

AFFIDAVIT

STATE OF GEORGIA

COUNTY OF FULTON

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared Ronald M. Pate, BellSouth Telecommunications, Inc., being by me first duly sworn deposed and said that:

He is appearing as a witness before the Kentucky Public Service Commission in "Investigation Concerning the Propriety of InterLATA Services by BellSouth Telecommunications, Inc. Pursuant to the Telecommunications Act of 1996," KY PSC Case No. 2001-105, and if present before the Commission and duly sworn, his testimony would be set forth in the annexed transcript consisting of 173 pages and 17 exhibit(s).

Ronald M. Pate

SWORN TO AND SUBSCRIBED BEFORE ME this
25th day of July, 2001.

NOTARY PUBLIC

MICHEALE F. HOLCOMB
Notary Public, Douglas County, Georgia
My Commission Expires November 3, 2001

1 BELLSOUTH TELECOMMUNICATIONS, INC.

2 REBUTTAL TESTIMONY OF RONALD M. PATE

3 BEFORE THE PUBLIC SERVICE COMMISSION OF KENTUCKY

4 Case No. 2001-105

5 JULY 30, 2001

6

7 Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELLSOUTH
8 TELECOMMUNICATIONS, INC. AND YOUR BUSINESS ADDRESS.

9

10 A. My name is Ronald M. Pate. I am employed by BellSouth
11 Telecommunications, Inc. ("BellSouth") as a Director, Interconnection
12 Services. In this position, I handle certain issues related to local
13 interconnection matters, primarily operations support systems ("OSS").
14 My business address is 675 West Peachtree Street, Atlanta, Georgia
15 30375.

16

17 Q. ARE YOU THE SAME RONALD M. PATE WHO PREVIOUSLY FILED
18 TESTIMONY IN THIS DOCKET?

19

20 A. Yes.

21

22 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

23

24 A. The purpose of my testimony is to rebut the testimony filed by Jay
25 Bradbury of AT&T, Denise Berger of AT&T, Bernadette Seigler of AT&T,

1 Edward Gibbs of AT&T, Sharon Norris of AT&T, Steven Turner of AT&T
2 Mark G. Felton of Sprint, and Sherry Lichtenberg of MCI/WorldCom filed
3 on July 9, 2001

4

5 Q. IN WHAT CONTEXT SHOULD YOUR TESTIMONY BE READ?

6

7 A. My testimony should be read in conjunction with other rebuttal testimony
8 supporting BellSouth's 271 application.

9

10 Further, for the convenience of this Commission, a list of acronyms has
11 been provided in Exhibit OSS-72 to my direct testimony filed on May 18,
12 2001.

13

14 Q. DO YOU HAVE PRELIMINARY COMMENTS?

15

16 A. Yes. In this testimony, I will address the issues that have been raised by
17 the Competitive Local Exchange Carriers ("CLECs") by topic and category
18 within those topics. Many of the issues raised in this proceeding are
19 currently being handled collaboratively by BellSouth and the CLECs
20 through the regional Change Control Process ("CCP"), or otherwise dealt
21 with by this Commission. I also will address the interveners' comments
22 regarding the independent third party test that was performed by KPMG
23 for the state of Georgia and regionality issues, including the report
24 prepared by PricewaterhouseCoopers.

25

1 First, I will discuss the regionality of BellSouth Operations Support System
2 (“OSS”). Next, I will describe the independent third party test in Georgia,
3 and then I will discuss many of the CLECs’ concerns about the Georgia
4 test. The remainder of the CLECs’ concerns about the Georgia test will be
5 discussed in the context of a particular issue. For example, concerns
6 about the Georgia test of change management will be discussed in the
7 section on change management.

8

9 **Regionality Issues and the PricewaterhouseCoopers Regionality Report**

10

11 Q. DID YOU DISCUSS REGIONALITY IN YOUR DIRECT TESTIMONY OF
12 MAY 18, 2001?

13

14 A. Yes, I did, on pages 179-190. Also, attached to my direct testimony of
15 May 18, 2001, was Exhibit OSS-74, PriceWaterhouseCoopers Report on
16 the Region-wide Comparability of BellSouth's Pre-Order and Order
17 Operational Support Systems as of May 3, 2001.

18

19 I now attach the Affidavit of Robert Lattimore of May 21, 2001, as Exhibit
20 OSS-75. This exhibit supplements Exhibit OSS-74.

21

22 Q. PLEASE DESCRIBE THE PRICEWATERHOUSE REGIONALITY
23 REPORT, AND THE VALID AND PROFESSIONAL PRINCIPLES THAT
24 SUPPORT SUCH AN ATTESTATION.

25

1 A. Mr. Bradbury's testimony, beginning on page 19, focuses on the validity of
2 regionality and this Commission's ability to rely on test results from other
3 states. On page 22 of his testimony, Mr. Bradbury states "[r]ather,
4 BellSouth is urging the Kentucky Commission to determine up-front that
5 BellSouth's OSS is the "same" regionally without reference to any
6 particular data or factual assertion." This statement is not true. As
7 described in my direct testimony on May 18, 2001, starting at page 9, line
8 1, BellSouth engaged PricewaterhouseCoopers (PwC) to examine
9 BellSouth's assertions on the regionality of its OSS in accordance with
10 attestation standards established by the American Institute of Certified
11 Public Accountants. An attest engagement is one in which a practitioner
12 is engaged to issue a written communication that expresses a conclusion
13 about the reliability of a written assertion that is the responsibility of
14 another party; in this case the party was BellSouth. Under the AICPA
15 attestation standards, an examination is the highest level of assurance
16 that can be provided on an assertion and results in an opinion on the part
17 of PwC that the assertions presented are fairly stated in all material
18 respects.

19
20 BellSouth modeled its attestation examination directly after the
21 Southwestern Bell Telephone Company (SBC) Five State Regional OSS
22 Attestation Examination which is attached as Exhibit OSS-76. This model
23 was successfully used in SBC filings, so BellSouth used that model as its
24 roadmap to establish the same burden of proof. The only difference
25 between the SBC and BellSouth Attestation examinations is that BellSouth

1 added a second assertion on two of its manual order input systems used
2 by its LCSC. The Management Assertions validated by PwC are as
3 follows:

4
5 First, BellSouth utilizes the same Pre-Order and Order operational support
6 systems (OSS) throughout its nine-state region to support wholesale
7 competing local exchange carrier (CLEC) activity, based on the criteria
8 established in the Report of Management Assertions and Assertion
9 Criteria on BellSouth Telecommunication's Operational Support Systems.

10

11 As it relates to the first assertion, "sameness" is defined as the following:

12

13 The applications and interfaces implemented and available are
14 identical across the nine-state region. "Identical" is defined as one
15 unique set of software coding and configuration ("version") installed
16 on either one or multiple computer servers ("instances") that
17 support all nine-states in an equitable manner.

18

19 The processes, personnel and work center facilities are consistently
20 available and employed across the nine-state region and there are
21 no significant aspects to the processes, personnel or work center
22 facilities that would provide one state a greater service level or
23 benefit than the other states in the nine-state region.

24

25 Second, BellSouth's DOE and SONGS systems have no material
26 differences in the functionality or performance for service order entry by
27 the Local Carrier Service Centers (LCSC), based on the criteria
28 established in the Report of Management Assertions and Assertion
29 Criteria on BellSouth Telecommunication's Operational Support Systems.

29

30 PwC examined functionality and performance. The Functionality assertion
was based on the following criteria:

- 1 • The same Local Service Requests (LSRs), created from a single
2 set of business rules are used for order entry
- 3 • SOCS requires the same LSR screening and validating procedure
- 4 • Similar processes are used for creating a Service Order
- 5 • SOCS requires checking for and clearing order entry or initiation
6 errors.
- 7 • Both systems output must adhere to the service order edits housed
8 in SOCS. BellSouth also asserted that there was no material
9 difference in performance of order entry between DOE and SONGS
10 based on the following criteria:
- 11 • Orders that are input through both DOE and SONGS are created in
12 SOCS on a real-time basis upon submission
- 13 • Similar orders from throughout the nine-state region can be input
14 within reasonably similar timeframes, regardless of whether DOE or
15 SONGS is used.
- 16 • Service Representatives are cross-trained on both DOE and
17 SONGS and utilize both systems on a regular basis dependent
18 upon the relative volume and type of transactions by state.

19
20 PwC concluded that its examination provided a reasonable basis for their
21 opinion. In its opinion, PwC determined that the BellSouth management
22 assertions were fairly stated, in all material respects, as of May 3, 2001,
23 based on the criteria set forth in the Report of Management Assertions
24 and Assertion Criteria on BellSouth Telecommunication's Operational
25 Support Systems. The PwC Report provides data and validated factual

1 assertions that this Commission can rely upon to establish the regionality
2 of BellSouth's OSS.

3

4 Q. **ARE THERE ANY MATERIAL DIFFERENCES BETWEEN THE WAY**
5 **DATA IS INPUT IN DOE OR SONGS?**

6

7 A. No. In other state 271 filings (Alabama, for example), CLECs have
8 commented on PWC's remarks regarding how data is input into DOE and
9 SONGS, and differences in the way commands, function keys, and
10 procedures for the two systems. PwC, however, validated that these
11 differences were trivial and certainly not material in nature as it relates to
12 the performance of either system.

13

14 Q. **DID PWC ADDRESS PERFORMANCE?**

15

16 A. Yes. Contrary to Mr. Bradbury's comments on pages 32-33, PwC did
17 address performance. In fact, PwC completed a performance
18 comparability examination for DOE and SONGS with the following testing
19 approach:

20

- 21 • Observed transactions input into DOE and SONGS and
22 ensured that the process was not materially different.
23 Transactions included each service type (i.e., Resale,
24 Complex, and UNE) and were for each state
- 25
- 26 • Observed DOE and SONGS data validation controls and
27 ensured that they were not materially different (i.e., required
28 fields). LSRs are created from a single set of business rules
29 for the purposed for submitting transactions. LSRs are

1 submitted to SOCS in the same format and subject to the
2 same SOCS validations
3

- 4 • Ensured that there are no material differences between DOE
5 and SONGS based on the end user State. This was
6 completed via observation of LSRs from all states within the
7 BellSouth region and ensuring the process for submission is
8 consistent
9
- 10 • Ensured that there are no material differences between DOE
11 and SONGS launch, logon and navigational commands via
12 observation of service representatives completing daily work
13
- 14 • Observed the process for submitting orders to SOCS and
15 ensured that consistent processes are followed for DOE and
16 SONGS and for each state in BellSouth's region.

17
18 As referenced in Mr. Bradbury's testimony on page 31, there was an
19 Informal Conference held on May 10, 2001, with the Kentucky PSC
20 wherein the PwC regionality attestation report was discussed. Based on
21 the conference, BellSouth requested that PwC perform a statistically
22 based evaluation of the time it takes to input orders in DOE versus
23 SONGS along with an analysis of downstream errors. As described
24 below, PwC has completed this evaluation and re-substantiated
25 BellSouth's original assertion that there are no material performance
26 differences in DOE and SONGS.
27

28 The specifics are contained in the PwC DOE and SONGS Comparability
29 Accuracy and Timeliness Report of July 20, 2001, which is attached to
30 Exhibit OSS-77. Exhibit OSS-77 is the Affidavit of Mr. Robert L. Lattimore
31 of July 20, 2001. In his affidavit, Mr. Lattimore describes the report along
32 with an overview of the level of involvement of PwC professionals. He

1 identifies that the engagement was performed under the Consulting
2 Standards of the American Institute of Certified Public Accountants
3 (AICPA) and then describes standards of professional competence, due
4 professional care, planning and supervision, and sufficient relevant data.
5 PwC completed the timeliness assessment using a statistically based
6 methodology. In their report, PwC defined how it reached its sample
7 determination using a confidence level of 95%, a tolerable rate of 1% and
8 an expected rate of 0%. PwC's report defines these terms and expresses
9 the significance of why these levels were selected since PwC's objective
10 was to yield a high confidence level and to minimize the risk of the sample
11 not being representative of the entire population. PwC defined its scope,
12 methodology and procedures used for the timeliness assessment for the
13 transaction input in DOE and SONGS. PwC measured (via a stopwatch)
14 the amount of time it took LCSC service representatives to successfully
15 submit orders into SOCS via DOE and SONGS. PwC found that based on
16 a statistically valid sample, the average input time for DOE was 8 minutes
17 and 22 seconds, while the SONGS input time was 5 minutes and 26
18 seconds. The less than 3 minute difference between the two input times is
19 not material. PwC depicted the relationship and the relative materiality of
20 the time incurred inputting an order into DOE and SONGS compared to
21 the FOC timeliness for the partially mechanized orders standard of 18
22 hours and for the manual orders standard of 36 hours. This depiction can
23 be seen on pages 5 and 6 of the PwC report of July 20, 2001. The pie
24 charts demonstrate that the average time to process an order through
25 either system is less than 1% of the overall process for the FOC interval

1 for either partially mechanized or manually submitted orders. There is no
2 material difference for this order input activity particularly when you
3 consider the FOC Timeliness Service Quality Measure (SQM) standard in
4 which this component process resides. The current standards established
5 by the Georgia Public Service Commission are 18 hours for partially
6 mechanized and 36 hours for non-mechanized service requests. This
7 report validates the results from the original May 3, 2001 PwC report.

8

9 Additionally, PwC defined its scope, methodology and procedures used for
10 the accuracy assessment for the transaction input in DOE and SONGS.

11 This assessment can also be seen in the July 20, 2001 report found in
12 Exhibit OSS-77:

13 To determine the accuracy of orders input into DOE and SONGS,
14 PwC reviewed the history log files maintained in SOCS. PwC
15 documented the orders that experienced downstream system edit
16 errors, which had to be subsequently corrected by a BellSouth
17 service representative. PwC was unable to review SOCS history
18 log files for some orders due to a change in the original order due
19 date which resulted in an earlier completion of the order. The
20 completed order history is purged from SOCS the day after an
21 order completes. In these cases, PwC observed the final status of
22 the order within the Mechanized On-line Billing System (MOBI).
23 This allowed them to determine if the order had completed, was in
24 pending status or had been cancelled. PwC did review the SOCS
25 history log files for 239 orders that had been input through DOE

1 and 220 that had been input through SONGS. A distribution across
2 product types and by types of errors can be found in their July 20,
3 2001 report. A description of each downstream system edit error
4 type along with examples of what caused the edit errors can also
5 be found in the report. BellSouth utilizes strong edit checks within
6 its systems to help eliminate potential downstream provisioning
7 errors. PwC determined that 19.7% of the orders submitted
8 through DOE and 20.0% of the orders submitted through SONGS
9 experienced downstream system edit errors. Again, PwC was able
10 to validate that BellSouth's assertion that there is no material
11 difference in performance for service order entry by the LCSCs
12 through the DOE and SONGS systems is accurate and correct.

13
14 PwC has now completed two independent assessments on the two
15 BellSouth assertions on regionality. These assessments have concluded
16 that BellSouth's systems are regional and that there are no material
17 differences between DOE and SONGS.

18
19 Q. SUMMARIZE THE REASONS THAT THIS COMMISSION SHOULD
20 RELY UPON THE PWC REPORT TO FIND THAT BELLSOUTH'S OSS
21 ARE REGIONAL IN NATURE ACCORDING TO THE REQUIREMENTS
22 OF STATE AND FEDERAL COMMISSIONS.

23
24 A. BellSouth adopted the roadmap that SBC used to provide the proof and
25 gain the support and approval of state and federal commissions. PwC

1 examined BellSouth's assertions on the regionality of BellSouth's OSS in
2 accordance with attestation standards established by the American
3 Institute of Certified Public Accountants and PwC concluded that its
4 examination provided a reasonable basis for its opinion that the BellSouth
5 management assertions were fairly stated, in all material respects. There
6 is substance to the PwC report and this Commission can rely on it as a
7 component in its consideration of BellSouth's application.
8

9 Q. ARE BELLSOUTH'S OSS, IN FACT, REGIONAL IN NATURE, AND IN
10 COMPLIANCE WITH THE FCC'S REQUIREMENTS?
11

12 A. Yes. On pages 25-30, Mr. Bradbury makes a number of claims about
13 BellSouth's legacy systems (OSS) for pre-ordering and ordering, and the
14 supposed lack of regionality of these systems. I discussed the regionality
15 of BellSouth's OSS and the electronic interfaces for CLECs on pages 179-
16 190 of my direct testimony of May 18, 2001. To reiterate, BellSouth
17 provides CLECs with one set of electronic and manual interfaces for all
18 CLEC resale and UNE service requests throughout BellSouth's nine-state
19 region – all of which provide nondiscriminatory access to BellSouth's OSS.
20 Very simply put, a CLEC in Alabama uses the same interfaces for access
21 to the same BellSouth OSS as a CLEC in any other state in BellSouth's
22 region. There is only one TAG, RoboTAG™, EDI, LENS, TAFI, ECTA,
23 ODUF, EODUF, and ADUF. Attached to this testimony is Exhibit OSS-78,
24 which describes the electronic interfaces used by CLECs, the databases
25 used exclusively by CLECs, the OSS shared by CLECs and BellSouth, the

1 function of each, the location of the server or servers, and the
2 geographical responsibility of each of these applications. To the extent
3 that there are separate servers for processing CLEC requests via these
4 interfaces, the servers use the same programming code and are designed
5 to operate in an indistinguishable manner. Similar to the situation with
6 SWBT, the servers use the same type of hardware running identical
7 software.¹ Please see the Testimony of David Scollard for BellSouth's
8 response to AT&T's allegations about the data centers to process usage
9 records for production of bills sent to CLECs.

10

11 Q. IS THERE ANY LOGICAL BASIS FOR MR. BRADBURY'S COMMENTS
12 REGARDING THE FACT THAT BELLSOUTH'S DATA IS NOT
13 CONTAINED IN A SINGLE DATABASE?

14

15 A No. Mr. Bradbury's comments on pages 27-28, are unsupported by his
16 testimony and in reality. There is no basis for Mr. Bradbury's claim that a
17 database will perform more effectively simply because all of the data is in
18 one location. As I explained in my direct testimony filed May 18, 2001, on
19 page 16, BellSouth's preordering OSS functionality is regional in scope
20 and performs in a robust and reliable manner. The servers use the same
21 type of hardware running the identical software. To further contradict Mr.

¹ "Where SWBT has discernibly separate OSS, SWBT demonstrates that its OSS reasonably can be expected to behave the same way in all three states. As described below, for example, the use by SWBT of two different order processing systems (a SORD processor in Dallas for retail and wholesale orders in Texas, and a SORD processor in St. Louis for retail and wholesale orders in SWBT's other four in-region states) use the same programming code and, moreover, are designed to operate in an indistinguishable manner." Kansas/Oklahoma Order, paragraph 111.

1 Bradbury's assertions, PwC reported on the regionality of BellSouth's
2 OSS.

3

4 PwC concluded that the:

5 Applications and interfaces implemented and available are identical
6 across the nine-state region. "Identical" was defined as one unique
7 set of software coding and configuration ("version") installed on
8 either one or multiple computer servers ("instances") that support
9 all nine-states in an equitable manner. (See the Affidavit of
10 Lattimore of May 21, 2001, which is Exhibit OSS-75.)

11

12 **KPMG'S THIRD-PARTY TEST IN GEORGIA**

13

14 Q. PLEASE ADDRESS THE CLECS' COMPLAINTS ABOUT THE
15 ADEQUACY OF THE INDEPENDENT THIRD-PARTY TEST IN
16 GEORGIA.

17

18 A. The testimony filed by the CLECs on July 9, 2001, in particular that of Mr.
19 Bradbury of AT&T, Ms. Norris of AT&T, Mr. Bell of AT&T, and in testimony
20 filed by other CLECs in the 271 proceedings in other states, complains
21 extensively about the scope of the independent third party test in Georgia,
22 often comparing it with tests that have or are taking place in other states.
23 When reading these witnesses' statements, particularly the "laundry lists"
24 on pages 4-5 and 10-11 of Ms. Norris's testimony, it is easy to forget that
25 the test that was ordered by the Georgia Commission was the test that

1 was executed by KPMG – and that the very CLECs that are now
2 complaining had ample opportunity to participate in the design and
3 execution of this Georgia test. (See Exhibit OSS-64 to my testimony filed
4 on May 18, 2001, pages VIII-A-4-A-23, for a listing of meetings that were
5 held during the testing process.) Beginning on page 143, of my direct
6 testimony of May 18, 2001, I described in detail the scope and purpose of
7 the Georgia test. Before discussing the issues raised by the CLECs on
8 July 9, 2001, I would like to summarize the scope, purpose, and
9 conclusions of the independent third party test in Georgia.

10

11 When it first ordered an independent, third-party test of BellSouth's OSS
12 two years ago, the Georgia Commission correctly recognized that actual
13 "commercial usage" should be the primary factor in evaluating
14 nondiscriminatory access – a view shared by the FCC.² As a result, the
15 Georgia Commission originally structured the third-party test as a
16 "focused, supervised audit" of BellSouth's OSS in recognition of the
17 extensive commercial usage that BellSouth's OSS experienced since the
18 Georgia Commission first began examining BellSouth's systems in 1995.

19

20 In response to CLEC concerns, however, the Georgia Commission
21 subsequently expanded the scope of the Georgia third-party test. With the
22 implementation of the Master Test Plan ("MTP") and the Supplemental

² In determining operational readiness, the FCC examines "performance measurements and other evidence of commercial readiness to ascertain whether the BOC's OSS is handling current demand and will be able to handle reasonably foreseeable demand volumes." *New York Order* ¶ 89. According to the FCC, "actual commercial usage" is the most probative evidence that OSS functions are operationally ready. *Id.*; *see also Texas Order* ¶ 98. Absent commercial usage data, the FCC will consider the results of carrier-to-carrier testing, independent third-party testing, and internal testing in assessing the commercial readiness of a BOC's OSS. *Id.*

1 Test Plan (“STP”), KPMG tested the OSS functions of pre-ordering,
2 ordering and provisioning, maintenance and repair, and billing associated
3 with the following service delivery methods: unbundled analog loops with
4 and without Interim Number Portability and Local Number Portability;
5 unbundled switch ports; unbundled loop/port combinations; and resold
6 services. KPMG also tested the following: the pre-ordering, ordering, and
7 provisioning of xDSL loops; the Change Management process, including a
8 review of the process as it related to implementation of OSS '99; the
9 processes and procedures supporting the calculation of performance data;
10 and BellSouth’s flow-through reporting. The depth and breadth of
11 KPMG’s testing is evident from the sheer volume of KPMG’s Final
12 Reports. These reports were attached to my testimony of May 18, 2001,
13 as Exhibits OSS-64 through OSS-66.

14
15 To be sure, the test conducted in Georgia is different in scope than third-
16 party OSS tests conducted in other states, as the CLECs have pointed
17 out. Such differences, however, are expected, as is evident from the
18 FCC’s Section 271 decisions, wherein the FCC has rejected any “cookie
19 cutter” approach to third-party OSS tests. (See *Texas Order* ¶ 103
20 (rejecting argument that Southwestern Bell Telephone Company’s 271
21 application is “inadequate” because “the third party test in Texas was less
22 comprehensive than the test executed by KPMG in New York, with
23 respect to the Bell Atlantic Section 271 process.”) The scope of the third-
24 party OSS test in New York was different than the scope of the Texas test,
25 which was different than the scope of the third-party test in

1 Massachusetts. In short, that the Georgia test was different by design
2 than other third-party OSS tests does not detract from the usefulness of
3 the Georgia test.

4
5 Nevertheless, the Georgia test is comparable in scope to the third party
6 tests conducted in New York and Texas, both of which received 271
7 approval. The similarities and differences between the Georgia test and
8 those in New York and Texas were demonstrated in Exhibit OSS-71,
9 which was attached to my direct testimony of May 18, 2001. The Georgia
10 test included the same functionality review of OSS Business processes as
11 New York and Texas. In addition, all three tests assess OSS scalability.
12 All three tests included normal volume and peak testing of the interfaces.
13 Moreover, the Georgia test reviewed all documentation for maintenance,
14 updates and communication, as did New York and Texas. Like New York
15 and Texas, the Georgia test assessed change management including the
16 notice and completion intervals; release versioning policy; defect
17 management process; and OSS interface development review. All three
18 tests included functional testing of pre-ordering and ordering. All three
19 tests provisioned orders, evaluated provisioning processes, and tested the
20 performance of specific provisioning measures. Georgia and New York
21 tested basic functionalities of Maintenance and Repair, and included a
22 M&R process parity evaluation. In some cases, the Georgia test went
23 beyond the tests in New York and Texas. For example, the Georgia test
24 included manual ordering for xDSL loops while the New York test did not.

1 Moreover, the Georgia test included a more extensive performance
2 metrics evaluation than either New York or Texas.

3
4 The Georgia test meets all of the criteria established by the FCC in its
5 decision on Bell Atlantic's New York application. Specifically, in the
6 Georgia test, like the New York test, KPMG was an independent tester;
7 conducted a military-style test; made efforts to place itself in the position of
8 an actual market entrant; and made efforts to maintain blindness when
9 possible. As in New York, KPMG established "a pseudo-CLEC" as part of
10 the Georgia test in order "to live the CLEC experience." (See Exhibit
11 OSS-64 to my testimony of May 18, 2001, the Master Test Plan Final
12 Report, at II-5.) In compliance with FCC decisions, the Georgia test is a
13 focused test that appropriately concentrates on the specific areas of
14 BellSouth's OSS that had not experienced significant commercial usage.
15 As set forth in the Master Test Plan, the test covered all five core OSS
16 processes (pre-ordering; ordering; provisioning; maintenance and repair;
17 and billing); electronic interfaces to the OSS (TAG, EDI, TAFI, ECTA,
18 ODUF, ADUF, CRIS and CABS); UNE analog loops (with and without
19 number portability); UNE switched ports; UNE business and residence
20 port-loop combinations; LNP; and normal and peak volume testing of the
21 electronic interfaces for pre-ordering; ordering, and maintenance and
22 repair using a representative mix of resale services and UNE transactions.
23 The Georgia test also provides for an audit of BellSouth's flow-through
24 Service Request Report for the latest three months of data.

25

1 In a Supplemental Test Plan, the Georgia Commission expanded the test
2 to include an assessment of the change management process as it
3 applied to the implementation of Release 6.0 (“OSS99”); an evaluation of
4 pre-ordering, ordering and provisioning of xDSL loops; a functional test of
5 resale pre-ordering, ordering, provisioning, maintenance and repair, and
6 billing transactions for the top 50 electronically orderable retail services
7 available for resale; and an evaluation of the processes and procedures
8 for the collection and calculation of performance data.

9

10 In all, KPMG analyzed 1,173 criteria in eight functional areas. KPMG
11 analyzed each criterion, and the results fell into five categories: satisfied,
12 not satisfied, not complete, no result, and not applicable. KPMG
13 determined that 95% of the completed criteria were satisfied. 1.8% are
14 “not satisfied,” 1.5% are “no report,” and 0.3% are not applicable. Eleven
15 criteria (0.9%; all metrics) remain categorized as not complete at this time.
16 Of the few not satisfied criteria, KPMG has given its professional opinion
17 that most of these items would not, in and of themselves, have a material
18 adverse impact on competition. KPMG stated in its March 20, 2001
19 opinion letter, “No deficiencies creating potentially material adverse
20 impacts on competition currently exist in Pre-Ordering, Billing,
21 Maintenance & Repair, Capacity Management, Change Management, and
22 Flow-Through.” (Attached to my direct testimony of May 18, 2001, as
23 Exhibit OSS-67.)

24

1 Notwithstanding any suggestion to the contrary, KPMG conducted a
2 comprehensive, independent, third-party test of BellSouth's OSS
3 consistent with the Georgia Commission's directives. KPMG's Final
4 Reports and the KPMG Opinion Letter provide persuasive evidence that
5 BellSouth has met its obligation to provide nondiscriminatory access to its
6 OSS as required by the Telecommunications Act of 1996 ("1996 Act").
7

8 Q. PLEASE COMMENT ON THE CLECS' COMPARISONS BETWEEN THE
9 EXCEPTIONS ISSUED IN THE GEORGIA TEST AND THOSE ISSUED
10 IN THE FLORIDA TEST.
11

12 A. The CLECs' witnesses, especially Mr. Bradbury and Ms. Norris of AT&T,
13 and Ms. Lichtenberg of MCI/WorldCom, spend considerable time
14 comparing the observations and exceptions from the Florida test with the
15 exceptions and finds of the Georgia test. In making these comparisons,
16 these witnesses have made a number of generalizations in which they
17 allege that many of the exceptions that were satisfied in the Georgia Test,
18 were then re-opened in the Florida Test. These statements are wrong
19 when applied to some of the observations and exceptions, and misleading
20 applied to others.
21

22 Ms. Norris of AT&T has filed Exhibit SEN3PT-1, and Mr. Bradbury has
23 filed JMB-23, which provide lists of observations and exceptions regarding
24 issues, many of which were simply not within the scope of the Georgia
25 test. The implication is that the differences between Florida and Georgia,

1 in and of themselves, make the Georgia test invalid. This is not the case.
2 Instead, the differences merely reflect that the scope of the Georgia test
3 different from the scope of the Florida test. As I discussed earlier, the
4 FCC has specifically rejected the suggestion by CLECs that third party
5 tests should follow a “cookie cutter” pattern. KPMG completed and
6 concluded the test in Georgia based upon the scope of that test as
7 ordered by the Georgia Commission.

8

9 Mr. Bradbury of AT&T comments that observations and exceptions found
10 in the Third-Party Test in Florida demonstrate that BellSouth has problems
11 with the implementation of business rules and with the adequacy of
12 documentation and processes related to the support BellSouth provides
13 CLECs. Additionally, Ms Norris’s Exhibit SEN3PT-1, on pages 11-15, lists
14 22 observations and 14 exceptions from the Florida test that she calls
15 “repeats.” Of those that BellSouth investigated, most were related to
16 different issues, and were not “repeats” at all. I have provided a detailed
17 response to Observations 29, 30, 61, and 82, along with Exceptions 23,
18 33, 38, 41, 63, and 71 in my Exhibit OSS-79. Because none of these six
19 Florida exceptions were about the *same* issue in both the Florida and
20 Georgia tests, it follows that none of these issues were “missed” during
21 the Georgia test. It appears that Ms. Norris disregards the fact that many
22 of these issues have been thoroughly tested and conclusively satisfied in
23 both the Georgia and Florida tests. Of those exceptions and observations
24 still open in Florida, BellSouth is working with KPMG to close them.

25

1 My Exhibit OSS-79 also includes responses to other observations and
2 exceptions mentioned in Ms. Norris's SEN3PT-1 and Mr. Bradbury's JMB-
3 23. Ms. Norris' comments about exceptions related to LNP, on page 6 of
4 her testimony, are also addressed in Exhibit OSS-79. Responses,
5 however, to the CLECs' remarks about a exceptions related to manual or
6 LCSC matters, performance measurements, and billing are covered in the
7 testimony of BellSouth's witnesses, Mr. Ainsworth, Mr. Varner and Mr.
8 Scollard. It is important to note that, between February 2000 and January
9 2001, BellSouth made many changes due to the Georgia third party test.
10 In many instances, KPMG opened observations and exceptions in the
11 Florida test after auditing code and documentation that dated from the
12 time between February 2000 through January 2001, before BellSouth had
13 implemented the changes to satisfy the Georgia Exception. After KPMG
14 opened an observation or exception in Florida that was based on old
15 information, BellSouth asked KPMG to review current information.

16
17 **Parity of Performance**

18
19 Q. HOW IS PARITY EVALUATED DURING THIRD-PARTY TESTS?

20
21 A. Beginning on page 7 of her testimony, Ms. Norris of AT&T complains that
22 the Georgia third party test did not measure BellSouth's parity of
23 performance. The Georgia Commission and the FCC have established
24 that parity is evaluated by reviewing the RBOC wholesale performance
25 results against its retail analogs. If the performance results show that an

1 RBOC serves its CLECs with same level of service as it serves itself or its
2 retail customers, then a further process parity evaluation would be
3 irrelevant. This is the same method of proof that was used in the New
4 York, Texas, and Massachusetts third party tests.

5
6 The Georgia test has the most comprehensive performance metrics
7 evaluation of all the tests performed so far by any state. It contains 430
8 evaluation criteria against 48 in New York and 126 in Massachusetts.
9 Moreover, and most importantly, the BellSouth's performance
10 measurement plan reports on over 1700 sub-metrics, significantly more
11 detail than all other RBOCs. As a result, this Commission will have an
12 enormous amount of actual commercial data by which to correctly
13 evaluate BellSouth's position of parity to CLECs.

14
15 **Interfaces used by CLECs and Interface Development**

16
17 Q. PLEASE DISCUSS THE INTERFACES THAT WERE EVALUATED
18 DURING THE GEORGIA TEST.

19
20 A. Beginning on page 8, Ms. Norris of AT&T claims that the Georgia test is
21 incomplete as it related to electronic interfaces testing because it reviewed
22 versions that pre-dated the OSS '99 release and did not review any
23 versions of certain other interfaces. This complaint exemplifies the fact
24 that the CLECs will never agree that it is time to review BellSouth's
25 compliance with the Act. Instead, the CLECs will always argue that there

1 is some change in the industry that necessitates delay. From the CLECs'
2 perspective, this is a fool-proof strategy because the telecommunications
3 industry is always changing – new technology, new products, new
4 competitors. BellSouth's (and other RBOCs') interfaces and systems are
5 constantly evolving. Internal, regulatory, and even CLEC-driven changes
6 are incorporated into the systems to increase system functionality and
7 performance. To argue that the Commission should wait for the change to
8 stop is to argue that the Commission should never move forward.

9

10 A third party test, by its nature, must test a snapshot in time. BellSouth
11 enhanced its OSS during the Georgia test, and is enhancing its OSS
12 during the Florida test. The fact that things change during or after the test
13 does not alleviate the probative value of the test – that BellSouth provides
14 adequate access, functionality, and performance to CLECs. The fact that
15 the systems have evolved since the Georgia test should not impact this
16 Commission's use of the test. Otherwise, no third party test would ever
17 have value.

18

19 Moreover, with respect to OSS99, KPMG tested the OSS99 change
20 management pursuant to the STP in the Georgia test. Among other
21 things, the STP was designed to assess the electronic interface change
22 control process as applied to the implementation of OSS99. KPMG
23 examined the methods and procedures that BellSouth used to develop
24 and release the OSS99 applications package and supporting

1 documentation (CM-2). KPMG found that BellSouth satisfied all of the test
2 criteria for change management, including OSS99.

3

4 In addition, BellSouth and AT&T conducted a successful carrier-to-carrier
5 test of OSS99 in the fourth quarter of 1999. AT&T would have this
6 Commission believe that the carrier-to-carrier beta test of OSS99 was
7 unsuccessful (See the Affidavit of Edward Gibbs of AT&T filed with Mr.
8 Bradbury's testimony of July 9, 2001), However my testimony below
9 shows that the objectives of the test were met.

10

11 On page 8, Ms. Norris complains that BellSouth did not test LENS or
12 RoboTAG™. The Georgia Commission did not order the testing of LENS,
13 because there was commercial usage for LENS at the time the test began
14 in May 1999. 153 CLECs were using LENS region-wide. This usage
15 proves the accessibility and functionality of LENS better than a third party
16 test evaluation could. RoboTAG™ was not available at the time the
17 Georgia test was developed. In addition to this, RoboTAG is a stand-
18 alone product, which BellSouth sells to CLECs that choose not to develop
19 applications to interact with the TAG gateway on their own. Currently,
20 there are 331 CLECs/OCNs using LENS and 6 CLECs using RoboTAG™.

21

22 Ms. Norris, on page 9, complains that KPMG did not evaluate the ability of
23 CLECs to build interfaces based on BellSouth's documentation. Once
24 again, the significant commercial usage of BellSouth's CLEC interfaces
25 obviates the need for third party testing in this area. There are 37

1 CLECs/OCNs using EDI and 71 CLECs/OCNs using TAG, with a
2 combined region-wide electronically submitted non-LNP LSRs of
3 approximately 109,000 in June 2001.³ Because CLECs are using these
4 interfaces in commercially significant numbers, additional verification of a
5 CLEC's ability to build the interface is unnecessary.

6
7 Finally, BellSouth will demonstrate to the Commission significant
8 commercial usage of interfaces, including OSS99, in Kentucky and
9 throughout BellSouth's region. For the *12 months* ending May 2001,
10 CLECs submitted 423,641 LSRs through EDI, 972,151 through TAG, and
11 2,178,899 through LENS.

12
13 **Manual Support Systems**

14
15 Q. PLEASE ADDRESS THE CLECS' COMPLAINTS REGARDING THE
16 TESTING OF MANUAL PROCESSES.

17
18 A. Ms. Norris, on pages 10-11 of her testimony, complains that the Georgia
19 test did not include a test of manual processes. That is not true. Indeed,
20 the Georgia functional testing did include BellSouth's performance on
21 partially mechanized orders, which are those that are submitted
22 electronically but fall out for manual handling. Partially mechanized orders
23 were tested, among other things, for timeliness and accuracy. In addition,
24 the Georgia Commission added a manual order process evaluation for

³These totals based on Operating Company Numbers ("OCNs").

1 xDSL and manual loop makeup in the STP, which included evaluation of
2 the xDSL Work Center and Capacity Management evaluation. Using
3 AT&T's own numbers, 65% of manual orders were indeed included in this
4 testing process.

5

6 Moreover, there is significant commercial usage of BellSouth's manual
7 OSS. As the FCC has repeatedly stated, actual commercial usage, not
8 third-party testing, is the most probative evidence of compliance. In the
9 five former South Central Bell states in BellSouth's region, for example,
10 BellSouth processes 20,000 partially mechanized and manual orders for
11 CLECs per month. Because the commercial usage is so high, BellSouth
12 will rely on commercial data and performance data to demonstrate its
13 compliance with the Act for most manual orders and third party testing is
14 unnecessary.

15

16 **Relationship Management Practices**

17

18 Q. DID THE GEORGIA TEST INCLUDE RELATIONSHIP MANAGEMENT?

19

20 A. No. On page 12-13, Ms. Norris complains that the Georgia test did not
21 include a test of "relationship management" practices. The simple reason
22 for this is because neither the Master Test Plan nor the Supplemental Test
23 Plan, which were approved by the Georgia Commission, called for such a
24 test. Further, as defined by the Georgia Commission, the original
25 intention of the Georgia test was to focus on BellSouth's OSS systems.

1 The "relationship management" aspect of the CLEC experience was
2 rightfully excluded from a test that was designed to focus on OSS. As in
3 Georgia, "relationship management" practices were not tested in Texas.
4 Please also see Exhibit OSS-79

5

6 **BellSouth's and KPMG's Roles in the Georgia Test**

7

8 Q. WAS KPMG FULLY INDEPENDENT?

9

10 A. Yes. Contrary to Ms. Norris's statements, which begin on page 20, the
11 Georgia test was fully independent. The Georgia Commission ordered
12 BellSouth to hire credible and reputable firms to conduct the process. To
13 fulfill this mandate, BellSouth hired KPMG, the firm that conducted the
14 third party tests in both New York and Massachusetts. KPMG acted at all
15 times as required by independent auditing standards.

16

17 AT&T's suggestion that KPMG was not sufficiently "independent" because
18 "KPMG works for BellSouth" is patently false. (Testimony of Ms. Norris,
19 page 20.) Although KPMG's contract is with BellSouth, KPMG has made
20 clear that it is working for the Commission as well as BellSouth. (See
21 Exhibit OSS-64 to my direct testimony of May 18, 2001, the MTP Final
22 Report at II-1). Furthermore, although KPMG was compensated by
23 BellSouth for its work on the third-party test, this was hardly an
24 arrangement unique to Georgia. Surely, AT&T is not suggesting that it
25 and the other CLECs would have liked to pay for the test? Importantly,

1 KPMG's compensation in Georgia was based solely on the time spent on
2 the project, and there is no suggestion, let alone evidence that KPMG's
3 conclusions were in anyway influenced by the fact that BellSouth paid
4 KPMG's bills for its third-party testing.

5

6 On pages 22-23, Ms. Norris claims that BellSouth designed the Georgia
7 test to its own advantage and tailored the test to target or avoid specific
8 areas. It is important to remember that the test plan for the Georgia test
9 was mandated by the Georgia Commission and drafted based on the
10 parameters set by it. The test managers, first Hewlett Packard, and then
11 KPMG, wrote both the core test documents, the MTP and the STP, and
12 other documentation for the test. Both the Georgia Commission and the
13 CLECs viewed the MTP and the STP. Every version of the plan was filed
14 at the Georgia Commission.

15

16 **CLEC Involvement in the Georgia Test**

17

18 Q. WERE THE CLECS INVOLVED IN THE GEORGIA TEST?

19

20 A. Yes. On pages 24-26, Ms. Norris of AT&T complains about the level of
21 involvement that CLECs had in the Georgia Test. CLECs have had ample
22 opportunity to participate in the testing process in Georgia. The third-party
23 test was actually commenced in response to a petition filed by a coalition
24 of CLECs, which helped shape the scope of the test. CLECs have had
25 the option to file written responses to each interim status report filed by

1 KPMG and to participate in weekly conference calls to address ongoing
2 issues associated with the test. KPMG held weekly conference calls with
3 CLECs, conducted numerous CLEC interviews, and posted all exceptions
4 and meeting minutes to a website accessible to all CLECs. In certain
5 cases, it was not practical for KPMG to conduct transactions as a pseudo-
6 CLEC, such as the provisioning of xDSL loops and the ordering of LNP.
7 CLECs supplied test scenarios for the test plan, and KPMG had the
8 CLECs submit selected orders on its behalf (e.g. LNP and xDSL). Finally,
9 CLECs also were given the opportunity by the Georgia Commission to
10 discover the basis for KPMG's conclusions, which included serving
11 voluminous discovery requests and deposing four KPMG witnesses over
12 the course of two days, as well as to cross-examine KPMG's principal
13 witnesses at the May 8, 2001 hearing. At the conclusion of the hearing, all
14 interested parties submitted written comments addressing the test and
15 KPMG's conclusions. In short, CLECs actively were involved the test
16 process.

17

18 On pages 24-25 of her testimony, Ms. Norris alleges that KPMG did not
19 consider the CLECs' point of view in conducting its analysis. This is
20 without merit. As I stated earlier, KPMG established a pseudo-CLEC in
21 order to test BellSouth's OSS.

22

1 **KPMG's Procedures**

2

3 Q. PLEASE DISCUSS MS. NORRIS'S CRITICISMS OF HOW KPMG
4 HANDLED THE GEORGIA TEST.

5

6 A. Ms. Norris, on pages 32-33, and interspersed throughout the remainder of
7 her testimony, complains about the analyses that KPMG performed during
8 the Georgia test. More specifically, she complains about the alleged
9 subjectivity of KPMG's analyses, KPMG's use of aggregations, KPMG's
10 statistical analysis, KPMG's use of professional judgment, and KPMG's
11 reliance on BellSouth's performance measurements and the Georgia
12 Commission's penalty plan.

13

14 The CLECs' complaints about KPMG's statistical procedures, particularly
15 those made by Mr. Bell of AT&T, are rebutted in the testimony of Edward
16 J. Mulrow, Ph.D. of Ernst & Young LLP, who is filing on behalf of
17 BellSouth. I have also attached KPMG's *Motion for Leave to Articulate*
18 *Basis for Statistical Analysis in the GA 271 Test Final Reports*, filed on
19 June 25, 2001 in the Louisiana Public Service Commission 271
20 proceeding, Docket No. U-22252-E as Exhibit OSS-80, in which KPMG
21 describes its use of statistical analysis during the third party test in
22 Georgia. Note that the statistical test used by KPMG in Georgia is the
23 same that was used by KPMG in the New York third party test of Verizon.

24

1 First, I would direct you to the July 24, 2001 testimony of BellSouth's
2 witness, Mr. Varner. Mr. Varner discusses the levels of aggregation used
3 in the Georgia test, and the levels being used in the Phase II of the test,
4 which is ongoing. He also discusses Ms. Norris's remarks about KPMG
5 and its statements to the Georgia Commission regarding performance
6 measurements and penalty plans.

7

8 Second, as described by KPMG on pages 3-4 of Exhibit OSS-80, the
9 methods that KPMG used were appropriate:

10

11 The Georgia 271 OSS test was designed and implemented to cover
12 a wide range of products and services. In total, well over 1,000 test
13 points were reported in the eight major test categories: Pre-
14 Ordering, Ordering and Provisioning, Billing, Maintenance and
15 Repair, Capacity Management, Change Management, Metrics, and
16 Flow-Through Evaluation.

17

18 In many cases, the measures related to these test points were
19 quantitative, and statistical testing was performed. However, the
20 sample sizes for each specific service or transaction type were not
21 designed for statistical precision. Instead, the timeliness and
22 accuracy issues were generally evaluated at an aggregate level,
23 while functionality was evaluated at the specific level. Functionality
24 tests, for example, do not determine how quickly or how accurately
25 the system is performing a particular service or transaction type.

1 Instead, functionality tests determine whether the system has the
2 capability of performing the required service.

3
4 When statistical tests were used, the purpose was to *inform* KPMG
5 Consulting's professional judgment, rather than to *determine* KPMG
6 Consulting's professional judgment. The statistical test informed
7 KPMG Consulting whether an observed difference could have been
8 the result of random variation, or whether that difference was
9 statistically significant. KPMG Consulting used professional
10 judgment to determine, when a difference was statistically
11 significant, if that difference was substantial enough to have an
12 adverse impact on competition. Thus, the statistical test result,
13 while often a key component in the Satisfied/Not Satisfied decision,
14 was not the only consideration in that decision.

15
16 The purpose of the Georgia 271 OSS test was not to determine, for
17 the specific data created by KPMG Consulting, whether standards
18 were being met. The purpose of on-going monitoring efforts is to
19 determine whether BellSouth is performing below a standard for a
20 specific set of data. The Georgia 271 OSS test sought to
21 determine whether the test outcomes were consistent with an OSS
22 that is generally operating at or above an acceptable level, in order
23 to provide CLECs with non-discriminatory service or a meaningful
24 opportunity to compete. As such, random variation in test
25 outcomes were necessarily considered, via statistical testing,

1 during the OSS test, regardless of whether the appropriate
2 standards were benchmarks or parity measures.

3
4 Additionally, on page 5 of Exhibit OSS-80, KPMG stated:

5
6 KPMG Consulting tested an extremely broad array of products and
7 services for functionality. A functionality test addresses whether a
8 particular aspect of the OSS is functioning. Statistical analysis
9 tests are primarily used in areas where timeliness and accuracy are
10 an issue. For that part of the test, rolling up the data to an
11 aggregate level is appropriate, because the system operating on
12 the data is not substantively different for every disaggregation. On
13 this basis, KPMG Consulting did not believe that every
14 disaggregation needed to be subject to statistical analysis.

15
16 On page 33, and elsewhere in her testimony, Ms. Norris questions
17 KPMG's use of its professional judgment. The exercise of professional
18 judgment by KPMG in conducting the Georgia test is consistent with the
19 process used in all of the third-party tests conducted by KPMG in the other
20 states that have been approved by the FCC. In each instance where
21 KPMG has been involved in OSS testing, KPMG has used its professional
22 judgment, and it is absurd to suggest that KPMG should have avoided
23 doing so in Georgia. Test targets and their corresponding evaluation
24 criteria provided the basis for KPMG's test. Standards for these
25 evaluation criteria were established by the Georgia Commission in its

1 June 6, 2000 Order, or, where a standard did not exist, results were
2 evaluated by KPMG using its professional judgment. KPMG also used “its
3 professional judgment with respect to passing or failing, when its judgment
4 is different from what the performance standard states.” (See Exhibit
5 OSS-80, page 7).

6

7 **SUPPORT FOR CLECS**

8

9 **Documentation**

10

11 Q. DOES BELLSOUTH PROVIDE COMPLETE DOCUMENTATION TO THE
12 CLECS IN COMPLIANCE WITH THE FCC’S REQUIREMENTS?

13

14 A. Yes. Mr. Bradbury asserts, on page 125, that BellSouth’s support for
15 CLECS is insufficient. BellSouth disagrees. Mr. Bradbury does not offer
16 any evidence to support his claim.

17

18 As stated in my direct testimony on pages 31-34 and detailed in Exhibits
19 OSS 25-38, BellSouth provides extensive support to the CLECS through
20 documentation and training for the electronic interfaces and its OSS.

21 Specifically, BellSouth CLEC Training Course Offerings are posted to the
22 web at the Interconnection web site.

23 (<http://www.interconnection.bellsouth.com/training/html/info.html>).

24 BellSouth strives to make such training and documentation complete,
25 accurate, and up to date in order to meet the CLECS business needs.

1

2 Q. DO CLECS HAVE ANY RECOURSE WHEN THEY DETECT THAT
3 THERE MAY BE A PROBLEM WITH BELLSOUTH'S
4 DOCUMENTATION?

5

6 A. Certainly. When CLECs detect problems associated with BellSouth's
7 documentation, they should submit a Change Request via the CCP, which
8 is the appropriate forum in which to address this issue.

9

10 In summary, BellSouth provides thorough documentation and makes it
11 readily available to CLECs. Additionally, extensive training is available to
12 the CLECS in both of these areas.

13

14 **Third Party Test of Documentation**

15

16 Q. DID KPMG ISSUE EXCEPTIONS RELATED TO DOCUMENTATION IN
17 THE GEORGIA AND FLORIDA TESTS?

18

19 A. Yes. KPMG has raised various levels of documentation and process
20 issues in both the Georgia and Florida test. To put this in perspective,
21 however, consider that the four volumes of the Local Exchange Ordering
22 (LEO) Guides, the business rules for TCIF 7.0 interfaces, contain
23 approximately 1200 pages, and the BellSouth Business Rules for Local
24 Ordering, the business rules for TCIF 9.0 interfaces, contains
25 approximately 1800 pages (see Exhibits OSS-14 through OSS-17 and

1 OSS-6 attached to my testimony of May 18, 2001). The accuracy and
2 usability of these business rules have been demonstrated by the fact that
3 many CLECs are using these rules to submit orders successfully in
4 Kentucky, as evidenced by the commercial data on UNE and Resold
5 services in BellSouth's region.

6

7 Q. MS. NORRIS COMPLAINS THAT BELLSOUTH'S DOCUMENTATION
8 IS INCONSISTENT AND INACCURATE AND THAT THIRD PARTY
9 TEST IN FLORIDA HAS REVEALED EXCEPTIONS IN THIS REGARD.
10 PLEASE COMMENT.

11

12 A. On pages 12-13 of her testimony, Ms. Norris makes a broad claim that
13 BellSouth provides inconsistent and contradictory information, although
14 she offers no specifics or substantiation that this is true. In her Exhibit
15 SEN3PT-1, she has made a number of generalized statements alleging
16 that numerous exception issues that were satisfied in the Georgia Test
17 were then opened in the Florida Test. Ms. Norris specifically identified
18 Florida Exception 33 as one of those Exceptions that was opened in the
19 Florida test after having been satisfied in the Georgia test.

20

21 As I have explained in Exhibit OSS-79 attached hereto, the Florida test
22 looked at products that were different from the products that were
23 available at the time of the test in Georgia (see the explanation of Florida
24 Exception 41 in Exhibit OSS-79). Florida Exception 33 relates specifically
25 to the Flow-Through Ordering Matrix (BBRLO-12/22/00, sec 2.6), Flow-

1 Through Parameters (BBRLO-12/22/00, sec 2.6.1), and the BST SQM
2 Plan LSR Flow-Through Matrix (10/00). In response to Florida Exception
3 33, BellSouth agreed to synchronize the flow-through information between
4 the documents. New products and services and changes to flow-through
5 occur through the natural evolution of BellSouth's development of its
6 business, and CLECs' requests for such changes. BellSouth has
7 addressed KPMG's issues raised in Florida Exception 33, and closure is
8 currently in progress.

9

10 Q. DOES BELLSOUTH PROVIDE COMPLETE DOCUMENTATION TO THE
11 CLECS IN COMPLIANCE WITH THE FCC'S REQUIREMENTS?

12

13 A. Yes. Mr. Bradbury, beginning on page 126 of his testimony, makes an
14 unsubstantiated inference that BellSouth's general support of the CLECs
15 is insufficient because KPMG did not do a thorough test of the EDI
16 specifications and other documentation that BellSouth provides to the
17 CLECs. However, the fact that it was not tested to AT&T's satisfaction
18 does not automatically make it insufficient. As stated in my direct
19 testimony of May 18, 2001, beginning on page 25 and detailed in Exhibits
20 OSS-4 through OSS-38, BellSouth provides extensive support to the
21 CLECS through documentation and training for the electronic interfaces
22 and its OSS. For example, beginning on page 28 of my direct testimony
23 of May 18, 2001, I describe the complete and accurate information on EDI
24 specifications that BellSouth provides to CLECs. This information is easily

1 accessible on BellSouth's Interconnection web site.⁴ BellSouth strives to
2 make such training and documentation complete, accurate, and up to date
3 in order to meet the CLECs business needs.

4

5 Q. DOES THE CCP CONTAIN REQUIREMENTS FOR NOTIFYING THE
6 CLECs OF CHANGES TO DOCUMENTATION?

7

8 A. The CCP has contained notification requirements for some time, and
9 BellSouth has been complying with those requirements. Regarding
10 notification intervals that I discussed beginning on page 53 of my
11 testimony of May 18, 2001, BellSouth and the CLEC participants have
12 been discussing a new more comprehensive set of notification deadlines,
13 and a ballot regarding notification intervals was issued to the participants
14 in the CCP on June 21, 2001. The ballots were returned to BellSouth on
15 June 28, 2001. Of the 26 items on the ballot, 24 were items that had
16 direct bearing on the Release Management Schedule process, and 20 of
17 those were approved. The Approved items were incorporated into CCP
18 Document of July 2, 2001, (and they are included in the later CCP
19 document of July 18, 2001, which is attached as Exhibit OSS-81). These
20 notification deadlines within the context of a comprehensive release
21 management program contain schedules for industry releases (new
22 industry standard(s) that may impact and require the entire CLEC
23 community to make changes to their interfaces), major releases (changes
24 that may require CLECs to make changes to their interfaces), minor

⁴ http://www.interconnection.bellsouth.com/guides/html/guides_1eo4.html

1 releases (changes that may not require CLECs to make changes to their
2 interfaces), and maintenance releases (scheduled maintenance of a
3 BellSouth system). The results of these two ballots should satisfy AT&T's
4 and MCI/WorldCom's complaints about notification intervals. Because
5 AT&T and MCI/WorldCom (via Mr. Bradbury and Ms. Lichtenberg)
6 complain about these issues in their testimony, it is surprising that neither
7 AT&T nor MCI/WorldCom chose to vote on the ballot that preceded the
8 CCP document of July 2, 2001, nor did they on the subsequent ballot that
9 preceded the CCP document of July 18, 2001. However, these CLECs'
10 lack of participation in the process does not nullify the accomplishments of
11 the CLECs that choose to participate.

12

13 Q. MS LICHTENBERG OF MCI/WORLDCOM, ON PAGE 28-29,
14 COMPLAINS THAT CLECS DO NOT RECEIVE DOCUMENTATION
15 SUFFICIENTLY IN ADVANCE OF DEPLOYMENT OF INTERFACE
16 RELEASES. PLEASE COMMENT

17

18 A. Ms. Lichtenberg referred specifically to the dates documentation was
19 provided to the CLECs for major releases and industry releases. As I
20 discussed above, the CLECs voted on a new release management
21 schedule that has been incorporated in the latest version of the CCP
22 document. Section 4.0, page 35, of the CCP document (Exhibit OSS-81)
23 provides that:

Major Releases

- Draft User Requirements for major software releases will be provided to CLECs at least 36 weeks prior to production
- Final User Requirements for major software releases will be provided to CLECs at least 34 weeks prior to production
- Final specifications for major software releases will be provided to CLECs at least 10 weeks prior to production
- Business Rules associated with major software releases will be provided to CLECs at least 8 weeks prior to production

Industry Releases

- Notification for the implementation of an Industry release will be provided at least 42 weeks prior to production
- Draft User Requirements for implementation of Industry release will be provided to CLECs at least 40 weeks prior to production
- Final User Requirements for implementation of Industry release will be provided to CLECs at least 10 weeks prior to production
- Final specifications for implementation of Industry release will be provided to CLECs at least 10 weeks prior to production
- Business rules associated with implementation of Industry release will be provided to CLECs at least 8 weeks prior to production

Q. IF THEY DETECT PROBLEMS WITH BELLSOUTH'S DOCUMENTATION, HOW DO CLECs ALERT BELLSOUTH?

1 A. If a CLEC detects a problem with BellSouth's documentation, it should
2 submit a change request via the CCP, which is the proper forum. And
3 indeed, CLECs are using the CCP to address issues with documentation.
4 In summary, BellSouth provides CLECs with thorough and complete
5 documentation that is readily available.

6

7 **CHANGE MANAGEMENT**

8

9 **BellSouth's Change Control Process**

10

11 Q. HAVE AT&T'S COMPLAINTS ABOUT THE CHANGE CONTROL
12 PROCESS ("CCP") ALREADY BEEN ADDRESSED IN ARBITRATIONS
13 THROUGHOUT THE BELLSOUTH REGION?

14

15 A. Yes. In this proceeding, as well as in affidavits and testimony filed in 271
16 proceedings throughout the BellSouth region (AL Docket 25835, LA
17 Docket U-22252, GA Docket 6863-U and KY Case No. 2000-465), Mr.
18 Bradbury of AT&T makes a number of allegations concerning BellSouth's
19 Change Control Process. On pages 95-124 of his testimony, Mr.
20 Bradbury (AT&T) condemns BellSouth's CCP as inadequate, and cites
21 examples of how he feels BellSouth has operated to the detriment of
22 CLECs within that process. The allegations that Mr. Bradbury presents
23 here are nothing new and are unfounded.

24

25 Q. WHAT HAS THIS COMMISSION SAID ABOUT BELLSOUTH'S CCP?

23
24
25

A. These are the same issues raised by AT&T in its Petition for Arbitration in Kentucky Case No. 2000-465. This Commission dealt with these issues and ordered, “[n]o change to the CCP is warranted at this time; however, if AT&T believes that the escalation process yields insufficient progress, then AT&T may file a complaint against BellSouth with this Commission.”

In addition, the Georgia Commission ordered, “that if the parties have disputes arising from the change control process, they should adhere to the escalation and dispute resolution process included in the change control document.” Additionally, the North Carolina Public Utilities Commission, on page 35 of its Order released in Docket No Pub-170, Sub 73, found that it “agrees with the Public Staff that it would be more appropriate to order BellSouth and AT&T to refer the issues that AT&T has raised in this docket to the CCP for further action.” Additionally, the North Carolina Commission noted that “...the Public Staff observed that the CCP appears to be steadily evolving in ways that are mutually acceptable to both BellSouth and the CLPs [competing local providers] ...” The North Carolina Commission further noted “... the Public Staff opined, it seems unnecessary for the Commission to intervene in a process that appears to be working, even if it is working more slowly than AT&T desires.” In contrast, none of the issues raised by Mr. Bradbury in his testimony have been worked through the dispute resolution process of CCP.

1 Q. FROM PAGE 13 THROUGH PAGE 33 OF HER TESTIMONY, MS.
2 LICHTENBERG (WORLDCOM/MCI) ADDRESSES A NUMBER OF
3 CONCERNS REGARDING BELL SOUTH'S CHANGE MANAGEMENT
4 PROCESS. DO YOU HAVE ANY COMMENTS REGARDING HER
5 COMPLAINTS?

6

7 A. Yes. Ms. Lichtenberg's complaints are speculative and/or misleading, and
8 very similar to those of Mr. Bradbury of AT&T. She takes great pains to
9 be specific in her discussion of change requests and areas of purported
10 deficiency in BellSouth's Change Control Process ("CCP"), but her story is
11 woefully incomplete. I will address her claims and show that BellSouth's
12 CCP is a viable change management process that meets standards set
13 forth by the FCC, state commissions and independent third-party test
14 administrators.

15

16 Q. HAS THERE BEEN INCIDENCES WHEN ISSUES HAVE ARISEN THAT
17 WERE HANDLED OUTSIDE THE GUIDELINES OF THE CCP?

18

19 A. Yes. BellSouth has testified herein and in other proceedings regarding
20 isolated events in which BellSouth acted outside the CCP guidelines.
21 BellSouth acknowledged the situations, and took corrective steps. That
22 should not be translated as an inadequacy of the process itself, nor should
23 BellSouth be depicted as the only violator of process guidelines.
24 Commissions have been perceptive enough to recognize that point. (Ref.
25 Georgia Public Service Commission Docket No. 11853-U, North Carolina

1 Utilities Commission Docket No. P-140, Sub 73, Kentucky Public Service
2 Commission Case No. 2000-465)

3
4 Mr. Bradbury and BellSouth have each recounted virtually the same
5 events within the evolution of BellSouth's change management process.
6 Unfortunately, Mr. Bradbury's recitation of those events continues to
7 reflect AT&T's attitude that, if BellSouth does not respond at all times with
8 solutions that are acceptable to AT&T, BellSouth is non-compliant and the
9 process is inadequate.

10
11 The BellSouth CCP is a regional, multi-CLEC process, and BellSouth is
12 responsible to the CLEC community as a whole, and to individual CLECs
13 as practicable. Most CLECs, and the Commissions that have rendered
14 decisions on this issue in BellSouth's region, have demonstrated their
15 understanding of this issue, and are working through the process in a
16 positive manner.

17
18 Additionally, upon conclusion of the independent third-party testing in
19 Georgia, KPMG presented its findings on the BellSouth's CCP. In its letter
20 of March 20, 2001, to the Georgia Public Service Commission, KPMG
21 stated that BellSouth's Change Management was but one of the many
22 categories in which "no deficiencies creating potentially material adverse
23 impacts on competition currently exist." BellSouth provided a copy of that
24 letter (which accompanied KPMG's final Reports) as Exhibit OSS-67 to my
25 direct testimony filed on May 18, 2001.

1

2

On the other extreme, Mr. Bradbury takes issue with virtually every detail or activity of the CCP. While there is disagreement on most every one of Mr. Bradbury's claims, I will limit my comments to only the most seriously misleading of those allegations.

6

7

BellSouth's Alleged "Veto" Power

8

9

Q. DOES BELLSOUTH AGREE WITH MR. BRADBURY'S ALLEGATIONS THAT BELLSOUTH HAS A "VETO" POWER IN THE CCP?

10

11

12

A. No. On page 98, Mr. Bradbury and Ms. Norris at page 18, lines 13-19 allege "veto" power that BellSouth has within the CCP. BellSouth disagrees with this characterization of a right that is reasonably granted to BellSouth by the CCP, itself. AT&T is a part of the CCP and participated in the development of that document. AT&T's negative vote on the baseline CCP document of August 23, 2000 was overruled by the consensus vote of the CLEC community. BellSouth did not vote, and therefore, it appears AT&T's true issue is with AT&T's lack of control over the entire industry. Please see my direct testimony of May 18, 2001, beginning on page 41, for the history of the development of the CCP process.

13

14

15

16

17

18

19

20

21

22

23

24

As part of the collaborative effort between BellSouth and the CCP community (which means that there are more members than just AT&T),

25

1 and where consensus is required to make decisions, BellSouth and the
2 CLECs have made a concerted effort to incorporate all reasonable and
3 technically feasible requests for changes. AT&T apparently feels that
4 BellSouth has no rights as a stakeholder in this process, and should
5 automatically acquiesce to CLEC requests (or voting results), even if
6 those requests (or voting results) 1) fall outside of BellSouth's obligations
7 under FCC orders, 2) are not feasible under BellSouth's current technical
8 capabilities or policies, or 3) require BellSouth to make substantial
9 financial investment for a limited potential utilization by the CLEC
10 community as a whole. By agreement with the CLECs in the process, the
11 CCP plan itself clearly allows BellSouth the right to reject changes that fall
12 under the following criteria:

13
14 In instances where BellSouth has declined to adopt a CLEC request –
15 from either a single CLEC, or the CLEC community – the requests have
16 been given appropriate consideration, and a reason for BellSouth's
17 response has been provided through the CCP (under one of the
18 categories described above). If appropriate, that message has been
19 delivered and explained by a BellSouth subject matter expert on the issue.
20 In spite of AT&T's implications otherwise, the CCP document contains
21 provisions describing this review of change requests and subsequent
22 rejection, if warranted.

23
24 Additionally, there is a provision for a request that is submitted for a
25 change that is being actively discussed or is on the agenda to be

1 discussed at the industry's Ordering and Billing Forum ("OBF"). Such a
2 change request will be deferred by the CCP. If, however, the issue is not
3 active and will not be considered within the next six months, and if there is
4 agreement between BellSouth and the CLECs to proceed prior to an OBF
5 resolution, BellSouth will determine if it can support the request.

6
7 These criteria are specifically defined in the current CCP Document on
8 pages 29-31. I have included this document as Exhibit OSS-81. I would
9 add that there is currently no change request from a CLEC to alter these
10 terms.

11

12 Q. ON PAGE 101, MR. BRADBURY ALLEGES THAT NO COMMISSION
13 HAS RECOGNIZED BELLSOUTH'S CCP NOR ESTABLISHED A
14 MECHANISM FOR HANDLING DISPUTES. IS MR. BRADBURY
15 CORRECT?

16

17 A. Absolutely not. This Commission recognized BellSouth's CCP in Case
18 No.2000-465 and agreed that the CCP contains provisions for escalating
19 disputes.

20

21 As I discussed on page 59 of my direct testimony, if a dispute arises
22 based upon a BellSouth response, or any other CCP issue, the CCP also
23 contains remedies of escalation and dispute resolution, that include an
24 opportunity for either party to take the issue to the state commission for
25 assistance after all internal escalation efforts within both companies have

1 failed to produce a resolution. That environment hardly seems to qualify
2 as one in which BellSouth would have any true “veto” power. AT&T has
3 not used the dispute resolution process for even one of the issues raised
4 in Mr. Bradbury’s testimony.

5

6 Q. ON PAGE 99 LINES 14-15, MR. BRADBURY STATES THAT
7 “BELLSOUTH’S VETO OF THESE SEVEN ISSUES HAS HAD A
8 PERMANENT CHILLING EFFECT ON THE SUBSEQUENT BALLOTING
9 AND CLEC VOTING PROCESS.” PLEASE COMMENT.

10

11 A. Mr. Bradbury's remark is typically out of context. It is a dramatic attempt
12 to obscure the fact that five of the issues were subsequently passed
13 unanimously by the CCP – including BellSouth – and incorporated into the
14 CCP document, one issue was passed by the CCP – including BellSouth
15 – with only AT&T dissenting – and incorporated into the CCP document,
16 and one issue remains open as BellSouth continues to review it within the
17 CCP. The terms and wording of those issues were approved by vote after
18 collaborative negotiations within the CCP.

19

20 Mr. Bradbury would have this Commission believe that BellSouth refuses
21 to approve change requests out of hand, just to be contrary. That is
22 hardly the case, since BellSouth benefits from CLEC-requested changes
23 just as CLECs benefit from BellSouth-requested changes. That
24 notwithstanding, in instances in which BellSouth has had to decline,

1 BellSouth has been more than willing to fully explain the reasonableness
2 of its decisions.

3

4 The CCP itself authorizes BellSouth to review the outcome of the votes in
5 order to determine if BellSouth can implement the change. Specifically in
6 Section 9.0 of the current CCP Document, on page 64, the language
7 reads:

8 BellSouth may not be able to support all requested changes to the
9 process as proposed. BellSouth will provide a supporting reason(s)
10 to substantiate its position. A CLEC may seek relief through the
11 escalation process if dissatisfied with BellSouth's response.

12

13 The activity related to these seven items reflects what the CCP is truly all
14 about – reaching agreements on issues in a way that benefits the CLEC
15 community as a whole, with BellSouth as a partner, not an adversary. The
16 fact that consensus was ultimately reached on those issues hardly reflects
17 a “permanent chilling effect.” And contrary to Mr. Bradbury's
18 exaggeration, voting on issues has continued in a open and responsible
19 fashion to this day.

20

21 Mr. Bradbury states on page 99, line18 that BellSouth “did not continue to
22 publish” the CLECs language regarding dispute resolution. What Mr.
23 Bradbury really means is that BellSouth did not continue to publish AT&T's
24 desired version of the language regarding dispute resolution. BellSouth
25 considers this issue to be resolved in that the language in Section 8.0 of

1 the current CCP Document (Dispute Resolution Process) reflects the
2 requirements of both CLECs and BellSouth, to the extent that BellSouth
3 can support such requirements. BellSouth has agreed to all CLEC
4 requests in this issue except one; i.e., BellSouth has stated its inability to
5 support the CLEC request that BellSouth notify all CLECs of any and all
6 pending arbitrations between itself and a CLEC, or group of CLECs. It is
7 BellSouth's contention that it is the responsibility of the CLEC(s) to provide
8 that notification to other interested parties – not BellSouth's.

9

10 **Compliance with the requirements of the CCP**

11

12 Q. HAVE THE CLECs COMPLAINED ABOUT BELLSOUTH'S
13 COMPLIANCE WITH THE CCP?

14

15 A. Yes. On pages 100-101, Mr. Bradbury complains about the treatment of
16 BellSouth- and CLEC-initiated change requests. There is no mystery why
17 BellSouth did not submit change requests in 1998-1999. Originally, the
18 EICCP and the interim CCP were envisioned as processes for CLECs
19 only to submit change requests. Over time, as I have already emphasized
20 in this testimony and in my direct testimony of May 18, 2001, the CCP has
21 evolved and continues to evolve. In 2000, BellSouth started submitting its
22 change requests to the CCP as well.

23

24 Mr. Bradbury seems to forget that any changes made to interfaces –
25 whether CLEC- or BellSouth-requested – are intended to serve the CLEC

1 community. Instead it seems to be more important to him to compare the
2 number of CLEC change requests implemented versus the number of
3 BellSouth change requests implemented, while ignoring the content and
4 importance of the change requests themselves. Some change requests,
5 such as Type 6 change requests for defects, simply are more important
6 than others and will have a greater impact. I feel confident that the CLEC
7 community would be happy to see the implementation of a BellSouth
8 change request to remedy a defect or to correct a documentation error
9 that benefits the entire CLEC community, and would not be concerned as
10 to who made the change request. It is true that the Type 6 change
11 requests that BellSouth submitted were not prioritized by the CCP,
12 because the CCP does not require prioritization for Type 6 request.
13 BellSouth is not skirting the CCP by submitting Type 6 change requests.

14

15 Q. PLEASE COMMENT ON THE HANDLING OF AN UPDATE TO THE
16 BUSINESS RULES IN 2000.

17

18 A. On page 102, line12, Mr. Bradbury claims that BellSouth circumvented the
19 CCP when it implemented BBR Issue 9G, which prevented the CLECs
20 from making their required coding and process changes. That is only
21 partially correct. BellSouth failed to submit this change through the CCP,
22 but, contrary to Mr. Bradbury's claim, BellSouth posted a Carrier
23 Notification letter on August 18, 2000, thus providing all CLECs the
24 requisite notice of this charge. Issue 9G of the BBR was posted at the
25 BellSouth Interconnection Website under Guides on August 31, 2000, to

1 be effective October 2, 2000. BellSouth did not utilize the CCP process
2 for this implementation because the release was primarily intended to
3 correct defects in documentation that had been previously identified by
4 various CCP members over time, which would not involve any coding
5 changes by the CLECS. A number of these documentation changes were
6 necessary to address exception raised in the Georgia Third-Party Test,
7 with which AT&T was very familiar.

8
9 In addition to the documentation changes, there was one minor software
10 change included in the release. As AT&T knows, there was an issue with
11 the software change which was corrected soon thereafter. BellSouth's
12 rationale for going forward with the release of the documentation changes,
13 was an effort to assure that accurate documentation was available for the
14 CLECs. BellSouth is committed to using its best efforts to make this
15 process work.

16
17 **CCP Process Improvement**

18
19 Q. DOES MR. BRADBURY QUESTION BELLSOUTH'S HANDLING OF
20 CLEC CHANGE REQUESTS?

21
22 A. Yes. On page 104, beginning on line 20 and continuing on page 105, Mr.
23 Bradbury makes allegations concerning the handling of a change request,
24 asking for modification of the change control process, submitted by AT&T.
25 Mr. Bradbury alleges that BellSouth refused to discuss this request in the

1 CCP Monthly Status meetings, but rather formed a sub-team to manage
2 the request. Mr. Bradbury's allegations are incorrect. BellSouth simply
3 made a suggestion that, because of the scope and magnitude of AT&T's
4 change request for changing the CCP document, it should possibly be
5 handled by a CLEC subcommittee. The suggestion (along with the name
6 'Process Improvement') received the blessing of the CCP, and BellSouth
7 was also invited to participate. It was decided that a sub-team was
8 needed to review and discuss AT&T's proposed changes and to get other
9 CLEC participants' input and concerns. AT&T's own CCP representative
10 agreed to facilitate the subcommittee. Since the CCP document affects
11 the entire CLEC community (not just AT&T) as well as BellSouth, the idea
12 of a multi-CLEC subcommittee made absolute sense. The CCP Process
13 Improvement sub team is discussed in on pages 48-49 of my May 18,
14 2001 testimony.

15

16 **Introduction of New Interfaces**

17

18 Q. DOES MR. BRADBURY CONTINUE TO RAISE ISSUES THAT HAVE
19 BEEN SETTLED BETWEEN AT&T, SUCH AS WHETHER THE
20 DEVELOPMENT OF NEW INTERFACES SHOULD BE INCLUDED IN
21 THE CCP?

22

23 A. Yes. On page 105, lines 5-10 Mr. Bradbury, claims interfaces brought
24 online by BellSouth since the initiation of the CCP have not been included
25 in the CCP. Mr. Bradbury specifically references TAG, the LNP gateway

1 and the xDSL corporate gateway. This is the same issue raised by AT&T
2 and resolved by this Commission in Case No. 2000-465. Therefore, it is
3 baffling that Mr. Bradbury has chosen to revive it in this proceeding. I will
4 agree that his statement is correct regarding BellSouth's desire to exclude
5 development of new interfaces from the CCP.

6
7 First let me reiterate as explained on page 59, line 23 and page 61, line 11
8 of my direct testimony dated May 18, 2001 that the CCP incorporates the
9 *introduction* to the CLECs of new electronic interfaces. But, the
10 *development* of new electronic interfaces does not come under the CCP
11 because BellSouth must have the flexibility to develop interfaces to meet
12 industry standards and guidelines, and regulatory requirements. This
13 process is described on page 55 of the current CCP document, attached
14 as Exhibit OSS-81.

15
16 The process allows for and encourages CLEC input, but new development
17 is too critical to risk being stymied in the process by CLEC disagreement.
18 To ensure efficient and up-to-date deployment of new interfaces,
19 BellSouth must retain ultimate control of their development.

20
21 Second, the LNP gateway and the xDSL corporate gateway are not
22 interfaces, but rather are data communications servers – with their own
23 processors and memory – that provide access between processes that
24 use different access protocols. A CLEC uses the BellSouth provided
25 electronic interfaces, EDI or TAG, as the actual interface over which to

1 pass LNP service requests to the LNP gateway. A CLEC uses LENS,
2 TAG or EDI to pass xDSL service requests, including requests for loop
3 makeup information, to the xDSL corporate gateway. Simply put, these
4 gateways convert the CLEC provided data, and for xDSL services
5 assignment data, into the format expected by BellSouth's downstream
6 systems in order to provision service.

7
8 Third, and contrary to the picture Mr. Bradbury attempts to paint, CLECs
9 had a major role in the development of the TAG interface, the LNP
10 gateway and the xDSL corporate gateway. On page 87, lines 16-24 of my
11 direct testimony filed May 18, 2001, I address the role of the CLECs in the
12 development and implementation of electronic ordering of xDSL services.
13 Furthermore, the development of the process flow and business rules for
14 the LNP gateway were discussed and approved during meetings of the
15 Southeast Region LNP Operations Team during 1997 and 1998, in which
16 AT&T participated. This team was formed prior to implementation of LNP
17 and was attended by CLECs, including AT&T, Local Exchange
18 Companies, including BellSouth, and Independent Telephone Companies.

19
20 BellSouth accepts change requests through the CCP for enhancements
21 and/or defect corrections to the process of issuing services request for
22 LNP and xDSL services. Some of those change requests will
23 appropriately affect the LNP gateway and the xDSL corporate gateway.

24

1 Finally, CLECs had a major role in the development of the TAG interface.
2 Several CLECs, including AT&T, participated in the industry Electronic
3 Communications Implementation Committee (“ECIC”) Steering Committee
4 when the industry standards for TAG were determined. ECIC is a
5 subcommittee of ATIS dealing with electronic bonding – electronic
6 exchange of information. On October 31, 1997, the ECIC “recommended”
7 that the Ordering and Billing Forum (“OBF”), another subcommittee of
8 ATIS, create CORBA formats for local service request pre-order
9 validation.

10

11 When BellSouth began working on the TAG interface, BellSouth convened
12 a focus group for interested CLECs in March 1998 at which
13 documentation was distributed and CLECs were given the opportunity to
14 provide input. BellSouth also offered interested CLECs the opportunity in
15 early 1998 to become TAG early adapters. Three companies requested to
16 be TAG early adapters (Beta testers). BellSouth held 8 training sessions
17 for early adapters and any interested CLEC for pre-ordering and ordering.
18 As stated on page 72, lines 20-21 of my May 18, 2001 direct testimony,
19 TAG became subject to change control on August 1, 1999.

20

21 **Go/No-Go Decision Point**

22

23 Q. MR. BRADBURY IMPLIES THAT THE LACK OF A “GO/NO-GO
24 DECISION POINT” PROVISION IN BELLSOUTH’S CCP MAY FORCE

1 THE CLECS TO CUT OVER TO A NEW RELEASE PREMATURELY. IS
2 THIS TRUE?

3

4 A. No. On page 107, lines 12-17, Mr. Bradbury implies that the CCP has no
5 provision entitled 'go/no-go decision point' to "ensure that CLECs are not
6 forced prematurely to cut over to a new release." While I will agree only
7 that the BellSouth CCP does not have a provision entitled "Go/No-Go
8 Decision Point," as does another Bell Operating Company, BellSouth's
9 CCP employs a different process to accomplish the same goal. Contained
10 in the CCP is a notification schedule designed to keep CLECs informed as
11 to the implementation of new interfaces and program release upgrades.
12 As discussed in pages 54-55 of my testimony filed on May 18, 2001,
13 BellSouth and the CLECs were discussing a release management
14 schedule as part of the process improvements for the CCP. The CLECs
15 voted on this schedule in June 2001, and the new schedule has been
16 incorporated into the latest version of the CCP document, which is
17 attached as Exhibit OSS-81. The release management schedule has
18 increased the amount of advanced notification for the CLECs that occur
19 before the different steps in the deployment of new releases of the
20 interfaces.

21

22 I will also point out that BellSouth maintains support of two (2) versions of
23 industry standard interface programs and does not force CLECs to switch.
24 That is another protection for CLECs who may not be ready to migrate to
25 a new industry standard interface. Despite Mr. Bradbury's implications

1 regarding BellSouth's lack of a specific Go/No-Go provision, this
2 Commission should not be misled that BellSouth's CCP does not offer
3 protection against a premature cut-over.
4

5 **Cooperation with CLECs in Implementing Change**

6
7 Q. AT&T AND MCI/WORLDCOM CRITICIZE BELLSOUTH'S
8 COOPERATION WITH THE CLECs FOR IMPLEMENTING CHANGE VIA
9 THE CCP. PLEASE COMMENT.
10

11 A. Mr. Bradbury says, on page 122, that KPMG did not evaluate BellSouth's
12 "failure to implement changes" [within the CCP process]. Furthermore,
13 Ms. Lichtenberg, on pages 14-21 of her testimony, makes various claims
14 that BellSouth delays CLEC-initiated change requests and she provides
15 an overview of the age of existing requests as "evidence" of such.
16

17 Ms. Lichtenberg provides scant information to support her claims. Taking
18 the age of existing change requests in "new" status at face value does not
19 determine whether BellSouth's CCP operates effectively. BellSouth is
20 committed to responding to CRs as quickly as possible, and has 20 days –
21 per the CCP Change Request Review interval – to respond whether it can
22 support a CR. Again, the CCP Change Request Review process is clear
23 that BellSouth can, in fact, reject a CR under certain circumstances (both
24 provisions can be found in the current CCP Document in Section 4.0 –

1 Change Control Process Flow; Table 4-3, Types 2-5 Detail Process Flow;
2 Step 3 – Review Change Request for Acceptance).

3
4 If a CR is rejected by BellSouth, the requesting CLEC can ask that the
5 request be kept in the “new” status until it determines its next step. It is
6 the responsibility of the CLEC to cancel the request, and BellSouth allows
7 ample time for cancellation. Therefore, the fact that some “new” requests
8 remain in that status for lengthy periods of time is due to circumstances
9 controlled by the CLECs – not BellSouth.

10
11 For example, AT&T submitted CR0012 in April 2000 (16 months ago) to
12 add TAFI maintenance functionality to the ECTA maintenance interface
13 (TAFI and ECTA are discussed at length in my direct testimony).

14 BellSouth supplied its response to AT&T in June 2000, stating that the
15 request was not valid since AT&T was not currently a user of ECTA (and
16 still is not), and that the rules of the CCP specifically state that a CLEC
17 can not issue a CR on an interface that it is not currently using. Further,
18 BellSouth stated that AT&T could submit a BonaFide Request (“BFR”) to
19 BellSouth for custom development work to meet its request, but that AT&T
20 would have to bear all of the development costs – up front. AT&T
21 countered by submitting this CCP issue as part of its interconnection
22 agreement arbitrations around the BellSouth region, and would not agree
23 to allow this CR to be closed. As recently as June 28, 2001, the Florida

1 Public Service Commission ruled in agreement with BellSouth's response
2 regarding the BFR. Still, AT&T refuses to allow the CCP to close this CR.

3
4 MCI itself submitted CR0132 almost 11 months ago. There has been
5 ongoing correspondence with MCI since then, after BellSouth asked MCI
6 to verify if the request was the same as one currently before the industry's
7 Order and Billing Forum ("OBF"). The CCP rules (in the same Section 4.0
8 cited above) are specific that any matter currently before the OBF will be
9 deferred by BellSouth's CCP until disposition by the OBF. BellSouth
10 asked in June and July 2001 for status by MCI, and MCI again questioned
11 BellSouth's initial response. BellSouth committed to further investigation,
12 but activity such as that keeps CRs in the "new" status.

13
14 Another CR still shown as "new" is CR0171, submitted by AT&T in
15 September 2000 (almost 11 months ago). As discussed elsewhere in my
16 testimony, that CR pertains to the ongoing process of changing the
17 Change Control Process itself, as well as the subsequent changes to the
18 CCP document. Because that CR is in progress (for 11 months), and is
19 not the type of CR that reaches closure due to implementation of a feature
20 into a program release, it remains in "new" status. As with the other CRs
21 cited, it is simply wrong to imply that this CR has been delayed.

22

1 For the 21 CRs that Ms. Lichtenberg cites, BellSouth met its 20-day
2 response date on 17 of them. Those 17 remain open at the request of the
3 issuing CLEC. This Commission is reminded that the CCP has evolved
4 over this period of time, and BellSouth now consistently responds to CLEC
5 CRs within the 20-day interval. Therefore, Ms. Lichtenberg is wrong when
6 she says “BellSouth has caused delays even in the earliest stage of the
7 change control process.”

8
9 It is also Ms. Lichtenberg’s implication that no CLEC-initiated change
10 requests are accepted and/or worked through BellSouth's CCP, and that
11 simply is wrong. She also states on page 15 at line 3 that “for BellSouth
12 requests, such acceptance is a given”. Again, as I will show, Ms.
13 Lichtenberg is wrong.

14
15 Since the inception of BellSouth’s CCP, 27 CLEC-initiated change
16 requests for new functionality have been implemented, and 31 BellSouth-
17 initiated change requests for new functionality have been implemented.
18 Additionally, 94 defect corrections (submitted by both CLECs and
19 BellSouth) have been implemented, along with three (3) regulatory
20 changes. Over 420 total change requests have been processed, although
21 a number of CLEC and BellSouth requests were subsequently cancelled.
22 KPMG validated the process, and the reality of 155 total implemented
23 changes validates the actual impact of that process.

24

1 There are currently (as of July 19, 2001) a total of 101 change requests
2 existing in various statuses within the CCP. Of that total, 66 are CLEC-
3 initiated, and 35 are BellSouth-initiated (3 of which are regulatory
4 mandates). Here is a further breakdown of those requests as of July 19,
5 2001.

6

7 31 Requests are in '**New**' Status (26 CLEC, 5 BellSouth)

- 8 • 11 are being reviewed for acceptance
- 9 • 11 have been reviewed and BellSouth has provided reason for
10 inability to support (waiting on CLEC response)
- 11 • 4 have been reviewed and denied, and are currently in the appeal
12 process
- 13 • 3 have been reviewed and CLECs have asked BellSouth to revisit
14 (will be put into appeal process)
- 15 • 1 is under investigation by subject matter expert (BellSouth missed
16 the response interval on this one request)
- 17 • 1 is ongoing request currently being worked within the CCP
18 (CR0171 – Modify CCP Document – Issued by AT&T), and is
19 subject of Process Improvement subteam which has been
20 addressing requested changes to the CCP and the Document since
21 late 2000. Five voting ballots and subsequent CCP Document
22 version updates have resulted, thus far.

23

24 1 Request is in '**Pending Clarification**' Status (1 CLEC) – Need
25 additional information from CLEC before review for acceptance

17
18
19
20
21
22
23
24
25

0 Requests are in '**Pending**' Status (4 CLEC, 6 BellSouth) – Will be prioritized by CLECs at next Change Review Meeting

3 Requests are in '**Pending**' Status (3 CLEC) – With outstanding issues that need resolution before these can be prioritized

45 Requests are in '**Candidate Request**' Status (28 CLEC, 17 BellSouth) Have been prioritized by CLECs, and are eligible for sizing and sequencing into future releases

11 Requests are in '**Scheduled**' Status (4 CLEC, 4 Defect CRs, 3 Regulatory Requests initiated by BellSouth) – Targeted for upcoming releases

All requests have received at least an initial response from BellSouth via the CCP, and only *one* response to a request missed the BellSouth 20-day response interval. In light of that, and to the extent that some CLECs have expressed concerns that BellSouth has not responded to some stated number of requests, or has consistently missed the 20-day response interval, these claims are without merit.

Q. HAVE ISSUES BEEN HANDLED OUTSIDE THE GUIDELINES OF THE CCP?

1 Yes, but they have been isolated occurrences. In response to Ms. Norris's
2 statement on page 18, that BellSouth has "implement[ed] changes
3 regardless of industry dissent," BellSouth confirms that there have been
4 isolated occurrences. BellSouth acknowledged, corrected, or resolved
5 each of these occurrences under the oversight of various commissions in
6 the Bellsouth region. This does not mean that the process itself is
7 inadequate, nor should BellSouth be depicted as the only violator of
8 process guidelines. Commissions have been perceptive enough to
9 recognize that point. (Ref. Georgia Public Service Commission Docket
10 No. 11853-U, North Carolina Utilities Commission Docket No. P-140, Sub
11 73, Kentucky Public Service Commission Case No. 2000-465, Florida
12 Public Service Commission Docket No. 000731-TP)

13
14 Q. IN HER DISCUSSION OF INTEGRATION OF PRE-ORDERING AND
15 ORDERING ACTIVITIES, MS. LICHTENBERG SAYS THAT BELLSOUTH
16 "FAILED TO SUBMIT THAT REQUEST [CR0002] TO CLECS FOR
17 PRIORITIZATION." PLEASE RESPOND.

18
19 A. Ms. Lichtenberg is not totally correct, but she is misleading. AT&T's
20 CR0002 was submitted as a defect, and was, in fact, on the June 28, 2000
21 prioritization list under the "Documentation" category. During that
22 meeting, Change Control confirmed that CR0002 also impacted coding
23 changes, and reclassified the request as a feature change. The CLECs,
24 however, requested that this CR remain in the "Documentation" category.

1 Since that time, BellSouth and the CLECs have agreed upon a new
2 definition for defects.

3

4 **Third-Party Testing of Change Management**

5

6 Q. PLEASE DESCRIBE THE SCOPE OF THE GEORGIA THIRD-PARTY
7 TEST REGARDING CHANGE MANAGEMENT.

8

9 A. In assessing BellSouth's Change Management process, KPMG conducted
10 the following tests: (1) evaluated overall policies and practices for
11 managing changes to the procedures and OSS necessary for establishing
12 and maintaining effective operations between BellSouth and CLECs (CM-
13 1); and (2) examined the methods and procedures that BellSouth used to
14 develop and release the OSS '99 applications package and supporting
15 documentation (CM-2). KPMG participated in the change management
16 process for approximately a year and a half, which included attending
17 meetings and reviewing the documentation in the process. During the
18 test, KPMG witnessed many changes to the CCP that were developed
19 collaboratively by the CLECs and BellSouth under the CCP. KPMG found
20 that BellSouth had satisfied all of the Change Management evaluation
21 criteria. (See KPMG Final MTP Report, at VIII-A-15 – VIII-A-23 which was
22 filed with direct testimony of May 18, 2001, as Exhibit OSS-64).

23

1 Q. ARE AT&T'S CRITICISMS OF THE THIRD-PARTY TESTS OF
2 BELLSOUTH'S CHANGE MANAGEMENT PROCESS IN GEORGIA AND
3 FLORIDA VALID?

4
5 A. No. AT&T criticizes KPMG's test in Georgia of BellSouth's change
6 management processes, particularly at pages 116-125 of Mr. Bradbury's
7 testimony, and at pages 15-19 of Ms. Norris's testimony, first by
8 complaining about issues that have been raised during the ongoing test in
9 Florida, and then by addressing the test in Georgia directly.

10
11 What AT&T is doing is attempting to question the validity of KPMG's
12 findings on change management by virtue of the fact that BellSouth's
13 change management process is continuing to evolve. However, there is
14 nothing particularly new or controversial about an evolving change
15 management process. As the FCC has noted, "We do not expect any
16 change management process to remain static. Rather, a key component
17 of an effective change management process is the existence of a forum in
18 which both competing carriers and the BOC can work collaboratively to
19 improve the method by which changes to the BOC's OSS are
20 implemented." Texas Order ¶ 117. This certainly is the case with
21 BellSouth's process, where, in an effort to address CLEC concerns and to
22 implement recommendations by KPMG, BellSouth's change management
23 process has evolved over time, and BellSouth fully expects that it will
24 continue to evolve in the future. As the process evolves and changes are
25 made to it, there will be issues that arise that must be worked out by the

1 CCP. These issues are an inherent part of a changing process, and there
2 is nothing negative about this.

3

4 Q. PLEASE DISCUSS THE CLECS' CRITICISMS OF THE THIRD PARTY
5 TEST OF CHANGE MANAGEMENT IN GEORGIA.

6

7 A. On page 120, lines 12-18 of his testimony, Mr. Bradbury of AT&T is
8 apparently complaining that KPMG did not perform the third party test of
9 BellSouth's change management that AT&T would have wished. Ms.
10 Norris of AT&T makes similar remarks starting on page 15 of her
11 testimony, and so does Ms. Lichtenberg of MCI/WorldCom, starting on
12 page 31 of her testimony.

13

14 The exercise of professional judgment by KPMG in conducting the
15 Georgia test is consistent with the process used in all of the third-party
16 tests conducted by KPMG in the other states and has been approved by
17 the FCC. In each instance where KPMG has been involved in OSS
18 testing, KPMG has used its professional judgment, and it is absurd to
19 suggest that KPMG should have avoided doing so in Georgia. On pages
20 122-123, Mr. Bradbury of AT&T complains that KPMG exercised its
21 professional judgment to conclude that three of the eight evaluation
22 criteria, CM 1-1-2, CM 1-1-3, and CM 1-1-5, related to change
23 management were satisfied. KPMG's judgment has been consistently
24 relied upon by the FCC in its 271 decisions, notwithstanding AT&T's
25 unfounded criticisms.

23
24

The following discussion responds to AT&T’s criticisms of CM 1-1-2, CM 1-1-3, and CM 1-1-5.

CM 1-1-2 evaluation criteria focused upon the essential elements of the change management process and its documentation. AT&T complains that KPMG used its professional judgment to determine that it was satisfied without retesting it. On March 23, 2001, the Change Control Process was revised to ensure the efficiency of providing notification of Type 1 system outages. The following actions and processes were put in place:

- All administrative responsibilities are managed by one member of the EC Support team. Also, the organization has identified a back-up person to assist when needed. Both the primary and the secondary contact are fully trained on responsibilities.
- The Administrator adheres to a template detailing necessary information for each e-mail notification.
- The Administrator with primary responsibility for E-mail notification submits a daily report to the Manager of EC Support. This ensures that procedures are being followed as expected.
- Every e-mail delivery failure is investigated immediately. The e-mail is re-sent regardless of whether the outage has been cleared. Text is added to the re-sent E-mail identifying that it is a re-send.

1 CM 1-1-3 focused upon the change management process framework to
2 evaluate, categorize, and prioritize proposed changes. AT&T complains
3 that criterion CM 1-1-3 was “satisfied” before the CLECs voted on the
4 balloted items. The CLECs, however, voted on items related to CM 1-1-3
5 before the test in Georgia ended. During the February 21, 2001 CCP
6 Improvement meeting, 29 items were added to the ballot subject to the
7 results of a formal vote before being incorporated in the actual CCP
8 document. The formal vote takes place by way of an e-mail ballot. The e-
9 mail ballots were distributed to CLECs on March 1, 2001, with the CLECs
10 being given one week to return the ballot. BellSouth and a CLEC
11 volunteer prepared and reviewed the ballot. The results of this ballot were
12 distributed on March 15, 2001, and the changes were incorporated into
13 CCP document on March 26, 2001. (Exhibit OSS-39 to my direct
14 testimony filed on May 16, 2001) KPMG issued its reports on March 31,
15 2001. The bottom line is that the required changes have been voted on
16 and are included in the CCP.

17

18 CM 1-1-5 states that, “the change management’s process has clearly
19 defined reasonable intervals for considering and notifying customers about
20 proposed changes.” AT&T complains that KPMG found CM 1-1-5
21 satisfied before the draft process for intervals was implemented. On
22 February 21, 2001, BellSouth presented its “proposed” Release cycles to
23 the CLECs. The CLECs made several recommendations that BellSouth
24 agreed to add to the document. On March 14, 2001, BellSouth again
25 discussed the Release Management process with the CLECs. On April

1 25, 2001, BellSouth presented the Release Management process
2 package to the CLECs. Several recommendations were made by CLECs
3 that were incorporated into the final document, and re-distributed to
4 CLECs. On May 10, 2001, the CLECs reached consensus on the
5 Release Management package, although the CCP must still must vote on
6 the process.

7
8 Additionally, Mr. Bradbury complains that CM 1-1-3 and CM 1-1-8, which
9 were concerned with prioritization and release management, were closed
10 "prematurely." As discussed above, BellSouth has met with the CLECs on
11 several occasions to discuss prioritization and release management. This
12 has taken place both in face-to-face meetings and on conference calls.

13 BellSouth made a presentation to the CLECs on February 21, 2001
14 regarding this process. On March 14, 2001, the Release 9.4 Package
15 Meeting was held and these issues were discussed. Contrary to AT&T's
16 assertion, three (3) representatives from KPMG participated in that
17 meeting. On May 10, 2001, the CLECs reached consensus on the
18 Release Management/Schedules document. As I discussed earlier, this
19 schedule has been approved by the CCP participants and incorporated
20 into the CCP on July 2, 2001.

21

22 Q. PLEASE DISCUSS THE CLECS' REMARKS ABOUT FLORIDA
23 EXCEPTIONS 12, 23, AND 26.

24

1 A. As I discussed earlier, the majority of their complaints stem from the fact
2 that the scope of the tests in Georgia and Florida are different. As
3 discussed above, there is no inherent fault in that fact. It does indicate
4 that BellSouth's change management plan continues to evolve, and there
5 is nothing particularly new or controversial about an evolving change
6 management process. The requirements of the change management will
7 continue to evolve. New intervals and processes to improve change
8 management will be developed and implemented.

9
10 In the their testimony (especially, Mr. Bradbury on pages 116-120; Ms.
11 Lichtenberg on page 32; Ms. Norris makes similar remarks), the CLECs'
12 witnesses assert that Florida exceptions 12, 23, and 26 regarding change
13 management serve as "persuasive evidence" that BellSouth is not offering
14 CLECs a meaningful opportunity to compete, and that the observations
15 and exceptions found in the Florida test demonstrate that there are
16 inadequacies in BellSouth's change management process that were not
17 discovered during the Georgia test. These statements are derived from a
18 biased view and are not based upon a thorough review of the
19 observations and exceptions.

20
21 Florida Exception 12 states, "BellSouth does not adhere to the procedures
22 for System Outages (Type 1) established in the BellSouth Change Control
23 Process, version 2.0." These procedures were implemented by the CCP
24 in March of this year. Soon after their introduction, KPMG found that the
25 email notifications were not sent in a timely manner. BellSouth posts all

1 outage notifications to its Interconnection Web site. In addition to posting
2 them on the Web, BellSouth also sends outage notification by email to the
3 CLECs that have requested email notification. (Exhibit OSS-39 to my May
4 direct testimony.)

5
6 BellSouth investigated the exception and agreed with the initial audit
7 results. As a result, KPMG retested. BellSouth has disputed some of
8 KPMG's findings from the retest based on when the email outage
9 notifications are sent. The BellSouth Change Control Process guidelines
10 dictate that if the system outage is not resolved within 20 minutes a
11 notification will be provided via email and posted to the website within 15
12 minutes from the time the outage is verified. BellSouth's investigation
13 shows that 84% of the outage notifications were sent in a timely manner.
14 BellSouth has implemented changes to address other obstacles, and to
15 improve progress to achieve the 97% benchmark level. KPMG will retest
16 this issue as it works through the exception process.

17
18 Below, I discuss each issue in Florida Exception 23, which is concerned
19 with the distribution of carrier notification letters associated with the CCP.
20 Contrary to AT&T's opinion, as expressed in Mr. Bradbury's testimony at
21 pages 117-118, BellSouth believes remedied the issues in Florida
22 Exception 23. As of July 19, 2001, and KPMG is closing Exception 23.
23 Final language has been drafted for the CCP document for those issues
24 that require a change to the CCP document, and BellSouth and the CLEC

1 participants in the CCP must discuss and vote on the language before the
2 exception can be closed.

3
4 Florida Exception 23 first identified that the BellSouth CCP document does
5 not clearly define when CLECs are to receive notification of
6 documentation updates, or when they are to receive the actual
7 documentation for system and non-system affecting changes. BellSouth
8 disagreed with KPMG's findings because the CCP document that was
9 current at the time of KPMG's review contained a clear and defined
10 process for documentation updates. The CCP document, version 2.0
11 dated August 23, 2000, Section 4.0 - Change Control Process Flow, Part
12 2 – Types 2-5 Process Flow, available on the BellSouth Interconnection
13 Web site, provided that:

- 14 • Software Release Notifications will be provided 30 days or more in
15 advance of implementation date;
- 16 • Documentation changes for business rules will be provided 30 days
17 or more in advance of implementation date; and
- 18 • CLEC notification of documentation updates (non-system changes)
19 will be posted 5 (five) business days in advance of documentation
20 posting date.

21
22 As I discussed above, a new release management schedule, as part of
23 the process improvements, has been incorporated into the latest version
24 of the CCP document, which is attached as Exhibit OSS-81 The CCP's
25 clearly defined intervals for notification and development of a release

1 management schedule contradicts Ms. Norris's remarks in page 18, lines
2 17-18 of her testimony. Additionally, there are no user requirements for
3 maintenance releases.

4
5 Florida Exception 23 also stated that a unique Carrier Notification is not
6 issued for each instance of documentation updates. BellSouth corrected
7 this last year. On November 1, 2000, Carrier Notifications for updates to
8 the Local Exchange Ordering Guide, Volume 1 and BellSouth Business
9 Rules for Local Ordering began advising whether the change pertained to
10 documentation only or to electronic and/or manual ordering processes.
11 The specifics of the change are contained in the Summary of Changes
12 that is provided in the CCP document. Also on November 1, 2000, the
13 Summary of Changes began to be provided to the CCP on the same day
14 the Carrier Notification is posted. Electronic interface documentation
15 changes are listed in the Carrier Notification letters for Releases. This
16 notification occurs 30 calendar days prior to the Release implementation
17 date.

18
19 Florida Exception 23 stated that the original Carrier Notifications do not
20 remain on the BellSouth Interconnection Web site after revisions have
21 been made. BellSouth disagreed with KPMG that this is a problem.
22 BellSouth's policy has been that when a Carrier Notification letter is
23 revised, an additional letter is generated with a new Carrier Notification
24 number announcing the revision, and detailing items that have been
25 changed. BellSouth's intent was to maintain only current and accurate

1 information on the Carrier Notification site so that CLECs would not be
2 confused by viewing old or out-of- date information.

3
4 However, to address this issue, BellSouth has developed a table for OSS
5 letters that shows the original version of the Carrier Notification letter, its
6 scheduled release dates, and an itemization of all of the release features.
7 The table is attached to the Carrier Notification letter. When any
8 information is revised on a Carrier Notification letter, the information is
9 added to the table attached to the letter.

10
11 Florida Exception 23 also stated that Carrier Notifications do not reference
12 Change Request numbers for tracking purposes. BellSouth has corrected
13 this. In January 2001, Carrier Notifications began to reference Change
14 Request numbers for tracking purposes and Change Request numbers
15 began to be included in the Summary of Changes that goes to CLECs
16 through the CCP.

17
18 Finally, Florida Exception 23 stated that Carrier Notifications of
19 documentation updates do not state whether the documentation changes
20 will be system or non-system affecting. BellSouth corrected this last year.
21 On November 1, 2000, Carrier Notifications for updates to the Local
22 Exchange Ordering Guide, Volume 1 and BellSouth Business Rules for
23 Local Ordering began advising whether the change pertained to
24 documentation only or to electronic and/or manual ordering processes.
25 The specifics of the change are contained in the Summary of Changes

1 that is provided to the CCP for distribution to CLECs. Also on November
2 1, 2000, the Summary of Changes began to be provided to the CCP on
3 the same day the Carrier Notification is posted. As I explained earlier,
4 Florida Exception 23 is in the process of being closed.

5
6 Regarding Florida Exception 26, KPMG is currently working with the
7 Florida Public Service Commission to issue a Disposition Statement and
8 to formally close this exception. In pages 118-120 of his testimony, Mr.
9 Bradbury claims that BellSouth has failed to remedy the issues related to
10 Florida Exception 26. Florida Exception 26 stated: "BellSouth does not
11 have a clearly defined process for addressing the expedited release of
12 BellSouth documentation defects." BellSouth disagrees. The process for
13 handling defects is located on pages 44-50, particularly pages 48-50, for
14 information on the handling of documentation defects, in the current CCP
15 document. (Exhibit OSS-81) Additionally, I discussed the CCP process for
16 handling documentation defects on page 57 of my testimony of May 18,
17 2001. KPMG, with the Florida Public Service Commission, has issued a
18 Disposition Statement and has closed Exception 26. This exception is
19 merely another illustration that the CCP has evolved and will continue to
20 do so.

21
22 Contrary to the CLECs' predictions, the few remaining open issues will be
23 resolved, and the CCP process will benefit as a result of the third-party
24 tests in both Georgia and Florida. The very nature of the CCP allows
25 leeway to correct, via consensus vote, any problems that arise between

1 BellSouth and the CLECs, as the FCC envisioned when it sanctioned the
2 evolutionary process of an active CCP.

3

4 **BellSouth's Test Environments for CLECs**

5

6 Q. ARE MR. BRADBURY'S COMPLAINTS ABOUT BELLSOUTH'S
7 TESTING ENVIRONMENTS VALID?

8

9 A. No. On pages 111 and 112 of his testimony, Mr. Bradbury complains
10 about the testing environments BellSouth has made available for CLECs.
11 These complaints are unfounded.

12

13 The discussion of BellSouth's test environments in my direct testimony of
14 May 18 2001 at pages 63-71, clearly described what is available for
15 CLECs. BellSouth makes two types of environments available to CLECs.
16 The first is used when a CLEC is shifting from a manual to an electronic
17 environment, or when the CLEC is upgrading its electronic interface from
18 one industry standard to the next.

19

20 The second environment is available to CLECs that choose to do optional
21 functional testing. This is the new CLEC Application Verification
22 Environment ("CAVE"), that allows a CLEC to perform functional testing
23 on pre-production and post-production releases during the specified
24 period. The required and optional aspects of testing are described in

1 more detail in Exhibit OSS-69 to my direct testimony filed on May 18,
2 2001.

3

4 On page 112 of his testimony, Mr. Bradbury of AT&T states that BellSouth
5 will not use CAVE to test “minor” releases. Contrary to Mr. Bradbury’s
6 allegations, BellSouth will use CAVE to test some minor releases. Minor
7 releases are occasionally referred to as “point” releases. As I stated on
8 page 68, lines 4-6 of my direct testimony of May 18, 2001, BellSouth will
9 determine, based on the functionality in the minor release, whether a
10 minor release would be available for CAVE testing by the CLECs.
11 BellSouth will inform the CLECs through the CCP notification process.

12

13 In page 112, lines 10-13, Mr. Bradbury also complains about the lack of
14 testing of the new CLEC Application Verification Environment (“CAVE”),
15 which allows a CLEC to perform functional testing on pre-production and
16 post-production releases during the specified period. On April 7, 2001,
17 BellSouth began carrier-to-carrier beta testing with a vendor that provides
18 TAG interfaces to five CLECs. The testing was successfully completed on
19 April 20, 2001. BellSouth had hoped to perform carrier-to-carrier beta
20 testing of CAVE with EDI with AT&T in May 2001. AT&T, however, was
21 not ready to beta test CAVE until the end of May, at about the time
22 BellSouth had to install release 9.4 in CAVE. BellSouth and AT&T
23 completed preliminary testing for beta testing of CAVE on July 11, 2001.
24 AT&T began functional testing (sending LSRs) for beta testing of CAVE on
25 July 17, 2001. Another CLEC completed preliminary testing for beta

1 testing of CAVE on July 24, 2001 and began functional testing on July 25,
2 2001.

3

4 As described in Exhibit OSS-82 , CAVE is now available for any CLEC to
5 test functionality of the upcoming July 28, 2001 Release 9.4. The
6 procedures for initiating testing are discussed in page 71, line 18 through
7 pages 69-70, of my direct testimony filed on May 18, 2001. CLECs do not
8 have to perform carrier-to-carrier beta testing of CAVE before using it.

9

10 On page 112, lines 13-16, Mr. Bradbury comments on the
11 “communications strategy” used for CAVE. Mr. Bradbury claims that the
12 communications strategy for CAVE is different than that used for
13 production, and therefore, AT&T was unable to beta test CAVE. The
14 Electronic Interface Implementation and Upgrade Communication Plan,
15 Exhibit OSS-83, describes the communications strategy for CLECs that
16 wish to use CAVE. It is the same as that which is used for production by
17 CLECs.

18

19 Q. PLEASE COMMENT ON THE CLECs’ COMPLAINTS ABOUT CAVE
20 TESTING OF LENS AND ROBOTAG™.

21

22 A. Mr. Bradbury of AT&T has complained about the exclusion of LENS and
23 RoboTAG™ from CAVE testing on page 112, line 19 through 114, line 3.
24 BellSouth considered the CLECs’ requests to add LENS and RoboTAG™
25 to CAVE during its development. As described in my direct testimony of

1 May 18, 2001, particularly on pages 19-23 and page 71 lines 12-15,
2 BellSouth offers CLECs the option of using LENS or RoboTAG™, which
3 are proprietary interfaces for which BellSouth performs the programming.
4 In other words, when modifications are made to LENS or RoboTAG, all of
5 the programming work is done on the BellSouth side of the interface.
6 CLECs are not required to do any work, and thus there is little to “test”
7 from this perspective. Because both interfaces were developed and are
8 upgraded through BellSouth's internal software development process,
9 BellSouth determined that it would not test LENS and RoboTAG™ in
10 CAVE. BellSouth's response is contained in the minutes for CCP Process
11 Improvement Meeting of February 21, 2001, which is attached as Exhibit
12 OSS-84. As I explained on pages 68-69 of my direct testimony, CAVE
13 was developed under the auspices of the CCP. If the CLECs disagreed
14 with BellSouth's decision to exclude LENS and RoboTAG™ from CAVE,
15 then they should have escalated their dispute through the escalation and
16 dispute resolution processes of the CCP. No CLEC did this.

17

18 Q. WERE CLECs ABLE TO PERFORM CARRIER-TO-CARRIER BETA
19 TESTING OF OSS99?

20

21 A. Yes. On page 114 of his testimony, Mr. Bradbury alleges that BellSouth
22 did not provide a test environment for beta testing new releases when it
23 implemented OSS99. As I just described, BellSouth recently introduced
24 CAVE. CAVE is used to test new functionality that is added to existing
25 industry standard interfaces. BellSouth's existing environment for testing

1 new industry standards certainly was available when OSS99, an entirely
2 new industry standard, was introduced. CLECs did have the opportunity
3 to perform carrier-to-carrier beta testing of OSS99, as AT&T well knows
4 (see my discussion of the Georgia 1000 test below). Mr. Bradbury's
5 complaint is that CLECs were not able to beta test new functionality (new
6 releases) to OSS99 before CAVE. BellSouth disagrees. Before CAVE
7 existed, BellSouth indeed provided CLECs with the opportunity to perform
8 carrier-to-carrier beta testing of new functionality to the OSS99 standard
9 as it was added. For example, when BellSouth developed and
10 implemented a new OSS platform to support the electronic pre-order and
11 firm order functionality for mechanized LMU and xDSL in July 2000,
12 BellSouth and CLECs beta tested this new functionality. I discussed this
13 carrier-to-carrier beta test with CLECs on page 87 and page 96 beginning
14 at line 24 through page 98, line 22, of my testimony of May 18, 2001. The
15 carrier-to-carrier beta test of line sharing was described on page 100, lines
16 3-13 of my testimony of May 18, 2001.

17
18 On page 115, lines 4-6, Mr. Bradbury of AT&T claims that BellSouth did
19 not in this filing discuss any of the carrier-to-carrier testing that had
20 occurred between BellSouth and other CLECs. This is incorrect. I
21 discussed carrier-to-carrier testing between CLECs and BellSouth on
22 pages 13-14 and pages 96-98 of my direct testimony of May 18, 2001.
23 Further, I will rebut the testimony of Mr. Gibbs regarding the Georgia 1000
24 test below.

25

1 **Third Party Testing of the Test Environments**

2
3 Q. PLEASE RESPOND TO THE CLECS' COMPLAINTS ABOUT THE
4 THIRD PARTY TESTING OF THE TEST ENVIRONMENT.

5
6 A. Mr. Bradbury, On page 112, line 16 of his testimony and Ms. Norris, on
7 page 19, lines 10-11 of her testimony, state that CAVE was not tested by
8 KPMG in the Third-Party Test in Georgia. That is a misleading, but
9 correct narrow statement. CAVE could not be tested during KPMG's test,
10 because it did not exist when the Georgia Public Service Commission
11 approved the Master and Supplemental Test Plans for the third-party test.
12 As I described above, BellSouth began carrier-to-carrier beta testing of
13 CAVE on April 7, 2000, after the third-party test in Georgia, which tested
14 TCIF 7.0 interfaces, ended. I described the "history" of CAVE on pages
15 66-69 of my direct testimony of May 18, 2001. Importantly, BellSouth
16 offered CLECs an open and stable testing environment even before CAVE
17 was implemented. I mentioned this environment above and describe it on
18 pages 63-66 ("BellSouth's Original Testing Environment for CLECs") of my
19 direct testimony of May 18, 2001. As part of the third-party test, KPMG
20 evaluated this environment and found it satisfactory. (The Supplemental
21 Test Plan ("STP") is attached to my direct testimony of May 18, 2001 as
22 Exhibit OSS-65. STP at VII-A-22 – VII-A-24. KPMG evaluated BellSouth
23 (evaluation criterion CM-2-1-6) to determine if "[f]unctioning testing
24 environments were made available to customers for all supported
25 interfaces." STP at VII-A-24 – VII-A-26. KPMG evaluated BellSouth

1 (evaluation criterion CM-2-1-7) to determine if “[c]arrier-to-carrier test
2 environments were stable and segregated from [BellSouth] production and
3 development environments. KPMG evaluated BellSouth (evaluation
4 criterion CM-2-1-8) to determine if “BellSouth provided telephone
5 customer support for interface testing to the CLECs (with on-call support
6 available 24 hours a day, seven days a week for emergencies).”) In this
7 environment, CLECs perform required testing, such as those that occur
8 when a CLEC is shifting from a manual to an electronic environment, or
9 when the CLEC is upgrading its electronic interface from one industry
10 standard to the next.

11

12 On page 112, lines 16-17 of his testimony, Mr. Bradbury of AT&T states
13 that the testing available to CLECs before CAVE has been subject to
14 observations and exceptions in the Florida Third-Party Test. Ms. Norris of
15 AT&T makes similar remarks on page 19 of her testimony. Florida
16 Exception 6 was issued to address the availability of an adequate EDI test
17 environment for CLECs to use when establishing new or new industry
18 standard EDI interfaces, not the CAVE environment. BellSouth has been
19 providing an extensive list of technical details on the environment to the
20 test auditor to satisfy the exception and resolve the issue. BellSouth
21 believes that the environment that it currently provides CLECs allows them
22 a full opportunity to test new releases that impact the processing of their
23 LSRs.

24

1 Although KPMG issued this exception in Florida, CLECs certainly are able
2 to build and use their EDI interfaces, as reflected in the data provided on
3 page 92 of my direct testimony filed on May 18, 2001.

4

5 **PRE-ORDERING**

6

7 **Due Dates**

8

9 Q. HAS BELLSOUTH SUPPLIED A DUE DATE CALCULATOR IN FULL
10 COMPLIANCE WITH THE FCC'S SECOND LOUISIANA ORDER AND
11 THE GEORGIA PUBLIC SERVICE COMMISSION'S ORDER?

12

13 A. On page 42, line 19 through page 43, line 3 of his testimony, Mr.
14 Bradbury of AT&T refers to the FCC's Second Louisiana order of 1998
15 and its statements about due date calculation. Mr. Bradbury references
16 paragraph 106 of the Second Louisiana Order, October 13, 1998, which in
17 turn references an order by the Georgia Public Service Commission.
18 BellSouth complied with the Georgia Commission's order by providing a
19 due date calculator for resale services in LENS on November 14, 1998 in
20 Release 4.0. Mr. Bradbury recognizes that BellSouth provided the
21 calculator in his comments on page 43, even though he disputes the
22 functionality of the calculator. In the pre-ordering mode of LENS, CLECs
23 view the installation calendar and may obtain an automatically-calculated
24 estimated due date.

25

1 On pages 43-45, Mr. Bradbury criticizes the due date calculator that
2 BellSouth has provided to CLECs. As I just explained, BellSouth provided
3 a due date calculator for resale service on November 14, 1998. Following
4 that, BellSouth added functionality for UNEs and continued to enhance the
5 functionality and intervals as retail analogs were determined for those
6 services and UNEs that did not have them. The most recent
7 enhancement took place on June 4, 2001, when BellSouth released
8 functionality for the calculation of due dates for resale services that did not
9 require dispatches and for SL1 loops with LNP and SL2 loops with LNP.
10 Although BellSouth initially encountered some problems with the release
11 that were related to Local Number Portability ("LNP"), those many of those
12 problems have been resolved. BellSouth continues to work on the others.

13

14 On page 43, lines 18-19, I do not understand Mr. Bradbury's statement
15 that CLEC orders fall out for manual handling because of deficiencies with
16 the due date calculator. There are certain resale services and UNEs for
17 which the pre-ordering interfaces do not calculate a due date. These are
18 resale services and UNEs that have been designed to be ordered
19 electronically, but fall out to the Local Carrier Service Center ("LCSC") for
20 manual handling. The due date would be provided on the Firm Order
21 Confirmation ("FOC"). On page 103, line 17 through page 105, line 4 and
22 in Exhibit OSS- 47 of my direct testimony of May 18, 2001, I described
23 these resale services and UNEs. Also, an estimated due date calculation
24 would not be provided in the pre-ordering mode in certain situations, for
25 example, when a CLEC requests 25 lines or more on a single LSR or

1 when a CLEC expedites an LSR. This also occurs for BellSouth retail.
2 These situations are also described on page 104, line 10 through page
3 105, line 4, and in Exhibit 47 of my direct testimony of May 18, 2001. It
4 takes some expertise on the part of the CLEC representative, as well as
5 the BellSouth retail representative, to be familiar with the targeted intervals
6 for the products they market so they can provide the best due dates for
7 their customers. There is no magic button to push that will cover every
8 situation. However, I cannot think of any situations in which the due date
9 calculator would cause LSRs to fall out for manual handling. If, for
10 example, a CLEC chooses to expedite an LSR, the LSR will fall out for
11 manual handling. The LSR, however, falls out because the CLEC
12 indicates on the LSR that it is expedited, not because the due date
13 calculator did not function properly. In fact, if a CLEC expedites an LSR,
14 there would be no reason for the CLEC to calculate a due date. If, for
15 example, the CLEC requests one of the services or UNEs that is designed
16 to fall out, the due date calculator is not used, as I just described above.

17
18 On page 43, lines 19-20, Bradbury also states that, "when LSRs fall out for
19 manual processing, they lose their place in queue for being assigned due
20 dates." Due dates for CLECs' end users will be assigned using the same
21 guidelines as are used for BellSouth's end users. BellSouth provides
22 service on the desired due date or the earliest available installation date
23 thereafter. Due dates cannot be considered confirmed until a complete
24 and accurate LSR has been entered into BellSouth's service request
25 processing system. Service requests that require manual handling are

1 impacted alike whether they originate from a BellSouth retail customer or
2 a CLEC.

3

4 On page 43, lines 9-18, Mr. Bradbury discusses exception 116 of the
5 Georgia Third-Party Test. BellSouth corrected the deficiency identified in
6 Georgia Exception 116 where the TAG interface was not providing a due
7 date calculation for one particular combination request, the unbundled
8 loop-port combination. BellSouth determined that the loop-port
9 combination request was inadvertently omitted from the product category
10 field. On December 11, 2000, BellSouth submitted a change request
11 CR0237 that included the workaround to modify a due date module for
12 UNE-P. The change request was validated as a defect and a workaround
13 was provided to the CLECs and BellSouth indicated that this would be
14 corrected in a future release. The workaround enabled a CLEC to submit
15 a calculated due date transaction for REQTYPE M Loop/Port Combo by
16 populating the RSPROD field of the LSR with 31 or 32. This interim
17 solution was communicated to all TAG users via the change request
18 CR0237. BellSouth also provided notification of the interim solution to the
19 CLEC community via a carrier notification letter on December 12, 2000
20 (revised December 29, 2000).

21

22 KPMG re-tested the interim solution by submitting calculated due date
23 pre-order transactions for unbundled loop-port combination customers by
24 following the rules outlined in the BellSouth interim solution. All of the re-
25 test transactions were successfully processed by BellSouth's TAG

1 interface. KPMG determined that “utilizing this workaround, BellSouth’s
2 pre-order interface adequately provides functionality to process Calculate
3 Due Date pre-orders for Loop-Port Combination service requests”. KPMG
4 validated that the solution put in place at the time of the third-party test in
5 Georgia was satisfactory and provided the functionality for CLECs for due
6 date calculation for this one of many pre-order types. As a result of re-test
7 activities, KPMG, with the concurrence of the Georgia Public Service
8 Commission, closed Georgia Exception 116.

9
10 Also on page 44 and in footnote 40, Mr. Bradbury comments on change
11 requests CR0237 and CR0313, which are related to exception 116. As
12 BellSouth was developing the requirements to fix the defect identified in
13 CR0237, it became evident that the fix envisioned for CR0237 would only
14 address specific request types. BellSouth needed to submit a separate
15 change request to address all requests types. Hence, CR0313 was
16 opened and was treated as an expedited feature. The CCP
17 communicated this to the CLEC community and received no objections.
18 An explanation for this feature was also provided in Carrier Notification
19 SN91082236, posted February 19, 2001. Consequently, because
20 CR0313 fixed the defect identified in CR0237, and the remaining fix would
21 occur in the June 4, 2001 release, BellSouth agreed to cancel the original
22 change request CR0237. CR0313 was originally posted on the CCP
23 website as a new change request; however, when implemented, the web
24 support personnel deleted it from the folder, but failed to move it to the
25 “Implemented Folder”. This was corrected on June 7, 2001. However,

1 CR0313 was always reflected on the Change Control Log used by the
2 CLEC team from the beginning. It is now on the Change Control Archive
3 Log.

4
5 Q. DOES BELLSOUTH CHANGE MCI'S DUE DATES?

6
7 A. No. Ms. Lichtenberg, on page 10, describes an isolated issue that has
8 arisen regarding changed due dates on MCI/WorldCom's FOCs. The
9 BellSouth account team and MCI/WorldCom are jointly working to resolve
10 this issue.

11
12 **CSRs and Parsing**

13
14 Q. DOES BELLSOUTH PROVIDE THE CLECS WITH
15 NONDISCRIMINATORY ACCESS TO CUSTOMER SERVICE RECORD
16 DATA FOR PARSING?

17
18 A. Yes. On pages 36-42, Mr. Bradbury (AT&T) states his views that
19 BellSouth does not provide nondiscriminatory access to Customer Service
20 Record ("CSR") data while it has fully integrated the receipt and
21 transmission of CSR data within its own retail pre-ordering and ordering
22 operations. Mr. Bradbury is trying to convince this Commission that
23 BellSouth provides more useable CSR information to its retail operations
24 than it does to CLECs. I disagree, and will further demonstrate to this
25 Commission that BellSouth is currently in compliance with FCC

1 requirements, and that other enhancements under development by
2 BellSouth will go beyond such requirements.

3
4 As I discussed in my direct testimony of May 18, 2001 on page 82,
5 BellSouth does provide CLECs the ability to parse information on the
6 CSR, using the integrateable machine-to-machine TAG pre-ordering
7 interface, and the same data stream that BellSouth provides to its retail
8 units. With that stream of CSR data that is supplied to a CLEC, the CLEC
9 can parse to the same line level – using the same unique section
10 identifiers and delimiters – that BellSouth does for itself. Some CLECs
11 have made the business decision to parse CSR information beyond that
12 level, but I reiterate from my direct testimony of May 18, 2001, that this
13 higher level of parsing can be programmed by the CLECs on their side of
14 the interface at this time (if they choose to do so), as BellSouth has done
15 for its retail operation.

16
17 Mr. Bradbury on page 38, lines 8-12, and Ms. Lichtenberg, on pages 21-
18 22, quote the same FCC excerpt from the Bell Atlantic, New York Order
19 regarding parsing that I included in my original testimony. I further
20 reiterate the FCC's confirmation (in Footnote 413 of the FCC's
21 Southwestern Bell Telephone, Texas Order) that its statement in that Bell
22 Atlantic excerpt did not require a Bell Operating Company to perform
23 parsing on its side of the interface. Therefore, BellSouth clearly complies
24 with the requirement to provide nondiscriminatory access to CSR
25 information and meets the FCC's requirements.

18
19
20
21
22
23
24
25

In spite of the clarity of that Texas 413 Footnote, Ms. Lichtenberg on page 22, line 3 cites Para. 153 of that same Texas 271 order to somehow justify her claim that BellSouth *should* provide more than the current parsing capability. Her argument is flawed because the cite she offers is totally out of the context of this discussion of parsing. Paragraph 153 is specific to the sub-issue of parsing *address* information, not the general issue of nondiscriminatory access to CSR information and BellSouth's current compliance with FCC requirements.

Mr. Bradbury states, at page 42, lines 2-3, that CLECs cannot electronically populate the LSR using the CSR data that is provided by BellSouth. Whether or not a CLEC can use the CSR information provided by BellSouth to the degree that a CLEC might prefer is determined by its own business decision regarding the programming of the higher level of parsing on its side of the interface. Even though Mr. Bradbury says at page 40, lines 17-18 that this purported “lack of CSR parsing functionality significantly reduce the level and reliability of integration that CLECs can achieve,” CLECs have the capability for self-determination in that regard. BellSouth is in compliance with FCC requirements by providing the same CSR data stream to CLECs as is provided to BellSouth retail.

On page 42, lines 4-5, Mr. Bradbury of AT&T notes that the Third-Party Test in Georgia revealed incompatibility between Pre-ordering and ordering data requirements. Mr. Bradbury refers to the “Integration Test

1 Evaluation Criteria and Results” from the Georgia Third-Party Test. (See
2 the pages V-A-28 through V-A-31 of the MTP report, filed as Exhibit OSS-
3 64 to my direct testimony filed on May 18, 2001.) Although some
4 inconsistencies were found during the test, all evaluation criteria related to
5 this part of the test were satisfied and closed. KPMG noted that, in some
6 instances where the pre-order and order fields did not agree, the data
7 returned on the pre-order responses was still adequate for the order field
8 requirements. In order to provide more information on the relationship
9 between the pre-order and order fields, BellSouth published the Pre-Order
10 to Firm Order Mapping Matrix on March 30, 2001 (Exhibit OSS-63 to my
11 direct testimony filed on May 18, 2001). For disagreement between the
12 “Address Validation Queries” and other fields, BellSouth has opened a
13 feature to close the gap between the field size/length between pre-order
14 and order fields. This feature has been associated with change request
15 CR0369, which is the change request AT&T has made for a more robust
16 form of parsing. I will discuss that next. Again, all of the KPMG evaluation
17 criteria related to this matter were satisfied and closed. As I described in
18 my direct testimony filed on May 18, 2001, many CLECs have
19 successfully integrated the pre-ordering and ordering interfaces.

20

21 At pages 39-40, Mr. Bradbury and Ms. Lichtenberg, on page 22, provide a
22 chronological view of a more robust version of parsing that is under
23 development within BellSouth’s Change Control Process. In general, I do
24 not disagree with the chronology in Mr. Bradbury's or Ms. Lichtenberg’s
25 accounting of the development process, and I have discussed the same

1 events in my previous testimony in this proceeding. However, there are
2 some mischaracterizations that I would like to correct.

3
4 First, I would like to reiterate that BellSouth's current access to CSR
5 information, and what BellSouth provides to the CLECs from a parsing
6 standpoint, is nondiscriminatory. Therefore, it should be clear that this
7 development is a response in an effort to accommodate a CLEC's (AT&T)
8 change request and goes beyond what is required under the
9 Telecommunications Act.

10
11 It is clear that Mr. Bradbury has concerns about the length of time for
12 development of this version of parsing. It is important for this Commission
13 to understand that, despite the existence of industry standards for this
14 service, such standards are merely guidelines that may or may not cover
15 all situations likely to affect CLECs or BellSouth. Such is the case with
16 parsing. The programming complexities and system interdependencies
17 for this particular development preclude a simple implementation of
18 industry standard parsing. While the standards provide a good basis for
19 BellSouth, there are specific CLEC and BellSouth issues to be addressed
20 that are not parts of the "standard" package.

21
22 I take particular exception to Mr. Bradbury's statement at page 39, lines
23 21-23, that "BellSouth unilaterally downgrades the change request for
24 CSR parsing functionality to Subteam being formed to perform planning
25 and analysis during 2000'." I have provided minutes from the October 19,

1 2000 Parsed CSR Kickoff Meeting (Exhibit OSS-85 showing that the
2 decision to develop a sub-team was made jointly with the CLEC members
3 of the CCP, including AT&T's own representative. BellSouth has targeted
4 CAVE testing of parsing to be available on December 17, 2001 and an
5 implementation date of January 14, 2002.

6
7 As I state above, industry standards do not always address all necessary
8 requirements. A number of additional CLEC requirements for parsing
9 were identified after the formation of the sub-team, and all of them did not
10 fit within the standards requirements. If anything, and notwithstanding the
11 extended development time, the formation of the sub-team has been
12 beneficial to CLECs in that a more comprehensive parsing package that
13 will go beyond parity will ultimately be developed.

14
15 BellSouth would prefer that implementation could be more timely, but the
16 activities of the sub-team, as well as those of BellSouth and its
17 programming vendors, have dictated the pace of this project.

18

19 **LOOP MAKEUP**

20

21 Q. DOES MR. BRADBURY INCORRECTLY DESCRIBE THE AVAILABILITY
22 OF LOOP MAKEUP INQUIRY AND THE TESTING ENVIRONMENT?

23

24 A. Yes. Mr. Bradbury, on page 111, lines 3-4, alleges that ,
25 "...enhancements to loop makeup inquiry responses supposedly

1 implemented in 9.0 are only available in selected areas.” I do not agree
2 with Mr. Bradbury. When Loop Makeup inquiry (“LMU”) functionality was
3 deployed in November 2000, it had no known defects. When BellSouth
4 added enhancements in January 2001, defects were identified. These
5 defects delayed the deployment of LFACS 27.0 software on a region-wide
6 basis coincident with the other OSS enhancements associated with
7 Release 9.0. The delay of the LFACS 27.0 software did not result in any
8 loss of existing functionality but did delay the return of the new data
9 elements. This was corrected on a region-wide basis by March 31, 2001,
10 and the Release 9.0 enhancements are available everywhere.

11
12 Mr. Bradbury claimed, on page 114, line 22, that BellSouth has placed a
13 number of software releases into production which have contained defects
14 that negatively affected CLEC operations and required immediate
15 corrective action by BellSouth. Mr. Bradbury specifically referred to
16 electronic pre-order functionality associated with loop makeup queries. I
17 do not agree with his claim. On January 27, 2001, as part of Release 9.0,
18 two enhancements of functionality were made to Mechanized LMU.
19 These enhancements were made in a beta test environment. During that
20 beta test, BellSouth identified three defects that were associated with the
21 LMU functionality. BellSouth immediately opened Change Requests
22 (“CRs”) via the CCP as defects were identified.

23
24 All three of these LMU defects were considered minor enough by both
25 BellSouth and the beta test partners that the new functionality associated

1 with Release 9.0 was implemented into full production on February 12,
2 2001, with the known defects. BellSouth was able to take immediate
3 corrective action because the defects were so minor.

4
5 Finally, and most importantly, actual commercial usage demonstrates that
6 BellSouth's interfaces allow CLECs access to loop makeup information.
7 On page 88 of my direct testimony filed on May 18, 2001, I included the
8 number of loop makeup inquiries that were made by CLECs for December
9 2000 through March 2001. **The numbers of loop makeup inquiries for**
10 **April 2001 through June 2001 are:**

11

Month	# Submitted Regionally	% Within 5 Minutes	% Within 1 Minute	# Submitted in KY	% Within 1 Minute in KY
April 2001	4565	100%	96.3%	120	96.7%
May 2001	3685	100%	98.7%	50	100%
June 2001	5005	100%	99.2%	118	100%

12
13 In Kentucky, CLECs sent 19 fully mechanized LSRs in April 2001, 29 fully
14 mechanized LSRs in May 2001, and 13 fully mechanized LSRs in June 2001
15 for xDSL loops.

16
17 Q. DOES BELLSOUTH PROVIDE NONDISCRIMINATORY ACCESS TO
18 LOOP MAKEUP INFORMATION IN KENTUCKY?

19
20 A. Yes. Since November 18, 2000, CLECs have had nondiscriminatory
21 electronic access to loop makeup information that is contained in the
22 LFACS database. This functionality is provided via the

1 Telecommunications Access Gateway (“TAG”), RoboTAG™, and the
2 Local Exchange Navigation System (“LENS”) electronic interfaces.
3 CLECs access loop qualification information to determine whether a
4 BellSouth customer qualifies for Fast Access® service is obtained from
5 LFACS. This request is processed in substantially the same time and
6 manner as for a similar BellSouth service inquiry for its own customer as
7 part of the ordering and provisioning process. If a CLEC determines that it
8 needs additional information that is not available electronically, the CLEC
9 can request a manual loop makeup request. Personnel in BellSouth’s
10 Outside Plant Engineering department must then retrieve the data from
11 the paper records, or plats, manually whether the request relates to a
12 BellSouth customer or to a CLEC customer.

13

14 Q. ON PAGE 4-5 OF HIS TESTIMONY, DOES MR. FELTON IMPLY THAT
15 CLECS CAN QUALIFY A LOOP FOR PROVISION OF SERVICE
16 THROUGH THE CFD IN KENTUCKY?

17

18 A. Yes, but he is incorrect. The Corporate Facilities Database (“CFD”) does
19 not exist in Kentucky. The CFD is available only in North Carolina, South
20 Carolina, Georgia, Florida and 13 wire centers in Alabama.

21

22 Accordingly, BellSouth disagrees with the conclusion of the North Carolina
23 Utilities Commission’s (“NCUC”) order in NCUC Docket No. P-100, Sub
24 133d that is cited by Mr. Felton on page 4, lines 15-20 of his testimony.

1 BellSouth has submitted Exceptions to the Report and Recommended
2 order issued by the NCUC, requesting that it be modified.

3

4 **ORDERING**

5

6 **Mechanized Ordering for Local Number Portability (“LNP”)**

7

8 Q. CAN BELLSOUTH ADEQUATELY PROCESS ORDERS FOR LNP IN A
9 MECHANIZED MANNER?

10

11 A. Yes. On page 16 of her rebuttal testimony, Ms. Berger of AT&T discusses
12 processing orders involving Local Number Portability (“LNP”). As stated in
13 Carrier Notification 91082397 dated May 21, 2001, supplemental
14 electronic LNP LSRs, for other than due date changes on port-out only
15 (Requisition Type C) LNP LSRs, are not eligible for electronic flow-
16 through. In other words, while these LNP LSRs may be submitted
17 electronically, they are processed by the LCSC on a planned manual
18 fallout basis. Specifically, Ms. Berger states that 91% of AT&T’s loop and
19 port orders were processed as partially mechanized or manually. An
20 assessment of this data reveals the AT&T division that Ms. Berger
21 discusses in her affidavit primarily focuses on Complex LNP LSRs, which
22 requires manual handling. Another AT&T division that also processes
23 LNP LSRs, which were *not* predominately Complex LNP LSRs, had an
24 86.76% flow through rate in June 2001. BellSouth will continue to work

1 with CLECs to implement further LNP mechanization as requested and as
2 technically feasible.

3

4 **Mechanized Ordering for Line Splitting**

5

6 Q. ON PAGE 21, MR. TURNER COMPLAINS THAT BELLSOUTH DOES
7 NOT PROVIDE ELECTRONIC OSS FOR CLEC LINE SPLITTING.
8 PLEASE COMMENT.

9

10 A. BellSouth stands ready to accept manual line splitting orders today.
11 BellSouth continues to work with the BellSouth/CLEC Collaborative
12 (“Collaborative”) to facilitate and improve the ordering process.

13

14 As required by the Georgia Public Service Commission in Docket No.
15 11900-U, BellSouth is currently developing a mechanized ordering
16 capability and anticipates having it ready in time to meet the deadline of
17 the Georgia Commission Order, which is 6 months from June 11, 2001. A
18 precise implementation schedule will be filed with the Georgia
19 Commission next month.

20

21 **Operator Services/Directory Assistance (“OS/DA”)**

22

23 This is the same issue raised by AT&T in its petition for Arbitration in Case
24 No. 2000-465. This Commission dealt with this issue and no point would
25 be served in repeating the same arguments here.

1 **Flow-Through**

2
3 Q. DOES MR. BRADBURY OF AT&T CONTINUE TO CLOUD THE ISSUE
4 OF FLOW-THROUGH WITH IRRELEVANT AND INACCURATE
5 INFORMATION AND ACCUSATIONS?
6

7 A. Yes. In this proceeding, as well as in affidavits and testimony filed in 271
8 proceedings throughout the BellSouth region. (AL Docket 25835 and LA
9 Docket U-22252), Mr. Bradbury of AT&T makes a number of allegations
10 concerning BellSouth's flow-through reporting.
11

12 This discussion is merely a continuation of the same argument made
13 numerous times in numerous proceedings by Mr. Bradbury on the subject
14 of flow-through, where he clouds the issue with irrelevant concepts,
15 inaccurate calculations and inappropriate comparisons, all to reach an
16 incorrect conclusion. Flow-through is not that difficult a subject, and – by
17 relying on the FCC's current view of flow-through-I will explain that
18 BellSouth is clearly in compliance with its obligations relating to flow-
19 through of CLEC requests.
20

21 In his explanation of flow-through (at page 51, lines 2-4), Mr. Bradbury
22 suggests that "for the sake of simplicity," it is OK to use the term 'local
23 service request' (or 'LSR') to denote both CLEC and BellSouth retail
24 transactions. While that might make it easier for him, it masks a simple
25 fact – and underlies the fundamental flaw in his argument – that BellSouth

1 does not issue LSRs. As described below, this process is inherently
2 different from the way BellSouth has historically generated and submitted
3 service orders. This difference, while not great, does lead to dissimilarities
4 in the ordering process that Mr. Bradbury greatly exaggerates. The FCC
5 has recognized that there are differences in these ordering methodologies.
6 These differences do not result in a finding of non-compliance with the
7 BOC's obligations to provide nondiscriminatory access to its OSS. (See
8 FCC 99-404 for Bell Atlantic, New York, at Footnote 488.), FCC 00-238
9 for Southwestern Bell Telephone Company, Texas, at Para. 180 and,
10 more recently, in FCC 01-130 for Verizon, Massachusetts, at Para.79.) In
11 those orders, the FCC has held that nondiscriminatory access does *not*
12 even require that all service requests be submitted electronically in the
13 first place. The real issues – that Mr. Bradbury would prefer to avoid –
14 are: a) that submission of service requests is done in substantially the
15 same manner, whether LSRs are for CLECs, or service requests are for
16 BellSouth's retail unit; and b) BellSouth's flow-through calculation
17 methodology has been upheld time after time. Further, there is absolutely
18 no requirement that CLEC and BellSouth ordering processes must be
19 identical, as by their very nature across the nation they are not.

20
21 He later suggests that both CLECs and BellSouth "transmit" LSRs. I
22 reiterate that BellSouth's own service requests are not submitted via the
23 "LSR" method, and, consequently, there is a fundamental difference in the
24 CLEC and BellSouth request submission processes. CLECs "transmit"
25 LSRs via interfaces (e.g., LENS, TAG, EDI) that are converted by

1 BellSouth systems from an accepted industry-standard Order and Billing
2 Forum (“OBF”) LSR format to a BellSouth Service Order Communication
3 System- (“SOCS”) readable format so that BellSouth service orders can
4 be created. The LSR process was implemented as a result of OBF
5 decisions where the industry decided that it would be advantageous for
6 CLECs to have a single LSR process that could operate nationwide. This
7 Allows CLECs to submit requests on the same form throughout the
8 country. On the other hand, BellSouth retail service requests are “input”
9 into its own interfaces that build the requests in a SOCS-readable format
10 for service request submission. This Commission should not be misled by
11 Mr. Bradbury's attempt to simplify for convenience a difference that affects
12 not only how flow-through can be viewed, but that which, as I mentioned
13 above, is the reason there is even a CLEC issue over measuring flow-
14 through in the first place.

15

16 The LSR step is the difference in the ordering processes, but, that
17 difference notwithstanding, the FCC has accepted that the processes
18 function in substantially the same manner. Mr. Bradbury should do
19 likewise. I will add that in a recent Florida Public Service Commission
20 ruling in the BellSouth/AT&T arbitration (Docket No. 000731-TP), the
21 Florida Public Service Commission said “we agree with BellSouth that
22 because the same processes are in place for both ALEC and BellSouth
23 retail orders, the processes are competitively neutral.”

24

1 Both Mr. Bradbury and I quote the same excerpt from the FCC's Second
2 Louisiana Order regarding flow-through, yet Mr. Bradbury states in other
3 271 proceedings that I have "inappropriately broaden[ed] the FCC's
4 definition by adding pre-ordering activities, which have nothing to do with
5 flow-through," and he implies that I have developed my own definition of
6 flow-through. Mr. Bradbury's implication notwithstanding, and as he
7 knows, he and I actually agree on the basic definition of flow-through.
8 Further, my additional words were not intended to add to or otherwise re-
9 define the FCC's statement – nor do they include pre-order activities.
10 However, the words that Mr. Bradbury suggests are inappropriate
11 underscore once again that there are activities involved in issuing CLEC
12 service requests or BellSouth retail service orders that are manual in
13 nature, but that occur after pre-order activities. That is where Mr.
14 Bradbury and I disagree, but for him to further suggest that "confusion of
15 pre-ordering activities with ordering and flow-through permeates [my]
16 testimony" is patently misleading.

17
18 As I described in various points in my direct testimony, such non-pre-order
19 manual activities are prevalent primarily with complex orders, and are not
20 pre-order activities in the strict sense of the pre-order definition. Rather, it
21 is work that must be done by the CLEC or BellSouth service
22 representatives after gathering the pre-order information. These activities
23 are done by both the CLEC and BellSouth service representatives prior to
24 submissions, or the "hit the send button" phase of ordering, as Mr.
25 Bradbury terms on page 51, lines 12-13. Mr. Bradbury himself

1 acknowledges the fact that “it is impossible to completely automate the
2 pre-ordering process” (page 51, line 22), but his flaw is suggesting that all
3 of the manual activities done prior to submission are strictly pre-order
4 activities, and alleging that I am confused. That simply is not accurate,
5 and I stand by my direct testimony on the matter.

6
7 In other 271 proceedings, Mr. Bradbury states that BellSouth has “chosen
8 an unnecessarily complex way of linking its OSS interface gateways, thus
9 increasing the likelihood of fallout thru [sic] no fault of the CLEC. His
10 statement is not an appropriate characterization of BellSouth’s interfaces.
11 Mr. Bradbury's sweeping overstatement is unfounded, despite his claim of
12 “long experience with this issue and knowledge of the suite of hardware
13 and software BellSouth has deployed.” Over time – since the passage of
14 the Telecommunications Act of 1996 – services that can be ordered
15 electronically by CLECs have progressed from the simple resale of dial
16 tone to a host of offerings for designed services and number portability . It
17 is ludicrous for Mr. Bradbury to suggest that every type of service can be
18 easily inserted into existing processes without certain changes to existing
19 interfaces, or the development of new interfaces (and, possibly, OSS). As
20 examples, local number portability (“LNP”) xDSL and UNE-P – along with
21 all of their associated variations and interdependencies – are not drop-in
22 services that easily fit existing processes and OSS, and extensive work
23 was required to develop the business rules and processes to allow
24 ordering and provisioning.

25

1 Given the circumstances of the complexities of the types of services and
2 the system interdependencies created, BellSouth has designed efficient
3 CLEC service request processes, adhering to both industry standards and
4 FCC requirements.

5

6 Also on the subject of requests falling out for manual processing, on page
7 56, line 22-23, Mr. Bradbury states that “designed manual fallout is totally
8 and solely within BellSouth’s control.” Mr. Bradbury is implying that
9 BellSouth intends to harm CLECs by limiting the availability of the number
10 of services that flow-through. Nothing could be further from the truth.
11 BellSouth is committed to providing flow-through on as many types of
12 CLEC service requests as is practical, for exactly the reasons stated by
13 Mr. Bradbury, beginning on page 57, line 10 attesting that lack of flow-
14 through can be detrimental to CLECs and BellSouth alike.

15

16 Realistically, however, flow-through on all service requests is not practical
17 or possible. BellSouth has defined and published to various regulatory
18 commissions the types of service requests that do not flow through, as
19 well as the supporting reasons for such. Some of those reasons include:
20 service requests on accounts for which there is a contractual payoff
21 involved; expedites based upon CLEC requests; types of service requests
22 for which there is a low volume, but a high cost to program for flow-
23 through; and, service requests that cannot easily be programmed for flow-
24 through for technical reasons, such as complex services.

25

1 These practical problems impact BellSouth's retail processes as well.
2 What decision-making BellSouth uses to determine what types of service
3 requests can flow-through is the result of logical business decisions, within
4 a very narrow list of categories. In making these decisions, BellSouth has
5 ensured that processing of service requests is done in substantially the
6 same manner, whether LSRs are for CLECs, or service requests are for
7 BellSouth's retail unit.

8
9 The FCC understands and, more importantly, accepts that all CLEC
10 service requests do not flow-through. In cases where the FCC has
11 granted long distance relief to a Bell Operating Company ("BOC"), the
12 FCC has recognized that some service requests could be properly
13 designed to fall out for manual processing (see FCC 99-404 for Bell
14 Atlantic, New York, at Footnote 488, FCC 00-238 for Southwestern Bell
15 Telephone Company, Texas, at Para. 180, and, more recently, FCC 01-
16 130 for Verizon, Massachusetts, at Para.79). In those orders, the FCC
17 has held that nondiscriminatory access does not require that all service
18 requests be submitted electronically in the first place.

19
20 Furthermore, this Commission clarified in its Reconsideration Order in
21 Case No. 2000-465, that "the interfaces used by CLECs must be
22 electronic if BellSouth can handle the identical order electronically for
23 itself. If, however, BellSouth utilizes manual processing for the same type
24 of order for its own customers then it may utilize manual processing for a
25 CLEC's customers orders."

24
25

On page 56, line 17, Mr. Bradbury has attacked BellSouth’s method of calculating flow-through. Mr. Bradbury has for years had a problem with BellSouth's exclusion from the flow-through rate calculation any CLEC service requests that are designed to fall out for manual handling, even though BellSouth's methodology has been upheld time after time. BellSouth calculates the flow-through based upon the information contained in a letter from the FCC's Common Carrier Bureau Staff in February 1999 (“Strickling Letter” provided as Exhibit OSS-86 . Bureau Chief Lawrence Strickling, in an interpretation of the FCC’s BellSouth Second Louisiana Order, confirmed in Section 1 that BellSouth could exclude manually handled complex orders from the flow-through calculation as long as BellSouth could show that its process is nondiscriminatory. Specifically, the Strickling letter states that BellSouth may exclude complex orders if it provides “(1) a clear definition of complex orders for CLECs and BellSouth; (2) a demonstration of how BellSouth handles complex orders for its retail customers and CLECs; (3) evidence that complex orders are processed in a nondiscriminatory manner (i.e., performance results and analysis).” BellSouth has provided this information in my direct testimony of May 18, 2001, in BellSouth witness, Alphonso Varner’s testimony of May 18, 2001, and in BellSouth monthly filings of performance data. The FCC realizes that it is not appropriate to negatively tax system flow-through for that which the system has not been designed to handle.

1 That same letter further confirmed in Section 4 that there is no
2 requirement that all types of CLEC requests be capable of electronic
3 submission, thereby also confirming that total flow-through is not a
4 requirement for CLEC requests.

5
6 Mr. Bradbury compares flow-through rates both with and without designed
7 fall-out requests included, and states that flow-through rates which include
8 designed fall-out requests are much lower. I certainly will not argue that
9 one rate will be lower (or higher) than the other – that is obvious. The true
10 issue is that BellSouth's performance should be evaluated based upon a
11 flow-through calculation that excludes requests that are designed to fall
12 out. This approach has most recently been confirmed by the Georgia
13 Public Service Commission. Even though the Georgia Commission
14 ordered an additional calculation to indicate that there is, in fact, a
15 difference between the two results, the performance benchmarks only
16 apply to the flow-through calculation excluding designed fall-out. It does
17 not provide, as Mr. Bradbury purports on line 57, lines 10-11, any proof
18 that "BellSouth's design decisions have a detrimental and discriminatory
19 affect on CLEC flow-through." It simply supports the FCC-approved
20 concept that all CLEC requests are not expected to flow through.
21 Incidentally, LSRs that fall into the designed fall-out category number less
22 than 10% of all electronic LSRs sent (8.2% for May 2001).

23
24

1 At page 62, Mr. Bradbury provides rates of designed fall-out of CLEC
2 requests for various BellSouth interfaces, and makes the point that certain
3 rates are higher than others. Mr. Bradbury's comparison merely
4 substantiates a commonly known fact: the more complex the type of order,
5 the more likely it is to be of a type that is designed to fall out. CLECs that
6 use EDI, for example, generally send in more complex LSRs than do
7 CLECs that use LENS. It also highlights the fact that BellSouth has taken
8 the initiative to make electronic ordering of complex services available to
9 CLECs as a convenience, even if they do not flow all of the way through
10 the systems.

11

12 Mr. Bradbury states at page 62, lines 10-13 that “CLECs using TAG or
13 EDI...and employing particular market entry strategies – UNEs, LNP, and
14 business resale – will be significantly constrained by BellSouth’s
15 imposition of manual processing.” Let me reiterate my earlier position that
16 – for the same reasons CLECs want flow-through – so, too, does
17 BellSouth. However, there is absolutely no substantiation to Mr.
18 Bradbury's implication that BellSouth purposefully does not provide flow-
19 through in an effort to impede CLEC market entry or growth. Once again,
20 Mr. Bradbury uses examples that reflect the types of requests that are
21 most likely to fall out for CLECs, and, where similar retail offerings exist,
22 those same types of requests are also are handled manually for BellSouth
23 retail.

24

1 BellSouth has the same desire to allow flow-through for as many request
2 types as possible, and Mr. Bradbury's claims of drastic flow-through
3 problems are exaggerated. To put this in perspective, designed manual
4 fall-out affects only 8-9% of all electronic LSRs submitted, and any manual
5 processing from BellSouth system errors affects only 11-13% of all
6 electronic LSRs. BellSouth is also committed to processing these LSRs
7 as quickly as possible. Measurements exist to readily track BellSouth's
8 performance in this area.

9
10 On page 63, lines 1-2, Mr. Bradbury states that "manual processing simply
11 cannot handle volumes or provide the responsiveness of electronic
12 processing." The issue here, particularly for services highlighted by Mr.
13 Bradbury such as the UNE-P, is whether AT&T has a meaningful
14 opportunity to compete. Volumes of ordering and provisioning for the
15 UNE-P in Kentucky and other states indicates that CLECs are able to
16 efficiently order the UNE-P (as shown in my discussion of the Georgia
17 1000 Trial later in this testimony), as BellSouth is provisioning thousands
18 of these services every month.

19
20 At page 63, line 6, and later at lines 19-20, Mr. Bradbury again refers to
21 "BellSouth's retail LSRs", and heads off into another comparison with
22 CLEC LSRs, suggesting that BellSouth can submit all orders electronically
23 that flow through 100% of the time. Again, BellSouth does not issue
24 LSRs. As I stated earlier, and will discuss in more detail here, a CLEC
25 issuing a complex order via the industry-standard LSR format, is not

1 appropriate. The issue is one of translation of an LSR-formatted request
2 to a format that can be accepted by BellSouth's Service Order
3 Communication System ("SOCS") for provisioning by further downstream
4 BellSouth's OSS legacy systems. The interfaces utilized by BellSouth's
5 business retail units do not have to deal with this translation issue
6 because the retail requests are built in a SOCS-compatible format.

7
8 Mr. Bradbury's testimony also suggests that it is a simple matter for
9 BellSouth to electronically input any order for a BellSouth retail customer,
10 implying that BellSouth does not offer nondiscriminatory access, and that
11 is not the case. While true that BellSouth's retail requests can be
12 electronically transmitted, it is hardly a simple matter for BellSouth's
13 service representatives to input any order. The following will explain why.

14
15 For most simple business products and services, BellSouth's retail
16 Regional Ordering System ("ROS") has process flows designed into the
17 system which allow a BellSouth service representative to follow a logical
18 step-by-step process using a point-and-click type of selection/entry
19 methodology to build a service order in SOCS-readable format.

20
21 As illustration, Exhibit OSS-87 provides an example (via screen
22 snapshots) of a simple change request for adding call waiting to an
23 existing account. It is easy to see that for this request there are
24 programmed selections available using drop-down boxes, labeled folders
25 and point-and-click selection/entry inputs.

20
21
22
23
24

For complex services, BellSouth representatives must manually enter that request information into ROS in a “free-form” format, because there are no process flows programmed within the ROS application to handle all of the variables associated with the different types of complex services.

Exhibit OSS-88 provides an example (again, via screen snapshots) of one of BellSouth's complex requests – changing an account to ESSX service. From the illustration and accompanying text, it is apparent that BellSouth's service representatives must manually input each and every USOC, FID, etc. into the service and equipment sections in the SOCS-compatible format without benefit of any process flows which provide programmed selections. The final screen snapshot in this exhibit illustrates a portion of the final order, showing elements of the service order that had to be manually input.

While the ultimate electronic submission for a BellSouth retail complex service request may be the result of a single employee manually typing it, requests for complex services are actually the result of a team of employees working to develop the information necessary for that single employee to input the request. That team might include the account team, system designers, network specialists and other subject matter experts required for input of information to the request.

1 Once that team has done its collective work, and the BellSouth service
2 representative has gathered and arranged all of the necessary
3 information, it is then typically written on a paper service request form. It
4 is from that form that the single employee inputs the request utilizing the
5 Regional Ordering System (“ROS”) interface, for example, for a business
6 transaction. ROS then transmits the SOCS-compatible formatted order
7 which can then be distributed to the downstream provisioning systems.

8
9 For CLECs placing a complex service request, the process is substantially
10 similar. It is still a team effort, but involves CLEC personnel along with
11 BellSouth account team representatives, system designers and other
12 BellSouth subject matter experts. Once the order information has been
13 gathered and arranged by the CLEC, it is then handed off via the LSR
14 process to BellSouth's Local Carrier Service Center (“LCSC”). This
15 process requires the CLEC to fill out an LSR for the requested service.

16
17 It is from this LSR that the BellSouth LCSC representative inputs the
18 request to the Direct Order Entry (“DOE”) system. In other words, at that
19 point, a single employee types the order into DOE, which in turn puts the
20 information into a SOCS-compatible format, and distributes the order to
21 the same downstream service order and provisioning systems as does the
22 BellSouth retail order process. I reiterate that this is the same
23 “competitively neutral” situation as cited earlier from the Florida
24 Commission ruling in Docket No. 000731-TP.

25

1 This process ensures that CLEC service requests are processed in
2 substantially the same time and manner as are BellSouth's retail service
3 requests. Thus, BellSouth's process falls within the nondiscriminatory
4 access guidelines of the FCC.

5
6 Mr. Bradbury states, at page 64, lines 8-9, that "BellSouth's flow-through
7 performance is significantly below parity and the benchmarks established
8 by the Georgia Public Service Commission." Mr. Bradbury's statement is
9 typical of his generalizations – broad, with exaggeration. BellSouth's
10 general performance, while still below benchmarks in some areas of flow-
11 through, can hardly be described as "significantly below" the Georgia
12 Public Service Commission benchmark as stated by Mr. Bradbury. Only
13 business flow-through could be considered in this light, and as I stated in
14 page 106 of my direct testimony, business LSRs are more difficult, and
15 only amount to 4.9% of the total volume of electronically-submitted LSRs.
16 In fact, BellSouth's residential flow-through performance was only 3%
17 better than that of the CLECs for May 2001 (93% vs. 90%).

18
19 Beginning on page 64, Mr. Bradbury states that BellSouth is not
20 committed to the success of the Flow-Through Improvement Task Force,
21 as mandated by the Georgia Commission. Mr. Bradbury could not be
22 more incorrect. BellSouth's Task Force has been working diligently within
23 the Change Control Process ("CCP") for several months to analyze flow-
24 through, with the goal of improving it. He cites the fact that there have
25 only been 3 meetings of the Task Force as an example of BellSouth's lack

1 of dedication. Mr. Bradbury appears to be utilizing the same logic that he
2 accuses BellSouth of using, which is the substitution of “quantity reporting
3 for quality evaluation.” (Bradbury testimony, page 88, line 5). He is correct
4 that the Task Force has met 3 times, but he is incorrect to imply that the
5 number of meetings is indicative of the progress of the group, or
6 BellSouth’s dedication to the improvement of flow-through.

7
8 At no time has BellSouth had more resources committed to the flow-
9 through issue by identifying and bringing lists of flow-through
10 improvements to the CCP. BellSouth will continue to do so, and has
11 invited the CLECs to submit their suggestions as well in each of the
12 meetings. At this point, the Task Force has received only three
13 suggestions from the CLECs – one submitted through the Task Force,
14 and two existing suggestions that the CLECs requested be moved to the
15 Task Force from the CCP. Therefore, I do not understand Mr. Bradbury’s
16 allegation of a lack of dedication by BellSouth in this matter

17
18 BellSouth has been attempting to identify areas of flow-through
19 improvement since well before the formation of the Task Force, and
20 continues to work on those pre-Task Force issues in conjunction with
21 those newly identified by the Task Force. Following is a representative list
22 of key items installed or planned, along with release numbers and
23 implementation dates:

- 24 • Do Not Tear Down (“DNTD”) MemoryCall Mailbox (Release 9.2,
25 April 7, 2001) (LSRs with non-resellable USOCs no longer require

1 manual handling because the DNTD FID (field identifier) for
2 MemoryCall Service is populated.)

- 3 • CKL2 not populated when LOC provided on SL1/SL2 ReqType AB
4 (Release 9.2, April 7, 2001) (This was identified as a defect. – The
5 second circuit location (“CKL2”) is now populated properly when the
6 location (“LOC”) information is provided for that second location,
7 and these requests will not drop for manual handling any longer.)
- 8 • Allow the ability to submit LSR on non-affected PSO (Release 9.4,
9 July 28, 2001) (On an account that has a pending service
10 order, systems will allow submission of an LSR that does not affect
11 the pending service order (“PSO”), BellSouth’s systems will allow
12 submission and flow-through of an LSR provided that the activity
13 requested on that LSR does not affect the PSO. Currently, all
14 LSRs issued on accounts w/PSOs require manual handling.)
- 15 • Develop process to handle ACT of T outside moves (Release 9.4,
16 July 28, 2001) (This modification will allow flow-through of activity
17 (“ACT”) of T-type requests (outside moves), which is currently
18 available for electronic ordering, but is on the designed manual fall-
19 out list.)
- 20 • Enhancements to Fast Track (central office-based) Line Sharing
21 (Release 9.4) (Among a host of enhancements to the Line-
22 Sharing functionality, this modification will allow automatic
23 validation of certain account and line activity types (ACT and “LNA”)
24 on initial Line Share orders that currently fall out for manual
25 handling when submitted electronically. Also, the LSR that is

1 required to establish Line-Sharing on a line that currently has ADSL
2 on it will flow-through without falling out for manual handling, and
3 supplemental LSRs will flow-through without falling out for manual
4 handling.)

- 5 • New install with no prior service at LOC, and service address is
6 valid in RSAG (Release 9.4, July 28, 2001) (This enhancement for
7 LEO/TAG/LENS will allow electronic ordering and flow-through of
8 an LSR when service is being installed at a new address that has
9 had no prior service – provided the address is valid in the Regional
10 Street Address Guide (“RSAG”). Currently, all such requests fall
11 out for manual handling.)
- 12 • Modify CHC and DFDT for designed loops (Release 9.4, July 28,
13 2001)
14 (For LEO/TAG ,this modification to the entries in Coordinated Hot
15 Cut (“CHC”) and Desired Frame Due Time (“DFDT”) fields will
16 facilitate flow-through when populated correctly. However,
17 requests will reject if certain conditions regarding those fields are
18 not met .)
- 19 • Add NEWLOC to EDI (Release 9.4, July 28, 2001) (This EDI
20 enhancement is similar to an improvement listed above for
21 LEO/TAG/LENS to allow electronic ordering and flow-through when
22 service is being installed at a new RSAG-valid address that has
23 had no prior service.)
- 24 • Modify CHC and DFDT for designed loops (Release 9.4, July 28,
25 2001)

1 (This LENS modification to entries on CHC and DFDT fields is
2 similar to a previously listed improvement for LEO/TAG.)

- 3 • Est. DD (at Inquiry Menu) will not calculate more than two business
4 lines (Release 9.4, July 28, 2001)(This enhancement will provide
5 correct due date calculation at the inquiry menu for more than two
6 business lines, and allow LSRs to be sent and processed without
7 falling out for manual handling.)
- 8 • LUD on migrations (Release 10.0, September 29, 2001) (This
9 enhancement will allow the systems to recap and add the local
10 usage detail (“LUD”) option automatically when an LSR is issued to
11 migrate an end user with LUD to a CLEC. Currently, such an LSR
12 falls out for manual handling.)

13
14 On page 65, line 4, Mr. Bradbury alleges that there have been some
15 inaccuracies in task force meeting minutes and an inability to contact
16 BellSouth’s task force project manager. To the extent that he is implying
17 that inaccuracies were intentional, he is incorrect. Any Task Force
18 meeting minutes that have been issued with errors of fact have been
19 corrected when brought to the attention of the Task Force. Correction of
20 errors in meeting minutes is standard procedure in any like situation.
21 What is not standard procedure, and what BellSouth has done on a
22 number of occasions, is agree to change the words because AT&T
23 wanted to say the same thing in a different way. AT&T is the only
24 participating CLEC that has had, and continues to have, a problem with

1 wording. That does not mean BellSouth's minutes have been
2 "inaccurate."

3

4 Mr. Bradbury's remarks regarding the availability of BellSouth's Task
5 Force project manager are unfounded, as well. The project manager has
6 adhered – and will continue to adhere – to the request of the Task Force
7 participants. At the formation of the Task Force, the participants – as a
8 group – determined that all questions, concerns and responses would
9 come through the CCP, and that the distribution of all such
10 correspondence would be provided through CCP channels to all
11 participants of the Task Force, as well as to the other CLEC members of
12 the CCP. The purpose of this policy is to ensure that all issues are known,
13 and that all decisions are made with full participation. BellSouth fully
14 supports that concept. All CLECs do not have the same agenda, and the
15 most important aspect of the Task Force – as it is for the CCP – is to
16 ensure that the CLEC community as a whole is best served – not just the
17 most vocal ones.

18

19 On page 65, line 12, Mr. Bradbury alleges that BellSouth lacks dedication
20 to eliminating defective programming and designed manual fallout. He
21 presents a series of AT&T complaints about Task Force activities that did
22 not conform to AT&T's desires. AT&T is the only CLEC complaining, so
23 Mr. Bradbury's assessment must be considered with that in mind. Non-
24 constructive complaint letters from one CLEC is no substantiation of "lack
25 of dedication" on BellSouth's part, and Mr. Bradbury's assessment is only

1 an opinion. I do not agree with it, and I direct attention to BellSouth's
2 commitment to resources and analysis as confirmation of our dedication.

3
4 At page 68, lines 7-8,, Mr. Bradbury states as fact that because the LCSC
5 representative does not add any information, [that] reveals that BellSouth
6 has the technology to create SOCs readable LSRs for all products,
7 services and transactions so that such LSRs can flow through. As is
8 reported in the monthly flow-through reports, there is a category entitled
9 "BST Caused Fallout". In a number of instances when LSRs fall out due
10 to BellSouth errors (e.g., a USOC conflict when the CLEC has input the
11 correct USOC), the LCSC representative can and will fix the error, and re-
12 submit it to the electronic process. That correction would take place no
13 other way except for the LCSC representative manually adding the correct
14 information to the order. In some situations regarding LSRs designed for
15 manual fall-out, LCSC representatives must make the value judgment or
16 decision that is required to supplement the LSR information, and allow for
17 subsequent generation of the BellSouth service orders. While I generally
18 agree that manual intervention can introduce error, there are instances in
19 which only a human can supply the inputs to offset the reason that certain
20 types of orders could not be programmed for flow-through in the first
21 place. Therefore, Mr. Bradbury's assertion is incorrect.

22
23 In his attack on BellSouth's reasons for designed fall-out, at page 69, lines
24 5-6, Mr. Bradbury states that "BellSouth already has the technology to
25 process so-called complex services without human intervention through its

1 retail front-end systems.” This is the same issue I discussed previously in
2 this part of my direct testimony, and I showed that BellSouth's retail
3 complex orders have manual processes associated with them that are not
4 part of the pre-order function.

5
6 At page 69, lines 9-11, Mr. Bradbury says that “most if not all of the 13
7 categories of CLEC LSRs that fall out to manual processing by design
8 have retail analogs that flow through when submitted via BellSouth’s front-
9 end retail systems.” Mr. Bradbury is incorrect. Again I refer back to my
10 earlier testimony regarding the fact that BellSouth's complex services have
11 non-pre-order manual processes associated with them that cannot be
12 considered as orders that flow-through. Further, I can confirm that not all
13 of the CLEC LSR categories that fall out have retail analogs, much less
14 achieve flow-through.

15
16 Mr. Bradbury next states, on page 69, lines 17-18, that “there are sufficient
17 volumes to justify more robust flow through capability.” Mr. Bradbury's
18 rationale for disclaiming the validity of BellSouth's ‘low-volume’ category of
19 fall-out is misleading. He wants this Commission to accept that a
20 particular number of designed fall-out service requests nullifies the
21 credibility of BellSouth's low-volume category of designed fall-out.

22
23 To set the record straight, the low volume category is not a measurement
24 or relative comparison of the total number of designed fall-out requests.
25 Rather, it is a category for types of service requests that have not been

1 programmed to flow through, because the CLECs do not submit enough of
2 those types of requests to justify any programming expense.

3

4 I also take exception to Mr. Bradbury's overstatement of the number of
5 LSRs that fall out for manual processing each month because of
6 BellSouth's system design. In his typical liberal use of unsupported
7 numbers , he cites approximately "70,000" as the number of LSRs in that
8 category but his number also includes LSRs that fell out due to CLEC
9 errors. The correct number that he should have quoted for May 2001 is
10 29,195 – far fewer than the number he cited here and elsewhere in his
11 testimony.

12

13 Second (and regardless of which number Mr. Bradbury uses), his
14 implication that all of those LSRs fall under the low-volume category is
15 absolutely incorrect. In fact, in May 2001, not a single CLEC LSR that fell
16 out was for service requests in the low-volume category as these have not
17 been programmed for electronic submission, so the number Mr. Bradbury
18 cites (even if he were to use the correct number) was actually spread over
19 the remaining 12 categories of designed fall-out. His contention that
20 70,000 LSRs constitutes sufficient volumes to require more flow-through is
21 a complete misapplication of the low-volume justification.

22

23 Mr. Bradbury states in his question that I imply in my direct testimony that
24 CLECs are responsible for designed manual fall-out if they do not upgrade
25 their interfaces. Mr. Bradbury's statement is incorrect. Functionality

1 improvement is one of the reasons BellSouth enhances CLEC interfaces.
2 One such improvement might provide CLECs opportunities to gain flow-
3 through on types of service requests that previously did not flow through.
4

5 An example of that occurred when BellSouth made Telecommunications
6 Industry Forum ("TCIF") Issue 9 available as an upgrade from Issue 7.
7 Included in that upgrade was the ability of flow-through for requests with
8 the hunting-series completion feature. CLECs with Issue 7, and a need to
9 issue requests with that particular feature, would certainly be better served
10 by upgrading to Issue 9, but that is not mandatory. It is the CLEC's
11 decision, but it is clear that a decision to upgrade will improve designed
12 fall-out performance.
13

14 At page 73, lines 8-9, Mr. Bradbury states that "BellSouth's retail
15 operations have flow through capability that is far superior to that provided
16 to CLECs." In the strictest sense, flow-through performance for BellSouth
17 service requests is only a diagnostic benchmark relative to measurement
18 of CLEC request performance. There is no true BellSouth retail analog
19 because there truly is not an apples-to-apples comparison of processes.
20 With that said, and by using benchmark comparisons, Mr. Bradbury's
21 statement is a gross overstatement of purported fact. In May 2001, for
22 example, CLEC residential resale requests had a flow-through rate of
23 90.16%, while BellSouth's retail residential figure was 93.20% – hardly an
24 advantage that can be construed as "far superior." There is no BellSouth
25 retail analog for unbundled network elements ("UNEs"), so Mr. Bradbury

1 can make no comparisons there. And, there is no BellSouth business
2 retail flow-through measurement available, so, likewise, comparisons are
3 not possible.

4

5 **Third-Party Test Evaluation of Flow-Through**

6

7 Q. ARE MR. BRADBURY'S CRITICISMS OF KPMG'S TESTING OF
8 BELLSOUTH'S FLOW-THROUGH DISTORTED AND INCORRECT?

9

10 A. Yes. In this proceeding, beginning on page 58, Mr. Bradbury of AT&T
11 makes a number of allegations concerning the results of KPMG's report on
12 the third-party test in Georgia. I will address all of these allegations here.

13

14 Mr. Bradbury criticizes KPMG's analysis of BellSouth's flow-through data.
15 AT&T has taken excerpts from the KPMG report and used these excerpts
16 to distort the actual effort and outcome of the KPMG evaluation of the
17 Percent Flow Through Service Requests report. KPMG's Flow-Through
18 Evaluation Report is attached as Exhibit OSS-66 to my direct testimony of
19 May 18, 2001. **THIS EXHIBIT WAS INTRODUCED EARLIER.** I have
20 also attached KPMG's Motion for Leave to Articulate Basis for Statistical
21 Analysis in the GA 271 Test Final Reports, filed 6/25/01 in the Louisiana
22 Public Service Commission ("LPSC") 271 proceeding, Docket No. U-
23 22252-E as Exhibit OSS-80, in which KPMG describes its use of statistical
24 analysis during the third party test in Georgia. KPMG did indeed conduct
25 a flow through evaluation that complied with the Georgia Commission's

1 Order of May 19, 1999. KPMG performed a thorough flow through
2 analysis. Where KPMG's flow through replication did not accurately match
3 the BellSouth results, KPMG issued an exception, which BellSouth
4 corrected. KPMG was very much concerned with accuracy, which
5 prompted the following changes to BellSouth's flow through reporting.

6
7 January 2000 - pending supplement LSRs - were counted as CLEC
8 errors, moved to BST errors. Then, after further KPMG review, in
9 September 2000, these pending supplements were more correctly
10 categorized as neither a CLEC error nor a BST error; they are
11 excluded from the flow through calculation.

12
13 February 2000 and April 2000 - the requirement that the LSR must
14 also have received a FOC and CN was added to the flow through
15 requirement.

16
17 October 2000 - the LSR count was corrected by using the correct
18 company code table for the LSR count. The auto clarification count
19 was corrected by a change in the code used to count auto
20 clarification. BellSouth responded to KPMG that the October 2000
21 report had been corrected, and was available to the CLECs upon
22 request.

23
24 KPMG started its audit in Georgia by using the September through
25 November 1999 flow through reports because they were the most current

1 reports at the time the flow through audit began. As KPMG indicated, they
2 also used the February 2000 and October 2000 reports that showed the
3 further accuracy changes BellSouth made to the flow through report in
4 response to KPMG's findings.

5
6 KPMG did not evaluate the accuracy of BellSouth's "retail" flow through
7 rate because it was clearly not within the scope of the evaluation for the
8 Percent Flow Through Service Requests which assessed the degree to
9 which LSRs submitted by CLECs would flow through.

10

11 On page 58 of his testimony, Mr. Bradbury of AT&T further referenced
12 KPMG's caveat that "[c]ertain information and assumptions (oral and
13 written) have been provided to KPMG by the management of BellSouth
14 and other third parties...." and that KPMG "has not independently verified
15 to the accuracy or completeness of the information provided..." and
16 alludes that KPMG did not conduct an audit to determine if the BellSouth
17 Percent Flow Through Service Requests report are accurate. The key
18 word in the caveat is "certain". AT&T fails to reference the Evaluation
19 Methods, the Analysis Methods and the Evaluation Criteria used by KPMG
20 to conduct the audit. It is obvious throughout the KPMG report, that
21 although certain information may have been gathered without an
22 independent verification, extreme efforts were used in ensuring the
23 accuracy of the report and the data used to evaluate the report.

24

1 AT&T inaccurately states that KPMG did not independently verify the
2 accuracy of BellSouth's raw data. In KPMG's statement that "certain" data
3 had not been independently verified, AT&T interpreted "certain" data to
4 mean BellSouth's raw data. AT&T has absolutely no evidence that KPMG
5 did not verify the raw data used in the evaluation. To the contrary, KPMG
6 has very explicitly stated what data it used and how it was used to perform
7 the evaluation. Please see "Table 3: Data Sources for Flow-through
8 Evaluation" in KPMG's Percent Flow Through Service Requests report,
9 which was attached as Exhibit OSS-66 to my direct testimony of May 18,
10 2001.

11

12 In summary, KPMG complied with the Georgia Commission's Order when
13 it conducted the evaluation of the Percent Flow Through Service Requests
14 report. After BellSouth made KPMG's recommended changes to the
15 Flow-Through Report, KPMG found that the report satisfied the evaluation
16 criteria.

17

18 **Rejected LSRs**

19

20 Q. MCI/WORLDCOM COMPLAINS ABOUT LSRS REJECTED DUE TO
21 INCORRECT ADDRESSES. PLEASE COMMENT.

22

23 A. During the pre-order process, MCI/WorldCom should review the BellSouth
24 CSR for its customer to extract the customer's address for population to
25 the LSR , and then validate that address to RSAG. MCI/WorldCom would

1 also be reviewing services that the customer had with BellSouth for sales
2 opportunities.

3

4 Ms. Lichtenberg states on page 11, that MCI/WorldCom “has created an
5 application-to-application interface with TAG that allows MCI to perform a
6 service address validation and obtain the customer’s CSR. These two
7 transactions are necessary.” MCI/WorldCom therefore acknowledges
8 that this is a required function to prevent the issuance of a clarification
9 resulting from an incorrect service address.

10

11 Currently, two change requests (CR0313 and CR0371 which was
12 submitted by AT&T to validate on telephone number field versus the
13 address field), have been combined since both requests are related to not
14 requiring the end user address field for Resale and Migrations with activity
15 types of V, P, and Q.

16

17 As of July 12, 2001, MCI/WorldCom informed the BellSouth account team
18 that the manual handling reject number has decreased.

19

20 **Access to Loop Facility Assignment Control System (“LFACS”)**

21

22 Q. SHOULD BELLSOUTH BE HELD ACCOUNTABLE FOR CHECKING A
23 CLECS CFAS, AND FURTHER, BE REQUIRED TO PROVIDE DIRECT
24 ACCESS TO ITS LFACS?

25

1 A. The answer is no in both cases. Ms. Berger of AT&T, on page 16 line 12,
2 states, "...another source of unreasonable delay...occurs when BellSouth
3 returns a FOC without first checking the availability of its connecting
4 facility assignments ("CFAs"). BellSouth has agreed to submit a change
5 request to the CCP to alter its processes for electronically available facility
6 checks to address this issue through the addition of a post FOC
7 unsolicited response sent from BellSouth to the CLEC when the order
8 reaches PD status and after an electronic facility check has been
9 completed. Additionally an optional field would be added to designate the
10 "new" FOC response for only selected LSRs. .

11

12 Nevertheless, CLECs are responsible for submitting complete and
13 accurate LSRs with accurate assignments to BellSouth for CFA cable and
14 pair assignments, and for maintaining their own records so that they may
15 perform accurate assignments of their cables. The CFA assignments that
16 Ms. Berger's says BellSouth should check are the AT&T assignments, not
17 the BellSouth assignments. This function is clearly AT&T's responsibility.

18

19 On page 19, lines 5-6, Ms. Berger says that BellSouth agreed to give
20 AT&T access to LFACS, but that access has not yet been granted. As
21 referenced in my direct testimony on page 87, line 21 through page 88,
22 line 2, BellSouth already provides CLECs access to the LFACS database
23 through the LMU process which provides CLECs with the loop makeup
24 information needed to qualify loops for high speed services, including
25 ADSL and HDSL

1

2

Although Ms. Berger seeks to confuse the issue, BellSouth is properly working through the CCP to address AT&T's request for access to the CFA cable and pair data that resides in BellSouth's LFACS database. AT&T submitted Change Request 0368, requesting that CLECs be provided new pre-ordering functionality so that they could validate the CFA cable ID and channel pair prior to submitting the LSR. They also requested that, if it is determined that the cable id and channel pair are working, the circuit identification would be provided.

10

11

During the April 25, 2001 CCP Monthly Status meeting, CLECs re-prioritized change requests, and CR0368 moved up in the ranking to number 9. BellSouth has completed User Requirements for this effort. The "draft" User Requirements are scheduled to be delivered to the CLECs on August 3, 2001 and the final User Requirements on August 9, 2001. The scope of releases for the remainder of 2001 have not yet been finalized, but BellSouth is targeting this request for CAVE on December 08, 2001 and full production on January 5, 2002. , Once the release scope is finalized, this information will be communicated to the CLECs through regularly scheduled CCP communication channels.

21

22

Other Ordering Issues

23

24

Q. SOME CLECS HAVE EXPRESSED CONCERNS THAT BELLSOUTH HAS A "SHORTCUT" ORDERING PROCESS FOR END USER

25

1 CUSTOMERS THAT DESIRE TO RETURN TO BELL SOUTH FROM A
2 CLEC, IS THERE A BASIS FOR SUCH AN IMPLICATION?

3

4 A. Absolutely not. BellSouth does, in fact, provide end user customers (“end
5 users”) with ordering processes to make possible their return to BellSouth
6 service, but they are neither “shortcuts”, nor are they discriminatory. In
7 the simplest terms, they are essentially processes that are the reverse of
8 those used when an end user migrates from BellSouth to a CLEC in the
9 first place, and are accomplished within substantially the same time and
10 manner.

11

12 Q. PLEASE DESCRIBE THE PROCESSES.

13

14 A. There are two standard scenarios under which an end user might wish to
15 return to BellSouth for its local service – from a resale status and from a
16 facilities-based CLEC. I will describe both.

17

18 Generally, in a resale situation, an end user calls BellSouth’s retail
19 business office to express a desire to return to BellSouth, and it is the
20 retail unit that negotiates the new order to return the end user to
21 BellSouth. The ordering process is handled via the Regional Negotiation
22 System (“RNS”) or the Regional Ordering System (“ROS”) depending
23 upon whether the end user is a residential customer or business
24 customer. A “new” order is issued re-establishing the account as

1 BellSouth's, and the appropriate interval is assigned based upon the
2 products and services requested by the end user.

3

4 BellSouth also issues a “disconnect” order which discontinues the local
5 exchange service account under the CLEC’s billing authority. The dates
6 of both orders are coordinated to prevent an end user from losing dial tone
7 at the time that the billing arrangement is transferred and actual service
8 changes (if requested) occurs. Additionally, BellSouth validates the end
9 user’s desire to return back to BellSouth by contacting a third-party vendor
10 that might be representing an end user, or by obtaining a letter of agency
11 directly from the end user authorizing the transfer of service back to
12 BellSouth.

13

14 If an end user’s service is provided via a facility-based provider,
15 BellSouth’s ordering process for returning that end user to BellSouth is
16 more complex. That is because the ordering and provisioning
17 components of porting, or transferring, the end user’s telephone numbers
18 back to BellSouth include physical activities that must be coordinated with
19 the CLEC. First, the BellSouth customer service representative must set
20 up the request for service under a new BellSouth account. The “new”
21 order is issued via RNS or ROS depending upon whether the end user is
22 a residential or business customer.

23

24 Once the “new” order is processed via RNS or ROS, the BellSouth
25 representative places the order on hold until the associated coordination

1 activities are completed. The coordination activities include identification
2 of the circuit ID(s), issuing the local service request (“LSR”) to the current
3 CLEC provider, and coordinating the activities associated with the Number
4 Portability Administration Center (“NPAC” - the industry organization that
5 is responsible for handling all of the messaging between local exchange
6 service providers that must occur when telephone number ownership is
7 transferred.) To a degree, BellSouth is at the mercy of CLEC intervals,
8 and it has been our experience that, depending upon the type of service(s)
9 to which the end user subscribes, the port-back, or transfer, process could
10 take as many as twelve business days.

11

12 As I stated above, these processes clearly mirror those through which an
13 end user goes when migrating from BellSouth to a CLEC, and occur under
14 substantially the same time and manner.

15

16 **PROVISIONING**

17

18 **Completion Notifications (“CNs”)**

19

20 Q. ON PAGE 82, LINES 17-18, MR. BRADBURY STATES BELLSOUTH IS
21 MISINFORMED AS TO WHEN COMPLETION NOTICES ARE
22 DELIVERED TO CLECS. PLEASE COMMENT.

23

24 A. Mr. Bradbury’s comments concerning BellSouth’s delivery of Completion
25 Notices (“CN”) is partially correct. Contrary to Mr. Bradbury’s suggestion,

1 for the majority of orders BellSouth returns the CN once BellSouth's
2 systems determine that the service is completed, is error free, and is in
3 Completed/Error Free ("CPX") or Posted Complete/Error Free ("PCX")
4 status. On April 7, 2001, BellSouth began returning CNs for an additional
5 status category entitled Completed Order ("CP") status. There is no PC
6 status, as referred to in Mr. Bradbury's testimony. Prior to April 7, 2001,
7 BellSouth did not send a CN based on the CP status to CLECs. This
8 change was requested in November 2000, as a result of third-party
9 testing, and the change resulted in a more timely CN delivery for those
10 orders that are completed by BellSouth's provisioning units, but are not yet
11 in CPX status.

12

13 Q. DOES AT&T QUESTION BELLSOUTH'S RETURN OF COMPLETION
14 NOTIFICATIONS?

15

16 A. Yes. On page 81 of his testimony, Mr. Bradbury claims that BellSouth
17 routinely fails to return completion notifications to CLECs. Ms. Norris, on
18 pages 43-44 of her testimony, makes similar remarks. AT&T apparently
19 bases this assertion on KPMG's receipt of completion notifications during
20 the Third Party Test in Georgia. Please refer to my testimony of May 18,
21 2001, beginning at page 159 for details regarding the not satisfied test
22 criteria related to completion notifications.

23

24 During the Third-Party Test in Georgia, KPMG opened Georgia Exception
25 125 to address the issues of untimely or erroneous CNs. BellSouth

1 responded by opening defect 3078 to correct the problems related to CNs
2 for LNP orders, and feature 11920 to address CNs for non-LNP orders.
3 Feature 11920 was prioritized and implemented with Release 9.2 on April
4 6, 2001, in accordance with normal procedures defined by the CCP.
5 Defect 3078 generated two change requests that have been prioritized by
6 BellSouth's internal process. This did not allow for KPMG to re-test in
7 these areas. However, BellSouth offers the CSOTS system as an
8 alternative method by which CLECs can check the status of a service
9 order, including completion date. As outlined in Georgia Exception 125,
10 KPMG did perform a functional test to observe the accuracy of the CSOTS
11 system. Based upon these test results, KPMG found that less than 3% of
12 all transactions contained CN inconsistencies. KPMG concluded that
13 these inconsistencies were "not significant enough to affect the overall
14 evaluation of the test criterion." Thus, KPMG determined that the
15 exception had been satisfied and closed the exception with the approval of
16 the Georgia Public Service Commission.

17

18 Q. HAS BELLSOUTH RESPONDED TO MCI/WORLDCOM'S REQUEST
19 FOR TRACKING DATA?

20

21 A. Yes. On page 9, Ms. Lichtenberg of MCI/WorldCom states that MCI had
22 requested EDI tracking numbers (ISA/GA numbers) so that MCI may do
23 internal research to resolve its problem with missing notifiers for firm order
24 confirmations and completion notifications. Based upon that request,
25 BellSouth provided MCI/WorldCom with the tracking number information.

1

2

MAINTENANCE AND REPAIR

3

4 Q.

IS MR. BRADBURY OF AT&T REQUESTING THAT BELLSOUTH PROVIDE A MAINTENANCE AND REPAIR ARRANGEMENT FAR IN EXCESS OF WHAT THE FCC REQUIRES, AND IN EVEN IN EXCESS OF WHAT BELLSOUTH PROVIDES FOR ITSELF?

8

9 A.

Yes. On pages 88-93 of his testimony, Mr. Bradbury questions the nondiscriminatory nature of BellSouth's electronic trouble reporting systems. As I have stated in my direct testimony of May 18, 2001, BellSouth provides nondiscriminatory access to its electronic trouble reporting systems – the same systems that BellSouth uses for itself. In fact, and as I have also previously testified, the version of the Trouble Analysis Facilitation Interface ("TAFI") for CLECs is actually superior in that it combines the complete functionality of the separate business and residence versions that BellSouth's repair attendants use.

18

What AT&T is requesting for itself is an arrangement that is not based upon any existing standards, and would combine the functionality of the non-integrateable human-to-machine TAFI interface with the integrateable machine-to-machine Electronic Communication Trouble Administration ("ECTA") gateway to give AT&T something that BellSouth itself does not have, and that no other CLEC has requested.

25

1 Mr. Bradbury, on page 94-95, outlines the chronology of AT&T's change
2 request issued through the CCP specifically asking for TAFI functionality
3 via the ECTA interface. Unfortunately, he omits the response that
4 BellSouth provided to that change request. BellSouth informed AT&T that
5 BellSouth could develop such a non-industry-standard integrateable
6 interface, but it would require a Bona Fide Request from AT&T. Since
7 AT&T would be the only CLEC using the interface, AT&T would also have
8 to pay for this development in advance. Further, development of the
9 interface would be outside of the scope of the CCP. To date, BellSouth
10 has not received such a request.

11

12 Mr. Bradbury states, beginning at page 94, line 20, that BellSouth told the
13 FCC staff in 1998 that "BellSouth could provide initial TAFI functionality via
14 the ECTA interface in 13 months and complete functionality in 18 months."
15 BellSouth absolutely never said that. BellSouth said then (as it said in the
16 response to the change request) that it could develop a non-industry-
17 standard arrangement to deliver TAFI-like functionality over a machine-to-
18 machine interface – not that it would be provided over the existing ECTA
19 interface, which is built to national standards.

20

21 Mr. Bradbury discusses the 1999 letter to BellSouth from the FCC
22 Common Carrier Bureau staff, suggesting that it restates the FCC's
23 findings regarding nondiscriminatory access to BellSouth's repair OSS. If
24 anything, the letter actually clarifies the FCC's earlier findings on several
25 points of the BellSouth Second Louisiana Order. I have provided a copy

1 of Bureau Chief Lawrence Strickling's letter as Exhibit OSS-86 and have
2 referred to it in my discussion of flow-through elsewhere in this testimony.

3
4 Interestingly, the letter clearly shows that the FCC did not conclude that
5 TAFI's lack of integration constitutes nondiscriminatory access. Moreover,
6 although the letter does note opportunities for BellSouth to improve CLEC
7 functionalities, it also confirms BellSouth's contention that its maintenance
8 and repair access is within FCC requirements.

9
10 Further, in the first order granting 271 relief (Bell Atlantic, New York), the
11 FCC stated in Paragraph 215 that it specifically disagreed with "AT&T's
12 assertion that Bell Atlantic must demonstrate that it provides an
13 integrateable, application-to-application interface for maintenance and
14 repair." Finally, in a more recent order granting 271 relief (Southwestern
15 Bell Telephone, Texas), the FCC reaffirmed that position, stating in
16 Footnote 565 that it "determined that a BOC is not required, for the
17 purpose of satisfying checklist item 2, to implement an application-to-
18 application interface for maintenance and repair functions – provided it
19 demonstrates that it provides equivalent access to its maintenance and
20 repair functions in another manner." BellSouth has done that.

21
22 On April 20, 2001, the Georgia Commission issued its order in docket no.
23 11853-U regarding the interconnection agreement between AT&T and
24 BellSouth. The Commission ordered that:

1 BellSouth has provided AT&T with parity with respect to its
2 maintenance and repair interface through its provision of complete
3 access to TAFI.” The Commission noted that its conclusion is
4 consistent with the FCC’s New York Order: “In that proceeding, the
5 FCC found that Bell Atlantic was not obligated to demonstrate that
6 it provided “an integrateable, application-to-application interface for
7 maintenance and repair. ¶ 215. The evidence in this proceeding
8 supports that BellSouth uses the same interface that it makes
9 available to AT&T. (Tr. 1088).

10
11 Therefore, BellSouth has provided parity with regard to its maintenance
12 and repair interface.

13
14 Furthermore, the Florida Public Service Commission in its Final Order
15 (Docket No. 000731-TP) dated June 28, 2001, sent the clear message
16 that “BellSouth provides AT&T access to its M&R [maintenance and
17 repair] trouble reporting systems in a manner similar to that it provides
18 retail customers. While BellSouth's repair interfaces may not integrate all
19 functionalities AT&T desires, repair reporting access is similar to that of
20 BellSouth retail maintenance and repair.” Further, the Florida Commission
21 found “that if AT&T desires to integrate full TAFI functionality into ECTA on
22 a non-industry standard basis, AT&T shall present a formal BonaFide
23 Request to BellSouth and pay for the added functionality desired.”
24

1 GEORGIA 1000 TRIAL – A CARRIER-TO-CARRIER TEST BETWEEN
2 BELLSOUTH AND AT&T

3
4 Q. PLEASE EXPLAIN BELLSOUTH'S GOOD FAITH PURPOSE AND
5 RATIONALE FOR ENTERING THE GEORGIA 1000 TEST WITH AT&T.

6
7 A. Before discussing AT&T's allegations about the Georgia 1000 Trial,
8 particularly those made in the testimony of Edward Gibbs attached to Mr.
9 Bradbury's testimony as Exhibit JMB-3, I would like to make some general
10 comments. The purpose of my general comments is to place the Georgia
11 1000 Trial in proper context. I believe that it will be easier for this
12 Commission to understand BellSouth's rationale for agreeing to the terms
13 and conditions of the Trial, and BellSouth's expected outcome. Before
14 doing so, I would like to discuss the purpose and design of the Georgia
15 1000 Trial, particularly with regard to AT&T's reasons for requesting the
16 Trial and BellSouth's reasons for agreeing to do so.

17
18 The purpose of the Trial was to validate both BellSouth's and AT&T's
19 ordering, provisioning, billing requirements and procedures for port/loop
20 combinations. It was designed to achieve the following goals regarding
21 port/loop combinations services:

- 22 • Validate BellSouth's ability to electronically acknowledge, translate
23 and process AT&T LSRs and Supplements (SUPPs), including
24 cancellations;

- 1 • Validate BellSouth's ability to electronically send
2 Acknowledgements, Firm Order Confirmations,
3 Rejects/Clarifications/Jeopardies and Completion Notices;
- 4 • Validate AT&T's ability to properly order (via LSR) port/loop
5 combination services;
- 6 • Validate AT&T's ability to respond electronically to BellSouth's Firm
7 Order Confirmations, Rejects, Clarifications, Jeopardies and
8 Completion Notices;
- 9 • Validate BellSouth's ability to provision and bill port/loop
10 combination services (conversions, changes, suspensions,
11 restorals, cancellations, and disconnections); and
- 12 • Validate BST's ability to deliver daily usage files and bill daily
13 usage.

14
15 AT&T's stated reason for requesting the test was to ensure that both
16 AT&T and BellSouth could effectively order, provision, deliver and receive
17 usage records and bill UNE-P prior to its commercial deployment.

18
19 On October 11, 1999, BellSouth received a letter from Jill Williamson of
20 AT&T requesting that BellSouth work cooperatively with AT&T in
21 conducting a comprehensive test of the UNE-P in Georgia. AT&T
22 requested that BellSouth participate in the Trial in an effort to test and
23 operationalize AT&T's UNE-P efforts in Georgia.

24

1 To start the test, AT&T requested that BellSouth install 1000 residential
2 test lines into one of AT&T's central offices. Initially 800 lines were
3 connected as BellSouth retail lines, with provisions to install 200 new
4 UNE-P lines at a later date. The installation process was completed in
5 December 1999.

6
7 In another show of good faith, BellSouth began the installation process of
8 the 800 BellSouth retail lines without a signed test agreement. BellSouth
9 requested that AT&T provide a comprehensive test plan, but AT&T never
10 did so. BellSouth believed that because the trial was a joint effort between
11 BellSouth and AT&T, BellSouth should have had the opportunity to review
12 AT&T's intended order scenarios and expected outcomes. Moreover,
13 AT&T did not elect to follow the normal testing process by submitting
14 pathfinder orders. The pathfinder order process is a step in the testing
15 process that allows CLECs to confirm that transactions flow to the
16 production environment without incident and that transactions can be
17 properly translated. This is an important step in the testing process,
18 particularly with new functionality. Once the pathfinder process has been
19 thoroughly tested, normal testing would begin. Ordinarily, a joint Test/Trial
20 is handled in this manner. However, AT&T elected not to provide
21 BellSouth with the requested test scenarios or expected outcomes needed
22 to test effectively. Because the trial was a joint effort between BellSouth
23 and AT&T, BellSouth should have had the opportunity to review AT&T's
24 intended order scenarios and expected outcomes prior to the beginning of
25 the test.

1

2 Q. DOES MR. GIBBS MAKE NUMEROUS INCORRECT STATEMENTS
3 REGARDING THE GEORGIA 1000 TEST?

4

5 A. Yes. Mr. Gibbs claims, in paragraph 11, that the Third-Party Test ordered
6 by the Georgia Public Service Commission did not simulate real-world
7 production. This is absolutely incorrect. In fact, the KPMG report and
8 letter provided as Exhibits OSS-64-67 to my direct testimony of May 18,
9 2001 clearly disproves Mr. Gibbs' claims.

10

11 I do not agree with Mr. Gibbs' statements in paragraphs 16-17 that the
12 multiple phases of the test were due to BellSouth's OSS problems. In Mr.
13 Gibbs own testimony he states that AT&T started testing immediately
14 following the Georgia Public Service Commission's Order that allowed
15 CLECs to order the UNE-P. Mr. Gibbs' clearly states that AT&T initiated
16 testing and not BellSouth. In reality, AT&T started sending orders without
17 having a signed agreement and without even letting BellSouth know that
18 the test was beginning. It is unclear why Mr. Gibbs makes such a claim.
19 The multiple phases of the Georgia 1000 Trial were the direct result of
20 AT&T's unilateral decisions to, among other things, proceed without first
21 coming to an agreement as to the parameters of the testing.

22

23 In paragraph 19, Mr. Gibbs states, "Each phase of the Georgia 1000 test
24 began with AT&T placing an order for BellSouth to provide local phone
25 service to 800 of the 1000 lines." BellSouth does not agree. Mr. Gibbs

1 ignores that some of the difficulties were caused by the fact that AT&T
2 converted some of the BellSouth retail test accounts to UNE-P during
3 Phase I. Those accounts were not converted back to BellSouth at the
4 beginning of Phase II. Since the accounts were not migrated to their
5 original state, unnecessary complications resulted. For example, AT&T
6 submitted duplicate local service requests for the same end-users in
7 Phase I and Phase II. AT&T also issued LSRs to remove features that
8 had been previously removed. These complications also skewed the test
9 results. For this reason, BellSouth believes that the data collected by
10 AT&T for the Georgia 1000 Trial is unreliable. Moreover, BellSouth
11 believes that the Trial is theoretically flawed.

12
13 For a Trial to be both reliable and effective it has to be conducted in a
14 controlled environment. The Georgia 1000 Trial was not a controlled test.
15 BellSouth's intent was to work cooperatively with AT&T testing both
16 BellSouth's and AT&T's UNE-P capabilities and to do so in a controlled
17 environment. The purpose for conducting such a Trial is to determine if
18 gaps exist and fix them in a timely manner. The Georgia 1000 Trial
19 neither proves nor disproves BellSouth's current capabilities to provision
20 the UNE-P. In fact, the most reliable indicator of BellSouth's ability to
21 provide the UNE-P lies in commercial usage. In April, BellSouth
22 processed 40,989 LSRs for the UNE-P region-wide.

23
24 In paragraph 30, Mr. Gibbs alleges that BellSouth had significant difficulty
25 in handling AT&T orders during phase II. I do not agree. I would agree

1 that Phase II revealed gaps and that both companies worked aggressively
2 to resolve those gaps. From BellSouth's perspective, this was the
3 intended purpose of the Trial and BellSouth has made every effort to work
4 with AT&T in resolving issues.

5
6 In paragraph 28, Mr. Gibbs states, "The metrics that measured BellSouth's
7 performance in the Georgia 1000 test were agreed upon by BellSouth and
8 AT&T in the phase II and III test agreements." BellSouth never agreed to
9 AT&T's metrics. As a matter of fact, it would be impossible to do so. One
10 reason why this is impossible is the fact that EDI timestamps were the
11 primary instrument of communication between BellSouth and AT&T
12 regarding the ordering and provisioning of service during the Georgia
13 1000 Trial. BellSouth cannot calculate measures based on AT&T's EDI
14 time-stamp even if it were inclined to do so. Moreover, neither BellSouth
15 or any other party can verify AT&T's results..

16
17 The Addendum to the Georgia 1000 Trial Agreement signed by BellSouth
18 and AT&T outlines the metrics for which BellSouth would and would not
19 report results for the Trial. BellSouth PMAP metrics represent standards
20 approved by the Georgia Public Service Commission which were used as
21 the basis for BellSouth results. BellSouth adhered to the requirements in
22 the Addendum to the Georgia 1000 Trial Agreement and expected AT&T
23 to do likewise. However, the only official Georgia metric standard utilized
24 by AT&T in the test was the "Percent of Orders Acknowledged on Time"
25 metric.

20
21
22
23
24
25

In paragraph 35, Mr. Gibbs states, “BellSouth has no CLEC testing environment in which BellSouth and CLECs can test revisions to BellSouth’s OSS code to identify and solve problems before they affect real customers.” As previously discussed herein, BellSouth’s CLEC Application Verification Environment (“CAVE”) test environment was implemented on April 7, 2001. CAVE allows a CLEC to perform functional testing for pre-production and post-production releases. BellSouth and interested CLECs will use the CAVE to test some minor releases.

In paragraph 36, Mr. Gibbs states, “Phase II revealed that a customer could lose dial tone if she got cold feet about signing up for AT&T local service and changed her mind.” The scenario described in Mr. Gibbs’ testimony did occur approximately thirteen months ago and has since been corrected. As a result of the testing with AT&T, BellSouth corrected the potential service problem in June 2000. BellSouth implemented a feature, which relates both orders, and requires both dates to change if one date changes.

In paragraph 39, Mr. Gibbs states, “BellSouth’s business rules did not permit AT&T to offer customer services relating to multi-line accounts on parity with BellSouth.” This is simply incorrect. As described on pages 96-97 of my direct testimony of May 18, 2001, BellSouth’s systems allow CLECs to electronically order both initial and subsequent partial migrations. BellSouth’s systems, however, do not allow CLECs or itself to

1 provide certain features, such as multi-line hunting, across different local
2 service providers, which is what AT&T was attempting to test. Mr. Gibbs
3 contends that BellSouth could provide multi-line hunting service to its end-
4 user when AT&T could not. Mr. Gibbs specifically sites the example of a
5 multi-line hunt end user who migrates part of his service to AT&T while
6 maintaining service with BellSouth. In this instance, a multi-line hunt end
7 user would no longer remain the customer of one telephone provider.
8 BellSouth restricts hunting arrangements when the billing names are
9 different. This restriction occurs even when the hunting arrangement is at
10 the same premise. This restriction applies to BellSouth for its retail
11 accounts, as well as to CLEC accounts. Based on the equal treatment in
12 this scenario, BellSouth provides parity.

13

14 Mr. Gibbs states in paragraph 41, "The Georgia 1000 test revealed that
15 BellSouth has significant flow-through problems." I do not agree. The
16 test results revealed that both BellSouth and AT&T contributed to the
17 78.13% flow-through results AT&T achieved in Phase II. For example,
18 AT&T contributed to the fall-out percentage rate when AT&T submitted
19 multiple subsequent orders without verifying the CSR. AT&T issued order
20 upon order for the same end-user without confirming that the CSR
21 information had changed. This flaw in AT&T's methodology caused
22 unnecessary manual fall-out, thereby, resulting in a lower flow-through
23 percentage rate. Of course, that this may not have been AT&T's expected
24 outcome is unclear, since as I stated earlier, BellSouth never received the
25 test scenarios or the expected outcomes. However, in any event, AT&T

1 achieved a flow-through rate of nearly 90% in phase III, which exceeds the
2 Georgia Commission's benchmarks for UNE flow-through.

3
4 In paragraph 43, Mr. Gibbs states, "Yet 14.2% of the improper LSR
5 rejections received by AT&T were a result of mistakes by BellSouth's
6 service representatives." Because Mr. Gibbs does not provide data to
7 support his claim; therefore, I am unable to specifically respond to his
8 allegation. However, BellSouth concedes that human error may occur
9 occasionally; nevertheless BellSouth is committed to doing its part to
10 reduce these errors.

11
12 In paragraph 44, Mr. Gibbs states, "BellSouth was consistently unable to
13 send timestamps to AT&T on a timely basis as a result of various system
14 problems." BellSouth addressed this issue by installing the new Mercator
15 EDI platform in November 2000. The Mercator EDI platform has resolved
16 these problems and is providing CLECs with improved performance and
17 reliability.

18
19 In paragraphs 46-48, Mr. Gibbs claims that BellSouth maintains an
20 "inadequate telephone number reservation system." Mr. Gibbs is incorrect
21 when he says that if a CLEC wants to install new service, "step one is go
22 to the database and reserve a phone number. " It is not necessary to
23 reserve a telephone number prior to placing an order for new service.
24 Generally, a telephone number request is made at the time an end-user
25 places a firm order for new service. However, if a CLEC wants to reserve

1 telephone numbers in advance of placing a firm order for service, a
2 reservation can be made. As described in my direct testimony of May 18,
3 2001, on page 78, lines 4-6, CLECs may reserve telephone numbers
4 using the TAG or LENS interfaces. Just as for BellSouth retail, the
5 telephone number is not guaranteed.

6
7 In paragraphs 49-54, Mr. Gibbs summarizes Phase III of the trial. Phase
8 III of the Trial began on October 25, 2000 and ended February 21, 2001.
9 During this phase, AT&T and BellSouth processed transactions resulting
10 in 6,318 service orders. While Phase III of the Georgia Trial was in
11 progress, BellSouth was also in the process of migrating CLECs to a new
12 EDI platform, Mercator. BellSouth and AT&T realized that this could
13 impact the results of the Trial; however, both companies agreed to
14 continue the testing process. AT&T acknowledged that by ending Phase
15 III of the Trial after November 30, 2000, test results could be impacted, as
16 noted in the Georgia UNE Trial Agreement. AT&T also acknowledged that
17 the risk associated with running the Trial during this time period could
18 result in a negative impact on metrics measurements.

19
20 In paragraph 55 of his testimony, Mr. Gibbs stated "A frequent occurrence
21 during Phase III was the receipt of a Completion Notice for work that
22 BellSouth had not yet provisioned to AT&T's customer." Mr. Gibbs is not
23 correct. BellSouth did experience a problem during the month of
24 November 2000, which caused a delay in CLEC's receiving Completion
25 Notices. The problem not only impacted AT&T, but also affected all

1 CLECS as well as BellSouth's retail operation. The problem resulted from
2 a defect in BellSouth's CRIS Billing System, which caused completed
3 service orders not to post to the telephone account. The result was that
4 CLECs did not immediately receive completion notices and CSRs were
5 not immediately updated. The problem was identified and corrected
6 quickly.

7
8 Once the problem was identified, BellSouth advised AT&T that they
9 should verify the CSR before billing their end user customer. The CSR
10 validation process is a critical step in the validation process that CLECs
11 should perform before billing their end users.

12
13 In paragraph 56, Mr. Gibbs states "Another Completion Notice problem
14 experienced by AT&T was the receipt of Completion Notices for work that
15 had not been performed." Mr. Gibbs' allegations are simply incorrect. The
16 problem occurred when AT&T issued an LSR to migrate an end user, and
17 then issued a Supplemental LSR to modify the request. In the interim, the
18 service order had been generated and the work completed. As a result,
19 AT&T received a rejection on the subsequent request. Once an order is
20 issued and the work completed a Supplemental LSR cannot be
21 processed, but rather a new LSR must be submitted.

22
23 In paragraph 57 of his testimony, Mr. Gibbs states "AT&T ran "cold feet"
24 scenarios where a customer decides that he or she wanted AT&T service
25 and then decides to remain with BellSouth service." AT&T intentionally

1 created this problem by submitting migration orders, then issuing
2 Supplemental LSRs to cancel the request without checking the status of
3 the original order. AT&T made accusations in Phase II of the Trial that
4 BellSouth did not relate the orders that resulted in lost dial tone. BellSouth
5 corrected the problem by relating the orders to prevent a possible conflict
6 in the dates assigned to these orders. Now that BellSouth has corrected
7 the problem by relating the orders, AT&T continues to complain.

8

9 Mr. Gibbs states, at paragraph 60, “BellSouth admitted in the Phase III
10 Exception Report that at least one of its mistakes (the inadvertent
11 switching problem) was caused by a backlog in the service center.” In
12 January 2001, BellSouth opened the new Fleming Island Wholesale
13 Operations Center. The Fleming Island Center operates solely as a call
14 center, thus allowing the other centers to concentrate on order processing.

15

16 In paragraph 61, Mr. Gibbs states, “system problems were a consistent
17 source of problems during phase III”, as demonstrated in entries in the
18 Phase III Exceptions Report.” Mr. Gibbs is not correct. The data Mr.
19 Gibbs provides seems to indicate that BellSouth and AT&T were equally
20 responsibility for the problems AT&T experienced. Mr. Gibbs contends
21 that BellSouth systems caused the problems – this simply is not true.
22 AT&T constantly submitted subsequent LSRs before validating a previous
23 order had been completed and records changed. BellSouth believes that
24 AT&T’s order methodology created unnecessary manual intervention and
25 unnecessary delays.

24

Q. DID THE GEORGIA 1000 TRIAL PRODUCE PROCESS IMPROVEMENT?

A. Yes. The Georgia 1000 Trial has produced significant process improvements. The Trial has not only benefited AT&T, as its test partner, but every other CLEC submitting UNE-P orders.

- BellSouth isolated CLEC transactions from those of other trading partners on the old EDI platform. The implementation initially caused some delays as CLECs were migrated to a separate processing site and adjustments were made. This action prevented activity from other trading partners from interfering with CLEC activity.
- BellSouth, with cooperation from AT&T, detected a problem with telephone number reservation requests processed via the LENS pre-order process. The problem was identified and corrected.
- AT&T and BellSouth jointly discovered a problem with UNE-P migration activity when a supplemental request was made to cancel the original order. The problem was identified and corrected.
- AT&T made BellSouth aware of a problem with the use of the CREX USOC. CREX is a code which places calling restrictions on the line. BellSouth Business Rules were unclear. As a result, BellSouth published the CREX USOC Job Aid that defined and explained appropriate use of the code.

- 1 • AT&T and BellSouth determined that the use of all upper case
2 letters in the directory listings section did not obtain the desired
3 directory listing.
- 4 • AT&T and BellSouth used the analysis provided in the Trial to train
5 their respective service representatives on observations made
6 during the Trial.

7

8 The levels of current commercial usage reflect these improvements and
9 clearly demonstrate that BellSouth is fully capable of fulfilling UNE-P
10 orders. In Kentucky and Georgia in May 2001, CLECs electronically
11 transmitted 19, 886 LSRs for UNE-P.

12

13 **STABILITY, CAPACITY, AND AVAILABILITY OF BELLSOUTH'S**
14 **INTERFACES FOR CLECS**

15

16 **Use of RSIMMS during the Georgia Third Party Test**

17

18 Q. DOES BELLSOUTH PROVIDE CLECS WITH SUFFICIENT CAPACITY
19 TO PROCESS CURRENT AND PROJECTED VOLUMES?

20

21 A. Beginning on page 85 of his testimony, Mr. Bradbury of AT&T criticizes
22 BellSouth's production capacity for CLECs' electronic interfaces. He
23 quotes a representative of KPMG concerning BellSouth's production
24 capacity. Ms. Norris of AT&T makes similar comments, beginning at page
25 26 of her testimony. BellSouth's comment to KPMG must be put into

1 context. In mid-1999, when the MTP for the Third-Party Test in Georgia
2 was developed, it was decided that the volume tests would be performed
3 in the Reengineered Services, Installation and Maintenance Management
4 System ("RSIMMS"). RSIMMS emulates the production environment in
5 interoperability and end-to-end (flow-through) testing in support of the
6 functionality that facilitates a CLEC's ability to process the following
7 transaction types on BellSouth's OSS: submit LSRs, receive Functional
8 Acknowledgments, receive FOCs, receive CNs, and receive Rejects,
9 Clarifications, and Service Jeopardies. (BellSouth's production
10 environment is called "ENCORE.") The MTP directed KPMG to perform
11 four volume tests in RSIMMS: two normal volume tests and two peak
12 volume tests.

13

14 The volumes for these tests were determined by forecasting the expected
15 order volume for year-end 2001. KPMG obtained the transaction growth
16 rates from CLECs and BellSouth. The peak volumes were defined as
17 150% of transaction volume levels during the busiest consecutive 8 hours
18 of the normal volume test.

19

20 RSIMMS was an existing testing facility used by BellSouth that could
21 readily be used to execute the normal and peak volume tests. Moreover,
22 BellSouth, as well as KPMG, was confident that the production systems
23 could be effectively enhanced to match the RSIMMS capacity, and that is
24 precisely the conclusion KPMG reached:

1 “...except for specific, preauthorized changes that were made in
2 RSIMMS to support the requirements of the volume test, the
3 applications implemented in the RSIMMS environment mirrored those
4 of BellSouth's ENCORE production system.”

5
6 “Specific changes were made to the RSIMMS environment to support
7 the business volumes required to accomplish KPMG's volume test.
8 KPMG is not aware of any reasons, and is satisfied, that these same
9 changes could be made to the production environment such that it
10 could support the same volumes as were tested in KPMG's volume
11 evaluation.” Appendix to the MTP Final Report, on page 5, attached
12 as Exhibit OSS-64 to my direct testimony filed on May 18, 2001.

13
14 During the Georgia Third-Party Test, KPMG conducted five volume tests,
15 the purpose of which was to evaluate BellSouth's OSS associated with
16 specified volumes of pre-ordering and ordering activities, and to determine
17 if BellSouth could demonstrate the development of computing capacity for
18 a future workload level. The TAG/EDI “normal” volume test evaluated
19 BellSouth's performance by sending approximately 35,000 orders with
20 118,000 associated pre-orders on two occasions over a ten-hour period.
21 See Version 1.0 Master Test Plan Final Report at V-C-6 (describing pre-
22 ordering volume test (PRE-4) and ordering volume test (O&P-3) being
23 executed concurrently). The TAG/EDI “peak” volume test evaluated
24 BellSouth's performance by sending approximately 43,000 orders with
25 118,000 associated pre-orders on two occasions over an eight-hour

1 period. See Version 1.0 Master Test Plan Final Report at V-C-6
2 (describing pre-ordering volume test (PRE-5) and ordering volume test
3 (O&P-4) being executed concurrently). The fifth volume test occurred in
4 BellSouth's production environment and was conducted at the production
5 environment's stated capacity level, the results of which confirm the
6 capabilities of BellSouth's OSS. Specifically, KPMG tested BellSouth's
7 ability to accurately and quickly process orders and their associated pre-
8 orders using EDI and TAG using the projected year-end 2001 transaction
9 mix in the production environment at then current system capacity. See
10 Version 1.0 Master Test Plan Final Report at V-J-1 (describing ordering
11 volume test (O&P-10)). The Master Test Plan Final report was filed with
12 the Georgia Commission in Docket No. 8354-U on March 20, 2001 and
13 attached to my direct testimony filed on May 18, 2001, as Exhibit OSS-64.

14
15 As part of this test, KPMG sent approximately 7,400 orders with 24,600
16 associated pre-orders over an eight-hour period. These KPMG
17 transaction submissions augmented the volume of transactions sent by
18 live production CLECs so the total transactions that were sent during the
19 production volume test were 21,600 total orders and 73,400 total pre-
20 orders. After completing the test, KPMG found that BellSouth had
21 satisfied each of the 21 evaluation criteria associated with this EDI and
22 TAG production performance test. KPMG's production testing confirmed
23 that BellSouth's EDI and TAG interfaces provide timely Functional
24 Acknowledgements, timely and accurate FOCs, timely and accurate pre-
25 order responses, and accurate order errors and clarifications. (MTP Final

1 Report, V-J-12). This extensive volume testing effort validates that
2 BellSouth can and has developed the computing capacity to meet future
3 CLEC transaction workloads. Indeed, current production volumes in
4 ENCORE demonstrate that the systems are handling and are capable of
5 handling the necessary load. The current production volumes in ENCORE
6 are actually lower than what was tested in the third party volume tests.
7 BellSouth typically sees 15,000-20,000 LSRs per day in production. The
8 third party test tested normal and peak volumes of 35,000-45,000 LSRs
9 per day in RSIMMS. The third party test tested production volumes of
10 16,000 LSRs per day, which is closer to current volumes in production.

11
12 Since the third-party test in Georgia concluded, BellSouth has increased
13 the capacity of its production environment. Because of current
14 projections, BellSouth recently has increased the capacity of its production
15 environment. BellSouth has performed routine, ongoing, internal normal,
16 peak, and stress volume tests that have shown that BellSouth's production
17 environment has sufficient capacity. Therefore, contrary to Mr. Bradbury's
18 statements on pages 85-86 of his testimony, BellSouth's production
19 environment provides CLECs with sufficient capacity to process current
20 and projected volumes. The table below shows RSIMMS at the time of
21 the third party test, the production environment (ENCORE) at the end of
22 2000, and the production environment on June 30, 2001.

23

Type System	Application	RSIMMS2 Georgia 3PT	Production on 12/31/2000	Production on 06/30/2001

1

2 Q. ON PAGE 86 MR. BRADBURY STATES, “BELLSOUTH’S LACK OF
3 SUFFICIENT CAPACITY IS FURTHER DEMONSTRATED BY
4 MODIFICATIONS TO BELLSOUTH’S ENCORE PRODUCTION
5 ENVIRONMENT SINCE THE CONCLUSION OF THE GEORGIA
6 VOLUME TESTS. IN DECEMBER 2000, BELLSOUTH UPGRADED A
7 SERVER ASSOCIATED WITH LENS AND TAG AFTER THOSE
8 INTERFACES SUFFERED NUMEROUS OUTAGES AND CLECS
9 ENDURED DEGRADED PERFORMANCE FOR A NUMBER OF
10 MONTHS.” CAN YOU COMMENT?

11

1 A. Yes. BellSouth added a new TAG Security Server on December 11, 2000
2 as a result of the first outage that was reported by a CLEC on December
3 3, 2000. BellSouth attributed the capacity problem during the first week in
4 December 2000 to the sunset of the LENS Version 5.x Platform that
5 occurred on December 1, 2000. On December 1, 2000, the remaining
6 CLECs that were still using the 5.x Platform were migrated to the current
7 LENS platform, thereby increasing the traffic to the current LENS Platform.
8 This created the server capacity issue for TAG. As I discussed on pages
9 21-22 of my direct testimony filed on May 18, 2001, the current version of
10 LENS interfaces with the TAG gateway. BellSouth immediately added a
11 new TAG Security Server to handle the additional capacity needs. This
12 situation that occurred in December 2000 and BellSouth's solution are
13 described in the Carrier Notification Letter SN91082158 dated January
14 11, 2001 (Exhibit OSS-89)

15
16 On page 31 of her testimony, Ms. Norris of AT&T complains that KPMG
17 did not perform any stress volume testing in Georgia. The simple fact is
18 that the Georgia Commission did not deem stress testing as necessary in
19 Georgia when it issued its order for a third party test. In its ordering the
20 Georgia Commission states, "The systems will be tested at both normal
21 and peak volumes to evaluate BellSouth's ability to process representative
22 future wholesale transaction volumes to support CLEC's entry into the
23 market." (GA PSC. Docket No. 8354-U. Order on Petition for Third Party
24 Testing. Pg 4)

25

1 **EDI Capacity**

2
3 Q. DOES MR. BRADBURY INCORRECTLY INTERPRET RECENT
4 INTERRUPTIONS IN EDI SERVICE AS PROBLEMS WITH CAPACITY?

5
6 A. Yes. Beginning on page 85 of his testimony, Mr. Bradbury of AT&T
7 criticizes production capacity for EDI. The recent interruptions of service
8 on EDI to which Mr. Bradbury refers are in no way related to capacity
9 issues. Because BellSouth's former vendor who provided the translator
10 for EDI notified BellSouth that it would no longer continue to support the
11 former translator, BellSouth has been migrating CLECs to a new EDI
12 translator. All CLECs, except one, were transitioned to the new translator
13 by the end of June 2001.

14
15 The new translator provides CLECs with new capabilities. EDI is able to
16 process multiple jobs simultaneously and at a faster rate. In addition, EDI
17 is event-driven and is able to react as soon as a file is presented, as
18 opposed to being batch-driven for overnight processing as in the past.

19
20 During this transition to Mercator, some outages of the EDI system have
21 occurred. A record of those outages can be viewed on the
22 Interconnection web site as noted by Mr. Bradbury. However, I would like
23 to reiterate that these outages are not related to capacity issues or
24 "increasing demand" in any way.

25

1 Exhibit OSS-90 (provides a graphical summary of the EDI outages from
2 January through June 2001. In addition, there is a graphical presentation
3 of the outages for the months of April and June 2001. The graph entitled
4 “EDI Outages 2001” shows that there were no outages recorded on the
5 website in January 2001, In February there three (3) outages, five (5)
6 outages in March, five (5) outages in April, sixteen (16) in May and three
7 (3) in June.

8

9 In April, the resolution for one (1) of outages was recorded as a Loss of
10 Functionality (LOF) and was recorded as 17.4 hours. When compared to
11 the posted EDI system availability time, a conservative system availability
12 time of 644 hours per month was used. This was based on a 7-day 4-
13 week month as opposed to the actual hours available for a full calendar
14 month using 24 hours for Tuesday – Saturday, 18 hours on Sunday and
15 23 hours on Monday. The Loss of Functionality outage would have
16 totaled 2.70% of the total posted EDI system availability time. The four (4)
17 Full (F) outages lasted a combined total of 14.5 hours and would have
18 been 2.25 % of the total EDI posted availability time.

19

20 In May, three (3) of the sixteen posted outages were for No Outage (N)
21 situations. Four (4) were for Degraded (D) or slow service and lasted
22 2.25 hours or 0.35% of the posted EDI system availability time. Five (5) of
23 the May outages were recorded as a Loss of Functionality (LOF) and
24 lasted a combined total of 6.9 hours or 1.07% of the total EDI system

1 availability time. There were four (4) Full (F) outages which lasted a total
2 of 10 hours or 1.55% of the total posted EDI system availability time.

3

4 In June, there were three (3) outages posted. Two (2) were determined to
5 be No (0) Outages. One (1) was determined to have been for a Loss Of
6 Functionality which lasted 3.76 or 0.58% if the total EDI posted system
7 availability.

8

9 As reflected in matrix, the EDI system was available as follows for the
10 months of April, May and June as follows:

11

- 12 • April 95.05%
- 13 • May 97.03%
- 14 • June 99.42%

15

16 Nevertheless, BellSouth takes all outages very seriously, and in an effort
17 to minimize ongoing problems related to this transition, a 24/7, on-site
18 monitoring team has been put into place. This team is constantly
19 monitoring the process through the end of the Mercator transition in an
20 effort to minimize any on-going impact to our customers. Additionally, the
21 team is working with a continuous improvement team, and they have
22 already implemented several process improvements.

23

24 Q. DOES MR. BRADBURY MAKE AN INCORRECT CLAIM THAT
25 BELLSOUTH'S STEPS IN THE TRANSITION OVER TO THE NEW EDI

1 TRANSLATOR ARE “HIGHLY UNUSUAL, BUT AS YET
2 UNSUCCESSFUL STEPS” TO RESOLVE EDI OUTAGES?

3

4 A. Yes. On page 85-86, Mr. Bradbury makes this claim. As I have
5 previously discussed in my direct testimony, BellSouth acknowledges that
6 we have experienced problems while working with our customers to
7 transition them over to a new EDI translator. However, I'd like to clarify
8 that the events that took place on May 2, 2001 did not impact AT&T. At
9 the end of April, BellSouth discovered that there was a technical problem
10 with the software used for Connect Direct for UNIX. As a result, BellSouth
11 notified our customers that we were suspending the conversion of any
12 additional customers to Connect Direct UNIX. There was no impact to
13 customers, including AT&T, who were not using Connect Direct for
14 mainframe to UNIX. For those customers who were impacted, we moved
15 them back to the previous method used for Connect Direct. BellSouth
16 continues to work with our vendors to resolve this issue. Until we are
17 confident that there will be no further impact to our customers, we will
18 leave them as is.

19

20 Additionally, BellSouth notified our customers that on May 19th we would
21 have to perform an Emergency Maintenance Release and that EDI would
22 not be available for LSR processing from 12:01 AM to 6:00 AM EDT. This
23 action was taken simply to address some BellSouth internal programming
24 issues, and was not related to reduction of outages.

25

1 **LENS Outages**

2
3 Q. DOES BELLSOUTH AGREE WITH AT&T'S INTERPRETATION OF THE
4 LENS OUTAGES REPORT?

5
6 A. No. In paragraph 44 of her affidavit, Ms. Seigler of AT&T discusses the
7 adverse impact on AT&T's ability to serve its UNE-P customers due to
8 LENS outages. That should not be a problem for them in Kentucky, since
9 AT&T has no UNE-P customers. Nevertheless, we will gladly address this
10 assertion in anticipation of their entry into the market. AT&T's
11 interpretation of the LENS outage report is incorrect.

12
13 BellSouth acknowledges that there have been LENS outages . This
14 information is tracked at the BellSouth Interconnection Website under
15 Change Control Process, Type 1 System Outages.⁵ If the System Outage
16 is not resolved within 20 minutes, a notification will be provided via e-mail
17 and posted to the web within 15 minutes of the outage verification. Either
18 BellSouth or a CLEC may initiate a change request to address the
19 problem. Type 1 System Outages will be processed on an expedited
20 basis. Attached is a chart (Exhibit OSS-91) that summarizes the outages
21 for the months of March through June 2001.

22
23 Exhibit OSS-91 details the results of BellSouth's review of Type 1 outages
24 posted the Change Control Process (CCP) website for determine based

⁵ http://www.interconnection.bellsouth.com/markets/lec/ccp_live/ccp_so.html

1 on the final resolution on for each of the outages and compares it to the
2 total time of the LENS posted system availability time. Upon resolution,
3 each outage is classified into one of four (4) categories. The first is a No
4 Outage condition that may occur for several reasons. First, the
5 investigation finds that no problem actually existed. Second, the problem
6 may be determined to have occurred on the customer side. Third, the
7 investigation was unable to confirm that an outage actually occurred. And
8 finally, the reported outage actually occurred during a previously
9 announced scheduled downtime. Next, there is a Degraded (D) Outage.
10 A Degraded Outage means that an application is processing less than
11 normal capacity or is providing slow responses. This degraded condition
12 may also impact one or more customers. Then, there is Loss of
13 Functionality (LOF). Loss of Functionality is incurred when a function
14 normally provided by an application is unavailable to any customer. This
15 may also impact one or more customers. And, finally, there is a Full (F)
16 Outage. A Full Outage occurs when an application is down or is totally
17 inoperative to one or more CLECs.

18
19 In the month of March 2001, there were a total of fifteen (15) outages.
20 Four (4) were determined to have been No Outage (N) and thus had no
21 time associated with them. Four (4) were Degraded (D) or slow outages
22 which lasted a total of 4.85 hours. Three outages (3) fell into the Loss of
23 Functionality (LOF) category for a total of 6.6.83 hours. And, four (4) of
24 those were determined to have fallen into the Full (F) category and lasted
25 a total of 3.28 hours.

14
15
16
17
18
19
20
21
22
23
24
25

In the Month of April 2001, there were a total of ten (10) outages posted on the website. Four (4) were found to be No Outage situations, two (2) for Loss of Functionality lasting a total of 2.01 hours and four (4) were for Full Outages which lasted a total of 7.86 hours.

In May 2001, there were a total twelve (12) outages posted. Four (4) were for No Outages, three (3) for Degraded Outages lasting a total of 3.33 hours, three (3) Loss of Functionality which lasted 33.51 hours, and three (3) were Full (F) outages which lasted a total of 2.76 hours. You will note that there are a total of 13 outage types recorded in May but with a total of 12 outages reported. This is because (O) one outage was recorded as for both a Degraded (D) and a Full (F) outage.

In June 2001, there were a total of sixteen (15) outages posted. Three (3) were for No Outage (N). Five (5) were for Degraded (D) or slow outages which lasted a total of 5.53 hours. Four (4) were for Loss of Functionality (LOF) and lasted a total of 10.08 hours. Finally, there were 4 Full (F) outages which lasted 3.86 hours. You will again note that there were a total of 16 outage types recorded for the 15 outages in June. Again, one outage was recorded as both a Degraded (D) and a Full (F) outage.

A further comparison assessment was made which compared the total number of actual outage hours for each type of outage and the posted system availability hours. The supporting details of the assessment are

1 noted in the matrix in Exhibit OSS-91. .A conservative time of system
2 availability of 548 hours per month was used. This was based on a 7- day
3 4- week month as opposed to the actual hours available for a full calendar
4 month using 21 hours of system availability for Monday - Friday, 18 hours
5 for Saturday and 14 hours for Sunday.

6
7 In March four (4) of the total number of fifteen (15) outages were for No
8 Outage (N). The four (4) Degraded (D) or slow outages totaling 4.85 hours
9 would have equated to 0.89% of the total LENS posted system availability
10 time. The time for the three (3) Loss of Functionality (LOF) outages of 6.83
11 hours equated to 1.25% of the total of the posted LENS system availability
12 time. And finally, the time associated with the four (4) Full outages (F) of
13 3.28 hours would have been a total of 0.60% of the LENS system posted
14 availability time.

15
16 In April, four (4) of the total of 10 outages were determined to have been
17 for No Outages (N). There were 2.01 hours posted for two (2) Loss for
18 Functionality (LOF) outages that totaled 0.37% of the total posted LENS
19 system availability time. Four (4) Full (F) Outages were determined to
20 have lasted a total of 7.86 hours that equated to 1.43% of the total time
21 posted as LENS system total availability time.

22
23 For May there were four (4) No Outages (N) reported. The three (3)
24 Degraded (D) or slow service outages that lasted 3.33 hours totaled
25 0.61% of the posted LENS system total availability time. The three (3)

1 Loss of Functionality outages that totaled 33.51 hours or 6.11% of the total
2 availability time were due mainly to one order type. LENS was having a
3 problem returning notifications on xDSL orders. The investigation
4 revealed that the problem was caused by a configuration problem.
5 Measures were immediately put into place for a temporary fix and a team
6 was formed to determine a long-term fix. The long-term fix was
7 determined and was implemented on June 2, 2001. Finally, there were
8 three (3) Full (F) outages which totaled 2.76 hours or 0.50% of the total
9 availability time.

10

11 In June, there were three (3) No Outages (N) reported. Five (5) Degraded
12 (D) or slow outages lasted a total of 5.53 hours or a total of 1.10% of the
13 total posted system availability time. Four (4) Loss of Functionality (LOF)
14 outages totaled 10.08 hours or 1.84% of the total posted system
15 availability time. There were four (4) Full (F) outages that lasted 3.86
16 hours or 0.70% of the total posted system availability time.

17

18 As the matrix reflects from the Full Outage data, the LENS system has
19 been available as follows for the months from March through June:

20

- 21 • March 97.27%
- 22 • April 98.2%
- 23 • May 92.77%
- 24 • June 96.45%

25

1 It is important to note that even though an outage is posted to the website
2 that in many cases it may only not impact some of our all CLECs. As
3 outlined in the Glossary that has been provided as a part of Exhibit OSS-
4 91 that all type of outages, even a Full Outage, may impact only one
5 customer. However, the posting of the outages to the web serves as a
6 useful tool. It allows us to alert all of our customers that a problem has
7 been reported and that each of those problems are actively being
8 investigated by BellSouth.

9

10 **TAG Response Time**

11

12 Q. DOES BELLSOUTH AGREE WITH MS. LICHTENBERG'S
13 ASSESSMENT OF THE TAG RESPONSE TIME ISSUE?

14 A. No. On page 11, Ms. Lichtenberg describes what she believes to be a
15 TAG response time issue. BellSouth does not agree with her
16 interpretation of the issue. Our investigation revealed that this problem is
17 being caused by the way MCI/WorldCom is using the TAG security server.
18 Currently, MCI/WorldCom is making a separate request through the TAG
19 security server with each transaction it submits. The TAG security server
20 is not designed to handle requests in this manner. Instead,
21 MCI/WorldCom should acquire credentials once during the day and reuse
22 them on all subsequent transactions. This will require a re-coding effort
23 on MCI/WorldCom's part of their front-end interface to TAG. The design of
24 the TAG security server and the way to use it properly was discussed with
25 MCI/WorldCom. Detailed information for the proper coding of their system

1 can be found in the TAG API Documentation which is located at the
2 BellSouth Interconnection website.⁶

3

4 This discussion may possibly have been the source that caused the
5 misunderstanding Ms. Lichtenberg had when she stated, “the system was
6 not built for the stress our commercial entry is placing on it.” While the
7 security server is not designed to handle transactions in the manner
8 MCI/WorldCom is using it, the TAG environment is designed to handle the
9 volume of business our customers are doing with BellSouth.

10

11 BellSouth feels confident that all of our OSS are fully capable of handling
12 the orders submitted to us electronically. However, if MCI/WorldCom
13 continues to have concerns surrounding this issue, the BellSouth
14 MCI/WorldCom Account Team stands by its previous offer to work with
15 MCI/WorldCom by using MCI/WorldCom forecasted data to ensure that
16 our capacity estimates do in fact meet MCI/WorldCom’s. Thus far,
17 MCI/WorldCom has refused to provide that data.

18

19 **Third-Party Test of System Availability**

20

21 Q. MS. NORRIS QUESTIONS KPMG’S TESTING OF BELLSOUTH’S
22 SYSTEM AVAILABILITY PLEASE COMMENT

23

⁶ http://www.interconnection.bellsouth.com/oss/tag/tag_info.html

1 A. On page 42, Ms. Norris questions KPMG's method of testing BellSouth's
2 system availability. Contrary to Ms. Norris's statements, KPMG did
3 evaluate BellSouth's system availability properly, as reflected in Georgia
4 Exception 133. Georgia Exception 133 describes KPMG's concerns
5 regarding BellSouth's system availability and measurement of system
6 availability. As a result, BellSouth modified the associated SQM
7 measurement, and both KPMG and the Georgia Commission closed the
8 exception as satisfied.

9

10 **CONCLUSION**

11

12 Q. PLEASE CONCLUDE YOUR TESTIMONY.

13

14 A. BellSouth's interfaces, processes, and procedures provide CLECs with
15 access to the required OSS information and functions in substantially the
16 same time and manner as BellSouth's access for its retail customers, and
17 therefore conform to the FCC's definition of non-discriminatory access.
18 BellSouth's OSS is designed, developed, modified, and measured for
19 performance on a region-wide basis to operate in an undistinguishable
20 manner whether a CLEC is in Kentucky, Georgia or any of the other seven
21 states in BellSouth's region. PWC evaluated and confirmed BellSouth's
22 assertion that its OSS is regional in nature. BellSouth respectfully submits
23 that the Commission can rely on the results of the independent third-party
24 test performed in Georgia, in addition to the evidence of actual commercial

1 usage, to determine that BellSouth provides nondiscriminatory access on
2 a region wide basis to its OSS in Kentucky.
