Reference: Kentucky America Water Company Rate Increase Request

Many mistakes have been made dealing with Kentucky America Water Company but we need not continue along this line by granting them the outrageous rate increase that they are requesting.

In February 2005 Kentucky American Water was given a rate increase of 8.5% and the most they should now be allowed is to account for inflation since that time which will be about 12% not the 30% they are requesting. Most businesses make up for inflation and profit increases by growth and increases in productivity, this should be the case for Kentucky America Water.

When it comes to public utilities we the customers have no options as to where we can buy service, so, please please standup for us. Even a 12% increase is too mush considering the growth in the number of customers.

George T. Williams
