## COMMONWEALTH OF KENTUCKY BEFORE THE PUBLIC SERVICE COMMISSION

IN THE MATTER OF:	
ADJUSTMENT OF THE RATES OF KENTUCKY-AMERICAN WATER COMPANY	) CASE NO. 2004-00103 )
	)

## REBUTTAL TESTIMONY OF JAMES E. SALSER ON BEHALF OF KENTUCKY-AMERICAN WATER COMPANY

October 8, 2004

1			KENTUCKY AMERICAN WATER
2			CASE NO. 2004-00103
3			<b>REBUTTAL TESTIMONY</b>
4 5			JAMES E. SALSER
5 6			
7	1.	Q.	STATE YOUR NAME FOR THE RECORD.
8		А.	My name is James E. Salser.
9			
10	2.	Q.	WHAT IS THE PRUPOSE OF YOUR REBUTTAL TESTIMONY IN
11			THIS CASE?
12		<b>A.</b>	The purpose of my rebuttal testimony is to address certain issues and
13			revenue requirement adjustments that were made by the Attorney
14			General's witness, Ms. Andrea C. Crane.
15			
16	3.	Q.	WHAT ARE THE ISSUES THAT YOU WILL BE ADDRESSING IN
17			YOUR REBUTTAL TESTIMONY?
18		А.	They are as follows:
19			1. Cash working capital – Service Company and
20			Depreciation
21			Update of lag day on AG DR 2-29
22			2. Annualization of the Residential and Commercial water sales and
23			customers for the forecast period.
24			
25	CAS	SH WOI	<u> RKING CAPITAL – SERVICE COMPANY</u>
26			
27	4.	Q.	WHY DO YOU DISAGREE WITH MS. CRANE POSITION ON
28			LAG DAYS USED FOR THE SERVICE COMPANY.
29		А.	The service company bill is more than just labor costs. The service
30			company has a number of expenses that are due on the first day of the
31			month such as rental for the office buildings, rents for office equipment
32			and computers, the maintenance of software programs on computers,

1			leased telephone lines for computers and group insurance, to name just a
2			few. The service company makes overnight investments on cash at the
3			end of each business day and the interest earned is reflected as a reduction
4			on the service company bill. The Service Company charges are not the
5			same as Company payroll as suggested by Ms. Crane, and the timing of
6			the payment of Service Company invoices does not support change from
7			(1.34) days to the 12 days proposed by Ms. Crane.
8			
9	CAS	SH WO	RKING CAPITAL – DEPRECIATION EXPENSE
10			
11	5.	Q.	PLEASE EXPLAIN MS. CRANE'S POSITION ON THE
12			DEPRECIATION EXPENSE AS IT RELATED TO THE
13			COMPANY'S CASH WORKING CAPITAL ALLOWANCE.
14		А.	Ms. Crane proposes depreciation expense be eliminated from the
15			Company's cash working capital allowance.
16			
17	(	0	DO YOU AGREE WITH ELIMINATING DEPRECIATION

No, not at all. Depreciation expense is the recovery of the depreciable utility plant placed in service over their plant lives. I have assigned a zero expense lag in this lead/lag study for depreciation expense. With a 36.59 day lag between customer payment and the water service provided, the collection for depreciation will also be 36.59 days. The Company records depreciation expense monthly that increases accumulated depreciation that reduces the Company's rate base, therefore in determining the rate base utilizing a thirteen month average if the 36.59 day lag is not reflect in rate base the investor will not have the opportunity to earn a return on their full

1 in the working cash allowance and indicating the issue had previously 2 been upheld by the Franklin County Circuit Court. Ms. Crane's 3 inappropriate elimination of depreciation from the lead/lay study reduces 4 cash working capital by \$691,025 and her proposed change of my 5 recommended service company lag of (1.34) days also inappropriately 6 reduces the cash working capital by \$142.000, or a total rate base 7 deduction of \$ 833,025. 8 9 CASH WORKING CAPITAL - UPDATED LAG DAYS 10 **RELATED TO AG DR NO. 2-29.** 11 7. 12 **Q**. WOULD YOU EXPLAIN THE DIFFERENCE BETWEEN THE 13 KAWC FILING AND THE RESPONSE TO AG 2-29. 14 A. I utilized a sister company lag days for the expenses in the Company's rate 15 case filing as reflected on Ms. Crane direct testimony page 25. Before the 16 dead line to issue the AG's Data Request it was my understanding that 17 there was an understanding between the Company and AG's office that I 18 would update the lag day by using KAWC actual information for the year 19 2003 for these expenses. The response to AG 2-29 reflects that update. 20 21 ANNUALIZATION OF RESIDENTIAL AND COMMERCIAL CUSTOMERS 22 23 8. **O**. MR. SALSER, IN PREPARING THE BILL ANALYSIS FOR THE 24 ACTUAL BASE PERIOD, DID YOU FIND A PROBLEM WITH 25 THE NUMBER OF CUSTOMERS FOR RESIDENTIAL AND 26 COMMERICAL CLASSES IN THE BASE PERIOD OF SIX 27 MONTHS ACTUAL AND SIX MONTHS BUDGET? 28 А. The first six months of the base period was overstated due to Yes. 29 doubling up of the billings for the period December 13, 2003 through 30 December 31, 2003. December 2003 financials were cut off on December 31 12, 2003. To reflect a full month billing, the period December 13, 2003

1 through December 31, 2003 was added to the first part of December 2 billings. The month of January 2004 billing information also included the 3 period December 13, 2003 through January 30, 2004 that was added to the 4 first five months of the base period, doubling the usage and customers for 5 this period in the base period. Update Schedules M - 3.1C, T and E Page 1 of 8 shows the number of residential customer bills of 1,154,162, 6 7 19,823, and 3,254 respectively. . 8 9 9. MR. SALSER HAVE YOU PREPARED AN EXHIBIT JES-1 **Q**. 10 FOLLOWING THE FORMAT INCLUDED IN MS. CRANE'S 11 **DIRECT TESTIMONY?** 12 A. Yes. 13 14 10. WOULD YOU BREIFLY EXPLAIN EACH PART OF EXHIBIT **Q**. 15 JES - 1 AND WHERE THE RELATED INFORMATION IS FOUND 16 **IN MS. CRANE'S DIRECT TESTIMONY?** 17 A. Part I reflects the consumption per day for the residential customer class 18 over certain periods from October 1997 through November 2005. The 19 first three periods are the same as shown in Ms Crane's direct testimony 20 on page 37. I have added the periods for calendar years 2002, 2003 and 21 the base period has been revised to reflect the actual information ended 22 July 2004. The forecast period reflects Dr. Spitznagel's and Ms. Crane's 23 recommended gallons per day. Ms. Crane's recommended consumption 24 of 174.68 gallon for the residential customer was last realized during the 25 year 2002. As shown in Part 1 of Exhibit JES-1, the residential customer 26 daily consumption is continuing to decline. Dr. Spitznagel's 27 recommended gallon per day is higher than calendar year 2003 and the 28 twelve months ended July 2004, the base period updated to actual. Ms. 29 Crane's forecast is not consistent with the detailed analysis prepared by 30 Dr. Spitznagel in past cases nor is it reflective of sales level expected in 31 the forecast period.

Part II shows the Residential customer annual consumption in thousand gallons as indicated in Ms. Crane's direct testimony on page 38. The only difference between the three is I inserted a line for the Base Period Update which is the actual during the base period of 59 thousand gallons and secondly added the last two lines showing the comparison of the forecast gallon of 60 thousand gallons supported by Dr. Spitznagel and the 64 thousand gallons recommended by Ms. Crane. Again Ms. Crane's recommendation is not reflective of expected sales and has been skewed by the error in the six months of the base period.

11

12 Part III shows the number of residential customers, by district for the 6 + 613 actual base period (August 2003 – July 2004) per the filing, updated base 14 period, forecasted period per filing (December 2004 – November 2005) 15 and Ms. Crane's forecast recommendation which was the same as the 16 Company's filing for the 6 + 6 base period (see Ms. Cranes direct 17 testimony page 41). As I stated earlier in my testimony, the Company 18 doubled-up the customers billed for the period December 13, 2003 19 through December 31, 2003 as shown in the first column. The second 20 column reflects the updated actual base period (actual billed residential 21 customers for the period August 2003 through July 2004) number of 22 residential customer of 98,103. The Company's forecast period 23 (December 2004 through November 2005) number of customers is 24 101,956 with an increase of 3,853 residential customers. Historically the 25 Company has increased the customer base by approximately 2,500 26 customers annually. The increase of 3,853 customers represents an annual 27 increase of 2,890 for the sixteen month period ending November 2005. 28 Based on this information the company has probably overstated its 29 residential customers by approximately 520 customers instead of 30 understating residential customers by 669 as suggested by Ms. Crane. Ms. 31 Crane's recommendation regarding residential customers is overstated due to the problem in the 6 + 6 base period, and not reflective of the forecast period

11

12

25

Part IV shows the Commercial customer annual consumption in thousand gallons as indicated in Ms. Crane's direct testimony on page 43. The only difference between the two schedules is the addition of the Base Period Update which is the actual during the base period of 512.thousand gallons per customer, and Dr. Spitznagel's and Ms. Crane's recommendation of 506 and 536 thousand gallons respectively. As shown on Part IV the company has not experienced the average thousand gallons sold supported by Ms. Crane since 2001.

13 Part V reflects the consumption per day for the commercial customer over 14 certain periods from October 1997 through November 2005. The first 15 three periods are the same as shown in Ms Crane's direct testimony on 16 page 44. The next three periods show the commercial consumption per 17 day based on more current information. The forecast period is the 18 consumption per day for the forecast period supported by Dr. Spitznagel 19 and Ms. Crane respectively. Here again the last year the actual 20 commercial customer average usage was above Ms. Crane's 21 recommendation was in 2001. As shown in Part V of Exhibit JES-1 the 22 commercial customer daily consumption is continuing to decline, and Ms. 23 Crane's recommendation has been skewed by the error in the 6 + 6 base 24 period filing.

Part VI shows the number of commercial customers by district for the 6 +
base period (August 2003 – July 2004) per filing, updated base period,
forecasted period per filing (December 2004 – November 2005) and Ms.
Crane's recommendation which was the Company's filing for the 6 + 6
base period (see Ms. Cranes direct testimony page 45). As I stated earlier
in my testimony, the Company doubled-up the customers billed for the

6

1 period December 13, 2003 through December 31, 2003 as shown in the 2 first column. The second column reflects the updated base period (actual 3 billed commercial customers for the period August 2003 through July 4 2004) number of commercial customers of 8,211. The Company's 5 forecast period (December 2004 through November 2005) number of customers is 8,289 with an increase of 78 commercial customers. 6 Ms. 7 Crane's use of the Company's 6 + 6 base period filing of 8,482 for 8 commercial customers for the forecast period results in an overstatement 9 of approximately 190 commercial customers.

## 11 11. Q. WHAT IS YOUR CONCLUSION FROM THE DATA SHOWN ON 12 EXHIBIT JES-1?

13 The Company regrets the doubling of the usage and customers in the 6 A. 14 month actual and 6 months budget base period filing and any 15 inconvenience it has caused Ms. Crane. However, her recommendation 16 for forecasted residential and commercial sales (and going-level 17 revenues) have been overstated because of this error which was corrected 18 in the update to reflect actual data for the base period. Ms. Crane's 19 recommended going level revenue adjustment to add \$1.9 million of 20 revenue is not reflective of actual usage trends and would not be reflective 21 of the going-level revenue for the forecast period. The Company's sales 22 levels and going-level revenues for the forecast period capture current 23 usage trends and are normalized to reflect those trends as adjusted for 24 weather fluctuations. The Company's forecasted customers, water sales, 25 and going-level revenues should be used to determine the appropriate rates 26 in this case.

27

10

28 29

## 12. Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

А.

Yes.
