*Case No. 2002-00312*

Dear Board Members:

There is a lot of controversy over the proposed power plant in Trapp. Environmentalist are opposed to the plant because of hydrocarbon emissions.

If we listen to the environmentalist we will be trying to cover the ocean floor next. The ocean puts out more hydrocarbons than all of the cars and equipment of the world. The Bermuda Triangle alone gives off huge amounts of hydrocarbons

Furthermore we need small power plants scattered all over the United States so we are not dependent on one area for supply. This would diminish the threat of terrorist attacks and allow companies to compete for electric sales.

As we will need more and more electric to power home computers and televisions ,we can use the Trapp project to do so. Please consider supporting this proposed plant.

Thanks for Your Time

*David L. Combs*
