the BellSouth MDF running
23 between the loop and the BellSouth switch port. This is shown on pages 6-7 of
24 Exhibit WKM-2.
- 25 • The technician locates and removes the end of the jumper connected to the

- 1 BellSouth cable pair. This is shown on page 8 of Exhibit WKM-2.
- 2 • The technician then locates and removes the end of the jumper connected to the
- 3 BellSouth switching equipment. This is shown on page 9 of Exhibit WKM-2.
- 4 • The technician then connects the one end of a new jumper between the loop and a
- 5 connector block on a cable rack with tie cables to the CLEC's collocation
- 6 arrangement. This is shown on page 10 of Exhibit WKM-2.
- 7 • The technician then weaves the new jumper wire through the cable rack to reach
- 8 the tie cables to the CLEC's collocation arrangement. This is shown on page 11
- 9 of Exhibit WKM-2.
- 10 • The technician connects the second end of the new jumper to the connector block
- 11 and thus the tie cable to the CLEC's collocation equipment. This is shown on
- 12 page 12 of Exhibit WKM-2.
- 13 • The technician next verifies that the loop is connected to the expected switch port
- 14 and telephone number in the CLEC's switch, again using ANAC capabilities.
- 15 This is shown on page 13 of Exhibit WKM-2.
- 16 • Upon successful completion of the loop cutover, the technician verifies with the
- 17 CLEC that the order was correctly worked, closes the work order, and notifies the
- 18 UNE Center. This is shown on page 14 of Exhibit WKM-2.
- 19 • Once the cutover is complete, the CLEC sends appropriate messages to effect
- 20 number porting.

21

22 Q. DOES BELLSOUTH DO ANY TESTING IN ADVANCE OF THE CUTOVER DATE?

23

24 A. Yes, BellSouth does advance testing for all designed circuits which come with test points.

25 For such circuits, BellSouth will check the circuit 24 to 48 hours prior to the due date.

1 For non-designed circuits, BellSouth performs continuity tests within the central office
2 from the collocation space to the BellSouth switch. For both designed and non-designed
3 circuits, BellSouth tests on the cutover due date for CLEC dialtone.

4
5 On the due date, BellSouth tests for CLEC dialtone for all circuits, whether designed or
6 nondesigned. BellSouth also monitors the line for use. If during the test, BellSouth does
7 not receive CLEC dialtone, the cutover will not take place unless the CLEC corrects the
8 problem within 15 minutes or pays for standby time. Otherwise, the CLEC must elect to
9 reschedule the conversion.

10

11 Q. DOES BELLSOUTH PERFORM LOOP CUTOVERS SIMULTANEOUSLY WITH
12 NUMBER PORTING?

13

14 A. No. BellSouth does not perform loop cutovers simultaneously with number porting for
15 the very important reason that to do so leaves the end user customer at risk of the number
16 porting being completed early and calls bound for the end user customer being
17 misdirected to the CLEC's switch. The loop cutover is much more complicated in terms
18 of the work steps involved (on the part of both BellSouth and the CLEC) than the number
19 porting. BellSouth performs all "up front" work in anticipation of the loop cutover being
20 successfully completed. BellSouth's provisioning process is discussed in the testimony of
21 Ken Ainsworth. BellSouth's LNP implementation is discussed further in the Affidavit of
22 Dennis L. Davis, Attachment E.

23

24 The cutover process can be even more unobtrusive to the end user customer if one of
25 several processes is followed. The CLEC might, for example, schedule the cutover late

1 at night or on a weekend or any other time when the end user customer will not be using
2 the service. Other procedures such as pre-wiring cross connections in anticipation of
3 BellSouth's providing the unbundled network elements likewise minimize or eliminate
4 any inconvenience to the end user customer.

5
6 Q. DOES BELLSOUTH DOCUMENT ITS CUTOVER PROCESS SUCH THAT THE
7 CLECS CAN REVIEW IT?

8
9 A. Yes. BellSouth has developed a detailed flow chart depicting the entire process. This
10 process flow is attached to this testimony as Exhibit WKM-3.

11
12 Q. DOES BELLSOUTH HAVE METHODS AND PROCEDURES THAT DOCUMENT
13 THIS PROCESS FLOW?

14
15 A. Yes. BellSouth has developed methods and procedures ("M&Ps") for its process flow.
16 BellSouth's M&Ps are attached to this testimony as Exhibit WKM-4 and address the
17 following:

- 18 • BellSouth's processes when a CLEC orders a coordinated conversion and whether
19 the CLEC wants to set the conversion time for an offered day or whether the
20 CLEC elects to have the time mutually agreed to prior to conversion.
- 21 • BellSouth's requirements to contact the CLEC at any point in the provisioning
22 process where a jeopardy condition might result in a conversion delay.
- 23 • BellSouth's commitment to contact the CLEC 24 to 48 hours in advance of the
24 cut depending on the interval for the service ordered, to negotiate a non time
25 specific conversion and/or to verify the CLEC's readiness to convert the

1 customer's service as ordered.

- 2 • BellSouth's pre-testing responsibilities prior to conversion as well as on the
- 3 conversion date to ensure the conversion is completed successfully.
- 4 • BellSouth's willingness to notify and cooperatively work with CLECs to correct
- 5 any wiring defects which BellSouth identifies while performing pre-testing
- 6 activities whether the fault appears to be in BellSouth's or a CLEC's equipment.
- 7 • A CLEC's ability to accept or reject the completion of a conversion prior to
- 8 BellSouth completing the service request and BellSouth's obligation to timely
- 9 notification to the CLEC for the porting of telephone numbers.

10 In addition, BellSouth has developed training materials with which to instruct its
11 technicians about the loop cutover process. These are Work Instruction UTDIC001,
12 Issue 2f, and Work Instruction UTNIC001, Issue 2g., and are attached to this testimony
13 as Exhibit WKM-5.

14
15 Q. IS BELLSOUTH'S CIRCUIT FACILITY ASSIGNMENT (CFA) DATABASE
16 AVAILABLE TO CLECS IN CONNECTION WITH LOOP CUTOVERS?

17
18 A. Yes. BellSouth makes available its CFA database to CLECs via the Internet. BellSouth
19 provides CLECs with the circuit facility assignments (that is, cable and pair assignments
20 for the cable between the CLEC's collocation arrangement and BellSouth's equipment
21 such as distributing frames or cross-connect bays) assigned to the CLEC at the time the
22 CLEC's collocation arrangement is made available. Each CLEC is required to maintain
23 its own circuit facility assignment records and assign each pair that the CLEC wants
24 BellSouth to use in order to connect BellSouth facilities to the CLEC's facilities.

25

1 **CHECKLIST ITEM 5: LOCAL TRANSPORT**

2
3 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 5.

4
5 A. Checklist Item 5 requires BellSouth to offer access to the local transport network element
6 on the trunk side of a wireline local exchange carrier switch unbundled from switching or
7 other services. 47 U.S.C. § 271(c)(2)(B)(v). Local transport consists of BellSouth
8 interoffice transmission facilities dedicated to a particular customer or carrier, or shared
9 by more than one customer or carrier, that provide telecommunications between wire
10 centers owned by BellSouth or a CLEC or third parties acting on behalf of a CLEC, or
11 between switches owned by BellSouth or a CLEC or third parties acting on behalf of a
12 CLEC. BellSouth provides both types of local transport, namely dedicated and common
13 (also called "shared.") *See* NewSouth Agmnt., Att. 2, § 8.0. BellSouth complies with the
14 obligations of this checklist item, both through its interconnection agreements and
15 through its SGAT.

16
17 Dedicated transport consists of BellSouth transmission facilities dedicated to a particular
18 customer or carrier that provide telecommunications between wire centers owned by
19 BellSouth or CLECs, or between switches owned by BellSouth or CLECs. *See* e.spire
20 Agmnt., Att. 2, § 8.3.

21
22 Common transport is interoffice transmission facilities, shared between BellSouth and
23 one or more CLECs, that connect end office switches, end office switches and tandem
24 switches, or tandem switches, in BellSouth's network. This definition of common

1 transport assumes the interconnection point between the two carriers' networks is at
2 BellSouth's switch. *See e.spire Agmnt., Att. 2, § 8.2.*

3
4 With respect to dedicated transport, BellSouth does the following: (1) provides
5 unbundled access to dedicated transmission facilities between BellSouth's central offices
6 or between such central offices and serving wire centers ("SWCs"); between SWCs and
7 IXC's points of presence ("POPs"); between tandem switches and SWCs, end offices, or
8 tandems of BellSouth and the wire centers of BellSouth and requesting carriers; (2)
9 provides all technically feasible transmission capabilities such as DS1, DS3, and Optical
10 Carrier (OCn) levels that the competing carrier could use to provide telecommunications,
11 including the necessary electronics; (3) does not limit the facilities to which dedicated
12 interoffice transport facilities are connected, provided such interconnections are
13 technically feasible, or restrict the use of unbundled transport facilities; and (d) to the
14 extent technically feasible, provides requesting carriers with access to digital cross-
15 connect functionality in the same manner that the BellSouth offers such capabilities to
16 IXCs that purchase transport services. *See e.spire Agmnt., Att. 2, §. 8.0.*

17
18 In addition, CLECs can use dedicated transport to provide any transmission-specific
19 service to the extent technically feasible.

20
21 With respect to common transport, BellSouth does the following: (1) provides common
22 transport in a way that enables the traffic of requesting carriers to be carried on the same
23 transport facilities that BellSouth uses for its own traffic; (2) provides common transport
24 transmission facilities between end office switches, between BellSouth's end office and
25 tandem switches; and between tandem switches in BellSouth's network; (3) permits

1 requesting carriers that purchase unbundled common transport and unbundled switching
2 to use the same routing table that is resident in BellSouth's switch; and (4) permits
3 requesting carriers to use common (or dedicated) transport as an unbundled element to
4 carry originating traffic from, and terminating traffic to, customers to whom the
5 requesting carrier is also providing local exchange service. *See* e.spire Agmnt., Att. 2, §
6 8.0.

7
8 In the *Second Louisiana Order*, the FCC found that BellSouth complies with the
9 requirements of this checklist item by making available dedicated and common transport
10 between end offices, between tandems, and between tandems and end offices.³ BellSouth
11 continues to make both dedicated and shared transport available to CLECs on a
12 nondiscriminatory basis and has procedures in place for the ordering, provisioning, and
13 maintenance of both dedicated and shared interoffice transport.

14
15 In addition to the types of local transport currently offered by BellSouth, a CLEC may
16 request new or additional unbundled transport elements using the BFR process. *See*
17 *NewSouth Agmnt.*, GTC-A, § 6.0.

18
19 Q. ARE CLECS ORDERING LOCAL TRANSPORT?
20

³ Despite its favorable conclusion on BellSouth's provision of local transport, the FCC declined to approve this checklist item on the grounds that BellSouth had failed to make a prima facie showing that it provides nondiscriminatory access to OSS for the ordering and provisioning of dedicated and shared transport facilities. These issues are discussed in the testimony of Ron Pate.

1 A. Yes. As of March 31, 2001, BellSouth had provided 228 dedicated local transport trunks
2 to CLECs in Kentucky. BellSouth has provided 10,907 dedicated trunks providing
3 interoffice transport to CLECs in its nine-state region as of that same date.

4
5 For common transport, specific counts of trunks providing service to CLECs cannot be
6 determined. This is because, as the name (common transport) implies, all trunks in a
7 given trunk group are available for carrying service for any carrier which uses that group,
8 including BellSouth and in some cases multiple CLECs. However, BellSouth can state
9 that as of from July 1999 to March 31, 2001, there were 16 CLECs in Kentucky and 92 in
10 BellSouth's nine-state region using common transport to some degree.

11

12 **CHECKLIST ITEM 6: LOCAL SWITCHING**

13

14 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 6.

15

16 A. The Act requires BellSouth to offer access to "[l]ocal switching unbundled from
17 transport, local loop transmission, or other services." 47 U.S.C. § 271(c)(2)(B)(vi).

18 Local switching is the network element that provides the functionality required to connect
19 the appropriate originating lines or trunks wired to the MDF or to the digital cross
20 connect panel to a desired terminating line or trunk. Local switching encompasses line-
21 side and trunk-side facilities, plus the features, functions and capabilities of the switch.
22 *See NewSouth Agmnt., Att. 2, § 7.0.*

23

24 BellSouth has procedures in place for the ordering, provisioning, and maintenance of its
25 switching services on a nondiscriminatory basis. *See e.spire Agmnt., Att. 2, § 7.1.1.* The

1 line-side facilities include the connection between a loop termination at, for example, a
2 main distributing frame, and a switch line card. 47 C.F.R. § 51.319(c)(1)(i)(A). The
3 trunk-side facilities include the connection between, for example, trunk termination at a
4 trunk-side cross connect panel and a trunk card. 47 C.F.R. § 51.319 (c)(1)(i)(B). The
5 functionality of BellSouth's local circuit switching offerings includes all of the features,
6 functions and capabilities provided for the particular port type, including features
7 inherent to the switch and the switch software. Local circuit switching also provides
8 access to additional capabilities such as common and dedicated transport, out of band
9 signaling, 911, operator services, directory services, repair service, as well as AIN and
10 similar capabilities.

11
12 Because BellSouth obligates itself to provide common transport, it, by definition,
13 provides CLECs with shared trunk ports, and the routing table that instructs the call to
14 follow a specified path. *See Second Louisiana Order*, ¶ 228 (“BellSouth is obligated to
15 provide shared trunk ports and the routing tables necessary to get to the shared trunk port
16 as a consequence of its legal obligation to provide shared transport.”)

17
18 In addition, if CLECs want unbundled switching in conjunction with dedicated transport,
19 CLECs likewise have access to BellSouth's routing tables.

20
21 Q. DOES BELLSOUTH PROVIDE ACCESS TO VERTICAL SERVICES AND
22 FEATURES?

23
24 A. Yes. BellSouth's local circuit switching offerings include access to the vertical services
25 and features the switch is capable of providing. All vertical features loaded in a circuit

1 switch are available to CLECs, whether or not BellSouth offers such features to its retail
2 customers. Features loaded but not activated and features not loaded in the circuit switch
3 may be requested through the BFR process. *See* e.spire Agmnt., Att. 2, § 7.1.2; *Second*
4 *Louisiana Order*, ¶ 220 (“we find that a BOC can require a requesting carrier to submit a
5 request for such a vertical feature through a predetermined process that give the BOC an
6 opportunity to ensure that it is technically feasible and otherwise develop the necessary
7 procedures for ordering those features.”)

8
9 Q. DOES BELLSOUTH ACTIVATE CLEC NXX CODES IN BELLSOUTH’S
10 SWITCHES?

11
12 A. Yes. For successful call completion, each switch must recognize all active NXX codes in
13 order to determine where the call is to be routed. When a CLEC, or any other LEC,
14 obtains a new NXX code, BellSouth activates the code in its switches in accordance with
15 the FCC’s *Third Order on Reconsideration*, 12 FCC Rcd 12,460, ¶ 82. BellSouth
16 performs this function at no charge to the CLEC.

17
18 BellSouth provides an NXX activation Single Point of Contact (“SPOC”) to address
19 CLEC inquiries about NXX codes. Among other functions, the NXX SPOC coordinates
20 the activation of CLEC NXX codes within BellSouth’s network and provides a trouble-
21 reporting center for CLEC code activation.

22
23 Since its establishment, the NXX SPOC has successfully facilitated the NXX activation
24 process. The NXX SPOC provides CLECs with a positive report on the activation of all
25 of the CLEC’s NXXs that are activated in BellSouth’s network. If requested by a CLEC,

1 a written response is provided to the CLEC when BellSouth's Complex Translations
2 Group has provisioned the NPA/NXX in the appropriate BellSouth switches and
3 BellSouth has completed mechanized Automatic Message Accounting ("AMA") testing
4 and validation. Since it began operation, the NXX SPOC has tracked the provisioning
5 and testing of approximately 4,300 NXXs codes for facility-based CLECs and
6 Independent Telephone Companies and has been involved in the resolution of over 400
7 customer related routing troubles.

8
9 Q. DOES BELLSOUTH PROVIDE FEATURE GROUP D SIGNALING IN
10 CONJUNCTION WITH THE PROVISIONING OF UNBUNDLED LOCAL
11 SWITCHING?

12
13 A. Yes. BellSouth will provide a CLEC with its choice of signaling format, including
14 Feature Group D signaling, to the extent technically feasible.

15
16 Q. DOES BELLSOUTH PROVIDE ACCESS TO PACKET SWITCHING?

17
18 A. Pursuant to Rule 51.319, BellSouth will provide CLECs packet switching as a UNE in
19 situations in which each of the following conditions is satisfied:

- 20 (1) BellSouth has deployed digital loop carrier systems, including but not limited
21 to, integrated digital loop carrier or universal digital loop carrier systems; or
22 has deployed any other system in which fiber optic facilities replace copper
23 facilities in the distribution section (*e.g.*, end office to remote terminal,
24 pedestal or environmentally controlled vault);

1 (2) There are no spare copper loops capable of supporting xDSL services the
2 CLEC seeks to offer;

3 (3) BellSouth has not permitted a CLEC to deploy a Digital Subscriber Line
4 Access Multiplexer in the remote terminal, pedestal or environmentally
5 controlled vault or other interconnection point, nor has the requesting carrier
6 obtained a virtual collocation arrangement at these subloop interconnection
7 points as defined in 47 C.F.R. § 319(b); and

8 (4) BellSouth has deployed packet switching for its own use.

9 *See* SGAT, § VI.D.

10
11 Q. DOES BELLSOUTH PROVIDE ACCESS TO TANDEM SWITCHING?

12
13 A. Yes. BellSouth's unbundled tandem switching element meets all the requirements of the
14 FCC's Rules. Tandem switching is defined as trunk-to-trunk connection facilities,
15 including but not limited to the connection between trunk terminations at a cross connect
16 panel and a switch trunk card; the basic switching function of connecting trunks to
17 trunks; and all technically feasible functions that are centralized in tandem switches (as
18 distinguished from separate end office switches), including but not limited to call
19 recording, the routing of calls to operator services, and signaling conversion features. 47
20 C.F.R. § 51.319(c)(2); *See e.spire Agmnt.*, Att. 2, § 7.1.1.1. Tandem switching provides
21 trunk to trunk connections for local calls between two end office switches, including two
22 end office switches belonging to different CLECs. To the extent that all signaling is SS7,
23 tandem switching preserves Custom Local Area Switched Services (CLASS) features and
24 Caller ID information as calls are processed. BellSouth performs testing through the
25 tandem switching element for CLECs in the same manner and frequency that it performs

1 such testing for itself. To the extent that BellSouth manages traffic congestion for
2 tandem switching for itself, it also manages it for CLECs using unbundled tandem
3 switching, including congestion points such as those caused by radio station call-ins, and
4 network routing abnormalities, using capabilities such as Automatic Call Gapping,
5 Automatic Code Gapping, Automatic Congestion Control, and Network Routing
6 Overflow.

7
8 Q. ARE CLECS ORDERING UNBUNDLED LOCAL SWITCHING?

9
10 A. Yes. As of March 31, 2001, BellSouth had two (2) unbundled switch ports in service in
11 Kentucky. Region-wide, BellSouth had 388 unbundled switch ports in service as of that
12 same date. Additionally, in connection with its combined loop/port combination offering,
13 BellSouth had 14,635 switch ports in service in Kentucky and 303,257 in service
14 regionally.

15
16 Q. DOES BELL SOUTH OFFER CUSTOMIZED ROUTING IN COMPLIANCE WITH
17 THE FCC'S REQUIREMENTS?

18
19 A. Yes. Customized routing (which is also referred to as selective routing) permits
20 requesting carriers to designate the particular outgoing trunks that will carry certain
21 classes of traffic originating from competitors' customers. *See Second Louisiana Order,*
22 ¶ 221. One specific use of customized routing is to allow calls from a CLEC's customers
23 served by a BellSouth switch to reach the CLEC's choice of operator service or directory
24 assistance service platforms which may be BellSouth's operator service and directory
25 assistance service platforms or the CLEC's platforms or the platforms of a third party

1 provider. Customized routing can be provided when a CLEC acquires unbundled local
2 switching from BellSouth or resells BellSouth's local exchange services.

3 BellSouth offers two methods of customized routing to CLECs: AIN and LCCs. *See*
4 SGAT, § X.A.3(f); NewSouth Agmnt., Att. 2, § 7.2.1.14.6.4. BellSouth has tested both
5 methods and both currently are available.

6
7 BellSouth posted its CLEC Information Package for the BellSouth AIN Selective Carrier
8 Routing (AIN-SCR) service and its Market Service Description ("MSD") for the SCR via
9 LCCs (SCR-LCC) service to the BellSouth Interconnection Services website on April 30,
10 2001.

11
12 Q. DESCRIBE THE AIN METHOD OF CUSTOMIZED ROUTING BELLSOUTH
13 OFFERS.

14
15 A. BellSouth's AIN method uses a database of the CLEC's routing choices queried during
16 call set up. The AIN method of customized routing allows the use of the AIN "hub"
17 concept, which yields several advantages. The AIN hubbing arrangement:

- 18
19
- Allows the use of appropriate AIN "triggers" for all call types rather than only a
20 limited set of call types.
 - Allows even those end office switches that are not AIN-capable to use the AIN
21 customized routing solution.
 - Optimizes the use of trunk groups by allowing the carriage of customized routing
22 traffic over common trunk groups between the end office and the AIN hub.
- 23
24
25

1 Thus, the AIN hubbing arrangement allows the use of the AIN method in all switches,
2 even those that are not AIN capable. Also, the AIN hubbing arrangement allows the
3 sharing of trunk groups that some CLECs have stated they prefer.
4

5 Q. DID BELLSOUTH RECENTLY COMPLETE AN ENHANCEMENT TO THE AIN
6 METHOD?

7
8 A. Yes. BellSouth completed an enhancement to its AIN method that further automates the
9 means by which CLECs' routing information may be updated. End-to-End call-through
10 testing was successfully completed on June 14, 2000. BellSouth then completed all
11 methods and procedures for the service offering during the third quarter 2000, and posted
12 a MSD to its interconnection website on October 23, 2000.
13

14 Q. ARE CLECS USING THE AIN METHOD OF CUSTOMIZED ROUTING?

15
16 A. To date, no CLEC has requested BellSouth's AIN method of customized routing.
17 BellSouth stands ready to provide the AIN method upon request.
18

19 Q. DESCRIBE THE LCC METHOD OF CUSTOMIZED ROUTING.
20

21 A. In the LCC method, which is the method by which BellSouth routes its own end users'
22 calls, end user calls are routed via the use of a LCC in the switch. For example, a
23 CLEC's end users served by a BellSouth switch are configured such that when the end
24 user dials 0-, a Line Attributes Table points to another table, a Position Table for 0- calls.
25 This table in turn identifies a trunk group to the appropriate operator services platform.

1 For calls requiring a number pretranslation such as 411 or 611, the Line Attributes Table
2 points the call to the appropriate pretranslator table, and this table then points the call to
3 the appropriate destination. A separate line class code is not needed for each end user for
4 each function, but rather the same line class code can be used for multiple subscribers.
5 The same LCC connects each of them to the same destination for the same type of call.
6 *See e.g., NewSouth Agmnt., Att. 2, § 10.4.*

7
8 Availability of customized routing capability using LCCs is offered on a first-come, first-
9 served basis. This method permits the passage of intraLATA toll and interLATA
10 operator services traffic to interexchange carriers over Feature Group D trunks at the
11 CLEC's option. While there are finite limits on the number of line class codes in
12 particular central office switches, BellSouth has not denied any request for customized
13 routing based on lack of LCC capacity. Moreover, the AIN method of customized
14 routing eliminates any potential exhaust concerns about the LCC method of customized
15 routing.

16
17 Q. ARE CLECS USING THE LCC METHOD OF CUSTOMIZED ROUTING?

18
19 A. Yes. BellSouth has provided the LCC method of customized routing to one CLEC in
20 Georgia. No CLEC in Kentucky has requested this method of customized routing;
21 BellSouth, however, stands ready to provide it.

22
23 Q. HOW IS THE AIN METHOD OF CUSTOMIZED ROUTING DIFFERENT THAN
24 THE LCC METHOD?

25

1 A. The AIN method allows the use of shared trunk groups (for those CLECs using the AIN
2 method) between the end office switch and the AIN hub switch to accomplish customized
3 routing for customers served by different end offices subtending a particular AIN hub. In
4 contrast, the LCC solution, discussed below, requires a separate trunk group for each end
5 office due to the inherent technical limitations of the switches. This separate trunk group
6 may be shared, however, by those CLECs requesting the same branding or unbranding of
7 their respective end users' OS/DA traffic. BellSouth uses separate trunk groups between
8 its end office switches and BellSouth's operator services and directory assistance
9 platforms for calls from BellSouth's end users.

10

11 Q. DO BELLSOUTH'S CUSTOMIZED ROUTING SOLUTIONS MEET THE FCC'S
12 REQUIREMENTS?

13

14 A. Yes. In the *Second Louisiana Order*, the FCC discussed the CLECs' ability to route its
15 customers' calls. Specifically, the FCC held that "BellSouth should not require the
16 competitive LEC to provide the actual line class codes, which may differ from switch to
17 switch, if BellSouth is capable of accepting a single code region-wide." *Second*
18 *Louisiana Order*, ¶ 224. In compliance with this obligation, BellSouth will implement
19 one routing pattern per region for a CLEC's customers. In addition, although it is not
20 required to do so, BellSouth voluntarily will provide a single routing pattern on a state-
21 wide basis. This single routing pattern (whether region-wide or state-wide) can include
22 routing to a BellSouth platform (branded or unbranded), a CLEC platform, or a third-
23 party platform.

24

1 To avail itself of the single routing pattern, the CLEC need not put any LCC on its local
2 service requests (“LSRs”). Such orders will be handled electronically (assuming, of
3 course, that they would not otherwise fall out for manual handling) and therefore will
4 need no manual intervention.

5
6 This line class code routing arrangement is identical to that provided to the BellSouth
7 retail units. On its retail side, BellSouth has a single region-wide routing pattern for its
8 customers’ calls that is effectuated without the service representative having to populate
9 the LCC on the service order. Likewise, BellSouth will provide a single routing pattern
10 for CLECs that is effectuated without the CLEC service representative having to populate
11 the LCC on the order.

12
13 If, on the other hand, the CLEC chooses to have different routing options available for
14 different customers served out of the same switch, BellSouth will handle such requests on
15 a manual basis. In this scenario, the CLEC will provide information on the LSR
16 designating the appropriate LCCs to direct the call for those of the CLEC’s end users for
17 which the single routing plan will not be used. Although submitted electronically, such
18 an order will fall out for manual handling and BellSouth will process it manually. The
19 FCC specifically recognized that CLECs who wish to have multiple routing patterns in
20 the same switch should bear the obligation to populate the requisite LCCs on the LSR.
21 Specifically, the FCC held as follows:

22
23 We agree with BellSouth that a competitive LEC must tell BellSouth how to route
24 its customers’ calls. If a competitive LEC wants all of its customers’ calls routed
25 in the same way, it should be able to inform BellSouth, and BellSouth should be

1 able to build the corresponding routing instructions into its systems just as
2 BellSouth has done for itself. If, however, a competitive LEC has more than one
3 set of routing instructions for its customers, it seems reasonable and necessary for
4 BellSouth to require the competitive LEC to include in its order an indicator that
5 will inform BellSouth which selective routing pattern to use.

6
7 *Second Louisiana Order*, ¶ 224. As described above, BellSouth is in full compliance
8 with these obligations.

9
10 For those LSRs on which the CLECs populate the LCCs for specific routing patterns,
11 BellSouth will process them in a timely manner. Such orders will be counted in the
12 “partially mechanized” category of performance data and addressed fully in the
13 performance data filing of Alphonso Varner.

14
15 **CHECKLIST ITEM 7: 911/E911, DIRECTORY ASSISTANCE AND OPERATOR CALL**
16 **COMPLETION**

17
18 Q. PLEASE DESCRIBE BELLSOUTH’S COMPLIANCE WITH CHECKLIST ITEM 7.

19
20 A. BellSouth provides to CLECs access to 911/E911 services, directory assistance services,
21 and operator call completion services at a level of quality and performance that is at least
22 equal to that which BellSouth provides to itself.

1 911/E911

2

3 Q. DOES BELLSOUTH PROVIDE NONDISCRIMINATORY ACCESS TO 911 AND
4 E911 SERVICES?

5

6 A. Yes. Section 271(c)(2)(B)(vii) of the Act requires a Bell Operating Company such as
7 BellSouth to provide “[n]ondiscriminatory access to --- (I) 911 and E911 services. In the
8 *Ameritech Michigan Order*, the FCC held that a BOC “must maintain the 911 database
9 entries for competing LECs with the same accuracy and reliability that it maintains the
10 database entries for its own customers” and that for facilities-based carriers, BellSouth
11 must provide “unbundled access to [its] 911 database and 911 interconnection, including
12 the provision of dedicated trunks from the requesting carrier’s switching facilities to the
13 911 control office at parity with what [BellSouth] provides to itself.” *Ameritech*
14 *Michigan Order*, ¶ 256.

15

16 Q. DESCRIBE THE MEANS BY WHICH BELLSOUTH OFFERS CLECS ACCESS TO
17 BELLSOUTH’S E911 DATABASE.

18

19 A. The BellSouth E911 database contains end user subscriber information that is useful to
20 emergency service agencies in locating a customer dialing 911 for dispatching
21 appropriate emergency services. The database contains information such as customer
22 name, service address, class and type of service. BellSouth has had procedures in place
23 since early 1996 by which CLECs can connect their switches to BellSouth’s E911
24 tandems. Because methods and procedures have long been in place to allow other
25 carriers, including independent LECs, access to BellSouth’s E911 and 911 updating

1 capabilities, the necessary methods and procedures for obtaining such updating by
2 CLECs have been business as usual for BellSouth. *See* NewSouth Agmnt., Att. 2, § 16.0,
3 e.spire Agmnt., Att. 2, § 16.0.

4
5 BellSouth's provision of nondiscriminatory access to the E911 database as well as
6 procedures for updating and maintaining the E911 database both for CLEC and BellSouth
7 end users are described in the Affidavit of Ms. Val Sapp, Attachment F.

8
9 In the *Second Louisiana Order*, the FCC found that BellSouth satisfied the requirements
10 of Checklist Item (7)(I). There has been no material change in BellSouth's provision of
11 911/E911 since that decision and thus the Commission should find BellSouth in
12 compliance.

13
14 Q. ARE CLECS ACCESSING BELLSOUTH'S E911 DATABASE?

15
16 A. Yes. As of March 31, 2001, CLECs had requested and BellSouth had provided 96 such
17 trunks for CLECs in Kentucky. In its nine-state region, BellSouth had 4,400 trunks in
18 service connecting CLECs' switches with BellSouth's E911 arrangements as of that same
19 date. In Kentucky, 13 CLECs were sending mechanized updates to BellSouth for
20 inclusion in the 911 database as of March 31, 2001; and in BellSouth's nine-state region,
21 66 CLECs were doing so as of that same date. These mechanized updates include
22 information about both end user customers to whom CLECs provide service via the
23 resale provisions of the Act as well as those end user customers to whom CLECs provide
24 service from the CLECs' own switches.

25

1 **DIRECTORY ASSISTANCE/OPERATOR SERVICES**

2
3 Q. WHAT ARE BELLSOUTH'S OBLIGATIONS WITH RESPECT TO DIRECTORY
4 ASSISTANCE AND OPERATOR SERVICES?

5
6 A. Section 271(c)(2)(B)(vii)(II) and (III) of the Act requires BellSouth to provide
7 nondiscriminatory access to "directory assistance services to allow the other carrier's
8 customers to obtain telephone numbers" and "operator call completion services,"
9 respectively. Section 251(b)(3) obligates BellSouth to permit CLECs to have
10 nondiscriminatory access to operator services, directory assistance and directory listing
11 with no unreasonable dialing delays. BellSouth, however, is no longer obligated to
12 provide operator and directory assistance services as a UNE because BellSouth provides
13 customized routing as discussed earlier.

14
15 Q. DOES BELLSOUTH PROVIDE DIRECTORY ASSISTANCE SERVICE IN A
16 NONDISCRIMINATORY MANNER?

17
18 A. Yes. BellSouth provides directory assistance access service to CLECs in the same
19 manner as it does for its own retail subscribers. *See* NewSouth Agmnt., Att. 2, § 10.3.
20 Specifically, BellSouth provides CLECs with DAAS. DAAS allows CLECs' end users
21 to obtain telephone listing information from BellSouth. CLECs also have access to
22 BellSouth's DACC service, which gives the CLEC's end user the option to have a call to
23 BellSouth's DA service completed automatically. Facilities-based CLECs obtain access
24 to these services through trunks connecting the CLEC's point of interface to BellSouth's
25 DA platform.

1 Q. ARE CLECS USING DAAS AND DACC?

2

3 A. Yes. As of March 31, 2001, CLECs in Kentucky had 65 directory assistance trunks in
4 place between those CLECs' switches and BellSouth's DA platform. In BellSouth's
5 nine-state region, there were 2,929 such directory assistance trunks in place serving
6 CLECs. In BellSouth's nine-state region, 30 CLECs were purchasing DAAS and 41
7 CLECs were purchasing DACC from BellSouth as of March 31, 2001.

8

9 Because methods and procedures have long been in place to allow other carriers, such as
10 independent LECs, access to BellSouth's DAAS and DAAC services, the necessary
11 methods and procedures for obtaining such access by CLECs are business as usual for
12 BellSouth.

13

14 Q. DOES BELLSOUTH PROVIDE CLECS WITH ACCESS TO BELLSOUTH'S
15 SUBSCRIBER LISTING INFORMATION FOR CLECS TO ESTABLISH THEIR
16 OWN DIRECTORY ASSISTANCE SERVICES?

17

18 A. Yes. BellSouth provides CLECs and other service providers with access to BellSouth's
19 DADS, which allows CLECs to use BellSouth's subscriber listing information to set up
20 their own directory assistance services. *See* NewSouth Agmnt., Att. 2 § 10.5. BellSouth
21 also provides CLECs and other service providers with DADAS, which gives CLECs
22 direct access to BellSouth's DA database so that CLECs may provide directory assistance
23 services. *See* NewSouth Agmnt., Att. 2, § 10.6. BellSouth currently provides both
24 DADS and DADAS to CLECs themselves and to various third-party service providers
25 which, in turn, furnish the service to CLECs. Database information is available to

1 CLECs in magnetic tape format, cartridge tape format, and where the CLEC has
2 electronic connectivity, in network data mover (NDM) format.

3
4 All information contained in BellSouth's listing database for its own end users, CLECs'
5 end users, and independent LECs' end users is available to competitive carriers in the
6 same manner as it is available to BellSouth itself. BellSouth is fully compliant with
7 Section 51.217(c)(3)(i) of the FCC's rules.

8
9 Q. ARE CLECS ACCESSING BELLSOUTH'S DIRECTORY DATABASES?

10
11 A. Yes. As of March 31, 2001, five (5) service providers were using BellSouth's Kentucky
12 subscriber listings, via DADS, to provide DA service and third party listing data to end
13 users. Nine (9) service providers were using DADS across BellSouth's nine-state region
14 as of that same date. As of March 1, 2001, two (2) service providers in the region were
15 using DADAS to provide the service to CLECs.

16
17 Q. DESCRIBE BELLSOUTH'S INTERCEPT SERVICE OFFERING.

18
19 A. CLECs also have access to BellSouth's intercept service, which refers calls from a
20 disconnected or non-working number to an appropriate announcement. Facilities-based
21 CLECs obtain access to BellSouth's intercept service through a dedicated trunk facility.
22 As of March 31, 2001, BellSouth had provided CLECs in Kentucky with six (6) intercept
23 trunks. In BellSouth's nine-state region, BellSouth had provided 172 intercept trunks to
24 CLECs as of that same date. Because methods and procedures have long been in place to
25 allow other carriers, such as independent LECs, access to BellSouth's intercept service,

1 the necessary methods and procedures for obtaining such access by CLECs are business
2 as usual for BellSouth.

3
4 Q. DESCRIBE BELLSOUTH'S OPERATOR CALL PROCESSING SERVICES
5 OFFERING.

6
7 A. Operator call processing, which allows CLECs to obtain both live operator and
8 mechanized functionality, is available from BellSouth. *See* NewSouth Agmnt., Att. 2, §
9 10. BellSouth call processing includes: Call Assistance and Call Completion services;
10 Alternate Billing Services such as third number billing, calling card billing, and collect
11 call handling; verification and interruption of a busy line; and operator transfer service.
12 Facilities-based CLECs can obtain access to BellSouth's operator call processing by
13 connecting their point of interface via a trunk group to BellSouth's operator services
14 system.

15
16 Q. ARE CLECS ACCESSING BELLSOUTH'S OPERATOR SERVICES?

17
18 A. Yes. As of March 31, 2001, BellSouth had provided CLECs in Kentucky with 59
19 operator services trunks. Across its nine-state region, BellSouth had provided CLECs
20 with 2,903 operator services trunks as of that same date. In Kentucky, BellSouth had
21 provided CLECs with two (2) verification trunks as of March 31, 2001. Across its nine-
22 state region, BellSouth had provided CLECs with 503 verification trunks as of that same
23 date. Because methods and procedures have long been in place to allow other carriers,
24 such as independent LECs, access to BellSouth's operator call processing, such access by
25 CLECs is considered business as usual for BellSouth.

1 Q. CAN INFORMATION CONCERNING CLECS' END USER CUSTOMERS BE
2 ENTERED INTO OR CORRECTED IN BELLSOUTH'S DIRECTORY ASSISTANCE
3 AND OPERATOR SERVICES DATABASES?

4
5 A. Yes. BellSouth will update CLEC end user listings equal to the service it provides to
6 itself and its end users. *See* NewSouth Agmnt., Att. 2, § 10.3.2.2. BellSouth's
7 procedures for updating and maintaining the DA and OS databases for BellSouth's end
8 user subscribers are described in the Affidavit of Doug Coutee, Attachment C. As
9 described by Mr. Coutee, procedures for both CLEC subscribers and BellSouth
10 subscribers are performed in a similar and nondiscriminatory manner.

11
12 **DISAGGREGATION OF PERFORMANCE DATA FOR DIRECTORY**

13 **ASSISTANCE/OPERATOR SERVICES**

14
15 Q. DO BELLSOUTH'S PERFORMANCE MEASUREMENTS FOR DIRECTORY
16 ASSISTANCE/OPERATOR SERVICES SUFFICIENTLY DEMONSTRATE
17 NONDISCRIMINATION?

18
19 A. Yes. In the *Second Louisiana Order*, the FCC stated that in future applications,
20 BellSouth needed either to disaggregate its performance data for directory assistance and
21 operator services between wholesale and retail, or explain why such disaggregation is
22 unnecessary to show nondiscrimination. *Second Louisiana Order*, ¶ 245. Because
23 BellSouth's provision of directory assistance and operator services to CLECs is parity by
24 design, disaggregation of performance measurements for these services is unnecessary.

25

1 To demonstrate this fact, I directed the preparation of exhibits that describe the routing
2 and handling of operator services and directory assistance calls. Exhibit WKM-7
3 describes the processing of such calls by the Traffic Operating Position System (“TOPS”)
4 and its associated Queuing Management System (“QMS”). This exhibit was prepared by
5 BellSouth subject matter experts responsible for staff support for BellSouth departmental
6 operations in these two areas. I also obtained an affidavit from one of BellSouth’s major
7 suppliers of hardware and associated software systems for these two areas, Nortel, Inc.
8 This affidavit, which is attached to my testimony as Exhibit WKM-8 validates the
9 accuracy of the exhibit as well as my overview of it contained herein.

10
11 Q. EXPLAIN WHY DISAGGREGATION OF PERFORMANCE DATA IS
12 UNNECESSARY.

13
14 A. Exhibit WKM-6 documents the flow of service orders from various sources (BellSouth
15 Retail Units, CLEC resale, CLEC UNE, and CLEC UNE and resale with customized call
16 routing). As this Exhibit demonstrates, the flow of the service order is precisely the same
17 regardless of the source of the service order. Universal Service Order Codes (“USOCs”)
18 on the service orders are used to establish switch translations that provide dial tone and
19 various service features listed on each service request. The exact same list of USOCs,
20 with the exception of four unique provisioning USOCs used for UNEs, is used on both
21 BellSouth and CLEC orders to describe various features and functions. If the service
22 order being processed is for a CLEC, it contains a special four-digit Field Identifier Code
23 (“FID”) that ultimately identifies the CLEC to the billing system. However, the FID is
24 not input to the switch. Thus, the switch is “blind” as to whether a given end user
25 customer is BellSouth’s customer or a CLEC’s customer. The service orders enter a

1 system called the Line Class Code Assignment Module (“LCCAM”). The LCCAM
2 associates the USOCs assigned on service orders with an appropriate LCC that identifies
3 the routing and screening characteristics of the line to the switch. Nothing in the LCC
4 distinguishes a BellSouth customer from a CLEC customer. The LCC information flows
5 into a computer system named MARCH. MARCH is a memory administration system
6 that translates line-related service order data into switch provisioning messages and
7 automatically transmits the messages to targeted stored program control switches.
8 Routing, screening, and trunking of calls by the switch are identical for lines associated
9 with identical LCCs. Therefore, it is not necessary to perform measurements beyond this
10 point in the process to demonstrate parity in the handling of operator services and
11 directory assistance calls. The diagrams attached to Exhibit WKM-6 clearly show that
12 the LCCAM to MARCH handoff merges traffic from all sources into a single flow
13 determined solely by LCCs.

14
15 **BRANDING**

16
17 Q. WHAT BRANDING OPTIONS DOES BELLSOUTH PROVIDE TO CLECS?

18
19 A. BellSouth offers four service levels of branding to CLECs when CLECs order Directory
20 Assistance and/or Operator Call Processing. The options are: BellSouth branding,
21 unbranded, custom branding, and self-branding. *See* NewSouth Agmnt., Att. 2, § 10.4.
22 Unbranded, custom branding and self-branding are all provided via customized routing.
23 Unbranded and custom branding can also be provided via OLNS. BellSouth will
24 complete its deployment of OLNS in Kentucky by July 13, 2001.
25

1 Q. HOW DOES BELLSOUTH ROUTE OPERATOR SERVICES AND DIRECTORY
2 ASSISTANCE TRAFFIC FOR ITS OWN END USER CUSTOMERS?

3

4 A. BellSouth routes its operator services or directory assistance traffic directly to a
5 BellSouth TOPS platform rather than via a tandem switch. The operator services or
6 directory assistance end office functions offered by BellSouth, as part of its retail
7 services, require dedicated trunk groups from BellSouth end offices to the TOPS
8 platform.

9

10 Q. PLEASE DESCRIBE THE OPERATION OF TOPS.

11

12 A. Exhibit WKM-7 provides a complete description of TOPS call flow via the QMS. Calls
13 are initially queued based on call origination type. For example, a determination is made
14 whether the call originated from a public telephone or arrived at TOPS via a directory
15 assistance trunk group. Next, calls are ordered based on whether or not they have
16 previously received some form of automated treatment or operator handling. Then the
17 calls are processed through six refinement tables to enable them to be handled by
18 operator groups best equipped to handle specific types of calls. For example, this process
19 routes directory assistance calls to directory assistance equipped TOPS positions while
20 calls requiring fluency in a particular language are routed to operators with skills in that
21 language. Finally, the calls are routed to queues based on such factors as the age of the
22 call, equipment availability, and force management considerations.

23

24 Q. HOW DOES TOPS TREAT CALLS FROM CLEC END USER CUSTOMERS?

25

1 A. CLECs' customers' calls to BellSouth's TOPS platform are handled in a
2 nondiscriminatory manner at parity with the treatment of calls from BellSouth's retail
3 customers. TOPS does not distinguish between calls made by BellSouth end users and
4 calls made by CLEC end users. Thus, the system represents parity by design.
5 Exhibit WKM-8 contains affidavits prepared by Mr. Robert Summers, Jr., Mr. William
6 Greytock, and Mr. David C. Thompson, all of Nortel, pertaining to operation of the
7 TOPS and QMS systems. Nortel is the supplier of BellSouth's TOPS platform. Their
8 affidavits confirm that BellSouth's processes for the handling of calls to operator services
9 are nondiscriminatory.

10

11 Q. DOES BELLSOUTH PERMIT A CLEC TO ROUTE ITS OPERATOR SERVICES OR
12 DIRECTORY ASSISTANCE TRAFFIC TO ITS OWN OPERATOR SERVICES OR
13 DIRECTORY ASSISTANCE PLATFORMS?

14

15 A. Yes. The CLEC may wish to route calls to its own operator or directory assistance
16 platform for branding purposes. As discussed in Exhibit WKM-6, customized routing is
17 ordered by use of a FID that is then converted by LCCAM, as discussed above, into an
18 LCC for use by the switch. Once this conversion occurs, the switch's processor routes
19 the call based on the assigned LCC rather than on the basis of whether the LCC is a
20 "BellSouth LCC" or a "CLEC LCC". If the LCC denotes that the call is to be routed to
21 an operator services platform other than BellSouth's operator services platform, then the
22 provisioning of the trunk group to the CLEC's choice of operator services platform is the
23 responsibility of the CLEC. Under this scenario, the CLEC will have the option of
24 treating the calls in any fashion it wants because the calls will be directed to the CLEC's

1 (or third party provider's) platform. The diagram for example 3 of the attachments to
2 Exhibit WKM-6 depicts the call processing flow of calls using customized routing.

3
4 Q. DOES BELLSOUTH PROVIDE CLECS WITH THE ABILITY TO APPLY UNIQUE
5 BRANDING IN COMPLIANCE WITH THE FCC'S REBRANDING
6 REQUIREMENTS?

7
8 A. Yes. In the *Second Louisiana Order*, the FCC stated that BellSouth must demonstrate
9 that its method of providing branding results in nondiscriminatory access. *Second*
10 *Louisiana Order*, at ¶ 247. BellSouth provides CLECs the ability to apply unique
11 branding via the customized routing methods discussed in my testimony under Checklist
12 Item 6 and the OLNS method described below.

13
14 Under the LCC method of customized routing, calls are directed at the end office switch
15 to the requested OS/DA platform over dedicated trunks. Dedicated trunks are required
16 because of the technical limitations of the switches. To the extent that CLECs choose the
17 same OS/DA platform and the same branding (or unbranding) of calls, CLECs may share
18 transport between the end office switch and the platform. A CLEC's use of line class
19 codes to reach an OS/DA platform is the same as BellSouth's use of line class codes to
20 reach its TOPS platform, and thus BellSouth's provision of customized routing is
21 nondiscriminatory.

22
23 Under the AIN method of customized routing, calls are sent to an AIN hub that performs
24 the database query. AIN uses centralized databases to determine routing instructions
25 rather than have the same determination made at the end office switch level. In this

1 arrangement, CLECs may share transport between BellSouth's end office switch to the
2 AIN hub. Moreover, CLECs who opt for the same branding (or unbranding) of their
3 traffic and whose traffic is sent to the same OS/DA platform can likewise share trunk
4 groups between the AIN hub and that OS/DA platform.

5
6 Q. DESCRIBE BELLSOUTH'S OFFERING OF ORIGINATING LINE NUMBER
7 SCREENING (OLNS).

8
9 A. OLNS is method of providing customized branding in addition to the LCC and AIN
10 methods described earlier in this testimony. OLNS provides a means of making
11 information available to the OS/DA platform about the end user originating a telephone
12 call. This information may be used to determine things such as an end user's local
13 service provider and that local service provider's branding preferences. OLNS
14 functionality makes originating line information available to the OS/DA platform via
15 centralized databases. In other words, OLNS allows end users' calls to proceed from the
16 end office switches to BellSouth's OS/DA platform over common trunk groups (that is, a
17 single trunk group between an end office switch and the OS/DA platform carrying
18 multiple service providers' traffic including calls from BellSouth's retail customers).
19 Once the call arrives at the OS/DA platform, OLNS is used to "look up" the telephone
20 number of the calling party in its database to determine whether and how to brand a call
21 from that particular end user.

22
23 BellSouth completed its deployment of OLNS in Georgia on December 31, 2000.

24 BellSouth had earlier informed CLECs of this deployment in a carrier notification letter
25 on BellSouth's interconnection website dated December 22, 2000. The current

1 deployment schedule calls for OLN availability to CLECs in Kentucky by July 13, 2001
2 and in the rest of BellSouth's region by that same date.

3
4 **CHECKLIST ITEM 8: WHITE PAGES LISTINGS**

5
6 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 8.

7
8 A. Checklist Item 8 requires that BellSouth's interconnection offerings include directory
9 listings in BellSouth's white pages directory for customers served by a CLEC. BellSouth
10 has long made its white pages listing capabilities available to independent LECs and
11 other service providers. Because methods and procedures have been in place to allow
12 other carriers access to BellSouth's white pages listing capabilities for many years, the
13 necessary methods and procedures pursuant to which CLECs may obtain such listings are
14 business as usual for BellSouth. The white pages listings will include the subscriber's
15 name, address and telephone number. The FCC in the *Second Louisiana Order* found
16 BellSouth in compliance with this checklist item. In addition, in its 1999 Advisory
17 Opinion in Case No. 96-608, the Commission found BellSouth in compliance with this
18 checklist item.

19
20 The Affidavit of Rook Barretto, attached hereto as Attachment D, describes the flow of
21 orders received for the production of white pages directories and how this process is
22 accomplished for both BellSouth's listings and CLECs' listings.

23
24 **CHECKLIST ITEM 9: NUMBER ADMINISTRATION**

1 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 9.

2

3 A. During February 1998, Lockheed-Martin assumed the NANPA functions previously
4 provided by Bell Communications Research, Inc. (Bellcore), now Telcordia
5 Technologies, Inc. This did not include the central office code assignment and
6 Numbering Plan Administration (NPA) relief planning functions that continued to be
7 performed by the dominant ILEC serving the particular geographic territory until a
8 transition plan could be finalized to transfer these functions to Lockheed-Martin. The
9 central office code assignment function was transferred to Lockheed-Martin region-by-
10 region through an industry-accepted transition plan. In BellSouth's region, that transition
11 began July 6, 1998, and concluded August 14, 1998. At this time, BellSouth no longer
12 performs the central office code assignment function. NeuStar assumed all NANPA
13 responsibilities on November 17, 1999 when the FCC approved the transfer of Lockheed-
14 Martin's Communication Industry Service Division to NeuStar. In its 1999 Advisory
15 Opinion in Case No. 96-608, the Commission found BellSouth in compliance with this
16 checklist item.

17

18 Q. DOES BELLSOUTH HAVE ANY RESPONSIBILITY FOR NPA RELIEF PLANNING
19 NOW?

20

21 A. No. NeuStar also assumed responsibility for NPA relief planning. When BellSouth was
22 responsible for NPA relief planning and as an NPA was found to be in jeopardy of
23 exhausting before a NPA relief plan could be implemented, the BellSouth Central Office
24 Code Administration Center implemented code conservation measures complying with

1 consensus decisions of the local industry as reached in one or more Industry Jeopardy
2 Meetings. NANPA now has the responsibility for jeopardy declaration in a NPA.

3
4 Q. PLEASE DESCRIBE BELLSOUTH'S ACTIONS PRIOR TO THE TIME NPA RELIEF
5 PLANNING WAS TRANSFERRED TO NEUSTAR.

6
7 A. While serving as the Central Office Code Administrator for its territory, BellSouth
8 maintained neutrality in performing the code administration functions and ensured that
9 CLECs had nondiscriminatory access to telephone numbers for assignment to their
10 customers. BellSouth adhered to the code administration guidelines published by the
11 Industry Numbering Council ("INC"), a national industry body under the Carrier Liaison
12 Committee ("CLC"), sanctioned by the Alliance for Telecommunications Industry
13 Solutions ("ATIS"). INC documents, including final documents, completed guidelines,
14 and issue resolutions in final closure, are readily accessible via the Internet, at ATIS's
15 website (<http://www.atis.org>). These guidelines provide instructions to all service
16 providers, including CLECs, on how to request and have NPA/NXX codes assigned.
17 BellSouth established procedures to provide nondiscriminatory NXX code assignments to
18 CLECs that conform to the INC standards. Pursuant to these procedures, as of August
19 19, 1998, BellSouth had assigned 2,141 NPA/NXX codes for CLECs in its nine-state
20 region. Other than when faced with imminent NPA exhaustion, BellSouth did not refuse
21 any CLEC requests for NPA/NXX code assignments, either in Kentucky or in
22 BellSouth's nine-state region.

23
24 Q. DOES BELLSOUTH HAVE ANY RESPONSIBILITY FOR THE ASSIGNMENT OF
25 NPA/NXX CODES NOW?

1 A. No. Since NeuStar assumed the Central Office Code Administration function, BellSouth
2 no longer has any responsibility for the administration or assignment of central office
3 codes (NXXs) to CLECs or any other telecommunications service provider. BellSouth
4 follows the Central Office Code (NXX) Assignment Guidelines developed by the INC in
5 submitting NXX code requests to NANPA, entering code information into the
6 appropriate national databases, activating NXX codes assigned to any service provider in
7 BellSouth's territory, making available BellSouth NXX codes that are no longer in use,
8 and all other areas covered by these and other appropriate industry guidelines. It is now
9 NANPA's responsibility to supply competitively neutral number administration services
10 and to ensure that all service providers have equal and non-discriminatory access to
11 telephone numbers.

12

13 Q. WHAT RESPONSIBILITIES DOES BELLSOUTH NOW HAVE WITH REGARD TO
14 THE ACTIVATION OF NXX CODES WITHIN ITS NETWORK?

15

16 A. BellSouth responded to CLEC concerns about accurate and timely activation of NXX
17 codes by establishing, effective May 15, 1998, its NXX activation Single Point of
18 Contact ("SPOC") to provide assistance to CLECs and Independent LECs. The NXX
19 SPOC processes requests for NXX activity coordination, and provides information
20 concerning BellSouth's architecture arrangements, assistance in trouble resolution for
21 code activation, and assistance in preparing the Code Request. If a CLEC or independent
22 LEC intends to interconnect directly with BellSouth, or if interconnection arrangements
23 with BellSouth are already in place, the CLEC or independent LEC should send to
24 BellSouth a courtesy copy of its Central Office Code Request in conjunction with the
25 submission of its CO Code Request to the NANPA (NeuStar). If the CLEC gives

1 BellSouth a copy of its Central Office Code Request, BellSouth is better able to activate
2 the Central Office Code in BellSouth's network.

3
4 Among other functions, the NXX SPOC coordinates the activation of CLEC NXX codes
5 and provides a trouble-reporting center for CLEC code activation. Since its
6 establishment in mid-1998, the NXX SPOC has operated successfully in keeping NXX
7 activation problems to a minimum. The NXX SPOC provides CLECs with a positive
8 report on the activation of all of the CLECs' NXX codes that are activated in BellSouth's
9 network. If requested by the CLEC, a written response is provided to the CLEC when
10 BellSouth's Complex Translations Group has provisioned the NPA/NXX in the
11 appropriate BellSouth switches and BellSouth has completed mechanized AMA testing
12 and validation. Since it began operation, BellSouth's NXX SPOC has tracked the
13 provisioning and testing of approximately 4,300 NXXs for facility-based CLECs and
14 Independent Telephone Companies. BellSouth has never charged CLECs or LECs for
15 NPA/NXX codes.

16
17 Q. WHAT INFORMATION DOES BELLSOUTH FURNISH TO NEUSTAR WITH
18 RESPECT TO NUMBER RESOURCES?

19
20 A. BellSouth furnishes certain data to NeuStar with respect to number resources. For
21 example, BellSouth provides the following: (1) Number Resource Utilization Forecast
22 (NRUF) Report – BellSouth prepares a NRUF Report and forwards it to NeuStar
23 pursuant to FCC directives. NeuStar uses the NRUF Reports from all carriers to estimate
24 when all NPAs will exhaust; (2) Part 1 CO Code Request Form and Months-To-Exhaust
25 Worksheet – when BellSouth requests a new CO code assignment for growth from

1 NeuStar CO Code Administration, BellSouth submits a Part 1 CO Code Request Form
2 and Months-To-Exhaust Worksheet that shows when the existing supply of telephone
3 numbers in the CO will exhaust; (3) Part 4 – New CO codes must be put to work within
4 six months of being or assigned or must be returned to NeuStar. BellSouth notifies
5 NeuStar that an NXX code has been put to work by furnishing NeuStar with a Part 4.

6
7 **CHECKLIST ITEM 10: ACCESS TO DATABASES AND ASSOCIATED SIGNALING**

8
9 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 10.

10
11 A. This checklist item obligates BellSouth to provide:

- 12
- 13 • Nondiscriminatory access to databases and associated signaling necessary for call
14 routing and completion. 47 U.S.C. § 271(c)(2)(B)(x).
 - 15 • Nondiscriminatory access to signaling networks and call-related databases. 47
16 C.F.R. § 51.319(e).

17 The FCC, in its *Second Louisiana Order*, found that BellSouth was in compliance with
18 this checklist item. In addition, in its 1999 Advisory Opinion in Case No. 96-608, the
19 Commission found BellSouth in compliance with this checklist item.

20
21 Q. GENERALLY DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO ITS
22 DATABASES AND SIGNALING NETWORKS.

23
24 A. BellSouth employs the same relevant systems, processes, and procedures in Kentucky as
25 in Louisiana, which the FCC held were providing nondiscriminatory access to signaling

1 and call-related databases. BellSouth provides nondiscriminatory access to its signaling
2 networks, including Signal Transfer Points (“STPs”), Signaling Links, Service Control
3 Points (“SCPs”), LIDB, Toll Free Number Database, AIN Toolkit, and the AIN method
4 for Customized Routing. In addition, BellSouth also provides access to the LNP database
5 and the CNAM database.

6
7 BellSouth provides nondiscriminatory access to its call-related databases and associated
8 signaling as evidenced by the millions of queries that BellSouth’s call-related databases
9 have successfully handled for CLECs, IXC’s, and other ILECs. BellSouth provides
10 CLECs access to BellSouth’s signaling network either directly, or through third party
11 service providers, whichever the CLEC elects. BellSouth’s provision of the AIN method
12 for customized routing is described earlier in my testimony.

13
14 **SIGNALING NETWORKS**

15
16 Q. DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO ITS SIGNALING LINKS
17 AND SIGNAL TRANSFER POINTS.

18
19 A. BellSouth provides nondiscriminatory access to its signaling network, including
20 Signaling Links and STPs on an unbundled basis. 47 C.F.R. § 51.319(e)(1)(i); *See*
21 *NewSouth Agmnt., Att. 2, § 11.0.* Signaling networks enable CLECs to send signals
22 between its switches (including unbundled switching elements), between its switches and
23 BellSouth’s switches, and between its switches and those third party networks with which
24 BellSouth’s signaling network is connected. BellSouth provides Signaling System 7
25 (“SS7”) network service to CLECs for their use in furnishing SS7-based services to their

1 own end users or to the end users of another CLEC that has subtended its STP to the
2 signaling network of the interconnecting CLEC. *See* SGAT, § X. This arrangement
3 permits CLECs to use BellSouth's SS7 signaling network for signaling between the
4 CLECs' switches, between the CLECs' switches and BellSouth's switches, and between
5 the CLECs' switches and the networks of other parties connected to BellSouth's SS7
6 network. Because all unbundled switching elements are provided on switches that
7 BellSouth uses to provide service to its own customers, all signaling functions are
8 identical. 47 C.F.R. § 51.319(e)(1)(iii); *See* NewSouth Agmnt., Att. 2, § 11.0.

9
10 The Signaling Link between the CLEC's switch and BellSouth's STP is an unbundled
11 network element that CLECs can order by contacting their assigned account team
12 representative at BellSouth. The representative then arranges the set-up for the CLEC.
13 When a CLEC purchases unbundled switching from BellSouth, BellSouth will provide
14 access to its signaling network in the same manner as it provides such access for itself.

15
16 BellSouth's SS7 network provides dedicated two-way signaling links that interconnect
17 BellSouth's STP locations and CLEC's Signaling Points at Signaling-Point-of-Interface
18 (SPOI) locations. SGAT, § X.A. The SS7 network consists of STP Port Termination(s)
19 for CLEC signaling and STP Interconnection Facilities (also called Signaling Links).

20 The port terminations consist of port connections operating at 56 Kilobits per second (56
21 Kbps) transmission facilities on BellSouth's STP. The STP Interconnection Facility is the
22 transmission facility which lies between the multiplexing hub, which demultiplexes the
23 CLEC's 56 Kbps transmission from DS1 transmission facilities, and the STP port. 47
24 C.F.R. § 51.319(e)(1)(ii); *See* NewSouth Agmnt., Att. 2, § 11.0.

25

1 STPs are signaling message switches that interconnect Signaling Links to route signaling
2 messages between switches and databases. CLECs may use BellSouth's SS7 signaling
3 network for signaling between their switches, between their switches and BellSouth's
4 switches, and between their switches and the networks of other parties connected to the
5 BellSouth SS7 network. STPs also provide access to other network elements connected
6 to the BellSouth SS7 network including: 1) BellSouth-provided local end office
7 switching or tandem switching; 2) BellSouth-provided SCPs or databases; 3) third-party
8 provided local end office switching or tandem switching; and 4) third-party provided
9 SCPs or databases. *See* NewSouth Agmnt., Att. 2, § 11.0.

10
11 Q. DOES BELLSOUTH PROVIDE SS7 NETWORK INTERCONNECTION?

12
13 A. Yes. SS7 Network Interconnection is the interconnection of the CLEC's local STPs and
14 CLEC's local end office or tandem switching systems with BellSouth's STPs. This
15 interconnection provides connectivity that enables the exchange of SS7 messages among
16 BellSouth's switching systems and databases, CLEC's local or tandem switching
17 systems, and other third-party switching systems directly connected to the BellSouth SS7
18 network. SS7 network interconnection provides CLECs with connectivity to all
19 components of the BellSouth SS7 network.

20
21 Q. IS ACCESS TO BELLSOUTH'S SIGNALING NETWORK AVAILABLE?

22
23 A. Yes. BellSouth's signaling service is available as evidenced by the fact that, as of May 7,
24 2001, ten (10) CLECs had directly connected to BellSouth's signaling network in
25 Kentucky. Additional facilities-based CLECs may obtain access to BellSouth's signaling

1 network as described above and in BellSouth's tariff (FCC No. 1). Because neither
2 BellSouth's switch nor STP distinguish between BellSouth's end users and the end users
3 of resellers, BellSouth does not know how many queries have been made to BellSouth's
4 databases from the end users of resellers.

5
6 **CALL-RELATED DATABASES**

7
8 Q. DESCRIBE THE CALL-RELATED DATABASES BELLSOUTH OFFERS ON AN
9 UNBUNDLED BASIS.

10
11 A. Section 51.319(e)(2)(ii) of the FCC Rules set forth certain call-related databases to
12 which BellSouth must offer access on an unbundled basis. Consistent with that rule,
13 BellSouth provides access to its LIDB, Toll Free Number Database, LNP database,
14 CNAM database, AIN Services Feature database, as well as the 911 and E911 databases.
15 *See* SGAT § X.A.3.d.

16
17 Q. DOES BELLSOUTH PROVIDE ACCESS TO ITS SERVICE CONTROL POINTS?

18
19 A. Yes. A SCP is a specific type of network element where call related databases can reside.
20 SCPs deployed in a SS7 network execute service application logic in response to SS7
21 queries sent to them by a switching system also connected to the SS7 network. SCPs also
22 provide operational interfaces to allow for provisioning, administration and maintenance
23 of subscriber data and service application data. CLECs may use either Feature Group D
24 or SS7 signaling for interconnecting with BellSouth's network. *See* NewSouth Agmnt.,
25 Att. 2, § 13.0.

1 Q. DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO ITS LIDB DATABASE.

2

3 A. The LIDB is a transaction-oriented database accessible through Common Channel
4 Signaling (CCS) networks such as BellSouth's SS7 network. It contains records
5 associated with end user line numbers and Special Billing Numbers. BellSouth's region-
6 wide LIDB processed more than 1.5 billion queries from CLECs and others during the
7 period from January 1997 through February 2001. Access to the LIDB is at present
8 through a third party "signaling hub" provider or IXC directly connected to BellSouth's
9 signaling network. LIDB queries are billed to the third party "signaling hub" provider or
10 IXC, not the CLEC. CLECs can access the LIDB database once the CLEC puts required
11 signaling links in place. *See* NewSouth Agmnt., Att. 2, § 13.4. Carriers may update
12 customer information contained in BellSouth's LIDB in substantially the same time and
13 manner as BellSouth's retail operations.

14

15 Q. DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO ITS CNAM SERVICE.

16

17 A. CNAM service enables the called end user to identify the calling party by a displayed
18 name before the call is answered (often referred to as a "caller ID" service). BellSouth
19 will provide all requesting CLECs nondiscriminatory access to its CNAM Service
20 Database. *See* NewSouth Agmnt., Att. 2, § 13.8. When a CLEC purchases unbundled
21 local switching from BellSouth, access to the CNAM database will be identical to that
22 used by BellSouth in the same switch. 47 C.F.R. § 51.319(e)(2)(iii).

23

24 The calling party's name, date, and time of the call are retrieved from the SCP database
25 and delivered to the end user's premises between the first and second ring for display on

1 compatible customer premise equipment. CNAM Service Query is BellSouth's service
2 that allows a CLEC to query BellSouth's Calling Name database.

3
4 When a CLEC operates its own switching center, access to the CNAM database is
5 obtained through the SS7 network. The CLEC accesses the SCP through the BellSouth
6 STP or by connecting the CLEC's STP to the BellSouth STP and then to the BellSouth
7 SCP. CLECs that deploy their own switching facilities are able to access BellSouth's
8 SS7 network for each of their switches through a signaling link between their switches
9 and BellSouth's STP in the same manner as BellSouth connects its own switches to the
10 STP. The same features, functions, and capabilities are available to the CLEC as are
11 available to BellSouth. 47 C.F.R. §51.319(e)(2)(iv).

12
13 Q. IS CNAM AVAILABLE TO CLECS?

14
15 A. Yes. As of April 1, 2001, BellSouth has over 70 CNAM database customers, consisting
16 of both CLECs and independent LECs, across BellSouth's nine-state region.

17
18 Q. DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO ITS TOLL FREE NUMBER
19 AND NUMBER PORTABILITY DATABASE.

20
21 A. The SGAT and BellSouth's Commission approved agreements provide the terms and
22 conditions for nondiscriminatory access to BellSouth's Toll Free Number and Number
23 Portability Database. *See* NewSouth Agmnt., Att. 2, § 13.5. Access to the Toll Free
24 Number and Number Portability databases allows a CLEC to access BellSouth's Toll
25 Free Number and Number Portability databases for the purpose of switch query and

1 database response. The Toll Free Number database provides the CLEC information
2 required to determine the appropriate routing to a toll free number such as an 800 or 888
3 number.

4
5 The Number Portability database comes in two forms. The Routing service, which is a
6 default porting service (if a company does not sign up for a query service, it will
7 automatically use the Routing service to port calls) is available to any company and no
8 registration is necessary. The Query service is available to any company as well, but a
9 three-page form must be completed and returned to BellSouth. The differences between
10 the two services is that the query service is about one-fourth of the cost of the routing
11 service. No contracts are necessary for either service. Additional information on both
12 LNP database services is available at:

13 http://www.interconnection.bellsouth.com/products/vertical/LNP_Query.html; and
14 http://www.interconnection.bellsouth.com/products/vertical/LNP_Call_Routing.html.

15 When a CLEC purchases unbundled local switching from BellSouth, it has exactly the
16 same access as BellSouth to BellSouth's Toll Free Number and Number Portability
17 database. *See* NewSouth Agmnt., Att. 2, § 13.5.

18
19 BellSouth offers three different types of access to the BellSouth call related databases.
20 The first type of access allows a CLEC whose switches are SS7 capable to attach those
21 switches to BellSouth's STPs and then to the BellSouth call related databases. *See*
22 SGAT, § X.A.

23
24 The second option is for a CLEC whose switches are SS7 capable to attach those
25 switches to a third party's STPs. These STPs would be attached to BellSouth's STPs and

1 then to BellSouth's call related databases. See SGAT, § X.A. A CLEC can use Feature
2 Group D for calls using information retrieved from BellSouth's databases.

3
4 The third option allows access by a CLEC whose switches are not capable of supporting
5 SS7 protocols. I am not aware of any requests from CLECs for such access, no doubt
6 because the SS7 protocol has been used so extensively for many years that most, if not
7 all, modern switching systems are SS7-capable. However, should a CLEC make such a
8 request, BellSouth would respond using the BFR process.

9
10 All of the above features are available to a CLEC and its customers in the same manner
11 as provided by BellSouth to its own customers. When a CLEC operates its own
12 switching system, access to the databases will be obtained by using the SS7 network. 47
13 C.F.R. § 51.319(e)(2)(iv).

14
15 When a CLEC purchases unbundled local switching from BellSouth, the access to the
16 call related databases will be identical to that used by BellSouth in the same switch. 47
17 C.F.R. § 51.319(e)(2)(iii).

18
19 Q. IS BELLSOUTH SUCCESSFULLY PROVIDING ACCESS TO ITS TOLL FREE
20 NUMBER DATABASE?

21
22 A. Yes. BellSouth has offered independent LECs and other service providers access to its
23 Toll Free Number database for years. The necessary methods and procedures for
24 obtaining such access by CLECs are business as usual for BellSouth. Moreover, the
25 availability of these services is evidenced by the fact that, from January 1997 through

1 March 31, 2001, CLECs and other service providers across BellSouth's nine-state region
2 completed approximately 8.2 billion queries to BellSouth's Toll Free Number database.
3 Additional facilities-based CLECs may obtain access to the database as described in
4 BellSouth's tariff (FCC No. 1). Assuming the appropriate signaling links are in place,
5 direct access to the database can be provided as determined through negotiations.

6
7 Q. DESCRIBE THE ACCESS BELLSOUTH PROVIDES TO THE AUTOMATIC
8 LOCATION IDENTIFICATION/DATA MANAGEMENT SYSTEM (ALI/DMS).

9
10 A. The ALI/DMS database contains end user information (including name, address,
11 telephone information, and sometimes special information from the local service provider
12 or end user) used to determine to which Public Safety Answering Point the call should be
13 sent. BellSouth offers CLECs a data link to the ALI/DMS database or permits CLECs to
14 provide their own datalinks to the database. *See NewSouth Agmnt., Att. 2, § 13.6.*

15
16 Q. DESCRIBE BELLSOUTH'S AIN NETWORK ARCHITECTURE.

17
18 A. AIN is a vendor-independent network architecture deployed by BellSouth that provides
19 capabilities for creation of custom telecommunications services that are invoked by SS7
20 messages (called "triggers") from a switch through the STP to a SCP database. AIN uses
21 distributed intelligence in databases to control call processing and manage network
22 information, rather than performing those functions at every switch. When a CLEC
23 purchases unbundled local switching from BellSouth, it has exactly the same access as
24 BellSouth to BellSouth's AIN.

1 AIN access provides CLECs the ability to create service applications utilizing
2 BellSouth's AIN and deploy those applications via the BellSouth Service Management
3 System ("SMS") in conjunction with BellSouth's SCPs. BellSouth provides access to its
4 AIN SCP, or databases, through its AIN Toolkit and AIN SMS Access services. These
5 services permit the CLEC to create and deploy AIN services on a BellSouth SCP using a
6 set of service creation tools provided by BellSouth. BellSouth uses these same tools to
7 create and deploy AIN services in exactly the same manner as is available to CLECs. As
8 set forth in BellSouth's SGAT, SMS access allows CLECs to provide AIN services from
9 either BellSouth switches or the CLEC's own switch. It also allows CLECs to create
10 service applications using BellSouth's AIN service creation tools and to deploy those
11 services using BellSouth's service management tools. CLECs will have the same access
12 to SMS as does BellSouth. *See* SGAT, § X.3.d.

13
14 Using BellSouth's AIN Toolkit, end user customers of the CLEC may also access
15 BellSouth-created AIN applications and/or CLEC-created AIN applications residing in
16 BellSouth's SCP via 1) unbundled local switching purchased from BellSouth, or 2) a
17 CLEC's own switch that is connected to BellSouth's SS7 network via the SS7 network
18 element. 47 C.F.R. § 51.319(e)(2)(iii), (iv) and § 51.319(e)(3)(C).

19
20 BellSouth has tested its AIN Toolkit, which provides a CLEC with the ability to create
21 and offer AIN-service applications to the CLEC's end users, as well as its AIN SMS
22 Access, which provides a CLEC with access to the BellSouth-provided service creation
23 environment. The completion of test calls and the generation of billing records were part
24 of the testing process that completed March 31,1997. The testing confirmed that service

1 orders flowed through BellSouth's systems properly and that accurate bills were
2 rendered.

3
4 BellSouth has made presentations to several CLECs interested in using AIN Toolkit to
5 develop AIN applications that would run via BellSouth's AIN, and thus on BellSouth's
6 switches. A CLEC that wishes to access BellSouth's AIN service creation tools (that is,
7 AIN Toolkit) for the first time could, however, do so in a matter of seven days provided
8 that the CLEC has an ISDN line and a personal computer.

9
10 BellSouth provides access to the SMS associated with each of the databases described
11 above in accordance with 47 C.F.R. §51.319(e)(3). This gives CLECs the same access as
12 BellSouth to develop and deploy AIN services using BellSouth's SMS. Requesting
13 CLECs receive the information necessary to format data and enter the data correctly into
14 the various databases using the associated SMS.

15

16 Q. DOES BELLSOUTH MAINTAIN ITS DATABASES IN ACCORDANCE WITH
17 SECTION 222 OBLIGATIONS?

18

19 A. Yes. All data in the above databases are maintained in accordance with §222 of the Act.
20 47 C.F.R. § 51.319(e)(2)(vi).

21

22 Q. WILL BELLSOUTH CONSIDER OTHER MEANS OF ACCESS TO ITS CALL-
23 RELATED DATABASES?

24

1 A. BellSouth will respond to requests for additional arrangements for access to call-related
2 databases and associated signaling facilities through the BFR process.

3

4 Q. PLEASE SUMMARIZE YOUR TESTIMONY ON CALL-RELATED DATABASES.

5

6 A. In summary, as required by 47 C.F.R. § 51.319(e), BellSouth provides unbundled,
7 nondiscriminatory access to its signaling networks, to its call-related databases used in
8 signaling networks for billing and collection or the transmission, routing or other
9 provision of telecommunications services, and to the associated SMS for each database.
10 Each database is accessed through BellSouth's STPs by a requesting CLEC in the same
11 manner and via the same signaling links to the database that are used by BellSouth itself.

12

13 Q. DESCRIBE BELLSOUTH'S PROVISION OF NONDISCRIMINATORY ACCESS TO
14 SERVICE MANAGEMENT SYSTEMS.

15

16 A. SMS is defined as a computer database or system not part of the public switched network
17 that, among other things: (1) interconnects to the SCP and sends to that SCP the
18 information and call processing instructions needed for a network switch to process and
19 complete a telephone call; (2) provides telecommunications carriers with the capability of
20 entering and storing data regarding the processing and completing of a telephone call.
21 BellSouth provides access to the SMS associated with each of the databases described
22 above in accordance with 47 C.F.R. § 51.319(e)(3). Requesting carriers are provided
23 with the information necessary to format data and enter it into the various databases using
24 the associated SMS. Carriers have the same access as BellSouth to develop AIN services

1 using SMS. All data in the databases described above is maintained in accordance with §
2 222 of the Act.

3
4 **CHECKLIST ITEM 11: SERVICE PROVIDER NUMBER PORTABILITY**

5
6 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 11.

7
8 A. Section 271(2)(B)(xi) requires that BellSouth generally offer "until the date by which the
9 Commission issues regulations pursuant to section 251 to require number portability,
10 interim telecommunications number portability through remote call forwarding, direct
11 inward dialing trunks, or other comparable arrangements, with as little impairment of
12 functioning, quality, reliability, and convenience as possible. After that date, full
13 compliance with such regulations." BellSouth provides interim number portability in
14 accordance with these requirements. In its 1999 Advisory Opinion in Case No. 96-608,
15 the Commission found BellSouth in compliance with this checklist item. BellSouth
16 continued to offer INP in each central office in Kentucky until LNP was implemented,
17 which began in December 1998. By March 31, 2000, over 97% of the access lines served
18 by BellSouth were LNP capable. As of that same date, all of the central offices in
19 Kentucky were LNP capable and 100% of the access lines in Kentucky were LNP
20 capable. Therefore, BellSouth continues to be in compliance with this checklist item.

21
22 Q. DESCRIBE BELLSOUTH'S INTERIM NUMBER PORTABILITY OFFER.

23
24 A. BellSouth offered interim number portability under the four methods which the FCC has
25 found to be technically feasible: (1) Remote Call Forwarding (RCF) and Direct Inward

1 Dialing (DID); (2) Route Index-Portability Hub (RI-PH); (3) Directory Number-Route
2 Index (DN-RI); and (4) Local Exchange Routing Guide (LERG) Reassignment.

3 BellSouth provides Route Index-Portability Hub (RI-PH) as a comparable arrangement in
4 provisioning interim number portability.

5
6 BellSouth ported 2,456 lines in Kentucky using INP. However, as of May 2, 2001,
7 BellSouth had converted 1,236 (50%) of those lines to LNP. In its region, BellSouth
8 ported 117,010 numbers, of which 107,773 (92%) have been converted to LNP as of that
9 same date.

10
11 Q. DESCRIBE BELLSOUTH'S PERMANENT NUMBER PORTABILITY OFFER.

12
13 A. BellSouth has implemented permanent number portability in Kentucky in accordance
14 with FCC rules and as discussed further in the Affidavit of Dennis Davis, Attachment E.
15 As of March 31, 2000, BellSouth had equipped all of its switches in Kentucky with LNP
16 capability. As of March 31, 2001, BellSouth has equipped in its nine-state region
17 switches accounting for over 97% of its access lines with LNP capability. This total
18 includes all major marketing areas. The remaining approximately less than 3% of
19 network access lines in BellSouth's nine-state region generally are located in rural areas
20 not yet subject to competition. These access lines will be equipped for LNP if requested
21 by a CLEC via the BFR process. For the less than 3% of access lines for which LNP is
22 not available, INP will remain available.

23
24 Once long term number portability is implemented in a particular end office, BellSouth
25 and CLECs will withdraw interim number portability offers. The transition from interim

1 arrangements to permanent arrangements should be accomplished within 120 days.
2 BellSouth will not charge the CLEC for the conversion from interim to permanent
3 number portability.

4
5 As of March 31, 2001, BellSouth had ported 26,613 business directory numbers and 110
6 residence directory numbers in Kentucky using LNP. In its nine-state region, BellSouth
7 has ported 1,113,649 business and 133,703 residence directory numbers as of March 31,
8 2001, which confirms the availability of LNP.

9
10 Q. DESCRIBE THE MEANS BY WHICH CLECS' END USER CUSTOMERS MAY
11 OBTAIN VERIFICATION OR INTERRUPTION OF A TELEPHONE NUMBER
12 THAT HAS BEEN PORTED TO A CLEC SWITCH.

13
14 A. BellSouth has developed methods and procedures to be followed when customers want
15 verification or interruption of a conversation involving a telephone number that has been
16 ported to a CLEC's switch. There are two arrangements that a CLEC may elect: 1)
17 BellSouth provides operator call processing on behalf of the CLEC; and 2) the CLEC
18 provides its own operator call processing. When BellSouth handles the CLEC's operator
19 call processing, a verification trunk will be provisioned between the BellSouth operator
20 services platform and the CLEC's network. This will allow BellSouth's operator to
21 verify such a line in a CLEC switch at the request of either a BellSouth or CLEC end
22 user. When the CLEC handles its own operator call processing, a two-way inward
23 operator trunk (an operator to operator connection) will be jointly provisioned. This will
24 allow the BellSouth operator to contact the CLEC operator. The CLEC operator will
25 verify and/or interrupt the line, and report the condition to the BellSouth operator who

1 will, in turn, report the condition of the line to the end user. This arrangement will
2 likewise allow the CLEC operator to contact the BellSouth operator. The BellSouth
3 operator will verify and/or interrupt the line and report the condition to the CLEC
4 operator who will report the condition of the line to the CLEC's end user.

5
6 **CHECKLIST ITEM 12: LOCAL DIALING PARITY**

7
8 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 12.

9
10 A. Checklist Item 12 obligates BellSouth to provide nondiscriminatory access to such
11 services or information as are necessary to allow the requesting carrier to implement local
12 dialing parity in accordance with the requirements of Section 251(b)(3). Rule 51.207
13 states that a LEC shall permit telephone exchange service customers within a local
14 calling area to dial the same number of digits to make a local call notwithstanding the
15 identity of the customer's or the called party's telecommunications service provider. The
16 FCC, in the *Second Louisiana Order*, found BellSouth in compliance with this Checklist
17 Item. In addition, in its 1999 Advisory Opinion in Case No. 96-608, the Commission
18 found BellSouth in compliance with this checklist item.

19
20 The FCC's *Second Report and Order*, ¶ 71 stated that local dialing parity also is achieved
21 through the implementation of the interconnection, number portability and
22 nondiscriminatory access to telephone number requirements of Section 251 of the Act.
23 As described earlier, BellSouth has implemented each of these items in accordance with
24 the Act.

25

1 BellSouth's interconnection arrangements do not require any CLEC to use access codes
2 or additional digits to complete local calls to BellSouth customers. Neither are BellSouth
3 customers required to dial any access codes or additional digits to complete local calls to
4 the customers of any CLEC. Further, end user customers of CLECs that have
5 provisioned those customers utilizing the UNE Platform (UNE-P) will have available to
6 them local dialing plans in the same manner as BellSouth's retail customers. In addition,
7 BellSouth will not cause CLECs' local service customers to experience inferior quality
8 regarding post-dial delay, call completion rate and transmission quality as compared to
9 BellSouth's local service customers. *See* NewSouth Agmnt., Att. 3, § 5.0. The
10 interconnection of the BellSouth network and the network of the CLEC will be seamless
11 from a customer perspective, unless the CLEC chooses otherwise. While BellSouth is
12 unable to determine the full extent of CLEC dialing policies, BellSouth is not aware of
13 any complaints from CLEC customers that they are required to dial any access codes or
14 additional digits to complete local calls.

15
16 **CHECKLIST ITEM 13: RECIPROCAL COMPENSATION**

17
18 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 13.

19
20 A. Reciprocal compensation arrangements are provided for in BellSouth's interconnection
21 agreements as well as through its SGAT. In its 1999 Advisory Opinion in Case No. 96-
22 608, the Commission found BellSouth in compliance with this checklist item. Reciprocal
23 compensation is discussed further in the testimony of Cynthia Cox.

24

1 **CHECKLIST ITEM 14: RESALE OF THE INCUMBENT LEC'S RETAIL**

2 **TELECOMMUNICATIONS SERVICES AT A DISCOUNT**

3
4 Q. DESCRIBE BELLSOUTH'S COMPLIANCE WITH CHECKLIST ITEM 14.

5 A. Checklist Item 14 obligates BellSouth to make telecommunications services available for
6 resale in accordance with the requirements of sections 251(c)(4) and 252(d)(3).

7 Specifically, BellSouth is required to offer for resale at wholesale rates without
8 unreasonable or discriminatory conditions or limitations any telecommunications service
9 that the carrier provides at retail to subscribers who are not telecommunications carriers.

10 In the *Second Louisiana Order*, the FCC found that but for perceived deficiencies in
11 BellSouth's OSS systems, BellSouth makes telecommunications services available for
12 resale in accordance with sections 251(c)(4) and 252(d)(3). With respect to the offering
13 of services for resale, BellSouth continues to meet the requirements of this Checklist
14 Item.

15
16 Q. ARE CLECS PURCHASING RESOLD SERVICES?

17
18 A. Yes. As of March 31, 2001, there were 121,031 units being resold by CLECs in
19 Kentucky while 3,002,701 were being resold throughout BellSouth's region. The table
20 shown in Exhibit WKM-9, which is attached to my testimony, identifies the service and
21 the number of units being resold in Kentucky and across the BellSouth region.

22
23 Other retail telecommunications services are likewise available for resale. Further
24 discussion of Checklist Item 14 is found in the testimony of Cynthia Cox. Ms. Cox also
25 addresses pricing of resold services in Kentucky in her testimony.

1 Q. DOES THIS CO NCLUDE YOUR TESTIMONY?

2

3 A. Yes.
