COMMONWEALTH OF KENTUCKY  
BEFORE THE PUBLIC SERVICE COMMISSION

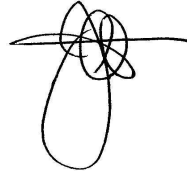

In the Matter of:

AN INVESTIGATION INTO THE INTRASTATE ) ADMINISTRATIVE  
SWITCHED ACCESS RATES OF ALL ) CASE NO.  
KENTUCKY INCUMBENT AND ) 2010-00398  
COMPETITIVE LOCAL EXCHANGE )  
CARRIERS )

**PREFILED DIRECT TESTIMONY OF EMMANUEL STAURULAKIS  
FILED ON BEHALF OF  
THE RURAL LOCAL EXCHANGE CARRIERS**

**July 8, 2011**

1 **Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 A1. My name is Emmanuel Staurulakis. My business address is 7852 Walker Drive, Suite  
3 200, Greenbelt, Maryland 20770.

4 **Q2. BY WHOM AND IN WHAT CAPACITY ARE YOU EMPLOYED?**

5 A2. I am President of John Staurulakis, Inc. (JSI) a telecommunications consulting firm  
6 providing a full range of financial, regulatory and management consulting services to  
7 independent telecommunications providers throughout the nation.

8 **Q3. PLEASE BRIEFLY OUTLINE YOUR EDUCATION, TRAINING AND  
9 EXPERIENCE IN THE TELEPHONE INDUSTRY.**

10 A3. In 1980, I received a Bachelor of Arts degree in Business Administration from the  
11 American University, Washington, D.C. Since beginning my career with JSI in May  
12 1980, I have completed numerous jurisdictional cost separation studies on behalf of rate-  
13 of-return ILECs, developed and filed state and interstate access tariffs, participated in the

1 preparation of local rate cases, and have testified before a number of state regulatory  
2 authorities on numerous topics including access reform and universal service reform.

3 **Q4. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS CASE?**

4 A4. I have been requested to testify on behalf of the Kentucky Incumbent Rural Local  
5 Exchange Carriers (collectively referred to as the RLECs).<sup>1</sup>

6 **Q5. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

7 A5. The purpose of my testimony is to address various shortcomings and deficiencies I have  
8 observed in the plan filed by AT&T (AT&T Plan) regarding reform of intrastate switched  
9 access rates of the RLECs and the creation of a Kentucky universal service fund  
10 (KYUSF) in this proceeding. My testimony will also address universal service and  
11 intercarrier compensation (ICC) reform efforts underway at the federal level and how  
12 such reforms, if implemented, will impact the RLECs and any reform efforts undertaken  
13 by the Public Service Commission of the Commonwealth of Kentucky (Commission). In  
14 addition, my testimony addresses reasons for the differences in the RLEC's intrastate and  
15 interstate tariff switched access rates and how such rates are a significant part of the  
16 RLECs' regulated network cost structure.

17

---

<sup>1</sup> Ballard Rural Telephone Cooperative Corporation, Inc.; Brandenburg Telephone Company; Duo County Telephone Cooperative Corporation, Inc.; Foothills Rural Telephone Cooperative, Inc.; Gearhart Communications Co., Inc.; Highland Telephone Cooperative, Inc.; Logan Telephone Cooperative, Inc.; Mountain Rural Telephone Cooperative, Inc.; North Central Telephone Cooperative Corporation; Peoples Rural Telephone Cooperative, Inc.; South Central Rural Telephone Cooperative Corporation, Inc.; Thacker-Grigsby Telephone Company, Inc.; and West Kentucky Rural Telephone Cooperative Corporation, Inc.

1 **Q6. ARE THE RLECS OPPOSED TO INTRASTATE ACCESS REFORM** M  
2 **INCLUDING CREATION OF A KENTUCKY UNIVERSAL SERVICE** FUND  
3 **(KYUSF)?**

4 A6. No. I understand that the RLECs are not opposed to a plan to reform intrastate switched  
5 access rates in a manner that continues to allow for continued delivery and maintenance  
6 of affordable basic and advanced telecommunications services to end-user customers in  
7 rural Kentucky. The RLECs believe that the creation of a state universal service fund is  
8 essential to any intrastate switched access reform measures undertaken by the  
9 Commission. The creation of a properly sized and sustainable KYUSF is the best way to  
10 ensure continued availability of quality broadband and basic local exchange service to all  
11 rural Kentucky end users at affordable rates. In addition, I believe any switched access  
12 reform measures undertaken in Kentucky must take into consideration pending switched  
13 access reform measures currently under consideration by the FCC in accordance with its  
14 recent Notice of Proposed Rulemaking (NPRM).<sup>2</sup>

15 **Q7. DO THE RLECS SUPPORT THE ACCESS REFORM PLAN SUBMITTED BY**  
16 **AT&T (AT&T PLAN)?**

17 A7. No. The RLECs do not believe that the AT&T Plan for the reform of intrastate access  
18 rates is in the best interests of the RLECs and their rural subscribers. Moreover,  
19 implementation of the AT&T Plan could have adverse impacts on the ability of the  
20 RLECs to continue providing basic and advanced telecommunications services to their  
21 rural subscribers at affordable rates.

---

<sup>2</sup> See Federal Communications Commission Notice of Proposed Rulemaking and Further Notice of Proposed Rulemaking, FCC 11-13, Released February 9, 2011 (FCC NPRM).

1 **Q8. WHAT ASPECTS OF THE AT&T PLAN DO OTHER RLECS OPPOSE?**

2 A8. The RLECs oppose a number of the mechanisms included in the AT&T Plan. First, the  
3 RLECs oppose the mirroring of state switched access rates with current interstate  
4 switched access rates at the outset of the AT&T Plan. Second, the RLECs oppose the  
5 five-year transition period contained in the Plan. Third, the RLECs oppose the use of an  
6 access line based revenue shift for determining the level of support to be recovered from a  
7 properly sized KYUSF on an annual basis. Fourth, the RLECs oppose the unreasonably  
8 high annual increase in basic local rates proposed in the AT&T Plan. Finally, the AT&T  
9 Plan is not consistent with access reform measures advocated by AT&T at the federal  
10 level.

11 **Q9. DOES AT&T OFFER ANY PROOF THAT THE INTRASTATE SWITCHED**  
12 **ACCESS RATES OF THE RLECS CREATE THE HARMS DESCRIBED ON**  
13 **PAGE 2 OF ITS COMMENTS TO THE COMMISSION IN THIS PROCEEDING?**

14 A9. No. The comments filed by AT&T in this proceeding offer no support or proof of the  
15 three primary assertions raised on page 2 regarding the RLEC's intrastate switched access  
16 rates.<sup>3</sup> Specifically, AT&T offers no proof that the RLEC's intrastate switched access  
17 rates are responsible for keeping long-distance rates in Kentucky too high, or that  
18 competition in the state is being impeded or that the majority of Kentucky ratepayers are  
19 subsidizing ratepayers of the RLECs. Instead, the assertions of harm raised by AT&T  
20 appear to be nothing more than a smoke screen to cover AT&T's apparent intent—which  
21 is to abolish all state and federal rules and obligations surrounding the origination and

1 termination of traffic over the public switched telephone network (PST N) so that AT&T  
2 can save money and thereby improve its own competitive and financial standing.<sup>4</sup> While  
3 the RLECs believe that reform of the existing intercarrier compensation regime and  
4 federal high-cost support mechanisms is necessary, the RLECs do not agree with AT&T's  
5 ill-advised proposals as described both in its comments to the Commission and in its  
6 comments in response to the FCC's NPRM.

7 **Q10. WHY DO THE RLECS OPPOSE THE MIRRORING OF STATE SWITCHED**  
8 **ACCESS RATES WITH INTERSTATE SWITCHED ACCESS RATES AS**  
9 **PROPOSED IN THE AT&T PLAN?**

10 A10. The RLECs oppose any mirroring of state and interstate switched access rates because of  
11 the uncertainty and pace of interstate access reform at the federal level and the potential  
12 impact that mirroring will have on the size of a KYUSF. The FCC's NPRM, while  
13 addressing reform of state and interstate switched access rates, makes no specific  
14 proposals for how such reform will unfold. Nowhere in the NRPM does the FCC endorse  
15 a mirroring mechanism for the reform of state and interstate switched access charges.  
16 Given the FCC's goals for a gradual transition in the reduction of access charges in order  
17 to minimize market disruptions, it would appear that the mirroring mechanism stated in  
18 the AT&T Plan would not meet the FCC's goals. Should the FCC move forward and  
19 begin reducing interstate switched access rates ahead of any actions undertaken in

---

<sup>3</sup> See responses by AT&T Kentucky to RLECs First Data Requests, May 2, 2011: The RLECs sought information from AT&T of its plan, but AT&T's responses were less than forthcoming.  
<sup>4</sup> See AT&T Inc. 10-K Report Filed Period 2010, filed on 3/1/2011, page 14 (AT&T 10-K Report): "However, since the Telecom Act was passed, the Federal Communications Commission (FCC) and some state regulatory commissions have maintained certain regulatory requirements that were imposed decades ago on our traditional wireline subsidiaries when they operated as legal monopolies. Where appropriate, we are pursuing additional

1 Kentucky, then the financial impact associated with the mirroring of rates could be even  
2 more severe than the numbers submitted by the RLECs in response to the Commission's  
3 data request.<sup>5</sup> For these reasons, the Commission should reject any reform mechanism  
4 that includes the ongoing mirroring of intrastate access rate levels with corresponding  
5 interstate access rate levels.

6 **Q11. WHAT IS AN APPROPRIATE AND REASONABLE TRANSITION PERIOD**  
7 **OVER WHICH INTRASTATE SWITCHED ACCESS RATES SHOULD BE**  
8 **BROUGHT INTO PARITY WITH CORRESPONDING INTERSTATE**  
9 **SWITCHED ACCESS RATES?**

10 A11. I believe an appropriate transition period for any reduction in switched access rates and  
11 recovery of associated lost access revenue from a KY USF should be longer than the five-  
12 year period stated in the AT&T Plan. At a minimum, the RLECs believe a transition  
13 period of at least ten years is appropriate. While the FCC makes reference to a longer  
14 "glide path" for rate of return carriers in its NPRM, it does not mention any specific  
15 period of time, in terms of years, over which switched access rates are to be reduced.<sup>6</sup>  
16 With regard to the voluntary reform of state access rates, the FCC proposes a four-year  
17 period for states to voluntarily begin reform of state access rates before the FCC would

---

legislative and regulatory measures to reduce regulatory burdens that inhibit our ability to compete more effectively and offer services wanted and needed by our customers."  
<sup>5</sup> See response of RLECs to Kentucky PSC data request. The collective reduction in intrastate switched access revenues for the RLECs associated with the mirroring of state access rates and interstate rates is approximately [REDACTED].  
<sup>6</sup> See FCC NPRM at paragraphs 533 and 542: "We also believe it is important for any transition to be gradual enough to enable the private sector to react and plan accordingly." and "Rate-of-return carriers' interstate access rates are higher than price cap carriers' interstate access rates, and continue to increase every year. Should the Commission consider giving rate-of-return carriers additional time?"

1 take action.<sup>7</sup> It would appear that if states are to be given up to four years to undertake  
2 access reform efforts, then the FCC is contemplating a transition period well in excess of  
3 four years to bring state rates into parity with interstate rates. Even if the Commission  
4 orders a shorter transition period for any reduction in switched access rates, recovery of  
5 the associated lost access revenue from a KYUSF should continue for a minimum of at  
6 least ten years. In its NPRM, the FCC states that any transition plan to reform interstate  
7 access charges must be done so in a manner that will minimize market disruptions.<sup>8</sup> At  
8 the federal level, precedent exists for transition periods in excess of five years for matters  
9 involving access charges and universal service reform. In the National Broadband Plan,  
10 the FCC discusses a ten-year transition period for the elimination of per-minute of use  
11 switched access rates and legacy high-cost support mechanisms.<sup>9</sup> In its order establishing  
12 the twenty-five percent (25%) Gross Allocator, the FCC established an eight-year  
13 transition period for carriers to phase-up or phase-down their subscriber plant factor  
14 (SPF) to the 25% level.<sup>10</sup>

15 One state that recently undertook access reform and creation of state universal  
16 service fund instituted a transition period in excess of five years for the recovery of lost  
17 access revenue. The state of Georgia completed an access reform and state Universal  
18 Access Fund proceeding in 2010 that resulted in the five-year transition of states switched

---

<sup>7</sup> See FCC NPRM at para. 534: "We also propose a backstop mechanism through which, after a specified period of time such as four years, the Commission would take action if states have not done so".

<sup>8</sup> See FCC NPRM at para. 521: "As the D.C. Circuit has recognized, avoiding market disruption pending broader reforms is, of course, a standard and accepted justification for a temporary rule."

<sup>9</sup> See Federal Communications Commission Connecting America: The National Broadband Plan, released March 16, 2010, page 148 (NBP).

<sup>10</sup> The Subscriber Plant Factor is defined in section 36.154(e) of the Commission's rules. 47 C.F.R. § 36.154(e). It was frozen in 1981 and then transitioned to 25% between 1985 and 1993, subject to the limitations in section 36.154(f) of the Commission's rules. 47 C.F.R. § 36.154(f).

1 access rates to targeted interstate switched access rate levels (rates in effect on July 1,  
2 2010) in equal annual increments. For Georgia ILECs, recovery of the resulting state  
3 switched access revenue shortfall comes from a state universal access fund for a period of  
4 ten years.<sup>11</sup>

5 Given the level of displaced access revenue that will result from any meaningful  
6 access reform efforts undertaken in Kentucky and the potential impact on rural end users,  
7 the importance of a significant transition period, longer than the five years in the opinion  
8 of the RLECs, cannot be understated. I submit that a significant transition period is in  
9 the public interest and will provide needed stability for the RLECs to plan for and deploy  
10 the infrastructure necessary to provide critical services to customers in rural Kentucky.

11 **Q12. WOULD THE PER LINE ACCESS SHIFT MECHANISM DESCRIBED IN**  
12 **SECTION 4 OF THE AT&T PLAN PROVIDE FOR ADEQUATE RECOVERY**  
13 **OF LOST INTRASTATE ACCESS REVENUE RESULTING FROM**  
14 **MIRRORING OF INTRASTATE AND INTERSTATE SWITCHED ACCESS**  
15 **RATES?**

16 A12. No. The per-line access shift mechanism described in the AT&T Plan will result in the  
17 inability of the RLECs to fully recover their underlying intrastate access costs due to the  
18 RLECs' year-over-year decreases in access lines similar to what the entire rural ILEC  
19 industry is experiencing. Given the potential shift in cost recovery to end user customers  
20 being considered by the FCC, the RLECs believe that the pace of basic local service  
21 disconnection will accelerate. Assuming a KY USF of approximately \$ [REDACTED] ased

---

<sup>11</sup>See Georgia Public Service Commission Order Implementing House Bill 168, Docket No. 32235, November 23, 2010.

1 on responses to the Commission data requests and an average decrease in billable retail  
2 local exchange lines of five RLECs would face a collective annual  
3 decrease in KYUSF support of over \$1 million. Since the RLECs will continue to have  
4 carrier of last resort (COLR) obligations that call for the provision of service to customers  
5 residing throughout their service territories, there is no basis for placing KYUSF support  
6 on a per-line basis as called for in the AT&T Plan. Even at the federal level, high-cost  
7 support payments are based on the overall cost of the RLECs' network at an authorized  
8 rate-of-return, not on a per-line basis. Similarly, a KYUSF should be adequately sized in  
9 order to recognize the costs associated with maintaining critical RLEC networks rather  
10 than the number of lines served.

11 **Q13. SHOULD THE COMMISSION CONSIDER ESTABLISHING A REASONABLE**  
12 **BENCHMARK FOR BASIC LOCAL EXCHANGE RATES IN CONJUNCTION**  
13 **WITH THE ESTABLISHMENT OF A KYUSF?**

14 A13. Yes. While the RLECs support establishment of a reasonable and affordable basic local  
15 service benchmark in conjunction with the creation of a KYUSF, I recommend the  
16 Commission strike a balance between the benchmark level established and the potential  
17 for harm to rural end users and the RLECs that serve them. Even though the AT&T Plan  
18 is silent with respect to an actual monthly basic local service benchmark, AT&T's  
19 comments in the FCC's NPRM support a monthly benchmark of between \$27 and \$30  
20 per line.<sup>12</sup> According to AT&T, even if a carrier chooses not to increase basic local

---

<sup>12</sup> See Comments of AT&T Inc. in FCC NPRM, April 18, 2011, page 33 (AT&T Comments): "Specifically, the Commission could set a benchmark rate that it believes is reasonable for intrastate end-user rates. This benchmark could initially be set at a low level, such as \$27, and rise gradually to a higher level, such as \$30. Before returning to

1           servicerates to the benchmark established, it would be required to im           pute or deduct the  
2           amount not charged to the end user from any interstate cost recovery           mechanism. A  
3           review of the monthly residential basic local service rates of           the RLECs indicates an  
4           average rate that appears to be well below the \$27 to \$30 benchmark support           ed by  
5           AT&T. Using a five-year transition period as called for in the           AT&T Plan, a yearly  
6           increase of \$3 or more may very well be required to get tariff           residential basic local  
7           service rates of the RLECs up to the benchmark level prescribed by           AT&T in its  
8           comments to the FCC. The RLECs believe that a yearly increas           e of \$3 in residential  
9           basic local service rates is excessive and could result in rat           eshock to the rural subscribers  
10          of the RLECs. The RLECs believe that any yearly increase in           residential basic local  
11          service rates prescribed by the Commission should not be at the level           s prescribed by  
12          AT&T. The RLECs recognize that a suitable Kentucky benchmark may           be a reasonable  
13          policy adopted by the Commission. In making this determination, the RLEC           s are hopeful  
14          the Commission will undertake a fact-based investigation into what be           nchmark is  
15          appropriate for Kentucky.

---

federal sources of revenue recovery, a provider would be expected to exercise whatever regulatory flexibility it has at the state level to raise its intrastate end-user charges to the benchmark level.”

1 **Q14. PLEASE DESCRIBE THE FCC'S RECENT RECOMMENDATIONS**  
2 **REGARDING REFORM OF THE LEGACY HIGH-COST FEDERAL US F**  
3 **MECHANISMS AND HOW SUCH REFORM MEASURES, IF ULTIMATE LY**  
4 **APPROVED, WILL IMPACT FUTURE FEDERAL HIGH-COST SUPPORT TO**  
5 **THE RLECS?**

6 A14. On February 9, 2011, the FCC released a Notice of Proposed Rulemaking (“NPRM”)  
7 seeking comment on numerous issues including reform of the federal high -cost universal  
8 service funding mechanisms.<sup>13</sup> The legacy high-cost funding mechanisms cited for  
9 reform in the NPRM include High-Cost Loop Support (“HCLS”), Local S witching  
10 Support (“LSS”), Interstate Common Line Support (“ICLS”) and Safety -Net Additive  
11 Support (“SNA”). All of the RLECs are recipients of most or al l of the legacy support  
12 mechanisms listed above. As a result, any actions undertaken by the F CC to decrease  
13 HCLS and SNA payments will place upward financial pressure on intr astate earnings of  
14 the RLECs and increase the amount of support needed from a KYUSF. I n the NPRM,  
15 the FCC recommends changes to the algorithm utilized to calculate HCLS including the  
16 elimination of corporate operations expense. In addition, the NPRM recom mends  
17 complete elimination of SNA over a three-year period. The changes to HCLS and phase-  
18 out of SNA would begin in January, 2012 according to the NPRM. Utilizing 2009 data,  
19 JSI has calculated a collective decrease of approximately \$1.52 [REDACTED] in HCLS and  
20 SNA payments to several of the RLECs equating to a 4.5 per [REDACTED] cent re duction in legacy  
21 HCLS and SNA payments.<sup>14</sup> Extrapolating the 4.5 [REDACTED] percent reduction to the \$51.5 [REDACTED]

---

<sup>13</sup>See FCC NPRM.

<sup>14</sup>The five JSI cost companies include: Duo County, F oothills, Peoples Rural, South Central and West Ken tucky.

1 [REDACTED] in 2010 federal high-cost support payments paid to the RLECs r results in a  
2 collective decrease of approximately \$2 [REDACTED] HCLS and SNA, loop-based  
3 support that is used to offset intrastate costs and would need to be re covered from a  
4 KYUSF.

5 **Q15. WHAT OTHER LEGACY HIGH-COST SUPPORT PROGRAM IN THE FCC'S**  
6 **NPRM THAT, IF ENACTED, WOULD IMPACT THE RLECS?**

7 **A15.** In addition to the HCLS and SNA near-term reform measures being c onsidered by the  
8 FCC, the NPRM also discusses the elimination of LSS over a three -year period. In 2010,  
9 the RLECs received approximately \$3 [REDACTED] LSS. While LSS is considered to be  
10 an explicit interstate high-cost funding mechanism, elimination of LSS will place  
11 additional burden on the financial viability of the RLECs if the FCC does not allow  
12 carriers to recover the revenue shortfall from other federal cost recovery mechanisms  
13 including the interstate local switching rate, federal subscriber line charges and or the  
14 proposed Connect America Fund (CAF). If the FCC were to allow recovery of lost LSS  
15 support via increases in the tariff interstate local switching rate, the collective interstate  
16 local switching rate of the RLECs would increase by approximately [REDACTED]

17 [REDACTED]. Given that the composite per-minute interstate switched access rate of the  
18 RLECs is approximately [REDACTED] elimination of LSS would result in a 40 [REDACTED]  
19 increase in the RLEC's composite interstate switched access rate. Such uncertainty with  
20 respect to what the FCC may do to the LSS mechanism further compl icates any state  
21 access and USF reform that the Commission must consider and that the AT&T Plan fails  
22 to address.

1 **Q16. IS THE AT&T PLAN CONSISTENT WITH AT&T’S COMMENTS IN THE**  
 2 **FCC’S PROCEEDING TO REFORM THE LEGACY HIGH-COST FEDERAL**  
 3 **UNIVERSAL SERVICE AND INTERCARRIER COMPENSATION (ICC)**  
 4 **MECHANISMS?**

5 **A16.** No. I have examined AT&T’s filed comments in response to the FCC’s NPRM. AT&T  
 6 proposes an aggressive phase-down in the intrastate and interstate switched access rates  
 7 of all carriers. Specifically, AT&T proposes a reduction in all per-minute rates to  
 8 \$0.0007 beginning in 2012 and concluding in 2016. Beginning in 2017, AT&T proposes  
 9 a bill-and-keep regime for the exchange of all time division multiplexing (TDM) traffic.<sup>15</sup>  
 10 AT&T also proposes elimination of all COLR, interconnection and tariff filing obligations  
 11 for TDM traffic. I believe the comments filed by AT&T in response to the FCC’s NPRM  
 12 demonstrate AT&T’s true position and intent with respect to existing switched access  
 13 rates. In its plan for Kentucky, AT&T makes no mention of total elimination of intrastate  
 14 switched access rates. The AT&T plan makes no mention of a measured phase-down in  
 15 intrastate switched access rates in equal increments as it proposes in its comments to the  
 16 FCC. The AT&T plan also makes no mention of eliminating COLR, interconnection and

---

<sup>15</sup>See AT&T Comments, pages 31-32. “Specifically:  
 • On January 1, 2012, intrastate access charges will be reduced to the level of interstate access charges. If a carrier’s reciprocal compensation charges exceed its interstate access charges, the former will be reduced to the level of the latter at this step, and both will be phased down in accordance with the access-charges schedule outlined immediately below.<sup>55</sup>  
 • On January 1 of the succeeding four years (that is, 2013, 2014, 2015, and 2016), access charges will be reduced in equal steps until, in 2016, they are harmonized with all other intercarrier compensation charges and reduced to a rate of \$0.0007. During this transition, when a carrier’s access charges reach the level of its reciprocal compensation charges, the two charges will be unified and reduced together in accordance with the schedule outlined above.  
 • On January 1, 2017, access rates will be fully detariffed, and all government mandated intercarrier compensation obligations will be eliminated ( *i.e.*, the default rule for intercarrier compensation on the PSTN will be bill and keep).<sup>56</sup> Providers will, however, remain free to negotiate interprovider payments as they do on the Internet today.<sup>57</sup>

1 tariffing requirements that are currently the domain of this Commission. In fact, AT&T's  
2 comments in the FCC proceeding underscore AT&T's true position with respect to what  
3 regulatory body has ultimate authority over all switched access traffic, state and interstate.  
4 It is AT&T's position that the FCC has the authority to preempt the Commission with  
5 respect to jurisdiction over intrastate switched access charges. The RLECs do not believe  
6 that the FCC has the statutory authority to preempt the Commission with regard to  
7 intrastate access reform but even if it did, the RLECs believe that the Commission better  
8 understands what is in the best interests of all Kentucky ratepayers. Finally, in its  
9 comments to the FCC, AT&T states that the size of any increase in rates to end-users  
10 could be as much as \$3.00 per year.<sup>16</sup> In its plan filed with the Commission, AT&T  
11 proposes a maximum rate increase of \$2.00 per year. I believe that annual increases of  
12 \$2.00 or more to residential basic local service rates is excessive and unreasonable.

13 **Q17. WHAT IS THE TOTAL AMOUNT OF ANNUAL INTRASTATE AND**  
14 **INTERSTATE SWITCHED ACCESS REVENUE THAT THE RLECS WOULD**  
15 **NEED TO RECOVER IF THE FCC WERE TO ADOPT A BILL-AND-KEEP**  
16 **INTERCARRIER COMPENSATION MECHANISM AS SUPPORTED BY**  
17 **AT&T'S COMMENTS?**

18 A17. Based on calendar year 2010 originating and terminating switched access minutes of use  
19 for the RLECs, adoption of a bill & keep mechanism would create an annual revenue  
20 shortfall of approximately \$[REDACTED] in the intrastate jurisdiction and a shortfall of  
21 approximately \$[REDACTED] in the interstate jurisdiction. In AT&T's comments in the

---

• On January 1, 2017, the regulatory superstructure applied to legacy TDM based telecommunications services—including interconnection obligations, service obligations, tariffing, and unbundling—will also be eliminated.

1 FCC's NPRM, the access revenue shortfall would be recovered first by increases in basic  
2 local service rates and federal subscriber line charges before it could be recovered from a  
3 federal funding mechanism. Such a scenario assumes that a federal recovery mechanism  
4 would support lost intrastate access revenue not recoverable through a K YUSF  
5 mechanism. At this time, it is far from certain if the CAF mechanism envisioned by the  
6 FCC will be large enough to accommodate lost access revenue associated with reductions  
7 in intrastate switched access rates.

8 **Q18. WHO WOULD BENEFIT MOST IF SWITCHED ACCESS RATES WERE**  
9 **REDUCED TO \$0.0007 PER MINUTE OR TO ZERO IN ACCORDANCE WITH**  
10 **A BILL-AND-KEEP MECHANISM AS PROPOSED IN AT&T'S COMMENTS**  
11 **TO THE FCC?**

12 A18. The interexchange carriers (IXCs), wireless carriers, and AT&T, would be the primary  
13 beneficiaries of any reduction in switched access rates that are well below the RLECs'  
14 costs of providing end-office access services. Given the fact that access charges are a  
15 significant expense for AT&T, any decrease in access charges will flow directly to  
16 AT&T's bottom line. In 2010, AT&T's wireline segment had net income of \$7.8 billion  
17 on revenue of \$61.2 billion. <sup>17</sup>Any decrease in switched access charge expense would  
18 increase AT&T's robust wireline net income even more.

<sup>16</sup>See AT&T Comments, page 34.

<sup>17</sup>See AT&T 10-K Report, page 9.

1 **Q19. ARE THE TARIFFED INTRASTATE SWITCHED ACCESS RATES ASSESSED**  
2 **BY THE RLECS AN IMPORTANT SOURCE OF NETWORK COST**  
3 **RECOVERY AND PART OF THE RLECS' INTRASTATE REGULATED RATE**  
4 **DESIGN?**

5 A19. Yes, the intrastate switched and special access rates reflect the design in section 17 of the PSCKY  
6 No. 2A tariff is intended to generate a level of intrastate access revenue that, when  
7 combined with regulated basic local service revenue, the non-traffic sensitive revenue  
8 requirement and federal universal service support, generates the requisite amount of  
9 regulated intrastate revenue so that each RLEC can meet its authorized intrastate rate-of-  
10 return and carry out its COLR responsibilities as established by the Commission.

11 **Q20. ARE THE NETWORK COSTS UNDERLYING THE RLEC'S TARIFF**  
12 **INTRASTATE AND INTERSTATE SWITCHED ACCESS RATES**  
13 **INHERENTLY DIFFERENT?**

14 A20. No. The tariff intrastate and interstate switched access rates of each RLEC are based on  
15 the regulated network costs of the RLEC in accordance with the FCC's Uniform System  
16 of Accounts for Telecommunications Companies. As a rate of return carriers, each RLEC  
17 is required to follow the FCC's Part 32 Accounting rules for the appropriate classification  
18 of regulated telecommunications investment and expense. The FCC's Part 36  
19 Jurisdictional Separations rules are utilized to allocate regulated investment and expenses  
20 between the intrastate and interstate jurisdictions. The FCC's Part 69 Access Charges  
21 rules are then utilized to apportion jurisdictionalized interstate investment and expenses  
22 to the appropriate access categories. The interstate switched access rates of each RLEC

1 are then calculated by dividing the appropriate Part 69 access category by the appropriate  
2 demand units, originating and terminating minutes of use. Since each RLEC participates  
3 in the NECA Common Line Pool and most of the RLECs participate in the NECA Traffic  
4 Sensitive Pool, interstate switched access rates change every year as NECA is required to  
5 re-file tariff rates annually.<sup>18</sup> In the intrastate jurisdiction, the states switched access rates  
6 of each RLEC are reflected in section 17 of Tariff PSCKY No. 2A effective November 1,  
7 1999 and reflect the interstate switched access rates contained in NECA Tariff FCC No. 5  
8 effective on November 1, 1999. The intrastate non-traffic sensitive revenue requirement  
9 charge reflected in the RLEC's access tariff is assessed on a per access line, per month  
10 basis. Aside from the difference in frequency of the required re-filing of state and  
11 interstate rates, each RLEC's switched access rates reflect its regulated network costs at  
12 an authorized rate of return prescribed by the Commission and the FCC.

13 **Q21. WHAT ACCOUNTS FOR THE SIGNIFICANT DIFFERENCE BETWEEN THE**  
14 **RLECS TARIFF INTRASTATE AND INTERSTATE SWITCHED ACCESS**  
15 **RATES?**

16 **A21.** The fundamental reason for the difference between the RLEC's intra state and interstate  
17 switched access rates is due to actions taken some time ago by the FCC to remove and  
18 convert cost recovery reflected in the per-minute of user rates and make the cost recovery  
19 explicit.<sup>19</sup> As a result of the FCC's reform efforts, the per-minute interstate carrier

---

<sup>18</sup> Gearheart-Coalfields and South Central Rural are issuing carriers in JSI Tariff F.C.C. No. 1 for traffic sensitive rates and are required by the FCC to re-file rates biannually.

<sup>19</sup> See Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers, Federal-State Joint Board on Universal Service, Access Charge Reform for Incumbent Local Exchange Carriers Subject to Rate-of-Return Regulation, Prescribing the Authorized Rate of Return for Interstate Services of Local Exchange Carriers, Second Report and Order and Further Notice of

1 common line rate was eliminated and the associated cost recovery was moved to the ICLS  
2 mechanism. At the same time, the FCC reduced the portion of the per -minute interstate  
3 local switching rate associated with the Dial Equipment Weighting Factor and moved the  
4 associated cost recovery to the LSS mechanism. The ICLS and LSS mechanisms are  
5 components of the federal high-cost universal service program. All of the RLECs are  
6 recipients of ICLS and LSS. So while the FCC's previous reform measures resulted in a  
7 decrease in the per-minute rates of the RLECs, recovery of the underlying network costs  
8 were shifted to the ICLS and LSS mechanisms.

9 **Q22. HAVE YOU CALCULATED THE TRUE DIFFERENCE BETWEEN THE**  
10 **COMPOSITE STATE AND INTERSTATE SWITCHED ACCESS RATES FOR**  
11 **THE RLECS?**

12 **A22.** Yes. I have calculated this for the RLECs. The average composite intrastate switched  
13 access rate in 2010 is approximately \$0.095 per minute (including the non-traffic  
14 sensitive revenue requirement element) versus approximately \$0.02 per minute in the  
15 interstate jurisdiction per the rates in NECA Tariff F.C.C. No. 5. In order to truly  
16 compare the difference in intrastate and interstate composite switched access rates of the  
17 RLECs, I divided the amount of annual ICLS and LSS received by the RLECs by the total  
18 amount of billed originating and terminating access minutes and added the amount to the  
19 existing composite interstate rate. Dividing 2010 ICLS and LSS support paid to the  
20 RLECs by 2010 interstate minutes of use yields a composite rate per minute of \$0.0699  
21 that, when added to the existing average composite rate of \$0.02 results in a true

1 interstate composite switched access rate per minute of \$0.0899 or approximately nine  
2 cents.<sup>20</sup> The true composite interstate switched access rate of \$0.09 is actually very close  
3 to the composite intrastate switched access rate of \$0.095 per minute. While the RLEC  
4 switched access composite rates calculated above are not actually being assessed on IXC  
5 originated and terminated traffic on a per-minute of use basis, these rates nevertheless are  
6 representative of the RLEC's costs of providing access services.

7 **Q23. DO ESTHIS CONCLUDE YOUR PRE-FILED DIRECT TESTIMONY?**

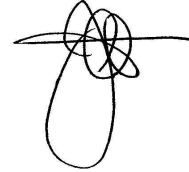

8 A23. Yes.

---

<sup>20</sup> According to the disbursements section of the Universal Service Administrative Company (USAC) website, the RLECs received approximately \$[REDACTED] CLS and \$[REDACTED] LSS for a total of \$26.9[REDACTED] in calendar year 2010. Calendar year 2010 originating and terminating interstate minutes of use reported to NECA by the RLECs was approximately 38[REDACTED]

**CERTIFICATE OF SERVICE**

In accordance with Ordering Paragraph No. 5 of the Commission's March 10, 2011 Order, this is to certify that the RLECs' July 8, 2011 electronic filing is a true and accurate copy of the documents to be filed in paper medium; that the electronic filing has been transmitted to the Commission on July 8, 2011; that an original and one copy of the filing will be delivered to the Commission on July 8, 2011; and that, on July 8, 2011, electronic mail notification of the electronic filing will be provided through the Commission's electronic filings system.

A handwritten signature in black ink, consisting of several loops and a horizontal line extending to the right.
