**TESTIMONY OF**  
**RONALD L. WILLHITE**  
**SCHOOL ENERGY MANAGER PROJECT DIRECTOR**  
**KENTUCKY SCHOOL BOARDS ASSOCIATION**

**FILED: OCTOBER 3, 2012**

1 INTRODUCTION  
2

3 **Q. Please state your name and business address.**

4 A. My name is Ronald L. Willhite, 7375 Wolf Spring Trace, Louisville, KY 40241.

5 **Q. By whom are you employed?**

6 A. I have been engaged by the Kentucky School Boards Association to examine the filing of  
7 Louisville Gas and Electric Company (“LGE”) in this proceeding and to address concerns  
8 of its member public school districts receiving service from LG&E. The Kentucky  
9 School Boards Association (KSBA) is a nonprofit corporation of school boards from each  
10 public school district in Kentucky. The association, founded in 1936, now has over 75  
11 years of serving school board members and school districts in such areas as governmental  
12 relations, board member and team development, risk management, facility planning,  
13 energy management, legal services, policy services, publications and community  
14 relations. It is governed by a 27-member board of directors made up of representatives  
15 elected as regional chairpersons or as directors-at-large. With nearly 900 school board  
16 members, KSBA is the largest organization of elected officials in Kentucky.  
17

18 **Q. Please describe your regulatory and public school experience.**

19  
20 A. In December 2001 I retired from LG&E Energy Services. Prior to the formation of the  
21 service organization and following the PowerGen acquisition of LG&E Energy Corp., I  
22 had been employed by Louisville Gas and Electric Utilities Company. During my tenure  
23 at LGE I testified before this and other commissions on numerous rate and regulatory  
24 matters. In March 2010 I was employed by KSBA to develop and direct the School  
25 Energy Managers Project (SEMP). From 1989 to 1998 I served on the Scott County  
26 Board of Education, the last six years as its chairman, and since 2009 have served on  
27 their Energy Committee. I graduated from the University of Kentucky in 1969 earning a  
28 B.S. in Electrical Engineering.  
29

30 **Q. Please describe Kentucky’s public schools and the role of boards of education.**

31  
32 A. Kentucky has some 1233 P-12 public schools serving 640,000 students that are overseen  
33 per statute by 174 local school boards pursuant to KRS 160.290:

34 *“Each board of education shall have general control and management*  
35 *of the public schools in its district and may establish schools and provide*  
36 *for courses and other services as it deems necessary for the promotion of*  
37 *education and the general health and welfare of pupils, consistent with*  
38 *the administrative regulations of the Kentucky Board of Education.*  
39 *Each board shall have control and management of all school funds and*

*all public school property of its district and may use its funds and property to promote public education. Each board shall exercise generally all powers prescribed by law in the administration of its public school system, appoint the superintendent of schools, and fix the compensation of employees.”*

**Q. What specific issues are you addressing?**

A. I will address the following; 1) efforts being taken by public schools to manage their use of energy, 2) all-electric service to schools, 3) Rate Schedules PS, TODS and TODP minimums, 4) the kw threshold for Rate Schedules TODS and TODP service and 5) sport field lighting.

**Q. How will the requested increase affect schools?**

A. Kentucky’s public schools are being severely impacted by today’s economic conditions. After personnel energy is the second highest cost for schools. Unlike businesses that can increase sales or prices to offset cost increases, public schools must either cut programs or attempt to raise taxes. Public schools cannot refuse service to a student or limit their enrollment.

**Public School District Energy Management Initiatives**

**Q. What are schools doing to manage energy costs?**

A. First of all the General Assembly and Governor are focused on assisting schools in making intelligent energy choices.

*“In an effort to reduce rising energy costs that are straining school budgets”* the General Assembly in 2008 passed House Bill 2, which became law on July 15, 2008 as KRS 160.325. Pursuant to KRS 160.325 boards of education began reporting annually through the Kentucky Pollution Prevention Center (“KPPC”) to the Department for Energy Development and Independence and the Legislative Research Commission on the status of the development of energy management plans by those boards of education and the anticipated savings to be obtained from those plans.

On July 15, 2010 KRS 157.455 became law stating that the Kentucky Department of Education and all school districts undertaking the construction of new school buildings or the major renovation of existing school buildings are strongly encouraged to:

- (a) Meet or exceed efficient school design standards in planning and designing all new buildings and major renovation projects;
- (b) Use life-cycle cost analysis to evaluate different design proposals; and

- 1 (c) Consider the possibility that each new school building or major renovation of a  
2 building could be a net zero building, either during the construction or renovation, or  
3 at a later date as resources become available.  
4

5 The statute further requires the Department of Education to develop and adopt guidelines for  
6 efficient school design, net zero buildings, and life-cycle cost analysis, including the  
7 identification of appropriate computer-based simulation programs for use in undertaking life-  
8 cycle cost analysis. The Departments of Education and Energy Development and  
9 Independence are required to assist school districts in:

- 10  
11 (a) Developing methods for measuring ongoing operating savings resulting from the use  
12 of efficient school design;  
13  
14 (b) Identifying sources for training for school staff and students to ensure that efficient  
15 school design features and components are fully utilized; and  
16  
17 (c) Identifying ways that efficient school design and its energy-saving components can  
18 be integrated into the school curriculum.  
19

20 Finally, the statute requires the Departments of Education and Energy Development and  
21 Independence to report annually to the Legislative Research Commission and the Governor  
22 the following for new school buildings or building renovations:  
23

- 24 (a) An assessment of the implementation of efficient school design within Kentucky's  
25 education system;  
26  
27 (b) Documented energy savings from any buildings built using efficient school design or  
28 net zero school buildings in operation;  
29  
30 (c) A list of the new or renovated school buildings completed or identified for future  
31 construction during the prior year using efficient school design, including the name of  
32 the school district, name of the school, total project cost, additional cost or savings, if  
33 any, associated with efficient school design features, and efficient school design  
34 features included in the project;  
35  
36 (d) A list of all school buildings that operate as a net zero building, and school buildings  
37 which school districts plan to convert to net zero. The list shall include the name of  
38 the school district, the name of the school, the total cost associated with the school  
39 building becoming a net zero building, and the components that will be installed to  
40 make the building a net zero building;  
41  
42 (e) Any recommendations relating to efficient school design; and  
43  
44 (f) A list of new school buildings completed during the prior year without using efficient  
45 school design and an explanation of why efficient school design was not used.  
46

1                   **Q. Please describe the School Energy Managers Project (SEMP).**

2  
3    A.    In support of the state’s energy plan to increase energy efficiency in Kentucky’s public  
4    schools, Governor Beshear authorized \$5.1million in Recovery Act funds from the U.S.  
5    Department of Energy to create the School Energy Managers Project (SEMP). The  
6    Kentucky School Boards Association (“KSBA) was chosen to develop and administer  
7    SEMP. The Project was initiated in March 2010 and coordinated the development of a  
8    state-wide energy management infrastructure that has focused public school districts on  
9    fostering intelligent energy choices in new and existing buildings through implementation  
10   of energy efficiency projects. SEMP provided matching funds for districts to employ  
11   energy managers to assemble information, access technical resources and formulate and  
12   implement energy management plans. As a result of SEMP 35 energy managers were  
13   employed to go along with 14 then existing energy managers to serve 144 of the 174  
14   districts. This effort has resulted in both significant emission reductions and monetary  
15   savings to enhance the educational opportunities for the Commonwealth’s public school  
16   students. Even though funding for SEMP expired this past April, 32 of 49 of the energy  
17   managers were retained.

18  
19   **Q.    What actions have been taken by boards of education?**

20  
21    A.    All 174 public school boards of education have adopted and implemented an Energy  
22    Management Policy. Most district policies are as follows:

23                                   **Energy Management Policy**

24                   *It is the intent of the Board that the District use energy resources in a safe*  
25                   *and efficient manner with an on-going focus on identifying and*  
26                   *implementing cost saving measures and developing staff and student*  
27                   *commitment to identified energy management practices.*

28                   *To promote this effort, the Superintendent/designee shall direct the*  
29                   *development of an energy management plan (EMP) for Board approval and*  
30                   *oversee the implementation and maintenance of that plan, which shall*  
31                   *address the following components:*

32                   *1. A District level committee shall be appointed by the*  
33                   *Superintendent/designee to develop and implement the energy management*  
34                   *plan (EMP).*

35                   *2. The District level committee shall track and monitor the EMP to*  
36                   *determine progress toward managing and reducing energy costs.*

37                   *3. Effective with the 2011-2012 school year, the Superintendent/designee*  
38                   *shall report the EMP results for each fiscal year, including annual District*  
39                   *energy usage, costs and anticipated savings to KPPC - the Kentucky*  
40                   *Pollution Prevention Center – by October 1<sup>st</sup> annually through the Kentucky*  
41                   *Energy Efficiency Program for Schools (KEEPS).*

1 *A status report on implementation of the plan in Board-owned and Board-*  
2 *operated facilities shall be provided to the Board following the end of each*  
3 *fiscal year*  
4

5 **Q. Please explain activities undertaken by the school energy managers.**  
6

7 A. Most districts have established an energy committee and have developed and  
8 implemented an energy management plan under the leadership and assistance by their  
9 energy manager. The energy managers initially reviewed utility bills and developed  
10 historical baselines. Recognizing that students are the future home and community energy  
11 managers, energy managers working in conjunction with the Kentucky National Energy  
12 Education Development Project (NEED) and the Kentucky Green and Healthy School  
13 Program (KGHS) are actively involved with teachers in curriculum modifications that are  
14 being implemented to foster energy awareness as envisioned by the Governor's  
15 comprehensive energy plan for Kentucky, "Intelligent Energy Choices for Kentucky's  
16 Future." The energy managers have worked closely with LG&E's demand-side  
17 management staff to benefit from energy audits and capture rebates from the Company's  
18 program as they have replaced inefficient lighting.

19  
20 **Q. Please explain how Kentucky's public schools utilization of energy compares to**  
21 **schools across the nation.**  
22

23 A. A common metric is the energy utilization index or "EUI" (kBtu per square foot). The  
24 national average for K-12 schools is 73, while the Kentucky school district average in  
25 FY2011 was 63. To achieve an Energy Star rating (upper 25 percent of nation)  
26 approximately 50 is necessary. 179 Kentucky schools have attained the Energy Star  
27 rating. Currently, 20 of Kentucky's school districts overall EUI's are 50 or lower. New  
28 schools being constructed are in the 18 – 22 range. So, overall Kentucky schools are  
29 doing very well.  
30

31 **Q. How are districts able to construct these very efficient schools?**  
32

33 A. Districts utilize the expertise of skilled architects well versed in energy efficiency  
34 methods in the design of construction projects. In addition, the Facilities Branch of the  
35 Kentucky Department of Education reviews and approves all construction projects. Use  
36 of modern wall and roof construction technologies, geothermal space conditioning  
37 technologies, day-lighting and building automation control systems are primary factors  
38 contributing to highly efficient projects. It is important to note that many existing  
39 efficient schools came into being through LGE's sister utility KU's support and  
40 recognition of the joint efficiency value to its system and schools of all electric schools.

**Q. On what rate schedules do schools in LG&E’s service territory receive service?**

A. Depending on load size schools are served pursuant to Rate Schedules GS, PS, CTODS or CTODP. Under LG&E’s proposal in this case commercial rate schedules CTODS and CTODP will be merged with industrial rate schedules ITODS and ITODP to form Rate Schedules TODS and TODP.

**Q. Please describe KU’s Rate Schedule AES?**

A. Rate AES is a service made available to school facilities in KU’s service territory that totally use electric energy for other than incidental instructional and miscellaneous purposes. KU froze Rate AES to new customers effective February 6, 2009 pursuant to the Commission’s Order in Case No. 2008-00251. KSBA has proposed in Case No. 2012-00221 that KU unfreeze the rate.

**Q. Is an all electric school rate a win-win situation?**

A. Addition by LG&E of a similar Rate AES would be a win-win situation for LG&E, schools, other customers, taxpayers and most importantly K-12 students for a number of reasons. First, Rate AES provides for increased system efficiency. Schools must use electric energy for lighting, cooling, ventilation, refrigeration, computer labs and other uses. However, all electric schools allow LGE to use their same capacity to produce more units of output and increase efficiency. Second, all-electric customers are more likely over time to provide a more consistent use of otherwise under- utilized winter capacity compared to off-system sales. Third, a LG&E Rate AES would be designed, similar to KU’s Rate AES, that would not harm other customers. KU’s Rate AES is more than profitable as demonstrated by Bellar Table 1 – Per Forma Rates of Return in Case No. 2012-00221 which shows Rate AES to be providing a return of 7.25 % versus the Kentucky Jurisdiction average of 6.02 %. Fourth, Kentucky schools are directed by law to construct and operate efficiently which in large part can be achieved by year round use of geothermal technology to heat and cool buildings.

**Q. What is your recommendation regarding a rate for all electric schools ?**

A. The Commission should approve the addition by LG&E of a Rate Schedule AES. By doing so, schools will be afforded an additional option to evaluate when constructing new and remodeling existing schools that capitalize on implementing energy efficiency initiatives which will benefit the public and, most importantly, Kentucky’s K-12 students.

1 **PS, TODS and TODP Minimums**

2  
3 **Q. Please explain the minimum bill application of LG&E’s proposed Rate Schedules**  
4 **PS, TODS and TODP.**

5  
6 A. Proposed Rate Schedules TODS and TODP have three time differentiated demand charge  
7 levels; base, intermediate and peak. If the current month peak and intermediate measured  
8 demand is not twice the demand in the preceding eleven (11) months a customer is then  
9 charged for 50 percent of the highest past demand. In the application of the base demand  
10 charge a customer pays the higher of: a) the current month measured demand b) 250 kw;  
11 c) 75 percent of the highest demand of the preceding eleven (11) months; c)75 percent of  
12 contract capacity.

13  
14 Proposed Rate Schedule PS has separate summer and winter demand charges. In the  
15 application of the demand charges a customer pays the higher of: a) the current month  
16 measured demand; b) 50 kw; c) 50 percent of the highest demand of the preceding eleven  
17 (11) months; or d) 60 percent of contract capacity.

18  
19 **Q. What problem do you see with the proposed Rate Schedules PS, TODS and TODP**  
20 **demand minimum application?**

21  
22 A. School district energy managers are confronted by a dilemma as they are encouraged by  
23 LG&E’s demand-side management program to pursue demand and energy use  
24 reductions. On the one hand they initiate actions to reduce demand and consumption,  
25 while on the other hand they experience imposition of rate schedule minimums that  
26 diminish the monetary value of their efforts. While equitable recovery of fixed cost from  
27 customers is a reasonable objective, imposition of rate minimums in off-peak months  
28 must be balanced with today’s emphasis on slowing the growth of capacity additions.

29  
30 **Q. In response to KSBA Initial Question 11 LG&E responded that the ratchet**  
31 **percentages are based in part on historical tariffs. Please respond.**

32  
33 A. It was not until LG&E’s last Case, No. 2009-00459, did the 60% contract demand  
34 minimum requirement ratchet appear in Rate PS and the 75% base demand minimum  
35 requirement ratchet appear in Rate Schedules CTODS and CTODP. Both, predecessor  
36 Rate Schedules CPS and CTOD only contained a ratchet of 50% of the highest summer  
37 period demand occurring during the preceding eleven month period and neither contained  
38 a contract minimum requirement.

39  
40 **Q. What is your recommendation to the Commission?**

41  
42 A. Lowering the ratchet percentage to 40 percent for both the highest billing demand in the  
43 preceding eleven months and the contract capacity applications would be more  
44 appropriate for Rate Schedule PS. Similarly, for the proposed Rate Schedules TODS and  
45 TODP, the ratchet percentage should be lowered to 40 percent for the peak, intermediate  
46 and base billing demand calculation.

1 **TODS and TODP Service Threshold**

2 **Q. Please explain the availability criteria for service under the proposed Rate**  
3 **Schedules TODS and TOPP.**

4 A. Customers must have a 12-month average minimum load of 250 kw. However, this  
5 minimum precludes many schools from this rate, particularly elementary and middle  
6 schools. With the required focus on energy management both KU and schools would  
7 benefit from the incentive to reduce peak demand provided by the rate structure.

8 **Q. Is there any reason to not lower the threshold for service on Rates TODS and**  
9 **TODP?**

10 A. LG&E responded to KSBA Initial Question 5 that time differentiated rates are  
11 appropriate when the additional cost of metering is justified. In response to KSBA  
12 Supplemental No.5 LG&E stated the installed cost for time-based metering to be \$352 for  
13 secondary service and \$519 for primary service. In response the Staff Third No. 31  
14 LG&E stated the difference in cost of time-based metering to be \$19.40 plus labor.

15 **Q. What is your recommendation to the Commission?**

16  
17 A. My recommendation is that Commission order LG&E to reduce the Rate Schedule TODS  
18 and TODP threshold to 100 kw. If the metering cost is a concern then LGE should  
19 include an upfront contribution or a monthly metering charge for the time-based meter  
20 cost differential (time-based vs. non time-based) as a condition for service under the rate  
21 schedules for any customer whose 12-month average maximum load is less than 250 kw,  
22 but greater than 100 kw.

23 **Sport Field Lighting**

24  
25 **Q. On what Rate Schedules are school sport fields served?**

26 A. Sport fields are served on Rate Schedules GS and PS. Even though service on Rate GS is  
27 limited to average monthly loads of 50 kw any secondary load greater than 50 kw as of  
28 February 6, 2009 was grandfathered under Rate GS. Primary voltage sport fields are  
29 served on Rate PS and pay significantly more due to minimum demand charges.

30 **Q. Should LG&E add a Sport Field Rate Schedule to their tariff?**

31 A. Yes. Otherwise, new sport fields will be served on Rate PS and be faced with paying a  
32 demand charge and minimum payments in the months they are not in operation. Sports  
33 fields are not similar to other commercial and industrial loads served on Rate Schedule  
34 PS.

1 In the alternative LG&E could modify the Availability of Service provision of Rate  
2 Schedule LE to permit service to sport fields. Rate LE is available for public street and  
3 highway lighting where the customer owns and maintains all street lighting equipment  
4 and other facilities on the customer's side of the point of delivery. Schools similarly own  
5 and maintain the lighting equipment utilized on their sport fields. Sport field lights do  
6 operate significant fewer annual hours than the 4000 operational hours of street lighting  
7 and do not require additional capacity as they are operated in after school hours.

8 **Q. Does this conclude your testimony?**

9 A. Yes.

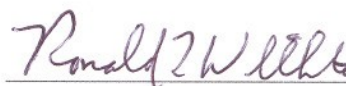

**VERIFICATION**

STATE OF KENTUCKY

COUNTY OF JEFFERSON

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared, Ronald L. Willhite, who, being by me first duly sworn deposed and said that:

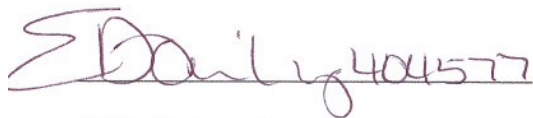

He is appearing as a witness on the behalf of the Kentucky School Boards Association before the Kentucky Public Service Commission in an Application filed by Louisville Gas and Electric Company, and if present before the Commission and duly sworn, his testimony would be set forth in the annexed testimony.

Ronald L. Willhite

SWORN TO AND SUBSCRIBED BEFORE ME this

25<sup>th</sup> day of September, 2012

NOTARY PUBLIC

Commission exp. 9/11/2013

---
