Louisville Gas and Electric Company

Explanations 2008 vs. 2009

**Expenses**

Fuel for electric generation and natural gas supply expenses comprise a large component of total operating expenses. Increases or decreases in the cost of fuel and natural gas supply are reflected in electric and natural gas retail rates, through the FAC and GSC, subject to the approval of the Kentucky Commission.

Fuel for electric generation decreased a net \$18 million in 2009 primarily due to:

- Decreased volumes of fuel usage (\$20 million) due to decreased native load and wholesale sales

Partially offset by:

- Increased commodity and transportation costs for coal (\$2 million)

Power purchased expense decreased \$61 million in 2009 primarily due to:

- Decreased purchase volumes from KU (\$60 million). This was a result of LG&E and KU's scheduled coal-fired generation unit outages during 2009, and as a result of KU's units held in reserve as a result of low spot market pricing for the majority of 2009. Via a mutual agreement LG&E purchases KU's excess economic capacity for wholesale sales, and LG&E sells its lower cost electricity to KU to serve KU's native load.
- Decreased prices (\$2 million) and volumes (\$1 million) for third-party purchases due to lower spot market pricing and lower native load requirements, respectively

Partially offset by:

- Increased demand payments for third-party energy purchases (\$2 million) on long-term contracts

Gas supply expenses decreased \$104 million in 2009 due to:

- Decreased cost of net gas supply billed to customers (\$99 million) resulting from lower cost per Mcf (\$73 million) and lower purchased volumes (\$26 million)
- Decreased wholesale expense (\$5 million) due to a decline in volume of wholesale sales of purchased gas

Other operation and maintenance expenses increased \$30 million in 2009 primarily due to increased other operation expenses (\$28 million) and increased other maintenance expenses (\$2 million).

Other operation expenses increased \$28 million in 2009 primarily due to:

- Increased pension expense (\$24 million) due to lower 2008 pension asset investment performance

**Louisville Gas and Electric Company**

- Increased administrative and general expense (\$12 million) due to increased DSM program spending as well as consulting fees for software training and increased labor and benefit costs

Partially offset by:

- Decreased other power supply expense (\$4 million) due to a FERC Order resulting in decreased MISO RSG costs (\$3 million) and decreased operating reserve charges in the PJM Interconnection market due to lower rates and sales volumes (\$1 million)
- Decreased transmission expense (\$3 million) due to the establishment of regulatory assets approved by the Kentucky Commission for the East Kentucky Power Cooperative settlement and MISO refund and lower off-system transmission purchases from KU resulting from units held in reserve as a result of low spot market pricing which reduced excess generation
- Decreased distribution expense (\$1 million) due to higher storm and outage related expense in 2008

Other maintenance expenses increased \$2 million in 2009 primarily due to:

- Increased steam maintenance expense (\$3 million) due to timing of scheduled unit outages and routine maintenance
- Increased administrative and general expense (\$1 million) due to increased labor and system maintenance contracts resulting from completion of a significant in-house customer information system project

Partially offset by:

- Decreased distribution expense (\$2 million) due to lower storm and outage related expense and gas main maintenance in 2009

Mark-to-market income – net increased \$55 million in 2009 due to a gain from the change in the value of ineffective swaps (\$57 million), partially offset by related interest expense (\$2 million).

Other income – net decreased \$6 million in 2009 primarily due to decreased gains on the sale of company property.

Interest expense decreased \$14 million in 2009 primarily due to:

- Decreased net gain (\$8 million) on the ineffective portion of the effective interest rate swap
- Decreased interest expense to affiliated companies (\$6 million) as a result of lower interest rates on short-term borrowings
- Decreased interest rates on bonds and lower interest expense due to bonds repurchased during 2008 (\$4 million)

Partially offset by:

- Increased interest expense to affiliated companies (\$4 million) as a result of additional debt issued during 2008

## Louisville Gas and Electric Company

**Investing Activities**

The primary use of funds for investing activities continues to be for capital expenditures. Net cash used for investing activities decreased \$56 million in 2009 compared to 2008, primarily due to decreased capital expenditures of \$57 million and increased changes in non-hedging derivatives of \$15 million. This decrease was partially offset by assets sold to KU of \$10 million in 2008 and decreased proceeds from the sale of company property of \$6 million.

**Explanations 2010 vs. 2011**

The following table summarizes the significant components of net income for 2011 vs. 2010:

	<b>Year Ended December 31, 2011</b>	<b>Year Ended December 31, 2010</b>
Operating Revenues	\$ 1,364	\$ 1,311
Fuel	350	366
Energy purchases	245	218
Other operation and maintenance	363	348
Depreciation	147	138
Taxes, other than income	18	13
Total Operating Expenses	<u>1,123</u>	<u>1,083</u>
Other Income (Expense) - net	(2)	14
Interest Expense	44	46
Income Taxes	71	68
Net Income	<u>\$ 124</u>	<u>\$ 128</u>

**Louisville Gas and Electric Company**

The changes in the components of Net Income between these periods were due to the following factors. The results are adjusted for certain items that management considers special. See additional detail of this special item below.

	<u>2011 vs. 2010</u>
Margin	\$ 39
Other operation and maintenance	(10)
Depreciation	(13)
Taxes, other than income	(5)
Other Income (Expense) – net	(16)
Interest Expense	2
Income Taxes	(3)
Special Items	2
	<u>\$ (4)</u>

The net unrealized gains (losses) on contracts that economically hedge anticipated cash flows are considered special items by management. The after-tax amounts for 2011 and for 2010 were insignificant.

**Margin**

Margins were higher by \$39 million for 2011 compared with 2010. New KPSC rates went into effect on August 1, 2010, contributing an additional \$48 million in operating revenue over the prior year. Partially offsetting the rate increase were lower retail volumes resulting from weather and economic conditions.

**Other Operation and Maintenance**

Changes in other operation and maintenance expense were due to the following:

	<u>2011 vs. 2010</u>
Fuel for generation	\$ 5
Distribution maintenance (a)	8
Steam maintenance (b)	(5)
Transmission operation	1
Administrative and general	4
Other generation maintenance	(2)
Other	4
Total	<u>\$ 15</u>

- (a) Distribution maintenance costs increased in 2011 compared with 2010, primarily due to amortization of storm restoration-related costs along with a

**Louisville Gas and Electric Company**

hazardous tree removal project initiated in August 2010 and an increase in pipeline integrity work.

- (b) Steam maintenance costs decreased in 2011 compared with 2010, primarily due to the timing of scheduled maintenance outages and non-outage boiler maintenance.

**Depreciation**

Changes in depreciation were due to the following:

	<u>2011 vs. 2010</u>
TC2 (dispatch began in January 2011)	\$ 7
Other	<u>2</u>
Total	<u>\$ 9</u>

**Taxes, Other Than Income**

Taxes, other than income increased by \$5 million in 2011 compared with 2010 primarily due to a \$4 million state coal tax credit that was applied to 2010 property taxes. The remaining increase was due to higher assessments, primarily from significant property additions.

**Other Income (Expense) - net**

Changes in other income (expense) - net were due to the following:

	<u>2011 vs. 2010</u>
Losses on interest rate swaps (a)	\$ (19)
Other	<u>3</u>
Total	<u>\$ (16)</u>

- (a) Other income in 2010 resulted from the establishment of a regulatory asset for previously recorded losses on interest rate swaps.

## Louisville Gas and Electric Company

### Interest Expense

The changes in interest expense were due to:

	<b>2011 vs. 2010</b>
Interest rates (a)	\$ (7)
Long-term debt balances (b)	2
Other	3
Total	\$ (2)

- (a) Interest rates on the first mortgage bonds issued in November 2010 were lower than the rates on the loans from Fidelia Corporation in place through October 2010.
- (b) LG&E's higher interest expense in 2011 was the result of lower long-term debt balances for the first ten months of 2010.

### Investing Activities

The primary use of cash in investing activities in 2011 was capital expenditures.

Net cash used in investing activities decreased by 78%, or \$132 million, in 2011 compared with 2010, as a result of:

- proceeds from the sale of other investments of \$163 million in 2011 and
- a decrease in capital expenditures of \$28 million due primarily to TC2 being dispatched in 2011, partially offset by
- proceeds from the sale of assets of \$48 million in 2010 and
- a decrease in restricted cash of \$11 million.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 194**

**Responding Witness: Valerie L. Scott**

Q-194. Please provide a detailed analysis of all charges booked during the test period for advertising expenditures. Include a complete breakdown, including but not limited to these categories: (1) sales or promotional, (2) institutional, (3) conservation related, (4) rate case, and (5) other. The analysis should specify the account charged, the purpose of the expenditure and the expected benefit to be derived.

A-194. See attached. In the process of providing this response, LG&E identified \$187,306 of costs that were incorrectly included in Blake Exhibit 1, Reference Schedule 1.17.

(1) This advertising cost was not initiated for the sole benefit of the ratepayers; therefore, these costs were included in the pro forma adjustment 1.17.  
 (2) This advertising cost was not initiated for the sole benefit of the ratepayers; therefore, this cost is not included in recoverable expenses.  
 (3) This advertising cost was initiated for the sole benefit of the ratepayers, and was incorrectly included in pro forma adjustment 1.17. These costs total \$187,306.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 195**

**Responding Witness: Valerie L. Scott**

Q-195. For each advertising expense over \$10,000 recorded by the Company during the test period, state the payee, amount, date and purpose. Also provide a copy of the associated invoice and a copy of (or if a non-print ad, the text of) each advertisement.

A-195. See the response to AG 1-194 for detail of charges over \$10,000. See attached.

The attachment is being  
provided in a separate  
file in Media format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 196**

**Responding Witness: Valerie L. Scott**

Q-196. Are there any advertising costs being incurred by the Company which cannot be identified with a specific advertisement? If so, please itemize and describe each such cost, and list the associated amounts for each year 2008, 2009 and 2010.

A-196. See attached.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 197**

**Responding Witness: Valerie L. Scott**

Q-197. Break down the Company's advertising expense for the test period into its components, i.e., labor, overhead, materials and fees to agencies, etc.

A-197. See the response to Question No. 194.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 198**

**Responding Witness: Lonnie E. Bellar**

Q-198. Does the Company have any studies as to the effectiveness of its advertising and marketing programs? If so, describe by name, date and contents each study the Company has. Provide a copy of all such studies in the last three years.

A-198. LG&E has proposed an adjustment to eliminate advertising expenses that are primarily institutional and promotional in nature; see Reference Schedule 1.17 of Blake Exhibit 1 in LG&E's application. Also, advertising expenses related to Energy Efficiency initiatives are eliminated as part of an adjustment to remove DSM revenue and expense; see Reference Schedule 1.06 of Blake Exhibit 1 in LG&E's application. LG&E does not have any studies as to the effectiveness of the remaining LG&E advertising, which is conducted primarily to inform customers about electrical safety.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 199**

**Responding Witness: Valerie L. Scott**

Q-199. Please list the trend in advertising expense per dollar of revenue for the five year period ending with 2011. If the Company has not made this calculation, please supply the information necessary to make it.

A-199. See table below.

	<u>Advertising Expense</u>	<u>Revenue</u>	<u>Expense per Dollar of Revenue</u>
2007	\$ 1,097,356	\$ 1,285,137,296	\$ 0.0009
2008	874,839	1,473,319,433	0.0006
2009	855,831	1,280,992,548	0.0007
2010	726,028	1,318,558,923	0.0006
2011	927,266	1,364,324,725	0.0007

Note: Excludes advertising dollars recovered through the Demand Side Management revenue mechanism.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 200**

**Responding Witness: Lonnie E. Bellar**

Q-200. Please provide a listing of and a copy of any and all Commission Orders the Company has reviewed or relied upon in preparation of its filing in this case concerning the ratemaking treatment of costs for each distinct type of advertising expense it incurs, including but not limited to these categories: (1) sales or promotional, (2) institutional, (3) conservation related, (4) rate case, and (5) other.

A-200. In preparing its rate case filing, the Company did not review any Commission Orders concerning the ratemaking treatment of costs for each distinct type of advertising expense it incurs. However, the Company is aware of, and complies with, the Commission's regulation on advertising which can be found at 807 KAR 5:016.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 201**

**Responding Witness: Lonnie E. Bellar**

Q-201. List any antitrust expense included in the test period.

A-201. No antitrust expense is included in the test period.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 202**

**Responding Witness: Lonnie E. Bellar**

Q-202. Does the Company's proposed rate increase include any claim for attrition or suppression of sales?

- a. If so, please reference where this is presented.
- b. Provide a complete copy of any and all attrition studies or analyses prepared by or for the Company during the period 2009 through 2010.

A-202. No.

- a. Not applicable.
- b. No studies were prepared during the period 2009 through 2010.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 203**

**Responding Witness: Valerie L. Scott**

Q-203. Explain the method used by the Company to project uncollectibles for the test period. Include an explanation of all assumptions used and a detailed explanation, including examples, of whether and how historical data was used in making this projection.

A-203. The allowance for doubtful accounts included in retail customer accounts receivable is based on the ratio of the amounts charged-off during the last twelve months to the retail revenues billed over the same period multiplied by the retail revenues billed over the last four months. Accounts with no payment activity are charged-off after four months, although collection efforts continue thereafter.

The Company reviews wholesale accounts receivable to identify potential uncollectible accounts using specific customer identification. Amounts are reserved as necessary.

The allowance for doubtful accounts included in other accounts receivable is composed of accounts aged more than four months. Adjustments are made to this balance quarterly. Increases to the balance are the result of new items that reach the four months aged criteria. Decreases are the result of items for which payment has been received and items deemed uncollectible and written off.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 204**

**Responding Witness: Valerie L. Scott**

Q-204. Provide for each year 2009, 2010, 2011 and 2012 the total dollar write-offs to uncollectibles reserve with and without subsequent recoveries.

A-204.

Retail Receivables:

Year	Write-Offs to Uncollectible Reserve	Write-Offs net of Subsequent Recoveries
2009	\$5,670,864	\$4,248,439
2010	6,530,018	5,301,179
2011	5,823,738	4,680,794
2012	1,186,153	809,192

Wholesale Receivables:

Year	Write-Offs to Uncollectible Reserve	Write-Offs net of Subsequent Recoveries
2009	\$9,527	\$4,998
2010	0	0
2011	166,355	166,355
2012	0	0

Other Receivables:

Year	Write-Offs to Uncollectible Reserve	Write-Offs net of Subsequent Recoveries
2009	\$395,689	\$394,985
2010	416,728	405,761
2011	653,230	615,057
2012	53,999	44,096

Note: 2012 is for the period of January 1, 2012 through March 31, 2012

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 205**

**Responding Witness: Sidney L. "Butch" Cockerill**

Q-205. Please list by customer and amount and by year for the period 2008 through 2011 any uncollectible accounts which have been written off and which exceeded \$1,000.00.

A-205. See attached. The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 206**

**Responding Witness: Lonnie E. Bellar**

- Q-206. List and describe in detail any cost-saving programs implemented 2008 through the present.
- a. For each program listed in response to this request, show the anticipated and achieved savings. Include calculations of savings amounts and explain any assumptions used in such calculations.
  - b. Provide the cost-benefit analyses for each such program.
  - c. Show the impact of any such cost-saving programs on the test period.
- A-206. a-c. See the response to Question No. 130, PSC 1-23(c), and the direct testimony of Paul W. Thompson and Chris Hermann in this case, 2009 rate case (Case No. 2009-00549) and 2008 rate case (Case No. 2008-00251) for descriptions of business processes or initiatives for operating the Company's systems cost-effectively to provide service and a discussion of their costs and benefits. The cost-reduction impacts of these programs are embedded in the test year in this case. The Company does not track savings.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 207**

**Responding Witness: Counsel**

Q-207. Provide a complete explanation of any and all expense reduction goals (cost savings programs) the Company had concerning the development of the 2009, 2010 and 2011 budgets.

A-207. Consistent with its historical practice, the Company does not disclose information relating to budgets. Such projections are only estimates; there is no guarantee that such projections will be realized; and the estimates are based on a number of assumptions that may change over time. The Company has used an historic test year in this proceeding; not a forecasted test year. The Commission determined in its September 6, 1990 Ruling and in its September 21 and October 18, 1990 Orders in Case No. 90-158 that such information is not discoverable in historical test year rate cases. The budgetary information requested in this data request is not relevant to the analysis of known and measurable pro forma adjustments in this case.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 208**

**Responding Witness: Valerie L. Scott**

Q-208. List for the test period, the amount of country club initiation fees, stock purchase payments, if applicable, annual dues and expenses which were paid and to what account these fees were charged.

- a. For each payment list the individual whose name the membership is in or who uses the club, his (her) title, and name of the country club.

A-208. LG&E did not pay any country club initiation fees or stock purchase payments.

- a. None.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 209**

**Responding Witness: Lonnie E. Bellar**

Q-209. Provide a copy of the Annual Report of EEI, AGA and every other organization of which Company was/is a dues-paying member during 2010, 2011 and 2012. For the purpose of this question through Question No. 190, the term "organization" refers to EEI and / or any other organization of which the Company is a dues-paying member.

A-209. LG&E does not collect and retain the requested information for its corporate files. The requested information is thus not readily available.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 210**

**Responding Witness: Valerie L. Scott**

- Q-210. Provide a copy of the formula used to compute, and the actual calculation of the Company's dues paid to any organization for the years 2009, 2010, 2011 and 2012. Also, provide a complete copy of invoices regarding dues paid for these years.
- A-210. See attached. The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

The entire attachment is  
Confidential and  
provided separately  
under seal.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 211**

**Responding Witness: Lonnie E. Bellar**

Q-211. Please provide any documents in LG&E's possession that show how these organizations spend the dues they collect, including the percentage that goes to legislative advocacy, legislative policy research, regulatory advocacy, regulatory policy research, advertising, marketing, utility operations and engineering, finance legal, planning and customer service, and public relations.

A-211. See the response to Question No. 209.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 212**

**Responding Witness: Valerie L. Scott**

- Q-212. Has the Company included in the test period operating expense any amount for any organizations' media communications? If so, state the amount, indicate in which account this has been recorded, and provide a citation to any and all Commission Orders or other authority upon which the Company is relying for the inclusion of such expense in the test period.
- A-212. See response Question No. 194. The Company does not record advertising expenses related to media communications for any other organization.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 213**

**Responding Witness: Valerie L. Scott**

Q-213. Is the Company relying upon any NARUC reports or other studies for the exclusion from or inclusion in rates of a portion of its organization dues? If so, please provide a copy of such report and indicate how the report's recommendations have been included in its filing.

A-213. LG&E does not rely upon any NARUC reports or other studies for the exclusion from or inclusion in rates of a portion of any organizations dues. LG&E relies on information provided on the invoices received from any organization in order to determine the lobbying portion of dues that should be excluded from rates.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 214**

**Responding Witness: Lonnie E. Bellar**

- Q-214. List all travel and entertainment expenses incurred in the test period by Company employees in relation to these organizations and other industry association activities. Show accounts, amounts, descriptions, person, job title and reason for the expense. Provide a copy of employee time and expense reports and invoices documenting such expenses.
- A-214. The Company does not track the requested information specifically related these organizations and other industry association activities. Company employees participate in various industry associations and organizations to gain knowledge and experience throughout the industry to allow for the Company to provide service to its customers in the most economical, cost-effective and reliable manner. The gaining of industry knowledge through these associations benefits customers through the use of best practices in providing services.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 215**

**Responding Witness: Lonnie E. Bellar**

Q-215. Do any of the Company's personnel actively participate on Committees and/or any other work for any industry organization to which the Company belongs?

- a. If so, state specifically which employees participate, how they are compensated for their time (amount and source of compensation), and the purpose and accomplishments of any such association related work.
- b. List any and all reimbursements received from industry associations, for work performed for such organizations by Company employees.

A-215. Company employees participate in various industry associations and organizations to gain knowledge and experience throughout the industry to allow for the Company to provide service to its customers in the most economical, cost effective and reliable manner. The gaining of industry knowledge through these associations benefits customers through the use of best practices in providing services.

- a. The Company does not track employee participation in industry organizations. Employees are not compensated by industry organizations for participation on committees.
- b. See the response to (a.) above.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 216**

**Responding Witness: Lonnie E. Bellar**

Q-216. Please provide copies of all expense reports (or similar documents) which exceed \$1,000 submitted by Company officers during 2010, 2011 and 2012 to date for reimbursement of business or personal expenses.

A-216. See the attached which details LG&E monthly expense report charges which exceeded \$1,000 during 2010, 2011, and 2012 to date by officer and charge type.

The attachment is being  
provided in a separate  
file.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 217**

**Responding Witness: Daniel K. Arbough**

Q-217. For each injury and damage claim, where the settlement exceeded \$10,000 for the years 2010, 2011 and 2012, list by year each such claim, the basis for the claim, the dollar amount of the claim paid and the associated legal fees.

A-217. The attachment shows the requested information through July 31, 2012.

The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

The entire attachment is  
Confidential and  
provided separately  
under seal.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 218**

**Responding Witness: Valerie L. Scott**

Q-218. State the amount of injuries and damages expense for each of the last three years.

A-218. See Blake Exhibit 1, Reference Schedule 1.16.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information**

**Dated July 31, 2012**

**Question No. 219**

**Responding Witness: Paula H. Pottinger, Ph.D. / Daniel K. Arbough**

Q-219. Itemize each component of insurance expense included in the test period, and provide comparative information for 2009, 2010 and 2011. Indicate the accounts and amounts in which each item of insurance expense is recorded.

- a. For any component of the Company's insurance expense which has fluctuated by more than 10% or \$10,000 from one year to the next, provide an explanation as to the cause of such fluctuation.

A-219. The insurance expense is itemized in the attachment for the test period and each of 2009, 2010, and 2011.

Property insurance expense increased from 2009 to 2010 due to the lead insurance carrier not offering a credit in 2010 associated with the length of the relationship with Louisville Gas and Electric Company (a membership credit), whereas a membership credit was realized in 2009. An increase in the value of the property covered by the insurance, due to completed construction projects, also contributed to the increase in insurance expense in 2010. Property insurance expense decreased in 2011 from 2010 due to Louisville Gas and Electric Company qualifying for a membership credit issued by the lead insurance carrier.

Public liability expenses increased from 2009 to 2010 due to an increase in insurance premium due to market conditions and fluctuations in the magnitude of claim payments during the year. 2011 expense decreased due to a decrease in insurance premiums due to changes in the premium allocation provided by the insurer between KU and LG&E and due to fluctuations in the magnitude of claim payments during the year.

The Company is self-insured for workers' compensation. This expense decreased in 2010 and increased in 2011 due to an update in reserves for open claims used in the calculation of the worker's compensation liability. The test year expense is impacted by the update in reserves used in the calculation of the liability.

Auto liability expense increased in 2010 due to fluctuations in the volume and magnitude of claim payments. The minor increase in 2011 expense is due to the fluctuation in the value of claim payments. The test year expense is impacted by the timing of claims.

Injuries and damages increased from 2009 to 2010 as brokerage fees were incurred, but were charged to account 923 in 2009 but to account 925 in 2010, and brokerage fees increased due to new insurance coverage being purchased.

Group life insurance costs are based on a negotiated insured premium times the amount of life insurance for each covered employee. The amount of coverage is based on the employee's salary. The company negotiated life insurance premium with the current carrier for the same rate for 2009 – 2012. The fluctuation in cost is due to changes in salaries and in the number of employees. It is also impacted by the timing of payment of premiums. The fluctuation between 2011 and the test period is due to the timing of the true up of the clearing accounts.

The medical plan is self-insured, paying medical claims incurred that year plus insured fees for administration, vision, stop-loss insurance and health care management program fees. Fluctuations from year to year are primarily based on an increase or decrease of medical claims.

The dental plan is on a self-insured basis, paying dental claims incurred that year plus an administrative fee. Fluctuations from year to year are primarily based on an increase or decrease of dental claims.

Long-term disability insurance costs are based on a negotiated insured premium times the amount of base salary for covered employees. The company negotiated Long-term disability insurance premium with the current carrier for the same rate for 2009 – 2012. The fluctuation in cost is due to changes in salaries and in the number of employees. It is also impacted by the timing of payment of premiums. The fluctuation between 2011 and the test period is due to the timing of the true up of the clearing accounts.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 220**

**Responding Witness: Valerie L. Scott**

Q-220. Itemize the legal services expenses included in 2010, 2011 and 2012 for rate case related work. For each distinct item state: payee; amount; account; purpose; docket, case, or proceeding reference; and describe briefly the nature of the case or legal service received.

A-220. See attached.

Louisville Gas and Electric Company

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 221**

**Responding Witness: Valerie L. Scott**

Q-221. Please itemize the amount of non-rate case legal expense for 2008, 2009, 2010, 2011 and 2012 to date. For each distinct item over \$5,000 show payee, amount, account and indicate what services were performed and what the subject matter of the services was.

- a. Provide copies of all invoices which exceed \$10,000. This should be the complete document including a detailed description of work performed.

A-221. See attached.

- a. The information requested herein is voluminous and would require a significant amount of time to compile. If the AG has specific invoices that it would like to review, please advise and the Company will agree to provide copies of those invoices, subject to the attorney-client privilege and work product doctrine.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 222**

**Responding Witness: Daniel K. Arbough**

Q-222. List all fees during the test period, the previous two years and 2012 to date for maintaining lines of credit. List such fees for each line of credit which the Company maintains. Indicate in which account such fees are recorded.

A-222. See attached.

The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

## CONFIDENTIAL INFORMATION REDACTED

## Line of Credit Fees

	2010	2011	2012 1/1-6/30	Test Period 4/1/2011 - 3/31/2012
\$50 million bilateral line of credit	\$ 29,151			
\$50 million bilateral line of credit	29,151			
\$25 million bilateral line of credit	14,623			
\$400 million revolving line of credit:				
Amortization of upfront fees				
Commitment fees	102,146	796,549	252,278	568,056
Total line of credit fees	\$ 344,156	\$ 1,793,645	\$ 644,218	\$ 1,505,429

Fees for the three bilateral lines of credit were recorded in account #921003 - General office expense/supplies. Fees for the \$400 million revolving line of credit are recorded in account #431104 - Interest expense from financial liabilities or in amortization expense account #428019. These two accounts both are consolidated into interest expense. Note that the \$400 million revolving line of credit was in place for only 2 months in 2010.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 223**

**Responding Witness: Valerie L. Scott**

Q-223. Does the Company employ a fringe-benefit or overhead factor to assign overhead costs to specific projects? If so, state what these factors were in 2009 and 2010 and show in detail how they were calculated.

A-223. Yes. See attached.

Dec-10	26,212.77	0.00	

A July 2010 LGE rate changed from 1.3% to 0% based on account. Projected Capital spend in 2010 was expected to lower LE balance closer to zero with zero rate. The balanced was lowered over time from -\$160K at 01/01/10 to -\$26K at 11/30/10. Balance was reduced to zero as part of local engineering yearly close-out.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 224**

**Responding Witness: Paul W. Thompson / Chris Hermann**

Q-224. List and describe all maintenance programs and expenses which have been deferred into the test period from prior years, and for each item, explain the Company's reason for such deferral.

A-224. LG&E did not defer maintenance programs and expenses for the purpose of reflecting costs in the test year. The timing and continuation of maintenance programs is based on the requirements of the overall operation of the system and the conditions experienced in operating the system.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 225**

**Responding Witness: Daniel K. Arbough**

Q-225. List all merchandise-related revenue, expense and rate base items included in the test period by account and amount.

A-225. The net revenue booked in Account 415 – Revenue for Merchandise Sales in the test year was \$13,503.46. This represents sales of items such as transformers, poles, conduit, etc. to LG&E customers.

There was nothing booked in Account 416 – Expense for Merchandise Cost of Sales during the test period.

Demand Side Management revenues and expenses are excluded from this response since they are included in Blake Exhibit 1, Reference Schedule 1.09.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 226**

**Responding Witness: Valerie L. Scott**

Q-226. List each abnormal or non recurring charge or credit which occurred during 2009, 2010, 2011 and 2012 to date, and which exceeded \$10,000.00. For purposes of this question, regulatory assets for storm-related damage may be excluded.

- a. For each such charge or credit, state the basis and dollar magnitude of each.
- b. Provide copies of invoices, journal entries or other documentation to support each abnormal or non recurring item.

A-226. Abnormal or non-recurring charges are not specifically tracked. These types of charges or credits are identified through the normal course of rate case preparation and not during other time periods. Therefore, the Company has only identified abnormal or non-recurring charges during rate case test years. The test years ended October 31, 2009 and March 31, 2012 fall into the time period requested above and the abnormal or non-recurring charges identified for each of these cases is provided below.

- a. See attached. Additionally, the Company transferred ownership of certain assets at its Trimble County Station to Kentucky Utilities (KU) as these assets became jointly owned by both LG&E and KU related to Trimble County Unit 2 in 2009. See also the response to Question No. 110.
- b. For details regarding the adjustments, please refer to Blake Exhibit 1, the related Reference Schedules and the related testimony for the current case as well as Case No. 2009-00549. See attached July 30, 2009 letter to the Kentucky Public Service Commission and the June 7, 2010 letter to the Federal Energy Regulatory Commission related to the transferred ownership of Trimble County Station assets.

**RE: Transfer of Joint Use Assets for Trimble County Unit No. 2 in Accordance with the Commission's November 1, 2005 Order in Case No. 2004-00507, In the Matter of: Joint Application of Louisville Gas and Electric Company and Kentucky Utilities Company for a Certificate of Public Convenience and Necessity, and a Site Compatibility Certificate, for the Expansion of the Trimble County Generating Station**

Dear Mr. DeRouen:

This letter is to advise the Commission of the planned transfer on the books and records of Louisville Gas & Electric Company ("LG&E") and Kentucky Utilities Company ("KU") (collectively, the "Companies") of the ownership of certain assets relating to the Trimble County Generating Station from LG&E to KU.

The Commission issued LG&E a Certificate of Public Convenience and Necessity ("CPCN") for the Trimble County Generating Station on October 19, 1978, in Case No. 7113.<sup>1</sup> The CPCN allowed for the installation of two 495 MW generating units, Units Number 1 ("TC1") and Number 2, to be available for operation in May 1983 and May 1985, respectively. TC1 was placed in service in December 1990 with a 495 MW net summer rating and a 566 MW

<sup>1</sup> *In the Matter of: Application of Louisville Gas and Electric Company for a Certificate of Public Convenience and Necessity and a Certificate of Environmental Compatibility to Proceed with the Development of a New FOUR-UNIT Electric Generating Station with a Total Capacity of 2340 MW and to Install 2 – 495 MW Coal-Fired Steam Turbine-Driven Generating Units at Trimble County Station on the Ohio River Near Bedford Kentucky, Case No. 7113, Order (Oct. 19, 1978).*

Mr. Jeff DeRouen, Executive Director  
July 30, 2009

generator nameplate rating; however, the Companies ultimately allowed the original CPCN for Unit Number 2 to lapse.

When LG&E and KU merged in 1998, the Companies committed to plan and operate their generation and transmission systems on an integrated basis, including jointly dispatching their generating units. They also anticipated that future generating units might be jointly owned and that each company would be responsible for its pro rata share of each such unit's costs.<sup>2</sup> Subsequently, the Companies sought, and the Commission issued, a new CPCN for the construction of Trimble County Unit 2 ("TC2"),<sup>3</sup> now an 838 MW (generator nameplate rating) baseload unit to be located adjacent to TC1. In its order granting the CPCN, the Commission established ownership shares of 81% and 19% for KU and LG&E, respectively, for the Companies' collective 75% share of the unit. (The other 25% is owned by the Indiana Municipal Power Agency and the Illinois Municipal Electric Agency.)

A number of the assets that will be necessary to the operation of TC2 (e.g., the plant coal handling system) are currently being used only by TC1. When TC2 is complete, both units will use such assets ("Joint Use Assets"). Because KU has no ownership interest in TC1, to achieve the ownership shares in TC2 that the Commission explicitly approved in its November 1, 2005 Order in Case No. 2004-00507, LG&E will need to transfer ownership interests in the Joint Use Assets to KU. KRS 278.218 states that any transfer of utility assets valued at more than \$1 million require Commission approval, which the Commission shall grant if the proposed transaction is for a proper purpose and is consistent with the public interest. In this particular circumstance, the Commission has already approved as consistent with the public convenience and necessity the 81% and 19% respective ownership shares of KU and LG&E in their collective 75% ownership interest in TC2; the transfers of ownership interests the Companies describe herein are necessary to achieve the overall ownership interests in TC2 the Commission has already approved, and therefore do not require the Commission to issue an additional order in this proceeding.

To achieve this Commission-approved division of ownership, the Companies will transfer ownership interests in the Joint Use Assets from LG&E to KU in

---

<sup>2</sup> *In the Matter of: Joint Application of Louisville Gas & Electric Company and Kentucky Utilities Company for Approval of Merger*, Case No. 97-300, Order at 18-19 (Sept. 12, 1997).

<sup>3</sup> *In the Matter of: Joint Application of Louisville Gas and Electric Company and Kentucky Utilities Company for a Certificate of Public Convenience and Necessity, and a Site Compatibility Certificate, For the Expansion of the Trimble County Generating Station*, Case No. 2004-00507, Order (Nov. 1, 2005).

Mr. Jeff DeRouen, Executive Director  
July 30, 2009

accordance with the Corporate Policies and Guidelines for Intercompany Transactions (“Guidelines”).

Transfers or sales of assets will be priced at the greater of cost or fair market value for transfers or sales from LG&E or KU to LG&E Energy or other subsidiaries and at the lower of cost or fair market value for transfers or sales made to LG&E or KU from LG&E Energy or any of LG&E Energy’s non-utility subsidiaries. Transfers or sales of assets between LG&E and KU will be priced at cost.<sup>4</sup>

To comply with the Guidelines in this exchange, KU will pay LG&E net book value (original cost minus accumulated depreciation) to purchase its ownership share of the Joint Use Assets. On the basis of the nameplate ratings of TC1 and TC2, the Companies have determined that to achieve respective overall ownership shares of 81% and 19% for KU and LG&E in TC2, their respective ownership shares of the Joint Use Assets must be 48% and 52%. Attachment 1 hereto is a schedule of the assets LG&E will transfer to KU and the net book value of KU’s ownership share of each asset (a total as of June 2009 of \$48,753,671); Attachment 2 is a site plan of the Trimble County Generating Station showing the locations of the Joint Use Assets; Attachment 3 shows sample journal entries for the ownership interest transfers LG&E will make to KU for the Joint Use Assets in December 2009, the first period in which the assets are expected to be used by both LG&E and KU as TC2 unit testing begins; and Attachment 4 shows the method by which the Companies have determined that the Joint Use Assets should be owned 52% and 48% by LG&E and KU, respectively.

In August 2009, LG&E and KU will apply to the Commission for approval of depreciation rates to use for its TC2-related assets.

---

<sup>4</sup> Emphasis added. See *In the Matter of: Joint Application of Louisville Gas and Electric Company and Kentucky Utilities Company for Approval of Merger*, Case No. 97-300, Order at 39 (Sept. 12, 1997) (“LG&E, KU and each related company shall, after the merger, comply with LG&E Energy’s Corporate Policies and Guidelines for Intercompany Transactions.”).

Mr. Jeff DeRouen, Executive Director  
July 30, 2009

If the Commission or Commission Staff have any questions or concerns about these transfers, please contact me at your first convenience.

Sincerely,

A handwritten signature in cursive script that reads "Lonnie E. Bellar". The signature is written in black ink and is positioned above the printed name.

Trimble County Steam Generating PlantTransfer of Joint Use Assets to KUNet Book Value As of June 2009

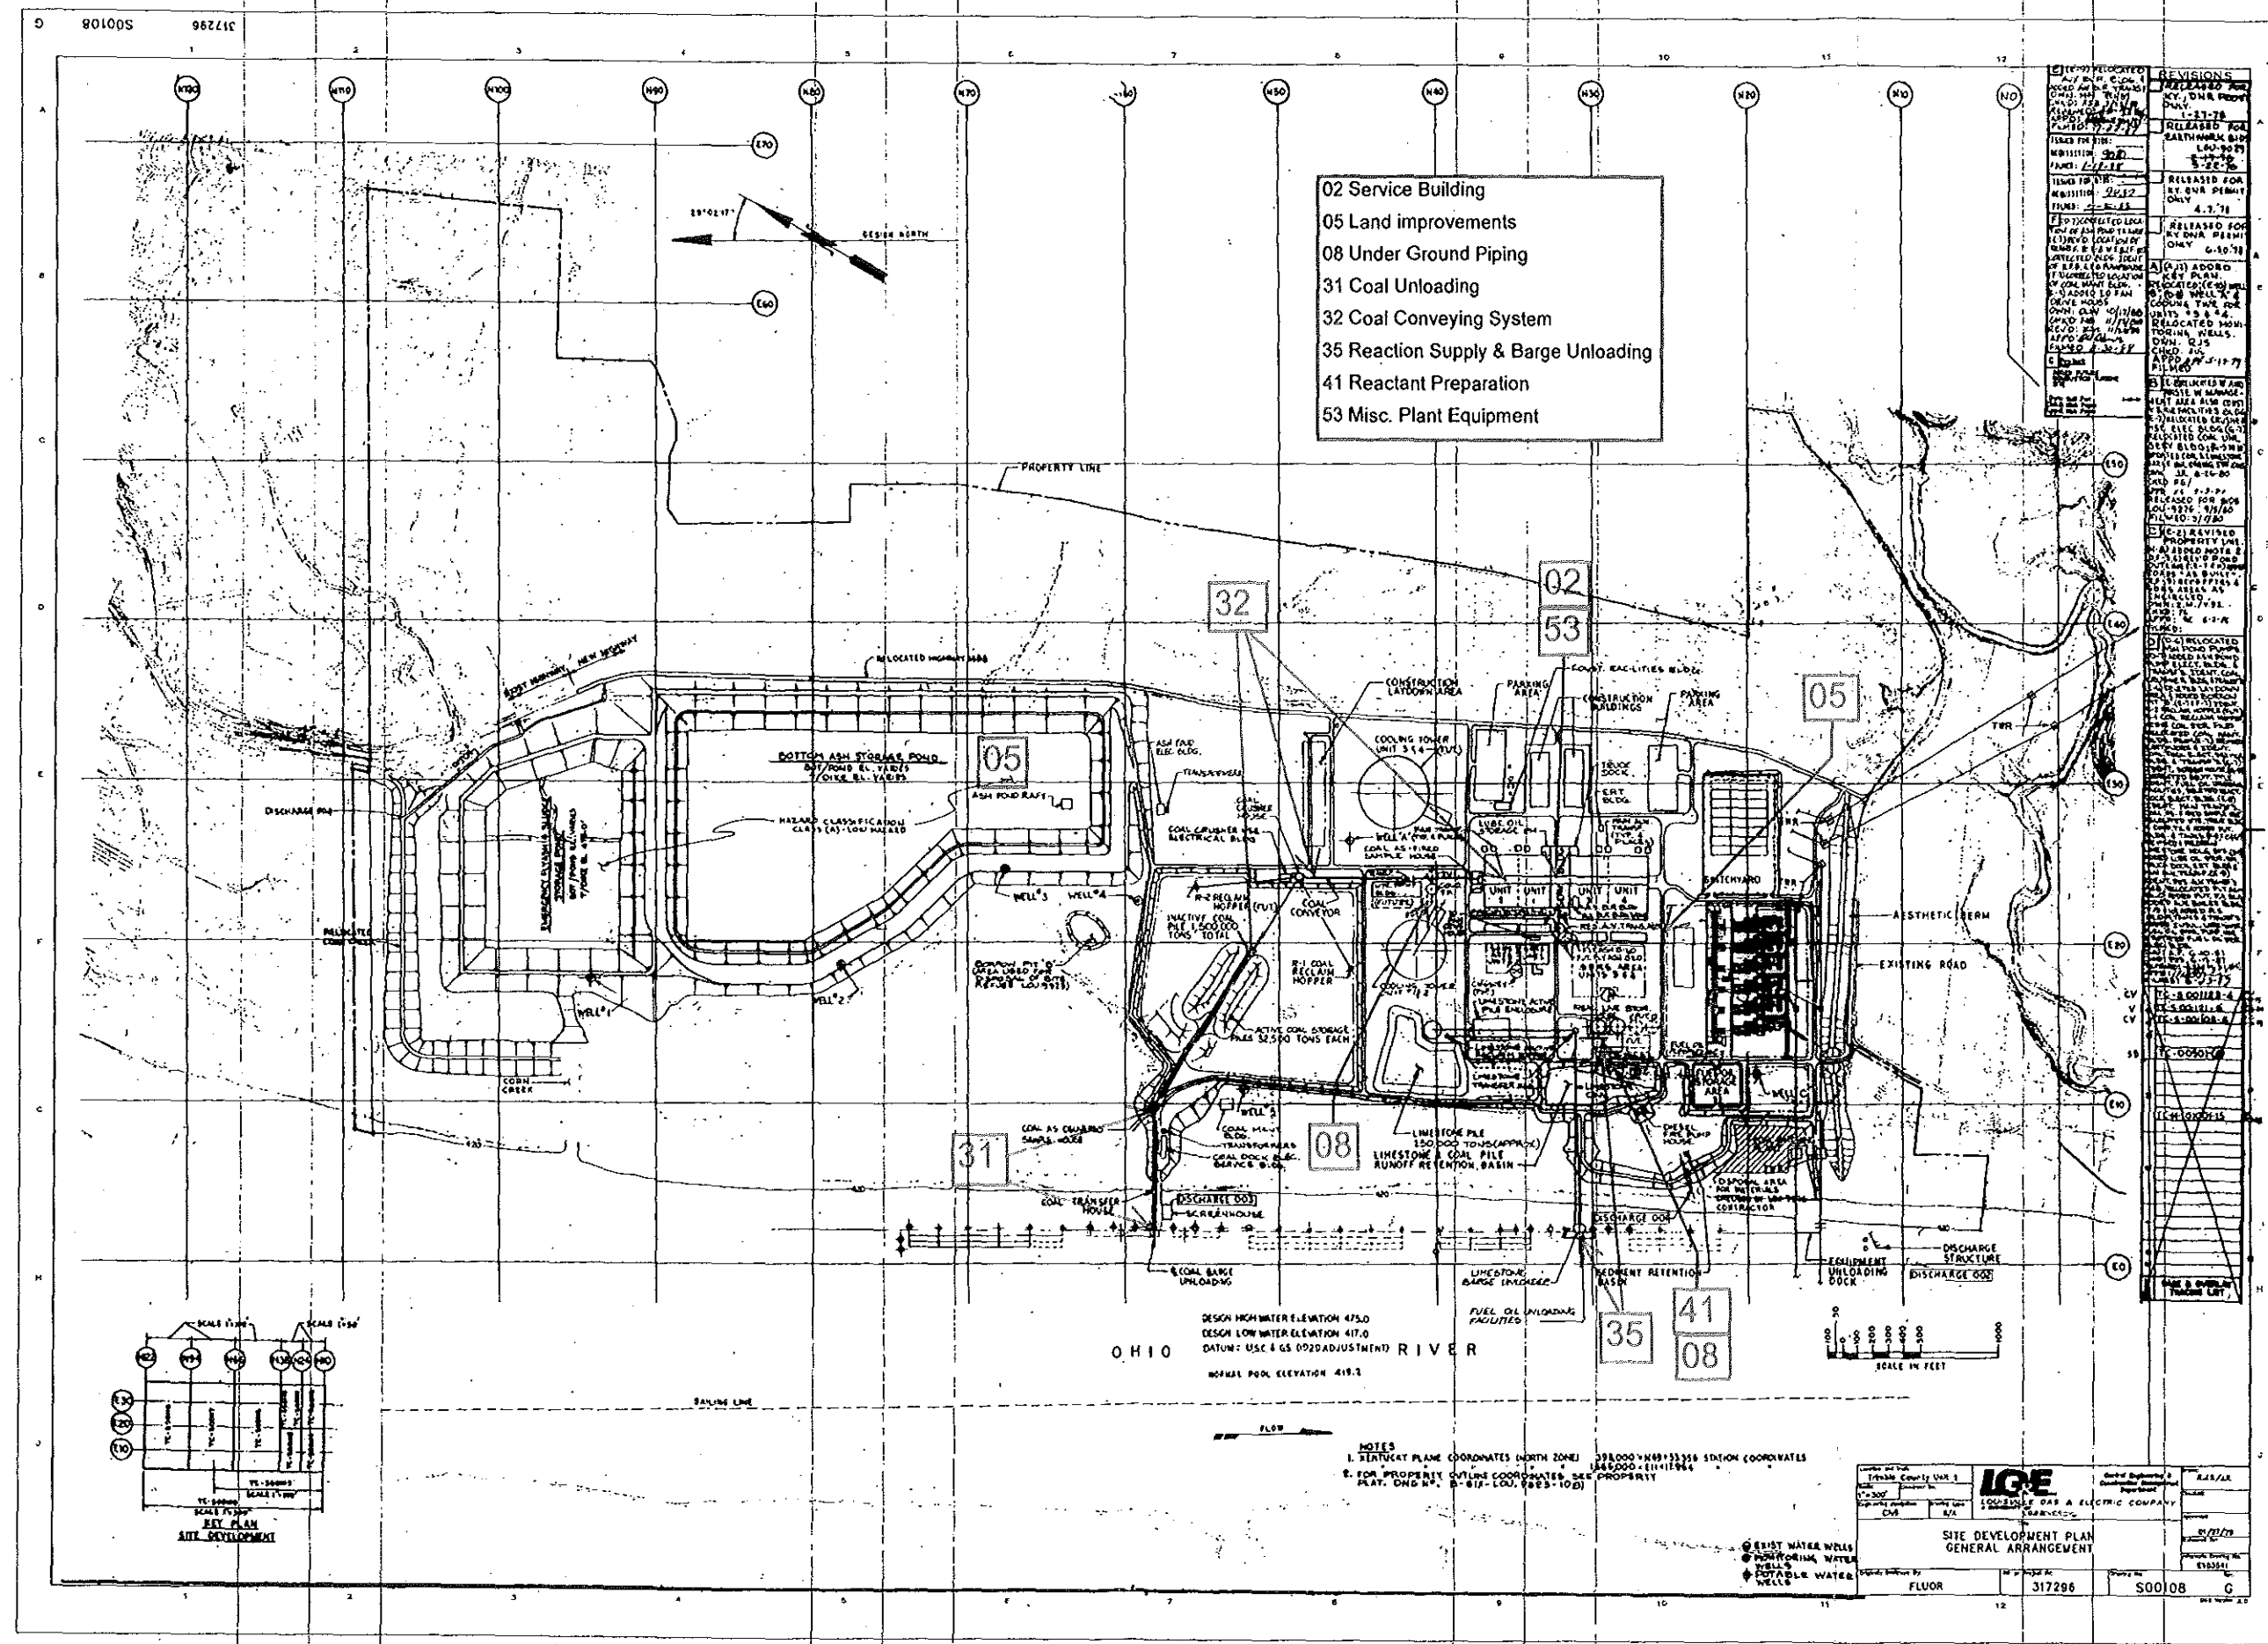

<u>Asset</u>	<u>Description</u>	<u>KU 48%</u> <u>Net Book Value</u>
01 - Unit Structure	The Unit Structure System is the structural steel and reinforced concrete skeletal frame as well as finished concrete floors of the powerhouse including the Turbine Room, Conveyor Room, Boiler Room Deaerator Room and Air Preheater Room. Covering of the building sides and roofs is included also as well as louvers, heating/ventilating, lighting, communication, grounding, fire protection, plumbing, drains and passenger/freight elevators are also a part of this system.	\$ 1,618,879
02 - Service Bldg	The Service Building System shall include costs for contracted labor, material and equipment and local labor, material and equipment to provide a service building facility. The Service Building System shall include the service building physical structure, the shops, offices, locker rooms and restrooms, and storage rooms. which are provided to service all units.	\$ 6,473,934
03 - Screenwell	The Screenwell System includes the structural steel and reinforced concrete skeletal frame of the Ohio River water intake structure for the station. This system includes all the mechanical equipment located in the screenwell structure. This includes but is not limited to various pumps, traveling screens, fixed screens, chemical treatment equipment, piping, house crane (located in the screenwell), trash rakes and other screen cleaning devices, stop log gates, and heating/ventilating equipment. The Screenwell System also includes all electrical equipment located within the screenwell structure.	\$ 3,923,274
04 - Structure B	The Structures B/As Fired Sample House System includes two main structures: Structure B, the north extension of the Unit 1 Conveyor Room; and Coal Conveying Structure, As Fired Sample House. Due to the particular arrangement of the coal conveying system at Trimble County Station, it was necessary to construct a portion of the Unit 2 Conveyor Room to be able to operate the coal conveying system in Unit 1. This portion of Unit 2 is known as Structure B. The System includes the structural steel and reinforced concrete skeletal frames for these two structures. Building covering of the sides and roof are also included. The heating, ventilating and air conditioning equipment, building drains, lighting, communication, grounding, and fire protection in the two structures are a part of this system.	\$ 1,479,471
05 - Land Improvements	This System shall include only those improvements which have a long term life, which approximates the life of the plant. Items which would be included are emergency fly ash and sludge storage pond; relocation of Corn Creek; relocation of Highway 1488; bottom ash storage pond; coal pile impoundment dikes, liners, and stacker-reclaimer fill; grading for reactant preparation, solid waste, construction shops, parking lots, equipment laydown, and concrete batch plant; undercutting for cooling towers, units, and service building; improvement fills and liners for limestone storage, and coal pile runoff, fuel oil storage; construction and plant site runoff basin; switching station fill; permanent plant roads including fill and surfacing; and aesthetic berm.	\$ 5,363,411

<u>Asset</u>	<u>Description</u>	<u>Net Book Value</u>
06 - Yard Facilities	The Yard Facilities System will include those facilities or equipment which are: inter-connections between other systems; have multi-system usage, or are not within a plant structure. Items which shall be included in the Yard Facilities System are: plant yard surfacing; underground electrical ducts; monitor wells; grounding; yard lighting; security facilities; yard drainage (including storm sewers, culverts, and ditches); diesel fire pump house; sanitary sewers (including lift and pumping stations); and fences. (see subsystem descriptions below)	\$ 1,992,881
07 - Above Ground Piping	This system shall include contract labor, materials, and equipment and local labor, material and equipment required to install combined plant piping-systems which are routed and supported on a common pipe rack. The ash water recycle pumps, floating ash pond pumps, platform, floating lines, power, and control shall be part of this system. Also the floating discharge lines for bottom ash, scrubber sludge, and fly ash and sludge storage pond shall be included.	\$ 1,414,127
08 - Under Ground Piping	This System shall include contract labor, materials and equipment, and local labor, material and equipment required to install underground pipe which runs across the plant site from one System to another. Pipe lines included in this System are the Underground Portable Water Piping Distribution Facilities, Yard Fire Protection Piping Distribution Facilities, Fuel Piping Distribution Facilities, Service Water Underground Pipe Distribution Facilities and the "Temporary" Underground Pipes west of Unit 1 and 2 Boiler Room to facilitate Unit No. 2 Construction.	\$ 695,609
22 - Stack	This system shall include contract labor, material, and equipment and local labor, material and equipment to install the stack. The Stack System includes the reinforced concrete base slab and column, all structural steel including ladders, and the fiberglass liner. This system also includes any concrete floors or grating and the permanent elevator is also a part of the Stack System. Mechanical equipment and piping located within the chimney are a part of this system. Electrically, all power, grounding, lighting, communications, instrumentation and control equipment, and wiring are a part of this system. This system also includes the strobe warning lights or other warning devices or system.	\$ 1,496,135
25 - Plant Coal Handling	The system shall be defined as including all contract labor and material, and all company labor and local material as may apply within the system boundaries' outlined as follows: 1) Fabrication and erection of coal bunkers down to outlet flange (to include load cells, seals at conveyor room floor, interior coating of top ring, etc.); 2) "G" conveyors, trippers and all coal handling equipment in conveyor room (to include dust collection equipment); 3) Silo junction house sampling equipment; 4) Fire protection system including deluge valve and all piping down stream of valve; 5) All instrument, control and electrical shall be included with the associated equipment in the respective subsystem (including 6900V, 480V, conduit and cable tray).	\$ 320,672
30 - Fuel Oil System	The Fuel Oil System shall include contract labor, material and equipment, and local labor, material and equipment to install the fuel oil system. The Fuel Oil System will begin at the first joint through the dike around the fuel oil tanks such as foundations for the tanks and station piping and pumps, the steel tanks, pumps and piping within the dike area to the last joint prior to going through the dike. The boundary stops at this last joint. All labor and materials are covered within the dike area. The Fuel Oil Electric Building and Fuel Oil Pump house is also included.	\$ 306,784

<u>Asset</u>	<u>Description</u>	<u>Net Book Value</u>
31 - Coal Unloading	The coal unloading system shall be defined as including contract labor material, and equipment, and local labor, material and equipment to provide coal unloading facilities within system boundaries as outlined as follows: 1) Shuttle barge equipment; 2) Barge Unloader and Coal Conveyor "A" & "B"; 3) Transfer House "B" - "C"; 4) Coal Conveyor "C"; 5) Sample House which includes vibrating feeders, conveyor "D", "as-delivered" scales, conveyor "S", barge unloader bin, and the concrete support for "E" conveyor (but not "E" conveyor or its pulley frame). (see subsystem descriptions below)	\$ 6,121,011
32 - Coal Conveying System	The Coal Conveying System shall be defined as including contract labor, material and equipment, and local labor, material and equipment as required to provide a stackout-to-storage and reclaim-from-storage machine, a conveyor system which shall begin with steel framework to support "E" conveyor, "F" conveyors, up to the point where the framework supporting the head pulley attaches to the plant structural steel, reclaim hoppers and tunnel, conveyor R, and R.2., magnetic separator, crusher equipment, vibrating feeders in crusher house, and crusher house. Shall also include all Instrumentation and Control and all electrical. Power feed shall be included back to the breaker terminals for 4000V equipment or to the motor starter terminals for 480V equipment. (see subsystem descriptions below)	\$ 4,954,731
35 - Reactant Supply & Barge Unloading	This system shall include contract labor, material and equipment and local labor, material and equipment to install reactant supply and barge unloading system. The Reactant Supply and Barge Unloading System will begin at the Barge Unloading Facilities and will end where the conveyor enters the Ball Mill pulverizer building at the Surge Hopper. It shall also include all Instrumentation and Control and all electrical. Control wiring shall be included. Power feed shall be included for 4000V equipment. (see subsystem descriptions below)	\$ 4,369,349
41 - Reactant Preparation	This system shall include contract labor, material and equipment and local labor, material and equipment to install the Reactant Preparation System. This system will include the Ball Mill Building, and associated equipment, Live Storage Tanks, agitators and other equipment. It shall also include all Instrumentation and Control and all electrical. Control wiring shall be included. Power feed shall be included for 4000V equipment. (see subsystem descriptions below)	\$ 3,307,517
50 - Station Water Treatment Facility	This system shall include contract labor, material and equipment, and local labor, material and equipment to consolidate facilities in one location for treating station waste water and water treatment. The system shall include the SWWT building and pipe, equipment, tanks, storage tanks and storage facilities, in and adjacent to the SWWT building. Facilities associated with this system will include sewage treatment, cooling tower water treatment, condensate make-up water treatment, and demineralization, associated bulk chemical storage, and SWWT compressed air facilities. Shall also include all Instrumentation and Control and all electrical	\$ 2,117,762
53 - Misc. Plant Equipment	This system shall include contract labor, material and equipment, and local labor, material and equipment to install the following subsystems: Turbine Room Gantry Crane, Turbine Room House Crane, Electric Hoists, Station Air Compressors, and Instrument Air Compressors. It shall also include all Instrumentation and Control and all electrical. Control wiring shall be included. Power feed shall be included for 4000V or 6900V equipment or for 480V equipment.	\$ 987,746
61 - Circulating Water System	This system shall include contract labor, material and equipment, and local labor, material and equipment to provide the circulating water facilities. This system shall include the cooling tower, cooling tower pumps, circulating water lines, condenser, cooling tower blowdown facilities, and ash water makeup system.	\$ 114,750

<u>Asset</u>	<u>Description</u>	<u>Net Book Value</u>
71 - Station Auxiliary	This subsystem shall include contract labor, material and equipment, and local labor, material and equipment to install the reserve auxiliary transformers (including foundations and fire protection), the 138KV cable from the switching station termination to the reserve auxiliary transformers, the 6900 volt station switchgear, 6900/480 volt station transformers, 480 volt station switchgear and 480 volt station motor control centers. This includes all necessary control wiring changes internal to the switchgear, power feeds (bus duct and cable) and check-out associated with this equipment.	\$ 1,471,491
73 - Cable Tray & Conduit	This system shall include contract labor, material and equipment, and local labor, material and equipment to install the cable tray system in the plant and service building. Any cable tray or conduit drops to final devices (motors, boxes, etc.) shall be charged to the appropriate system and subsystem.	\$ 224,137

PO Box 32030  
Louisville, Kentucky 40232-2030

June 7, 2010

Mr. Scott Molony, Chief Accountant  
Federal Energy Regulatory Commission  
888 1<sup>st</sup> Street N.E.  
Washington, D.C. 20426

Dear Mr. Molony:

Trimble County Generating Station Unit 2 is currently under construction and is jointly owned by Kentucky Utilities Company (KU) and Louisville Gas and Electric Company (LG&E). LG&E sold to KU a share of certain joint use assets which are to be utilized by both Trimble County Unit 1 (currently owned by LG&E) and Trimble County Unit 2. Additionally, LG&E also sold KU a share of a hyperbolic cooling tower previously used by Trimble County Unit 1 but which will be used solely for Trimble County Unit 2 in the future. Consistent with Federal Energy Regulatory Commission regulations, LG&E is treating these transactions as a sale of an Operating Unit or System.

In accordance with the Code of Federal Regulations part 101 – Uniform System of Accounts Prescribed for Public Utilities, Electric Plant Instruction Number 5 – Electric Plant Purchased or Sold, LG&E respectfully submits this filing related to journal entries made to Plant Account 102, as described on Attachment A, Item 1, which is enclosed. Since there is no gain or loss on the transaction, the debits and credits charged to Plant Account 102 net to zero and there are no journal entries required to clear the balance of Plant Account 102.

Please contact me at (502) 627-3189 should you have any questions regarding this matter.

Very truly yours,

A handwritten signature in cursive script that reads "Sara Wiseman".

Sara Wiseman  
Manager, Property Accounting

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 227**

**Responding Witness: Valerie L. Scott**

- Q-227. Itemize all expenses over \$5,000 recorded by the Company during 2009, 2010 and 2011 in General Office Expense. For each, state the payee, amount, date, purpose and subaccount. Also provide a copy of the associated invoice for amounts over \$10,000.
- A-227. See attached. The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

The entire attachment is  
Confidential and  
provided separately  
under seal.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 228**

**Responding Witness: Valerie L. Scott**

- Q-228. List by account the Company's annual O&M expenses for the years 2008 through and including 2012 to date. For each account having a variance over the prior year exceeding 10%, explain the cause of such variance, listing and describing each significant causative item and the associated dollar amount.
- A-228. See attached. The Company does not maintain variance analyses in this level of detail. Variance explanations between 2008 and 2009 were provided in Case No 2009-00549 in its response to AG 1-149, dated March 15, 2010, which the Company hereby incorporates by reference. Variance explanations between 2009 and 2010, and between 2010 and 2011 are provided in response to Question No. 265.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 229**

**Responding Witness: Valerie L. Scott**

- Q-229. Penalties and fines. List and describe any and all penalties and fines in the test period and the preceding three years. Indicate in which account each such item was recorded, and whether any such penalty or fine is a shareholder or ratepayer expense.
- A-229. See attached. The Company identified \$17,500 in fines during the test period that were improperly recorded in net operating income. This amount should have been recorded in account 426301.

**Louisville Gas & Electric Company

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 230**

**Responding Witness: Paula H. Pottinger, Ph.D.**

Q-230. List all productivity savings expected to be realized by the Company as a result of increased employee experience.

A-230. The Company has not completed any productivity studies relative to increased employee experience.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 231**

**Responding Witness: Valerie L. Scott**

Q-231. List each facility, location, and asset which is included as rental expense. For each item include a description, the annual or monthly rental rate, the account and amount included in the base and test period expense.

A-231. See attached.

<sup>1</sup> The costs related to the copiers reflect the individual items returned at varying times throughout the 2011 portion of the test year - final month charges were prorated i.e. not a full month, refund due, etc.

<sup>2</sup> The costs related to the railcars are charged initially to the 151 Fuel Inventory account and included in the average cost. These charges are expensed with the cost of the fuel based on fuel burned.

<sup>3</sup> The costs related to uniform leases, uniform fittings began Q1 2012.

<sup>4</sup> The costs related to the vehicles are charged initially to the 184 Transportation Clearing Account. These charges are allocated based on labor charges on a one month lag.

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 233**

**Responding Witness: Valerie L. Scott**

Q-233. Provide detailed support for any Management Fees included in the filing. Provide this in Microsoft Excel or compatible format. Include total charges incurred by each corporate department and the amount each of these departments allocated to Kentucky regulated operations. Also include the number of employees in each department and the method used to allocate charges for each department.

A-233. Management fees are not charged to Kentucky regulated operations.

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 234**

**Responding Witness: Valerie L. Scott**

Q-234. Provide a general ledger listing or similar report of all transactions that comprise any corporate charges allocated to regulated operations.

A-234. There are no corporate charges allocated to the regulated operations. All charges are directly or indirectly charged in compliance with the Cost Allocation Manual, located at 807 KAR 5:001 Section 10(6)(t) in the original filing. Refer to PSC 1-42 for charges allocated to Louisville Gas and Electric Company from LG&E and KU Services Company.

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 235**

**Responding Witness: Lonnie E. Bellar**

Q-235. Reference the Spanos testimony in general. State the total costs which the witness is charging LG&E for his services in this proceeding.

A-235. See the response to PSC 1-57 and the update to the same filed on July 31, 2012.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 236**

**Responding Witness: John J. Spanos**

Q-236. Reference the Spanos testimony, pp. 13-14. State what jurisdiction, if any, along with the name of the case and case number, in which the proposed methodology, which the witness acknowledges is a deviation from best practices, has been accepted.

A-236. Mr. Spanos does not acknowledge that the proposed methodology is a "deviation from best practices," but instead states that the "the new methodology is a more precise practice and utilized by most utilities." The new methodology is, however, a change from the prior practice for production plant net salvage for Louisville Gas and Electric Company.

This methodology has been accepted in many jurisdictions which is represented by, but not limited to, the jurisdictions represented by the studies set forth in response to data request KU KIUC-1-44.

Additionally, Florida and California have accepted similar methodologies (FPL and PG&E), but in which the dismantlement component is recovered separately from depreciation expense.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information**

**Dated July 31, 2012**

**Question No. 237**

**Responding Witness: Lonnie E. Bellar**

Q-237. Please identify, describe fully, and provide full documentation of any capital or maintenance plans or programs that the Company has undertaken or is considering undertaking that will extend or shorten the life of any of its electric plant.

A-237. The Company continuously reviews the investment in and the operation of its electric facilities in order to provide continual reliable and economic operation of all assets to provide service to customers. As discussed in the Testimony of Mr. Thompson, one of Energy Services' major corporate objectives is to maximize the performance and investment life of the Companies' generation and transmission assets. The dual goals of asset management are to increase the efficiency of the assets while continuing to provide reliable service. Asset management allows for realization of these goals in the most cost-effective manner possible. In addition, as discussed in the Testimony of Mr. Hermann, the cornerstone of the distribution and retail operations continues to be the Company's commitment to the delivery of safe and reliable service at a low cost to customers. The Company remains dedicated to providing high quality customer service through refining its current programs and implementing innovative practices.

Investments to extend the operational ability of all assets are considered on an ongoing basis. Please refer to the response to Question No. 130 for various investment projects considered for electric plant. The Company is considering turbine upgrade projects for five of its existing coal units; these projects would extend the lives of the steam turbines. These projects are in the early developmental stages, and as such, there is no documentation to provide.

In addition, as part of the Integrated Resource Plan filed with the Kentucky Commission on a periodic basis, the Company reviews the ongoing operation of the existing facilities. See the response to KIUC 1-60 for the most recently filed Integrated Resource Plan.

LG&E's maintenance practices include time and symptom-based guidelines for maintaining or replacing, as appropriate, certain critical asset components before they fail, and maintains its plant assets in a way that is consistent with prudent utility practices.

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 238**

**Responding Witness: Shannon L. Charnas**

Q-238. Please identify, describe fully, and provide full documentation of any changes in the definition of plant units subject to capitalization that the Company has adopted during the last 20 years.

A-238. There have been no changes in the definition of plant units subject to capitalization.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 239**

**Responding Witness: Shannon L. Charnas**

Q-239. Please identify, describe fully, and provide full documentation of any changes in the definition or treatment of salvage or removal/dismantlement costs that the Company has adopted during the last 20 years.

A-239. The adoption of SFAS No. 143<sup>11</sup> resulted in a change in accounting for removal costs. See the response to PSC 1-56 for full description and documentation of the related changes. There have been no other changes in the definition or treatment of salvage or removal/dismantlement costs

---

<sup>11</sup> The guidance in SFAS No. 143 is now contained in FASB Accounting Standards Codification Topic 410, adopted effective September 30, 2009.

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 240**

**Responding Witness: Shannon L. Charnas**

Q-240. Please provide a copy of the Company's most recent depreciation study relating to electric plant and the Order(s), Decision(s), Stipulation(s) and/or Settlement(s) establishing the current electric depreciation rates.

A-240. See the information provided, as required by Commission regulation 807 KAR 5:001, Section 10(6)(n), located at Tab 33 of the Filing Requirements for the most recent depreciation study. See attached for the Order establishing the current depreciation rates. The full stipulation and settlement, and all related case documents, can be found at <http://psc.ky.gov/pscscf/2008%20cases/2008-00252/>.

COMMONWEALTH OF KENTUCKY  
BEFORE THE PUBLIC SERVICE COMMISSION

In the Matter of:

APPLICATION OF LOUISVILLE GAS AND ELECTRIC ) CASE NO.  
COMPANY TO FILE DEPRECIATION STUDY ) 2007-00564

APPLICATION OF LOUISVILLE GAS AND ELECTRIC ) CASE NO.  
COMPANY FOR AND ADJUSTMENT OF ITS ELECTRIC ) 2008-00252  
AND GAS BASE RATES )

O R D E R

Louisville Gas and Electric Company ("LG&E"), a wholly-owned subsidiary of E.ON U.S. LLC, is an electric and gas utility that generates, transmits, distributes and sells electricity to approximately 401,000 customers in Jefferson County, Kentucky and portions of 8 other Kentucky counties. LG&E also purchases, stores, transports, distributes and sells natural gas to approximately 326,000 customers in Jefferson County and in portions of 15 other Kentucky counties.

BACKGROUND

On July 1, 2008, LG&E filed a notice of its intent to file an application for approval of increases in its electric and gas rates, based on a historic test period ending April 30, 2008. On July 29, 2008, LG&E submitted its application seeking an increase in electric revenues of \$15.1 million, or 1.9 percent, and an increase in gas revenues of \$29.8

million, or 4.5 percent.<sup>1</sup> LG&E's application included new rates and revisions, deletions, and additions to its electric and gas tariffs, all to be effective on September 1, 2008.

A review of the application revealed that it did not meet the minimum filing requirements set forth in 807 KAR 5:001, Section 10, and a notice of filing deficiencies was issued. In response to that notice, LG&E filed additional information on August 7, 2008. The Commission then found, by Order dated August 15, 2008, that the additional information satisfied the minimum filing requirements as of August 7, 2008 and that the earliest possible date that LG&E's proposed rates could become effective was September 6, 2008. That Order also found that an investigation would be necessary to determine the reasonableness of LG&E's proposed rates and suspended the proposed rates for 5 months, pursuant to KRS 278.190(2), from September 6, 2008, up to and including February 5, 2009.

The following parties requested and were granted full intervention: the Attorney General of the Commonwealth of Kentucky, by and through his Office of Rate Intervention ("AG"); Kentucky Industrial Utility Customers ("KIUC"); Community Action Kentucky, Inc. ("CAK"); Association of Community Ministries ("ACM") and People Organized and Working for Energy Reform ("POWER"); and the Kroger Company.

The Commission's August 15, 2008 Order included a procedural schedule for processing this case. The schedule provided for discovery on LG&E's application, intervenor testimony, discovery on intervenor testimony, rebuttal testimony by LG&E, a public hearing, and an opportunity for the parties to file post-hearing briefs. The

---

<sup>1</sup> LG&E's sister company, Kentucky Utilities Company ("KU"), filed an application for a rate increase concurrent with LG&E's application, which the Commission docketed as Case No. 2008-00251.

Commission also incorporated into this case LG&E's report on the results of a 3-year pilot program implementing a Small-Time-of-Day Service tariff and subsequently consolidated into this case LG&E's application for approval of new depreciation rates.

On December 10, 2008, LG&E filed a motion requesting that an informal conference be scheduled on January 6, 2009 for the purposes of discussing procedural and substantive issues in these cases and to discuss settlement. The motion was granted and an informal conference was held at the Commission's offices on January 6, 7 and 9, 2009.

On January 13, 2009, LG&E filed on behalf of itself and the intervenors a unanimous Settlement Agreement, Stipulation and Recommendation ("Agreement"). The Agreement consists of a 19-page document with 8 consecutively numbered exhibits. The exhibits are as follows: Exhibit 1, KU Rate Allocation; Exhibit 2, LG&E Electric Rate Allocation; Exhibit 3, LG&E Gas Rate Allocation; Exhibit 4, KU Tariffs; Exhibit 5, LG&E Electric Tariffs; Exhibit 6, LG&E Gas Tariffs; Exhibit 7, KU Depreciation Rates; and Exhibit 8, LG&E Depreciation Rates. The Agreement is attached to this Order as an Appendix. The exhibits are not attached due to their voluminous nature but can be found on the Commission's website at [http://psc.ky.gov/pscscf/2008%20cases/2008-00252/20090113\\_LGE\\_Motion\\_and\\_Testimony.PDF](http://psc.ky.gov/pscscf/2008%20cases/2008-00252/20090113_LGE_Motion_and_Testimony.PDF).

At the public hearing held at the Commission's offices on January 13 and 15, 2009, the parties presented testimony in support of the Agreement. LG&E subsequently filed responses to data requests made at the hearing and the case now stands submitted for a decision.

The Commission notes at the outset that, over the last six months, a substantial number of customers wrote, called or e-mailed our offices to express opposition to any increase in electric or gas rates. The Commission held a public meeting in Louisville, Kentucky on January 5, 2009 to provide a further opportunity for LG&E's customers to state their opinions on the proposed rate increases.

### AGREEMENT

The Agreement, attached as an Appendix to this Order, reflects a unanimous resolution of all issues raised in this case.<sup>2</sup> The major provisions of the Agreement pertaining to LG&E include the following:

- LG&E's rates for electric service will be reduced to recover \$13.157 million less in annual revenues, with the revised rates to be effective for service rendered on and after February 6, 2009.
- LG&E's rates for gas service will be increased to recover \$22.0 million more in annual revenues, with the revised rates to be effective for service rendered on and after February 6, 2009.
- The decrease in LG&E's electric rates will be accomplished through reductions to the energy charges in all rate schedules except those with no energy charges, such as street lighting and outdoor lighting, where the reductions will be to the monthly charges per light, fixture, pole, etc.
- The increase in LG&E's gas rates will be accomplished via an allocation and rate design consistent with that proposed by LG&E in its application, except

---

<sup>2</sup> The Agreement is a comprehensive document which resolves all issues in LG&E's consolidated depreciation and rate cases, as well as KU's consolidated depreciation and rate cases, Case Nos. 2007-00565 and 2008-00251.

that the monthly customer charge for the residential class will be increased by only \$1.00, from \$8.50 to \$9.50, with the remainder of the residential increase being produced by an increase in the volumetric base rate from \$1.547 to \$2.1349 per Mcf.

- LG&E's depreciation expense will continue to be based on the Average Service Life ("ASL") methodology. The depreciation rates to be used are set forth in Exhibit 8 to the Agreement, with the cost of LG&E's new Customer Care System software to be depreciated over 10 years for accounting and ratemaking purposes.
- The return on equity ("ROE") included in LG&E's environmental cost recovery ("ECR") filings will be increased from 10.50 to 10.63 percent effective with the first expense month subsequent to approval of the Agreement.
- LG&E's costs associated with the Federal Energy Regulatory Commission ("FERC") approved settlement of a transmission rate dispute between LG&E, KU and East Kentucky Power Cooperative, Inc. ("East Kentucky") will be recorded as a regulatory asset and amortized over five years beginning in the month after approval of the Agreement.
- LG&E will be permitted to defer revenues related to the Midwest Independent System Operator's ("MISO") Schedule 10 expenses recorded between the end of the test year and February 6, 2009, as well as future adjustments to the MISO exit fee, as regulatory liabilities until the amounts can be amortized in future rate cases. The amortization of amounts related

to the MISO Schedule 10 expenses and the MISO exit fee deferred as of the end of the test year will begin in the month after approval of the Agreement.

- Residential customer deposits will be \$135 for LG&E electric, \$160 for LG&E gas, and \$295 for an LG&E combined gas and electric customer. All other customer deposits will be as proposed in LG&E's application.
- Residential customers indicating an inability to pay or difficulty in paying the full amount of the required deposit will be offered the option to pay all or a portion of the required deposit in installments over a period not to exceed the first four normal billing periods.
- LG&E's curtailable electric service riders will be modified, including increases in the monthly credit to participating customers and reductions in the annual and daily interruptions.
- Payment of a customer's bill will be due 12 days after the date of the bill; however, there will be no adverse credit impact, internally or externally, including credit scoring, nor will the account be considered delinquent, if the payment is received within 15 days from the date of the bill.
- LG&E, CAK and ACM/POWER will consult on a plan for utility-approved emergency energy assistance agencies to annually pre-certify recipients of utility payment assistance so that any late payment charges for such pre-certified customers can be waived from December through March. Participation in such a program will be optional for any of the energy assistance agencies.

- LG&E will increase the monthly residential meter charge for the Home Energy Assistance (“HEA”) program from \$0.10 to \$0.15 per meter. For two years following implementation of the rates included in the Agreement, or until rates take effect in LG&E’s next base rate case, whichever is longer, LG&E and KU will contribute shareholder funds to the program to match HEA funds collected from customers, up to \$300,000 annually on a combined utilities basis.
- LG&E will amortize its actual rate case expenses associated with this case over three years beginning in the month after the Agreement is approved.

#### ANALYSIS OF THE AGREEMENT

LG&E proposed an annual electric rate increase of \$15.1 million, while it proposed an annual gas rate increase of \$29.8 million. The AG proposed an annual electric decrease of \$52.4 million and an annual gas increase of \$12.8 million. KIUC proposed an annual electric decrease of \$50.9 million, but did not address LG&E’s gas rate increase. No other intervenor addressed LG&E’s proposed gas or electric increases. The Agreement contains the parties’ unanimous recommendation that LG&E’s existing electric rates should be decreased by \$13.157 million and that its existing gas rates should be increased by \$22.0 million.

In considering the parties’ recommended \$13.157 million decrease in electric rates, the Commission recognizes that LG&E’s existing merger surcredit will terminate on the effective date of the new rates in this case. The merger surcredit, which has recently offset electric rates by \$10.8 million annually, was implemented in 1998 to flow back to ratepayers one-half of the estimated savings in expenses resulting from LG&E’s

merger with KU. In accordance with last year's agreement among the parties in Case No. 2007-00562,<sup>3</sup> 100 percent of LG&E's merger savings will be reflected in the test year used in this rate case, and that obviates the need to continue the merger surcredit once new rates become effective. Other significant provisions of the Agreement are discussed in the following paragraphs.

#### Depreciation

LG&E sought approval of new depreciation rates it had originally proposed in Case No. 2007-00564 based on a depreciation study performed by Gannett Fleming, Inc. ("Gannett Fleming"). LG&E's new depreciation rates reflected Gannett Fleming's recommendation that it implement the Equal Life Group methodology, rather than continue to use the ASL methodology. The Agreement calls for LG&E to continue to use the ASL methodology, although it will use new ASL rates that are based on the results of the Gannett Fleming depreciation study.

#### ROE – Environmental Cost Recovery

Typically, an electric utility with an environmental surcharge approved pursuant to KRS 278.183 uses the ROE from its most recent rate case in the return component of the environmental costs included in its surcharge. Since the Agreement in this proceeding does not include a specific ROE in support of the agreed-upon revenue decrease, the parties agreed that a 10.63 percent ROE be used in LG&E's monthly ECR filings. This represents an increase from the 10.5 percent ROE that has been included in its ECR filings for a number of years.

---

<sup>3</sup> The Plan of Louisville Gas and Electric Company for the Future Disposition of the Merger Surcredit Mechanism, Order dated June 26, 2008.

### MISO Deferral / Regulatory Treatment

The Agreement authorizes LG&E to amortize over five years the \$6.8 million regulatory asset resulting from the Commission's approval of LG&E's exit from MISO in Case No. 2003-00266.<sup>4</sup> It also provides for LG&E to defer any post-test year revenues related to MISO Schedule 10 expenses, as well as future adjustments to the MISO exit fee, as regulatory liabilities to be amortized in a future rate case. This treatment is consistent with Commission's decision in Case No. 2003-00266.

### FERC Transmission Rate Settlement Costs

The dispute that led to the settlement of this issue related to East Kentucky's purchase of transmission capacity from MISO when LG&E and KU were members of MISO and when East Kentucky's load was, to some degree, on one, or both, of LG&E's and KU's transmission systems. These are costs which are also related to LG&E exiting MISO, which the Commission previously approved. The Agreement recommends a five-year amortization for these FERC settlement costs. Given the nature of the costs, plus their connection to LG&E's exit from MISO, a five-year amortization period is appropriate.

### HEA Increase – Shareholder Contribution

LG&E has operated its HEA program for several years and for virtually that entire time the Commission has encouraged LG&E to make some contribution of shareholder funds to the program. In the Agreement, on a combined basis with KU, LG&E has

---

<sup>4</sup> Case No. 2003-00266, Investigation into the Membership of Louisville Gas and Electric Company and Kentucky Utilities Company in the Midwest Independent System Operator, Inc., Order dated May 31, 2006.

agreed to match the funds generated via the increased per meter charge of \$0.15, up to \$300,000 annually for the first two years following approval of the Agreement. Especially in today's economic conditions, the Commission compliments LG&E for making this commitment of shareholder dollars to assist its low-income customers in making payment on, and maintaining, their utility service.

#### SUMMARY

The Agreement provides that the rates, terms and conditions proposed in LG&E's application, except as modified by the Agreement, will become effective upon Commission approval of the Agreement. The parties recommend that the new rates become effective on February 6, 2009, and agree that if the Agreement is approved, no requests for rehearing or appeals will be filed.

Based on a review of the provisions in the Agreement and the exhibits attached thereto; the voluminous record, including intervenor testimony and data responses; and the public comments; the Commission finds that the provisions of the Agreement are reasonable and in the public interest. The Agreement was the product of arms-length negotiations among knowledgeable, capable parties and should be approved. Such approval is based solely on the reasonableness of the Agreement in total and does not constitute a precedent on any individual issue.

The Commission further finds that LG&E should revise its electric and gas tariffs to reflect the provision of the Agreement specifying no adverse credit impact for customers paying within 15 days of the date of the bill. In addition, since LG&E will be unable to implement the 12-day bill due date for another few months, a copy of its existing bill format should be included in its tariffs along with a copy of its new bill

format. Prior to implementing the new bill format and the payment due date of 12 days, LG&E should notify its customers of the changes through its monthly billings.

Residential Bill Comparisons

As a result of the Agreement, the base rate component of the bill of a typical LG&E electric residential customer using 1,000 kWh per month will decline from \$69.04 to \$68.03. However, as a result of the termination of the merger surcredit and the \$0.05 increase in the monthly HEA meter charge, the overall net impact on the typical customer's monthly bill will be an increase of \$0.21. The base rate component of the bill of a typical gas residential customer using 10 Mcf monthly will increase from \$23.97 to \$30.85.

IT IS THEREFORE ORDERED that:

1. The rates and charges proposed by LG&E are denied.
2. The Agreement, attached hereto as an Appendix, is approved in its entirety.
3. LG&E shall continue to record depreciation on its utility plant for book and ratemaking purposes using the ASL methodology and the rates set forth in Exhibit 8 to the Agreement.
4. The rates, charges, terms, and conditions for electric service set forth in Exhibit 5 to the Agreement, with the modifications discussed above to the tariffs, are fair, just and reasonable, for LG&E to charge for electric service rendered on and after February 6, 2009.
5. The rates, charges terms, and conditions for gas service set forth in Exhibit 6 to the Agreement, with the modifications to the tariffs discussed above, are

fair, just and reasonable for LG&E to charge for gas service rendered on and after February 6, 2009.

6. LG&E shall file within 20 days of the date of this Order its revised tariffs as set forth in Exhibit Nos. 5 and 6 to the Agreement and as modified by the findings herein reflecting that they were approved pursuant to this Order.

7. LG&E shall establish as regulatory liabilities all post-test year revenues related to MISO Schedule 10 expenses and future adjustments to its MISO exit fee until such time as they can be amortized in a future rate case.

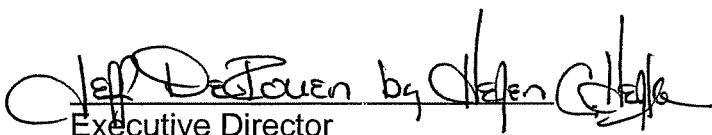

8. LG&E shall establish a regulatory asset and begin a five-year amortization thereof for the FERC settlement costs incurred in connection with the wholesale transmission rate dispute with East Kentucky relating to LG&E's exit from MISO.

9. LG&E shall defer and amortize over three years its actual rate case expenses incurred in conjunction with this proceeding.

Done at Frankfort, Kentucky, this 5th day of February, 2009.

By the Commission

ATTEST:

  
Executive Director

APPENDIX

APPENDIX TO AN ORDER OF THE KENTUCKY PUBLIC SERVICE  
COMMISSION IN CASE NOS. 2007-00564 and 2008-00252  
DATED FEBRUARY 5, 2009

RECEIVED

JAN 13 2009

PUBLIC SERVICE  
COMMISSION

**SETTLEMENT AGREEMENT, STIPULATION, AND RECOMMENDATION**

This Settlement Agreement, Stipulation, and Recommendation ("Settlement Agreement") is entered into this 12th day of January 2009, by and between Louisville Gas and Electric Company ("LG&E"); Kentucky Utilities Company ("KU") (LG&E and KU are hereafter collectively referenced as "the Utilities"); Commonwealth of Kentucky, ex. rel. Jack Conway, Attorney General, by and through the Office of Rate Intervention ("AG"); Kentucky Industrial Utility Customers, Inc. ("KIUC"); The Kroger Company ("Kroger"); Lexington-Fayette Urban County Government ("LFUCG"); Community Action Kentucky, Inc. ("CAK"); Community Action Council for Lexington-Fayette, Bourbon, Harrison and Nicholas Counties, Inc. ("CAC"); Association of Community Ministries ("ACM"); and, People Organized and Working for Energy Reform ("POWER") in the proceedings involving LG&E and KU which are the subject of this Settlement Agreement, as set forth below.

**WITNESSETH:**

**WHEREAS**, KU filed on July 29, 2008 with the Kentucky Public Service Commission ("Commission") its Application for Authority to Adjust Rates, *In the Matter of: An Application of Kentucky Utilities Company for an Adjustment of Base Rates*, and the Commission has established Case No. 2008-00251 to review KU's base rate application;

**WHEREAS**, LG&E filed on July 29, 2008 with the Commission its Application for Authority to Adjust Rates, *In the Matter of: An Application of Louisville Gas and Electric Company for an Adjustment of Its Electric and Gas Base Rates*, and the Commission has established Case No. 2008-00252 to review LG&E's base rate application (Case Nos. 2008-00251 and 2008-00252 are hereafter collectively referenced as the "rate proceedings");

**WHEREAS**, the AG, KIUC, Kroger, and CAK have been granted intervention by the Commission in both of the rate proceedings; LFUCG and CAC have been granted intervention

by the Commission in Case No. 2008-00251 only; and ACM and POWER have been granted intervention by the Commission in Case No. 2008-00252 only;

**WHEREAS**, on August 22, 2008, the Commission granted consolidation of Case No. 2008-00251 with the case captioned *In the Matter of: Application of Kentucky Utilities Company to File Depreciation Study*, Case No. 2007-00565, and Case No. 2008-00252 with the case captioned *In the Matter of: Application of Louisville Gas and Electric Company to File Depreciation Study*, Case No. 2007-00564;

**WHEREAS**, pursuant to the terms of the Utilities' Small Time-of-Day ("STOD") pilot tariffs, the Utilities performed studies of their STOD rates after the three-year pilot period, which studies the Utilities filed in these proceedings pursuant to the Commission's August 15, 2008 Orders in these proceedings;

**WHEREAS**, a prehearing informal conference for the purpose of discussing settlement, attended in person by representatives of the AG, KIUC, Kroger, LFUCG, CAK, CAC, ACM and POWER, the Commission Staff and the Utilities, took place on January 6, 7, and 9, 2009 at the offices of the Commission during which a number of procedural and substantive issues were discussed, including potential settlement of all issues pending before the Commission in the above-referenced proceedings;

**WHEREAS**, all of the Parties hereto unanimously desire to settle all the issues pending before the Commission in the above-referenced proceedings;

**WHEREAS**, the adoption of this Agreement will eliminate the need for the Commission and the parties to expend significant resources litigating these proceedings, and eliminate the possibility of, and any need for, rehearing or appeals of the Commission's final order herein;

**WHEREAS**, it is understood by all Parties hereto that this Settlement Agreement is subject to the approval of the Commission, insofar as it constitutes an agreement by all parties to the rate proceedings for settlement, and, absent express agreement stated herein, does not represent agreement on any specific claim, methodology or theory supporting the appropriateness of any proposed or recommended adjustments to the Utilities' rates, terms, and conditions;

**WHEREAS**, the Parties have spent many hours, over several days, in order to reach the stipulations and agreements which form the basis of this Settlement Agreement;

**WHEREAS**, all of the Parties, who represent diverse interests and divergent viewpoints, agree that this Settlement Agreement, viewed in its entirety, is a fair, just, and reasonable resolution of all the issues in the above-referenced proceedings; and

**WHEREAS**, it is the position of the Parties hereto that this Settlement Agreement is supported by sufficient and adequate data and information, and should be approved by the Commission.

**NOW, THEREFORE**, for and in consideration of the premises and conditions set forth herein, the Parties hereby stipulate and agree as follows:

**ARTICLE I. Revenue Requirement.**

**Section 1.1.** The Parties hereto stipulate that the following decreases in annual revenues for LG&E electric and KU operations, for purposes of determining the base electric rates of LG&E and KU in the rate proceedings, are fair, just, and reasonable for the Parties and for all customers of LG&E and KU:

**Section 1.1.1.** LG&E Electric Operations: \$13,157,000;

**Section 1.1.2.** KU Operations: \$8,851,000.

The Parties hereto agree that these decreases in annual revenues for LG&E electric operations and for KU operations will be effective for service rendered on and after February 6, 2009.

**Section 1.2.** The Parties hereto agree that, effective for service rendered on and after February 6, 2009, an increase in annual revenues for LG&E gas operations of \$22,000,000, for purposes of determining the base rates of LG&E gas operations in the rate proceedings, is fair, just, and reasonable for the Parties and for all gas customers of LG&E.

**ARTICLE II. Allocation of Revenue.**

**Section 2.1.** The Parties hereto agree that the allocations of the decreases in annual revenues for KU and LG&E electric operations, and that the allocation of the increase in annual revenue for LG&E gas operations, as set forth on the allocation schedules designated Exhibit 1 (KU), Exhibit 2 (LG&E electric), and Exhibit 3 (LG&E gas) hereto, are fair, just, and reasonable for the Parties and for all customers of LG&E and KU.

**Section 2.2.** The Parties hereto agree that, effective February 6, 2009, the Utilities shall implement the electric and gas rates set forth on the tariff sheets in Exhibit 4 (KU), Exhibit 5 (LG&E electric), and Exhibit 6 (LG&E gas), attached hereto, which rates the Parties unanimously stipulate are fair, just, and reasonable and should be approved by the Commission.

**ARTICLE III. Treatment of Certain Specific Issues.**

**Section 3.1.** The Parties agree that LG&E and KU may amortize their actual rate case expenses in these proceedings over a three year period. The amortization shall begin in the month after which the Commission approves this Settlement Agreement.

**Section 3.2.** The Parties agree that the depreciation rates attached hereto as Exhibit 7 (KU) and Exhibit 8 (LG&E electric and gas), which include the depreciation of the cost of the

Utilities' new Customer Care System software over ten years, are based on the Average Service Life methodology and the service lives as filed in the respective applications, and shall be effective for the Utilities' accounting and ratemaking purposes upon the approval of this Settlement Agreement.

**Section 3.3.** *The Parties hereto agree that, effective as of the first expense month after which the Commission approves this Settlement Agreement, the return on equity that shall apply to the Utilities' recovery under their environmental cost recovery ("ECR") mechanism is 10.63%.*

**Section 3.4.** *The Parties hereto agree that the Commission should grant the Utilities' requests, as stated in their Applications, to establish and amortize over five years a regulatory asset for each of the Utilities for the costs associated with the transmission depancaking settlement agreement in Federal Energy Regulatory Commission Docket No. ER06-1458-000 between the Utilities and East Kentucky Power Cooperative, Inc. The amortization shall begin in the month after which the Commission approves this Settlement Agreement.*

**Section 3.5.** *The Parties hereto agree that the Commission should grant the Utilities' requests that revenues related to MISO Schedule 10 expenses deferred between the end of the test year and February 6, 2009, as well as any future adjustments to the MISO exit fee, be deferred as regulatory liabilities until the amounts can be amortized in future base rate cases. The amortization of the amounts related to MISO Schedule 10 expenses and the MISO exit fee already deferred as of the end of the test year shall begin in the month after which the Commission approves this Settlement Agreement.*

**Section 3.6.** *The Parties hereto agree that the Utilities' currently approved customer charges shall remain unchanged in the new rates, terms, and conditions proposed by this*

Settlement Agreement, with the exception of LG&E's gas residential customer charge, which shall increase by \$1.00 per month to \$9.50 per month.

**Section 3.7.** The Parties hereto agree that the Utilities' merger surcredits will terminate February 6, 2009, and the total distribution of the merger surcredits will be prorated to that date.

**Section 3.8.** The Parties hereto agree that the following residential customer deposit amounts shall be implemented: \$135 for LG&E electric; \$160 for LG&E gas; \$295 for LG&E electric and gas combined; and \$135 for KU. All other customer deposit amounts will be as filed by the Utilities in these proceedings.

**Section 3.9.** The Parties hereto agree that, if a residential customer indicates an inability to pay or difficulty in paying a required customer deposit, the appropriate Utility shall offer the customer the option to pay all or a portion of the required deposit in installments over a period not to exceed the first four normal billing periods.

**Section 3.10.** The Parties hereto agree to the following changes to the following *Curtable Service Riders* for LG&E electric and KU: the CSR1 credit will increase from the currently approved level by \$2.00 per kW; CSR1 customers will be interruptible for no more than 200 hours annually, and no more than two interruptions per day; the CSR2 credit will increase from the currently approved level by \$1.50 per kW; CSR2 customers will be interruptible for no more than 425 hours annually, and no more than two interruptions per day. The amount of load that can be eligible for the CSR2 rider shall be limited to an aggregate of 100 MW per Utility.

**Section 3.11.** The Utilities agree to work with interested parties to study the feasibility of measuring demand for generation service to multi-site customers based on conjunctive demand, where "conjunctive demand" herein refers to the measured demand at a meter at the time that the

total demand of a multi-site customer's loads, measured over a coinciding time period, has reached its peak during the billing period.

**Section 3.12.** The Parties hereto agree that payment for a customer's bill shall be due to the appropriate Utility twelve days after the date on which the Utility issues the bill, though there will be no adverse credit impact on the customer's payment and credit record, including credit scoring, both internally and externally, and the account will not be considered delinquent for any purpose if the Utility receives the customer's payment within fifteen days after the date on which the Utility issues the customer's bill. If the appropriate Utility does not receive the customer's payment within fifteen days after the date on which the Utility issues the customer's bill, the Utility may assess a late payment charge as set out in the Utility's proposed tariffs in these proceedings. The Parties acknowledge and agree that LG&E and KU will not be able to implement the change in the due date of customers' bills and that KU will not be able to implement its late payment charge until the first billing cycle following the full operation of its new Customer Care System.

**Section 3.13.** The Parties hereto agree that the Utilities, CAK, and ACM/POWER will consult with each other concerning the design of a plan regarding the identification of late payment charges for low income customers associated with utility assistance payments. Specifically, they shall discuss the implementation of a plan by which CAK, ACM/POWER, their member agencies, and other Utility-approved emergency energy assistance agencies ("Assistance Agencies") would annually pre-certify recipients of certain utility payment assistance, conceptually similar to the pre-certification program currently in place in the Commonwealth of Virginia, which would allow the Utilities' Kentucky operations to waive the late payment charges for such pre-certified customers during the months of December through

March each year. Participation in such a pre-certification program would be optional to any or all of the Assistance Agencies.

**Section 3.14.** The Parties hereto agree that the Utilities shall increase the currently approved monthly residential meter charge (for gas and electric meters) for the Home Energy Assistance (“HEA”) program from \$0.10 to \$0.15 per meter. For a period of two years following the implementation of the rates proposed in this Settlement Agreement or until rates take effect in the Utilities’ next base rate proceedings, whichever is longer, the Utilities shall make a dollar-for-dollar contribution from shareholder funds to the HEA program to match HEA funds collected from customers (up to \$300,000 per year on a combined-Utilities basis).

**Section 3.15.** The Parties hereto agree that, except as modified in this Settlement Agreement and the exhibits attached hereto, the rates, terms, and conditions proposed by the Utilities in the rate proceedings shall be approved as filed. Approval of this Settlement Agreement shall not be construed to approve or deny the adjustments to LG&E’s and KU’s electric revenues and expenses associated with the normalization of weather.

**ARTICLE IV. Miscellaneous Provisions.**

**Section 4.1.** Except as specifically stated otherwise in this Settlement Agreement, the Parties agree that making this Settlement Agreement shall not be deemed in any respect to constitute an admission by any party hereto that any computation, formula, allegation, assertion or contention made by any other party in these proceedings is true or valid.

**Section 4.2.** The Parties hereto agree that the foregoing stipulations and agreements represent a fair, just, and reasonable resolution of the issues addressed herein and request the Commission to approve the Settlement Agreement.

**Section 4.3.** The Parties hereto agree that, following the execution of this Settlement Agreement, the Parties shall cause the Settlement Agreement to be filed with the Commission by January 12, 2009 together with a request to the Commission for consideration and approval of this Settlement Agreement for rates to become effective on February 6, 2009.

**Section 4.4.** Each party waives all cross-examination of the other parties' witnesses unless the Commission disapproves this Agreement, and each party further stipulates and recommends that the Notice of Intent, Notice, Application, testimony, pleadings, and responses to data requests filed in this proceeding be admitted into the record. The Parties stipulate that after the date of this Settlement Agreement they will not otherwise contest the Utilities' proposals, as modified by this Settlement Agreement, in the hearing of the above-referenced proceedings regarding the subject matter of the Settlement Agreement, and that they will refrain from cross-examination of the Utilities' witnesses during the hearing, except insofar as such cross-examination is in support of the Settlement Agreement.

**Section 4.5.** The Parties hereto agree that this Settlement Agreement is subject to the acceptance of and approval by the Commission. The Parties hereto further agree to act in good faith and to use their best efforts to recommend to the Commission that this Settlement Agreement be accepted and approved.

**Section 4.6.** If the Commission issues an order adopting this Settlement Agreement in its entirety, each of the parties agrees that it shall file neither an application for rehearing with the Commission, nor an appeal to the Franklin Circuit Court with respect to such order.

**Section 4.7.** The Parties hereto agree that, if the Commission does not accept and approve this Settlement Agreement in its entirety, then: (a) this Settlement Agreement shall be void and withdrawn by the parties hereto from further consideration by the Commission and

— none of the parties shall be bound by any of the provisions herein, provided that no party is precluded from advocating any position contained in this Settlement Agreement; and (b) neither the terms of this Settlement Agreement nor any matters raised during the settlement negotiations shall be binding on any of the Parties to this Settlement Agreement or be construed against any of the Parties.

**Section 4.8.** The Parties hereto agree that, should the Settlement Agreement be voided or vacated for any reason after the Commission has approved the Settlement Agreement, then the parties shall be returned to the *status quo* existing at the time immediately prior to the execution of this agreement.

**Section 4.9.** The Parties hereto agree that this Settlement Agreement shall in no way be deemed to divest the Commission of jurisdiction under Chapter 278 of the Kentucky Revised Statutes.

**Section 4.10.** The Parties hereto agree that this Settlement Agreement shall inure to the benefit of and be binding upon the parties hereto, their successors and assigns.

**Section 4.11.** The Parties hereto agree that this Settlement Agreement constitutes the complete agreement and understanding among the parties hereto, and any and all oral statements, representations or agreements made prior hereto or contained contemporaneously herewith shall be null and void and shall be deemed to have been merged into this Settlement Agreement.

**Section 4.12.** The Parties hereto agree that, for the purpose of this Settlement Agreement only, the terms are based upon the independent analysis of the parties to reflect a fair, just, and reasonable resolution of the issues herein and are the product of compromise and negotiation.

**Section 4.13.** The Parties hereto agree that neither the Settlement Agreement nor any of the terms shall be admissible in any court or commission except insofar as such court or

commission is addressing litigation arising out of the implementation of the terms herein or the approval of this Settlement Agreement. This Settlement Agreement shall not have any precedential value in this or any other jurisdiction.

**Section 4.14.** The signatories hereto warrant that they have appropriately informed, advised, and consulted their respective Parties in regard to the contents and significance of this Settlement Agreement and based upon the foregoing are authorized to execute this Settlement Agreement on behalf of their respective Parties.

**Section 4.15.** The Parties hereto agree that this Settlement Agreement is a product of negotiation among all parties hereto, and no provision of this Settlement Agreement shall be strictly construed in favor of or against any party. Notwithstanding anything contained in the Settlement Agreement, the parties recognize and agree that the effects, if any, of any future events upon the operating income of the Utilities are unknown and this Settlement Agreement shall be implemented as written.

**Section 4.16.** The Parties hereto agree that this Settlement Agreement may be executed in multiple counterparts.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 241**

**Responding Witness: John J. Spanos**

- Q-241. Please provide the calculation of the current depreciation rates (or those used to calculate the test period depreciation expense, if different) in electronic format (Excel) with all formulae intact. Show all parameters used (i.e., ASL, curve, remaining life, net salvage ratio), and provide a source for those parameters. Please explain any differences in the parameters or rates from those that were ordered when the rates were adopted.
- A-241. The attached spreadsheet sets forth the calculation of the current depreciation rates in Excel format. The spreadsheet includes all parameters. These parameters were agreed upon in settlement from the last proceeding. There are no differences in the parameters or rates from those that were ordered when the rates were adopted.

The attachment is being provided in a separate file in Excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 242**

**Responding Witness: Shannon L. Charnas**

Q-242. Does the Company maintain its book reserve by plant account? If not, explain why not and explain how the book reserves were determined for use in calculating the current depreciation rates.

A-242. The Company maintains its book reserve by plant account.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 244**

**Responding Witness: Shannon L. Charnas**

Q-244. Please provide any and all internal studies and correspondence from 2008-2012, inclusive, concerning FASB Statement No. 143, FIN 47 and FERC Order No. 631 in RM-02-7-000.

A-244. The Company provided internal documents and correspondence concerning FASB Statement No. 143, FIN47 and FERC Order 631 for 2008-2009 in Case No. 2009-00549 in its response to AG 1-163, dated March 15, 2010, which the Company hereby incorporates by reference. See attached for 2010 – 2012. LG&E has made its best effort to provide the most relevant documentation in response to this question other than documents that are subject to the attorney-client privilege or attorney work product protection.

The information requested is confidential and proprietary, and is being provided under seal pursuant to a petition for confidential treatment.

The attachment is  
being provided in a  
separate file.

4 files are redacted and  
provided; additional  
confidential information  
is provided under seal.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 245**

**Responding Witness: Shannon L. Charnas**

Q-245. Please provide complete copies of all correspondence with the following parties from 2008-2012, inclusive, regarding FASB Statement No. 143, FIN 47 and FERC Order 631 in RM02-7-000:

- a. External auditors and other public accounting firms,
- b. Consultants,
- c. External counsel,
- d. Federal and State regulatory agencies, and
- e. Internal Revenue Service.

A-245. a. See the response to Question No. 244.

b. See the response to Question No. 244.

c. Based on a reasonable search, there was no correspondence with external counsel from 2008-2012 regarding FASB Statement No. 143, FIN 47 or FERC Order 631 in RM02-7-000.

d. The Company had no correspondence with Federal and State regulatory agencies from 2008-2012 regarding FASB Statement No. 143, FIN 47 or FERC Order 631 in RM02-7-000.

e. The Company had no correspondence with the IRS from 2008-2012 regarding FASB Statement No. 143, FIN 47 or FERC Order 631 in RM02-7-000.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 246**

**Responding Witness: Shannon L. Charnas**

Q-246. Regarding FASB Statement No. 143, FIN 47, and FERC Order No. 631 in Docket No. RM02-7-000, on a plant account-by-plant account basis, please identify any and all "legal obligations" associated with the retirement of the assets contained in the account that result from the acquisition, construction, development and (or) the normal operation of the assets in the account. For the purposes of this question, please use the definition of a "legal obligation" provided in FASB Statement No. 143: "an obligation that a party is required to settle as a result of an existing or enacted law, statute, ordinance, or written or oral contract under the doctrine of promissory estoppel."

A-246. See attached.

**Louisville Gas and Electric  
Asset Retirement Obligations by Plant Account**

ARO	Plant Account and Description	Legal Obligation
Ash Ponds, Landfills	131100 - Structures and Improvements	Coal combustion by-product storage facilities must be properly closed and monitored.
Coal Storage	131100 - Structures and Improvements	Must remove all material storage piles to eliminate the potential for contaminated storm water runoff from the site.
Floodwall Penetration	131100 - Structures and Improvements	Must fill concrete tunnels in order to maintain integrity of the floodwall.
Generation Wells	131100 - Structures and Improvements	Wells must be properly covered and closed.
Nuclear Sources	131200 - Boiler Plant Equipment	Removal and disposal of radioactive waste.
Chemical Storage	131200 - Boiler Plant Equipment	Hazardous wastes must be removed from site and disposed of properly.
Oil Storage	131200 - Boiler Plant Equipment	Must drain/remove all hazardous chemicals/petroleum products from storage tanks/reservoirs and recycle/reuse or dispose of properly.
Asbestos - Generation	131200 - Boiler Plant Equipment	Removal and disposal of asbestos in the proper manner.
Asbestos - Distribution	136100 - Structures and Improvements	Removal and disposal of asbestos in the proper manner.
Asbestos - Distribution	136600 - Underground Conduit	Removal and disposal of asbestos in the proper manner.
Asbestos - Transmission	135210 - Structures & Improvements-Non System Control	Removal and disposal of asbestos in the proper manner.
Asbestos - General Plant	339010 - Structures and Improvements-General Offices	Removal and disposal of asbestos in the proper manner.
Asbestos - Gas	235120 - Compressor Station Structures	Removal and disposal of asbestos in the proper manner.
Asbestos - Gas	235300 - Lines	Removal and disposal of asbestos in the proper manner.
Asbestos - Gas	235600 - Purification Equipment	Removal and disposal of asbestos in the proper manner.
Asbestos - Gas	237520 - Other Distribution Structures	Removal and disposal of asbestos in the proper manner.
PCB - Distribution	136200 - Station Equipment	Removal and disposal of PCB in the proper manner.
PCB - Transmission	135310 - Station Equipment - Non System Control	Removal and disposal of PCB in the proper manner.
Gas Wells	235250 - Well Equipment	Wells must be properly plugged and covered.
Gas Distribution Mains	237600 - Mains	Gas must be purged from the mains and the pipe must be cut and capped.
Gas Transmission Mains	236700 - Mains	Gas must be purged from the mains and the pipe must be cut and capped.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 247**

**Responding Witness: Shannon L. Charnas**

Q-247. For any asset retirement obligations identified above, please provide the "fair value" of the obligation. For the purposes of the question, fair value means "the amount at which that liability could be settled in a current [not future] transaction between willing parties, that is, other than in a forced or liquidation transaction." Please provide all assumptions and calculations underlying these amounts.

A-247. See attached for the current asset retirement obligation (ARO) liabilities. The calculation of the ARO liability is an automated function in the Fixed Asset system. Each month, the Fixed Asset system multiplies the current month's beginning ARO liability balance by the applicable discount rate and then divides that amount by 12 to arrive at the monthly accretion amount. This monthly amount is added to the current month's beginning liability balance to compute the current ending balance.

**Louisville Gas and Electric  
Asset Retirement Obligation Liabilities  
March 31, 2012**

ARO	LIABILITY
Ash Ponds, Landfills	\$ 20,102,008

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 248**

**Responding Witness: Shannon L. Charnas**

Q-248. Please provide the "credit adjusted risk free rate" used for any and all ARO calculations under FASB Statement No. 143, FIN 47, and FERC Order No. 631 calculations to date.

A-248. See attached.

The "credit adjusted risk free rate" is based on LG&E's credit rating. The discount rate used for each ARO is equal to the yield for a bond with LG&E's credit rating and a maturity date in the same year as the year the ARO is expected to be settled. The yields are based on indications provided by a major investment bank. FERC Order No. 631 does not have separate calculations.

(1) A new ARO layer is established as revaluations are performed.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 249**

**Responding Witness: Shannon L. Charnas**

Q-249. Please provide complete copies of all Board of Director's minutes and internal management meeting minutes from 2008-2012, inclusive, in which any or all of the following subjects were discussed: the Company's electric plant depreciation rates; retirement unit costs; SFAS No. 143; FIN 47; and, FERC RM02-7-000.

A-249. See attached.

**Minutes of Depreciation Study Results Meeting  
April 13, 2012  
9 A.M.**

Attendees:

Valerie Scott, Controller  
Shannon Charnas, Director, Accounting & Regulatory Reporting  
Robert Conroy, Director, Rates  
Sara Wiseman, Manager, Property Accounting  
Eric Riggs, Senior Property Accounting Analyst  
Doug Leichty, Senior Rate & Regulatory Analyst  
John Spanos, Gannett Fleming (conference telephone)  
Robert Watt, Stoll Keenon Ogden PLLC (conference telephone)

The final recommendations and findings for the depreciation studies for Louisville Gas and Electric Company and Kentucky Utilities Company were presented by John Spanos of Gannett Fleming. Mr. Spanos noted the following regarding the study:

- The depreciation study results were prepared using the average service life procedure and remaining life basis methodology consistent with past studies.
- The study resulted in revised life and salvage parameters based on historical information, industry benchmarks and discussion with Company personnel.
- Probable retirement dates are based on a combination of the age of the current assets, the life assessment study and discussions with management. Generation retirement dates may be less than or greater than the years referenced in the life assessment study due to various circumstances at each plant.
- Retirement dates of 2015 were established for Cane Run, Green River and Tyrone steam generating units.
- Estimated terminal net salvage for generation assets was incorporated. This is a weighted average for terminal and interim net salvage. This parameter change provides a more precise method to include the final retirement costs of generation facilities.
- Future rates for LS Power/Bluegrass Generation were provided using interim salvage curves, net salvage percents and retirement dates consistent with the Company's existing assets.
- Communication, power operated and transportation equipment was segregated into new accounts based on the utilization of assets. The use of new accounts and depreciation rates will better represent the recovery of these assets.
- Trimble County Generating Unit 2 was assigned a life of 55 years, the same as the life from the original rate calculation in 2011, due primarily to the transfer of joint use assets from Trimble County Generating Unit 1.

Mr. Spanos also incorporated a relatively small reallocation of the accumulated provision for depreciation reserve for generation assets in order to realign past recovery and smooth out future recovery.

At the conclusion of this discussion, the depreciation study was accepted.

SLW

Minutes of the Investment Committee  
April 20, 2009

The Investment Committee (“the Committee” or “IC”) met on April 20, 2009 at 1:30 P.M. Committee Members present were: Chris Hermann, John McCall, Brad Rives, Paul Thompson (via phone), and Wendy Welsh. Other attendees included: Lonnie Bellar, Kent Blake, Ralph Bowling, David Cosby, Jeff Heun, Roger Hickman, Rusty Hudson, Christian Hulsman, Fred Jackson, Jon Miller, Caryl Pfeiffer, Debbie Shelton, John Voyles, Bob Waterman, Joe Watson and Sharon Wright. The meeting opened with solicitation by Brad Rives for approval of the minutes from March meeting (March 18, 2009). Minutes were approved as written.

**I. RAC Update**

The RAC met on April 9th. There were several projects that were cancelled or under runs on projects totaling \$2.6M plus the carryover of \$96K from March. RAC also has a list of unbudgeted or over runs on various projects. The RAC decided to fund some of the P1s that are needed immediately which totaled \$2.2M. We are about \$458K favorable to budget on a cash basis excluding the ice storm. Including the ice storm we are about \$39.7M unfavorable on a cash basis.

**II. Project: Brown Ash Pond – Phase II**

Proposal: This investment proposal seeks approval for \$25.0M to expand the Brown Ash Pond. The overall BAP project was approved by the Investment Committee on May 15, 2006 and included sanction approval for \$73.1M. Phase I is in progress and will be completed end of 2010. The investment is currently being recovered through ECR. Phase II includes the following activities: 1) Raising the Auxiliary Pond embankments from their current elevation of 880 feet to an elevation of 900 feet which provides 20-years of bottom ash storage; 2) Raising the Main Pond embankment from the current elevation of 902 feet to an elevation of 912 feet which provides 3-years of fly ash and gypsum storage; and 3) Operation and maintenance of the gypsum dewatering facility. Phase II is eligible for ECR recovery and will be presented to the KPSC in June 2009. No CCN is required.

Total LTP includes \$26.4M for this project compared to projected costs of \$25.0M. Final detailed engineering has been completed

and all applicable permits have been issued for the overall project. The project amount includes a 6% escalation rate (7.3% for fuel, 5.4% for labor and 5.5% for remaining cost) and a 10% contingency.

Discussion:

- The proposal was presented by Jeff Heun, Project Engineering.
- To meet the plant's CCP storage needs, construction of the Starter Dike, Aux Pond 900', and Main Pond 912' must run continuously. If delayed the Main Pond and Aux Pond would reach capacity in approximately one year after the FGD is placed into service.
- We haven't received a definite answer from Corporate Center regarding approval requirements. According to the Planning & Controlling Manual we might need an approval before going to the Commission.
- The IC requested an update on all CCP projects on a quarterly basis.

**Resolution: Approved – consistent with bids. ECR Projects should provide periodic updates on a quarterly basis.**

**III. Project: TC BAP Dike Extension/GSP Liner Project**

Proposal: This proposal seeks approval for \$25.0M net (\$33.4M gross) for the construction for the BAP Dike Extension and GSP liner. The expanded BAP will provide approximately 4 years of bottom ash and fly ash storage while the GSP will provide approximately 4 years of gypsum storage based on historical and projected CCP production rates. The BAP and GSP scope will provide an interim and incremental short term storage location for Trimble County CCP materials until the engineering, permitting, and construction of the first phases of long term storage in Ravines A and/or B can be developed.

The MTP includes \$17.6M for this project; however, the projected project cost is \$25.0M. The unfavorable variance in 2009 and 2010 will be partially offset by the budgeted TC Ravine project. Seven bids were received; however, no final decision has been made. Therefore, Project Engineering has included a 12% contingency, as well as a 6% escalation rate. This project is eligible for ECR recovery and will be presented to the KPSC in June 2009.

Discussion:

- The proposal was presented by Bob Waterman, Project Engineering.
- All necessary permits have been received.
- If the BAP and GSP Expansion project is cancelled or delayed beyond the optimal construction window, the existing BAP would reach capacity prior to Commercial Operation date for TC Unit #2, scheduled for June, 2010.
- This is the cheapest short-term solution and it is cheaper than the ravine project. Even in the case that the ravines could go in service earlier this is the preferred option. Furthermore, this could be used for long-term backup storage in the future.
- Depreciation rate is the same as the last unit placed in service. Financial Planning confirmed with Property Accounting.

**Resolution: Approved – consistent with bids. ECR Projects should provide periodic updates on a quarterly basis.**

Upon resolution Jeff Heun, Bob Waterman, Joe Watson, and Jon Miller left the meeting. Brian Isaac entered the meeting. Jeff Joyce dialed in.

**IV. Project: Ghent Trans Ash Contract**

Proposal: This contract proposal seeks approval for \$10.2M for beneficial reuse of 1.5 million tons of gypsum as structural fill. The scope of this project is to contract with Trans Ash to excavate gypsum from the gypsum stacking area at Ghent, load, haul and place at the beneficial reuse site a total of 1.5 million tons of gypsum. Without taking gypsum off-site, the remaining gypsum stacking capacity will fall below the desired level in mid 2012, well before the planned in-service date of the new landfill at Ghent. The proposed contract is for three years with two annual extensions. This project is eligible for ECR recovery.

The current beneficial reuse opportunity is \$1.4M (in PVRR) lower than the next least cost alternative and provides a hedge against lack of adequate on-site storage due to potential permitting or construction delays associated with the new landfill at Ghent.

Discussion:

- The proposal was presented by Brian Isaac, Senior Electrical Engineer. Reference was made to a provided handout.
- Financial Planning followed up with Property Accounting and confirmed this would not be capitalized.

- There are no dollars to cover this within the MTP; however, recovered through ECR.
- Could excavate from ATB#1 to meet liability if needed.

**Resolution: Approved.**

Upon resolution Brian Isaac left the meeting. Dan Kremer and Mike Hensley connected via telephone.

**V. Project: Cane Run Soda Ash Contract**

Proposal: This contract proposal seeks approval for \$7.4M to contract with Solvay Chemical to provide soda ash to the Cane Run Station storage. Soda ash is currently being utilized at Cane Run to treat high sulfur bituminous coal for SO<sub>2</sub> emissions. It is used in the sulfur dioxide removal system for CR6 to reduce emissions as per federal EPA regulations. The new contract will be January 1, 2010 through December 31, 2012. Funding for this award recommendation is for the new three year contract (\$6.0M) and additional funding needed for 2009 of \$1.4M. A 10% contingency is included to cover any incremental generation above the MTP assumptions.

Discussion:

- The project update was presented by Dan Kremer, Manager of Commercial Operation. Reference was made to a provided handout.
- Due to an increase in plant generation and changes made to the scrubbing process, the number of tons purchased and dollar amount authorized under the contract will be met May, 2009, prior to the expiration of the contract at the end of 2009.
- No ECR recovery or FAC.
- Solvay was the low bidder.

**Resolution: Approved.**

Upon resolution Dan Kremer disconnected. Doug Schetzel entered the meeting.

**VI. Project: Wind Power Purchase Agreement**

Proposal: This contract proposal seeks approval to contract with Invenegy Grand Ridge Power and Horizon Power for available energy from wind farms for a term of 20 years. The contract with Invenegy is for \$504.1M and the contract with Horizon is \$535.6M. The two wind PPAs together are expected to provide approximately 560 GWh annually or approximately 1.5% of the Utilities' retail sales.

The Invenegy PPA is for the output of the 99 MW Grand Ridge wind farm located in LaSalle County, Illinois. The Utilities are required to take and pay for all energy produced by the wind farm. The Utilities will use firm point to point transmission service from PJM to deliver the energy to the Utilities' transmission system. The Utilities hold all transmission risk. The energy price in the first contract year (2010) is \$76/MWh and it will escalate by 2.25% per year. In addition, PJM transmission service will cost \$20/kW-Yr or approximately \$7.15/MWh at the anticipated capacity factor. The PPA contains two conditions precedent for the Utilities: acceptable regulatory approvals and the execution of the PJM transmission agreement.

The Horizon Rail Splitter is for the output of the 100.5MW Rail Splitter wind farm located just north of Lincoln, Illinois. The Utilities are required to take and pay for all energy produced by the wind farm. The energy price from the Rail Splitter wind farm is \$91/MWh fixed for the term. In addition, the required transmission service will be provided by MISO for \$30/kW-Yr or approximately \$10.73/MWh at the anticipated capacity factor. The PPA contains only one condition precedent for acceptable regulatory approvals. The Rail Splitter PPA has not yet been fully negotiated, so additional differences could develop.

Transmission service is renewable annually with one year with rollover rights. If the PPA is terminated the transmission service would not be renewed.

These PPA's will allow the Utilities to begin building a renewable energy portfolio to comply with a future RPS. E.ON Board and EUSIC Board approval will be obtained prior to execution, transmission service will be obtained and PSC approval for cost recovery will be obtained before the PPA's are effective. If the Utilities do not obtain regulatory approval to recover all costs of the PPA's from the rate payers in a timely manner, the PPA's can be terminated without further liability to the Utilities. This is not covered in the 2009-2011 MTP.

Discussion:

- The update was presented by Doug Schetzel, Director of Energy Services.
- Because of term and amount of contracts need to go through E.ON approval of contract process. This has to be done before presenting to KPSC. EUSIC Board approval is required as well.
- The Utilities hold all transmission risk and are required to pay Seller for all energy that would have been produced, but for a transmission constraint.
- There may be additional investments required (e.g. Transmission network upgrades). PJM and MISO studies are underway to determine if upgrades will be required. These studies should be complete in the 4<sup>th</sup> Q of 2009.
- Early termination is possible but cost of cover damages would result.
- Take and pay contract. We will not enter into an agreement without full recover over term of contract.
- Contract will only be concluded if KPSC approved for recovery over the whole contract term is granted.

**Resolution: Approved – discuss strategy with Vic Staffieri. Use one or both as pilot program.**

*Update: The wind power contracts for Invenergy and Horizon Rail Splitter will not proceed further. The contract with Invenergy is no longer active and the Rail Splitter contract was never active. (3/25/10 per e-mail from Rusty Hudson)*

Upon resolution Dave Cosby, Doug Schetzel, Rusty Hudson, Fred Jackson and Lonnie left the meeting. Mark Schmitt, Lisa Hennekes, Butch Cockerill, Don Thorn, Joan Renfro and Douglas Wagoner entered the meeting.

**VII. Project: Meter Reading/Field Services Contract**

Proposal: This contract proposal seeks approval to provide monthly meter reading and field/credit services to customers throughout the

LG&E and KU service territory. Existing contracts with TruCheck and Accuread expire May 31, 2009. This contract seeks approval for the following: Meter reading contract for LG&E to Accuread for \$9.5M, Meter reading contract for KU to TruCheck for \$12.2M, Field and Credit Services contract for both companies to TruCheck for \$11.2M, with a total of \$32.9M in total contract. Each contract proposed is for three years with the option for two additional one year extensions. This agreement can be terminated. The variance from the MTP is due to the loss of the Columbia Gas contract which increased the costs of the meter reading contracts for KU.

Discussion:

- The project update was presented by Butch Cockerill, Director of Revenue Collection. Reference was made to a provided handout.
- In 2009, the \$186K will be covered through operational savings from ED. 2010 and 2011 overrun will need to be covered by ED in the 2010-2012 MTP process.
- No penalties for early termination.

**Resolution: Approved.**

The meeting was then adjourned.

Minutes of the Investment Committee  
February 15, 2008

The Investment Committee “(the Committee)” met on February 15, 2008 at 2:00 P.M. Committee Members present were: Brad Rives, Chris Hermann, John McCall and Mike Spurlock (as Wendy’s DOA). Other attendees included: Lonnie Bellar, Tom Crutcher, Roger Hickman, Christian Hulsman, Fred Jackson, Chip Keeling, John Malloy, Caryl Pfeifer, Ed Staton, John Voyles, and Sharon Wright. The meeting opened with solicitation by Brad Rives for approval of the minutes from January (January 14, 2008). One minor change was noted.

**I. RAC Update**

There are numerous cancelled/under runs on projects totaling \$36.2M. However, the RAC also has a list of unbudgeted or over runs on various projects. The RAC decided to fund all of the P1s and several P2s that are needed immediately. This will leave \$13.7M to allocate for future needs. The Committee accepted the RAC proposal; however, RAC should be aware that may need to find \$22M to cover additional cost for the scrubber.

Pam Orlando, Dave Cosby, Jon Miller, Phil Rabe, and Tomas Menezes entered the meeting. Ed Staton, Roger Hickman and Chip Keeling left the meeting.

**II. Project: Trimble County SCR Catalyst**

Proposal: This proposal seeks approval for \$2.8M gross (\$2.1M net) to purchase and install of one complete layer of plate type catalyst for the TC1 SCR. As part of a comprehensive plan to comply with the EPA NO<sub>x</sub> SIP Call, E.ON US installed Selective Catalytic Reduction (SCR) equipment on six generating units throughout the system, including Trimble County Unit 1 (TC1). In 2009 EPA CAIR annual NO<sub>x</sub> regulations take effect and the six SCRs will operate year-round. The projected performance of the TC1 SCR Catalyst will degrade below the level required for E.ON U.S. to meet the corporate plan for compliance with CAIR NO<sub>x</sub> regulatory requirements by late 2011, supporting the need to add catalyst to TC1 SCR during November 2011 outage. This project is ECR recoverable. The E.ON US Regulated Generation Catalyst Management program has identified the need for spare material in the fleet due to the risk of catalyst damage or rapid deactivation. If this were to occur, the lead times are a major risk.

Discussion:

- The proposal was presented by Pam Orlando, Lead Engineer; reference was made to a provided handout.
- Follow-up – Potential MTP savings if some can be pushed out. [Jon sent MTP numbers on 2/25/08. Will not know what can be delayed until after the spring outage.]
- The MTP includes \$1.9M for this project. The resulting gap in the future years will be covered within Regulated Generation.

**Resolution: Approved.**

**III. Project: Ghent #3 SCR Catalyst Addition**

Proposal: This Investment Proposal seeks approval for \$2.9M to purchase and install one complete layer of plate type catalyst for the GH3 SCR. As part of a comprehensive plan to comply with the EPA NO<sub>x</sub> SIP Call, E.ON US installed Selective Catalytic Reduction (SCR) equipment on six generating units throughout the system, including Ghent Unit 3 (GH3). The GH3 SCR is designed to hold three catalyst layers. Two layers were filled with catalyst initially, with the expectation of adding a third layer after the initial warranty period of 24,000 operating hours. This project is ECR recoverable. A total of \$3.0M is included in the 2008 MTP.

Discussion:

- The proposal was presented by Pam Orlando, Lead Engineer; reference was made to a provided handout.
- E.ON would have to purchase additional NOX allowance if SCR Catalyst not purchased.

**Resolution: Approved**

Immediately following the approval, Pam Orlando left the meeting.

**IV. Project: Trimble County CTs GE Contract**

Proposal: This contract seeks approval for \$4.6M. Trimble County Station has six GE frame single fuel gas turbines installed. The units are designated as TC5 through TC10. TC5 and TC6 were commissioned in 2002 and the remaining four units were commissioned in 2004. GE has a detailed recommended maintenance schedule for the major turbine components. The need to perform Combustion Inspections (CI) on a machine is determined by the number of factored starts for machines operated as peaking units. Major inspection intervals for the Trimble County units are recommended every 450 factored starts. TC 5 is the only unit which has had a major inspection to date.

Discussion:

- The contract was presented by Dave Cosby, Manager Commercial Operations. Reference was made to a provided handout.
- The MTP includes \$4.0M for this project and \$750K for T&M work.
- Follow-up on how Property Accounting is depreciating CTs. [Result: TC CTs are being depreciated over a 30 year life. ES proposed a 19 year life (email sent on 2/25/08). This has been filed with PSC, but still awaiting their approval. ]

**Resolution: Approved.**

Immediately following the resolution, Dave Cosby, Phil Rabe, Tomas Menezes, and Tom Crutcher left the meeting. Jeff Fraley joined the meeting via telephone.

**V. Project: Brown 2 Reheater**

Proposal: This proposal seeks approval for \$6.5M to replace the reheater inlet and outlet headers and pendant assemblies. Leak failures are considered imminent, within the next 1 to 3 years, and can be expected to have increased frequency within this period considering recent inspection data. Inspection results have also indicated creep damage on the outlet header. The majority of the front pendants have been in service since original unit startup in 1962, with partial replacements in 1989 and 2001. The rear pendants were totally replaced in 1990. The headers are original installation.

Discussion:

- The proposal was presented by Jeff Fraley, General Manager – Brown & Tyrone; reference was made to a provided handout.
- MTP includes \$3.8M for this project. The project is more expensive than originally planned due to roof tubing and additional stainless steel. RAC decided to use available funds for this project.
- Follow-up – Jon Miller will send other CEM for \$1.8M spending. [Result: Jon sent CEM via email on 2/25/08. Added an options summary tab within the CEM that shows capital and NPV of the different options.]

**Resolution: Approved.**

Immediately following the discussion Jon Miller and John Voyles left the meeting. Jeff Fraley disconnected. Barry Walker and Lisa Hennekes entered the meeting.

**VI. Doe Run Drill Shale Gas Recovery Wells**

Proposal: This Investment Proposal seeks approval for cash outlay of \$9.7M to expand the shale gas recovery system in Doe Run storage field to increase the recovery of gas that has leaked from the Doe Run storage formation to the New Albany black shale formation. O&M savings are expected in the form of a reduction in gas write-offs from the Doe Run Gas Storage Field. This O&M savings is directly offset in gas supply clause (GSC) revenues, as the gas losses are recoverable through the GSC. However, failure by LG&E to take appropriate action to mitigate the increased gas losses could jeopardize the continued recovery of storage field gas losses. The primary risk associated with this project is the potential failure to yield the projected reductions in annual lost gas write-offs for Doe Run storage field.

Discussion:

- The proposal was presented by Barry Walker, Director of Gas Storage and Compliance; reference was made to provided handouts.
- A total of \$7,718K is included in Energy Delivery's 2008-2010 MTP. An additional \$2,199K will be required in 2011 to complete the project.

- Follow-up – Was this included in the Long-Term Plan?  
[Result – Per Lisa’s email on 2/19/08 the amount for 2011 was not included in the LTP, but will be included on the next Plan.]

**Resolution: Approved.**

The meeting was then adjourned.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 250**

**Responding Witness: Shannon L. Charnas**

- Q-250. Please provide all accounting entries (debits and credits) relating to SFAS No. 143 and FIN 47, along with all workpapers supporting those entries. Please provide all these workpapers and calculations in electronic format (Excel) with all formulae intact.
- A-250. See attached for test year journal entries. See the response to PSC 1-56(b) for implementation journal entries. The ARO calculations are an automated function in the Fixed Asset system, therefore, there are no workpapers and calculations which can be provided.

The attachment is being provided in a separate file in Excel format.

## LOUISVILLE GAS AND ELECTRIC COMPANY

CASE NO. 2012-00222

Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012

Question No. 251

Responding Witness: Shannon L. Charnas

Q-251. Provide an analysis of the regulatory liability for accrued asset removal costs since inception identifying and explaining each debit and credit entry and amount. Also, provide the copies of the pages from each of LG&E's SEC Form 10Ks, Form 10Qs and Annual Reports in which SFAS No. 143 has ever mentioned from 2008-2012, whether or not LG&E had quantified an amount of the regulatory liability at the time. Specify the exact date each of these reports was issued and released to the public.

A-251. See the following table for an analysis of the regulatory liability for accrued asset removal cost since inception.

Regulatory Liability Balance 12/31/03	\$ (216,490,616)
Depreciation	(16,318,457)
Net Cost of Removal Charges	12,595,566
Regulatory Liability Balance 12/31/04	<u>(220,213,507)</u>
Depreciation	(16,849,489)
Net Cost of Removal Charges	7,509,011
Reclass of COR to Regulatory Liability from Life Reserves	8,260,343
FIN 47 Parent COR Transfer to FERC 254	2,424,396
Regulatory Liability Balance 12/31/05	<u>(218,869,246)</u>
Depreciation	(17,845,502)
Net Cost of Removal Charges	4,476,149
Regulatory Liability Balance 12/31/06	<u>(232,238,599)</u>
Depreciation	(17,610,294)
Net Cost of Removal Charges	8,904,588
Regulatory Liability Balance 12/31/07	<u>(240,944,305)</u>
Depreciation	(18,498,025)
Net Cost of Removal Charges	<u>8,784,192</u>

Regulatory Liability Balance 12/31/08	(250,658,138)
Depreciation	(22,214,829)
Net Cost of Removal Charges	17,215,397
Regulatory Liability Balance 12/31/09	(255,657,570)
Depreciation	(22,665,802)
Net Cost of Removal Charges	6,891,422
Regulatory Liability Balance 12/31/10	(271,431,950)
Depreciation	(26,460,659)
Net Cost of Removal Charges	14,015,498
Regulatory Liability Balance 12/31/11	(283,877,111)
Depreciation	(6,546,346)
Net Cost of Removal Charges	5,062,229
Regulatory Liability Balance 3/31/12	\$ (285,361,228)

See attached for copies of pages referencing SFAS No. 143 from LG&E's SEC Form 10Ks, Form 10Qs and Annual Reports. The following table specifies the date these reports were released:

**Document**

**Released Date**

2008 LG&E Annual Report

03/24/09

# **Louisville Gas and Electric Company**

## **Financial Statements and Additional Information**

*As of and For the Years Ended December 31, 2008 and 2007*

**ARO.** A summary of LG&E's net ARO assets, regulatory assets, ARO liabilities, regulatory liabilities and cost of removal established under FIN 47, *Accounting for Conditional Asset Retirement Obligations, an Interpretation of SFAS No. 143*, and SFAS No. 143, *Accounting for Asset Retirement Obligations* follows:

(in millions)	ARO Net <u>Assets</u>	ARO <u>Liabilities</u>	Regulatory <u>Assets</u>	Regulatory <u>Liabilities</u>	Accumulated <u>Cost of Removal</u>
As of December 31, 2006	\$ 4	\$ (28)	\$ 22	\$ -	\$ 3
ARO accretion	-	(2)	2	-	-
Removal cost incurred	-	1	-	-	-
As of December 31, 2007	4	(29)	24	-	3
ARO accretion	-	(2)	2	-	-
Removal cost reclass	-	-	3	(3)	-
As of December 31, 2008	<u>\$ 4</u>	<u>\$ (31)</u>	<u>\$ 29</u>	<u>\$ (3)</u>	<u>\$ 3</u>

Pursuant to regulatory treatment prescribed under SFAS No. 71, an offsetting regulatory credit was recorded in depreciation and amortization in the income statement of \$2 million in 2008 and 2007 for the ARO accretion and depreciation expense. LG&E AROs are primarily related to the final retirement of assets associated with generating units and natural gas wells. For assets associated with AROs, the removal cost accrued through depreciation under regulatory accounting is established as a regulatory liability pursuant to regulatory treatment prescribed under SFAS No. 71. There were no FIN 47 net asset additions during 2008 or 2007. For the year ended December 31, 2008, removal costs incurred were less than \$1 million. For the years ended December 31, 2008 and 2007, LG&E recorded less than \$1 million of depreciation expense related to the cost of removal of ARO related assets. An offsetting regulatory liability was established pursuant to regulatory treatment prescribed under SFAS No. 71.

LG&E transmission and distribution lines largely operate under perpetual property easement agreements which do not generally require restoration upon removal of the property. Therefore, under SFAS No. 143, no material asset retirement obligations are recorded for transmission and distribution assets.

**GSC.** LG&E's natural gas rates contain a GSC, whereby increases or decreases in the cost of natural gas supply are reflected in LG&E's rates, subject to approval by the Kentucky Commission. The GSC procedure prescribed by Order of the Kentucky Commission provides for quarterly rate adjustments to reflect the expected cost of natural gas supply in that quarter. In addition, the GSC contains a mechanism whereby any over- or under-recoveries of natural gas supply cost from prior quarters is to be refunded to or recovered from customers through the adjustment factor determined for subsequent quarters.

LG&E's GSC was modified in 1997 to incorporate a natural gas procurement incentive mechanism. Since November 1, 1997, LG&E has operated under this PBR mechanism related to its natural gas procurement activities. LG&E's rates are adjusted annually to recover (or refund) its portion of the expense (or savings) incurred during each PBR year (12 months ending October 31). During the PBR year ending in 2008, LG&E achieved \$11 million in savings. Of that total savings amount, LG&E's portion was approximately \$3 million and the customers' portion was approximately \$8 million. Pursuant to the extension of LG&E's natural gas supply cost PBR mechanism effective November 1, 2001, the sharing mechanism under the PBR requires savings (and expenses) to be shared 25% with shareholders and 75% with customers up to 4.5% of the benchmarked natural gas costs. Savings (and expenses) in excess of 4.5% of the benchmarked natural gas costs are shared 50% with shareholders and 50% with customers. The current natural gas supply cost PBR mechanism was extended through 2010 without further modification.

**Pension and Postretirement Benefits.** LG&E adopted SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans*, in 2006. This statement requires employers to recognize the over-funded or under-funded status of a defined benefit pension and postretirement plan as an asset or liability in the balance sheet and to recognize through other comprehensive income the changes in the funded status in the year in which the changes occur. Under SFAS No. 71, LG&E can defer recoverable costs that would otherwise be charged to expense or equity by non-regulated entities. Current rate recovery in Kentucky is based on SFAS No. 87, *Employers' Accounting for Pensions*, and SFAS No. 106, *Employers' Accounting for Postretirement Benefits Other than Pensions*, both of which were amended by SFAS No. 158. Regulators have been clear and consistent with their historical treatment of such rate recovery, therefore, the Company has recorded a regulatory asset representing the change in funded status of the pension and postretirement plans that is expected to be recovered. The regulatory asset will be adjusted annually as prior service cost and actuarial gains and losses are recognized in net periodic benefit cost.

**Accumulated Cost of Removal of Utility Plant.** As of December 31, 2008 and 2007, LG&E has segregated the cost of removal, previously embedded in accumulated depreciation, of \$251 million and \$241 million, respectively, in accordance with FERC Order No. 631. This cost of removal component is for assets that do not have a legal ARO under SFAS No. 143. For reporting purposes in the balance sheets, LG&E has presented this cost of removal as a regulatory liability pursuant to SFAS No. 71.

**Deferred Income Taxes – Net.** These regulatory liabilities represent the future revenue impact from the reversal of deferred income taxes required for unamortized investment tax credits and deferred taxes provided at rates in excess of currently enacted rates.

**DSM.** LG&E's rates contain a DSM provision. The provision includes a rate mechanism that provides for concurrent recovery of DSM costs and provides an incentive for implementing DSM programs. The provision allows LG&E to recover revenues from lost sales associated with the DSM programs based on program plan engineering estimates and post-implementation evaluations.

In July 2007, LG&E and KU filed an application with the Kentucky Commission requesting an order approving enhanced versions of the existing DSM programs along with the addition of several new cost effective programs. The total annual budget for these programs is approximately \$26 million, an increase over the previous annual costs of approximately \$10 million. In March 2008, the Kentucky Commission issued an Order approving the application, with minor modifications. LG&E and KU filed revised tariffs in April 2008, under authority of this Order, which were effective in May 2008.

#### Other Regulatory Matters

**Storm Restoration.** In January 2009, a significant winter ice storm passed through LG&E's service territory causing approximately 205,000 customer outages, followed closely by a severe wind storm in February 2009, causing approximately 37,000 customer outages. LG&E currently estimates costs incurred of \$34 million of expenses and \$6 million of capital expenditures related to the restoration following the two storms. The Company expects to seek recovery of these costs from the Kentucky Commission.

**Regional Reliability Council.** LG&E has changed its regional reliability council membership from the Reliability First Corporation to the SERC, effective January 1, 2007. Regional reliability councils are industry consortiums that promote, coordinate and ensure the reliability of the bulk electric supply systems in North America.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 252**

**Responding Witness: Shannon L. Charnas**

- Q-252. Provide LG&E's projection of the annual year-end balance in the regulatory liability for cost of removal obligations for LG&E for the next 20 years. If not available for the next twenty years provide for as many years into the future that the projection is available. If this projection has not been made, please explain why not. Provide in electronic format (Excel) with all formulae intact.
- a. For this projection assume that all of LG&E's current depreciation rates are continued in use.
  - b. Explain all other assumptions used to make this projection.
- A-252. a. See attached. The projections presented were made in July 2011 and use LG&E's existing depreciation rates.
- b. Costs for the physical work associated with the removal of assets are projected for a five year planning period. These costs assume normal on-going business activities including inflationary adjustments.

The attachment is being provided in a separate file in Excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 253**

**Responding Witness: Shannon L. Charnas**

Q-253. For all accounts for which LG&E has collected non-legal AROs, but instead recorded a regulatory liability (regulatory liability for cost of removal), please provide the fair value of the related asset retirement cost as of December 31, 2008; December 31, 2009; December 31, 2010, and December 31, 2011. For the purposes of this question, assume that LG&E has legal AROs for these accounts, and use the life and dispersion assumptions reflected in the current depreciation rates.

A-253. LG&E is not required under any accounting or regulatory standard to perform these hypothetical calculations. Therefore, these hypothetical calculations require original work and have not been prepared.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 254**

**Responding Witness: John J. Spanos**

- Q-254. Provide the calculation of the annual amount of future gross salvage, cost of removal and net salvage incorporated into LG&E's existing depreciation rates. If any of the amounts are reduced by the total amount of non-legal AROs included in year-end accumulated depreciation, show that calculation.
- A-254. The attached spreadsheet sets forth the calculation of the future annual gross salvage and cost of removal incorporated in LG&E's current depreciation rates by account. None of the amounts are reduced by the amount of non-legal AROs.

The attachment is being

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 255**

**Responding Witness: Shannon L. Charnas**

Q-255. Are the amounts of cost of removal and gross salvage incorporated into the existing and proposed depreciation rates the same as they would have been in the absence of SFAS No. 143 and FIN 47? Please explain.

A-255. The amounts of cost of removal and gross salvage incorporated into the existing and proposed depreciation rates are the same as they would have been in the absence of SFAS No. 143 and FIN 47.

All of the cost of removal and gross salvage recorded on the books and developed into the depreciation rates are costs associated with normal business in the utility industry.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 256**

**Responding Witness: Shannon L. Charnas**

- Q-256. Please identify and describe the level of detail, e.g. by account, functional category, at which the Company computes the depreciation expense for purposes of financial reporting, Commission reporting, and ratemaking. Explain fully any differences among these three depreciation calculations.
- A-256. There are no differences in computing depreciation expense for financial reporting, Commission reporting, and ratemaking. Depreciation expense is calculated at the plant account level for transmission, distribution, and general plant. Depreciation expense for generation plant is calculated by plant account for each generation unit location.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 257**

**Responding Witness: Shannon L. Charnas**

Q-257. State whether the Company has forecast any non-legal removal costs that it does not regard as regulatory liabilities. Please describe these costs in detail, state fully the reason(s) for your belief that such forecast costs are not regulatory liabilities, and identify the forecast amounts of such removal costs in as much detail as is available. Provide the supporting documentation for each forecast amount.

A-257. The Company has not forecast any non-legal removal costs that it does not regard as regulatory liabilities.

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 259**

**Responding Witness: Daniel K. Arbough / Counsel**

Q-259. Please provide copies of all presentations made to rating agencies and/or investment firms by PPL and/or Louisville Gas & Electric between January 1, 2010 and the present.

A-259. Objections are made to the request for production of documents on the grounds that it seeks the production of documents that are irrelevant to the issues in this case and relate to non-utility activities or hypothetical scenarios based upon projections. Such projections are only estimates; there is no guarantee that such projections will be realized; and the estimates are based on a number of assumptions that may change over time. These non-utility activities and projected information are not relevant to the analysis of known and measurable pro forma adjustments to the historic test period in this case. The Commission determined in its September 6, 1990 Ruling and in its September 21 and October 19, 1990 Orders in Case No. 90-158 that comparable projected information is not discoverable in historical test year rate cases. Without waiver of this objection see the attached documents provided to the credit rating agencies and investment firms since September 2010. The presentations made by LG&E to the rating agencies prior to September 2010 were produced to the Attorney General and filed with the Commission in the course of discovery in Case No. 2009-00549; presentations made by PPL to the rating agencies and investment firms prior to September 2010 were produced to the Attorney General and filed with the Commission in Case No. 2010-00204.

Moody's Investors Service

**Rating Action: Louisville Gas & Electric Company**

**Moody's downgrades four Louisville Gas and Electric issues due to release of security**

**\$120 million of debt securities affected**

New York, May 08, 2007 -- Moody's Investors Service downgraded four tax-exempt debt issues of Louisville Gas and Electric Company (LG&E: A2 Issuer Rating) to A2 from A1. The four issues are: Trimble County Pollution Control Revenue Bonds, \$27,500,000 2001 Series A due 2026 and \$35,000,000 2001 Series B due 2027 and Jefferson County Pollution Control Revenue Bonds, \$22,500,000 2001 Series A due 2026 and \$35,000,000 2001 Series B due 2027. LG&E is the obligor under each of these issues. LG&E's A2 Issuer Rating remains unchanged. The rating outlook is stable.

The downgrade of these securities was triggered by the termination of LG&E's mortgage indenture dated 1949 and its associated supplemental indentures. Specifically, all four issues have "fall-away" collateral provisions that are triggered upon termination of the mortgage indenture. In light of the termination of the mortgage indenture these four issues are now senior unsecured obligations of LG&E and their ratings have been adjusted accordingly.

Separately, Moody's downgraded the underlying rating for several LG&E Pollution Control Revenues Bonds to A2 from A1. The repayment obligations for these Pollution Control Revenue Bonds remain guaranteed by third-party financial guarantors and the bonds continue to be rated Aaa.

Louisville Gas and Electric is a wholly-owned subsidiary of E.ON U.S. LLC. It is headquartered in Louisville, Kentucky.

MOODY'S hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MOODY'S have, prior to assignment of any rating, agreed to pay to MOODY'S for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,400,000. Moody's Corporation (MCO) and its wholly-owned credit rating agency subsidiary, Moody's Investors Service (MIS), also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually on Moody's website at [www.moody's.com](http://www.moody's.com) under the heading "Shareholder Relations - Corporate Governance - Director and Shareholder Affiliation Policy."

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2012-00222**

**Response to Attorney General's Initial Requests for Information  
Dated July 31, 2012**

**Question No. 263**

**Responding Witness: Daniel K. Arbough**

- Q-263. Please provide the breakdown in the expected return on pension plan assets for Louisville Gas & Electric. Specifically, please provide the expected return on different assets classes (bonds, US stocks, international stocks, etc.) used in determining the expected return on plan assets. Please provide all associated source documents and work papers.
- A-263. LG&E generally sets the expected long-term rate of return assumption in consultation with its independent actuary and pension consultant. Attached are the return assumptions received from the actuary and pension consultant, along with the calculation of the expected returns for the LG&E pension plan assets. Additional considerations, including the portfolio's diversification benefit and additional returns expected from active portfolio management offset by non-investment expenses, are then factored in to arrive at the final expected return assumption of 7.25%.

PPL Electric Utilities Corporation	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Indicate by check mark whether the registrants are shell companies (as defined in Rule 12b-2 of the Act).

PPL Corporation	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
PPL Energy Supply, LLC	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
PPL Electric Utilities Corporation	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

As of June 30, 2010, PPL Corporation had 482,187,931 shares of its \$.01 par value Common Stock outstanding. The aggregate market value of these common shares (based upon the closing price of these shares on the New York Stock Exchange on that date) held by non-affiliates was \$12,030,588,878. As of January 31, 2011, PPL Corporation had 484,392,173 shares of its \$.01 par value Common Stock outstanding.

As of January 31, 2011, PPL Corporation held all 66,368,056 outstanding common shares, no par value, of PPL Electric Utilities Corporation.

PPL Corporation indirectly holds all of the membership interests in PPL Energy Supply, LLC.

**PPL Energy Supply, LLC and PPL Electric Utilities Corporation meet the conditions set forth in General Instructions (I)(1)(a) and (b) of Form 10-K and are therefore filing this form with the reduced disclosure format.**

Documents incorporated by reference:

PPL Corporation has incorporated herein by reference certain sections of PPL Corporation's 2011 Notice of Annual Meeting and Proxy Statement, which will be filed with the Securities and Exchange Commission not later than 120 days after December 31, 2010. Such Statements will provide the information required by Part III of this Report.

**PPL CORPORATION  
PPL ENERGY SUPPLY, LLC  
PPL ELECTRIC UTILITIES CORPORATION**

FORM 10-K ANNUAL REPORT TO  
THE SECURITIES AND EXCHANGE COMMISSION  
FOR THE YEAR ENDED DECEMBER 31, 2010

TABLE OF CONTENTS

This combined Form 10-K is separately filed by PPL Corporation, PPL Energy Supply, LLC and PPL Electric Utilities Corporation. Information contained herein relating to PPL Energy Supply, LLC and PPL Electric Utilities Corporation is filed by PPL Corporation and separately by PPL Energy Supply, LLC and PPL Electric Utilities Corporation on their own behalf. No registrant makes any representation as to information relating to any other registrant, except that information relating to the two PPL Corporation subsidiaries is also attributed to PPL Corporation.

**GLOSSARY OF TERMS AND ABBREVIATIONS****PPL Corporation and its current and former subsidiaries**

**KU** - Kentucky Utilities Company, a public utility subsidiary of LG&E and KU Energy LLC engaged in the regulated generation, transmission, distribution and sale of electricity, primarily in Kentucky. The subsidiary was acquired by PPL in November 2010.

**LG&E** - Louisville Gas and Electric Company, a public utility subsidiary of LG&E and KU Energy LLC engaged in the regulated generation, transmission, distribution and sale of electricity and the distribution and sale of natural gas in Kentucky. The subsidiary was acquired by PPL in November 2010.

**LKE** - LG&E and KU Energy LLC (formerly E.ON U.S. LLC), a subsidiary of PPL and the parent of LG&E and KU. PPL acquired E.ON U.S. LLC in November 2010 and changed the name to LG&E and KU Energy LLC. Within the context of this document, references to LKE also relate to the consolidated entity.

**PPL** - PPL Corporation, the parent holding company of PPL Electric, PPL Energy Funding, LKE and other subsidiaries.

**PPL Capital Funding** - PPL Capital Funding, Inc., a wholly owned financing subsidiary of PPL.

**PPL Electric** - PPL Electric Utilities Corporation, a public utility subsidiary of PPL that transmits and distributes electricity in its service territory and provides electric supply to retail customers in this territory as a PLR.

**PPL Energy Funding** - PPL Energy Funding Corporation, a subsidiary of PPL and the parent company of PPL Energy Supply.

**PPL EnergyPlus** - PPL EnergyPlus, LLC, a subsidiary of PPL Energy Supply that markets and trades wholesale and retail electricity and gas, and supplies energy and energy services in competitive markets.

**PPL Energy Supply** - PPL Energy Supply, LLC, a subsidiary of PPL Energy Funding and the parent company of PPL Generation, PPL EnergyPlus, PPL Global and other subsidiaries. In January 2011, PPL Energy Supply distributed its membership interest in PPL Global, representing 100% of the outstanding membership interests of PPL Global, to PPL Energy Supply's parent, PPL Energy Funding.

**PPL Gas Utilities** - PPL Gas Utilities Corporation, a regulated utility that provided natural gas distribution, transmission and storage services, and the competitive sale of propane, which was a subsidiary of PPL until its sale in October 2008.

**PPL Generation** - PPL Generation, LLC, a subsidiary of PPL Energy Supply that owns and operates U.S. generating facilities through various subsidiaries.

**PPL Global** - PPL Global, LLC, a subsidiary of PPL Energy Supply that primarily owns and operates a business in the U.K., WPD, that is focused on the regulated distribution of electricity. In January 2011, PPL Energy Supply distributed its membership interest in PPL Global, representing 100% of the outstanding membership interests of PPL Global, to PPL Energy Supply's parent, PPL Energy Funding.

**PPL Holtwood** - PPL Holtwood, LLC, a subsidiary of PPL Generation that owns hydroelectric generating operations in Pennsylvania.

**PPL Investment Corp.** - PPL Investment Corporation, a subsidiary of PPL Energy Supply.

**PPL Maine** - PPL Maine, LLC, a subsidiary of PPL Generation that owned generating operations in Maine, until their sales in 2009 and 2010.

**PPL Martins Creek** - PPL Martins Creek, LLC, a subsidiary of PPL Generation that owns generating operations in Pennsylvania.

**PPL Montana** - PPL Montana, LLC, an indirect subsidiary of PPL Generation that generates electricity for wholesale sales in Montana and the Pacific Northwest.

**PPL Services** - PPL Services Corporation, a subsidiary of PPL that provides shared services for PPL and its subsidiaries.

**PPL Susquehanna** - PPL Susquehanna, LLC, the nuclear generating subsidiary of PPL Generation.

**WPD** - refers collectively to WPDH Limited and its subsidiaries.

**WPD (South Wales)** - Western Power Distribution (South Wales) plc, a British regional electric utility company.

**WPD (South West)** - Western Power Distribution (South West) plc, a British regional electric utility company.

**WPDH Limited** - Western Power Distribution Holdings Limited, an indirect, wholly owned U.K. subsidiary of PPL Global. Indirectly, WPDH Limited wholly owns WPD (South Wales) and WPD (South West).

**WKE** - Western Kentucky Energy Corp., a subsidiary of LKE that leased certain non-utility generating stations in western Kentucky until July 2009.

#### **Other terms and abbreviations**

**£** - British pounds sterling.

**1945 First Mortgage Bond Indenture** - PPL Electric's Mortgage and Deed of Trust, dated as of October 1, 1945, to Deutsche Bank Trust Company Americas, as trustee, as supplemented.

**401(h) account** - A sub-account established within a qualified pension trust to provide for the payment of retiree medical costs.

**Acid Rain Program** - allowance trading system established by the Clean Air Act to reduce levels of sulfur dioxide. Under this program, affected power plants are allocated allowances based on their fuel consumption during specified baseline years and a specific emissions rate.

**Act 129** - became effective in October 2008. The law amends the Pennsylvania Public Utility Code and creates an energy efficiency and conservation program and smart metering technology requirements, adopts new PLR electricity supply procurement rules, provides remedies for market misconduct and makes changes to the existing Alternative Energy Portfolio Standard.

**AFUDC** (Allowance for Funds Used During Construction) - the cost of equity and debt funds used to finance construction projects of regulated businesses, which is capitalized as part of construction cost.

**A.M. Best** - A.M. Best Company, a company that reports on the financial condition of insurance companies.

**AMT** - alternative minimum tax.

**AOCI** - accumulated other comprehensive income or loss.

**ARO** - asset retirement obligation.

**Baseload generation** - includes the output provided by PPL's nuclear, coal, hydroelectric and qualifying facilities.

**Basis** - when used in the context of derivatives and commodity trading, the commodity price differential between two locations, products or time periods.

**Bcf** - billion cubic feet.

**Black Lung Trust** - a trust account maintained under federal and state Black Lung legislation for the payment of claims related to disability or death due to pneumoconiosis.

**Bridge Facility** - an up to \$6.5 billion Senior Bridge Term Loan Credit Agreement between PPL Capital Funding, as borrower, and PPL, as guarantor, and a group of banks syndicated in June 2010, to serve as a backstop in the event alternative financing was not available prior to the closing of PPL's acquisition of E.ON U.S.

**CAIR** - the EPA's Clean Air Interstate Rule.

**Clean Air Act** - federal legislation enacted to address certain environmental issues related to air emissions, including acid rain, ozone and toxic air emissions.

**COLA** - license application for a combined construction permit and operating license from the NRC for a nuclear plant.

**CTC** - competitive transition charge on customer bills to recover allowable transition costs under the Customer Choice Act.

**Customer Choice Act** - the Pennsylvania Electricity Generation Customer Choice and Competition Act, legislation enacted to restructure the state's electric utility industry to create retail access to a competitive market for generation of electricity.

**DDCP** - Directors Deferred Compensation Plan.

**DEP** - Department of Environmental Protection, a state government agency.

**Dodd-Frank Act** - the Dodd-Frank Wall Street Reform and Consumer Protection Act that was signed into law in July 2010.

**DOE** - Department of Energy, a U.S. government agency.

**DRIP** - Dividend Reinvestment and Direct Stock Purchase Plan.

**E.ON AG** - a German corporation and the parent of E.ON US Investments.

**E.ON US Investments** - E.ON US Investments Corp., a Delaware corporation and the former parent of E.ON U.S. LLC. PPL acquired E.ON U.S. LLC in November 2010 and changed its name to LG&E and KU Energy LLC.

**Economic Stimulus Package** - The American Recovery and Reinvestment Act of 2009, generally referred to as the federal economic stimulus package, which was signed into law in February 2009.

**EMF** - electric and magnetic fields.

**EPA** - Environmental Protection Agency, a U.S. government agency.

**EPS** - earnings per share.

**Equity Unit** - consists of a Purchase Contract and, initially, a 5.0% undivided beneficial ownership interest in \$1,000 principal amount of PPL Capital Funding 4.625% Junior Subordinated Notes due 2018. Equity Units were issued in June 2010 to help fund PPL's acquisition of LKE.

**ESOP** - Employee Stock Ownership Plan.

**Euro** - the basic monetary unit among participating members of the European Union.

**EWG** - exempt wholesale generator.

**FERC** - Federal Energy Regulatory Commission, the federal agency that regulates, among other things, interstate transmission and wholesale sales of electricity, hydroelectric power projects and related matters.

**Fitch** - Fitch, Inc., a credit rating agency.

**FTR** - financial transmission rights, which are financial instruments established to manage price risk related to electricity transmission congestion. They entitle the holder to receive compensation or require the holder to remit payment for certain congestion-related transmission charges that arise when the transmission grid is congested.

**Fundamental Change** - as it relates to the terms of the Equity Units, will be deemed to have occurred if any of the following occurs with respect to PPL, subject to certain exceptions: (i) a change of control; (ii) a consolidation with or merger into any other entity; (iii) common stock ceases to be listed or quoted; or (iv) a liquidation, dissolution or termination.

**GAAP** - generally accepted accounting principles in the U.S.

**GBP** - British pound sterling.

**GHG** - greenhouse gas(es).

**GWh** - gigawatt-hour, one million kilowatt-hours.

**Health Care Reform** - The Patient Protection and Affordable Care Act (HR 3590) and the Health Care and Education Reconciliation Act of 2010 (HR 4872), signed into law in March 2010.

**HMRC** - HM Revenue & Customs. The tax authority in the U.K., formerly known as Inland Revenue.

**IBEW** - International Brotherhood of Electrical Workers.

**ICP** - Incentive Compensation Plan.

**ICPKE** - Incentive Compensation Plan for Key Employees.

**Intermediate and peaking generation** - includes the output provided by PPL's oil- and natural gas-fired units.

**Ironwood** - a natural gas-fired power plant in Lebanon, Pennsylvania with a winter rating of 763 MW.

**IRS** - Internal Revenue Service, a U.S. government agency.

**IRC Sec. 481** - the Internal Revenue Code Section that identifies the tax year in which accounting method change differences are recognized in federal taxable income.

**ISO** - Independent System Operator.

**ITC** - intangible transition charge on customer bills to recover intangible transition costs associated with securitizing stranded costs under the Customer Choice Act.

**KPSC** - Kentucky Public Service Commission, the state agency that has jurisdiction over the regulation of rates and service of utilities in Kentucky.

**KU 2010 Mortgage Indenture** - KU's Indenture dated as of October 1, 2010, to The Bank of New York Mellon, as trustee, as supplemented.

**kVA** - kilovolt-ampere.

**kWh** - kilowatt-hour, basic unit of electrical energy.

**LCIDA** - Lehigh County Industrial Development Authority.

**LG&E 2010 Mortgage Indenture** - LG&E's Indenture, dated as of October 1, 2010, to The Bank of New York Mellon, as trustee, as supplemented.

**LIBOR** - London Interbank Offered Rate.

**Long Island generation business** - includes a 79.9 MW gas-fired plant in the Edgewood section of Brentwood, New York and a 79.9 MW oil-fired plant in Shoreham, New York and related tolling agreements. This business was sold in February 2010.

**MACT** - maximum achievable control technology.

**MISO** (Midwest Independent System Operator) - an independent system operator and the regional transmission organization that provides open-access transmission service and monitors the high voltage transmission system in all or parts of Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Montana, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin and Manitoba, Canada.

**Montana Power** - The Montana Power Company, a Montana-based company that sold its generating assets to PPL Montana in December 1999. Through a series of transactions consummated during the first quarter of 2002, Montana Power sold its electricity delivery business to NorthWestern.

**Moody's** - Moody's Investors Service, Inc., a credit rating agency.

**MW** - megawatt, one thousand kilowatts.

**MWh** - megawatt-hour, one thousand kilowatt-hours.

**NDT** - PPL Susquehanna's nuclear plant decommissioning trust.

**NERC** - North American Electric Reliability Corporation.

**NorthWestern** - NorthWestern Corporation, a Delaware corporation, and successor in interest to Montana Power's electricity delivery business, including Montana Power's rights and obligations under contracts with PPL Montana.

**NPDES** - National Pollutant Discharge Elimination System.

**NPNS** - the normal purchases and normal sales exception as permitted by derivative accounting rules.

**NRC** - Nuclear Regulatory Commission, the federal agency that regulates nuclear power facilities.

**NUGs** - non-utility generators, generating plants not owned by public utilities, whose electrical output must be purchased by utilities under the PURPA if the plant meets certain criteria.

**NYMEX** - New York Mercantile Exchange.

**OCI** - other comprehensive income or loss.

**Ofgem** - Office of Gas and Electricity Markets, the British agency that regulates transmission, distribution and wholesale sales of electricity and related matters.

**OVEC** - Ohio Valley Electric Corporation, located in Piketon, Ohio, an entity in which LKE indirectly owns an 8.13% interest. OVEC owns and operates two coal-fired power plants, the Kyger Creek Station in Ohio and the Clifty Creek Station in Indiana, with combined nameplate capacities of 2,390 MW.

**PEDFA** - Pennsylvania Economic Development Financing Authority.

**PJM** (PJM Interconnection, L.L.C.) - operator of the electric transmission network and electric energy market in all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia and the District of Columbia.

**PLR** (Provider of Last Resort) - the role of PPL Electric in providing default electricity supply to retail customers within its delivery territory who have not chosen to select an alternative electricity supplier under the Customer Choice Act.

**PP&E** - property, plant and equipment.

**PPL Electric 2001 Mortgage Indenture** - PPL Electric's Indenture, dated as of August 1, 2001, to The Bank of New York Mellon (as successor to JPMorgan Chase Bank), as trustee, as supplemented.

**PUC** - Pennsylvania Public Utility Commission, the state agency that regulates certain ratemaking, services, accounting and operations of Pennsylvania utilities.

**PUC Final Order** - final order issued by the PUC on August 27, 1998, approving the settlement of PPL Electric's restructuring proceeding.

**PUHCA** - Public Utility Holding Company Act of 1935, legislation passed by the U.S. Congress. Repealed effective February 2006 by the Energy Policy Act of 2005.

**Purchase Contract** - a contract that is a component of the Equity Unit that requires holders to purchase shares of PPL common stock on or prior to July 1, 2013.

**PURPA** - Public Utility Regulatory Policies Act of 1978, legislation passed by the U.S. Congress to encourage energy conservation, efficient use of resources and equitable rates.

**PURTA** - The Pennsylvania Public Utility Realty Tax Act.

**RAB** - regulatory asset base. This term is also commonly known as RAV.

**RECs** - renewable energy credits.

**RFC** - ReliabilityFirst Corporation (the regional reliability entity that replaced the Mid-Atlantic Area Coordination Council).

**RMC** - Risk Management Committee.

**RTO** - Regional Transmission Organization.

**S&P** - Standard & Poor's Ratings Services, a credit rating agency.

**Sarbanes-Oxley** - Sarbanes-Oxley Act of 2002, which sets requirements for management's assessment of internal controls for financial reporting. It also requires an independent auditor to make its own assessment.

**SCR** - selective catalytic reduction, a pollution control process for the removal of nitrogen oxide from exhaust gases.

**Scrubber** - an air pollution control device that can remove particulates and/or gases (such as sulfur dioxide) from exhaust gases.

**SEC** - Securities and Exchange Commission, a U.S. government agency whose primary mission is to protect investors and maintain the integrity of the securities markets.

**SIFMA Index** - the Securities Industry and Financial Markets Association Municipal Swap Index.

**Smart meter** - an electric meter that utilizes smart metering technology.

**Smart metering technology** - technology that can measure, among other things, time of electricity consumption to permit offering rate incentives for usage during lower cost or demand intervals. The use of this technology also strengthens network reliability.

**SNCR** - selective non-catalytic reduction, a pollution control process for the removal of nitrogen oxide from exhaust gases.

**Superfund** - federal environmental legislation that addresses remediation of contaminated sites; states also have similar statutes.

**Tolling agreement** - agreement whereby the owner of an electric generating facility agrees to use that facility to convert fuel provided by a third party into electricity for delivery back to the third party.

**Total shareowner return** - increase in market value of a share of the Company's common stock plus the value of all dividends paid on a share of the common stock during the applicable performance period, divided by the price of the common stock as of the beginning of the performance period.

**TRA** - Tennessee Regulatory Authority, the state agency that has jurisdiction over the regulation of rates and service of utilities in Tennessee.

**VaR** - value-at-risk, a statistical model that attempts to estimate the value of potential loss over a given holding period under normal market conditions at a given confidence level.

**VEBA** - Voluntary Employee Benefit Association Trust, trust accounts for health and welfare plans for future benefit payments for employees, retirees or their beneficiaries.

**VIE** - variable interest entity.

**Volumetric risk** - the risk that the actual load volumes provided under full-requirement sales contracts could vary significantly from forecasted volumes.

**VSCC** - Virginia State Corporation Commission, the state agency that has jurisdiction over the regulation of Virginia corporations, including utilities.

**VWAP** - as it relates to the Equity Units issued by PPL, the per share volume-weighted-average price as displayed under the heading Bloomberg VWAP on Bloomberg page "PPL <EQUITY> AQR" (or its equivalent successor if such page is not available) in respect of the period from the scheduled open of trading on the relevant trading day until the scheduled close of trading on the relevant trading day (or if such volume-weighted-average price is unavailable, the market price of one share of PPL common stock on such trading day determined, using a volume-weighted-average method, by a nationally recognized independent investment banking firm retained for this purpose by PPL).

**FORWARD-LOOKING INFORMATION**

Statements contained in this Form 10-K concerning expectations, beliefs, plans, objectives, goals, strategies, future events or performance and underlying assumptions and other statements which are other than statements of historical fact are "forward-looking statements" within the meaning of the federal securities laws. Although PPL, PPL Energy Supply and PPL Electric believe that the expectations and assumptions reflected in these statements are reasonable, there can be no assurance that these expectations will prove to be correct. Forward-looking statements are subject to many risks and uncertainties, and actual results may differ materially from the results discussed in forward-looking statements. In addition to the specific factors discussed in "Item 1A. Risk Factors" and in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" in this Form 10-K report, the following are among the important factors that could cause actual results to differ materially from the forward-looking statements.

- fuel supply cost and availability;
- continuing ability to recover fuel and natural gas supply costs in a timely manner at LG&E and KU;
- weather conditions affecting generation, customer energy use and operating costs;
- operation, availability and operating costs of existing generation facilities;
- transmission and distribution system conditions and operating costs;
- potential expansion of alternative sources of electricity generation;
- potential laws or regulations to reduce emissions of "greenhouse" gases;
- collective labor bargaining negotiations;
- the outcome of litigation against PPL and its subsidiaries;
- potential effects of threatened or actual terrorism, war or other hostilities, or natural disasters;
- the commitments and liabilities of PPL and its subsidiaries;
- market demand and prices for energy, capacity, transmission services, emission allowances and delivered fuel;
- competition in retail and wholesale power and natural gas markets;
- liquidity of wholesale power markets;
- defaults by counterparties under energy, fuel or other power product contracts;
- market prices of commodity inputs for ongoing capital expenditures;
- capital market conditions, including the availability of capital or credit, changes in interest rates, and decisions regarding capital structure;
- stock price performance of PPL;
- the fair value of debt and equity securities and the impact on defined benefit costs and resultant cash funding requirements for defined benefit plans;
- interest rates and their effect on pension, retiree medical and nuclear decommissioning liabilities;
- volatility in or the impact of other changes in financial or commodity markets and economic conditions;
- the profitability and liquidity, including access to capital markets and credit facilities, of PPL and its subsidiaries;
- new accounting requirements or new interpretations or applications of existing requirements;
- changes in securities and credit ratings;
- foreign currency exchange rates;
- current and future environmental conditions, regulations and other requirements and the related costs of compliance, including environmental capital expenditures, emission allowance costs and other expenses;
- political, regulatory or economic conditions in states, regions or countries where PPL or its subsidiaries conduct business;
- receipt of necessary governmental permits, approvals and rate relief;
- new state, federal or foreign legislation, including new tax, environmental, healthcare or pension-related legislation;
- state, federal and foreign regulatory developments;
- the outcome of any rate cases by PPL Electric at the PUC, by LG&E or KU at the KPSC, VSCC or the TRA, or by WPD at Ofgem in the U.K.;
- the impact of any state, federal or foreign investigations applicable to PPL and its subsidiaries and the energy industry;
- the effect of any business or industry restructuring;
- development of new projects, markets and technologies;
- performance of new ventures; and
- business or asset acquisitions and dispositions.

Any such forward-looking statements should be considered in light of such important factors and in conjunction with other documents of PPL, PPL Energy Supply and PPL Electric on file with the SEC.

New factors that could cause actual results to differ materially from those described in forward-looking statements emerge from time to time, and it is not possible for PPL, PPL Energy Supply or PPL Electric to predict all such factors, or the extent to which any such factor or combination of factors may cause actual results to differ from those contained in any forward-looking statement. Any forward-looking statement speaks only as of the date on which such statement is made, and PPL, PPL Energy Supply and PPL Electric undertake no obligation to update the information contained in such statement to reflect subsequent developments or information.

**PART I**

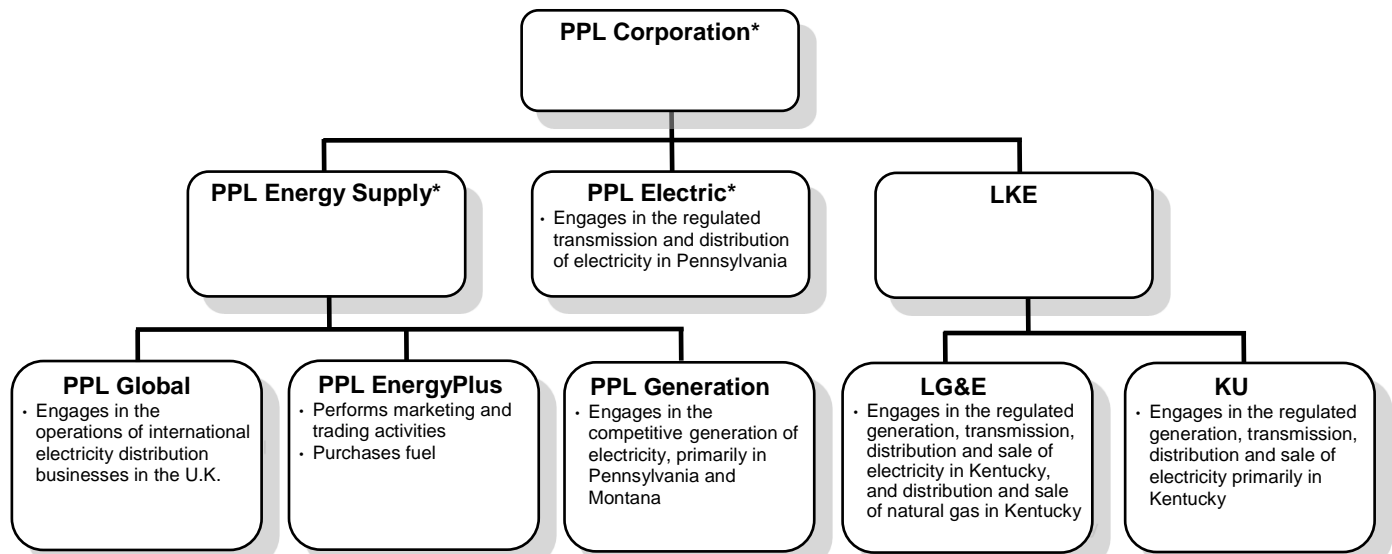

**ITEM 1. BUSINESS**

**BACKGROUND**

*PPL Corporation*, headquartered in Allentown, PA, is an energy and utility holding company that was incorporated in 1994. Through subsidiaries, PPL generates electricity from power plants in the northeastern, northwestern and southeastern U.S., markets wholesale or retail energy primarily in northeastern and northwestern portions of the U.S., delivers electricity to customers in Pennsylvania, Kentucky, Virginia, Tennessee and the U.K. and delivers natural gas in Kentucky. On November 1, 2010, PPL acquired all of the limited liability company interests of E.ON U.S. LLC from a wholly owned subsidiary of E.ON AG. Upon completion of the acquisition, E.ON U.S. LLC was renamed LG&E and KU Energy LLC (LKE). LKE is engaged in regulated utility operations through its subsidiaries, KU and LG&E. PPL acquired LKE for approximately \$7.6 billion, including debt assumed through consolidation. See Note 10 to the Financial Statements for additional information on the acquisition. The acquisition of LKE substantially reapportions the mix of PPL's regulated and competitive businesses by increasing the regulated portion of its business, strengthens PPL's credit profile and enhances rate-regulated growth opportunities as the regulated businesses make investments to improve infrastructure and customer reliability. An increase in regulated assets provides earnings stability through regulated returns and the ability to recover costs of capital investments, in contrast to the competitive supply business where earnings and cash flows are subject to market conditions. In 2011, PPL projects that 50% of its net income will be provided by its regulated businesses and the remainder will be provided by its competitive supply businesses. As of December 31, 2010, PPL has:

- More than \$10 billion in projected annual revenues (up from \$8.5 billion recorded by PPL in 2010 including two months of LKE revenue).
- 5.3 million utility customers (including 1.3 million served by the Kentucky-based companies).
- Approximately 19,000 MW of generation (including 7,700 MW of regulated capacity in the Kentucky-based companies).
- Approximately 14,000 full-time employees (including about 3,100 in Kentucky).

As of December 31, 2010, PPL's principal subsidiaries are shown below (\* denotes a SEC registrant):

In January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding, to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements.

In addition to PPL Corporation, the other SEC registrants included in this filing are:

*PPL Energy Supply, LLC*, an indirect wholly owned subsidiary of PPL formed in 2000, is an energy company engaged through its subsidiaries in the generation and marketing of electricity, primarily in the northeastern and northwestern power markets of the U.S. and in the delivery of electricity in the U.K. PPL Energy Supply's major operating subsidiaries are PPL Generation, PPL EnergyPlus and PPL Global. As noted above, in January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding. At December 31, 2010, PPL Energy Supply owned or controlled 11,729 MW of electric power generation capacity and is implementing capital projects at certain of its existing generation facilities in Pennsylvania and Montana to provide 247 MW of additional generating capacity by 2013, and is in the process of disposing of certain non-core generation facilities with a capacity of 961 MW in 2011.

*PPL Electric Utilities Corporation*, incorporated in 1920, is a direct subsidiary of PPL and a regulated public utility. PPL Electric delivers electricity in its Pennsylvania service territory and provides electricity supply to retail customers in that territory as a PLR under the Customer Choice Act.

PPL's utility subsidiaries, and to a lesser extent certain of its non-utility subsidiaries, are subject to extensive regulation by the FERC including: wholesale sales of power and related transactions, electric transmission service, accounting practices, issuances and sales of securities, acquisitions and sales of utility properties and payments of dividends. PPL is subject to certain FERC regulations as a holding company under PUHCA 2005 and the Federal Power Act, including with respect to accounting and record-keeping, inter-system sales of non-power goods and services and acquisitions of securities in, or mergers with, certain types of electric utility companies or holding companies.

### Segment Information

*(PPL)*

Following the November 1, 2010 acquisition of LKE, PPL is organized into four segments: Kentucky Regulated, International Regulated (formerly International Delivery), Pennsylvania Regulated (formerly Pennsylvania Delivery) and Supply. Other than PPL adding a Kentucky Regulated segment, there were no other changes to reportable segments except the renaming of segments and allocating interest expense related to the Equity Units to the Kentucky Regulated segment.

*(PPL Energy Supply)*

At December 31, 2010, PPL Energy Supply's segments consisted of Supply and International Regulated (formerly International Delivery). In 2010, there were no changes to these segments except the renaming of segments. However, in January of 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements.

*(PPL Electric)*

PPL Electric operates in a single business segment.

*(PPL, PPL Energy Supply, and PPL Electric)*

See Note 2 to the Financial Statements for financial information about the segments and geographic financial data.

*(PPL)*

- **Kentucky Regulated Segment**

*Consists of the operations of LKE, which owns and operates regulated public utilities engaged in the generation,*

*transmission, distribution and sale of electricity and the distribution and sale of natural gas, representing primarily the activities of LG&E and KU. The Kentucky Regulated segment also includes interest expense related to the Equity Units issued in June 2010 to partially finance the acquisition of LKE.*

LKE became a wholly owned subsidiary of PPL on November 1, 2010. LG&E and KU are engaged in the regulated generation, transmission, distribution and sale of electricity in Kentucky and, in KU's case, Virginia and Tennessee. KU provides electric service to approximately 514,000 customers in 77 counties in central, southeastern and western Kentucky, to approximately 30,000 customers in five counties in southwestern Virginia and less than ten customers in Tennessee. In Virginia, KU operates under the name Old Dominion Power Company. KU also sells wholesale electricity to 12 municipalities in Kentucky. LG&E provides electric service to approximately 395,000 customers in Louisville and adjacent areas in Kentucky, covering approximately 700 square miles in nine counties. LG&E provides natural gas service to approximately 320,000 customers in its electric service area and eight additional counties in Kentucky.

#### PPL Acquisition

In September 2010, the KPSC approved a settlement agreement among PPL and all of the intervening parties to PPL's joint application to the KPSC for approval of its acquisition of ownership and control of LKE. In the settlement agreement, the parties agreed that LG&E and KU would commit that no base rate increases would take effect before January 1, 2013. The rate increases for LG&E and KU that took effect on August 1, 2010 (as described below) are not impacted by the settlement. Under the terms of the settlement, LG&E and KU retain the right to seek approval for the deferral of "extraordinary and uncontrollable costs." Interim rate adjustments will continue to be permissible during that period through existing fuel, environmental and demand side management recovery mechanisms. The agreement also substitutes an acquisition savings shared deferral mechanism for the previous requirement that LG&E and KU file a synergies plan with the KPSC post-closing. This mechanism, which will be in place until the earlier of five years or the first day of the year in which a base rate increase becomes effective, permits LG&E and KU to each earn up to a 10.75% return on equity. Any earnings above a 10.75% return on equity will be shared with customers on a 50%/50% basis. The KPSC Order and the settlement agreement contained a number of other commitments by LG&E and KU with regard to operations, workforce, community involvement and other matters.

In October 2010, both the VSCC and the TRA approved the transfer of control of LKE to PPL. Certain of these Orders contained additional commitments with regard to operations, workforce, community involvement and other matters.

Also in October 2010, the FERC approved the application for the transfer of control of the utilities. The approval includes various conditional commitments, such as a continuation of certain existing undertakings with protesters in prior cases, an agreement not to terminate certain KU municipal customer contracts prior to January 2017, an exclusion of any transaction-related costs from wholesale energy and tariff customer rates to the extent that LG&E and KU have agreed to not seek recovery of the same transaction-related cost from retail customers and agreements to coordinate with protesters in certain open or ongoing matters.

#### Franchises and Licenses

LG&E and KU provide electric delivery service, and LG&E provides natural gas distribution service, in their various service territories pursuant to certain franchises, licenses, statutory service areas, easements and other rights or permissions granted by state legislatures, cities or municipalities or other entities.

#### Competition

There are currently no other electric public utilities operating within the electric service areas of LKE. Neither the Kentucky General Assembly nor the KPSC has adopted or approved a plan or timetable for retail electric industry competition in Kentucky. The nature or timing of any legislative or regulatory actions regarding industry restructuring and their impact on LKE, which may be significant, cannot currently be predicted. Virginia, formerly a deregulated jurisdiction, has enacted legislation which implemented a hybrid model of cost-based regulation; KU's operations in Virginia have been and remain regulated.

Alternative energy sources such as electricity, oil, propane and other fuels provide indirect competition for natural gas revenues of LKE. Marketers may also compete to sell natural gas to certain large end-users. Approximately 25% of LG&E's annual throughput is purchased by large commercial and industrial customers directly from alternate suppliers for delivery through LG&E's distribution system. LG&E's natural gas tariffs include gas price pass-through mechanisms relating to its sale of natural gas as a commodity; therefore, customer natural gas purchases from alternative suppliers do not generally impact profitability. However, some large industrial and commercial customers may physically bypass LG&E's facilities and seek delivery service directly from interstate pipelines or other natural gas distribution systems.

In April 2010, the KPSC commenced a proceeding to investigate the regulatory, financial and operational aspects of natural gas retail competition programs, and the potential benefits to Kentucky consumers. A number of entities, including LG&E, were parties to the proceeding. In December 2010, the KPSC issued an Order in the proceeding declining to endorse natural gas competition at the retail level, noting the existence of a number of transition or oversight costs and an uncertain level of economic benefits in such programs. With respect to existing natural gas transportation programs available to large commercial or industrial users, the Order indicates that the KPSC will review utilities' current tariff structures, user thresholds and other terms and conditions of such programs, as part of such utilities' next regular natural gas rate cases.

#### Electric Operations

LKE serves approximately 939,000 electric customers. LKE's transmission and distribution system territory covers approximately 7,300 square miles. For the period from acquisition through December 31, 2010, 83% of the Kentucky Regulated segment's operating revenues were derived from electric operations. Details of electric revenues by customer class for the period from acquisition through December 31, 2010 are shown below.

	<u>Revenue</u>	<u>% of Revenue</u>
Industrial and commercial	\$ 187	46
Residential	163	40
Municipal	15	4
Other retail	37	9
Wholesale	6	1
Total	<u>\$ 408</u>	<u>100</u>

#### Power Supply

At December 31, 2010, LKE owned, controlled or had ownership interest in generating capacity (winter rating) of 7,933 MW in Kentucky, Indiana, and Ohio. See "Item 2. Properties - Kentucky Regulated Segment" for a complete list of LKE's generating capacity. For the period from acquisition through December 31, 2010, LKE's power plants generated 6,008 GWh of electricity.

During 2010, approximately 95% of the electricity generated by LG&E, and 98% of that generated by KU, was produced by their coal-fired electric generating stations. The remainder was generated by natural gas and oil-fired combustion turbines and hydroelectric power plants. Also during 2010, substantially all of the electricity generated was used to supply its retail and municipal customer base.

See "Item 2. Properties - Kentucky Regulated Segment" and Note 8 to the Financial Statements for additional information regarding Unit 2 of the Trimble County generating station (TC2). With limited exceptions LKE took care, custody and control of TC2 on January 22, 2011, and has dispatched the unit to meet customer demand since that date. LG&E and KU and the contractor agreed to a further amendment of the construction agreement whereby the contractor will complete certain actions relating to identifying and completing any necessary modifications to allow operation of TC2 on all fuels in accordance with initial specifications prior to certain dates, and amending the provisions relating to liquidated damages. LKE cannot currently estimate the ultimate outcome of these matters. LKE owns a 75% interest in Unit 2. Unit 2 is coal-fired and has a capacity of 760 MW, of which LKE's share is 570 MW.

#### Fuel Supply

Coal is expected to be the predominant fuel used by LG&E and KU for baseload generation for the foreseeable future, with natural gas and oil being used for intermediate and peaking capacity and flame stabilization in coal-fired boilers.

Fuel inventory is maintained at levels estimated to be necessary to avoid operational disruptions at coal-fired generating units. Reliability of coal deliveries can be affected from time to time by a number of factors including fluctuations in demand, coal mine production issues and other supplier or transporter operating difficulties.

LG&E and KU have entered into coal supply agreements with various suppliers for coal deliveries through 2016 and normally augment their coal supply agreements with spot market purchases.

For their existing units, LG&E and KU expect for the foreseeable future to purchase most of their coal from western and eastern Kentucky, West Virginia, southern Indiana, southern Illinois and Ohio. With the installation of flue gas desulfurization systems (sulfur dioxide removal systems, or scrubbers), LG&E and KU expect their use of higher sulfur coal to increase. In 2011 and beyond, LG&E and KU may purchase certain quantities of ultra-low sulfur content coal from Wyoming for blending at Unit 2 of the Trimble County generating station. Coal is delivered to the generating stations primarily by barge, truck and rail.

#### Natural Gas

LG&E purchases, transports, distributes or stores natural gas for 320,000 customers in Kentucky. Its service area covers over 700 square miles in 17 counties and includes 391 miles of transportation mains, consisting of natural gas transmission lines of 255 miles, natural gas storage lines of 119 miles and natural gas combustion turbine lines of 17 miles. LG&E's natural gas distribution system includes 4,235 miles of distribution mains. For the period from acquisition through December 31, 2010, 17% of the Kentucky Regulated segment's operating revenues were derived from natural gas operations. Shown below are details of natural gas revenues by customer class for the period from acquisition through December 31, 2010.

	<u>Revenue</u>	<u>% of Revenue</u>
Residential	\$ 56	66
Industrial and commercial	22	26
Other retail	5	6
Wholesale	2	2
Total	<u>\$ 85</u>	<u>100</u>

LG&E's natural gas billings include a weather normalization adjustment mechanism which adjusts the distribution cost component of residential and commercial customer bills based on normal temperatures during the heating season months of November through April, somewhat mitigating the effect of above- or below-normal weather on residential and commercial revenues.

Five underground natural gas storage fields, with a current working natural gas capacity of approximately 15 Bcf, help provide economical and reliable natural gas service to ultimate consumers. By using natural gas storage facilities, LG&E avoids the costs typically associated with more expensive pipeline transportation capacity to serve peak winter heating loads. Natural gas is stored during the summer season for withdrawal the following winter heating season. Without this storage capacity, LG&E would be forced to buy additional natural gas and pipeline transportation services during winter months when customer demand increases and when the prices for natural gas supply and transportation services are typically at their highest. Several suppliers under contracts of varying duration provide competitively priced natural gas. The underground storage facilities, in combination with its purchasing practices, enable LG&E to offer natural gas sales service at competitive rates. At December 31, 2010, LG&E had a 12 Bcf inventory balance of natural gas stored underground valued at \$60 million.

A number of large commercial and industrial customers purchase their natural gas requirements directly from alternate suppliers for delivery through LG&E's distribution system. These large commercial and industrial customers account for approximately 25% of LG&E's annual throughput.

#### Natural Gas Supply

LG&E also has a portfolio of supply arrangements of various terms with a number of suppliers designed to meet its firm sales obligations. These natural gas supply arrangements include pricing provisions that are market-responsive. In tandem with pipeline transportation services, these natural gas supplies provide the reliability and flexibility necessary to serve LG&E's natural gas customers.

LG&E purchases natural gas supply transportation services from two pipelines. LG&E has contracts with one pipeline that are subject to termination by LG&E between 2013 and 2018. Total winter capacity under these contracts is 184,900 MMBtu/day and summer on-demand natural gas capacity is 60,000 MMBtu/day. LG&E has a contract with the other pipeline that expires in 2012. Total winter and summer capacity under this contract is 51,000 MMBtu/day.

#### Rates and Regulation

LG&E and KU are subject to the jurisdiction of the KPSC and the FERC in virtually all matters related to electric and natural gas utility regulation. In addition, KU is subject to the VSCC and the TRA. LG&E and KU withdrew from the MISO in 2006. Since exiting from the MISO, LG&E and KU have been operating under a FERC-approved open access transmission tariff. LG&E and KU now contract with the Tennessee Valley Authority to act as their transmission reliability coordinator and Southwest Power Pool, Inc. to function as their independent transmission operator, pursuant to FERC requirements. Certain operations of LKE are subject to the Occupational Safety and Health Act of 1970 and comparable state statutes. LKE is subject to certain FERC regulations as a holding company under PUHCA 2005 and the Federal Power Act.

LG&E's and KU's Kentucky base rates are calculated based on a return on capitalization (common equity, long-term debt and notes payable) including certain adjustments to exclude non-regulated investments and environmental compliance costs recovered separately through the environmental cost recovery (ECR) mechanism. As such, regulatory assets are generally earning a return. See Note 3 to the Financial Statements for additional information on cost recovery mechanisms.

KU's Virginia base rates are calculated based on a return on rate base. All regulatory assets and liabilities are excluded from the return on rate base utilized in the calculation of Virginia base rates. In January 2011, KU filed a notice of intent to file a rate case with the VSCC for the test year ended December 31, 2010. The case is expected to be filed on or after April 1, 2011.

KU's wholesale requirements rates for municipal customers are calculated based on annual updates to a rate formula that utilizes a return on rate base (net utility plant less deferred taxes and miscellaneous deductions). All regulatory assets and liabilities are excluded from the return on rate base utilized in the development of municipal rates.

See Note 3 to the Financial Statements for additional information on cost recovery mechanisms.

#### 2010 Kentucky Rate Case

In January 2010, LG&E and KU filed applications with the KPSC requesting increases in electric base rates of approximately 12%, or annual increases of \$95 million and \$135 million, respectively. In addition, LG&E requested an increase in its natural gas base rates of approximately 8%, or \$23 million annually. In June 2010, LG&E and KU and certain intervenors agreed to a stipulation providing for increases in LG&E's and KU's electric base rates of \$74 million and \$98 million on an annual basis, and LG&E's natural gas base rates of \$17 million on an annual basis, and those parties filed a request with the KPSC to approve such stipulation. In July 2010, the KPSC issued an Order in the proceeding approving all the provisions of the stipulation, including a return on equity range of 9.75-10.75%, with rates effective on and after August 1, 2010.

#### Virginia Rate Case

In June 2009, KU filed an application with the VSCC requesting an increase in electric base rates for its Virginia jurisdictional customers in an amount of \$12 million annually or approximately 21%. The proposed increase reflected a proposed rate of return on rate base of 8.586% based on a return of equity of 12%. As permitted pursuant to a VSCC Order, KU elected to implement the proposed rates effective November 1, 2009, on an interim basis. During December

2009, KU and the VSCC Staff agreed to a Stipulation and Recommendation authorizing a base rate revenue increase of \$11 million annually and a return on rate base of 7.846% based on a 10.5% return on common equity. In March 2010, the VSCC issued an Order approving the stipulation, with the increased rates to be put into effect as of April 1, 2010. As part of the stipulation, KU refunded approximately \$1 million in interim rate amounts in excess of the ultimate approved rates.

### FERC Wholesale Rate Case

In 2008, KU filed an application with the FERC for increases in electric base rates applicable to wholesale power sale contracts or interchange agreements involving, collectively, twelve Kentucky municipalities. The application requested a shift from an all-in stated unit charge rate to an unbundled formula rate, including an annual adjustment mechanism. In 2009, the FERC issued an Order approving a settlement among the parties in the case, incorporating increases of approximately 3% from prior rates and a return on equity of 11%. In May 2010, KU submitted to the FERC the proposed current annual adjustments to the formula rates, which incorporated certain proposed increases. Updated rates, including certain further adjustments from a review process involving wholesale requirements customers, became effective as of July 1, 2010.

*(PPL and PPL Energy Supply)*

- **International Regulated Segment**

*Includes WPD, a regulated electricity distribution company in the U.K.*

WPD, headquartered in Bristol, England, operates two of the 15 distribution networks providing electricity service in the U.K. through indirect wholly owned subsidiaries. WPD (South West) serves 1.5 million end-users in a 5,560 square mile area of southwest England. WPD (South Wales) serves 1.1 million end-users in a 4,550 square mile area within Wales.

Details of revenue by category for the years ended December 31, are shown below.

	2010		2009		2008	
	Revenue	% of Revenue	Revenue	% of Revenue	Revenue	% of Revenue
Utility revenues	\$ 727	96	\$ 684	96	\$ 824	96
Energy-related businesses	34	4	32	4	33	4
Total	\$ 761	100	\$ 716	100	\$ 857	100

WPD's energy-related businesses revenues include ancillary activities that support the distribution business, including telecommunications and real estate. WPD's telecommunication subsidiary derives revenue from the rental of fiber optic cables primarily attached to WPD's overhead electricity distribution network. WPD also provides meter services to businesses across the U.K.

### Franchise and Licenses

WPD is authorized by the U.K. government to provide electric distribution services within its concession areas and service territories, subject to certain conditions and obligations. For instance, WPD is subject to governmental regulation of the prices it can charge and the quality of service it must provide, and WPD can be fined or have its licenses revoked if it does not meet the mandated standard of service.

### Competition

Although WPD operates in non-exclusive concession areas in the U.K., it currently faces little competition with respect to end-users connected to its network. WPD (South West) and WPD (South Wales) are thus regulated monopolies which operate under regulatory price controls.

### Rates and Regulation

The operations of WPD (South West) and WPD (South Wales) are regulated under their distribution licenses under which income is generated subject to a price cap regulatory framework set by the regulatory body, Ofgem, that provides economic incentives to minimize operating, capital and financing costs. The charges made for the use of the distribution networks are regulated on the basis of the "RPI plus/minus X" formula where RPI is a measure of inflation and X is an efficiency factor established by Ofgem following their review. Under the review, Ofgem assesses the revenue and capital expenditure plans of companies and determines what they consider an efficient level of that expenditure. Ofgem also considers the required cost of capital sufficient to encourage the required investment and determines customer service targets. In December 2009, Ofgem completed its rate review for the period from April 1, 2010 through March 31, 2015. Ofgem allowed WPD an average increase in total revenues, before inflationary adjustments, of 6.9% in each of the five years. The revenue increase includes reimbursement to electricity distributors for higher operating and capital costs to be incurred. Also, Ofgem set the weighted average cost of capital at 4.7%, which includes pre-tax debt and post-tax equity costs and excludes adjustments for inflation, for all distribution companies. This is a 0.8% decrease from the previous regulatory period. Additionally, Ofgem has established strong incentive mechanisms to provide significant opportunities to enhance overall returns by improving network efficiency, reliability or customer service. In October 2010, Ofgem announced a new pricing model that will be effective for the electricity distribution sector, including WPD, beginning April 2015. The model, known as RIIO (Revenues = Incentives + Innovation + Outputs), is intended to encourage investment in regulated infrastructure. Key components of the model are: an extension of the price review period to eight years, increased emphasis on outputs and incentives, enhanced stakeholder engagement including network customers, a stronger incentive framework to encourage more efficient investment and innovation, expansion of the current Low Carbon Network Fund to stimulate innovation and continued use of a single weighted average cost of capital.

#### Customers

The majority of WPD's revenue is derived from the delivery of electricity to end-users and thus its customers are the suppliers to those end-users. It is a requirement of Ofgem that all licensed electricity distributors and suppliers become parties to the Distribution Connection and Use of System Agreement. This agreement sets out how creditworthiness will be determined and, as a result, whether the supplier needs to provide collateral.

#### *(PPL and PPL Electric)*

- **Pennsylvania Regulated Segment**

*Includes the regulated electric delivery operations of PPL Electric.*

PPL Electric is subject to regulation as a public utility by the PUC, and certain of its transmission activities are subject to the jurisdiction of the FERC under the Federal Power Act. PPL Electric delivers electricity to approximately 1.4 million customers in a 10,000-square mile territory in 29 counties of eastern and central Pennsylvania. PPL Electric also provides electricity supply in this territory as a PLR.

Details of electric revenues by customer class for the years ended December 31, are shown below.

	2010		2009		2008	
	Revenue	% of Revenue	Revenue	% of Revenue	Revenue	% of Revenue
Residential	\$ 1,469	60	\$ 1,473	45	\$ 1,468	43
Industrial	123	5	519	16	568	17
Commercial	588	24	1,173	35	1,165	34
Other (a) (b)	275	11	127	4	200	6
Total	<u>\$ 2,455</u>	<u>100</u>	<u>\$ 3,292</u>	<u>100</u>	<u>\$ 3,401</u>	<u>100</u>

(a) Includes regulatory over- or under-recovery reconciliation mechanisms, pole attachment revenues, street lighting and 2010 transmission revenues, net.

(b) Included in these amounts are \$7 million, \$74 million and \$111 million of retail and wholesale electric to affiliate revenue which is eliminated in consolidation for PPL.

Franchise, Licenses and Other Regulations

PPL Electric is authorized to provide electric public utility service throughout its service area as a result of grants by the Commonwealth of Pennsylvania in corporate charters to PPL Electric and companies to which it has succeeded and as a result of certification by the PUC. PPL Electric is granted the right to enter the streets and highways by the Commonwealth subject to certain conditions. In general, such conditions have been met by ordinance, resolution, permit, acquiescence or other action by an appropriate local political subdivision or agency of the Commonwealth.

Certain operations of PPL Electric are subject to the Occupational Safety and Health Act of 1970 and comparable state statutes.

Competition

Pursuant to authorizations from the Commonwealth of Pennsylvania and the PUC, PPL Electric operates a regulated transmission and distribution monopoly in its service area. Accordingly, PPL Electric does not face competition in its electricity transmission and distribution businesses.

Rates and Regulation

Transmission and Distribution

PPL Electric's transmission facilities are within PJM, which operates the electric transmission network and electric energy market in the Mid-Atlantic and Midwest regions of the U.S.

PJM serves as a FERC-approved RTO to promote greater participation and competition in the region it serves. Besides operating the electric transmission network, PJM also administers regional markets for energy, capacity and ancillary services. A primary objective of any RTO is to separate the operation of, and access to, the transmission grid from market participants that buy or sell electricity in the same markets. Electric utilities continue to own the transmission assets and to receive their share of transmission revenues, but the RTO directs the control and operation of the transmission facilities. PPL Electric is entitled to fully recover from customers the charges that it pays to PJM for transmission-related services.

In November 2004, Pennsylvania enacted the Alternative Energy Portfolio Standard Act (the AEPS), which requires electric distribution companies and retail electric suppliers to ultimately provide 18% of the electricity sold to retail customers in Pennsylvania from alternative energy sources by 2020. Under this state law, alternative energy sources include hydro, wind, solar, waste coal, landfill methane and fuel cells. If an electric distribution company is unable to meet these targets, it will pay an alternative compliance payment of \$45 (or, in the case of solar, 200% of the average market value of solar credits) for each MWh that it is short. PPL Electric's initial compliance obligation covered the period January 1, 2010 to May 31, 2010. PPL Electric was required to supply about 6.7% of the total amount of electricity it delivered to its PLR customers from alternative energy sources during this period. Under the PUC-approved Competitive Bridge Plan, PPL Electric obtained full requirements service that included the generation or credits that PPL Electric needed to comply with the AEPS in 2010. AEPS compliance requirements for June 1, 2010 through May 31, 2011 are about 9% of the total amount of electricity delivered to PLR Customers.

Act 129 became effective in October 2008. The law creates an energy efficiency and conservation program and smart metering technology requirements, establishes new PLR electricity supply procurement rules, provides remedies for market misconduct, and makes changes to the existing AEPS.

See "Regulatory Issues - Pennsylvania Activities" in Note 15 to the Financial Statements for additional information regarding Act 129, other legislative and regulatory impacts and PPL Electric's actions to provide default electricity supply for periods after 2009.

PLR

The Customer Choice Act requires electric distribution companies, including PPL Electric, to act as a PLR of electricity supply and provides that electricity supply costs will be recovered by such companies pursuant to regulations established

by the PUC. As part of the PUC Final Order, PPL Electric agreed to supply this electricity at predetermined capped rates through 2009. To mitigate the risk that PPL Electric would not be able to obtain adequate energy supply at the "capped" rates, PPL Electric entered into full-requirement energy supply contracts with PPL EnergyPlus sufficient for PPL Electric to meet its PLR obligation through the end of 2009. Under these contracts, PPL EnergyPlus supplied PPL Electric's entire PLR load at predetermined prices equal to the capped generation rates that PPL Electric was authorized to charge its customers. Prior to the expiration of the rate caps, PPL Electric's customers had limited incentive to purchase generation supply from other providers because, in recent years, the contracts between PPL Electric and PPL EnergyPlus provided a below-market price for these customers. As a result, a limited amount of "shopping" occurred.

PPL Electric's PLR obligation after 2009 is governed by the PUC pursuant to the Public Utility Code as amended by Act 129, PLR regulations and a policy statement regarding interpretation and implementation of those regulations. Effective January 1, 2010, PPL Electric's cost of electric generation is based on a competitive solicitation process. The PUC has approved PPL Electric's default service plan for the period January 2011 through May 2013 which includes 14 solicitations for supply beginning January 1, 2011 with a portion extending beyond May 2013. Pursuant to this plan, PPL Electric had contracted for all of the 2010 electricity supply for residential, small commercial and small industrial customers, large commercial and large industrial customers who elect to take that service in 2010. In addition, PPL Electric completed two solicitations in 2009 and four solicitations in 2010 for supply starting January 2011 to May 2015. The solicitations include a mix of long-term and short-term purchases ranging from five months to five years to fulfill PPL Electric's obligation to provide for customer supply as a PLR. See "Energy Purchase Commitments" in Note 15 to the Financial Statements for additional information regarding PPL Electric's solicitations for 2011 and its actions to provide default electricity supply for periods after 2011.

In addition, several alternative suppliers have offered to provide generation supply in PPL Electric's service territory. Whether its customers purchase supply from these alternative suppliers or from PPL Electric as a PLR, the purchase of such supply has no impact on the financial results of PPL Electric. The cost to purchase PLR supply is passed directly by PPL Electric to its customers without markup.

#### 2010 Rate Case

In March 2010, PPL Electric filed a request with the PUC to increase distribution rates by approximately \$115 million or approximately 2.4% over PPL Electric's projected 2010 revenues, to be effective January 1, 2011. In December 2010, the PUC approved a settlement filed by the parties that provides for a rate increase of \$77.5 million, or 1.6%, over PPL Electric's projected 2010 revenues. The approved rates became effective for service rendered on and after January 1, 2011. In January 2011, the PP&L Industrial Customers Alliance (PPLICA) filed a Petition for Reconsideration of the PUC's order regarding PPLICA's proposal for a special rate schedule for certain large commercial and industrial customers. Also in January 2011, the PUC granted reconsideration for the purpose of evaluating the merits of the petition. PPL Electric cannot predict the outcome of this evaluation.

See Note 3 to the Financial Statements for additional information on rate mechanisms.

(PPL)

#### Sale of Businesses

See Note 9 to the Financial Statements for information on the 2008 sale of PPL's natural gas distribution and propane businesses.

(PPL and PPL Energy Supply)

- Supply Segment

*Owns and operates competitive domestic power plants to generate electricity; markets and trades this electricity and other purchased power to competitive wholesale and retail markets; and acquires and develops competitive domestic generation projects. Consists primarily of the activities of PPL Generation and PPL EnergyPlus.*

PPL Energy Supply has generation assets that are located in the eastern and northwestern U.S. markets. The eastern generation assets are located in the Northeast and Mid-Atlantic energy markets, including PJM and ISO New England. PPL Energy Supply's northwestern generating capacity is located in Montana.

Details of revenue by category for the years ended December 31, are shown below.

	2010		2009		2008	
	Revenue	% of Revenue	Revenue	% of Revenue	Revenue	% of Revenue
Electric and Gas						
Wholesale (a)	\$ 4,347	85	\$ 4,761	90	\$ 5,020	91
Retail	415	8	152	3	151	2
Trading	2		17		(121)	(2)
Total electric and gas	4,764	93	4,930	93	5,050	91
Energy-related businesses (b)	364	7	379	7	478	9
Total	\$ 5,128	100	\$ 5,309	100	\$ 5,528	100

- (a) Included in these amounts are \$320 million, \$1,806 million and \$1,826 million of wholesale electric sales to an affiliate which are eliminated in consolidation for PPL.
- (b) In addition to these amounts, PPL has \$11 million, \$12 million and \$8 million of revenue which is not applicable to PPL Energy Supply.

The Supply segment's energy-related businesses revenues include activities that primarily support its generation, marketing and trading businesses. These activities include developing renewable energy projects and providing energy-related products and services to commercial and industrial customers, through its mechanical contracting and services subsidiaries. The renewable energy business builds, owns, operates and maintains renewable energy facilities throughout the Mid-Atlantic and Northeast regions, and includes solar, wind and landfill gas to energy plants. At December 31, 2010, the renewable energy business owned and operated 33 MW of renewable capacity. The revenues of the mechanical contracting and services subsidiaries are included in "Energy-related businesses" on the Statements of Income.

#### Customer Choice Act

In 1996, the Customer Choice Act was enacted to restructure Pennsylvania's electric utility industry in order to create retail access to a competitive market for generation of electricity. The Customer Choice Act required each Pennsylvania electric utility to file a restructuring plan to "unbundle" its rates into separate generation, transmission and distribution components and to permit its customers to directly access alternate suppliers of electricity. Under the Customer Choice Act, regulated utilities were required to act as a PLR. As part of a settlement approved by the PUC, PPL EnergyPlus and PPL Electric entered into full requirements energy supply agreements at predetermined "capped" rates through the end of 2009.

With the expiration of the long-term power purchase agreements between PPL Electric and PPL EnergyPlus, PPL EnergyPlus has multiple options as to how, and to whom, it sells the electricity produced by PPL Energy Supply's generation plants. These sales are based on prevailing market rates. The expiration of the long-term supply agreements with PPL Electric also enables PPL Energy Supply to adjust its exposure to fluctuations in demand that existed with supplying PPL Electric's PLR load. Entry of new generation suppliers into the Pennsylvania marketplace provides PPL Energy Supply the opportunity to provide generation supply to additional wholesale customers but also exposes the Supply segment to increased competition (see "Competition" below).

#### Power Supply

PPL Energy Supply owned or controlled generating capacity (winter rating) of 11,729 MW at December 31, 2010. Through subsidiaries, PPL Generation owns and operates power plants in Pennsylvania, Montana, Illinois and Connecticut. Generating capacity controlled by PPL Generation and other PPL Energy Supply subsidiaries includes power obtained through PPL EnergyPlus' tolling or power purchase agreements (including Ironwood and other facilities that consist of NUGs, wind farms and landfill gas facilities). See "Item 2. Properties - Supply Segment" for a complete listing of PPL Energy Supply's generating capacity.

See Note 9 to the Financial Statements for information on the 2010 sale of the Long Island Generation business, consisting of plants in New York and the 2010 and 2009 sales of hydroelectric facilities located in Maine. Also, see Note 9 to the Financial Statements for information on the anticipated sale of certain non-core generation facilities consisting of natural gas-fired facilities in Wallingford, Connecticut and University Park, Illinois and a PPL Energy Supply subsidiary's interest in Safe Harbor Water Power Corporation, which owns a hydroelectric facility in Conestoga, Pennsylvania.

PPL Energy Supply's generation subsidiaries are EWGs, which sell electricity into wholesale markets. EWGs are subject to regulation by the FERC, which has authorized these EWGs to sell the electricity generated at market-based prices. This electricity is sold to PPL EnergyPlus under FERC-jurisdictional power purchase agreements.

PPL Susquehanna is subject to the jurisdiction of the NRC in connection with the operation of the Susquehanna nuclear units. Certain of PPL Energy Supply's other subsidiaries are subject to the jurisdiction of the NRC in connection with the operation of their fossil plants with respect to certain level and density monitoring devices. Certain operations of PPL Generation's subsidiaries are also subject to the Occupational Safety and Health Act of 1970 and comparable state statutes.

The system capacity of PPL Energy Supply's owned or controlled generation is based upon a number of factors, including the operating experience and physical condition of the units, and may be revised periodically to reflect changes in circumstances.

During 2010, PPL Energy Supply's power plants, excluding renewable facilities that are discussed separately below, generated the following amounts of electricity.

<u>State</u>	<u>Millions of kWh</u>
Pennsylvania	48,140
Montana	8,409
Connecticut	220
New York (a)	
Illinois	164
Maine	75
Total	<u>57,008</u>

(a) 15 million kWhs were excluded as tolling agreements were in place for 100% of the output.

This generation represented a 4% increase above 2009 output. Of this generation, 50% of the electricity generated was from coal-fired stations, 29% from the Susquehanna nuclear station, 14% from oil/natural gas-fired stations and 7% from hydroelectric stations.

Substantially all of PPL Energy Supply's total expected generation in 2011 is anticipated to be used to meet its committed contractual sales. PPL Energy Supply has also entered into commitments of varying quantities and terms for the years 2012 and beyond. These commitments are consistent with, and integral to, PPL Energy Supply's business strategy to capture profits while managing exposure to adverse movements in energy and fuel prices. See "Commodity Volumetric Activity" in Note 19 to the Financial Statements for the strategies PPL Energy Supply employs to optimize the value of its wholesale and retail energy portfolio.

PPL Energy Supply subsidiaries own or control renewable energy projects located in Pennsylvania, New Jersey, Vermont and New Hampshire with a generating capacity (winter rating) of 33 MW. PPL EnergyPlus sells the energy and RECs produced by these plants to commercial, industrial and institutional customers. During 2010, the projects owned and operated by these PPL Energy Supply subsidiaries generated 154 million kWhs.

PPL EnergyPlus purchases the capacity, energy and RECs from two wind farms in Pennsylvania with a combined capacity of 50 MW. These contracts extend through 2027.

See "Item 2. Properties - Supply Segment" for additional information regarding PPL Generation's plans for capital projects in Pennsylvania and Montana that are expected to provide 247 MW of additional electric generating capacity by 2013.

Fuel Supply

PPL EnergyPlus acts as agent for PPL Generation to procure and optimize its various fuels.

Coal

*Pennsylvania*

PPL EnergyPlus actively manages PPL's coal requirements by purchasing coal principally from mines located in central and northern Appalachia.

During 2010, PPL Generation purchased 100% of the coal delivered to PPL Generation's wholly owned Pennsylvania stations under short-term and long-term contracts. These contracts provided PPL Generation 7.0 million tons of coal. Contracts currently in place are expected to provide 7.9 million tons of coal in 2011. The amount of coal in inventory varies from time to time depending on market conditions and plant operations.

PPL Generation, by and through its agent PPL EnergyPlus, has an agreement that provides more than one-third of PPL Generation's projected annual coal needs for the Pennsylvania power plants from 2011 through 2018. PPL Generation has other contracts that, in total, will provide additional coal supply for their projected annual needs from 2011 through 2013.

A PPL Generation subsidiary owns a 12.34% interest in the Keystone station and in Keystone Fuels, LLC and a 16.25% interest in the Conemaugh station and in Conemaugh Fuels, LLC. The Keystone station contracts with Keystone Fuels, LLC for its coal requirements, which provided 4.5 million tons of coal to the Keystone station in 2010. The Conemaugh station requirements are purchased under contract from Conemaugh Fuels, LLC, which provided 4.0 million tons of coal to the Conemaugh station in 2010.

All PPL Generation Pennsylvania coal stations have scrubbers installed. Limestone is necessary to operate the scrubbers. Acting as agent for PPL Brunner Island, LLC and PPL Montour, LLC, PPL EnergyPlus has entered into long-term contracts with limestone suppliers that will provide for those plants' limestone requirements through 2012. During 2010, 457,000 tons of limestone were delivered to Brunner Island and Montour under long-term contracts. Annual limestone requirements approximate 600,000 tons.

*Montana*

PPL Montana has a 50% leasehold interest in Colstrip Units 1 and 2, and a 30% leasehold interest in Colstrip Unit 3. NorthWestern owns a 30% leasehold interest in Colstrip Unit 4. PPL Montana and NorthWestern have a sharing agreement to govern each party's responsibilities regarding the operation of Colstrip Units 3 and 4, and each party is responsible for 15% of the respective operating and construction costs, regardless of whether a particular cost is specified to Colstrip Unit 3 or 4. However, each party is responsible for its own fuel-related costs. PPL Montana, along with the other owners, is party to contracts to purchase 100% of its coal requirements with defined coal quality characteristics and specifications. PPL Montana, along with the other owners, has a long-term purchase and supply agreement with the current supplier for Units 1 and 2 which, provides these units 100% of their coal requirements through December 2014, and at least 85% of such requirements from January 2015 through December 2019. The coal supply contract for Unit 3's requirements is in effect through December 2019.

These units were built with scrubbers and PPL Montana has entered into a long-term contract that commences in January 2011 through December 31, 2030, to purchase the lime requirements for these units.

Coal supply contracts are in place to purchase low-sulfur coal with defined quality characteristics and specifications for PPL Montana's Corette station. The contracts covered 100% of the station's coal requirements in 2010, and similar contracts are in place to supply 100% of the expected coal requirements through 2012.

## Oil and Natural Gas

### *Pennsylvania*

PPL Generation's Martins Creek Units 3 and 4 burn both oil and natural gas. During 2010, 100% of the physical gas requirements for the Martins Creek units were purchased on the spot market while oil requirements were supplied from inventory. At December 31, 2010, there were no long-term agreements for oil or natural gas for these units.

Short-term and long-term gas transportation contracts are in place for approximately 30% of the maximum daily requirements of the Lower Mt. Bethel facility. During 2010, 100% of the physical gas requirements for Lower Mt. Bethel were purchased on the spot market.

In 2008, PPL EnergyPlus acquired the rights to an existing long-term tolling agreement associated with the capacity and energy of the Ironwood facility. PPL EnergyPlus has long-term transportation contracts to serve approximately 25% of Ironwood's maximum daily requirements, which began in the fourth quarter of 2010. Ironwood will be served through a combination of transportation capacity release transactions and delivered supply to the plant. PPL EnergyPlus currently has no long-term physical supply agreements to purchase natural gas for Ironwood. During 2010, 100% of the physical gas requirements for Ironwood were purchased on the spot market.

### *Illinois*

At December 31, 2010, there were no long-term delivery or supply agreements to purchase natural gas for the University Park facility.

### *Connecticut*

PPL EnergyPlus has a long-term contract for approximately 40% of the expected pipeline transportation requirements of the Wallingford facility, but has no long-term physical supply agreement to purchase natural gas.

## Nuclear

The nuclear fuel cycle consists of several material and service components: the mining and milling of uranium ore to produce uranium concentrates; the conversion of these concentrates into uranium hexafluoride, a gas component; the enrichment of the hexafluoride gas; the fabrication of fuel assemblies for insertion and use in the reactor core; and the temporary storage and final disposal of spent nuclear fuel.

PPL Susquehanna has a portfolio of supply contracts, with varying expiration dates, for nuclear fuel materials and services. These contracts are expected to provide sufficient fuel to permit Unit 1 to operate into the first quarter of 2016 and Unit 2 to operate into the first quarter of 2017. PPL Susquehanna anticipates entering into additional contracts to ensure continued operation of the nuclear units.

Federal law requires the U.S. government to provide for the permanent disposal of commercial spent nuclear fuel, but there is no definitive date by which a repository will be operational. As a result, it was necessary to expand Susquehanna's on-site spent fuel storage capacity. To support this expansion, PPL Susquehanna contracted for the design and construction of a spent fuel storage facility employing dry cask fuel storage technology. The facility is modular, so that additional storage capacity can be added as needed. The facility began receiving spent nuclear fuel in 1999. PPL Susquehanna estimates that there is sufficient storage capacity in the spent nuclear fuel pools and the on-site spent fuel storage facility at Susquehanna to accommodate spent fuel discharged through approximately 2017 under current operating conditions. If necessary, the on-site spent fuel storage facility can be expanded, assuming appropriate regulatory approvals are obtained, such that, together, the spent fuel pools and the expanded dry fuel storage facility will accommodate all of the spent fuel expected to be discharged through the current licensed life of the plant.

In 1996, the U.S. Court of Appeals for the District of Columbia Circuit ruled that the Nuclear Waste Policy Act imposed on the DOE an unconditional obligation to begin accepting spent nuclear fuel on or before January 31, 1998. In 1997, the Court ruled that the contracts between the utilities and the DOE provide a potentially adequate remedy if the DOE

failed to begin accepting spent nuclear fuel by January 31, 1998. The DOE did not, in fact, begin to accept spent nuclear fuel by that date. The DOE continues to contest claims that its breach of contract resulted in recoverable damages. In January 2004, PPL Susquehanna filed suit in the U.S. Court of Federal Claims for unspecified damages suffered as a result of the DOE's breach of its contract to accept and dispose of spent nuclear fuel. Discovery in the case has concluded but the Court has not yet set a date for trial. PPL cannot predict the outcome of these proceedings.

#### Energy Marketing

PPL EnergyPlus sells the capacity and electricity produced by PPL Generation subsidiaries, along with purchased power, FTRs, natural gas, oil, uranium, emission allowances and RECs in competitive wholesale and competitive retail markets.

PPL EnergyPlus purchases and sells capacity and electricity at the wholesale level at competitive prices under FERC market-based prices. Within the constraints of its hedging policy, PPL EnergyPlus actively manages its portfolios of energy and energy-related products to optimize their value and to limit exposure to price fluctuations.

PPL EnergyPlus is licensed to provide retail electric supply to customers in Delaware, Maine, Massachusetts, Maryland, Montana, New Jersey and Pennsylvania and provides retail natural gas supply to customers in Pennsylvania, New Jersey, Delaware, and Maryland.

#### Competition

Since the early 1990s, there has been increased competition in U.S. energy markets because of federal and state competitive market initiatives. While some states, such as Pennsylvania and Montana, have created a competitive market for electricity generation, other states continue to consider different types of regulatory initiatives concerning competition in the power and gas industry. Some states that were considering creating competitive markets have slowed their plans or postponed further consideration. In addition, states that have created competitive markets have, from time to time, considered new market rules and re-regulation measures that could result in more limited opportunities for competitive energy suppliers. The activity around re-regulation, however, has slowed due to the current environment of declining power prices. As such, the competitive markets in which PPL and its subsidiaries participate are highly competitive.

The Supply segment faces competition in wholesale markets for available energy, capacity and ancillary services. Competition is impacted by electricity and fuel prices, congestion along the power grid, new market entrants, construction by others of generating assets, technological advances in power generation, the actions of environmental and other regulatory authorities and other factors. The Supply segment primarily competes with other electricity suppliers based on its ability to aggregate generation supply at competitive prices from different sources and to efficiently utilize transportation from third-party pipelines and transmission from electric utilities and ISOs. Competitors in wholesale power markets include regulated utilities, industrial companies, non-utility generators, competitive subsidiaries of regulated utilities and other energy marketers. See "Item 1A. Risk Factors - Risks Related to Supply Segment" and PPL's and PPL Energy Supply's "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Overview" for more information concerning the risks faced with respect to competitive energy markets.

#### Franchise and Licenses

See "Background - Segment Information - Supply Segment - Energy Marketing" for a discussion of PPL EnergyPlus' licenses in various states. PPL EnergyPlus also has an export license from the DOE to sell capacity and/or energy to electric utilities in Canada.

PPL Susquehanna operates Units 1 and 2 pursuant to NRC operating licenses that expire in 2042 for Unit 1 and in 2044 for Unit 2.

In 2008, PPL Susquehanna received NRC approval for its request to increase the generation capacity of the Susquehanna nuclear plant. The project is being completed in phases over several years. PPL Susquehanna's share of the total expected capacity increase is estimated to be 195 MW. The final phase of the Unit 1 uprate was completed in 2010 and yielded 55 MW for PPL Susquehanna. The final phase of the Unit 2 uprate is scheduled for 2011 and is projected to

yield an additional 50 MW for PPL Susquehanna. PPL Susquehanna's share of the expected remaining expenditures is \$15 million.

In 2008, a PPL subsidiary submitted a COLA to the NRC for a new nuclear generating unit (Bell Bend) to be built adjacent to the Susquehanna plant. Also in 2008, the COLA was accepted for review by the NRC. In February 2010, the NRC published its official review schedule that culminates with the issuance of Bell Bend's final safety evaluation report in 2012. See Note 8 to Financial Statements for additional information.

PPL Holtwood operates the Holtwood hydroelectric generating station pursuant to a license that was recently extended by the FERC to expire in 2030. PPL Holtwood operates the Wallenpaupack hydroelectric generating station pursuant to a license renewed by the FERC in 2005 and expiring in 2044. PPL Holtwood also owns one-third of the capital stock of Safe Harbor Water Power Corporation (Safe Harbor), which holds a project license that extends operation of its hydroelectric generating station until 2030. The total capacity of the Safe Harbor generating station was 423 MW at December 31, 2010, and PPL Holtwood is entitled by contract to one-third of the total capacity. In September 2010, PPL Energy Supply subsidiaries signed definitive agreements to sell their ownership interests in Safe Harbor and two other non-core generating facilities. See Note 9 to the Financial Statements for additional information.

In October 2009, the FERC approved the request to expand the Holtwood plant and extended the operating license through August 2030. See Note 8 to the Financial Statements for additional information.

The 11 hydroelectric facilities and one storage reservoir in Montana are licensed by the FERC. The FERC license for the Mystic facility was relicensed, effective January 1, 2010, for an additional 40-year term. The Thompson Falls and Kerr licenses expire in 2025 and 2035, respectively; and the licenses for the nine Missouri-Madison facilities expire in 2040.

In connection with the relicensing of these generating facilities, applicable law permits the FERC to relicense the original licensee or license a new licensee, or allow the U.S. government to take over the facility. If the original licensee is not relicensed, it is compensated for its net investment in the facility, not to exceed the fair value of the property taken, plus reasonable damages to other property affected by the lack of relicensing. See Note 15 to the Financial Statements for additional information on the Kerr Dam license.

*(PPL, PPL Energy Supply and PPL Electric)*

## **SEASONALITY**

The demand for and market prices of electricity and natural gas are affected by weather. As a result, PPL's, PPL Energy Supply's and PPL Electric's operating results in the future may fluctuate substantially on a seasonal basis, especially when more severe weather conditions such as heat waves or winter storms make such fluctuations more pronounced. The pattern of this fluctuation may change depending on the type and location of the facilities owned and the terms of contracts to purchase or sell electricity.

## **FINANCIAL CONDITION**

See PPL's, PPL Energy Supply's and PPL Electric's "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" for this information.

## **CAPITAL EXPENDITURE REQUIREMENTS**

See "Financial Condition - Liquidity and Capital Resources - Forecasted Uses of Cash - Capital Expenditures" in PPL's, PPL Energy Supply's and PPL Electric's "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" for information concerning projected capital expenditure requirements for the years 2011-2015. See Note 15 to the Financial Statements for additional information concerning the potential impact on capital expenditures from environmental matters.

## **ENVIRONMENTAL MATTERS**

PPL and its subsidiaries are subject to certain existing and developing federal, regional, state and local laws and regulations with respect to air and water quality, land use and other environmental matters. The EPA is in the process of proposing and finalizing an unprecedented number of environmental regulations over the next few years that will directly affect the electric industry. These initiatives cover all sources - air, water and waste. See PPL's and PPL Energy Supply's "Financial Condition - Liquidity and Capital Resources" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Forecasted Uses of Cash - Capital Expenditures" for information concerning environmental capital expenditures during 2010 and projected environmental capital expenditures for the years 2011-2015. Also, see "Environmental Matters" in Note 15 to the Financial Statements for additional information. To comply with air related requirements, PPL's forecast for capital expenditures reflects a best estimate projection of expenditures that may be required within the next five years. Such projections are a combined \$2.1 billion for LG&E and KU and \$400 million for PPL Energy Supply. Actual costs may be significantly lower or higher depending on the final requirements. Environmental compliance costs incurred by LG&E and KU are subject to recovery through a rate recovery mechanism. See Note 3 to the Financial Statements for additional information.

PPL and its subsidiaries are unable to predict the ultimate effect of evolving environmental laws and regulations upon their existing and proposed facilities and operations and competitive positions. In complying with statutes, regulations and actions by regulatory bodies involving environmental matters, including, among other things, air and water quality, GHG emissions, hazardous and solid waste management and disposal, and regulation of toxic substances, PPL's subsidiaries may be required to modify, replace or cease operating certain of their facilities. PPL's subsidiaries may also incur significant capital expenditures and operating expenses in amounts which are not now determinable, but could be significant.

## EMPLOYEE RELATIONS

As of December 31, 2010, PPL and its subsidiaries had the following full-time employees.

PPL Energy Supply	
PPL Generation	2,773
PPL EnergyPlus (a)	1,923
PPL Global (primarily WPD)	2,432
Total PPL Energy Supply	<u>7,128</u>
PPL Electric	2,293
LKE	3,122
PPL Services and other	1,266
Total PPL	<u><u>13,809</u></u>

(a) Includes labor union employees of mechanical contracting subsidiaries, whose numbers tend to fluctuate due to the nature of this business.

Approximately 5,800 employees, or 51%, of PPL's domestic workforce are members of labor unions, with four IBEW locals representing approximately 4,300 employees. The bargaining agreement with the largest labor union, an IBEW local, which expires in May 2014, covers approximately 1,600 PPL Electric, 1,200 PPL Energy Supply and 400 other employees. Approximately 830 employees of LKE were represented by an IBEW local and a United Steelworkers of America (USWA) local. Both LG&E and KU have a three-year labor agreement with the IBEW local. LG&E's agreement expires in November 2011 and KU's agreement expires in August 2012. LKE's agreement with the USWA expires in August 2011. PPL Montana's largest bargaining unit, an IBEW local, represents approximately 270 employees at the Colstrip plant. The four-year labor agreement expires in April 2012. PPL Montana's second largest bargaining unit, also an IBEW local, represents approximately 85 employees at hydroelectric facilities and the Corette plant. This four-year labor agreement expires in April 2012.

Approximately 1,870, or 77%, of PPL's U.K. workforce are members of labor unions. WPD recognizes four unions, the largest of which represents 40% of its union workforce. WPD's Electricity Business Agreement, which covers approximately 1,820 union employees may be amended by agreement between WPD and the unions and is terminable with 12 months notice by either side.

See "Separation Benefits" in Note 13 to the Financial Statements for information on a 2009 cost reduction initiative, which resulted in the elimination of approximately 200 domestic management and staff positions at PPL.

**AVAILABLE INFORMATION**

PPL's Internet website is [www.pplweb.com](http://www.pplweb.com). On the Investor Center page of that website, PPL provides access to all SEC filings of PPL, PPL Energy Supply and PPL Electric free of charge, as soon as reasonably practicable after filing with the SEC. Additionally, PPL registrants' filings are available at the SEC's website ([www.sec.gov](http://www.sec.gov)) and at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549, or by calling 1-800-SEC-0330.

## **ITEM 1A. RISK FACTORS**

PPL, PPL Energy Supply and PPL Electric face various risks associated with their businesses. While we have identified below the risks we currently consider material, these are not the only risks we face. Additional risks not presently known to us or that we currently deem immaterial may also impair our business operations. Our businesses, financial condition, cash flows or results of operations could be materially adversely affected by any of these risks. In addition, this report also contains forward-looking and other statements about our businesses that are subject to numerous risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 15 to the Financial Statements for more information concerning the risks described below and for other risks, uncertainties and factors that could impact our businesses and financial results.

As used in this Item 1A., the terms "we," "our" and "us" generally refer to PPL and its consolidated subsidiaries taken as a whole, or to PPL Energy Supply and its consolidated subsidiaries taken as a whole within the Supply and International Regulated segment discussions, or PPL Electric and its consolidated subsidiaries taken as a whole within the Pennsylvania Regulated segment discussion.

### **Risks Related to All Segments**

*(PPL, PPL Energy Supply and PPL Electric)*

***We will selectively pursue growth of generation and transmission and distribution capacity, which involves a number of uncertainties and may not achieve the desired financial results.***

We will pursue expansion of our generation and transmission and distribution capacity over the next several years through power uprates at certain of our existing power plants, the potential construction of new power plants, the potential acquisition of existing plants, the potential construction or acquisition of transmission and distribution projects and capital investments to upgrade transmission and distribution infrastructure. We will rigorously scrutinize opportunities to expand our generating capability and may determine not to proceed with any expansion. These types of projects involve numerous risks. Any planned power uprates could result in cost overruns, reduced plant efficiency and higher operating and other costs. With respect to the construction of new plants, the acquisition of existing plants, or the construction or acquisition of transmission and distribution projects, we may be required to expend significant sums for preliminary engineering, permitting, resource exploration, legal and other expenses before it can be established whether a project is feasible, economically attractive or capable of being financed. The success of both a new or acquired project would likely be contingent, among other things, upon the negotiation of satisfactory operating contracts, obtaining acceptable financing and maintaining acceptable credit ratings, as well as receipt of required and appropriate governmental approvals. If we were unable to complete construction or expansion of a project, we may not be able to recover our investment in the project. Furthermore, we might be unable to operate any new or acquired plants as efficiently as projected, which could result in higher than projected operating and other costs and reduced earnings.

***Adverse conditions in the economic and financial markets in which we operate could adversely affect our financial condition and results of operations.***

Adverse conditions in the financial markets during 2008 and the associated contraction of liquidity in the wholesale energy markets contributed significantly to declines in wholesale energy prices, significantly impacting our earnings during the second half of 2008 and the first half of 2009. The breadth and depth of these negative economic conditions had a wide-ranging impact on the U.S. and international business environment, including our businesses. As a result of the economic downturn, demand for energy commodities has declined significantly. This reduced demand will continue to impact the key domestic wholesale energy markets we serve (such as PJM) and our Pennsylvania and Kentucky utility businesses, especially industrial customer demand. The combination of lower demand for power and natural gas and other fuels has put downward price pressure on wholesale energy markets in general, further impacting our energy marketing results. In general, current economic and commodity market conditions will continue to challenge predictability regarding our unhedged future energy margins, liquidity and overall financial condition.

Our businesses are heavily dependent on credit and capital, among other things, for capital expenditures and providing collateral to support hedging in our energy marketing business. Global bank credit capacity declined and the cost of renewing or establishing new credit facilities increased significantly in 2008, primarily as a result of general credit concerns nationwide, thereby introducing uncertainties as to our businesses' ability to enter into long-term energy commitments or reliably estimate the longer-term cost and availability of credit. Although bank credit conditions have improved since mid-2009, and we currently expect to have adequate access to needed credit and capital based on current conditions, deterioration in the financial markets could adversely affect our financial condition and liquidity. Additionally, regulations to be adopted to implement the Dodd-Frank Financial Reform Act of 2010 may impose requirements on our businesses and the businesses of others with whom we contract such as banks or other counterparties, or simply result in increased costs to conduct our business or access sources of capital and liquidity upon which the conduct of our businesses is dependent.

***Our operating revenues could fluctuate on a seasonal basis, especially as a result of severe weather conditions.***

Our businesses are subject to seasonal demand cycles. For example, in some markets demand for, and market prices of, electricity peak during hot summer months, while in other markets such peaks occur in cold winter months. As a result, our overall operating results in the future may fluctuate substantially on a seasonal basis if weather conditions such as heat waves, extreme cold weather or severe storms occur. The patterns of these fluctuations may change depending on the type and location of our facilities and the terms of our contracts to sell electricity.

***Operating expenses could be affected by weather conditions, including storms, as well as by significant man-made or accidental disturbances, including terrorism or natural disasters.***

Weather and these other factors can significantly affect our profitability or operations by causing outages, damaging infrastructure or requiring significant repair costs. Storm outages and damage often directly decrease revenues or increase expenses, due to reduced usage and higher restoration charges. In addition, weather and other disturbances may affect capital markets and general economic conditions and impact future growth.

***Our businesses are subject to physical, market and economic risks relating to potential effects of climate change.***

Climate change may produce changes in weather or other environmental conditions, including temperature or precipitation changes, and thus may impact consumer demand for electric power. Temperature increases could result in increased overall electricity volumes or peaks and precipitation changes could result in altered availability of water for plant cooling operations. These or other meteorological changes could lead to increased operating costs, capital expenses or power purchase costs. Conversely, climate change could have a number of potential impacts tending to reduce demand. Changes may entail more frequent or more intense storm activity, which, if severe, could temporarily disrupt regional economic conditions and adversely affect electricity demand levels. Greenhouse gas regulation could increase the cost of electric power, particularly power generated by fossil-fuels, and such increases could have a depressive effect on the regional economy. Reduced economic and consumer activity in our service areas --both generally and specific to certain industries and consumers accustomed to previously low-cost power -- could reduce demand for the power we generate, market and deliver. Also, demand for our energy-related services could be similarly lowered should consumers' preferences or market factors move toward favoring energy efficiency, low-carbon power sources or reduced electric usage generally.

***We cannot predict the outcome of the legal proceedings and investigations currently being conducted with respect to our current and past business activities. An adverse determination could have a material adverse effect on our financial condition, results of operations or cash flows.***

We are involved in legal proceedings, claims and litigation and subject to ongoing state and federal investigations arising out of our business operations, the most significant of which are summarized in "Legal Matters," "Regulatory Issues" and in "Environmental Matters - Domestic" in Note 15 to the Financial Statements. We cannot predict the ultimate outcome of these matters, nor can we reasonably estimate the costs or liabilities that could potentially result from a negative outcome in each case.

***We could be negatively affected by rising interest rates, downgrades to our bond credit ratings or other negative developments in our ability to access capital markets.***

In the ordinary course of business, we are reliant upon adequate long-term and short-term financing means to fund our significant capital expenditures, debt interest or maturities and operating needs. As a capital-intensive business, we are sensitive to developments in interest rate levels; credit rating considerations; insurance, security or collateral requirements; market liquidity and credit availability and refinancing opportunities necessary or advisable to respond to credit market changes. Changes in these conditions could result in increased costs and decreased liquidity to our domestic regulated utility businesses.

***A downgrade in our credit ratings could negatively affect our ability to access capital and increase the cost of maintaining our credit facilities and any new debt.***

Credit ratings assigned by Moody's, Fitch and S&P to our businesses and their financial obligations have a significant impact on the cost of capital incurred by our businesses. Although we do not expect these ratings to limit our ability to fund short-term liquidity needs or access new long-term debt, any ratings downgrade could increase our short-term borrowing costs and negatively affect our ability to fund short-term liquidity needs and access new long-term debt. See "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Financial Condition - Liquidity and Capital Resources - Ratings Triggers" for additional information on the impact of a downgrade in our credit rating.

***Significant increases in our operation and maintenance expenses, including health care and pension costs, could adversely affect our future earnings and liquidity.***

We continually focus on limiting and reducing where possible our operation and maintenance expenses. However, we expect to continue to face increased cost pressures in our operations. Increased costs of materials and labor may result from general inflation, increased regulatory requirements (especially in respect of environmental regulations), the need for higher-cost expertise in the workforce or other factors. In addition, pursuant to collective bargaining agreements, we are contractually committed to provide specified levels of health care and pension benefits to certain current employees and retirees. We provide a similar level of benefits to our management employees. These benefits give rise to significant expenses. Due to general inflation with respect to such costs, the aging demographics of our workforce and other factors, we have experienced significant health care cost inflation in recent years, and we expect our health care costs, including prescription drug coverage, to continue to increase despite measures that we have taken and expect to take to require employees and retirees to bear a higher portion of the costs of their health care benefits. In addition, we expect to continue to incur significant costs with respect to the defined benefit pension plans for our employees and retirees. The measurement of our expected future health care and pension obligations, costs and liabilities is highly dependent on a variety of assumptions, most of which relate to factors beyond our control. These assumptions include investment returns, interest rates, health care cost trends, benefit improvements, salary increases and the demographics of plan participants. If our assumptions prove to be inaccurate, our future costs and cash contribution requirements to fund these benefits could increase significantly.

***We may be required to record impairment charges in the future for certain of our investments, which could adversely affect our earnings.***

Under GAAP, we are required to test our recorded goodwill for impairment on an annual basis, or more frequently if events or circumstances indicate that these assets may be impaired. Although no goodwill impairments were recorded based on our annual review in the fourth quarter of 2010, we are unable to predict whether future impairment charges may be necessary.

We also review our long-lived assets for impairment when events or circumstances indicate that the carrying value of these assets may not be recoverable. See Notes 8, 9 and 18 to the Financial Statements for additional information on impairment charges taken during the reporting periods. We are unable to predict whether impairment charges, or other losses on sales of other assets or businesses, may occur in future years.

***We may incur liabilities in connection with discontinued operations.***

In connection with various divestitures, we have indemnified or guaranteed parties against certain liabilities and with respect to certain transactions. These indemnities and guarantees relate to, among other things, liabilities which may

arise with respect to the period during which we or our subsidiaries operated the divested business, and to certain ongoing contractual relationships and entitlements with respect to which we or our subsidiaries made commitments in connection with the divestiture.

*We are subject to liability risks relating to our generation, transmission and distribution businesses.*

The conduct of our physical and commercial operations subjects us to many risks, including risks of potential physical injury, property damage or other financial effects, caused to or caused by employees, customers, contractors, vendors, contractual or financial counterparties and other third parties.

*Our facilities may not operate as planned, which may increase our expenses or decrease our revenues and, thus, have an adverse effect on our financial performance.*

Operation of power plants, transmission and distribution facilities, information technology systems and other assets and activities subjects us to a variety of risks, including the breakdown or failure of equipment, accidents, security breaches, viruses or outages affecting information technology systems, labor disputes, obsolescence, delivery/transportation problems and disruptions of fuel supply and performance below expected levels. These events may impact our ability to conduct our businesses efficiently or lead to increased costs, expenses or losses. Operation of our delivery systems below our expectations may result in lost revenue or increased expense, including higher maintenance costs which may not be recoverable from customers. Planned and unplanned outages at our power plants can require us to purchase power at then-current market prices to satisfy our commitments or, in the alternative, pay penalties and damages for failure to satisfy them.

Although we maintain customary insurance coverage for certain of these risks, no assurance can be given that such insurance coverage will be sufficient to compensate us fully in the event losses occur.

*We are subject to risks associated with federal and state tax laws and regulations.*

Changes in tax law as well as the inherent difficulty in quantifying potential tax effects of business decisions could negatively impact our results of operations. We are required to make judgments in order to estimate our obligations to taxing authorities. These tax obligations include income, property, sales and use and employment-related taxes. We also estimate our ability to utilize tax benefits and tax credits. Due to the revenue needs of the states and jurisdictions in which our businesses operate, various tax and fee increases may be proposed or considered. We cannot predict whether legislation or regulation will be introduced or enacted or the effect of any such changes on our businesses. If enacted, any changes could increase tax expense and could have a negative impact on our results of operations and cash flows.

*(PPL and PPL Electric)*

### **Risks Related to Domestic Regulated Utility Operations**

Our domestic regulated utility businesses face many of the same risks, in addition to those risks that are unique to the Kentucky Regulated segment and the Pennsylvania Regulated segment. Set forth below are risk factors common to both domestic regulated segments, followed by sections identifying separately the risks specific to each of these segments.

*Our profitability is highly dependent on our ability to recover the costs of providing energy and utility services to our customers and earn an adequate return on our capital investments. Regulators may not approve the rates we request.*

We currently provide services to our utility customers at rates approved by one or more federal or state regulatory commissions, including those commissions referred to below. While such regulation is generally premised on the recovery of prudently incurred costs and a reasonable rate of return on invested capital, the rates that we may charge our regulated generation, transmission and distribution customers are subject to authorization of the applicable regulatory authorities. There can be no assurance that such regulatory authorities will consider all of our costs to have been prudently incurred or that the regulatory process by which rates are determined will always result in rates that achieve full recovery of our costs or an adequate return on our capital investments. While our rates are generally regulated based on an analysis of our costs incurred in a base year, the rates we are allowed to charge may or may not match our costs at any given time. With respect to PPL's November 1, 2010 acquisition of LKE, each of LG&E and KU has agreed with the KPSC, subject to certain limited exceptions such as fuel and environmental cost recoveries, that no base rate increases

would take effect for their Kentucky retail customers before January 1, 2013. Our regulated utility businesses are subject to substantial capital expenditure requirements over the next several years, which will require rate increase requests to the regulators. If our costs are not adequately recovered through rates, it could have an adverse affect on our business, results of operations, cash flows or financial condition.

***Our domestic utility businesses are subject to significant and complex governmental regulation.***

Various federal and state entities, including but not limited to the FERC, the KPSC, the VSCC, the TRA and PUC regulate many aspects of the domestic utility operations of PPL, including:

- the rates that we may charge and the terms and conditions of our service and operations;
- financial and capital structure matters;
- siting, construction and operation of facilities;
- mandatory reliability and safety standards and other standards of conduct;
- accounting, depreciation and cost allocation methodologies;
- tax matters;
- affiliate restrictions;
- acquisition and disposal of utility assets and securities; and
- various other matters.

Such regulations or changes thereto may subject us to higher operating costs or increased capital expenditures and failure to comply could result in sanctions or possible penalties. In any rate-setting proceedings, federal or state agencies, intervenors and other permitted parties may challenge our rate requests, and ultimately reduce, alter or limit the rates we seek.

***We could be subject to higher costs and/or penalties related to mandatory reliability standards.***

Under the Energy Policy Act of 2005, owners and operators of the bulk power transmission system are now subject to mandatory reliability standards promulgated by the NERC and enforced by the FERC. Compliance with reliability standards may subject us to higher operating costs and/or increased capital expenditures, and violations of these standards could result in substantial penalties which may not be recoverable from customers.

***Changes in transmission and wholesale power market structures could increase costs or reduce revenues.***

Wholesale revenues fluctuate with regional demand, fuel prices and contracted capacity. Changes to transmission and wholesale power market structures and prices may occur in the future, are not estimable and may result in unforeseen effects on energy purchases and sales, transmission and related costs or revenues. These can include commercial or regulatory changes affecting power pools, exchanges or markets in which PPL participates.

***Our domestic regulated businesses undertake significant capital projects and these activities are subject to unforeseen costs, delays or failures, as well as risk of inadequate recovery of resulting costs.***

The domestic regulated utility businesses are capital intensive and require significant investments in energy generation (in the case of LKE) and transmission, distribution and other infrastructure projects, such as projects for environmental compliance and system reliability. The completion of these projects without delays or cost overruns is subject to risks in many areas, including:

- approval, licensing and permitting;
- land acquisition and the availability of suitable land;
- skilled labor or equipment shortages;
- construction problems or delays, including disputes with third party intervenors;
- increases in commodity prices or labor rates;
- contractor performance;
- environmental considerations and regulations;

- weather and geological issues; and
- political, labor and regulatory developments.

Failure to complete our capital projects on schedule or on budget, or at all, could adversely affect our financial performance, operations and future growth if such expenditures are not granted rate recovery by our regulators.

### **Risks Specific to Kentucky Regulated Segment**

*(PPL)*

***The costs of compliance with, and liabilities under, environmental laws are significant and are subject to continuing changes.***

Extensive federal, state and local environmental laws and regulations are applicable to LG&E's and KU's generation business, including its air emissions, water discharges and the management of hazardous and solid waste, among other business related activities; and the costs of compliance or alleged non-compliance cannot be predicted with certainty but could be material. In addition, our costs may increase significantly if the requirements or scope of environmental laws or regulations, or similar rules are expanded or changed. Costs may take the form of increased capital or operating and maintenance expenses, monetary fines, penalties or forfeitures or other restrictions. Many of these environmental law considerations are also applicable to the operations of our key suppliers, or customers, such as coal producers and industrial power users, and may impact the costs of their products or demand for our services.

### **Risks Specific to Pennsylvania Regulated Segment**

*(PPL and PPL Electric)*

***We may be subject to higher transmission costs and other risks as a result of PJM's regional transmission expansion plan (RTEP) process.***

PJM and the FERC have the authority to require upgrades or expansion of the regional transmission grid, which can result in substantial expenditures for transmission owners. As discussed in Note 8 to the Financial Statements, we expect to make substantial expenditures to construct the Susquehanna-Roseland transmission line that PJM has determined is necessary for the reliability of the regional transmission grid. Although the FERC has granted our request for incentive rate treatment of such facilities, we cannot be certain that all costs that we may incur will be recoverable. In addition, the date when these facilities will be in service, whether due to delays related to public opposition or other factors, is subject to the outcome of future events that are not all within our control. As a result, we cannot predict the ultimate financial or operational impact of this project or other RTEP projects on PPL Electric.

***We could be subject to higher costs and/or penalties related to Pennsylvania Conservation and Energy Efficiency Programs.***

Act 129 became effective in October 2008. This law created requirements for energy efficiency and conservation programs and for the use of smart metering technology, imposed new PLR electricity supply procurement rules, provided remedies for market misconduct, and made changes to the existing Alternative Energy Portfolio Standard. The law also requires electric utilities to meet specified goals for reduction in customer electricity usage and peak demand by specified dates (2011 and 2013). Utilities not meeting these requirements of Act 129 are subject to significant penalties that cannot be recovered in rates. Although we expect to meet these requirements, numerous factors outside of our control could prevent compliance with these requirements and result in penalties to us. See "Regulatory Issues - Energy Policy Act of 2005 - Reliability Standards" in Note 15 to the Financial Statements for additional information.

***Cost recovery remains subject to political risks.***

Although prior initiatives have not resulted in the enactment of such legislation, the possibility remains that certain Pennsylvania legislators could introduce legislation to reinstate generation rate caps or otherwise limit cost recovery through rates for Pennsylvania utilities after the end of applicable transition periods, which in PPL Electric's case was

December 31, 2009. If such legislation were introduced and ultimately enacted, PPL Electric could face severe financial consequences including operating losses and significant cash flow shortfalls. In addition, continuing uncertainty regarding PPL Electric's ability to recover its market supply and other costs of operating its business could adversely affect its credit quality, financing costs and availability of credit facilities necessary to operate its business.

*(PPL and PPL Energy Supply)*

### **Risks Related to International Regulated Segment**

***Our U.K. delivery business is subject to risks with respect to rate regulation and operational performance.***

Our U.K. delivery business is rate regulated and operates under an incentive-based regulatory framework. In addition, its ability to manage operational risk is critical to its financial performance. Disruption to the distribution network could reduce profitability both directly through the higher costs for network restoration and also through the system of penalties and rewards that Ofgem has in place relating to customer service levels.

In December 2009, Ofgem completed its rate review for the five-year period from April 1, 2010 through March 31, 2015, thus reducing regulatory rate risk in the International Regulated segment until the next rate review which will be effective April 1, 2015. The regulated income of the International Regulated segment and also the RAB are to some extent linked to movements in the Retail Price Index (RPI). Reductions in the RPI would adversely impact revenues and the debt/RAB ratio.

***Our U.K. distribution business exposes us to risks related to U.K. laws and regulations, taxes, economic conditions, foreign currency exchange rate fluctuations, and political conditions and policies of the U.K. government. These risks may reduce the results of operations from our U.K. distribution business.***

The acquisition, financing, development and operation of projects in the U.K. entail significant financial risks including:

- changes in laws or regulations relating to U.K. operations, including tax laws and regulations;
- changes in government policies, personnel or approval requirements;
- changes in general economic conditions affecting the U.K.;
- regulatory reviews of tariffs for distribution companies;
- severe weather and natural disaster impacts on the electric sector and our assets;
- changes in labor relations;
- limitations on foreign investment or ownership of projects and returns or distributions to foreign investors;
- limitations on the ability of foreign companies to borrow money from foreign lenders and lack of local capital or loans;
- fluctuations in foreign currency exchange rates and in converting U.K. revenues to U.S. dollars, which can increase our expenses and/or impair our ability to meet such expenses, and difficulty moving funds out of the country in which the funds were earned; and
- compliance with U.S. foreign corrupt practices laws.

### **Risks Related to Supply Segment**

*(PPL and PPL Energy Supply)*

***We face intense competition in our energy supply business, which may adversely affect our ability to operate profitably.***

Unlike our regulated utility businesses, our energy supply business is dependent on our ability to operate in a competitive environment and is not assured of any rate of return on capital investments through a predetermined rate structure. Competition is impacted by electricity and fuel prices, new market entrants, construction by others of generating assets and transmission capacity, technological advances in power generation, the actions of environmental and other regulatory authorities and other factors. These competitive factors may negatively impact our ability to sell electricity

and related products and services, as well as the prices that we may charge for such products and services, which could adversely affect our results of operations and our ability to grow our business.

We sell our available energy and capacity into the competitive wholesale markets through contracts of varying duration. Competition in the wholesale power markets occurs principally on the basis of the price of products and, to a lesser extent, on the basis of reliability and availability. We believe that the commencement of commercial operation of new electric facilities in the regional markets where we own or control generation capacity and the evolution of demand side management resources will continue to increase competition in the wholesale electricity market in those regions, which could have an adverse effect on the prices we receive for electricity.

We also face competition in the wholesale markets for electricity capacity and ancillary services. We primarily compete with other electricity suppliers based on our ability to aggregate supplies at competitive prices from different sources and to efficiently utilize transportation from third-party pipelines and transmission from electric utilities and ISOs. We also compete against other energy marketers on the basis of relative financial condition and access to credit sources, and our competitors may have greater financial resources than we have.

Competitors in the wholesale power markets in which PPL Generation subsidiaries and PPL EnergyPlus operate include regulated utilities, industrial companies, non-utility generators and competitive subsidiaries of regulated utilities. In the past, PUHCA significantly restricted mergers and acquisitions and other investments in the electric utility sector. Entirely new competitors, including financial institutions, have entered the energy markets as a result of the repeal of PUHCA in 2006. The repeal of PUHCA also may lead to consolidation in our industry, resulting in competitors with significantly greater financial resources than we have.

***Adverse changes in commodity prices and related costs may decrease our future energy margins, which could adversely affect our earnings and cash flows.***

Our energy margins, or the amount by which our revenues from the sale of power exceed our costs to supply power, are impacted by changes in market prices for electricity, fuel, fuel transportation, emission allowances, RECs, electricity transmission and related congestion charges and other costs. Unlike most commodities, the limited ability to store electric power requires that it must be consumed at the time of production. As a result, wholesale market prices for electricity may fluctuate substantially over relatively short periods of time and can be unpredictable. Among the factors that influence such prices are:

- supply and demand for electricity available from current or new generation resources;
- variable production costs, primarily fuel (and the associated fuel transportation costs) and emission allowance expense for the generation resources used to meet the demand for electricity;
- transmission capacity and service into, or out of, markets served;
- changes in the regulatory framework for wholesale power markets;
- liquidity in the wholesale electricity market, as well as general creditworthiness of key participants in the market; and
- weather and economic conditions impacting demand for electricity or the facilities necessary to deliver electricity.

See Exhibit 99(a) for more information concerning the market fluctuations in wholesale energy, fuel and emission allowance prices over the past five years.

***We do not always hedge against risks associated with electricity and fuel price volatility.***

We attempt to mitigate risks associated with satisfying our contractual electricity sales obligations by either reserving generation capacity to deliver electricity or purchasing the necessary financial or physical products and services through competitive markets to satisfy our net firm sales contracts. We also routinely enter into contracts, such as fuel and electricity purchase and sale commitments, to hedge our exposure to fuel requirements and other electricity-related commodities. However, based on economic and other considerations, we may decide not to hedge the entire exposure of our operations from commodity price risk. To the extent we do not hedge against commodity price risk, our results of operations and financial position may be adversely affected.

***We are exposed to operational, price and credit risks associated with selling and marketing products in the wholesale electricity markets.***

We purchase and sell electricity in wholesale markets under market-based tariffs authorized by the FERC throughout the U.S. and also enter into short-term agreements to market available electricity and capacity from our generation assets with the expectation of profiting from market price fluctuations. If we are unable to deliver firm capacity and electricity under these agreements, we could be required to pay damages. These damages would generally be based on the difference between the market price to acquire replacement capacity or electricity and the contract price of any undelivered capacity or electricity. Depending on price volatility in the wholesale electricity markets, such damages could be significant. Extreme weather conditions, unplanned generation facility outages, environmental compliance costs, transmission disruptions, and other factors could affect our ability to meet our obligations, or cause significant increases in the market price of replacement capacity and electricity.

Our power agreements typically include provisions requiring us to post collateral for the benefit of our counterparties if the market price of energy varies from the contract prices in excess of certain pre-determined amounts. We currently believe that we have sufficient credit to fulfill our potential collateral obligations under these power contracts. Our obligation to post collateral could exceed the amount of our facilities or our ability to increase our facilities could be limited by financial markets or other factors. See Note 7 for a discussion of PPL's credit facilities.

We also face credit risk that parties with whom we contract will default in their performance, in which case we may have to sell our electricity into a lower-priced market or make purchases in a higher-priced market than existed at the time of contract. Whenever feasible, we attempt to mitigate these risks using various means, including agreements that require our counterparties to post collateral for our benefit if the market price of energy varies from the contract price in excess of certain pre-determined amounts. However, there can be no assurance that we will avoid counterparty nonperformance risk, which could adversely impact our ability to meet our obligations to other parties, which could in turn subject us to claims for damages.

***The load following contracts that PPL EnergyPlus is awarded do not provide for specific levels of load and actual load significantly below or above our forecasts could adversely affect our energy margins.***

We generally hedge our load following obligations with energy purchases from third parties, and to a lesser extent with our own generation. If the actual load is significantly lower than the expected load, we may be required to resell power at a lower price than was contracted for to supply the load obligation, resulting in a financial loss. Alternatively, a significant increase in load could adversely affect our energy margins because we are required under the terms of the load following contracts to provide the energy necessary to fulfill increased demand at the contract price, which could be lower than the cost to procure additional energy on the open market. Therefore, any significant decrease or increase in load compared to our forecasts could have a material adverse effect on our results of operations or financial position.

***We may experience disruptions in our fuel supply, which could adversely affect our ability to operate our generation facilities.***

We purchase fuel from a number of suppliers. Disruption in the delivery of fuel and other products consumed during the production of electricity (such as coal, natural gas, oil, water, uranium, lime, limestone and other chemicals), including disruptions as a result of weather, transportation difficulties, global demand and supply dynamics, labor relations, environmental regulations or the financial viability of our fuel suppliers, could adversely affect our ability to operate our facilities, which could result in lower sales and/or higher costs and thereby adversely affect our results of operations.

***Our risk management policy and programs relating to electricity and fuel prices, interest rates, foreign currency and counterparty credit and non-performance risks may not work as planned, and we may suffer economic losses despite such programs.***

We actively manage the market risk inherent in our generation and energy marketing activities, as well as our debt, foreign currency and counterparty credit positions. We have implemented procedures to monitor compliance with our risk management policy and programs, including independent validation of transaction and market prices, verification of risk and transaction limits, portfolio stress tests, sensitivity analyses and daily portfolio reporting of various risk

management metrics. Nonetheless, our risk management programs may not work as planned. For example, actual electricity and fuel prices may be significantly different or more volatile than the historical trends and assumptions upon which we based our risk management calculations. Additionally, unforeseen market disruptions could decrease market depth and liquidity, negatively impacting our ability to enter into new transactions. We enter into financial contracts to hedge commodity basis risk, and as a result are exposed to the risk that the correlation between delivery points could change with actual physical delivery. Similarly, interest rates or foreign currency exchange rates could change in significant ways that our risk management procedures were not designed to address. As a result, we cannot always predict the impact that our risk management decisions may have on us if actual events result in greater losses or costs than our risk models predict or greater volatility in our earnings and financial position.

In addition, our trading, marketing and hedging activities are exposed to counterparty credit risk and market liquidity risk. We have adopted a credit risk management policy and program to evaluate counterparty credit risk. However, if counterparties fail to perform, the risk of which has increased due to the economic downturn, we may be forced to enter into alternative arrangements at then-current market prices. In that event, our financial results are likely to be adversely affected.

***Our costs to comply with existing and new environmental laws are expected to continue to be significant, and we plan to incur significant capital expenditures for pollution control improvements that, if delayed, would adversely affect our profitability and liquidity.***

Our business is subject to extensive federal, state and local statutes, rules and regulations relating to environmental protection. To comply with existing and future environmental requirements and as a result of voluntary pollution control measures we may take, we have spent and expect to spend substantial amounts in the future on environmental control and compliance.

In order to comply with existing and proposed federal and state environmental laws and regulations primarily governing air emissions from coal-fired plants, in 2005 PPL began a program to install scrubbers and other pollution control equipment (primarily aimed at sulfur dioxide, particulate matter and nitrogen oxides with co-benefits for mercury emissions reduction). The cost to install this equipment was approximately \$1.6 billion. The scrubbers at our Montour and Brunner Island plants are now in service. Many states and environmental groups have challenged certain federal laws and regulations relating to air emissions as not being sufficiently strict. As a result, it is possible that state and federal regulations will be adopted that would impose more stringent restrictions than are currently in effect, which could require us to significantly increase capital expenditures for additional pollution control equipment.

We may not be able to obtain or maintain all environmental regulatory approvals necessary for our planned capital projects which are necessary to our business. If there is a delay in obtaining any required environmental regulatory approval or if we fail to obtain, maintain or comply with any such approval, operations at our affected facilities could be halted, reduced or subjected to additional costs. Furthermore, at some of our older generating facilities it may be uneconomic for us to install necessary pollution control equipment, which could cause us to retire those units.

For more information regarding environmental matters, including existing and proposed federal, state and local statutes, rules and regulations to which we are subject, see "Environmental Matters - Domestic" in Note 15 to the Financial Statements.

***We rely on transmission and distribution assets that we do not own or control to deliver our wholesale electricity. If transmission is disrupted, or not operated efficiently, or if capacity is inadequate, our ability to sell and deliver power may be hindered.***

We depend on transmission and distribution facilities owned and operated by utilities and other energy companies to deliver the electricity and natural gas we sell in the wholesale market, as well as the natural gas we purchase for use in our electric generation facilities. If transmission is disrupted (as a result of weather, natural disasters or other reasons) or not operated efficiently by ISOs and RTOs, in applicable markets, or if capacity is inadequate, our ability to sell and deliver products and satisfy our contractual obligations may be hindered, or we may be unable to sell products at the most favorable terms.

The FERC has issued regulations that require wholesale electric transmission services to be offered on an open-access, non-discriminatory basis. Although these regulations are designed to encourage competition in wholesale market transactions for electricity, there is the potential that fair and equal access to transmission systems will not be available or that transmission capacity will not be available in the amounts we require. We cannot predict the timing of industry changes as a result of these initiatives or the adequacy of transmission facilities in specific markets or whether ISOs and RTOs in applicable markets will efficiently operate transmission networks and provide related services.

***Despite federal and state deregulation initiatives, our supply business is still subject to extensive regulation, which may increase our costs, reduce our revenues, or prevent or delay operation of our facilities.***

Our generation subsidiaries sell electricity into the wholesale market. Generally, our generation subsidiaries and our marketing subsidiaries are subject to regulation by the FERC. The FERC has authorized us to sell generation from our facilities and power from our marketing subsidiaries at market-based prices. The FERC retains the authority to modify or withdraw our market-based rate authority and to impose "cost of service" rates if it determines that the market is not competitive, that we possess market power or that we are not charging just and reasonable rates. Any reduction by the FERC in the rates we may receive or any unfavorable regulation of our business by state regulators could materially adversely affect our results of operations. See "FERC Market-Based Rate Authority" in Note 15 to the Financial Statements for information regarding recent court decisions that could impact the FERC's market-based rate authority program, and "PJM RPM Litigation" in Note 15 to the Financial Statements for information regarding the FERC's proceedings that could impact PJM's capacity pricing model.

In addition, the acquisition, construction, ownership and operation of electricity generation facilities require numerous permits, approvals, licenses and certificates from federal, state and local governmental agencies. We may not be able to obtain or maintain all required regulatory approvals. If there is a delay in obtaining any required regulatory approvals or if we fail to obtain or maintain any required approval or fail to comply with any applicable law or regulation, the operation of our assets and our sales of electricity could be prevented or delayed or become subject to additional costs.

***If market deregulation is reversed or discontinued, our business prospects and financial condition could be materially adversely affected.***

In some markets, state legislators, government agencies and other interested parties have made proposals to change the use of market-based pricing, re-regulate areas of these markets that have previously been competitive or permit electricity delivery companies to construct or acquire generating facilities. The ISOs that oversee the transmission systems in certain wholesale electricity markets have from time to time been authorized to impose price limitations and other mechanisms to address extremely high prices in the power markets. These types of price limitations and other mechanisms may reduce profits that our wholesale power marketing and trading business would have realized under competitive market conditions absent such limitations and mechanisms. Although we generally expect electricity markets to continue to be competitive, other proposals to re-regulate our industry may be made, and legislative or other actions affecting the electric power restructuring process may cause the process to be delayed, discontinued or reversed in states in which we currently, or may in the future, operate. See "New Jersey Capacity Legislation" in Note 15 to the Financial Statements.

***Changes in technology may negatively impact the value of our power plants.***

A basic premise of our generation business is that generating electricity at central power plants achieves economies of scale and produces electricity at relatively low prices. There are alternate technologies to produce electricity, most notably fuel cells, micro turbines, windmills and photovoltaic (solar) cells, the development of which has been expanded due to global climate change concerns. Research and development activities are ongoing to seek improvements in alternate technologies. It is possible that advances will reduce the cost of alternate methods of electricity production to a level that is equal to or below that of certain central station production. Also, as new technologies are developed and become available, the quantity and pattern of electricity usage (the "demand") by customers could decline, with a corresponding decline in revenues derived by generators. These alternative energy sources could result in a decline to the dispatch and capacity factors of our plants. As a result of all of these factors, the value of our generation facilities could be significantly reduced.

*We are subject to certain risks associated with nuclear generation, including the risk that our Susquehanna nuclear plant could become subject to increased security or safety requirements that would increase capital and operating expenditures, uncertainties regarding spent nuclear fuel, and uncertainties associated with decommissioning our plant at the end of its licensed life.*

Nuclear generation accounted for about 29% of our 2010 generation output. The risks of nuclear generation generally include:

- the potential harmful effects on the environment and human health from the operation of nuclear facilities and the storage, handling and disposal of radioactive materials;
- limitations on the amounts and types of insurance commercially available to cover losses and liabilities that might arise in connection with nuclear operations; and
- uncertainties with respect to the technological and financial aspects of decommissioning nuclear plants at the end of their licensed lives. The licenses for our two nuclear units expire in 2042 and 2044. See Note 21 to the Financial Statements for additional information on the ARO related to the decommissioning.

The NRC has broad authority under federal law to impose licensing requirements, including security, safety and employee-related requirements for the operation of nuclear generation facilities. In the event of noncompliance, the NRC has authority to impose fines or shut down a unit, or both, depending upon its assessment of the severity of the situation, until compliance is achieved. In addition, revised security or safety requirements promulgated by the NRC could necessitate substantial capital or operating expenditures at our Susquehanna nuclear plant. There also remains substantial uncertainty regarding the temporary storage and permanent disposal of spent nuclear fuel, which could result in substantial additional costs to PPL that cannot be predicted. In addition, although we have no reason to anticipate a serious nuclear incident at our Susquehanna plant, if an incident did occur, any resulting operational loss, damages and injuries could have a material adverse effect on our results of operations, cash flows or financial condition. See Note 15 to the Financial Statements for a discussion of nuclear insurance.

#### **ITEM 1B. UNRESOLVED STAFF COMMENTS**

**PPL Corporation, PPL Energy Supply, LLC and PPL Electric Utilities Corporation**

None.

**ITEM 2. PROPERTIES**

(PPL)

**Kentucky Regulated Segment**

LKE's properties consist primarily of regulated generation facilities, electric transmission and distribution assets and natural gas transmission and distribution mains in Kentucky. The electric generating capacity at December 31, 2010 was:

Primary Fuel/Plant	Total MW Capacity (a)		% Ownership	PPL's Ownership or Lease Interest in MW (a)		Location
	Winter Rating	Summer Rating		Winter Rating	Summer Rating	
<b>Coal</b>

- (a) The capacity of generation units is based on a number of factors, including the operating experience and physical conditions of the units, and may be revised periodically to reflect changed circumstances.
- (b) This unit is jointly owned. Each owner is entitled to its proportionate share of the unit's total output and funds its proportionate share of fuel and other operating costs. See Note 14 to the Financial Statements for additional information.
- (c) This unit is owned by OVEC. LKE owns 8.13% of OVEC's equity, which is accounted for as a cost-method investment, and has a power purchase agreement that entitles LKE to its proportionate share of the unit's total output and LKE funds its proportionate share of fuel and other operating costs.
- (d) Includes a leasehold interest. See Note 11 to the Financial Statements for additional information.

With limited exceptions LKE took care, custody and control of TC2 on January 22, 2011, and has dispatched the unit to meet customer demand since that date. LG&E and KU and the contractor agreed to a further amendment of the construction agreement whereby the contractor will complete certain actions relating to identifying and completing any necessary modifications to allow operation of TC2 on all fuels in accordance with initial specifications prior to certain dates, and amending the provisions relating to liquidated damages. LKE cannot currently estimate the ultimate outcome of these matters. LKE owns a 75% interest in TC2. TC2 is coal-fired and has a capacity of 760 MW, of which LKE's share is 570 MW.

For a description of LKE's service territory, see "Item 1. Business - Background." At December 31, 2010, LKE's transmission system included in the aggregate, 177 substations (86 of which are shared with the distribution system) with a total capacity of approximately 20 million kVA and 4,987 circuit miles of lines. The distribution system included 575 substations (86 of which are shared with the transmission system) with a total capacity of approximately 12 million kVA, 18,043 circuit miles of overhead lines and 4,571 circuit miles of underground wires.

LKE's natural gas transmission system included 391 miles of transmission mains (consisting of natural gas transmission lines of 255 miles, natural gas storage lines of 119 miles and gas combustion turbine lines of 17 miles) and the natural gas distribution system included 4,235 miles of distribution mains. Five underground natural gas storage fields, with a current working natural gas capacity of approximately 15 Bcf, help provide economical and reliable natural gas service to ultimate consumers.

Substantially all of LG&E's and KU's respective real and tangible personal property located in Kentucky and used or to be used in connection with the generation, transmission and distribution of electricity and, in the case of LG&E, the storage and distribution of natural gas, is subject to the lien of either the LG&E 2010 Mortgage Indenture or the KU 2010 Mortgage Indenture. See Note 7 to the Financial Statements for additional information.

*(PPL and PPL Energy Supply)*

#### International Regulated Segment

For a description of WPD's service territory, see "Item 1. Business - Background." At December 31, 2010, WPD had electric distribution lines in public streets and highways pursuant to legislation and rights-of-way secured from property owners. In 2010, electricity distributed totaled 26,820 GWh based on operating revenues recorded by WPD. WPD's distribution system in the U.K. includes 649 substations with a total capacity of 25 million kVA, 28,838 circuit miles of overhead lines and 24,131 cable miles of underground conductors.

*(PPL and PPL Electric)*

#### Pennsylvania Regulated Segment

For a description of PPL Electric's service territory, see "Item 1. Business - Background." At December 31, 2010, PPL Electric had electric transmission and distribution lines in public streets and highways pursuant to franchises and rights-of-way secured from property owners. PPL Electric's system included 377 substations with a total capacity of 31 million kVA, 33,122 circuit miles of overhead lines and 7,368 cable miles of underground conductors. All of PPL Electric's facilities are located in Pennsylvania. Substantially all of PPL Electric's distribution properties and certain transmission properties are subject to the lien of the PPL Electric 2001 Mortgage Indenture.

See Note 8 to the Financial Statements for information on the construction of the Susquehanna-Roseland 500-kilovolt transmission line.

*(PPL and PPL Energy Supply)*

#### Supply Segment

PPL Energy Supply's electric generating capacity at December 31, 2010 was:

Primary Fuel/Plant	Total MW Capacity (a)		% Ownership	PPL Energy Supply's Ownership or Lease Interest in MW (a)		Location

Total .....	<u>16,028</u>	<u>15,570</u>		<u>11,729</u>	<u>11,276</u>	

- (a) The capacity of generation units is based on a number of factors, including the operating experience and physical conditions of the units, and may be revised periodically to reflect changed circumstances.
- (b) Facilities not owned by PPL Energy Supply, but there is a tolling agreement or power purchase agreement in place.
- (c) In September 2010, certain PPL Energy Supply subsidiaries signed definitive agreements to sell their ownership interests in these facilities. The sale is expected to close in the first quarter of 2011. See Note 9 to the Financial Statements for additional information on the anticipated sale.
- (d) Represents the leasehold interest held by PPL Montana. See Note 11 to the Financial Statements for additional information.
- (e) This unit is jointly owned. Each owner is entitled to their proportionate share of the unit's total output and funds their proportionate share of fuel and other operating costs. See Note 14 to the Financial Statements for additional information.
- (f) Includes renewable energy facilities owned by a PPL Energy Supply subsidiary.
- (g) Includes renewable energy facilities owned by a PPL Energy Supply subsidiary for which there are power purchase agreements in place.

Amounts guaranteed by PPL Montour and PPL Brunner Island in connection with an \$800 million secured energy marketing and trading facility are secured by mortgages on the generating facilities owned by PPL Montour and PPL Brunner Island. See Note 7 to the Financial Statements for additional information.

PPL Energy Supply continuously reexamines development projects based on market conditions and other factors to determine whether to proceed with the projects, sell, cancel or expand them, execute tolling agreements or pursue other options. At December 31, 2010, PPL Energy Supply subsidiaries planned to implement the following incremental capacity increases.

Primary Fuel/Plant	Location	Total MW Capacity (a)	PPL Energy Supply Ownership or Lease Interest in MW	Expected In-Service Date (b)
<b>Hydro</b>				
Holtwood (c) .....	Pennsylvania	136	136 (100%)	2011 - 2013
Great Falls (d) .....	Montana	28	28 (100%)	2012
<b>Nuclear</b>				
Susquehanna (e) .....	Pennsylvania	56	50 (90%)	2011
<b>Natural Gas/Oil</b>				
Martins Creek (f) .....	Pennsylvania	30	30 (100%)	2011

**Landfill Gas**

Chrin Landfill .....	Pennsylvania	<u>3</u>	<u>3</u>	(100%)	2011
<b>Total .....</b>		<u><u>253</u></u>	<u><u>247</u></u>		

- (a) The capacity of generating units is based on a number of factors, including the operating experience and physical condition of the units, and may be revised periodically to reflect changed circumstances.
- (b) The expected in-service dates are subject to receipt of required approvals, permits and other contingencies.
- (c) This project primarily involves the installation of two additional large turbine-generators.
- (d) This project primarily involves the reconstruction of a powerhouse.
- (e) This project involves the extended upgrade of Units 1 and 2 and is being implemented in two uprates per unit. The uprates for Unit 1 have been completed. The first uprate for Unit 2 was completed in 2009 and the second uprate is planned to occur in 2011.
- (f) This project involves the replacement of certain rotors and blades for Unit 4.

**ITEM 3. LEGAL PROCEEDINGS**

See Notes 3 and 15 to the Financial Statements for information regarding legal, regulatory and environmental proceedings and matters.

**PART II****ITEM 5. MARKET FOR THE REGISTRANT'S COMMON EQUITY,  
RELATED STOCKHOLDER MATTERS AND  
ISSUER PURCHASES OF EQUITY SECURITIES****PPL Corporation**

Additional information for this item is set forth in the sections entitled "Quarterly Financial, Common Stock Price and Dividend Data," "Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters" and "Shareowner and Investor Information" of this report. At January 31, 2011, there were 70,223 common stock shareowners of record.

**Issuer Purchase of Equity Securities during the Fourth Quarter of 2010:**

	(a)	(b)	(c)	(d)
<b>Period</b>	<b>Total Number of Shares (or Units) Purchased</b>	<b>Average Price Paid per Share (or Unit)</b>	<b>Total Number of Shares (or Units) Purchased as Part of Publicly Announced Plans of Programs</b>	<b>Maximum Number (or Approximate Dollar Value) of Shares (or Units) that May Yet Be Purchased Under the Plans or Programs (1)</b>
October 1 to October 31, 2010				\$57,495
November 1 to November 30, 2010				\$57,495
December 1 to December 31, 2010				\$57,495
Total				\$57,495

- (1) In June 2007, PPL announced a program to repurchase from time to time up to \$750 million of its common stock in open market purchases, pre-arranged trading plans or privately negotiated transactions.

**PPL Energy Supply, LLC**

There is no established public trading market for PPL Energy Supply's membership interests. PPL Energy Funding, a direct wholly owned subsidiary of PPL, owns all of PPL Energy Supply's outstanding membership interests. Distributions on the membership interests will be paid as determined by PPL Energy Supply's Board of Managers. PPL Energy Supply made cash distributions to PPL Energy Funding of \$4,692 million in 2010 and \$943 million in 2009. See Note 24 regarding the distribution of PPL Energy Supply's membership interests in PPL Global to PPL Energy Funding on January 31, 2011.

**PPL Electric Utilities Corporation**

There is no established public trading market for PPL Electric's common stock, as PPL owns 100% of the outstanding common shares. Dividends paid to PPL on those common shares are determined by PPL Electric's Board of Directors. PPL Electric paid common stock dividends to PPL of \$71 million in 2010 and \$274 million in 2009.

**ITEM 6. SELECTED FINANCIAL AND OPERATING DATA****PPL Energy Supply, LLC and PPL Electric Utilities Corporation**

Item 6 is omitted as PPL Energy Supply and PPL Electric meet the conditions set forth in General Instructions (I)(1)(a) and (b) of Form 10-K.

**ITEM 6. SELECTED FINANCIAL AND OPERATING DATA**

- (a) The earnings each year were affected by several items that management considers special. See "Results of Operations - Segment Results" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" for a description of special items in 2010, 2009 and 2008.
- (b) See "Item 1A. Risk Factors" and Note 15 to the Financial Statements for a discussion of uncertainties that could affect PPL's future financial condition.
- (c) The year 2010 includes LKE's earnings and sales data for the two month period from acquisition through December 31, 2010 and all balance sheet accounts at December 31, 2010.
- (d) As of each respective year-end.
- (e) The year 2007 excludes amounts related to the natural gas distribution and propane businesses that had been classified as held for sale at December 31, 2007.
- (f) Computed using earnings and fixed charges of PPL and its subsidiaries. Fixed charges consist of interest on short- and long-term debt, amortization of debt discount, expense and premium - net, other interest charges, the estimated interest component of operating rentals and preferred securities distributions of subsidiaries. See Exhibit 12(a) for additional information.
- (g) Based on diluted EPS.

- (h) Based on year-end market prices.
- (i) The domestic trends for 2010 reflect the expiration of the PLR contract between PPL Energy Plus and PPL Electric as of December 31, 2009. See Note 16 for additional information.
- (j) All years include kWh associated with certain non-core generation facilities that have been classified as Discontinued Operations, the Long Island generation business that was sold in 2010 and PPL Maine's hydroelectric generation business that was sold in two separate transactions in 2009 and 2010.
- (k) Years 2007 and earlier include the deliveries associated with the Latin American businesses, until the date of their sale in 2007.

## PPL CORPORATION AND SUBSIDIARIES

### Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

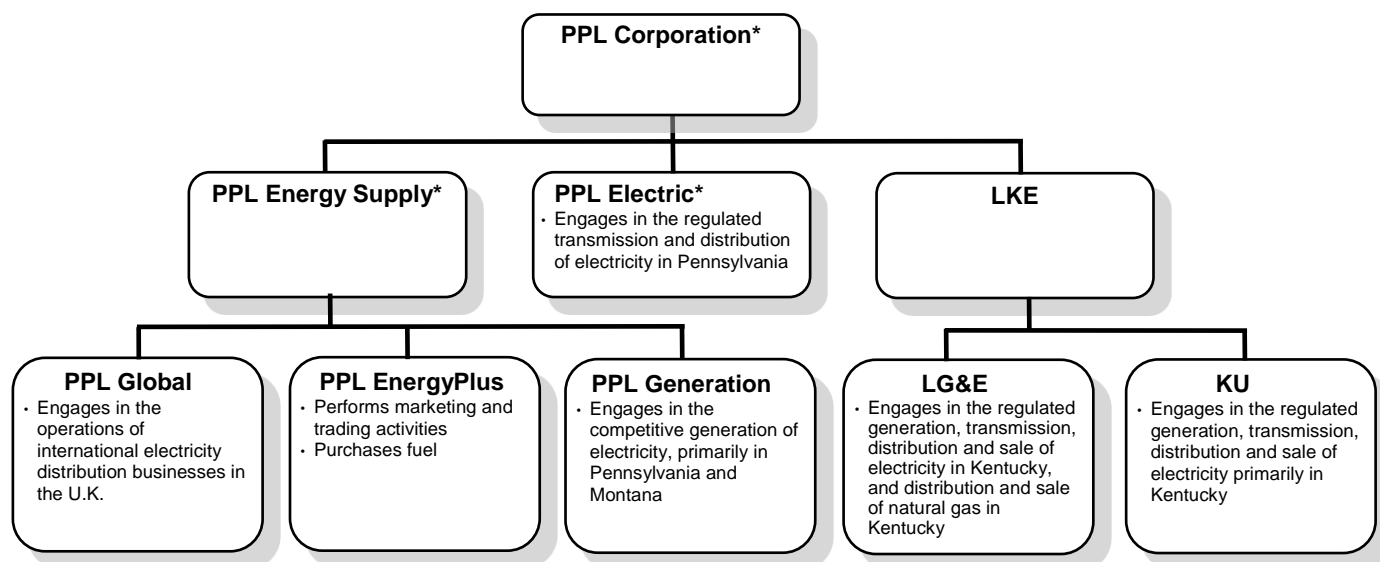

#### Overview

The information provided in this Item 7 should be read in conjunction with PPL's Consolidated Financial Statements and the accompanying Notes. Terms and abbreviations are explained in the glossary. Dollars are in millions unless otherwise noted.

PPL, headquartered in Allentown, PA, is an energy and utility holding company that was incorporated in 1994. Through subsidiaries, PPL generates electricity from power plants in the northeastern, northwestern and southeastern U.S., markets wholesale or retail energy primarily in northeastern and northwestern portions of the U.S., delivers electricity to customers in Pennsylvania, Kentucky, Virginia, Tennessee and the U.K. and delivers natural gas in Kentucky. On November 1, 2010, PPL acquired all of the limited liability company interests of E.ON U.S. LLC from a wholly owned subsidiary of E.ON AG. Upon completion of the acquisition, E.ON U.S. LLC was renamed LG&E and KU Energy LLC (LKE). LKE is engaged in regulated utility operations through its subsidiaries, KU and LG&E. PPL acquired LKE for approximately \$7.6 billion, including debt assumed through consolidation. See Note 10 to the Financial Statements for additional information on the acquisition. The acquisition of LKE substantially reapportions the mix of PPL's regulated and competitive businesses by increasing the regulated portion of its business, strengthens PPL's credit profile and enhances rate-regulated growth opportunities as the regulated businesses make investments to improve infrastructure and customer reliability. The increase in regulated assets provides earnings stability through regulated returns and the ability to recover costs of capital investments, in contrast to the competitive supply business where earnings and cash flows are subject to market conditions. In 2011, PPL projects that 50% of its net income will be provided by its regulated businesses and the remainder will be provided by its competitive supply businesses. As of December 31, 2010, PPL has:

- More than \$10 billion in projected annual revenues (up from \$8.5 billion recorded by PPL in 2010 including two months of LKE revenue).
- 5.3 million utility customers (including 1.3 million served by the Kentucky-based companies).
- Approximately 19,000 MW of generation (including 7,700 MW of regulated capacity in the Kentucky-based companies).
- Approximately 14,000 full-time employees (including about 3,100 in Kentucky).

As of December 31, 2010, PPL's principal subsidiaries are shown below (\* denotes a SEC registrant):

In January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding, to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements.

PPL's overall strategy is to achieve stable, long-term growth in its regulated electricity delivery businesses through efficient operations and strong customer and regulatory relations, and disciplined growth in energy supply margins while limiting volatility in both cash flows and earnings. More specifically, PPL's strategy for its regulated businesses is to own and operate these businesses at the most efficient cost while maintaining high quality customer service and reliability, as well as grow this part of the business. PPL's strategy for its competitive electricity generation and marketing businesses is to match energy supply with load, or customer demand, under contracts of varying lengths with creditworthy counterparties to capture profits while effectively managing exposure to energy and fuel price volatility, counterparty credit risk and operational risk.

To manage financing costs and access to credit markets, a key objective for PPL's business is to maintain a strong credit profile. PPL continually focuses on maintaining an appropriate capital structure and liquidity position. In addition, PPL has adopted financial and operational risk management programs that, among other things, are designed to monitor and manage its exposure to earnings and cash flow volatility related to changes in energy and fuel prices, interest rates, foreign currency exchange rates, counterparty credit quality and the operating performance of its generating units. See "Item 1A. Risk Factors" for more information concerning these and other material risks PPL faces in its businesses.

Following the November 1, 2010 acquisition of LKE, PPL is organized into four segments: Kentucky Regulated, International Regulated (formerly International Delivery), Pennsylvania Regulated (formerly Pennsylvania Delivery) and Supply. Other than PPL adding a Kentucky Regulated segment, there were no other changes to reportable segments except the renaming of segments and allocating interest expense related to the Equity Units to the Kentucky Regulated segment. Refer to "Item 1. Business - Background" for additional information on PPL's reportable segments.

"Management's Discussion and Analysis of Financial Condition and Results of Operations" provides information concerning PPL's performance in implementing the strategies and managing the risks and challenges mentioned above. Specifically:

- "Results of Operations" provides an overview of PPL's operating results in 2010, 2009 and 2008, including a review of earnings, with details of results by reportable segment. It also provides a brief outlook for 2011.
- "Financial Condition - Liquidity and Capital Resources" provides an analysis of PPL's liquidity position and credit profile, including its sources of cash (including bank credit facilities and sources of operating cash flow) and uses of cash (including contractual obligations and capital expenditure requirements) and the key risks and uncertainties that impact PPL's past and future liquidity position and financial condition. This subsection also includes rating agency actions on PPL's credit ratings.
- "Financial Condition - Risk Management - Energy Marketing & Trading and Other" provides an explanation of PPL's risk management programs relating to market risk and credit risk.
- "Application of Critical Accounting Policies" provides an overview of the accounting policies that are particularly important to the results of operations and financial condition of PPL and that require its management to make significant estimates, assumptions and other judgments.

See "Item 1. Business - Background - Segment Information - Pennsylvania Regulated Segment" for a discussion of PPL Electric's PLR obligations, PPL Electric's agreement to provide electricity as a PLR at "capped" rates through the end of 2009, and plans for default electricity supply procurement after 2009.

When comparing 2010 with 2009, certain line items on PPL's financial statements were impacted by the Customer Choice Act, Act 129 and other related issues. Overall, the expiration of generation rate caps and a long-term full requirements contract between PPL EnergyPlus and PPL Electric at the end of 2009 had a significant positive impact on PPL's results of operations, financial condition and cash flows during 2010.

The primary impact of the expiration of these generation rate caps and this contract is reflected in PPL's unregulated gross energy margins. See "Statement of Income Analysis" for an explanation of this non-GAAP financial measure. In 2010, PPL sold the majority of its generation supply to unaffiliated parties under various wholesale and retail contracts at prevailing market rates at the time the contracts were executed. In 2009, the majority of generation produced by PPL's generation plants was sold to PPL Electric's customers as PLR supply under predetermined capped rates.

Regarding PPL's Pennsylvania regulated electric delivery operations, the expiration of generation rate caps, the resulting competitive solicitations for power supply, the migration of customers to alternative suppliers, the Customer Choice Act and Act 129 had minimal impact on Pennsylvania gross delivery margins, as approved recovery mechanisms allow for cost recovery of associated expenses, including the cost of energy provided as a PLR. However, PPL Electric's 2010 Pennsylvania gross delivery margins were negatively impacted by the expiration of CTC recovery in December 2009. PPL Electric continues to remain the delivery provider for all customers in its service territory and charge a regulated rate for the service of delivering electricity. See "Statement of Income Analysis - Margins - Pennsylvania Gross Delivery Margins" for additional information.

See "Regulatory Issues - Enactment of Financial Reform Legislation" in Note 15 for information on the Dodd-Frank Act.

### Results of Operations

Tables analyzing changes in amounts between periods within "Segment Results" and "Statement of Income Analysis" are presented on a constant U.K. foreign currency exchange rate basis, where applicable, in order to isolate the impact of the change in the exchange rate on the item being explained. Results computed on a constant U.K. foreign currency exchange rate basis are calculated by translating current year results at the prior year weighted-average foreign currency exchange rate.

### Earnings

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Net Income Attributable to PPL Corporation	\$ 938	\$ 407	\$ 930
EPS - basic	\$ 2.17	\$ 1.08	\$ 2.48
EPS - diluted	\$ 2.17	\$ 1.08	\$ 2.47

The changes in Net Income Attributable to PPL Corporation from year to year were, in part, due to several special items that management considers significant. Details of these special items are provided within the review of each segment's earnings.

The "Statement of Income Analysis" explains the year-to-year changes in significant earnings components, including certain income statement line items, unregulated gross energy margins by region and Pennsylvania gross delivery margins by component. As a result of the November 1, 2010, acquisition, LKE's results for the two months ended December 31, 2010 are included in PPL's results with no comparable amounts for 2009. When discussing PPL's results of operations for 2010 compared with 2009, the results of LKE are isolated for purposes of comparability. LKE's results are shown separately within "Segment Results - Kentucky Regulated Segment." See Note 10 to the Financial Statements for additional information regarding the acquisition.

### Segment Results

Net Income Attributable to PPL Corporation by segment and for "Unallocated Costs" was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Kentucky Regulated	\$ 26		
International Regulated	261	\$ 243	\$ 290
Pennsylvania Regulated	115	124	161
Supply	612	40	479
Unallocated Costs (a)	(76)		

Total	<u>\$ 938</u>	<u>\$ 407</u>	<u>\$ 930</u>
-------	---------------	---------------	---------------

- (a) 2010 includes \$22 million, after tax, of certain third-party acquisition-related costs, including advisory, accounting, and legal fees associated with the acquisition of LKE that are recorded in "Other Income (Expense) – net" on the Statement of Income. 2010 also includes \$52 million, after tax, of Bridge Facility costs that are recorded in "Interest Expense" on the Statement of Income. These costs are considered special items by management. See Note 10 to the Financial Statements for additional information on the acquisition and related financing.

### Kentucky Regulated Segment

The Kentucky Regulated segment consists primarily of LKE's results from the operation of regulated electricity generation, transmission and distribution assets, primarily in Kentucky, as well as in Virginia and Tennessee. This segment also includes LKE's results from the regulated distribution and sale of natural gas in Kentucky.

The Kentucky Regulated segment Net Income Attributable to PPL Corporation for the two-month period from acquisition through December 31, 2010 was:

	<u>2010</u>
Operating revenues	
External	\$ 493
Total Operating revenues	<u>493</u>
Fuel and energy purchases	
External	207
Other operation and maintenance	139
Depreciation	49
Taxes, other than income	2
Total operating expenses	<u>397</u>
Other Income (Expense) - net	(1)
Interest Expense (a)	55
Income Taxes	16
Income from Discontinued Operations	2
Net Income Attributable to PPL Corporation	<u>\$ 26</u>

- (a) Includes interest expense allocated to the Kentucky Regulated segment of \$31 million related to the Equity Units. See Note 7 to the Financial Statements for additional information.

The following after-tax amounts, which management considers special items, impacted the Kentucky Regulated segment's earnings.

	<u>2010</u>
Energy-related economic activity, net (a)	\$ (1)
Other:	
Discontinued operations (Note 9)	2
Total	<u>\$ 1</u>

- (a) Represents net unrealized losses on contracts that economically hedge anticipated cash flows.

### *2011 Outlook*

Excluding special items, earnings in 2011 are expected to be generally driven by high-performing utilities in Kentucky, which are in a defined service area with a constructive regulatory environment and by the results of electric and natural gas base rate increases that became effective August 1, 2010. The Kentucky Regulated segment is expected to contribute approximately 20% of PPL's 2011 earnings.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings.

International Regulated Segment

The International Regulated segment primarily includes the electric distribution operations of WPD. See Note 9 to the Financial Statements for additional information on the sale of PPL's Latin American businesses in 2007. The International Regulated segment results in 2009 and 2008 reflect the classification of its Latin American businesses as Discontinued Operations.

International Regulated segment Net Income Attributable to PPL Corporation was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Utility revenues	\$ 727	\$ 684	\$ 824
Energy-related businesses	34	32	33
Total operating revenues	<u>761</u>	<u>716</u>	<u>857</u>
Other operation and maintenance	182	140	186
Depreciation	117	115	134
Taxes, other than income	52	57	66
Energy-related businesses	17	16	14
Total operating expenses	<u>368</u>	<u>328</u>	<u>400</u>
Other Income (Expense) - net	3	(11)	17
Interest Expense	135	87	144
Income Tax Expense		20	45
Income (Loss) from Discontinued Operations		(27)	5
Net Income Attributable to PPL Corporation	<u>\$ 261</u>	<u>\$ 243</u>	<u>\$ 290</u>

The after-tax changes in Net Income Attributable to PPL Corporation between these periods were due to the following factors.

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
U.K.		
Utility revenues	\$ 30	\$ 10
Other operation and maintenance	(34)	16
Other income (expense) - net	1	(7)
Depreciation	(2)	(4)
Interest expense	(36)	28
Income taxes	13	24
Foreign currency exchange rates	6	(69)
Other	5	(3)
Discontinued operations, excluding special item (Note 9)		(5)
U.S. income taxes	(32)	1
Other	7	(10)
Special items	60	(28)
Total	<u>\$ 18</u>	<u>\$ (47)</u>

- U.K. utility revenues increased in 2010 compared with 2009, primarily due to price increases in April 2010 and 2009, partially offset by lower regulatory recovery due to a revised estimate of network electricity losses.

U.K. utility revenues increased in 2009 compared with 2008, due to higher regulatory recovery primarily due to a revised estimate of network electricity losses and higher prices.

- U.K. other operation and maintenance increased in 2010 compared with 2009, primarily due to higher pension expense resulting from an increase in amortization of actuarial losses.

U.K. other operation and maintenance decreased in 2009 compared with 2008, primarily due to lower pension cost resulting from an increase in discount rates and lower inflation rates.

- U.K. interest expense increased in 2010 compared with 2009, primarily due to higher inflation rates on index-linked Senior Unsecured Notes and interest expense related to the March 2010 debt issuance.

U.K. interest expense decreased in 2009 compared with 2008, primarily due to lower inflation rates on index-linked Senior Unsecured Notes and lower debt balances.

- U.K. income taxes decreased in 2010 compared with 2009, primarily due to realized capital losses that offset a gain relating to a business activity sold in 1999, partially offset by favorable settlements of uncertain tax positions in 2009.

U.K. income taxes decreased in 2009 compared with 2008, primarily due to HMRC's determination related to the valuation of a business activity sold in 1999 and to the deductibility of foreign currency exchange losses, partially offset by the settlement of uncertain tax positions and a change in the tax law in 2008.

- Changes in foreign currency exchange rates positively impacted U.K. earnings for 2010 compared with 2009, and negatively impacted U.K. earnings for 2009 compared with 2008. The weighted-average exchange rates for the British pound sterling were approximately \$1.56 in 2010, \$1.53 in 2009 and \$1.91 in 2008.
- U.S. income taxes increased in 2010 compared with 2009, primarily due to changes in the taxable amount of planned U.K. cash repatriations.

The following after-tax amounts, which management considers special items, also impacted the International Regulated segment's earnings.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Foreign currency-related economic hedges (a)	\$ 1	\$ 1	
Sales of assets:			
Latin American businesses (Note 9)		(27)	
Asset impairments		(1)	
Workforce reduction (Note 13)		(2)	\$ (1)
Other:			
Change in U.K. tax rate (Note 5)	18		
U.S. Tax Court ruling (b)	12		
Total	<u>\$ 31</u>	<u>\$ (29)</u>	<u>\$ (1)</u>

- (a) Represents unrealized gains on contracts that economically hedge anticipated earnings denominated in British pounds sterling.  
(b) Represents the net tax benefit recorded as a result of the U.S. Tax Court ruling that the U.K. Windfall Profits Tax is creditable for U.S. tax purposes, excluding the reversal of accrued interest. See Notes 5 and 15 to the Financial Statements for additional information.

### 2011 Outlook

Excluding special items, earnings in 2011 are projected to be comparable with 2010 earnings as a result of higher electric delivery revenue and a more favorable currency exchange rate offset by higher income taxes, higher depreciation and higher financing costs.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings.

### Pennsylvania Regulated Segment

The Pennsylvania Regulated segment includes the regulated electric delivery operations of PPL Electric. In October 2008, PPL sold its natural gas distribution and propane businesses. See Note 9 to the Financial Statements for additional information.

The Pennsylvania Regulated segment results in 2008 reflect the classification of PPL's natural gas distribution and propane businesses as Discontinued Operations.

Pennsylvania Regulated segment Net Income Attributable to PPL Corporation was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating revenues			
External	\$ 2,448	\$ 3,218	\$ 3,290
Intersegment	7	74	111

Total operating revenues	2,455	3,292	3,401
Energy purchases			
External	1,075	114	163
Intersegment	320	1,806	1,826
Other operation and maintenance	502	417	410
Amortization of recoverable transition costs		304	293
Depreciation	136	128	131
Taxes, other than income	138	194	203
Total operating expenses	2,171	2,963	3,026
Other Income (Expense) - net	7	10	14
Interest Expense	99	118	111
Income Taxes	57	79	102
Income from Discontinued Operations			3
Net Income	135	142	179
Net Income Attributable to Noncontrolling Interests (Note 6)	20	18	18
Net Income Attributable to PPL Corporation	\$ 115	\$ 124	\$ 161

The after-tax changes in Net Income Attributable to PPL Corporation between these periods were due to the following factors.

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Pennsylvania gross delivery margins	\$ 2	\$ (18)
Other operation and maintenance	(29)	3
Interest expense	11	(12)
Income taxes and other	(2)	2
Discontinued Operations, excluding special item (Note 9)		(9)
Special items	9	(3)
Total	\$ (9)	\$ (37)

- See "Pennsylvania Gross Delivery Margins by Component" in the "Statement of Income Analysis" section for an explanation of margins generated by the regulated electric delivery operations.
- Other operation and maintenance increased in 2010 compared with 2009, primarily due to higher payroll-related costs and higher contractor costs related to vegetation management.
- Interest expense decreased in 2010 compared with 2009, primarily due to lower average debt balances in 2010 compared with 2009 and the interest related to the over-recovery of recoverable transition costs.

Interest expense increased in 2009 compared with 2008, primarily due to \$400 million of debt issuances in October 2008 that prefunded a portion of August 2009 debt maturities.

The following after-tax amounts, which management considers special items, also impacted earnings.

	<u>2009</u>	<u>2008</u>
Sales of assets:		
Gas & propane businesses (Note 9)		\$ (6)
Asset impairments	\$ (1)	
Workforce reduction (Note 13)	(5)	
Other:		
Change in tax accounting method related to repairs (Note 5)	(3)	
Total	\$ (9)	\$ (6)

### 2011 Outlook

Excluding special items, higher earnings are projected in 2011 compared with 2010, due to higher distribution revenues resulting from an approved distribution base rate increase effective January 1, 2011.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings. See "Item 1. Business - Segment Information - Pennsylvania Regulated Segment" for additional information on the 2010 rate case.

### Supply Segment

The Supply segment primarily consists of the energy marketing and trading activities, as well as the competitive generation and development operations of PPL Energy Supply. In September 2010, certain PPL Energy Supply subsidiaries signed definitive agreements to sell their entire ownership interests in certain non-core generation facilities. The sale is expected to close in the first quarter of 2011, subject to the receipt of necessary regulatory approvals and third-party consents. The operating results of these facilities have been classified as Discontinued Operations. In 2010 and 2009, PPL Energy Supply subsidiaries also completed the sale of several businesses, which have been classified as Discontinued Operations. See Note 9 to the Financial Statements for additional information.

Supply segment Net Income Attributable to PPL Corporation was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Energy revenues			
External (a)	\$ 4,444	\$ 3,124	\$ 3,224
Intersegment	320	1,806	1,826
Energy-related businesses	375	391	486
Total operating revenues	<u>5,139</u>	<u>5,321</u>	<u>5,536</u>
Fuel and energy purchases			
External (a)	2,440	3,586	3,071
Intersegment	3	70	108
Other operation and maintenance	934	865	821
Depreciation	254	212	179
Taxes, other than income	46	29	19
Energy-related businesses	366	380	467
Total operating expenses	<u>4,043</u>	<u>5,142</u>	<u>4,665</u>
Other Income (Expense) - net	(9)	48	22
Other-Than-Temporary Impairments	3	18	36
Interest Expense	224	182	192
Income Taxes	228	6	249
Income (Loss) from Discontinued Operations	(19)	20	65
Net Income	<u>613</u>	<u>41</u>	<u>481</u>
Net Income Attributable to Noncontrolling Interests (Note 22)	1	1	2
Net Income Attributable to PPL Corporation	<u>\$ 612</u>	<u>\$ 40</u>	<u>\$ 479</u>

(a) Includes impact from energy-related economic activity. See "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements for additional information.

The after-tax changes in Net Income Attributable to PPL Corporation between these periods were due to the following factors.

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Eastern U.S. non-trading margins	\$ 607	\$ (3)
Western U.S. non-trading margins	9	20
Net energy trading margins	(9)	81
Other operation and maintenance	(32)	(33)
Depreciation	(25)	(19)
Income taxes and other	94	(7)
Discontinued operations, excluding special items (Note 9)	13	(9)
Special items	(85)	(469)
Total	<u>\$ 572</u>	<u>\$ (439)</u>

- See "Unregulated Gross Energy Margins By Region" in the "Statement of Income Analysis" section for an explanation of non-trading margins and net energy trading margins.

- Other operation and maintenance increased in 2010 compared with 2009, primarily due to increased payroll-related costs, higher contractor-related costs and other costs at Susquehanna. Also contributing to the increase were higher support group costs, higher expenses at western fossil/hydro plants due to the Corette overhaul and lease expense related to the use of the streambeds in Montana. See Note 15 to the Financial Statements for additional information on continuing litigation regarding the streambeds in Montana.

Other operation and maintenance increased in 2009 compared with 2008, primarily due to increased payroll-related costs, higher contractor-related costs and other costs at generation plants.

- Depreciation increased in 2010 compared with 2009, primarily due to the Brunner Island environmental equipment that was placed in service in 2009 and early 2010.

Depreciation increased in 2009 compared with 2008, primarily due to the scrubbers at Brunner Island and Montour and portions of the Susquehanna uprate projects that were placed in service in 2008 and 2009.

- Income taxes decreased in 2010 compared with 2009, primarily due to a release of valuation allowances related to deferred tax assets for Pennsylvania net operating loss carryforwards, investment tax credits at Holtwood and Rainbow, a release of tax reserves in 2010, and a tax benefit from the manufacturing deduction.

The following after-tax amounts, which management considers special items, also impacted the Supply segment's earnings.

	2010	2009	2008
Adjusted energy-related economic activity, net (a)	\$ (121)	\$ (225)	\$ 251
Sales of assets:			
Maine hydroelectric generation business (Note 9)	15	22	
Sundance indemnification	1		
Long Island generation business (b)		(33)	
Interest in Wyman Unit 4 (Note 9)		(4)	
Impairments:			
Impacts from emission allowances (c)	(10)	(19)	(25)
Adjustments - NDT investments (d)			(17)
Other asset impairments (e)		(4)	(15)
Workforce reduction (Note 13)		(6)	(1)
LKE acquisition-related costs:			
Monetization of certain full-requirement sales contracts (f)	(125)		
Anticipated sale of certain non-core generation facilities (g)	(64)		
Discontinued cash flow hedges and ineffectiveness (Note 19)	(28)		
Reduction of credit facility (Note 7)	(6)		
Other:			
Montana hydroelectric litigation (Note 15)	(34)	(3)	
Health Care Reform - tax impact (Note 13)	(8)		
Montana basin seepage litigation (Note 15)	2		(5)
Change in tax accounting method related to repairs (Note 5)		(21)	
Synfuel tax adjustment (Note 15)			(13)
Off-site remediation of ash basin leak (Note 15)			1
Total	<u>\$ (378)</u>	<u>\$ (293)</u>	<u>\$ 176</u>

(a) See "Reconciliation of Economic Activity" below.

(b) Consists primarily of the initial impairment charge recorded in June 2009 when this business was classified as held for sale. See Note 9 to the Financial Statements for additional information.

(c) 2010 and 2009 include impairments of sulfur dioxide emission allowances. 2009 also includes a pre-tax gain of \$4 million related to the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options. See Note 18 to the Financial Statements for additional information.

2008 consists of charges related to annual nitrogen oxide allowances and put options. See Note 18 to the Financial Statements for additional information.

(d) Represents other-than-temporary impairment charges on securities, including reversals of previous impairments when securities previously impaired were sold.

(e) 2008 primarily consists of a pre-tax charge of \$22 million related to the Holtwood hydroelectric expansion project. See Note 8 to the Financial Statements for additional information.

(f) See "Components of Monetization of Certain Full-Requirement Sales Contracts" below.

- (g) Consists primarily of an impairment charge recorded when these facilities were classified as held for sale, and allocated goodwill that was written off. See Note 9 to the Financial Statements for additional information.

### Reconciliation of Economic Activity

The following table reconciles unrealized pre-tax gains (losses) from the table within "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements to the special item identified as "Adjusted energy-related economic activity, net."

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Revenues			
Unregulated retail electric and gas	\$ 1	\$ 6	\$ 5
Wholesale energy marketing	(805)	(229)	1,056
Operating Expenses			
Fuel	29	49	(79)
Energy Purchases	286	(155)	(553)
Energy-related economic activity (a)	(489)	(329)	429
Option premiums (b)	32	(54)	
Adjusted energy-related economic activity	(457)	(383)	429
Less: Unrealized economic activity associated with the monetization of certain full-requirement sales contracts (c)	(251)		
Adjusted energy-related economic activity, net, pre-tax	<u>\$ (206)</u>	<u>\$ (383)</u>	<u>\$ 429</u>
Adjusted energy-related economic activity, net, after-tax	<u>\$ (121)</u>	<u>\$ (225)</u>	<u>\$ 251</u>

- (a) The components of this item are from the table within "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements.
- (b) Adjustment for the net deferral and amortization of option premiums over the delivery period of the item that was hedged or upon realization. After-tax amount for 2010 was \$19 million and for 2009 was \$31 million.
- (c) See "Components of Monetization of Certain Full-Requirement Sales Contracts" below.

### Components of Monetization of Certain Full-Requirement Sales Contracts

The following table provides the components of the "Monetization of Certain Full-Requirement Sales Contracts" special item.

	<u>2010</u>
Full-requirement sales contracts monetized (a)	\$ (68)
Economic activity related to the full-requirement sales contracts monetized	(146)
Monetization of certain full-requirement sales contracts, pre-tax (b)	<u>\$ (214)</u>
Monetization of certain full-requirement sales contracts, after-tax	<u>\$ (125)</u>

- (a) See "Commodity Price Risk (Non-trading) – Monetization of Certain Full-Requirement Sales Contracts" in Note 19 to the Financial Statements for additional information.
- (b) Includes unrealized losses of \$251 million from the "Reconciliation of Economic Activity" table above. These amounts are reflected in "Wholesale energy marketing - Unrealized economic activity" and "Energy purchases - Unrealized economic activity" on the Statement of Income. Also includes net realized gains of \$37 million, which are reflected in "Wholesale energy marketing - Realized" and "Energy purchases - Realized" on the Statement of Income. This economic activity will continue to be realized through May 2013.

### 2011 Outlook

Excluding special items, lower earnings are projected from the Supply segment in 2011 compared with 2010 as a result of lower energy margins driven by lower energy and capacity prices in the East, higher average fuel costs, and higher operation and maintenance expense.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings.

**Statement of Income Analysis --****Margins**Non-GAAP Financial Measures

The following discussion includes financial information prepared in accordance with GAAP, as well as two non-GAAP financial measures: "Unregulated Gross Energy Margins" and "Pennsylvania Gross Delivery Margins." PPL believes that these measures provide additional criteria to make investment decisions. These performance measures are used, in conjunction with other information, internally by senior management and the Board of Directors to manage its operations. PPL's management also uses "Unregulated Gross Energy Margins" in measuring certain corporate performance goals used in determining variable compensation.

- "Unregulated Gross Energy Margins" is a single financial performance measure of PPL's competitive energy non-trading and trading activities. In calculating this measure, the Supply segment's energy revenues are offset by the cost of fuel and energy purchases, and adjusted for other related items. This performance measure is relevant to PPL due to the volatility in the individual revenue and expense lines on the Statements of Income that comprise "Unregulated Gross Energy Margins." This volatility stems from a number of factors, including the required netting of certain transactions with ISOs and significant swings in unrealized gains and losses. Such factors could result in gains or losses being recorded in either "Wholesale energy marketing" or "Energy purchases" on the Statements of Income. This performance measure includes PLR revenues from energy sales to PPL Electric by PPL EnergyPlus. In addition, PPL excludes from "Unregulated Gross Energy Margins" the Supply segment's energy-related economic activity, which includes the changes in fair value of positions used to economically hedge a portion of the economic value of PPL's competitive generation assets, full-requirement and retail activities. This economic value is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power) prior to the delivery period that was hedged. Also included in this energy-related economic activity is the ineffective portion of qualifying cash flow hedges, net losses on the monetization of certain full-requirement sales contracts and premium amortization associated with options. This economic activity is deferred, with the exception of the net losses on the full-requirement sales contracts that were monetized, and included in unregulated gross energy margins over the delivery period that was hedged or upon realization.
- "Pennsylvania Gross Delivery Margins" is a single financial performance measure of PPL's Pennsylvania regulated electric delivery operations, which includes transmission and distribution activities, including PLR supply. In calculating this measure, Pennsylvania regulated utility revenues and expenses associated with approved recovery mechanisms, including energy provided as a PLR, are offset. These mechanisms allow for full cost recovery of certain expenses; therefore, certain expenses and revenues offset with minimal impact on earnings. As a result, this measure represents the net revenues from PPL's Pennsylvania regulated electric delivery operations.

These measures are not intended to replace "Operating Income," which is determined in accordance with GAAP, as an indicator of overall operating performance. Other companies may use different measures to analyze and to report on the results of their operations.

Unregulated Gross Energy Margins

The following table reconciles "Operating Income" to "Unregulated Gross Energy Margins" as defined by PPL.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Income (a)	\$ 1,866	\$ 896	\$ 1,703
Adjustments:			
Utility (a)	(3,668)	(3,902)	(4,114)
Energy-related businesses, net (b)	(26)	(27)	(38)
Other operation and maintenance (a)	1,756	1,418	1,414
Amortization of recoverable transition costs (a)	304	304	293
Depreciation (a)	556	455	444
Taxes, other than income (a)	238	280	288

Revenue adjustments (c)	920	2,217	958
Expense adjustments (c)	1,128	90	616
Unregulated gross energy margins	<u>\$ 2,770</u>	<u>\$ 1,731</u>	<u>\$ 1,564</u>

- (a) As reported on the Statements of Income.  
(b) Amount represents the net of "Energy-related businesses" revenue and expense as reported on the Statements of Income.  
(c) The components of these adjustments are detailed in the table below.

The following table provides the income statement line items and other adjustments that comprise unregulated gross energy margins.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Revenue						
Unregulated retail electric and gas (a)	\$ 415	\$ 152	\$ 263	\$ 152	\$ 151	\$ 1
Wholesale energy marketing (a)	4,027	2,955	1,072	2,955	3,194	(239)
Net energy trading margins (a)	2	17	(15)	17	(121)	138
Revenue adjustments (b)						
Exclude the impact from the Supply segment's energy-related economic activity (c)	483	274	209	274	(1,061)	1,335
Include PLR revenue from energy supplied to PPL Electric by PPL EnergyPlus (d)	320	1,806	(1,486)	1,806	1,826	(20)
Include gains from sale of emission allowances/RECs (e)		2	(2)	2	6	(4)
Include revenue from Supply segment discontinued operations (f)	117	135	(18)	135	187	(52)
Total revenue adjustments	<u>920</u>	<u>2,217</u>	<u>(1,297)</u>	<u>2,217</u>	<u>958</u>	<u>1,259</u>
	<u>5,364</u>	<u>5,341</u>	<u>23</u>	<u>5,341</u>	<u>4,182</u>	<u>1,159</u>
Expense						
Fuel (a)	1,235	920	315	920	1,057	(137)
Energy purchases (a)	2,487	2,780	(293)	2,780	2,177	603
Expense adjustments (b)						
Exclude fuel and energy purchases from the Kentucky Regulated segment	(207)		(207)			
Exclude the impact from the Supply segment's energy-related economic activity (g)	63	(109)	172	(109)	(632)	523
Exclude external PLR energy purchases (h)	(1,068)	(40)	(1,028)	(40)	(52)	12
Include expenses from Supply segment discontinued operations (i)	33	22	11	22	37	(15)
Include ancillary charges (e)	24	19	5	19	15	4
Include gross receipts tax (j)	15		15			
Other	12	18	(6)	18	16	2
Total expense adjustments	<u>(1,128)</u>	<u>(90)</u>	<u>(1,038)</u>	<u>(90)</u>	<u>(616)</u>	<u>526</u>
	<u>2,594</u>	<u>3,610</u>	<u>(1,016)</u>	<u>3,610</u>	<u>2,618</u>	<u>992</u>
Unregulated gross energy margins	<u>\$ 2,770</u>	<u>\$ 1,731</u>	<u>\$ 1,039</u>	<u>\$ 1,731</u>	<u>\$ 1,564</u>	<u>\$ 167</u>

- (a) As reported on the Statements of Income.  
(b) To include/exclude the impact of any revenues and expenses consistent with the way management reviews unregulated gross energy margins internally.  
(c) See "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements for additional information. In addition, 2010 and 2009 includes a pre-tax gain of \$28 million and a loss of \$51 million related to the amortization of option premiums, and in 2010 a

- realized gain of \$293 million related to the monetization of certain full-requirement sales contracts. These amounts are reflected in "Wholesale energy marketing – Realized" on the Statements of Income.
- (d) Included in "Utility" on the Statements of Income.
- (e) Included in "Other operation and maintenance" on the Statements of Income.
- (f) Represents the operating revenues of the Supply segment businesses classified as discontinued operations. See Note 9 to the Financial Statements for additional information.
- (g) See "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements for additional information. In addition, 2010 and 2009 includes a pre-tax gain of \$4 million and a loss of \$3 million related to the amortization of option premiums, and in 2010 a realized loss of \$256 million related to the monetization of certain full-requirement sales contracts. These amounts are reflected in "Energy purchases – Realized" on the Statements of Income.
- (h) Included in "Energy purchases" on the Statements of Income.
- (i) Represents fuel costs and energy purchases associated with the anticipated sale of certain non-core generation facilities that are classified as discontinued operations. See Note 9 to the Financial Statements for additional information.
- (j) Included in "Taxes, other than income" on the Statement of Income.

### Unregulated Gross Energy Margins By Region

Unregulated gross energy margins are generated through non-trading and trading activities. The non-trading energy business is managed on a geographic basis that is aligned with its generation assets.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Non-trading:						
Eastern U.S.	\$ 2,429	\$ 1,391	\$ 1,038	\$ 1,391	\$ 1,396	\$ (5)
Western U.S.	339	323	16	323	289	34
Net energy trading	<u>2</u>	<u>17</u>	<u>(15)</u>	<u>17</u>	<u>(121)</u>	<u>138</u>
Unregulated gross energy margins	<u>\$ 2,770</u>	<u>\$ 1,731</u>	<u>\$ 1,039</u>	<u>\$ 1,731</u>	<u>\$ 1,564</u>	<u>\$ 167</u>

#### *Eastern U.S.*

Eastern U.S. non-trading margins were higher in 2010 compared with 2009, primarily due to significantly higher pricing in 2010 for eastern baseload generation compared with prices realized under the PLR contract with PPL Electric that expired at the end of 2009. Partially offsetting the increase were lower realized margins from full-requirement sales contracts due to lower customer demand and customer migration.

Eastern U.S. non-trading margins were lower in 2009 compared with 2008, primarily due to lower margins on full-requirement sales contracts resulting from mild weather, decreased demand, and customer migration. Also contributing to the decrease were higher average baseload generation fuel costs, primarily due to higher coal prices. Partially offsetting these lower margins were net gains resulting from the settlement of economic positions associated with rebalancing portfolios to better align them with current strategies, higher capacity revenue, higher baseload generation output due to unplanned major outages in 2008, and an increase in the PLR sales prices in accordance with the PUC Final Order.

#### *Western U.S.*

Western U.S. non-trading margins were higher in 2010 compared with 2009, primarily due to higher average prices, partially offset by lower volumes.

Western U.S. non-trading margins were higher in 2009 compared with 2008, primarily due to higher wholesale volumes and increased generation from the hydroelectric units.

#### *Net Energy Trading*

Net energy trading margins decreased in 2010 compared with 2009, consisting of lower trading margins related to power and gas, partially offset by higher trading margins related to FTRs.

Net energy trading margins increased in 2009 compared with 2008, primarily due to increased margins in the power, gas and oil trading positions resulting from unrealized trading losses in 2008 due to a dramatic decline in energy prices and a severe contraction of liquidity in the wholesale power markets.

### Pennsylvania Gross Delivery Margins

The following table reconciles "Operating Income" to "Pennsylvania Gross Delivery Margins" as defined by PPL.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Income (a)	\$ 1,866	\$ 896	\$ 1,703
Adjustments:			
Unregulated retail electric and gas (a)	(415)	(152)	(151)
Wholesale energy marketing (a)	(4,027)	(2,955)	(3,194)
Net energy trading margins (a)	(2)	(17)	121
Energy-related businesses, net (b)	(26)	(27)	(38)
Fuel (a)	1,235	920	1,057
Energy purchases (a)	2,487	2,780	2,177
Other operation and maintenance (a)	1,756	1,418	1,414
Depreciation (a)	556	455	444
Taxes, other than income (a)	238	280	288
Revenue adjustments (c)	(1,540)	(2,490)	(2,650)
Expense adjustments (c)	(1,273)	(256)	(288)
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 883</u>

- (a) As reported on the Statements of Income.  
(b) Amount represents the net of "Energy-related businesses" revenue and expense as reported on the Statements of Income.  
(c) The components of these adjustments are detailed in the table below.

The following table provides the income statement line items and other adjustments that comprise Pennsylvania gross delivery margins.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Revenue						
Utility (a)	\$ 3,668	\$ 3,902	\$ (234)	\$ 3,902	\$ 4,114	\$ (212)
Revenue adjustments (b)						
Exclude revenue from the Kentucky Regulated segment (c)	(493)		(493)			
Exclude WPD utility revenue (c)	(727)	(684)	(43)	(684)	(824)	140
Exclude PLR revenue from energy supplied to PPL Electric by PPL EnergyPlus (c)	(320)	(1,806)	1,486	(1,806)	(1,826)	20
Total revenue adjustments	<u>(1,540)</u>	<u>(2,490)</u>	<u>950</u>	<u>(2,490)</u>	<u>(2,650)</u>	<u>160</u>
	<u>2,128</u>	<u>1,412</u>	<u>716</u>	<u>1,412</u>	<u>1,464</u>	<u>(52)</u>
Expense						
Amortization of recoverable transition costs (a)		304	(304)	304	293	11
Expense adjustments (b)						
Include external PLR energy purchases (d)	1,068	40	1,028	40	52	(12)
Include gross receipts tax (e)	129	186	(57)	186	198	(12)
Include Act 129 (f)	54		54			
Other	22	30	(8)	30	38	(8)
Total expense adjustments	<u>1,273</u>	<u>256</u>	<u>1,017</u>	<u>256</u>	<u>288</u>	<u>(32)</u>
	<u>1,273</u>	<u>560</u>	<u>713</u>	<u>560</u>	<u>581</u>	<u>(21)</u>
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 3</u>	<u>\$ 852</u>	<u>\$ 883</u>	<u>\$ (31)</u>

- (a) As reported on the Statements of Income.  
(b) To include/exclude the impact of any revenues and expenses consistent with the way management reviews Pennsylvania gross delivery margins internally.  
(c) Included in "Utility" on the Statements of Income.  
(d) Included in "Energy purchases" on the Statements of Income. Excludes NUG purchases, the sales of which are not included in "Utility" revenue.  
(e) Included in "Taxes, other than income" on the Statements of Income.  
(f) Included in "Other operation and maintenance" on the Statements of Income.

### Pennsylvania Gross Delivery Margins by Component

Pennsylvania gross delivery margins are generated through domestic regulated electric distribution activities, including PLR supply, and transmission activities.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Distribution	\$ 679	\$ 702	\$ (23)	\$ 702	\$ 731	\$ (29)
Transmission	176	150	26	150	152	(2)
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 3</u>	<u>\$ 852</u>	<u>\$ 883</u>	<u>\$ (31)</u>

### *Distribution*

The decrease in 2010 compared with 2009 was primarily due to margins realized in 2009 related to the collection of CTC, which ended in December 2009, partially offset by favorable recovery mechanisms for certain energy related costs.

The decrease in 2009 compared with 2008 was primarily due to lower CTC/ITC margins in 2009, ITC collections ended in 2008. Lower margins were also attributable to unfavorable economic conditions, including industrial customers scaling back on production. In addition, weather had an unfavorable impact on sales volumes, offset by favorable price increases.

### *Transmission*

The increase in 2010 compared with 2009 was primarily due to increased investment in rate base, an increase in the cost of capital due to an increase in equity and the recovery of additional costs through FERC formula-based rates.

## Utility Revenues

The changes in utility revenues were attributable to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Domestic:		
PPL Electric retail electric revenue (a)	\$ (770)	\$ (72)
LKE	493	
U.K.:		
Electric delivery revenue	41	14
Foreign currency exchange rates	2	(154)
Total	<u>\$ (234)</u>	<u>\$ (212)</u>

(a) See "Pennsylvania Gross Delivery Margins" and "Pennsylvania Gross Delivery Margins by Component" above.

U.K. electric delivery revenues increased in 2010 compared with 2009, primarily due to price increases in April 2010 and 2009, partially offset by lower regulatory recovery due to a revised estimate of network electricity losses.

U.K. electric delivery revenues increased in 2009 compared with 2008, primarily due to price increases in April 2009 and 2008, increased regulatory recovery due to a revised estimate of network electricity losses, and favorable changes in customer mix. These increases were partially offset by lower volumes due to unfavorable economic conditions, including industrial customers scaling back on production and a decrease in engineering and metering services performed for third parties.

## Energy-Related Businesses

The changes in contributions from energy-related businesses were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Domestic Mechanicals (a)	\$ (7)	\$ (7)
WPD (b)	2	(4)

Other	4	
Total	<u>\$ (1)</u>	<u>\$ (11)</u>

- (a) Primarily attributable to a decline in construction activity caused by the slowdown in the economy.
- (b) Changes in contributions from U.K. energy-related businesses were primarily due to increases in remote metering business activity in 2010 and decreases related to changes in foreign currency exchange rates in 2009.

### Other Operation and Maintenance

The changes in other operation and maintenance expenses were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
LKE	\$ 139	
Act 129 costs incurred (a)	54	
Montana hydroelectric litigation (Note 15)	48	\$ 8
Defined benefit costs - U.K. (Note 13)	32	(16)
Other costs at Susquehanna nuclear plant	23	14
Vegetation management costs (b)	13	(5)
Payroll-related costs - PPL Electric	13	3
Outage costs at Susquehanna nuclear plant	11	
Other costs at fossil/hydroelectric plants	2	17
Outage costs at fossil/hydroelectric plants		23
Workforce reductions (Note 13)	(22)	18
Impacts from emission allowances (c)	(16)	(9)
Defined benefit costs - U.S. (Note 13)	(3)	18
U.K. foreign currency exchange rates	(1)	(24)
Impairment of cancelled generation expansion project in 2008 (Note 8)		(22)
Montana basin seepage litigation (Note 15)		(8)
Other - Domestic	31	(7)
Other - U.K.	14	(6)
Total	<u>\$ 338</u>	<u>\$ 4</u>

- (a) Relates to costs associated with a PUC-approved energy efficiency and conservation plan. These costs are recovered in customer rates. See "Regulatory Issues - Pennsylvania Activities" in Note 15 to the Financial Statements for additional information on this plan. These costs are included in "Pennsylvania Gross Delivery Margins" above.
- (b) In 2010, PPL Electric increased its vegetation management around its 230- and 500-kV major transmission lines in response to federal reliability requirements for transmission vegetation management. See "Regulatory Issues - Energy Policy Act of 2005 - Reliability Standards" in Note 15 to the Financial Statements for additional information.
- (c) For the period 2010 compared to 2009, \$21 million relates to lower impairment charges of sulfur dioxide emission allowances. See Note 18 to the Financial Statements for additional information. Partially offsetting the decrease was a \$5 million increase in the charge for the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options.

For the period 2009 compared to 2008, \$33 million relates to lower impairment charges of nitrogen oxide allowances partially offset by \$37 million of higher impairment charges of sulfur dioxide allowances. See Note 18 to the Financial Statements for additional information. Also contributing to the difference was a \$13 million decrease in the charge for the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options.

### Depreciation

The changes in depreciation expense were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Additions to PP&E (a)	\$ 52	\$ 43
LKE	49	
U.K. foreign currency exchange rates		(25)
Other		(7)
Total	<u>\$ 101</u>	<u>\$ 11</u>

- (a) Additions included Susquehanna generation uprates and the completion of Brunner Island environmental projects in 2008 through 2010 as well as the Montour scrubber project in 2008.

**Taxes, Other Than Income**

The changes in taxes, other than income were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Pennsylvania gross receipts tax (a)	\$ (42)	\$ (12)
U.K. foreign currency exchange rates		(12)
Domestic property tax expense (b)	1	10
Domestic sales and use tax	2	4
LKE	2	
Other (c)	(5)	2
Total	<u>\$ (42)</u>	<u>\$ (8)</u>

- (a) The decrease in 2010 compared with 2009 was primarily due to a decrease in electricity revenue as customers chose alternative suppliers in 2010. This tax is included in "Unregulated Gross Energy Margins" and "Pennsylvania Gross Delivery Margins" above. The decrease in 2009 compared with 2008 was primarily due to a decrease in the tax rate in 2009.
- (b) The increase in 2009 compared with 2008 was primarily due to a \$7 million property tax credit recorded by PPL Montana in 2008.
- (c) The decrease in 2010 compared with 2009 primarily relates to lower WPD real estate tax expense due to reductions in tax rates.

**Other Income (Expense) - net**

See Note 17 to the Financial Statements for details.

**Other-Than-Temporary Impairments**

Other-than-temporary impairments decreased by \$15 million in 2010 compared with 2009 and by \$18 million in 2009 compared with 2008. The decrease for both periods was primarily due to stronger returns on NDT investments caused by improved market conditions within the financial markets.

**Interest Expense**

The changes in interest expense were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Bridge Facility costs related to the acquisition of LKE (Notes 7 and 10)	\$ 80	
PPL Capital Funding Junior Subordinated Notes (a)	27	
Inflation adjustment on U.K. Index-linked Senior Unsecured Notes	23	\$ (29)
LKE (Note 7)	20	
Hedging activities	15	(30)
Repayment of transition bonds		(13)
Capitalized interest	14	13
Amortization of debt issuance costs	13	3
Montana hydroelectric litigation (Note 15)	10	
Other long-term debt interest expense	6	2
Short-term debt interest expense	(1)	6
U.K. foreign currency exchange rates	(3)	(17)
Other	2	5
Total	<u>\$ 206</u>	<u>\$ (60)</u>

- (a) Interest related to the June 2010 issuance to support the LKE acquisition. See Notes 7 and 10 for additional information.

**Income Taxes**

The changes in income taxes were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Higher (lower) pre-tax book income	\$ 258	\$ (287)
State valuation allowance adjustments	(52)	(13)
Federal income tax credits	(10)	(17)

Domestic manufacturing deduction	(8)	13
Federal and state tax reserve adjustments	(55)	(11)
Federal and state tax return adjustments	(25)	23
U.S. income tax on foreign earnings net of foreign tax credit	50	5
U.K. Finance Act adjustments	(18)	8
U.K. capital loss benefit		(46)
Foreign tax reserve adjustments	(17)	12
Foreign tax return adjustments		17
Health Care Reform	8	
LKE	27	
Other		5
Total	\$ 158	\$ (291)

See Note 5 to the Financial Statements for additional information on income taxes.

### Discontinued Operations

See Note 9 to the Financial Statements for information related to various 2010 and 2009 sales, including the anticipated sale of certain non-core generation facilities expected to occur in the first quarter of 2011.

## Financial Condition

### Liquidity and Capital Resources

PPL expects to continue to have adequate liquidity available through operating cash flows, cash and cash equivalents and its credit facilities. Additionally, subject to market conditions, PPL currently plans to access capital markets in 2011.

PPL's cash flows from operations and access to cost-effective bank and capital markets are subject to risks and uncertainties including, but not limited to:

- changes in market prices for electricity;
- changes in commodity prices that may increase the cost of producing power or decrease the amount PPL receives from selling power;
- operational and credit risks associated with selling and marketing products in the wholesale power markets;
- potential ineffectiveness of the trading, marketing and risk management policy and programs used to mitigate PPL's risk exposure to adverse electricity and fuel prices, interest rates, foreign currency exchange rates and counterparty credit;
- unusual or extreme weather that may damage PPL's transmission and distribution facilities or affect energy sales to customers;
- reliance on transmission and distribution facilities that PPL does not own or control to deliver its electricity and natural gas;
- unavailability of generating units (due to unscheduled or longer-than-anticipated generation outages, weather and natural disasters) and the resulting loss of revenues and additional costs of replacement electricity;
- the ability to recover and the timeliness and adequacy of recovery of costs associated with regulated utility businesses;
- costs of compliance with existing and new environmental laws and with new security and safety requirements for nuclear facilities;
- any adverse outcome of legal proceedings and investigations with respect to PPL's current and past business activities;
- deterioration in the financial markets that could make obtaining new sources of bank and capital markets funding more difficult and more costly; and
- a downgrade in PPL's or its rated subsidiaries' credit ratings that could adversely affect their ability to access capital and increase the cost of credit facilities and any new debt.

See "Item 1A. Risk Factors" for further discussion of risks and uncertainties affecting PPL's cash flows.

At December 31, PPL had the following:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Cash and cash equivalents	\$ 925	\$ 801	\$ 1,100
Short-term investments (a) (b)	163		150
	<u>\$ 1,088</u>	<u>\$ 801</u>	<u>\$ 1,250</u>
Short-term debt	<u>\$ 694</u>	<u>\$ 639</u>	<u>\$ 679</u>

- (a) 2010 amount represents tax-exempt bonds issued by Louisville/Jefferson County, Kentucky on behalf of LG&E that were subsequently purchased by LG&E. Such bonds were remarketed to unaffiliated investors in January 2011. See Note 7 to the Financial Statements for further discussion.
- (b) 2008 amount represents tax-exempt bonds issued by the PEDFA in December 2008 on behalf of PPL Energy Supply and purchased by a subsidiary of PPL Energy Supply upon issuance. Such bonds were refunded in April 2009. See Note 7 to the Financial Statements for further discussion.

The changes in PPL's cash and cash equivalents position resulted from:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Net cash provided by operating activities	\$ 2,033	\$ 1,852	\$ 1,589
Net cash used in investing activities	(8,229)	(880)	(1,627)
Net cash provided by (used in) financing activities	6,307	(1,271)	721
Effect of exchange rates on cash and cash equivalents	13		(13)
Net Increase (Decrease) in Cash and Cash Equivalents	<u>\$ 124</u>	<u>\$ (299)</u>	<u>\$ 670</u>

### Operating Activities

Net cash provided by operating activities increased by 10%, or \$181 million in 2010 compared with 2009. The expiration of the long-term power purchase agreements between PPL Electric and PPL EnergyPlus at the end of 2009 enabled PPL EnergyPlus to sell power at higher market prices and had a positive impact on net income, and specifically on "unregulated gross energy margins" which increased over \$600 million, after-tax, in 2010 compared with 2009, and therefore, was the primary driver to the above increase. The positive impact of additional earnings was partially offset by a reduction in the amount of counterparty collateral received and by additional defined benefit plan contributions.

Net cash provided by operating activities increased by 17%, or \$263 million in 2009 compared with 2008, primarily as a result of cash collateral received from counterparties and the benefit of lower income tax payments due to the change in method of accounting for certain expenditures for tax purposes. These increases were partially offset by a decrease in accounts payable and the unfavorable impact of foreign currency exchange rates in 2009 compared with 2008.

A significant portion of PPL's operating cash flows is derived from its Supply segment baseload generation business activities. PPL employs a formal hedging program for its baseload generation fleet, the primary objective of which is to provide a reasonable level of near-term cash flow and earnings certainty while preserving upside potential of power price increases over the medium term. See Note 19 to the Financial Statements for further discussion. Despite its hedging practices, PPL expects its future cash flows from operating activities from its Supply segment to be more influenced by commodity prices than during the past years when long-term supply contracts were in place between PPL EnergyPlus and PPL Electric. In the near-term, PPL expects its Supply segment operating cash flows to decline as a result of lower commodity prices. PPL expects to see an increase in cash flows from operating activities in the near-term from its Pennsylvania Regulated segment due to its \$77.5 million, or 1.6% rate increase that became effective on January 1, 2011. Finally, the acquisition of LKE (i.e. Kentucky Regulated segment) is expected to provide additional cash flows from operating activities through its regulated rate base that has been added to PPL's portfolio.

PPL's contracts for the sale and purchase of electricity and fuel often require cash collateral or other credit enhancements, or reductions or terminations of a portion of the entire contract through cash settlement, in the event of a downgrade of PPL's or its subsidiaries' credit ratings or adverse changes in market prices. For example, in addition to limiting its trading ability, if PPL's or its subsidiaries' ratings were lowered to below "investment grade" and there was a 10% adverse movement in energy prices, PPL estimates that, based on its December 31, 2010 positions, it would have had to post additional collateral of approximately \$441 million with respect to electricity and fuel contracts. PPL has in place risk management programs that are designed to monitor and manage its exposure to volatility of cash flows related

to changes in energy and fuel prices, interest rates, foreign currency exchange rates, counterparty credit quality and the operating performance of its generating units.

### Investing Activities

The primary use of cash in investing activities in 2010 was for the acquisition of LKE. In 2009 and 2008, the primary use of cash in investing activities was capital expenditures. See "Forecasted Uses of Cash" for detail regarding capital expenditures in 2010 and projected expenditures for the years 2011 through 2015.

Net cash used in investing activities increased by \$7.3 billion in 2010 compared with 2009, primarily as a result of \$6.8 billion used for the acquisition of LKE. Net cash used in investing activities also increased, to a lesser extent, due to an increase of \$372 million in capital expenditures, a decrease of \$154 million from proceeds from the sale of other investments, and a change of \$133 million from restricted cash and cash equivalents. See Note 10 to the Financial Statements for a discussion of the acquisition of LKE. The increase in cash used in investing activities from the above items was partially offset by the change in proceeds received from the sale of businesses, which are discussed in Note 9 to the Financial Statements. PPL received proceeds of \$81 million from the sale of the majority of the Maine hydroelectric generation business in 2009, compared to proceeds of \$162 million received in 2010 from the sales of the Long Island generation business and the remaining Maine hydroelectric generation business assets.

Net cash used in investing activities decreased by 46%, or \$747 million, in 2009 compared with 2008, primarily as a result of a change of \$289 million from restricted cash and cash equivalents, a change of \$249 million from purchases and sales of other investments, a change of \$241 million from purchases and sales of intangible assets and a decrease of \$193 million in capital expenditures. See Note 1 to the Financial Statements for a discussion of restricted cash and cash equivalents and Note 7 to the Financial Statements for a discussion of the purchase and sale by a subsidiary of PPL Energy Supply of Exempt Facilities Revenue Bonds issued by the PEDFA on behalf of PPL Energy Supply. The decrease in cash used in investing activities from the above items was partially offset by the change in proceeds received from the sale of businesses, which are discussed in Note 9 to the Financial Statements. PPL received \$303 million from the sale of the gas and propane businesses in 2008 compared to proceeds of \$81 million received from the sale of the majority of the Maine hydroelectric generation business in 2009.

### Financing Activities

Net cash provided by financing activities was \$6.3 billion in 2010 compared with \$1.3 billion of cash used in financing activities in 2009. The change from 2009 to 2010 primarily reflects increased issuances of long-term debt and equity related to the acquisition of LKE in 2010, as well as fewer retirements of long-term debt in 2010.

Net cash used in financing activities was \$1.3 billion in 2009 compared with \$721 million of cash provided by financing activities in 2008. The change from 2008 to 2009 primarily reflects fewer issuances and increased retirements of long-term debt in 2009, as well as the net repayment of short-term borrowings in 2009.

In 2010, cash provided by financing activities primarily consisted of net debt issuances of \$4.7 billion and \$2.4 billion of net proceeds from the issuance of common stock, partially offset by common stock dividends paid of \$566 million and debt issuance and credit facility costs paid of \$175 million.

In 2009, cash used in financing activities primarily consisted of net debt retirements of \$770 million and common stock dividends paid of \$517 million, partially offset by \$60 million of common stock sale proceeds.

In 2008, cash provided by financing activities primarily consisted of net debt issuances of \$1.3 billion and \$19 million of common stock sale proceeds, partially offset by common stock dividends paid of \$491 million and the repurchase of 802,816 shares of common stock for \$38 million.

See "Forecasted Sources of Cash" for a discussion of PPL's plans to issue debt and equity securities, as well as a discussion of credit facility capacity available to PPL. Also see "Forecasted Uses of Cash" for a discussion of plans to pay dividends on common and preferred securities in the future, as well as maturities of long-term debt.

PPL's debt financing activity in 2010 was:

	<u>Issuances (a)</u>	<u>Retirements</u>
PPL Capital Funding Junior Subordinated Notes (b)	\$ 1,150	\$ (19)
PPL Capital Funding Senior Unsecured Notes		(1)
LG&E and KU Energy LLC Senior Unsecured Notes	870	
LG&E First Mortgage Bonds	531	
KU First Mortgage Bonds	1,489	
WPD Senior Unsecured Notes	597	
Other long-term debt	5	
LG&E short-term debt	163	
PPL Energy Supply short-term debt (net change)	65	
WPD short-term debt (net change)		(158)
Total	<u>\$ 4,870</u>	<u>\$ (178)</u>
Net increase	<u>\$ 4,692</u>	

(a) Issuances are net of pricing discounts, where applicable and exclude the impact of debt issuance costs.

(b) Issuance is related to the Equity Units. Retirement reflects amount paid to repurchase \$20 million aggregate principal amount of junior subordinated notes.

See Note 7 to the Financial Statements for more detailed information regarding PPL's financing activities in 2010.

### Forecasted Sources of Cash

PPL expects to continue to have significant sources of cash available in the near term, including various credit facilities, a commercial paper program and operating leases. PPL currently plans to issue up to \$750 million in long-term debt securities in 2011, subject to market conditions, in addition to remarketing certain bonds at LG&E to unaffiliated investors as discussed below. Additionally, PPL's cash flows will include a full year of LKE's cash flows in 2011 and forward.

### *Credit Facilities*

At December 31, 2010, PPL's total committed borrowing capacity under credit facilities and the use of this borrowing capacity were:

	<u>Committed Capacity</u>	<u>Borrowed</u>	<u>Letters of Credit Issued (a)</u>	<u>Unused Capacity</u>
LG&E Credit Facility (b)	\$ 400	\$ 163		\$ 237
KU Credit Facility (b)	400		\$ 198	202
PPL Energy Supply Domestic Credit Facilities (c)	3,500	350	185	2,965
PPL Electric Credit Facilities (d)	350		13	337
Total Domestic Credit Facilities (e)	<u>\$ 4,650</u>	<u>\$ 513</u>	<u>\$ 396</u>	<u>\$ 3,741</u>
WPDH Limited Credit Facility (f)	£ 150	£ 115	n/a	£ 35
WPD (South West) Credit Facility (g)	210		n/a	210
Total WPD Credit Facilities (h)	<u>£ 360</u>	<u>£ 115</u>	<u>n/a</u>	<u>£ 245</u>

(a) The borrower under each of these facilities has a reimbursement obligation to the extent any letters of credit are drawn upon.

(b) Borrowings under LG&E's and KU's credit facilities generally bear interest at LIBOR-based rates plus a spread, depending upon the respective company's senior unsecured long-term debt rating. LG&E and KU also each have the capability to request the lenders to issue up to \$400 million of letters of credit under its respective facility, which issuances reduce available borrowing capacity. Additionally, subject to certain conditions, LG&E and KU may each request that its respective facility's capacity be increased by up to \$100 million. Both facilities expire in 2014.

The credit facilities each contain a financial covenant requiring the respective borrower's debt to total capitalization not to exceed 70% and other customary covenants. At December 31, 2010, LG&E's and KU's debt to total capitalization percentages, as calculated in accordance with the credit facilities, were 43% and 41%. The credit facilities also contain standard representations and warranties that must be made for LG&E or KU to borrow under them.

LG&E repaid its \$163 million borrowing in January 2011 with proceeds received from the remarketing of certain tax exempt bonds.

- (c) PPL Energy Supply has the ability to borrow \$3.0 billion under its credit facilities. Such borrowings generally bear interest at LIBOR-based rates plus a spread, depending upon the company's senior unsecured long-term debt rating. PPL Energy Supply also has the capability to cause the lenders to issue up to \$3.5 billion of letters of credit under these facilities, which issuances reduce available borrowing capacity. Subject to certain conditions, PPL Energy Supply may request that the capacity of one of its facilities be increased by up to \$500 million.

These credit facilities contain a financial covenant requiring debt to total capitalization not to exceed 65%. At December 31, 2010 and 2009, PPL Energy Supply's consolidated debt to total capitalization percentages, as calculated in accordance with its credit facilities, were 44% and 46%. The credit facilities also contain standard representations and warranties that must be made for PPL Energy Supply to borrow under them.

The committed capacity expires as follows: \$300 million in 2011, \$200 million in 2013 and \$3.0 billion in 2014.

- (d) Borrowings under PPL Electric's \$200 million syndicated credit facility generally bear interest at LIBOR-based rates plus a spread, depending upon the company's senior secured long-term debt rating. PPL Electric also has the capability to request the lenders to issue up to \$200 million of letters of credit under this facility, which issuances reduce available borrowing capacity. Subject to certain conditions, PPL Electric may request that the facility's capacity be increased by up to \$100 million.

The syndicated credit facility contains a financial covenant requiring debt to total capitalization not to exceed 70%. At December 31, 2010, PPL Electric's consolidated debt to total capitalization percentage, as calculated in accordance with its credit facility, was 43%. The syndicated credit facility also contains standard representations and warranties that must be made for PPL Electric to borrow under it.

Committed capacity includes a \$150 million credit facility related to an asset-backed commercial paper program through which PPL Electric obtains financing by selling and contributing its eligible accounts receivable and unbilled revenues to a special purpose, wholly owned subsidiary on an ongoing basis. The subsidiary pledges these assets to secure loans of up to an aggregate of \$150 million from a commercial paper conduit sponsored by a financial institution. At December 31, 2010, based on accounts receivable and unbilled revenue pledged, \$150 million was available for borrowing.

The committed capacity expires as follows: \$150 million in 2011 and \$200 million in 2014. PPL Electric intends to renew its existing \$150 million asset-backed credit facility in 2011 in order to maintain its current total committed capacity level.

- (e) The commitments under PPL's domestic credit facilities are provided by a diverse bank group, with no one bank and its affiliates providing an aggregate commitment of more than 12% of the total committed capacity.
- (f) Borrowings under WPDH Limited's credit facility bear interest at LIBOR-based rates plus a spread, depending upon the company's long-term credit rating. This credit facility contains financial covenants that require WPDH Limited to maintain an interest coverage ratio of not less than 3.0 times consolidated earnings before income taxes, depreciation and amortization and a RAB that exceeds total net debt by the higher of an amount equal to 15% of total net debt or £150 million, in each case as calculated in accordance with the credit facility. At December 31, 2010 and 2009, WPDH Limited's interest coverage ratios, as calculated in accordance with its credit facility, were 3.5 and 4.3. At December 31, 2010 and 2009, WPDH Limited's RAB, as calculated in accordance with the credit facility, exceeded its total net debt by £364 million, or 27%, and £325 million, or 25%.
- (g) Borrowings under WPD (South West)'s credit facility bear interest at LIBOR-based rates plus a margin. This credit facility contains financial covenants that require WPD (South West) to maintain an interest coverage ratio of not less than 3.0 times consolidated earnings before income taxes, depreciation and amortization and total net debt not in excess of 85% of RAB, in each case as calculated in accordance with the credit facility. At December 31, 2010 and 2009, WPD (South West)'s interest coverage ratios, as calculated in accordance with its credit facility, were 3.6 and 5.3. At December 31, 2010 and 2009, WPD (South West)'s total net debt, as calculated in accordance with the credit facility, was 75% and 67% of RAB.
- (h) The commitments under WPD's credit facilities are provided by eight banks, with no one bank providing more than 25% of the total committed capacity. The committed capacity under the facilities expires as follows: £210 million in 2012 and £150 million in 2013.

At December 31, 2010, the unused capacity of WPD's credit facilities was approximately \$381 million.

In addition to the financial covenants noted in the table above, the credit agreements governing the credit facilities contain various other covenants. Failure to comply with the covenants after applicable grace periods could result in acceleration of repayment of borrowings and/or termination of the agreements. PPL monitors compliance with the covenants on a regular basis. At December 31, 2010, PPL was in material compliance with these covenants. At this time, PPL believes that these covenants and other borrowing conditions will not limit access to these funding sources.

See Note 7 to the Financial Statements for further discussion of PPL's credit facilities.

### *Commercial Paper*

PPL Electric maintains a commercial paper program for up to \$200 million to provide an additional financing source to fund its short-term liquidity needs, if and when necessary. Commercial paper issuances are currently supported by PPL Electric's \$200 million syndicated credit facility, which expires in December 2014, based on available capacity.

PPL Electric did not issue any commercial paper during 2010. Based on its current cash position and anticipated cash flows, PPL Electric currently does not plan to issue any commercial paper during 2011, but it may do so from time to time, subject to market conditions, to facilitate short-term cash flow needs.

*Operating Leases*

PPL and its subsidiaries also have available funding sources that are provided through operating leases. PPL's subsidiaries lease office space, land, buildings and certain equipment. These leasing structures provide PPL additional operating and financing flexibility. The operating leases contain covenants that are typical for these agreements, such as maintaining insurance, maintaining corporate existence and timely payment of rent and other fees.

PPL, through its subsidiary PPL Montana, leases a 50% interest in Colstrip Units 1 and 2 and a 30% interest in Unit 3, under four 36-year, non-cancelable operating leases. These operating leases are not recorded on PPL's Balance Sheets. The leases place certain restrictions on PPL Montana's ability to incur additional debt, sell assets and declare dividends. At this time, PPL believes that these restrictions will not limit access to these funding sources or cause acceleration or termination of the leases. See Note 7 to the Financial Statements for a discussion of other dividend restrictions related to PPL subsidiaries.

See Note 11 to the Financial Statements for further discussion of the operating leases.

*Long-Term Debt and Equity Securities*

In January 2011, LG&E remarketed to unaffiliated investors \$163 million of tax-exempt bonds issued by Louisville/Jefferson County, Kentucky on behalf of LG&E. The proceeds from the remarketing were used for the repayment of short-term debt under its syndicated credit facility.

In addition to the remarketing, PPL and its subsidiaries currently plan to issue up to \$750 million in long-term debt securities in 2011, subject to market conditions. PPL expects to use the proceeds from the issuance of long-term debt securities primarily to refund PPL Energy Supply's 2011 debt maturity, to fund capital expenditures and for general corporate purposes.

PPL currently plans to issue new shares of common stock in 2011 in an aggregate amount up to \$300 million under various employee stock-based compensation plans and its DRIP.

The Economic Stimulus Package

In April 2010, PPL Electric entered into an agreement with the DOE, in which the agency is to provide funding for one-half of a \$38 million smart grid project. The project would use smart grid technology to strengthen reliability, save energy and improve electric service for 60,000 Harrisburg, Pennsylvania area customers. It would also provide benefits beyond the Harrisburg region, helping to speed power restoration across PPL Electric's 29-county service territory. Work on the project is progressing on schedule, and PPL Electric is receiving reimbursements under the grant for costs incurred. The project is scheduled to be completed by the end of September 2012.

Forecasted Uses of Cash

In addition to expenditures required for normal operating activities, such as purchased power, payroll, fuel and taxes, PPL currently expects to incur future cash outflows for capital expenditures, various contractual obligations, payment of dividends on its common and preferred securities and possibly the purchase or redemption of a portion of debt securities.

*Capital Expenditures*

The table below shows PPL's actual spending for the year 2010 and current capital expenditure projections for the years 2011 through 2015.

	<u>Actual</u>		<u>Projected</u>			
	<u>2010</u>	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>
Construction expenditures (a) (b)						
Generating facilities	\$ 582	\$ 781	\$ 641	\$ 554	\$ 364	\$ 501
Transmission and distribution facilities	702	1,035	1,241	1,553	1,488	1,145

Environmental	60	381	614	789	1,054	1,045
Other	162	193	223	177	179	395
Total Construction Expenditures	1,506	2,390	2,719	3,073	3,085	3,086
Nuclear fuel	138	152	159	161	158	160
Total Capital Expenditures	\$ 1,644	\$ 2,542	\$ 2,878	\$ 3,234	\$ 3,243	\$ 3,246

- (a) Construction expenditures include capitalized interest and AFUDC, which are expected to be approximately \$290 million for the years 2011 through 2015.
- (b) Includes expenditures for certain intangible assets.

PPL's capital expenditure projections for the years 2011 through 2015 total approximately \$15.1 billion. Capital expenditure plans are revised periodically to reflect changes in operational, market and regulatory conditions. For the years presented, this table includes projected costs related to the planned 817 MW of incremental capacity increases, PPL Electric's asset optimization program focused on the replacement of aging transmission and distribution assets, the PJM-approved regional transmission line expansion project, and LKE's and Energy Supply's environmental projects related to anticipated new EPA air compliance standards. See Note 8 to the Financial Statements for information on the PJM-approved regional transmission line expansion project and the other significant development projects.

PPL plans to fund its capital expenditures in 2011 with cash on hand, cash from operations and proceeds from the issuance of common stock and debt securities.

#### Contractual Obligations

PPL has assumed various financial obligations and commitments in the ordinary course of conducting its business. At December 31, 2010, the estimated contractual cash obligations of PPL were:

	Total	Less Than 1 Year	1-3 Years	4-5 Years	After 5 Years
Long-term Debt (a)	\$ 12,604	\$ 502	\$ 1,137	\$ 1,610	\$ 9,355
Interest on Long-term Debt (b)	11,794	636	1,205	1,113	8,840
Operating Leases (c)	891	122	237	218	314
Purchase Obligations (d)	8,605	2,908	2,537	1,336	1,824
Other Long-term Liabilities Reflected on the Balance Sheet under GAAP (e) (f)	480	260	185	35	
Total Contractual Cash Obligations	\$ 34,374	\$ 4,428	\$ 5,301	\$ 4,312	\$ 20,333

- (a) Reflects principal maturities only based on stated maturity dates, except for PPL Energy Supply's 5.70% Reset Put Securities (REPS). See Note 7 to the Financial Statements for a discussion of the remarketing feature related to the REPS, as well as discussion of variable-rate remarketable bonds issued on behalf of PPL Energy Supply, LG&E and KU. PPL does not have any significant capital lease obligations.
- (b) Assumes interest payments through stated maturity, except for the REPS, for which interest is reflected to the put date. The payments herein are subject to change, as payments for debt that is or becomes variable-rate debt have been estimated and payments denominated in British pounds sterling have been translated to U.S. dollars at a current foreign currency exchange rate.
- (c) See Note 11 to the Financial Statements for additional information.
- (d) The payments reflected herein are subject to change, as certain purchase obligations included are estimates based on projected obligated quantities and/or projected pricing under the contracts. Purchase orders made in the ordinary course of business are excluded from the amounts presented. The payments also include obligations related to nuclear fuel and the installation of the scrubbers, which are also reflected in the Capital Expenditures table presented above.
- (e) The amounts reflected represent WPD's contractual deficit pension funding requirements arising from an actuarial valuation performed in March 2010. The U.K. electricity regulator currently allows a recovery of a substantial portion of the contributions relating to the plan deficit; however, WPD cannot be certain that this will continue beyond the current review period, which extends to March 31, 2015. Based on the current funded status of PPL's U.S. qualified pension plans, no cash contributions are required. See Note 13 to the Financial Statements for a discussion of expected contributions. The amount also represents currently projected cash flows for LKE's construction commitments.
- (f) At December 31, 2010, total unrecognized tax benefits of \$251 million were excluded from this table as PPL cannot reasonably estimate the amount and period of future payments. See Note 5 to the Financial Statements for additional information.

#### Dividends

PPL views dividends as an integral component of shareholder return and expects to continue to pay dividends in amounts that are within the context of maintaining a capitalization structure that supports investment grade credit ratings. In 2010, PPL increased the annualized dividend rate on its common stock from \$1.38 to \$1.40 per share, effective with the

April 1, 2010 dividend payment. Future dividends will be declared at the discretion of the Board of Directors and will depend upon future earnings, cash flows, financial and legal requirements and other relevant factors at the time. As discussed in Note 7 to the Financial Statements, subject to certain exceptions, PPL may not declare or pay any cash dividend on its common stock during any period in which PPL Capital Funding defers interest payments on its 2007 Series A Junior Subordinated Notes due 2067 or its 4.625% Junior Subordinated Notes due 2018 or until deferred contract adjustment payments on PPL's Purchase Contracts have been paid. No such deferrals have occurred or are currently anticipated.

PPL Electric expects to continue to pay quarterly dividends on its outstanding preferred securities, if and as declared by its Board of Directors.

See Note 7 to the Financial Statements for other restrictions related to distributions on capital interests for PPL subsidiaries.

#### *Purchase or Redemption of Debt Securities*

PPL will continue to evaluate purchasing or redeeming outstanding debt securities and may decide to take action depending upon prevailing market conditions and available cash.

#### Credit Ratings

Moody's, S&P and Fitch periodically review the credit ratings on the debt and preferred securities of PPL and its subsidiaries. Based on their respective independent reviews, the rating agencies may make certain ratings revisions or ratings affirmations.

A credit rating reflects an assessment by the rating agency of the creditworthiness associated with an issuer and particular securities that it issues. The credit ratings of PPL and its subsidiaries are based on information provided by PPL and other sources. The ratings of Moody's, S&P and Fitch are not a recommendation to buy, sell or hold any securities of PPL or its subsidiaries. Such ratings may be subject to revisions or withdrawal by the agencies at any time and should be evaluated independently of each other and any other rating that may be assigned to the securities. A downgrade in PPL's or its subsidiaries' credit ratings could result in higher borrowing costs and reduced access to capital markets.

In prior periodic reports, PPL described its then-current debt ratings in connection with, and to facilitate, an understanding of its liquidity position. As a result of the passage of the Dodd-Frank Act and the attendant uncertainties relating to the extent to which issuers of non-asset backed securities may disclose credit ratings without being required to obtain rating agency consent to the inclusion of such disclosure, or incorporation by reference of such disclosure, in a registrant's registration statement or section 10(a) prospectus, PPL is limiting its credit rating disclosure to a description of the actions taken by the rating agencies with respect to PPL's ratings, but without stating what ratings have been assigned to PPL or its subsidiaries, or their securities. The ratings assigned by the rating agencies to PPL and its subsidiaries and their respective securities may be found, without charge, on each of the respective ratings agencies' websites, which ratings together with all other information contained on such rating agency websites is hereby explicitly not incorporated by reference in this report.

The rating agencies took the following actions related to PPL and its subsidiaries in 2010.

#### *Moody's*

In April 2010, Moody's took the following actions:

- Revised the outlook for PPL, PPL Capital Funding and PPL Electric;
- Lowered the issuer rating of PPL and the senior unsecured debt rating of PPL Capital Funding;
- Lowered the rating of PPL Capital Funding's junior subordinated notes and PPL Electric's preferred securities;
- Lowered the issuer rating of PPL Electric;
- Affirmed the senior secured debt rating and commercial paper rating of PPL Electric; and

- Affirmed the senior unsecured notes rating and the outlook of PPL Energy Supply.

Moody's stated in its press release that the revisions in the ratings for PPL, PPL Capital Funding, and PPL Electric, while reflective of PPL's then-announced agreement to acquire LKE, are driven more by weakening financial metrics and the outlooks that had been in place for PPL and PPL Electric for the past year.

In August 2010, Moody's affirmed all of PPL Energy Supply's ratings.

In October 2010, Moody's affirmed the ratings for PPL and PPL Capital Funding following PPL's receipt of FERC approval of its then-pending acquisition of LKE.

In November 2010, Moody's took the following actions:

- Assigned a senior unsecured debt rating to LG&E and KU Energy LLC; and
- Assigned a senior secured debt rating to LG&E and KU.

#### *S&P*

In April 2010, S&P took the following actions:

- Revised the outlook of PPL, PPL Energy Supply and PPL Capital Funding;
- Revised the outlook of WPDH Limited, WPD (South Wales) and WPD (South West); and
- Affirmed its credit ratings for PPL, PPL Capital Funding, PPL Energy Supply, PPL Electric, WPDH Limited, WPD (South Wales) and WPD (South West).

S&P stated in its press release that the change to the outlook for PPL and PPL Energy Supply considers the greater regulated mix that will result from PPL acquiring LKE, resulting in a pro forma "strong" consolidated business risk profile. S&P also stated that the revision in the outlook for WPD is a reflection of the change to PPL's outlook and is not a result of any change in WPD's stand-alone credit profile.

In October 2010, S&P took the following actions:

- Revised the outlook of PPL, PPL Capital Funding, PPL Energy Supply, and PPL Electric;
- Raised the issuer rating of PPL and PPL Energy Supply;
- Raised the senior unsecured and junior subordinated debt ratings of PPL Capital Funding;
- Raised the senior unsecured debt rating of PPL Energy Supply; and
- Affirmed its credit ratings for PPL Electric.

S&P stated in its press release that the upgrades reflect S&P's opinion of an improved credit profile of the consolidated company following the closing of PPL's then-pending acquisition of LKE.

In November 2010, S&P affirmed its credit rating and revised the outlook for PPL Montana's Pass Through Certificates due 2020.

Also in November 2010, S&P took the following actions:

- Assigned a senior unsecured debt rating to LG&E and KU Energy LLC; and
- Assigned a senior secured debt rating to LG&E and KU.

#### *Fitch*

In January 2010, as a result of implementing its revised guidelines for rating preferred stock and hybrid securities, Fitch lowered the rating of PPL Capital Funding's junior subordinated notes and lowered the ratings of PPL Electric's preferred stock and preference stock. Fitch stated in its press release that the new guidelines, which apply to instruments issued by

companies in all sectors, typically resulted in downgrades of one notch for many instruments that provide for the ability to defer interest or dividend payments. Fitch stated that it has no reason to believe that such deferral will be activated.

In April 2010, Fitch affirmed its credit ratings for PPL, PPL Capital Funding, PPL Energy Supply and PPL Electric and retained the outlook for these entities following PPL's then-announced agreement to acquire LKE.

In May 2010, Fitch affirmed its rating and issued an outlook for PPL Montana's Pass Through Certificates due 2020.

In October 2010, Fitch affirmed its credit ratings for and revised the outlook of WPDH Limited, WPD (South Wales) and WPD (South West).

In November 2010, Fitch took the following actions:

- Assigned an outlook, issuer ratings and senior unsecured debt rating to LG&E and KU Energy LLC; and
- Assigned an outlook, issuer ratings and senior secured debt rating to LG&E and KU.

### Ratings Triggers

As discussed in Note 7 to the Financial Statements, certain of WPD's senior unsecured notes may be put by the holders back to the issuer for redemption if the long-term credit ratings assigned to the notes by Moody's, S&P or Fitch are withdrawn by any of the rating agencies or reduced to a non-investment grade rating of Ba1 or BB+ in connection with a restructuring event. A restructuring event includes the loss of, or a material adverse change to, the distribution license under which WPD (South West) and WPD (South Wales) operate. These notes totaled £1.3 billion (approximately \$2.0 billion) at December 31, 2010.

PPL and PPL Energy Supply have various derivative and non-derivative contracts, including contracts for the sale and purchase of electricity and fuel, commodity transportation and storage, tolling agreements, and interest rate and foreign currency instruments, which contain provisions requiring PPL and PPL Energy Supply to post additional collateral, or permit the counterparty to terminate the contract, if PPL's or PPL Energy Supply's credit rating were to fall below investment grade. See Note 19 to the Financial Statements for a discussion of "Credit Risk-Related Contingent Features," including a discussion of the potential additional collateral that would have been required for derivative contracts in a net liability position at December 31, 2010. At December 31, 2010, if PPL's and PPL Energy Supply's credit ratings had been below investment grade, PPL would have been required to prepay or post an additional \$455 million of collateral to counterparties for both derivative and non-derivative commodity and commodity-related contracts used in its generation, marketing and trading operations and interest rate and foreign currency contracts.

### Guarantees for Subsidiaries

PPL guarantees certain consolidated affiliate financing arrangements that enable certain transactions. Some of the guarantees contain financial and other covenants that, if not met, would limit or restrict the consolidated affiliates' access to funds under these financing arrangements, require early maturity of such arrangements or limit the consolidated affiliates' ability to enter into certain transactions. At this time, PPL believes that these covenants will not limit access to relevant funding sources. See Note 15 to the Financial Statements for additional information about guarantees.

### **Off-Balance Sheet Arrangements**

PPL has entered into certain agreements that may contingently require payment to a guaranteed or indemnified party. See Note 15 to the Financial Statements for a discussion of these agreements.

### **Risk Management - Energy Marketing & Trading and Other**

#### Market Risk

See Notes 1, 18, and 19 to the Financial Statements for information about PPL's risk management objectives, valuation techniques and accounting designations.

The forward-looking information presented below provides estimates of what may occur in the future, assuming certain adverse market conditions and model assumptions. Actual future results may differ materially from those presented. These disclosures are not precise indicators of expected future losses, but only indicators of possible losses under normal market conditions at a given confidence level.

*Commodity Price Risk (Non-trading)*

PPL segregates its non-trading activities into two categories: hedge activity and economic activity. Transactions that are accounted for as hedge activity qualify for hedge accounting treatment. The economic activity category includes transactions that address a specific risk, but were not eligible for hedge accounting or for which hedge accounting was not elected. This activity includes the changes in fair value of positions used to hedge a portion of the economic value of PPL's generation assets, full-requirement sales contracts and retail activities. This economic activity is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power). Although they do not receive hedge accounting treatment, these transactions are considered non-trading activity. The net fair value of economic positions at December 31, 2010 and 2009 was a net liability of \$400 million and \$77 million. See Note 19 to the Financial Statements for additional information on economic activity.

To hedge the impact of market price volatility on PPL's energy-related assets, liabilities and other contractual arrangements, PPL sells and purchases physical energy at the wholesale level under FERC market-based tariffs throughout the U.S. and enters into financial exchange-traded and over-the-counter contracts. PPL's non-trading commodity derivative contracts mature at various times through 2017.

The following table sets forth the net fair value of PPL's non-trading commodity derivative contracts. See Notes 18 and 19 to the Financial Statements for additional information.

	<b>Gains (Losses)</b>	
	<b>2010</b>	<b>2009</b>
Fair value of contracts outstanding at the beginning of the period	\$ 1,280	\$ 402
Contracts realized or otherwise settled during the period	(478)	189
Fair value of new contracts entered into during the period	(5)	143
Changes in fair value attributable to changes in valuation techniques	(23)	
Fair value of LKE derivative contracts at the acquisition date	(24)	
Other changes in fair value	197	546
Fair value of contracts outstanding at the end of the period	<u>\$ 947</u>	<u>\$ 1,280</u>

The following table segregates the net fair value of PPL's non-trading commodity derivative contracts at December 31, 2010 based on whether the fair value was determined by prices quoted in active markets for identical instruments or other more subjective means.

	<b>Net Asset (Liability)</b>				
	<b>Maturity Less Than 1 Year</b>	<b>Maturity 1-3 Years</b>	<b>Maturity 4-5 Years</b>	<b>Maturity in Excess of 5 Years</b>	<b>Total Fair Value</b>
<b>Source of Fair Value</b>					
Prices based on significant other observable inputs	\$ 351	\$ 592	\$ 8		\$ 951
Prices based on significant unobservable inputs	3	(29)	(4)	26	(4)
Fair value of contracts outstanding at the end of the period	<u>\$ 354</u>	<u>\$ 563</u>	<u>\$ 4</u>	<u>\$ 26</u>	<u>\$ 947</u>

PPL sells electricity, capacity and related services and buys fuel on a forward basis to hedge the value of energy from its generation assets. If PPL were unable to deliver firm capacity and energy or to accept the delivery of fuel under its agreements, under certain circumstances it could be required to pay liquidating damages. These damages would be based on the difference between the market price and the contract price of the commodity. Depending on price changes in the wholesale energy markets, such damages could be significant. Extreme weather conditions, unplanned power plant outages, transmission disruptions, nonperformance by counterparties (or their own counterparties) with which it has energy contracts and other factors could affect PPL's ability to meet its obligations, or cause significant increases in the

market price of replacement energy. Although PPL attempts to mitigate these risks, there can be no assurance that it will be able to fully meet its firm obligations, that it will not be required to pay damages for failure to perform, or that it will not experience counterparty nonperformance in the future.

#### Commodity Price Risk (Trading)

PPL's trading contracts mature at various times through 2015. The following table sets forth changes in the net fair value of PPL's trading commodity derivative contracts. See Notes 18 and 19 to the Financial Statements for additional information.

	Gains (Losses)	
	2010	2009
Fair value of contracts outstanding at the beginning of the period	\$ (6)	\$ (75)
Contracts realized or otherwise settled during the period	(12)	2
Fair value of new contracts entered into during the period	39	31
Other changes in fair value	(17)	36
Fair value of contracts outstanding at the end of the period	<u>\$ 4</u>	<u>\$ (6)</u>

PPL will reverse unrealized losses of approximately \$2 million over the next three months as the transactions are realized.

The following table segregates the net fair value of PPL's trading commodity derivative contracts at December 31, 2010 based on whether the fair value was determined by prices quoted in active markets for identical instruments or other more subjective means.

Source of Fair Value	Net Asset (Liability)				Total Fair Value
	Maturity Less Than 1 Year	Maturity 1-3 Years	Maturity 4-5 Years	Maturity in Excess of 5 Years	
Prices based on significant other observable inputs	\$ (1)	\$ 2	\$ 3		\$ 4
Fair value of contracts outstanding at the end of the period	<u>\$ (1)</u>	<u>\$ 2</u>	<u>\$ 3</u>		<u>\$ 4</u>

#### VaR Models

PPL utilizes a VaR model to measure commodity price risk in domestic gross energy margins for its non-trading and trading portfolios. VaR is a statistical model that attempts to estimate the value of potential loss over a given holding period under normal market conditions at a given confidence level. PPL calculates VaR using a Monte Carlo simulation technique based on a five-day holding period at a 95% confidence level. Given the company's conservative hedging program, PPL's non-trading VaR exposure is expected to be limited in the short term. At December 31, 2010 and December 31, 2009, the VaR for PPL's portfolios using end-of-month results for the period was as follows.

95% Confidence Level, Five-Day Holding Period	Trading VaR		Non-Trading VaR	
	2010	2009	2010	2009
Period End	\$ 1	\$ 3	\$ 5	\$ 8
Average for the Period	4	4	7	9
High	9	8	12	11
Low	1	1	4	8

The trading portfolio includes all speculative positions, regardless of the delivery period. All positions not considered speculative are considered non-trading. PPL's non-trading portfolio includes PPL's entire portfolio, including generation, with delivery periods through the next 12 months. Both the trading and non-trading VaR computations exclude FTRs due to the absence of reliable spot and forward markets. The fair value of the non-trading and trading FTR positions was insignificant at December 31, 2010.

*Interest Rate Risk*

PPL and its subsidiaries have issued debt to finance their operations, which exposes them to interest rate risk. PPL utilizes various financial derivative instruments to adjust the mix of fixed and floating interest rates in its debt portfolio, adjust the duration of its debt portfolio and lock in benchmark interest rates in anticipation of future financing, when appropriate. Risk limits under the risk management program are designed to balance risk exposure to volatility in interest expense and changes in the fair value of PPL's debt portfolio due to changes in the absolute level of interest rates.

At December 31, 2010 and 2009, PPL's potential annual exposure to increased interest expense, based on a 10% increase in interest rates, was insignificant.

PPL is also exposed to changes in the fair value of its domestic and international debt portfolios. PPL estimated that a 10% decrease in interest rates at December 31, 2010 would increase the fair value of its debt portfolio by \$420 million, compared with \$285 million at December 31, 2009.

PPL had the following interest rate hedges outstanding at:

	December 31, 2010			December 31, 2009		
	Exposure Hedged	Fair Value, Net - Asset (Liability) (a)	Effect of a 10% Adverse Movement in Rates (b)	Exposure Hedged	Fair Value, Net - Asset (Liability) (a)	Effect of a 10% Adverse Movement in Rates (b)
Cash flow hedges						
Interest rate swaps (c)	\$ 500	\$ (19)	\$ (28)	\$ 425	\$ 24	\$ (24)
Cross-currency swaps (d)	302	35	(18)	302	8	(41)
Fair value hedges						
Interest rate swaps (e)	349	20	(3)	750	31	(12)
Economic hedges						
Interest rate swaps (c)	179	(34)	(7)			

(a) Includes accrued interest, if applicable.

(b) Effects of adverse movements decrease assets or increase liabilities, as applicable, which could result in an asset becoming a liability.

(c) PPL utilizes various risk management instruments to reduce its exposure to the expected future cash flow variability of its debt instruments. These risks include exposure to adverse interest rate movements for outstanding variable rate debt and for future anticipated financing. While PPL is exposed to changes in the fair value of these instruments, any changes in the fair value of such cash flow hedges are recorded in equity and any changes in the fair value of such economic hedges are recorded in regulatory assets and liabilities. The changes in fair value of these instruments are then reclassified into earnings in the same period during which the item being hedged affects earnings. Sensitivities represent a 10% adverse movement in interest rates.

(d) WPDH Limited uses cross-currency swaps to hedge the interest payments and principal of its U.S. dollar-denominated senior notes with maturity dates ranging from December 2017 to December 2028. While PPL is exposed to changes in the fair value of these instruments, any change in the fair value of these instruments is recorded in equity and reclassified into earnings in the same period during which the item being hedged affects earnings. Sensitivities represent a 10% adverse movement in both interest rates and foreign currency exchange rates.

(e) PPL utilizes various risk management instruments to adjust the mix of fixed and floating interest rates in its debt portfolio. The change in fair value of these instruments, as well as the offsetting change in the value of the hedged exposure of the debt, is reflected in earnings. Sensitivities represent a 10% adverse movement in interest rates.

*Foreign Currency Risk*

PPL is exposed to foreign currency risk, primarily through investments in U.K. affiliates. In addition, PPL's domestic operations may make purchases of equipment in currencies other than U.S. dollars. See Note 1 to the Financial Statements for additional information regarding foreign currency translation.

PPL has adopted a foreign currency risk management program designed to hedge certain foreign currency exposures, including firm commitments, recognized assets or liabilities, anticipated transactions and net investments. In addition, PPL enters into financial instruments to protect against foreign currency translation risk of expected earnings.

PPL had the following foreign currency hedges outstanding at:

	December 31, 2010			December 31, 2009		
	Exposure Hedged	Fair Value, Net - Asset (Liability)	Effect of a 10% Adverse Movement in Foreign Currency Exchange Rates (a)	Exposure Hedged	Fair Value, Net - Asset (Liability)	Effect of a 10% Adverse Movement in Foreign Currency Exchange Rates (a)
Net investment hedges (b)	£ 35	\$ 7	\$ (5)	£ 40	\$ 13	\$ (6)
Economic hedges (c)	89	4	(10)	48	2	(4)

- (a) Effects of adverse movements decrease assets or increase liabilities, as applicable, which could result in an asset becoming a liability.
- (b) To protect the value of a portion of its net investment in WPD, PPL executed forward contracts to sell British pounds sterling. The contracts outstanding at December 31, 2010 were settled in January 2011.
- (c) To economically hedge the translation of expected income denominated in British pounds sterling to U.S. dollars, PPL entered into a combination of average rate forwards and average rate options to sell British pounds sterling. The forwards and options outstanding at December 31, 2010 have termination dates ranging from January 2011 through December 2011.

#### *NDT Funds - Securities Price Risk*

In connection with certain NRC requirements, PPL Susquehanna maintains trust funds to fund certain costs of decommissioning the Susquehanna nuclear station. At December 31, 2010, these funds were invested primarily in domestic equity securities and fixed-rate, fixed-income securities and are reflected at fair value on PPL's Balance Sheet. The mix of securities is designed to provide returns sufficient to fund Susquehanna's decommissioning and to compensate for inflationary increases in decommissioning costs. However, the equity securities included in the trusts are exposed to price fluctuation in equity markets, and the values of fixed-rate, fixed-income securities are exposed to changes in interest rates. PPL actively monitors the investment performance and periodically reviews asset allocation in accordance with its nuclear decommissioning trust policy statement. At December 31, 2010, a hypothetical 10% increase in interest rates and a 10% decrease in equity prices would have resulted in an estimated \$45 million reduction in the fair value of the trust assets, compared with \$40 million at December 31, 2009. See Notes 18 and 23 to the Financial Statements for additional information regarding the NDT funds.

#### *Defined Benefit Plans - Securities Price Risk*

See "Application of Critical Accounting Policies - Defined Benefits" for additional information regarding the effect of securities price risk on plan assets.

#### Credit Risk

Credit risk is the risk that PPL would incur a loss as a result of nonperformance by counterparties of their contractual obligations. PPL maintains credit policies and procedures with respect to counterparty credit (including requirements that counterparties maintain specified credit ratings) and requires other assurances in the form of credit support or collateral in certain circumstances in order to limit counterparty credit risk. However, PPL has concentrations of suppliers and customers among electric utilities, financial institutions and other energy marketing and trading companies. These concentrations may impact PPL's overall exposure to credit risk, positively or negatively, as counterparties may be similarly affected by changes in economic, regulatory or other conditions.

PPL includes the effect of credit risk on its fair value measurements to reflect the probability that a counterparty will default when contracts are out of the money (from the counterparty's standpoint). In this case, PPL would have to sell into a lower-priced market or purchase from a higher-priced market. When necessary, PPL records an allowance for doubtful accounts to reflect the probability that a counterparty will not pay for deliveries PPL has made but not yet billed, which are reflected in "Unbilled revenues" on the Balance Sheets. PPL also has established a reserve with respect to certain sales to the California ISO for which PPL has not yet been paid, which is reflected in accounts receivable on the Balance Sheets. See Note 15 to the Financial Statements for additional information.

In 2007, the PUC approved PPL Electric's post-rate cap plan to procure default electricity supply for retail customers who do not choose an alternative competitive supplier in 2010. Pursuant to this plan, PPL Electric had contracted for all of the electric supply for customers who elected this service in 2010.

In June 2009, the PUC approved PPL Electric's procurement plan for the period January 2011 through May 2013. Through 2010, PPL Electric has conducted six of its 14 planned competitive solicitations.

Under the standard Supply Master Agreement (the Agreement) for the competitive solicitation process, PPL Electric requires all suppliers to post collateral if their credit exposure exceeds an established credit limit. In the event a supplier defaults on its obligation, PPL Electric would be required to seek replacement power in the market. All incremental costs incurred by PPL Electric would be recoverable from customers in future rates. At December 31, 2010, all of the successful bidders under all of the solicitations had an investment grade credit rating from S&P, and were not required to post collateral under the Agreement. There is no instance under the Agreement in which PPL Electric is required to post collateral to its suppliers.

See "Overview" in this Item 7 and Notes 15, 16, 18 and 19 to the Financial Statements for additional information on the competitive solicitations, the Agreement, credit concentration and credit risk.

### **Foreign Currency Translation**

At December 31, 2010, the British pound sterling had weakened in relation to the U.S. dollar compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation loss of \$63 million for 2010, which primarily reflected a \$180 million reduction to PP&E offset by a reduction of \$117 million to net liabilities. At December 31, 2009, the British pound sterling had strengthened in relation to the U.S. dollar as compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation gain of \$106 million for 2009, which primarily reflected a \$225 million increase in PP&E offset by an increase of \$119 million to net liabilities. At December 31, 2008, the British pound sterling had weakened in relation to the U.S. dollar compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation loss of \$520 million for 2008, which primarily reflected a \$1.1 billion reduction to PP&E offset by a reduction of \$580 million to net liabilities.

### **Related Party Transactions**

PPL is not aware of any material ownership interests or operating responsibility by senior management of PPL, PPL Energy Supply or PPL Electric in outside partnerships, including leasing transactions with variable interest entities, or other entities doing business with PPL. See Note 16 to the Financial Statements for additional information on related party transactions.

### **Acquisitions, Development and Divestitures**

See Note 10 to the Financial Statements for information on the acquisition of LKE.

With limited exceptions LKE took care, custody and control of TC2 on January 22, 2011, and has dispatched the unit to meet customer demand since that date. LG&E and KU and the contractor agreed to a further amendment of the construction agreement whereby the contractor will complete certain actions relating to identifying and completing any necessary modifications to allow operation of TC2 on all fuels in accordance with initial specifications prior to certain dates, and amending the provisions relating to liquidated damages. LKE cannot currently estimate the ultimate outcome of these matters. In addition, incremental capacity increases of 247 MW are currently planned, primarily at existing generating facilities. See "Item 2. Properties" for additional information.

Development projects are continuously reexamined based on market conditions and other factors to determine whether to proceed with the projects, sell, cancel or expand them, execute tolling agreements or pursue other options.

See Notes 8 and 9 to the Financial Statements for additional information on the more significant activities.

### **Environmental Matters**

See "Item 1. Business - Environmental Matters" and Note 15 to the Financial Statements for a discussion of environmental matters.

## Competition

See "Item 1. Business - Competition" under each of PPL's reportable segments and "Item 1A. Risk Factors" for a discussion of competitive factors affecting PPL.

## New Accounting Guidance

See Note 1 to the Financial Statements for a discussion of new accounting guidance adopted.

## Application of Critical Accounting Policies

Financial condition and results of operations are impacted by the methods, assumptions and estimates used in the application of critical accounting policies. The following accounting policies are particularly important to the financial condition or results of operations, and require estimates or other judgments of matters inherently uncertain. Changes in the estimates or other judgments included within these accounting policies could result in a significant change to the information presented in the Financial Statements (these accounting policies are also discussed in Note 1 to the Financial Statements). PPL's senior management has reviewed these critical accounting policies, the following disclosures regarding their application and the estimates and assumptions regarding them, with PPL's Audit Committee.

### 1) Price Risk Management

See "Price Risk Management" in Note 1 to the Financial Statements as well as "Risk Management - Energy Marketing & Trading and Other" above.

### 2) Defined Benefits

PPL and certain of its subsidiaries sponsor various defined benefit pension and other postretirement plans applicable to the majority of the employees of PPL and its subsidiaries. PPL and certain of its subsidiaries record an asset or liability to recognize the funded status of all defined benefit plans with an offsetting entry to OCI or regulatory assets and liabilities for amounts that are expected to be recovered through regulated customer rates. Consequently, the funded status of all defined benefit plans is fully recognized on the Balance Sheets. See Note 13 to the Financial Statements for additional information about the plans and the accounting for defined benefits.

PPL makes certain assumptions regarding the valuation of benefit obligations and the performance of plan assets. When accounting for defined benefits, delayed recognition in earnings of differences between actual results and expected or estimated results is a guiding principle. Annual net periodic defined benefit costs are recorded in current earnings based on estimated results. Any differences between actual and estimated results are recorded in OCI or regulatory assets and liabilities for amounts that are expected to be recovered through regulated customer rates. These amounts in AOCI or regulatory assets and liabilities are amortized to income over future periods. The delayed recognition allows for a smoothed recognition of costs over the working lives of the employees who benefit under the plans. The primary assumptions are:

- Discount Rate - The discount rate is used in calculating the present value of benefits, which is based on projections of benefit payments to be made in the future. The objective in selecting the discount rate is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the accumulated benefits when due.
- Expected Return on Plan Assets - Management projects the long-term rates of return on plan assets based on historical performance, future expectations and periodic portfolio rebalancing among the diversified asset classes. These projected returns reduce the net benefit costs PPL records currently.
- Rate of Compensation Increase - Management projects employees' annual pay increases, which are used to project employees' pension benefits at retirement.

- Health Care Cost Trend Rate - Management projects the expected increases in the cost of health care.

In selecting a discount rate for its U.S. defined benefit plans, PPL starts with an analysis of the expected benefit payment stream for its plans. This information is first matched against a spot-rate yield curve. A portfolio of 604 Aa-graded non-callable (or callable with make-whole provisions) bonds, with a total amount outstanding in excess of \$667 billion, serves as the base from which those with the lowest and highest yields are eliminated to develop the ultimate yield curve. The results of this analysis are considered together with other economic data and movements in various bond indices to determine the discount rate assumption. At December 31, 2010, PPL decreased the discount rate for its U.S. pension plans from 6.00% to 5.42% as a result of this assessment and decreased the discount rate for its other postretirement benefit plans from 5.81% to 5.14%.

A similar process is used to select the discount rate for the U.K. pension plans, which uses an iBoxx British pounds sterling denominated corporate bond index as its base. At December 31, 2010, the discount rate for the U.K. pension plans was decreased from 5.55% to 5.54% as a result of this assessment.

The expected long-term rates of return for PPL's U.S. defined benefit pension and other postretirement benefit plans have been developed using a best-estimate of expected returns, volatilities and correlations for each asset class. PPL management corroborates these rates with expected long-term rates of return calculated by its independent actuary, who uses a building block approach that begins with a risk-free rate of return with factors being added such as inflation, duration, credit spreads and equity risk. Each plan's specific asset allocation is also considered in developing a reasonable return assumption.

At December 31, 2010, PPL's expected return on plan assets decreased from 8.00% to 7.25% for its U.S. pension plans and decreased from 7.00% to 6.56% for its other postretirement benefit plans. The expected long-term rates of return for PPL's U.K. pension plans have been developed by PPL management with assistance from an independent actuary using a best-estimate of expected returns, volatilities and correlations for each asset class. For the U.K. plans, PPL's expected return on plan assets decreased from 7.91% to 7.86% at December 31, 2010.

In selecting a rate of compensation increase, PPL considers past experience in light of movements in inflation rates. At December 31, 2010, PPL's rate of compensation increase changed from 4.75% to 4.88% for its U.S. pension plans and 4.75% to 4.90% for its other postretirement benefit plans. For the U.K. plans, PPL's rate of compensation increase remained at 4.00% at December 31, 2010.

In selecting health care cost trend rates, PPL considers past performance and forecasts of health care costs. At December 31, 2010, PPL's health care cost trend rates were 9.00% for 2011, gradually declining to 5.50% for 2019.

A variance in the assumptions listed above could have a significant impact on accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and OCI or regulatory assets and liabilities for LG&E, KU and PPL Electric. While the charts below reflect either an increase or decrease in each assumption, the inverse of this change would impact the accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and OCI or regulatory assets and liabilities for LG&E, KU and PPL Electric by a similar amount in the opposite direction. The sensitivities below reflect an evaluation of the change based solely on a change in that assumption and does not include income tax effects.

At December 31, 2010, defined benefit plan liabilities were as follows.

Pension liabilities	\$	1,505
Other postretirement benefit liabilities		307

The following chart reflects the sensitivities in the December 31, 2010 Balance Sheet associated with a change in certain assumptions based on PPL's primary defined benefit plans.

---

**Increase (Decrease)**

Actuarial assumption	Change in assumption	Impact on defined benefit liabilities	Impact on OCI	Impact on regulatory assets
Discount Rate	(0.25)%	\$ 256	\$ (188)	\$ 68
Rate of Compensation Increase	0.25%	43	(32)	11
Health Care Cost Trend Rate (a)	1.00%	14	(8)	6

(a) Only impacts other postretirement benefits.

In 2010, PPL recognized net periodic defined benefit costs charged to operating expense of \$102 million. This amount represents a \$32 million increase from 2009. This increase in expense was primarily attributable to amortization of actuarial losses of the WPD pension plans in the U.K.

The following chart reflects the sensitivities in the 2010 Statement of Income (excluding income tax effects) associated with a change in certain assumptions based on PPL's primary defined benefit plans.

Actuarial assumption	Change in assumption	Impact on defined benefit costs
Discount Rate	(0.25)%	\$ 14
Expected Return on Plan Assets	(0.25)%	12
Rate of Compensation Increase	0.25%	6
Health Care Cost Trend Rate (a)	1.00%	2

(a) Only impacts other postretirement benefits.

### 3) Asset Impairment

Impairment analyses are performed for long-lived assets that are subject to depreciation or amortization whenever events or changes in circumstances indicate that a long-lived asset's carrying value may not be recoverable. For these long-lived assets classified as held and used, such events or changes in circumstances are:

- a significant decrease in the market price of an asset;
- a significant adverse change in the manner in which an asset is being used or in its physical condition;
- a significant adverse change in legal factors or in the business climate;
- an accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of an asset;
- a current-period operating or cash flow loss combined with a history of losses or a forecast that demonstrates continuing losses; or
- a current expectation that, more likely than not, an asset will be sold or otherwise disposed of before the end of its previously estimated useful life.

For a long-lived asset classified as held and used, an impairment is recognized when the carrying amount of the asset is not recoverable and exceeds its fair value. The carrying amount is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. If the asset is impaired, an impairment loss is recorded to adjust the asset's carrying value to its estimated fair value. Management must make significant judgments to estimate future cash flows, including the useful lives of long-lived assets, the fair value of the assets and management's intent to use the assets. Alternate courses of action are considered to recover the carrying value of a long-lived asset, and estimated cash flows from the "most likely" alternative are used to assess impairment whenever one alternative is clearly the most likely outcome. If no alternative is clearly the most likely, then a probability-weighted approach is used taking into consideration estimated cash flows from the alternatives. For assets tested for impairment as of the balance sheet date, the estimates of future cash flows used in that test consider the likelihood of possible outcomes that existed at the balance sheet date, including the assessment of the likelihood of a future sale of the assets. That assessment is not revised based on events that occur after the balance sheet date. Changes in assumptions and estimates could result in significantly different results than those identified and recorded in the financial statements.

For a long-lived asset classified as held for sale, an impairment exists when the carrying amount of the asset (disposal group) exceeds its fair value less cost to sell. If the asset (disposal group) is impaired, an impairment loss is recorded to

adjust the carrying amount to its fair value less cost to sell. A gain is recognized for any subsequent increase in fair value less cost to sell, but not in excess of the cumulative impairment previously recognized.

For determining fair value, quoted market prices in active markets are the best evidence of fair value. However, when market prices are unavailable, PPL considers all valuation techniques appropriate under the circumstances and for which market participant inputs can be obtained. Generally discounted cash flows are used to estimate fair value, which incorporates market participant inputs when available. Discounted cash flows are calculated by estimating future cash flow streams and applying appropriate discount rates to determine the present value of the cash flow streams.

In 2010, impairments of certain long-lived assets were recorded. See Note 18 to the Financial Statements for a discussion of impairments related to certain sulfur dioxide emission allowances and certain non-core generation facilities.

Goodwill is tested for impairment at the reporting unit level. Reporting units have been determined to be at or one level below operating segments. A goodwill impairment test is performed annually or more frequently if events or changes in circumstances indicate that the carrying value of the reporting unit may be greater than the unit's fair value. Additionally, goodwill is tested for impairment after a portion of goodwill has been allocated to a business to be disposed of.

Goodwill is tested for impairment using a two-step approach. The first step of the goodwill impairment test compares the estimated fair value of a reporting unit with its carrying amount, including goodwill. If the estimated fair value of a reporting unit exceeds its carrying amount, goodwill of the reporting unit is not considered impaired. If the carrying amount exceeds the estimated fair value of the reporting unit, the second step is performed to measure the amount of impairment loss, if any.

The second step requires a calculation of the implied fair value of goodwill. The implied fair value of goodwill is determined in the same manner as the amount of goodwill in a business combination. That is, the estimated fair value of a reporting unit is allocated to all of the assets and liabilities of that unit as if the reporting unit had been acquired in a business combination and the estimated fair value of the reporting unit was the price paid to acquire the reporting unit. The excess of the estimated fair value of a reporting unit over the amounts assigned to its assets and liabilities is the implied fair value of goodwill. The implied fair value of the reporting unit's goodwill is then compared with the carrying amount of that goodwill. If the carrying amount exceeds the implied fair value, an impairment loss is recognized in an amount equal to that excess. The loss recognized cannot exceed the carrying amount of the reporting unit's goodwill.

In 2010, no goodwill was required to be impaired. Management used both discounted cash flows and market multiples, which required significant assumptions, to estimate the fair value of each reporting unit. For the discounted cash flows approach, a decrease in the forecasted cash flows of 10%, or an increase in the discount rate by 25 basis points, would not have resulted in an impairment of goodwill. For the market multiples approach, which is based on either current or forward trading multiples of comparable companies or precedent transactions, a 10% decrease in the multiples would not have resulted in an impairment of goodwill.

In 2010 and 2009, \$5 million and \$3 million of goodwill allocated to discontinued operations was written off.

#### **4) Loss Accruals**

Losses are accrued for the estimated impacts of various conditions, situations or circumstances involving uncertain or contingent future outcomes. For loss contingencies, the loss must be accrued if (1) information is available that indicates it is probable that a loss has been incurred, given the likelihood of the uncertain future events, and (2) the amount of the loss can be reasonably estimated. Accounting guidance defines "probable" as cases in which "the future event or events are likely to occur." The accrual of contingencies that might result in gains is not recorded unless recovery is assured. Potential loss contingencies for environmental remediation, litigation claims, regulatory penalties and other events are continuously assessed.

The accounting aspects of estimated loss accruals include (1) the initial identification and recording of the loss, (2) the determination of triggering events for reducing a recorded loss accrual, and (3) the ongoing assessment as to whether a

recorded loss accrual is sufficient. All three of these aspects require significant judgment by management. Internal expertise and outside experts (such as lawyers and engineers) are used, as necessary, to help estimate the probability that a loss has been incurred and the amount (or range) of the loss.

In 2010, a significant adjustment to the contingency accrual related to the Montana hydroelectric streambed litigation was recorded. See Note 15 to the Financial Statements for additional information.

Certain other events have been identified that could give rise to a loss, but that do not meet the conditions for accrual. Such events are disclosed, but not recorded, when it is "reasonably possible" that a loss has been incurred. See Note 15 to the Financial Statements for disclosure of other potential loss contingencies that have not met the criteria for accrual.

When an estimated loss is accrued, the triggering events for subsequently reducing the loss accrual are identified, where applicable. The triggering events generally occur when the contingency has been resolved and the actual loss is paid or written off, or when the risk of loss has diminished or been eliminated. The following are some of the triggering events that provide for the reduction of certain recorded loss accruals:

- Allowances for uncollectible accounts are reduced when accounts are written off after prescribed collection procedures have been exhausted, a better estimate of the allowance is determined or underlying amounts are ultimately collected.
- Environmental and other litigation contingencies are reduced when the contingency is resolved and actual payments are made, a better estimate of the loss is determined or the loss is no longer considered probable.

Loss accruals are reviewed on a regular basis to assure that the recorded potential loss exposures are appropriate. This involves ongoing communication and analyses with internal and external legal counsel, engineers, operation management and other parties.

## 5) Asset Retirement Obligations

PPL is required to recognize a liability for legal obligations associated with the retirement of long-lived assets. The initial obligation is measured at its estimated fair value. A conditional ARO must be recognized when incurred if the fair value of the ARO can be reasonably estimated. An equivalent amount is recorded as an increase in the value of the capitalized asset and allocated to expense over the useful life of the asset. Until the obligation is settled, the liability is increased, through the recognition of accretion expense in the income statement, for changes in the obligation due to the passage of time. In the case of LG&E and KU, estimated costs of removal for all assets are recovered in rates as a component of depreciation. Since costs of removal are collected in rates prior to payment of such costs, the accrual for these costs of removal is classified as a regulatory liability. The regulatory liability is relieved as costs are incurred. The depreciation and accretion expense related to an ARO is recorded as a regulatory asset. See Note 21 to the Financial Statements for further discussion of AROs.

In determining AROs, management must make significant judgments and estimates to calculate fair value. Fair value is developed using an expected present value technique based on assumptions of market participants that considers estimated retirement costs in current period dollars that are inflated to the anticipated retirement date and then discounted back to the date the ARO was incurred. Changes in assumptions and estimates included within the calculations of the fair value of AROs could result in significantly different results than those identified and recorded in the financial statements. Estimated ARO costs and settlement dates, which affect the carrying value of the ARO and the related capitalized asset, are reviewed periodically to ensure that any material changes are incorporated into the latest estimate of the ARO. Any change to the capitalized asset, positive or negative, is amortized over the remaining life of the associated long-lived asset. See Note 21 to the Financial Statements for a discussion of the remeasurement of the ARO for the decommissioning of the Susquehanna nuclear units in the third quarter of 2010, which resulted in a \$103 million reduction in the ARO primarily due to a decrease in estimated inflation rates.

At December 31, 2010, AROs totaling \$448 million were recorded on the Balance Sheet, of which \$13 million is included in "Other current liabilities." Of the total amount, \$270 million, or 60%, relates to the nuclear decommissioning

ARO. The most significant assumptions surrounding AROs are the forecasted retirement costs, the discount rates and the inflation rates. A variance in any of these inputs could have a significant impact on the ARO liabilities.

The following table reflects the sensitivities related to the nuclear decommissioning ARO liability associated with a change in these assumptions as of December 31, 2010. There is no significant change to the annual depreciation expense of the ARO asset or the annual accretion expense of the ARO liability as a result of changing the assumptions. The sensitivities below reflect an evaluation of the change based solely on a change in that assumption.

	<u>Change in Assumption</u>	<u>Impact on ARO Liability</u>
Retirement Cost	10%	\$27
Discount Rate	(0.25)%	\$25
Inflation Rate	0.25%	\$26

## 6) Income Taxes

Significant management judgment is required in developing the provision for income taxes, primarily due to the uncertainty related to tax positions taken or expected to be taken in tax returns and the determination of deferred tax assets, liabilities and valuation allowances.

Significant management judgment is required to determine the amount of benefit recognized related to an uncertain tax position. Tax positions are evaluated following a two-step process. The first step requires an entity to determine whether, based on the technical merits supporting a particular tax position, it is more likely than not (greater than a 50% chance) that the tax position will be sustained. This determination assumes that the relevant taxing authority will examine the tax position and is aware of all the relevant facts surrounding the tax position. The second step requires an entity to recognize in the financial statements the benefit of a tax position that meets the more-likely-than-not recognition criterion. The benefit recognized is measured at the largest amount of benefit that has a likelihood of realization, upon settlement, that exceeds 50%. Management considers a number of factors in assessing the benefit to be recognized, including negotiation of a settlement.

On a quarterly basis, uncertain tax positions are reassessed by considering information known at the reporting date. Based on management's assessment of new information, a tax benefit may subsequently be recognized for a previously unrecognized tax position, a previously recognized tax position may be de-recognized, or the benefit of a previously recognized tax position may be remeasured. The amounts ultimately paid upon resolution of issues raised by taxing authorities may differ materially from the amounts accrued and may materially impact the financial statements in the future.

At December 31, 2010, it was reasonably possible that during the next 12 months the total amount of unrecognized tax benefits could increase by as much as \$28 million or decrease by up to \$226 million. This change could result from subsequent recognition, derecognition and/or changes in the measurement of uncertain tax positions related to the creditability of foreign taxes, the timing and utilization of foreign tax credits and the related impact on alternative minimum tax and other credits, the timing and/or valuation of certain deductions, intercompany transactions and unitary filing groups. The events that could cause these changes are direct settlements with taxing authorities, litigation, legal or administrative guidance by relevant taxing authorities and the lapse of an applicable statute of limitation.

The balance sheet classification of unrecognized tax benefits and the need for valuation allowances to reduce deferred tax assets also require significant management judgment. Unrecognized tax benefits are classified as current to the extent management expects to settle an uncertain tax position by payment or receipt of cash within one year of the reporting date. Valuation allowances are initially recorded and reevaluated each reporting period by assessing the likelihood of the ultimate realization of a deferred tax asset. Management considers a number of factors in assessing the realization of a deferred tax asset, including the reversal of temporary differences, future taxable income and ongoing prudent and feasible tax planning strategies. Any tax planning strategy utilized in this assessment must meet the recognition and measurement criteria utilized to account for an uncertain tax position. Management also considers the uncertainty posed by political risk (e.g. the potential for legislative extension of generation rate caps) and the effect of this uncertainty on the various factors that management takes into account in evaluating the need for valuation

allowances. The amount of deferred tax assets ultimately realized may differ materially from the estimates utilized in the computation of valuation allowances and may materially impact the financial statements in the future. See Note 5 to the Financial Statements for income tax disclosures, including the release of \$72 million of valuation allowances associated with state net operating loss carryforwards in 2010.

## 7) Regulatory Assets and Liabilities

Certain of PPL's subsidiaries are subject to cost-based rate regulation. As a result, the effects of regulatory actions are required to be reflected in the financial statements. Assets and liabilities are recorded that result from the regulated ratemaking process that may not be recorded under GAAP for non-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because such costs are probable of future recovery in regulated customer rates. Regulatory liabilities generally represent obligations to regulated customers for previous collections of costs that are expected to be refunded to customers in the future, or in certain cases, regulatory liabilities are recorded based on the understanding with the regulator that current rates are being set to recover costs that are expected to be incurred in the future, and the regulated entity is accountable for any amounts charged pursuant to such rates and not yet expended for the intended purpose.

Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as changes in the applicable regulatory and political environments, the ability to recover costs through regulated rates, recent rate orders to other regulated entities, and the status of any pending or potential deregulation legislation. Based on this continual assessment, management believes the existing regulatory assets are probable of recovery. This assessment reflects the current political and regulatory climate at the state and federal levels, and is subject to change in the future. If future recovery of costs ceases to be probable, then asset write-offs would be required to be recognized in operating income. Additionally, the regulatory agencies can provide flexibility in the manner and timing of the depreciation of PP&E and amortization of regulatory assets.

At December 31, 2010 and 2009, PPL had regulatory assets of \$1.2 billion and \$542 million. All regulatory assets are either currently being recovered under specific rate orders, represent amounts that are expected to be recovered in future rates or benefit future periods based upon established regulatory practices. At December 31, 2010 and 2009, PPL had regulatory liabilities of \$1.1 billion and \$84 million. The significant increase in regulatory assets and liabilities was primarily due to the acquisition of LKE in November 2010.

See "Business Combinations – Purchase Price Allocation" below for discussion of regulatory assets established by purchase accounting. See Note 3 to the Financial Statements for additional information on regulatory assets and liabilities.

## 8) Business Combinations – Purchase Price Allocation

On November 1, 2010 (acquisition date), PPL completed the acquisition of all of the limited liability company interests of LKE. In accordance with accounting guidance on business combinations, the identifiable assets acquired and the liabilities assumed were measured at fair value at the acquisition date. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. The excess of the purchase price over the estimated fair value of the identifiable net assets was recorded as goodwill.

The determination and allocation of fair value to the identifiable assets acquired and liabilities assumed was based on various assumptions and valuation methodologies requiring considerable management judgment, including estimates based on key assumptions of the acquisition, and historical and current market data. The most significant variables in these valuations were the discount rates, the number of years on which to base cash flow projections, as well as the assumptions and estimates used to determine cash inflows and outflows. Although the assumptions were reasonable based on information available at the date of acquisition, actual results may differ from the forecasted amounts and the difference could be material.

For purposes of measuring the fair value of the majority of PP&E and regulatory assets acquired and regulatory liabilities assumed, PPL determined that fair value was equal to net book value at the acquisition date, because LKE's operations are conducted in a regulated environment and the regulatory commissions allow for earning a rate of return on and

recovery of the book value of a majority of the regulated asset bases at rates determined to be fair and reasonable. As there is no current prospect for deregulation in LKE's operating territory, it is expected that these operations will remain in a regulated environment for the foreseeable future; therefore, management has concluded that the use of these assets in the regulatory environment represents their highest and best use and a market participant would measure the fair value of these assets using the regulatory rate of return as the discount rate, thus resulting in fair value equal to book value.

The fair value of intangible assets and liabilities (e.g. contracts that have favorable or unfavorable terms relative to market), including coal contracts and power purchase agreements, as well as emission allowances, have been reflected on the balance sheet with offsetting regulatory assets or liabilities. Prior to the acquisition, LKE recovered in customer rates the cost of coal contracts, power purchases and emission allowances and this rate treatment will continue after the acquisition. As a result, management believes the regulatory assets and liabilities created to offset the fair value adjustments meet the recognition criteria established by existing accounting guidance and eliminate any rate making impact of the fair value adjustments. LKE's customer rates will continue to reflect these items (e.g. coal, purchased power, emission allowances) at their original contracted prices.

PPL also considered whether a separate fair value should be assigned to LKE's rights to operate within its various electric and natural gas distribution service territories but concluded that these rights only provided the opportunity to earn a regulated return and barriers to market entry, which in management's judgment is not considered a separately identifiable intangible asset under applicable accounting guidance; rather, it is considered going-concern value, or goodwill.

Goodwill related to the LKE acquisition of \$996 million was recorded at LG&E and KU. For purposes of goodwill impairment testing, the goodwill must be assigned to the reporting units that are expected to benefit from the acquisition. Both the Kentucky Regulated and the Supply segments are expected to benefit and the assignment of goodwill was \$662 million to the Kentucky Regulated segment and \$334 million to the Supply segment. The goodwill at the Kentucky Regulated segment reflects the expected going-concern element of LKE's existing business. This going-concern element reflects the expected continued growth of a rate-regulated business located in a defined service area with a constructive regulatory environment, the ability of LKE to leverage its assembled workforce to take advantage of those growth opportunities and the attractiveness of stable, growing cash flows. Although no other assets or liabilities from the acquisition were assigned to the Supply segment, the Supply segment obtained a synergistic benefit attributed to the overall de-risking of the PPL portfolio, which enhanced PPL Energy Supply's credit profile, thereby increasing the value of the Supply segment. This increase in value resulted in the assignment of goodwill to the Supply segment.

See Note 10 to the Financial Statements for additional information regarding the acquisition.

#### **Other Information**

PPL's Audit Committee has approved the independent auditor to provide audit and audit-related services and other services permitted by Sarbanes-Oxley and SEC rules. The audit and audit-related services include services in connection with statutory and regulatory filings, reviews of offering documents and registration statements, and internal control reviews.

**PPL ENERGY SUPPLY, LLC AND SUBSIDIARIES****Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations****Overview**

The information provided in this Item 7 should be read in conjunction with PPL Energy Supply's Consolidated Financial Statements and the accompanying Notes. Terms and abbreviations are explained in the glossary. Dollars are in millions unless otherwise noted.

PPL Energy Supply is an energy company with headquarters in Allentown, Pennsylvania. Through its subsidiaries, PPL Energy Supply is primarily engaged in the generation and marketing of electricity in two key markets - the northeastern and northwestern U.S. - and, through 2010, in the delivery of electricity in the U.K. PPL Energy Supply's overall strategy is to achieve disciplined growth in energy supply margins while limiting volatility in both cash flows and earnings and to achieve stable, long-term growth in its regulated international electricity delivery business through efficient operations and strong customer and regulatory relations. More specifically, PPL Energy Supply's strategy for its competitive electricity generation and marketing business is to match energy supply with load, or customer demand, under contracts of varying lengths with creditworthy counterparties to capture profits while effectively managing exposure to energy and fuel price volatility, counterparty credit risk and operational risk. PPL Energy Supply's strategy for its regulated international electricity delivery business is to own and operate this business at the most efficient cost while maintaining high quality customer service and reliability.

In January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding, to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements. See Note 24 for additional information. Certain information for periods subsequent to 2010 has been adjusted to eliminate amounts related to PPL Global.

To manage financing costs and access to credit markets, a key objective for PPL Energy Supply's business is to maintain a strong credit profile. PPL Energy Supply continually focuses on maintaining an appropriate capital structure and liquidity position. In addition, PPL Energy Supply has adopted financial and operational risk management programs that, among other things, are designed to monitor and manage its exposure to earnings and cash flow volatility related to changes in energy and fuel prices, interest rates, foreign currency exchange rates, counterparty credit quality and the operating performance of its generating units. See "Item 1A. Risk Factors" for more information concerning these and other material risks PPL Energy Supply faces in its businesses.

Refer to "Item 1. Business - Background" for descriptions of PPL Energy Supply's reportable segments, which are International Regulated (formerly International Delivery) and Supply. In 2010, there were no changes to these segments other than renaming the International Regulated segment.

"Management's Discussion and Analysis of Financial Condition and Results of Operations" provides information concerning PPL Energy Supply's performance in implementing the strategies and managing the risks and challenges mentioned above. Specifically:

- "Results of Operations" provides an overview of PPL Energy Supply's operating results in 2010, 2009 and 2008, including a review of earnings, with details of results by reportable segment. It also provides a brief outlook for 2011.
- "Financial Condition - Liquidity and Capital Resources" provides an analysis of PPL Energy Supply's liquidity position and credit profile, including its sources of cash (including bank credit facilities and sources of operating cash flow) and uses of cash (including contractual obligations and capital expenditure requirements) and the key risks and uncertainties that impact PPL Energy Supply's past and future liquidity position and financial condition. This subsection also includes rating agency actions on PPL Energy Supply's credit ratings.
- "Financial Condition - Risk Management - Energy Marketing & Trading and Other" provides an explanation of PPL Energy Supply's risk management programs relating to market risk and credit risk.

- "Application of Critical Accounting Policies" provides an overview of the accounting policies that are particularly important to the results of operations and financial condition of PPL Energy Supply and that require its management to make significant estimates, assumptions and other judgments.

See "Item 1. Business - Background - Segment Information - Pennsylvania Regulated Segment" for a discussion of the Customer Choice Act.

When comparing 2010 with 2009, certain line items on PPL Energy Supply's financial statements were impacted by the expiration of the full-requirement energy supply contracts. Overall, the expiration of generation rate caps had a significant positive impact on PPL Energy Supply's results of operations, financial condition and cash flows during 2010.

The primary impact of the expiration of generation rate caps and this contract is reflected in PPL Energy Supply's unregulated gross energy margins. See "Statement of Income Analysis" for an explanation of this non-GAAP financial measure. In 2010, PPL Energy Supply sold the majority of its generation supply under various wholesale and retail contracts at prevailing market rates at the time the contracts were executed. In 2009, the majority of generation produced by PPL Energy Supply's generation plants was sold to PPL Electric's customers as PLR supply under predetermined capped rates.

See "Regulatory Issues - Enactment of Financial Reform Legislation" in Note 15 for information on the Dodd-Frank Act.

### Results of Operations

Tables analyzing changes in amounts between periods within "Segment Results" and "Statement of Income Analysis" are presented on a constant U.K. foreign currency exchange rate basis, where applicable, in order to isolate the impact of the change in the exchange rate on the item being explained. Results computed on a constant U.K. foreign currency exchange rate basis are calculated by translating current year results at the prior year weighted-average foreign currency exchange rate.

#### Earnings

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Net Income Attributable to PPL Energy Supply	\$ 861	\$ 246	\$ 768

The changes in Net Income Attributable to PPL Energy Supply from year to year were, in part, due to several special items that management considers significant. Details of these special items are provided within the review of each segment's earnings.

The year-to-year changes in significant earnings components, including unregulated gross energy margins by region and significant income statement line items, are explained in the "Statement of Income Analysis."

#### Segment Results

Net Income Attributable to PPL Energy Supply by segment was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
International Regulated	\$ 261	\$ 243	\$ 290
Supply	600	3	478
Total	<u>\$ 861</u>	<u>\$ 246</u>	<u>\$ 768</u>

#### International Regulated Segment

The International Regulated segment primarily includes the electric distribution operations of WPD. See Note 9 to the Financial Statements for additional information on the sale of PPL's Latin American businesses in 2007. The

International Regulated segment results in 2009 and 2008 reflect the classification of its Latin American businesses as Discontinued Operations.

International Regulated segment Net Income Attributable to PPL Energy Supply was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Utility revenues	\$ 727	\$ 684	\$ 824
Energy-related businesses	34	32	33
Total operating revenues	<u>761</u>	<u>716</u>	<u>857</u>
Other operation and maintenance	182	140	186
Depreciation	117	115	134
Taxes, other than income	52	57	66
Energy-related businesses	17	16	14
Total operating expenses	<u>368</u>	<u>328</u>	<u>400</u>
Other Income (Expense) - net	3	(11)	17
Interest Expense	135	87	144
Income Tax Expense		20	45
Income (Loss) from Discontinued Operations		(27)	5
Net Income Attributable to PPL Energy Supply	<u>\$ 261</u>	<u>\$ 243</u>	<u>\$ 290</u>

The after-tax changes in Net Income Attributable to PPL Energy Supply between these periods were due to the following factors.

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
U.K.		
Utility revenues	\$ 30	\$ 10
Other operation and maintenance	(34)	16
Other income (expense) - net	1	(7)
Depreciation	(2)	(4)
Interest expense	(36)	28
Income taxes	13	24
Foreign currency exchange rates	6	(69)
Other	5	(3)
Discontinued operations, excluding special item (Note 9)		(5)
U.S. income taxes	(32)	1
Other	7	(10)
Special items	60	(28)
Total	<u>\$ 18</u>	<u>\$ (47)</u>

- U.K. utility revenues increased in 2010 compared with 2009, primarily due to price increases in April 2010 and 2009, partially offset by lower regulatory recovery due to a revised estimate of network electricity losses.

U.K. utility revenues increased in 2009 compared with 2008, due to higher regulatory recovery primarily due to a revised estimate of network electricity losses and higher prices.

- U.K. other operation and maintenance increased in 2010 compared with 2009, primarily due to higher pension expense resulting from an increase in amortization of actuarial losses.

U.K. other operation and maintenance decreased in 2009 compared with 2008, primarily due to lower pension cost resulting from an increase in discount rates and lower inflation rates.

- U.K. interest expense increased in 2010 compared with 2009, primarily due to higher inflation rates on index-linked Senior Unsecured Notes and interest expense related to the March 2010 debt issuance.

U.K. interest expense decreased in 2009 compared with 2008, primarily due to lower inflation rates on index-linked Senior Unsecured Notes and lower debt balances.

- U.K. income taxes decreased in 2010 compared with 2009, primarily due to realized capital losses that offset a gain

relating to a business activity sold in 1999, partially offset by favorable settlements of uncertain tax positions in 2009.

U.K. income taxes decreased in 2009 compared with 2008, primarily due to HMRC's determination related to the valuation of a business activity sold in 1999 and to the deductibility of foreign currency exchange losses, partially offset by the settlement of uncertain tax positions and a change in the tax law in 2008.

- Changes in foreign currency exchange rates positively impacted U.K. earnings for 2010 compared with 2009, and negatively impacted U.K. earnings for 2009 compared with 2008. The weighted-average exchange rates for the British pound sterling were approximately \$1.56 in 2010, \$1.53 in 2009 and \$1.91 in 2008.
- U.S. income taxes increased in 2010 compared with 2009, primarily due to changes in the taxable amount of planned U.K. cash repatriations.

The following after-tax amounts, which management considers special items, also impacted the International Regulated segment's earnings.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Foreign currency-related economic hedges (a)	\$ 1	\$ 1	
Sales of assets:			
Latin American businesses (Note 9)		(27)	
Asset impairments		(1)	
Workforce reduction (Note 13)		(2)	\$ (1)
Other:			
Change in U.K. tax rate (Note 5)	18		
U.S. Tax Court ruling (b)	12		
Total	<u>\$ 31</u>	<u>\$ (29)</u>	<u>\$ (1)</u>

- (a) Represents unrealized gains on contracts that economically hedge anticipated earnings denominated in British pounds sterling.  
(b) Represents the net tax benefit recorded as a result of the U.S. Tax Court ruling that the U.K. Windfall Profits Tax is creditable for U.S. tax purposes, excluding the reversal of accrued interest. See Notes 5 and 15 to the Financial Statements for additional information.

### 2011 Outlook

In January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding, to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements. See Note 24 to the Financial Statements for additional information.

### Supply Segment

The Supply segment primarily consists of the energy marketing and trading activities, as well as the competitive generation and development operations of PPL Energy Supply. In September 2010, certain PPL Energy Supply subsidiaries signed definitive agreements to sell their entire ownership interests in certain non-core generation facilities. The sale is expected to close in the first quarter of 2011, subject to the receipt of necessary regulatory approvals and third-party consents. The operating results of these facilities have been classified as Discontinued Operations. In 2010 and 2009, PPL Energy Supply subsidiaries also completed the sale of several businesses, which have been classified as Discontinued Operations. See Note 9 to the Financial Statements for additional information.

Supply segment Net Income Attributable to PPL Energy Supply was:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Energy revenues (a)	\$ 4,764	\$ 4,930	\$ 5,050
Energy-related businesses	364	379	478
Total operating revenues	<u>5,128</u>	<u>5,309</u>	<u>5,528</u>
Fuel and energy purchases (a)	2,449	3,657	3,178
Other operation and maintenance	979	921	876

Depreciation	236	195	165
Taxes, other than income	47	29	20
Energy-related businesses	356	372	464
Total operating expenses	<u>4,067</u>	<u>5,174</u>	<u>4,703</u>
Other Income (Expense) - net (b)	32	46	43
Other-Than-Temporary Impairments	3	18	36
Interest Expense	208	176	162
Income Taxes	262	3	256
Income (Loss) from Discontinued Operations	<u>(19)</u>	<u>20</u>	<u>66</u>
Net Income	601	4	480
Net Income Attributable to Noncontrolling Interests (Note 22)	1	1	2
Net Income Attributable to PPL Energy Supply	<u>\$ 600</u>	<u>\$ 3</u>	<u>\$ 478</u>

- (a) Includes impact from energy-related economic activity. See "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements for additional information.
- (b) Includes interest income from affiliates.

The after-tax changes in Net Income Attributable to PPL Energy Supply between these periods were due to the following factors.

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Eastern U.S. non-trading margins	\$ 607	\$ (3)
Western U.S. non-trading margins	9	20
Net energy trading margins	(9)	81
Other operation and maintenance	(26)	(33)
Depreciation	(24)	(18)
Income taxes and other	81	(44)
Discontinued operations, excluding special items (Note 9)	13	(9)
Special items	(54)	(469)
Total	<u>\$ 597</u>	<u>\$ (475)</u>

- See "Unregulated Gross Energy Margins" in the "Statement of Income Analysis" section for an explanation of non-trading margins and net energy trading margins.
- Other operation and maintenance increased in 2010 compared with 2009, primarily due to increased payroll-related costs, higher contractor-related costs and other costs at Susquehanna. Also contributing to the increase were higher support group costs, higher expenses at western fossil/hydro plants due to the Corette overhaul and lease expense related to the use of the streambeds in Montana. See Note 15 to the Financial Statements for additional information on continuing litigation regarding the streambeds in Montana.

Other operation and maintenance increased in 2009 compared with 2008, primarily due to increased payroll-related costs, higher contractor-related costs and other costs at generation plants.

- Depreciation increased in 2010 compared with 2009, primarily due to the Brunner Island environmental equipment that was placed in service in 2009 and early 2010.

Depreciation increased in 2009 compared with 2008, primarily due to the scrubbers at Brunner Island and Montour and portions of the Susquehanna uprate projects that were placed in service in 2008 and 2009.

- Income taxes decreased in 2010 compared with 2009, primarily due to a release of valuation allowances related to deferred tax assets for Pennsylvania net operating loss carryforwards, investment tax credits at Holtwood and Rainbow, a release of tax reserves in 2010, and a tax benefit from the manufacturing deduction.

Income taxes increased in 2009 compared with 2008, in part due to lower domestic manufacturing deductions in 2009.

The following after-tax amounts, which management considers special items, also impacted the Supply segment's earnings.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Adjusted energy-related economic activity, net (a)	\$ (121)	\$ (225)	\$ 251
Sales of assets:			
Maine hydroelectric generation business (Note 9)	15	22	
Sundance indemnification	1		
Long Island generation business (b)		(33)	
Interest in Wyman Unit 4 (Note 9)		(4)	
Impairments:			
Impacts from emission allowances (c)	(10)	(19)	(25)
Adjustments - NDT investments (d)			(17)
Other asset impairments (e)		(4)	(15)
Workforce reduction (Note 13)		(6)	(1)
LKE acquisition-related costs:			
Monetization of certain full-requirement sales contracts (f)	(125)		
Anticipated sale of certain non-core generation facilities (g)	(64)		
Reduction of credit facility (Note 7)	(6)		
Other:			
Montana hydroelectric litigation (Note 15)	(34)	(3)	
Health Care Reform - tax impact (Note 13)	(5)		
Montana basin seepage litigation (Note 15)	2		(5)
Change in tax accounting method related to repairs (Note 5)		(21)	
Synfuel tax adjustment (Note 15)			(13)
Off-site remediation of ash basin leak (Note 15)			1
Total	<u>\$ (347)</u>	<u>\$ (293)</u>	<u>\$ 176</u>

- (a) See "Reconciliation of Economic Activity" below.
- (b) Consists primarily of the initial impairment charge recorded in June 2009 when this business was classified as held for sale. See Note 9 to the Financial Statements for additional information.
- (c) 2010 and 2009 include impairments of sulfur dioxide emission allowances. 2009 also includes a pre-tax gain of \$4 million related to the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options. See Note 18 to the Financial Statements for additional information.
- 2008 consists of charges related to annual nitrogen oxide allowances and put options. See Note 18 to the Financial Statements for additional information.
- (d) Represents other-than-temporary impairment charges on securities, including reversals of previous impairments when securities previously impaired were sold.
- (e) 2008 primarily consists of a pre-tax charge of \$22 million related to the Holtwood hydroelectric expansion project. See Note 8 to the Financial Statements for additional information.
- (f) See "Components of Monetization of Certain Full-Requirement Sales Contracts" below.
- (g) Consists primarily of an impairment charge recorded when these facilities were classified as held for sale, and allocated goodwill that was written off. See Note 9 to the Financial Statements for additional information.

### *Reconciliation of Economic Activity*

The following table reconciles unrealized pre-tax gains (losses) from the table within "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements to the special item identified as "Adjusted energy-related economic activity, net."

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Revenues			
Unregulated retail electric and gas	\$ 1	\$ 6	\$ 5
Wholesale energy marketing	(805)	(229)	1,056
Operating Expenses			
Fuel	29	49	(79)
Energy Purchases	286	(155)	(553)
Energy-related economic activity (a)	(489)	(329)	429
Option premiums (b)	32	(54)	
Adjusted energy-related economic activity	(457)	(383)	429
Less: Unrealized economic activity associated with the monetization of certain full-requirement sales contracts (c)	(251)		
Adjusted energy-related economic activity, net, pre-tax	<u>\$ (206)</u>	<u>\$ (383)</u>	<u>\$ 429</u>
Adjusted energy-related economic activity, net, after-tax	<u>\$ (121)</u>	<u>\$ (225)</u>	<u>\$ 251</u>

- (a) The components of this item are from the table within "Commodity Price Risk (Non-trading) - Economic Activity" in Note 19 to the Financial Statements.
- (b) Adjustment for the net deferral and amortization of option premiums over the delivery period of the item that was hedged or upon realization. After-tax amount for 2010 was \$19 million and for 2009 was \$31 million.
- (c) See "Components of Monetization of Certain Full-Requirement Sales Contracts" below.

#### *Components of Monetization of Certain Full-Requirement Sales Contracts*

The following table provides the components of the "Monetization of Certain Full-Requirement Sales Contracts" special item.

	<u>2010</u>
Full-requirement sales contracts monetized (a)	\$ (68)
Economic activity related to the full-requirement sales contracts monetized	(146)
Monetization of certain full-requirement sales contracts, pre-tax (b)	<u>\$ (214)</u>
Monetization of certain full-requirement sales contracts, after-tax	<u>\$ (125)</u>

- (a) See "Commodity Price Risk (Non-trading) – Monetization of Certain Full-Requirement Sales Contracts" in Note 19 to the Financial Statements for additional information.
- (b) Includes unrealized losses of \$251 million from the "Reconciliation of Economic Activity" table above. These amounts are reflected in "Wholesale energy marketing - Unrealized economic activity" and "Energy purchases - Unrealized economic activity" on the Statement of Income. Also includes net realized gains of \$37 million, which are reflected in "Wholesale energy marketing - Realized" and "Energy purchases - Realized" on the Statement of Income. This economic activity will continue to be realized through May 2013.

#### *2011 Outlook*

Excluding special items, lower earnings are projected from the Supply segment in 2011 compared with 2010 as a result of lower energy margins driven by lower energy and capacity prices in the East, higher average fuel costs, and higher operation and maintenance expense.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings.

#### **Statement of Income Analysis --**

#### **Unregulated Gross Energy Margins**

##### Non-GAAP Financial Measure

The following discussion includes financial information prepared in accordance with GAAP, as well as a non-GAAP financial measure, "Unregulated Gross Energy Margins." "Unregulated Gross Energy Margins" is a single financial performance measure of PPL Energy Supply's competitive energy non-trading and trading activities. In calculating this measure, the Supply segment's energy revenues are offset by the cost of fuel and energy purchases, and adjusted for other related items. This performance measure is relevant to PPL Energy Supply due to the volatility in the individual revenue and expense lines on the Statements of Income that comprise "Unregulated Gross Energy Margins." This volatility stems from a number of factors, including the required netting of certain transactions with ISOs and significant swings in unrealized gains and losses. Such factors could result in gains or losses being recorded in either "Wholesale energy marketing" or "Energy purchases" on the Statements of Income. In addition, PPL Energy Supply excludes from "Unregulated Gross Energy Margins" energy-related economic activity, which includes the changes in fair value of positions used to economically hedge a portion of the economic value of PPL Energy Supply's competitive generation assets, full-requirement and retail activities. This economic value is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power) prior to the delivery period that was hedged. Also included in this energy-related economic activity is the ineffective portion of qualifying cash flow hedges, net losses on the monetization of certain full-requirement sales contracts and premium amortization associated with options. This economic activity is deferred, with the exception of the net losses on the full-requirement sales contracts that were

monetized, and included in unregulated gross energy margins over the delivery period that was hedged or upon realization. PPL Energy Supply believes that "Unregulated Gross Energy Margins" provides another criterion to make investment decisions. This performance measure is used, in conjunction with other information, internally by senior management and the Board of Directors of PPL to manage its competitive energy non-trading and trading activities. PPL's management also uses "Unregulated Gross Energy Margins" in measuring certain PPL corporate performance goals used in determining variable compensation.

This measure is not intended to replace "Operating Income," which is determined in accordance with GAAP, as an indicator of overall operating performance. Other companies may use different measures to analyze and to report on the results of their operations. The following table reconciles "Operating Income" to "Unregulated Gross Energy Margins" as defined by PPL Energy Supply.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Income (a)	\$ 1,454	\$ 523	\$ 1,282
Adjustments:			
Utility (a)	(727)	(684)	(824)
Energy-related businesses, net (b)	(25)	(23)	(33)
Other operation and maintenance (a)	1,161	1,061	1,062
Depreciation (a)	353	310	299
Taxes, other than income (a)	99	86	86
Revenue adjustments (c)	600	411	(868)
Expense adjustments (c)	(145)	47	560
Unregulated gross energy margins	<u>\$ 2,770</u>	<u>\$ 1,731</u>	<u>\$ 1,564</u>

(a) As reported on the Statements of Income.

(b) Amount represents the net of "Energy-related businesses" revenue and expense as reported on the Statements of Income.

(c) The components of these adjustments are detailed in the table below.

The following table provides the income statement line items and other adjustments that comprise unregulated gross energy margins.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Revenue						
Wholesale energy marketing (a)	\$ 4,027	\$ 2,955	\$ 1,072	\$ 2,955	\$ 3,194	\$ (239)
Wholesale energy marketing to affiliate (a)	320	1,806	(1,486)	1,806	1,826	(20)
Unregulated retail electric and gas (a)	415	152	263	152	151	1
Net energy trading margins (a)	2	17	(15)	17	(121)	138
Revenue adjustments (b)						
Exclude impact from energy-related economic activity (c)	483	274	209	274	(1,061)	1,335
Include gains from sale of emission allowances/RECs (d)		2	(2)	2	6	(4)
Include revenue from Supply segment discontinued operations (e)	117	135	(18)	135	187	(52)
Total revenue adjustments	<u>600</u>	<u>411</u>	<u>189</u>	<u>411</u>	<u>(868)</u>	<u>1,279</u>
	<u>5,364</u>	<u>5,341</u>	<u>23</u>	<u>5,341</u>	<u>4,182</u>	<u>1,159</u>
Expense						
Fuel (a)	1,096	920	176	920	1,057	(137)
Energy purchases (a)	1,350	2,667	(1,317)	2,667	2,013	654
Energy purchases from affiliate (a)	3	70	(67)	70	108	(38)
Expense adjustments (b)						
Exclude impact from energy-related economic activity (f)	63	(109)	172	(109)	(632)	523
Include expenses from Supply segment discontinued operations (g)	33	22	11	22	37	(15)

Include ancillary charges (d)	24	19	5	19	15	4
Include gross receipts tax (h)	15		15			
Other	10	21	(11)	21	20	1
Total expense adjustments	145	(47)	192	(47)	(560)	513
	2,594	3,610	(1,016)	3,610	2,618	992
Unregulated gross energy margins	\$ 2,770	\$ 1,731	\$ 1,039	\$ 1,731	\$ 1,564	\$ 167

- (a) As reported on the Statements of Income.
- (b) To include/exclude the impact of any revenues and expenses consistent with the way management reviews unregulated gross energy margins internally.
- (c) See "Commodity Price Risk (Non-trading) – Economic Activity" in Note 19 to the Financial Statements for additional information. In addition, 2010 and 2009 includes a pre-tax gain of \$28 million and a loss of \$51 million related to the amortization of option premiums, and in 2010 a realized gain of \$293 million related to the monetization of certain full-requirement sales contracts. These amounts are reflected in "Wholesale energy marketing – Realized" on the Statement of Income.
- (d) Included in "Other operation and maintenance" on the Statements of Income.
- (e) Represents the operating revenues of the Supply segment businesses classified as discontinued operations. See Note 9 to the Financial Statements for additional information.
- (f) See "Commodity Price Risk (Non-trading) – Economic Activity" in Note 19 to the Financial Statements for additional information. In addition, 2010 and 2009 include a pre-tax gain of \$4 million and a loss of \$3 million related to the amortization of option premiums, and in 2010 a realized loss of \$256 million related to the monetization of certain full-requirement sales contracts. These amounts are reflected in "Energy purchases – Realized" on the Statement of Income.
- (g) Represents fuel costs and energy purchases associated with the anticipated sale of certain non-core generation facilities that are classified as discontinued operations. See Note 9 to the Financial Statements for additional information.
- (h) Included in "Taxes, other than income" on the Statement of Income.

### Unregulated Gross Energy Margins By Region

Unregulated gross energy margins are generated through non-trading and trading activities. The non-trading energy business is managed on a geographic basis that is aligned with its generation assets.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Non-trading:						
Eastern U.S.	\$ 2,429	\$ 1,391	\$ 1,038	\$ 1,391	\$ 1,396	\$ (5)
Western U.S.	339	323	16	323	289	34
Net energy trading	2	17	(15)	17	(121)	138
Unregulated gross energy margins	\$ 2,770	\$ 1,731	\$ 1,039	\$ 1,731	\$ 1,564	\$ 167

#### *Eastern U.S.*

Eastern U.S. non-trading margins were higher in 2010 compared with 2009, primarily due to significantly higher pricing in 2010 for eastern baseload generation compared with prices realized under the PLR contract with PPL Electric that expired at the end of 2009. Partially offsetting the increase were lower realized margins from full-requirement sales contracts due to lower customer demand and customer migration.

Eastern U.S. non-trading margins were lower in 2009 compared with 2008, primarily due to lower margins on full-requirement sales contracts resulting from mild weather, decreased demand, and customer migration. Also contributing to the decrease were higher average baseload generation fuel costs, primarily due to higher coal prices. Partially offsetting these lower margins were net gains resulting from the settlement of economic positions associated with rebalancing portfolios to better align them with current strategies, higher capacity revenue, higher baseload generation output due to unplanned major outages in 2008, and an increase in the PLR sales prices in accordance with the PUC Final Order.

#### *Western U.S.*

Western U.S. non-trading margins were higher in 2010 compared with 2009, primarily due to higher average prices, partially offset by lower volumes.

Western U.S. non-trading margins were higher in 2009 compared with 2008, primarily due to higher wholesale volumes and increased generation from the hydroelectric units.

### *Net Energy Trading*

Net energy trading margins decreased in 2010 compared with 2009, consisting of lower trading margins related to power and gas, partially offset by higher trading margins related to FTRs.

Net energy trading margins increased in 2009 compared with 2008, primarily due to increased margins in the power, gas and oil trading positions resulting from unrealized trading losses in 2008 due to a dramatic decline in energy prices and a severe contraction of liquidity in the wholesale power markets.

### Utility Revenues

The changes in utility revenues were attributable to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
U.K. electric delivery revenue	\$ 41	\$ 14
U.K. foreign currency exchange rates	2	(154)
Total	<u>\$ 43</u>	<u>\$ (140)</u>

U.K. electric delivery revenues increased in 2010 compared with 2009, primarily due to price increases in April 2010 and 2009, partially offset by lower regulatory recovery due to a revised estimate of network electricity losses.

U.K. electric delivery revenues increased in 2009 compared with 2008, primarily due to price increases in April 2009 and 2008, increased regulatory recovery due to a revised estimate of network electricity losses, and favorable changes in customer mix. These increases were partially offset by lower volumes due to unfavorable economic conditions, including industrial customers scaling back on production and a decrease in engineering and metering services performed for third parties.

### Energy-Related Businesses

The changes in contributions from energy-related businesses were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Domestic mechanical business (a)	\$ (8)	\$ (6)
WPD (b)	2	(4)
Other	8	
Total	<u>\$ 2</u>	<u>\$ (10)</u>

(a) Primarily attributable to a decline in construction activity caused by the slowdown in the economy.

(b) Changes in contributions from U.K. energy-related businesses were primarily due to increases in remote metering business activity in 2010 and decreases related to changes in foreign currency exchange rates in 2009.

### Other Operation and Maintenance

The changes in other operation and maintenance expenses were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Montana hydroelectric litigation (Note 15)	\$ 48	\$ 8
Defined benefit costs - U.K. (Note 13)	32	(16)
Other costs at Susquehanna nuclear plant	23	14
Outage costs at Susquehanna nuclear plant	8	
Uncollectible accounts	3	(8)

Other costs at fossil/hydroelectric plants	2	17
Outage costs at eastern fossil/hydroelectric plants		23
Impacts from emission allowances (a)	(16)	(9)
Workforce reductions (Note 13)	(13)	13
Allocation of certain corporate support group costs	(5)	16
Defined benefit costs - U.S. (Note 13)	(2)	11
U.K. foreign currency exchange rates	(1)	(24)
Impairment of cancelled generation expansion project in 2008 (Note 8)		(22)
Montana basin seepage litigation (Note 15)		(8)
Trademark royalty fees from a PPL subsidiary (Note 16)		(7)
Other - Domestic	7	(3)
Other - U.K.	14	(6)
Total	<u>\$ 100</u>	<u>\$ (1)</u>

- (a) For the period 2010 compared to 2009, \$21 million relates to lower impairment charges of sulfur dioxide emission allowances. See Note 18 to the Financial Statements for additional information. Partially offsetting the decrease was a \$5 million increase in the charge for the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options.

For the period 2009 compared to 2008, \$33 million relates to lower impairment charges of nitrogen oxide allowances partially offset by \$37 million of higher impairment charges of sulfur dioxide allowances. See Note 18 to the Financial Statements for additional information. Also contributing to the difference was a \$13 million decrease in the charge for the settlement of a dispute regarding the sale of certain annual nitrogen oxide allowance put options.

## Depreciation

The changes in depreciation expense were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Additions to PP&E (a)	\$ 43	\$ 40
U.K. foreign currency exchange rates		(25)
Other		(4)
Total	<u>\$ 43</u>	<u>\$ 11</u>

- (a) Additions included Susquehanna generation uprates and the completion of Brunner Island environmental projects in 2008 through 2010 as well as the Montour scrubber project in 2008.

## Taxes, Other Than Income

The changes in taxes, other than income were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Pennsylvania gross receipts tax (a)	\$ 15	
Domestic property tax expense (b)	1	\$ 10
U.K. foreign currency exchange rates		(12)
Other (c)	(3)	2
Total	<u>\$ 13</u>	<u>\$ (2)</u>

- (a) The increase in 2010 compared with 2009 was primarily due to an increase in retail electricity sales by PPL EnergyPlus. This tax is included in "Unregulated Gross Energy Margins" above.  
(b) The increase in 2009 compared with 2008 was primarily due to a \$7 million property tax credit recorded by PPL Montana in 2008.  
(c) The decrease in 2010 compared with 2009 primarily relates to lower WPD real estate tax expense due to reductions in tax rates.

## Other Income (Expense) - net

See Note 17 to the Financial Statements for details.

## Other-Than-Temporary Impairments

Other-than-temporary impairments decreased by \$15 million in 2010 compared with 2009 and by \$18 million in 2009 compared with 2008. The decrease for both periods was primarily due to stronger returns on NDT investments caused by improved market conditions within the financial markets.

### Interest Income from Affiliates

Interest income from affiliates increased by \$7 million in 2010 compared with 2009, primarily due to loans to LKE subsidiaries, which have been fully repaid as of December 31, 2010.

Interest income from affiliates decreased by \$12 million in 2009 compared with 2008, primarily due to the decline in the average balance outstanding and the floating interest rate on the collateral deposit related to the PLR contract.

### Interest Expense

The changes in interest expense were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Interest on WPD debt issuance (Note 7)	\$ 25	
Inflation adjustment on U.K. Index-linked Senior Unsecured Notes	23	\$ (29)

Total	<u>\$ 80</u>	<u>\$ (43)</u>

### Income Taxes

The changes in income taxes were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Higher (lower) pre-tax book income	\$ 350	\$ (288)
State valuation allowance adjustments	(52)	
Federal income tax credits	(10)	(17)
Domestic manufacturing deduction	(8)	13
Federal and state tax reserve adjustments	(46)	(14)
Federal and state tax return adjustments	(21)	27
U.S. income tax on foreign earnings net of foreign tax credit	50	5
U.K. Finance Act adjustments	(18)	8
U.K. capital loss benefit		(46)
Foreign tax reserve adjustments	(17)	12
Foreign tax return adjustments		17
Health Care Reform	5	
Other	6	5
Total	<u>\$ 239</u>	<u>\$ (278)</u>

See Note 5 to the Financial Statements for additional information on income taxes.

### Discontinued Operations

See Note 9 to the Financial Statements for information related to various 2010 and 2009 sales, including the anticipated sale of certain non-core generation facilities expected to occur in the first quarter of 2011.

Financial Condition**Liquidity and Capital Resources**

PPL Energy Supply expects to continue to have adequate liquidity available through operating cash flows, cash and cash equivalents and its credit facilities. Additionally, subject to market conditions, PPL Energy Supply currently plans to access debt capital markets in 2011.

PPL Energy Supply's cash flows from operations and access to cost-effective bank and capital markets are subject to risks and uncertainties including, but not limited to:

- changes in market prices for electricity;
- changes in commodity prices that may increase the cost of producing power or decrease the amount PPL Energy Supply receives from selling power;
- operational and credit risks associated with selling and marketing products in the wholesale power markets;
- potential ineffectiveness of the trading, marketing and risk management policy and programs used to mitigate PPL Energy Supply's risk exposure to adverse electricity and fuel prices, interest rates and counterparty credit;
- reliance on transmission and distribution facilities that PPL Energy Supply does not own or control to deliver its electricity and natural gas;
- unavailability of generating units (due to unscheduled or longer-than-anticipated generation outages, weather and natural disasters) and the resulting loss of revenues and additional costs of replacement electricity;
- costs of compliance with existing and new environmental laws and with new security and safety requirements for nuclear facilities;
- any adverse outcome of legal proceedings and investigations with respect to PPL Energy Supply's current and past business activities;
- deterioration in the financial markets that could make obtaining new sources of bank and capital markets funding more difficult and more costly; and
- a downgrade in PPL Energy Supply's or its rated subsidiaries' credit ratings that could adversely affect their ability to access capital and increase the cost of credit facilities and any new debt.

See "Item 1A. Risk Factors" for further discussion of risks and uncertainties affecting PPL Energy Supply's cash flows.

At December 31, PPL Energy Supply had the following:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Cash and cash equivalents	\$ 661	\$ 245	\$ 464
Short-term investments (a)			150
	<u>\$ 661</u>	<u>\$ 245</u>	<u>\$ 614</u>
Short-term debt	<u>\$ 531</u>	<u>\$ 639</u>	<u>\$ 584</u>

- (a) 2008 amount represents tax-exempt bonds issued by the PEDFA in December 2008 on behalf of PPL Energy Supply and purchased by a subsidiary of PPL Energy Supply upon issuance. Such bonds were refunded in April 2009. See Note 7 to the Financial Statements for further discussion.

The changes in PPL Energy Supply's cash and cash equivalents position resulted from:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Net cash provided by operating activities	\$ 1,840	\$ 1,413	\$ 1,039
Net cash used in investing activities	(825)	(551)	(1,696)
Net cash provided by (used in) financing activities	(612)	(1,081)	779
Effect of exchange rates on cash and cash equivalents	13		(13)
Net Increase (Decrease) in Cash and Cash Equivalents	<u>\$ 416</u>	<u>\$ (219)</u>	<u>\$ 109</u>

Operating Activities

Net cash provided by operating activities increased by 30%, or \$427 million, in 2010 compared with 2009. The expiration of the long-term power purchase agreements between PPL Electric and PPL EnergyPlus at the end of 2009 enabled PPL EnergyPlus to sell power at higher market prices and had a positive impact on net income, and specifically on "unregulated gross energy margins" which increased over \$600 million, after-tax, in 2010 compared with 2009, and therefore, was the primary driver to the above increase. The positive impact of additional earnings was partially offset by a reduction in the amount of counterparty collateral received and by additional defined benefit plan contributions. In addition, changes in working capital in 2010 compared with 2009 offset the \$300 million impact of cash collateral received from PPL Electric in 2009 as discussed below.

Net cash provided by operating activities increased by 36%, or \$374 million, in 2009 compared with 2008, primarily as a result of the return of \$300 million in cash collateral from PPL Electric related to the long-term PLR energy supply agreements (which expired at the end of 2009); cash collateral received from counterparties; and the benefit of lower income tax payments due to the change in method of accounting for certain expenditures for tax purposes. These increases were partially offset by a decrease in accounts payable and the unfavorable impact of foreign currency exchange rates in 2009 compared with 2008.

A significant portion of PPL Energy Supply's operating cash flows is derived from its Supply segment baseload generation business activities. PPL Energy Supply employs a formal hedging program for its baseload generation fleet, the primary objective of which is to provide a reasonable level of near-term cash flow and earnings certainty while preserving upside potential of power price increases over the medium term. See Note 19 to the Financial Statements for further discussion. Despite its hedging practices, PPL Energy Supply expects its future cash flows to be more influenced by commodity prices than during the past years when long-term supply contracts were in place between PPL EnergyPlus and PPL Electric. In the near-term, PPL Energy Supply expects its Supply segment operating cash flows to decline as a result of lower commodity prices. In addition, in January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements. See Note 24 to the Financial Statements for additional information. As a result, PPL Energy Supply's cash from operating activities will also decline in future periods, as compared with prior periods.

PPL Energy Supply's contracts for the sale and purchase of electricity and fuel often require cash collateral or other credit enhancements, or reductions or terminations of a portion of the entire contract through cash settlement, in the event of a downgrade of PPL Energy Supply's or its subsidiary's credit ratings or adverse changes in market prices. For example, in addition to limiting its trading ability, if PPL Energy Supply's or its subsidiary's ratings were lowered to below "investment grade" and there was a 10% adverse movement in energy prices, PPL Energy Supply estimates that, based on its December 31, 2010 positions, it would have had to post additional collateral of approximately \$348 million with respect to electricity and fuel contracts. PPL Energy Supply has in place risk management programs that are designed to monitor and manage its exposure to volatility of cash flows related to changes in energy and fuel prices, interest rates, foreign currency exchange rates, counterparty credit quality and the operating performance of its generating units.

### Investing Activities

The primary use of cash in investing activities is capital expenditures. See "Forecasted Uses of Cash" for detail regarding capital expenditures in 2010 and projected expenditures for the years 2011 through 2015.

Net cash used in investing activities increased 50%, or \$274 million in 2010 compared with 2009, primarily as a result of a decrease of \$154 million from proceeds from the sale of other investments, a change of \$135 million from restricted cash and cash equivalents, and an increase of \$102 million in capital expenditures. The increase in cash used in investing activities from the above items was partially offset by the change in proceeds received from the sale of businesses, which are discussed in Note 9 to the Financial Statements and a change of \$28 million in other investing activities. PPL Energy Supply received proceeds of \$81 million from the sale of the majority of the Maine hydroelectric generation business in 2009, compared to proceeds of \$162 million received in 2010 from the sales of the Long Island generation business and the remaining Maine hydroelectric generation business assets.

Net cash used in investing activities decreased 68%, or \$1.1 billion in 2009 compared with 2008, primarily as a result of a change of \$371 million from restricted cash and cash equivalents, a change of \$249 million from purchases and sales of other investments, a change of \$244 million from purchases and sales of intangible assets, a decrease of \$207 million in capital expenditures and \$81 million of proceeds received in 2009 from the sale of the majority of the Maine hydroelectric generation business. See Note 1 to the Financial Statements for a discussion of restricted cash and cash equivalents and Note 7 to the Financial Statements for a discussion of the purchase and sale by a subsidiary of PPL Energy Supply of Exempt Facilities Revenue Bonds issued by the PEDFA on behalf of PPL Energy Supply and Note 9 to the Financial Statements for a discussion of the sale of the majority of the Maine hydroelectric generation business.

### Financing Activities

Net cash used in financing activities was \$612 million in 2010 compared with \$1.1 billion in 2009 and net cash provided by financing activities of \$779 million in 2008. The change from 2009 to 2010 primarily reflects more long-term debt issuances, increased contributions from and distributions to Member, and less short-term borrowings in 2010. The change from 2008 to 2009 primarily reflects no issuances of long-term debt in 2009, reduced contributions from Member, increased distributions to Member and less short-term borrowings in 2009.

In 2010, cash used in financing activities primarily consisted of \$4.7 billion in distributions to Member, partially offset by \$3.6 billion in contributions from Member and net debt issuances of \$509 million. The distributions to and contributions from Member during 2010 primarily relate to the funds received by PPL in June 2010 from the issuance of common stock and Equity Units. These funds were invested by a subsidiary of PPL Energy Supply until they were returned to its Member in October 2010 to be available to partially fund the acquisition of LKE and pay certain acquisition-related fees and expenses.

In 2009, cash used in financing activities primarily consisted of \$943 million in distributions to Member and net debt retirements of \$177 million, partially offset by \$50 million in contributions from Member.

In 2008, cash provided by financing activities primarily consisted of net debt issuances of \$1.1 billion and \$421 million in contributions from Member, partially offset by \$750 million in distributions to Member.

See "Forecasted Sources of Cash" for a discussion of PPL Energy Supply's plans to issue debt securities, as well as a discussion of credit facility capacity available to PPL Energy Supply. Also see "Forecasted Uses of Cash" for information regarding maturities of PPL Energy Supply's long-term debt.

PPL Energy Supply's debt financing activity in 2010 was:

	<u>Issuances (a)</u>	<u>Retirements</u>
WPD Senior Unsecured Notes	\$ 597	
Other long-term debt	5	
PPL Energy Supply short-term debt (net change)	65	
WPD short-term debt (net change)		\$ (158)
Total	<u>\$ 667</u>	<u>\$ (158)</u>
Net increase	<u>\$ 509</u>	

(a) Issuances are net of pricing discounts, where applicable and exclude the impact of debt issuance costs.

See Note 7 to the Financial Statements for more detailed information regarding PPL Energy Supply's financing activities in 2010.

### Forecasted Sources of Cash

PPL Energy Supply expects to continue to have significant sources of cash available in the near term, including various credit facilities, operating leases and contributions from Member. Additionally, PPL Energy Supply expects to have access to debt capital markets and currently plans to issue up to \$500 million in long-term debt securities in 2011, subject to market conditions.

*Credit Facilities*

At December 31, 2010, PPL Energy Supply's total committed borrowing capacity under credit facilities and the use of this borrowing capacity were:

	<u>Committed Capacity</u>	<u>Borrowed</u>	<u>Letters of Credit Issued (a)</u>	<u>Unused Capacity</u>
PPL Energy Supply Domestic Credit Facilities (b)	\$ 3,500	\$ 350	\$ 185	\$ 2,965
WPDH Limited Credit Facility (c)	£ 150	£ 115	n/a	£ 35
WPD (South West) Credit Facility (d)	210		n/a	210
Total WPD Credit Facilities (e)	£ 360	£ 115	n/a	£ 245

- (a) The borrower under each of these facilities has a reimbursement obligation to the extent any letters of credit are drawn upon.
- (b) PPL Energy Supply has the ability to borrow \$3.0 billion under its credit facilities. Such borrowings generally bear interest at LIBOR-based rates plus a spread, depending upon the company's senior unsecured long-term debt rating. PPL Energy Supply also has the capability to cause the lenders to issue up to \$3.5 billion of letters of credit under these facilities, which issuances reduce available borrowing capacity. Subject to certain conditions, PPL Energy Supply may request that the capacity of one of its facilities be increased by up to \$500 million.

These credit facilities contain a financial covenant requiring debt to total capitalization not to exceed 65%. At December 31, 2010 and 2009, PPL Energy Supply's consolidated debt to total capitalization percentages, as calculated in accordance with its credit facilities, were 44% and 46%. The credit facilities also contain standard representations and warranties that must be made for PPL Energy Supply to borrow under them.

The commitments under PPL Energy Supply's domestic credit facilities are provided by a diverse bank group, with no one bank and its affiliates providing an aggregate commitment of more than 14% of the total committed capacity. The committed capacity expires as follows: \$300 million in 2011, \$200 million in 2013 and \$3.0 billion in 2014.

- (c) Borrowings under WPDH Limited's credit facility bear interest at LIBOR-based rates plus a spread, depending upon the company's public long-term credit rating. This credit facility contains financial covenants that require WPDH Limited to maintain an interest coverage ratio of not less than 3.0 times consolidated earnings before income taxes, depreciation and amortization and a RAB that exceeds total net debt by the higher of an amount equal to 15% of total net debt or £150 million, in each case as calculated in accordance with the credit facility. At December 31, 2010 and 2009, WPDH Limited's interest coverage ratios, as calculated in accordance with its credit facility, were 3.5 and 4.3. At December 31, 2010 and 2009, WPDH Limited's RAB, as calculated in accordance with the credit facility, exceeded its total net debt by £364 million, or 27%, and £325 million, or 25%.
- (d) Borrowings under WPD (South West)'s credit facility bear interest at LIBOR-based rates plus a margin. This credit facility contains financial covenants that require WPD (South West) to maintain an interest coverage ratio of not less than 3.0 times consolidated earnings before income taxes, depreciation and amortization and total net debt not in excess of 85% of RAB, in each case as calculated in accordance with the credit facility. At December 31, 2010 and 2009, WPD (South West)'s interest coverage ratios, as calculated in accordance with its credit facility, were 3.6 and 5.3. At December 31, 2010 and 2009, WPD (South West)'s total net debt, as calculated in accordance with the credit facility, was 75% and 67% of RAB.
- (e) The commitments under WPD's credit facilities are provided by eight banks, with no one bank providing more than 25% of the total committed capacity. The committed capacity under the facilities expires as follows: £210 million in 2012 and £150 million in 2013.

At December 31, 2010, the unused capacity of WPD's credit facilities was approximately \$381 million.

In January 2011, PPL Energy Supply distributed its 100% membership interest in PPL Global to its parent, PPL Energy Funding. See Note 24 to the Financial Statements for additional information.

In addition to the financial covenants noted in the table above, the credit agreements governing the credit facilities contain various other covenants. Failure to comply with the covenants after applicable grace periods could result in acceleration of repayment of borrowings and/or termination of the agreements. PPL Energy Supply monitors compliance with the covenants on a regular basis. At December 31, 2010, PPL Energy Supply was in material compliance with these covenants. At this time, PPL Energy Supply believes that these covenants and other borrowing conditions will not limit access to these funding sources.

See Note 7 to the Financial Statements for further discussion of PPL Energy Supply's credit facilities.

*Operating Leases*

PPL Energy Supply and its subsidiaries also have available funding sources that are provided through operating leases. PPL Energy Supply's subsidiaries lease office space, land, buildings and certain equipment. These leasing structures

provide PPL Energy Supply additional operating and financing flexibility. The operating leases contain covenants that are typical for these agreements, such as maintaining insurance, maintaining corporate existence and timely payment of rent and other fees.

PPL Energy Supply, through its subsidiary PPL Montana, leases a 50% interest in Colstrip Units 1 and 2 and a 30% interest in Unit 3, under four 36-year, non-cancelable operating leases. These operating leases are not recorded on PPL Energy Supply's Balance Sheets. The leases place certain restrictions on PPL Montana's ability to incur additional debt, sell assets and declare dividends. At this time, PPL Energy Supply believes that these restrictions will not limit access to these funding sources or cause acceleration or termination of the leases.

See Note 11 to the Financial Statements for further discussion of the operating leases.

#### *Long-Term Debt Securities and Contributions from Member*

Subject to market conditions, PPL Energy Supply currently plans to issue up to \$500 million in long-term debt securities in 2011. PPL Energy Supply expects to use the proceeds from this issuance primarily to refund PPL Energy Supply's 2011 debt maturity.

From time to time, as determined by its Board of Directors, PPL Energy Supply's Member, PPL Energy Funding, makes capital contributions to PPL Energy Supply. PPL Energy Supply uses these contributions for general corporate purposes.

#### Forecasted Uses of Cash

In addition to expenditures required for normal operating activities, such as purchased power, payroll, fuel and taxes, PPL Energy Supply currently expects to incur future cash outflows for capital expenditures, various contractual obligations, distributions to its Member and possibly the purchase or redemption of a portion of its debt securities.

#### *Capital Expenditures*

The table below shows PPL Energy Supply's actual spending for the year 2010 and current capital expenditure projections for the years 2011 through 2015. (Amounts related to PPL Global have been excluded for periods subsequent to 2010. See Note 24 to the Financial Statements for additional information.)

	<b>Actual</b>		<b>Projected</b>			
	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013</b>	<b>2014</b>	<b>2015</b>
Construction expenditures (a) (b)						
Generating facilities	\$ 550	\$ 625	\$ 513	\$ 398	\$ 202	\$ 366
Distribution facilities and other - WPD	286					
Environmental	40	48	53	99	147	64
Other	21	31	32	32	29	23
Total Construction Expenditures	897	704	598	529	378	453
Nuclear fuel	138	152	159	161	158	160
Total Capital Expenditures	<u>\$ 1,035</u>	<u>\$ 856</u>	<u>\$ 757</u>	<u>\$ 690</u>	<u>\$ 536</u>	<u>\$ 613</u>

(a) Construction expenditures include capitalized interest, which is expected to be approximately \$203 million for the years 2011 through 2015.

(b) Includes expenditures for certain intangible assets.

PPL Energy Supply's capital expenditure projections for the years 2011 through 2015 total approximately \$3.5 billion. Capital expenditure plans are revised periodically to reflect changes in operational, market and regulatory conditions. This table includes projected costs related to the planned 247 MW of incremental capacity increases. See Note 8 to the Financial Statements for information regarding the significant development projects.

PPL Energy Supply plans to fund its capital expenditures in 2011 with cash on hand and cash from operations.

#### *Contractual Obligations*

PPL Energy Supply has assumed various financial obligations and commitments in the ordinary course of conducting its business. At December 31, 2010, the estimated contractual cash obligations of PPL Energy Supply were: (Amounts related to PPL Global have been excluded for periods subsequent to 2010. See Note 24 to the Financial Statements for additional information.)

	<u>Total</u>	<u>Less Than 1 Year</u>	<u>1-3 Years</u>	<u>4-5 Years</u>	<u>After 5 Years</u>
Long-term Debt (a)	\$ 3,272	\$ 500	\$ 737	\$ 600	\$ 1,435
Interest on Long-term Debt (b)	1,862	204	343	222	1,093
Operating Leases (c)	828	105	213	204	306
Purchase Obligations (d)	4,908	1,197	1,554	754	1,403
Total Contractual Cash Obligations	<u>\$ 10,870</u>	<u>\$ 2,006</u>	<u>\$ 2,847</u>	<u>\$ 1,780</u>	<u>\$ 4,237</u>

- (a) Reflects principal maturities only based on stated maturity dates, except for PPL Energy Supply's 5.70% Reset Put Securities (REPS). See Note 7 to the Financial Statements for a discussion of the remarketing feature related to the REPS, as well as discussion of variable-rate remarketable bonds issued on behalf of PPL Energy Supply. PPL Energy Supply does not have any significant capital lease obligations.
- (b) Assumes interest payments through stated maturity, except for the REPS, for which interest is reflected to the put date. The payments herein are subject to change, as payments for debt that is or becomes variable-rate debt have been estimated.
- (c) See Note 11 to the Financial Statements for additional information.
- (d) The payments reflected herein are subject to change, as certain purchase obligations included are estimates based on projected obligated quantities and/or projected pricing under the contracts. Purchase orders made in the ordinary course of business are excluded from the amounts presented. The payments also include obligations related to nuclear fuel and the installation of the scrubbers, which are also reflected in the Capital Expenditures table presented above.

At December 31, 2010, total unrecognized tax benefits of \$183 million were excluded from this table as PPL Energy Supply cannot reasonably estimate the amount and period of future payments. See Note 5 to the Financial Statements for additional information.

#### *Distributions to Member*

From time to time, as determined by its Board of Managers, PPL Energy Supply makes return of capital distributions to its Member.

#### *Purchase or Redemption of Debt Securities*

PPL Energy Supply will continue to evaluate purchasing or redeeming outstanding debt securities and may decide to take action depending upon prevailing market conditions and available cash.

#### Credit Ratings

Moody's, S&P and Fitch periodically review the credit ratings on the debt securities of PPL Energy Supply and its subsidiaries. Based on their respective independent reviews, the rating agencies may make certain ratings revisions or ratings affirmations.

A credit rating reflects an assessment by the rating agency of the creditworthiness associated with an issuer and particular securities that it issues. The credit ratings of PPL Energy Supply and its subsidiaries are based on information provided by PPL Energy Supply and other sources. The ratings of Moody's, S&P and Fitch are not a recommendation to buy, sell or hold any securities of PPL Energy Supply or its subsidiaries. Such ratings may be subject to revisions or withdrawal by the agencies at any time and should be evaluated independently of each other and any other rating that may be assigned to the securities. A downgrade in PPL Energy Supply's or its subsidiaries' credit ratings could result in higher borrowing costs and reduced access to capital markets.

In prior periodic reports, PPL Energy Supply described its then-current debt ratings in connection with, and to facilitate, an understanding of its liquidity position. As a result of the passage of the Dodd-Frank Act and the attendant uncertainties relating to the extent to which issuers of non-asset backed securities may disclose credit ratings without being required to obtain rating agency consent to the inclusion of such disclosure, or incorporation by reference of such disclosure, in a registrant's registration statement or section 10(a) prospectus, PPL Energy Supply is limiting its credit

rating disclosure to a description of the actions taken by the rating agencies with respect to PPL Energy Supply's ratings, but without stating what ratings have been assigned to PPL Energy Supply or its subsidiaries, or their securities. The ratings assigned by the rating agencies to PPL Energy Supply and its subsidiaries and their respective securities may be found, without charge, on each of the respective ratings agencies' websites, which ratings together with all other information contained on such rating agency websites is, hereby, explicitly not incorporated by reference in this report.

The rating agencies took the following actions related to PPL Energy Supply and its subsidiaries in 2010.

#### *Moody's*

Following PPL's then-announced agreement to acquire LKE, Moody's affirmed its senior unsecured notes credit rating and outlook for PPL Energy Supply in April 2010.

In August 2010, Moody's affirmed all of PPL Energy Supply's ratings.

#### *S&P*

Following PPL's then-announced agreement to acquire LKE, S&P took the following actions in April 2010:

- Revised the outlook of PPL Energy Supply;
- Revised the outlook of WPDH Limited, WPD (South Wales) and WPD (South West); and
- Affirmed its credit ratings for PPL Energy Supply, WPDH Limited, WPD (South Wales) and WPD (South West).

S&P stated in its press release that the change to the outlook for PPL Energy Supply considers the greater regulated mix that will result from PPL acquiring LKE, resulting in a pro forma "strong" consolidated business risk profile for PPL. S&P also stated that the revision in the outlook for WPD is a reflection of the change to PPL's outlook and is not a result of any change in WPD's stand-alone credit profile.

In October 2010, S&P took the following actions:

- Revised the outlook of PPL Energy Supply;
- Raised the issuer rating of PPL Energy Supply; and
- Raised the senior unsecured debt rating of PPL Energy Supply.

In November 2010, S&P affirmed its credit rating and revised the outlook for PPL Montana's Pass Through Certificates due 2020.

#### *Fitch*

Following PPL's then-announced agreement to acquire LKE, Fitch affirmed its credit ratings and outlook for PPL Energy Supply in April 2010.

In May 2010, Fitch affirmed its rating and issued an outlook for PPL Montana's Pass Through Certificates due 2020.

In October 2010, Fitch affirmed its credit ratings for and revised the outlook of WPDH Limited, WPD (South Wales) and WPD (South West).

#### Ratings Triggers

As discussed in Note 7 to the Financial Statements, certain of WPD's senior unsecured notes may be put by the holders back to the issuer for redemption if the long-term credit ratings assigned to the notes by Moody's, S&P or Fitch are withdrawn by any of the rating agencies or reduced to a non-investment grade rating of Ba1 or BB+ in connection with a restructuring event. A restructuring event includes the loss of, or a material adverse change to, the distribution license under which WPD (South West) and WPD (South Wales) operate. These notes totaled £1.3 billion (approximately \$2.0 billion) at December 31, 2010.

PPL Energy Supply has various derivative and non-derivative contracts, including contracts for the sale and purchase of electricity and fuel, commodity transportation and storage, tolling agreements, and interest rate and foreign currency instruments, which contain provisions requiring PPL Energy Supply to post additional collateral, or permit the counterparty to terminate the contract, if PPL Energy Supply's credit rating were to fall below investment grade. See Note 19 to the Financial Statements for a discussion of "Credit Risk-Related Contingent Features," including a discussion of the potential additional collateral that would have been required for derivative contracts in a net liability position at December 31, 2010. At December 31, 2010, if PPL Energy Supply's credit rating had been below investment grade, PPL Energy Supply would have been required to prepay or post an additional \$347 million of collateral to counterparties for both derivative and non-derivative commodity and commodity-related contracts used in its generation, marketing and trading operations and interest rate and foreign currency contracts.

### Guarantees for Subsidiaries

PPL Energy Supply guarantees certain consolidated affiliate financing arrangements that enable certain transactions. Some of the guarantees contain financial and other covenants that, if not met, would limit or restrict the consolidated affiliates' access to funds under these financing arrangements, require early maturity of such arrangements or limit the consolidated affiliates' ability to enter into certain transactions. At this time, PPL Energy Supply believes that these covenants will not limit access to relevant funding sources. See Note 15 to the Financial Statements for additional information about guarantees.

### **Off-Balance Sheet Arrangements**

PPL Energy Supply has entered into certain agreements that may contingently require payment to a guaranteed or indemnified party. See Note 15 to the Financial Statements for a discussion of these agreements.

### **Risk Management - Energy Marketing & Trading and Other**

#### Market Risk

See Notes 1, 18, and 19 to the Financial Statements for information about PPL Energy Supply's risk management objectives, valuation techniques and accounting designations.

The forward-looking information presented below provides estimates of what may occur in the future, assuming certain adverse market conditions and model assumptions. Actual future results may differ materially from those presented. These disclosures are not precise indicators of expected future losses, but only indicators of possible losses under normal market conditions at a given confidence level.

#### *Commodity Price Risk (Non-trading)*

PPL Energy Supply segregates its non-trading activities into two categories: hedge activity and economic activity. Transactions that are accounted for as hedge activity qualify for hedge accounting treatment. The economic activity category includes transactions that address a specific risk, but were not eligible for hedge accounting or for which hedge accounting was not elected. This activity includes the changes in fair value of positions used to hedge a portion of the economic value of PPL Energy Supply's generation assets, full-requirement sales contracts and retail activities. This economic activity is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power). Although they do not receive hedge accounting treatment, these transactions are considered non-trading activity. (See Note 19 to the Financial Statements for additional information on hedge and economic activity). The net fair value of economic positions at December 31, 2010 and 2009 was a net liability of \$389 million and \$77 million.

To hedge the impact of market price volatility on PPL Energy Supply's energy-related assets, liabilities and other contractual arrangements, PPL Energy Supply sells and purchases physical energy at the wholesale level under FERC market-based tariffs throughout the U.S. and enters into financial exchange-traded and over-the-counter contracts. PPL Energy Supply's non-trading commodity derivative contracts mature at various times through 2017.

The following table sets forth the net fair value of PPL Energy Supply's non-trading commodity derivative contracts. See Notes 18 and 19 to the Financial Statements for additional information.

	<b>Gains (Losses)</b>	
	<b>2010</b>	<b>2009</b>
Fair value of contracts outstanding at the beginning of the period	\$ 1,280	\$ 402
Contracts realized or otherwise settled during the period	(490)	189
Fair value of new contracts entered into during the period	(5)	143
Changes in fair value attributable to changes in valuation techniques (a)	(23)	
Other changes in fair value	196	546
Fair value of contracts outstanding at the end of the period	<u>\$ 958</u>	<u>\$ 1,280</u>

(a) Amount represents the reduction of valuation reserves related to capacity and FTR contracts upon the adoption of fair value accounting guidance.

The following table segregates the net fair value of PPL Energy Supply's non-trading commodity derivative contracts at December 31, 2010 based on whether the fair value was determined by prices quoted in active markets for identical instruments or other more subjective means.

<b>Source of Fair Value</b>	<b>Net Asset (Liability)</b>				<b>Total Fair Value</b>
	<b>Maturity Less Than 1 Year</b>	<b>Maturity 1-3 Years</b>	<b>Maturity 4-5 Years</b>	<b>Maturity in Excess of 5 Years</b>	
Prices based on significant other observable inputs	\$ 362	\$ 592	\$ 8		\$ 962
Prices based on significant unobservable inputs	3	(29)	(4)	\$ 26	(4)
Fair value of contracts outstanding at the end of the period	<u>\$ 365</u>	<u>\$ 563</u>	<u>\$ 4</u>	<u>\$ 26</u>	<u>\$ 958</u>

PPL Energy Supply sells electricity, capacity and related services and buys fuel on a forward basis to hedge the value of energy from its generation assets. If PPL Energy Supply were unable to deliver firm capacity and energy or to accept the delivery of fuel under its agreements, under certain circumstances it could be required to pay liquidating damages. These damages would be based on the difference between the market price and the contract price of the commodity. Depending on price changes in the wholesale energy markets, such damages could be significant. Extreme weather conditions, unplanned power plant outages, transmission disruptions, nonperformance by counterparties (or their own counterparties) with which it has energy contracts and other factors could affect PPL Energy Supply's ability to meet its obligations, or cause significant increases in the market price of replacement energy. Although PPL Energy Supply attempts to mitigate these risks, there can be no assurance that it will be able to fully meet its firm obligations, that it will not be required to pay damages for failure to perform, or that it will not experience counterparty nonperformance in the future.

*Commodity Price Risk (Trading)*

PPL Energy Supply's trading contracts mature at various times through 2015. The following table sets forth changes in the net fair value of PPL Energy Supply's trading commodity derivative contracts. See Notes 18 and 19 to the Financial Statements for additional information.

	<b>Gains (Losses)</b>	
	<b>2010</b>	<b>2009</b>
Fair value of contracts outstanding at the beginning of the period	\$ (6)	\$ (75)
Contracts realized or otherwise settled during the period	(12)	2
Fair value of new contracts entered into during the period	39	31
Other changes in fair value	(17)	36
Fair value of contracts outstanding at the end of the period	<u>\$ 4</u>	<u>\$ (6)</u>

PPL Energy Supply will reverse unrealized gains of approximately \$2 million over the next three months as the transactions are realized.

The following table segregates the net fair value of PPL Energy Supply's trading commodity derivative contracts at December 31, 2010 based on whether the fair value was determined by prices quoted in active markets for identical instruments or other more subjective means.

	Net Asset (Liability)				Total Fair Value
	Maturity Less Than 1 Year	Maturity 1-3 Years	Maturity 4-5 Years	Maturity in Excess of 5 Years	
<b>Source of Fair Value</b>					
Prices based on significant other observable inputs	\$ (1)	\$ 2	\$ 3		\$ 4
Fair value of contracts outstanding at the end of the period	\$ (1)	\$ 2	\$ 3		\$ 4

#### *VaR Models*

PPL Energy Supply utilizes a VaR model to measure commodity price risk in domestic gross energy margins for its non-trading and trading portfolios. VaR is a statistical model that attempts to estimate the value of potential loss over a given holding period under normal market conditions at a given confidence level. PPL Energy Supply calculates VaR using a Monte Carlo simulation technique based on a five-day holding period at a 95% confidence level. Given the company's conservative hedging program, PPL's non-trading VaR exposure is expected to be limited in the short term. At December 31, 2010 and December 31, 2009, the VaR for PPL Energy Supply's portfolios using end-of-month results for the period was as follows.

	Trading VaR		Non-Trading VaR	
	2010	2009	2010	2009
95% Confidence Level, Five-Day Holding Period				
Period End	\$ 1	\$ 3	\$ 5	\$ 8
Average for the Period	4	4	7	9
High	9	8	12	11
Low	1	1	4	8

The trading portfolio includes all speculative positions, regardless of the delivery period. All positions not considered speculative are considered non-trading. PPL Energy Supply's non-trading portfolio includes PPL Energy Supply's entire portfolio, including generation, with delivery periods through the next 12 months. Both the trading and non-trading VaR computations exclude FTRs due to the absence of reliable spot and forward markets. The fair value of the non-trading and trading FTR positions was insignificant at December 31, 2010.

#### *Interest Rate Risk*

PPL Energy Supply and its subsidiaries have issued debt to finance their operations, which exposes them to interest rate risk. PPL and PPL Energy Supply utilize various financial derivative instruments to adjust the mix of fixed and floating interest rates in PPL Energy Supply's debt portfolio, adjust the duration of its debt portfolio and lock in benchmark interest rates in anticipation of future financing, when appropriate. Risk limits under the risk management program are designed to balance risk exposure to volatility in interest expense and changes in the fair value of PPL Energy Supply's debt portfolio due to changes in the absolute level of interest rates.

At December 31, 2010 and 2009, PPL Energy Supply's potential annual exposure to increased interest expense, based on a 10% increase in interest rates, was not significant.

PPL Energy Supply is also exposed to changes in the fair value of its domestic and international debt portfolios. PPL Energy Supply estimated that a 10% decrease in interest rates at December 31, 2010 would increase the fair value of its debt portfolio by \$198 million, compared with \$187 million at December 31, 2009.

PPL Energy Supply had the following interest rate hedges outstanding at:

	December 31, 2010	December 31, 2009

	<u>Exposure Hedged</u>	<u>Fair Value, Net - Asset (a)</u>	<u>Effect of a 10% Adverse Movement in Rates (b)</u>	<u>Exposure Hedged</u>	<u>Fair Value, Net - Asset (a)</u>	<u>Effect of a 10% Adverse Movement in Rates (b)</u>
Cash flow hedges						
Interest rate swaps (c)						
Cross-currency swaps (d)	\$ 302	\$ 35	\$ (18)	\$ 302	\$ 8	\$ (41)
Fair value hedges						
Interest rate swaps (e)						

- (a) Includes accrued interest, if applicable.
- (b) Effects of adverse movements decrease assets or increase liabilities, as applicable, which could result in an asset becoming a liability.
- (c) PPL and PPL Energy Supply utilize various risk management instruments to reduce PPL Energy Supply's exposure to the expected future cash flow variability of PPL Energy Supply's debt instruments. These risks include exposure to adverse interest rate movements for outstanding variable rate debt and for future anticipated financing. While PPL Energy Supply is exposed to changes in the fair value of these instruments, any changes in the fair value of these instruments are recorded in equity and then reclassified into earnings in the same period during which the item being hedged affects earnings. Sensitivities represent a 10% adverse movement in interest rates.
- (d) WPDH Limited uses cross-currency swaps to hedge the interest payments and principal of its U.S. dollar-denominated senior notes with maturity dates ranging from December 2017 to December 2028. While PPL Energy Supply is exposed to changes in the fair value of these instruments, any change in the fair value of these instruments is recorded in equity and reclassified into earnings in the same period during which the item being hedged affects earnings. Sensitivities represent a 10% adverse movement in both interest rates and foreign currency exchange rates.
- (e) PPL and PPL Energy Supply utilize various risk management instruments to adjust the mix of fixed and floating interest rates in PPL Energy Supply's debt portfolio. The change in fair value of these instruments, as well as the offsetting change in the value of the hedged exposure of the debt, is reflected in earnings. Sensitivities represent a 10% adverse movement in interest rates.

#### *Foreign Currency Risk*

PPL Energy Supply is exposed to foreign currency risk, primarily through investments in U.K. affiliates. In addition, PPL Energy Supply's domestic operations may make purchases of equipment in currencies other than U.S. dollars. See Note 1 to the Financial Statements for additional information regarding foreign currency translation.

PPL and PPL Energy Supply have adopted a foreign currency risk management program designed to hedge certain foreign currency exposures, including firm commitments, recognized assets or liabilities, anticipated transactions and net investments. In addition, PPL Energy Supply enters into financial instruments to protect against foreign currency translation risk of expected earnings.

PPL Energy Supply had the following foreign currency hedges outstanding at:

	<u>December 31, 2010</u>			<u>December 31, 2009</u>		
	<u>Exposure Hedged</u>	<u>Fair Value, Net - Asset (Liability)</u>	<u>Effect of a 10% Adverse Movement in Foreign Currency Exchange Rates (a)</u>	<u>Exposure Hedged</u>	<u>Fair Value, Net - Asset (Liability)</u>	<u>Effect of a 10% Adverse Movement in Foreign Currency Exchange Rates (a)</u>
Net investment hedges (b)	£ 35	\$ 7	\$ (5)	£ 40	\$ 13	\$ (6)
Economic hedges (c)	89	4	(10)	48	2	(4)

- (a) Effects of adverse movements decrease assets or increase liabilities, as applicable, which could result in an asset becoming a liability.
- (b) To protect the value of a portion of PPL Energy Supply's net investment in WPD, PPL executed forward contracts to sell British pounds sterling. The contracts outstanding at December 31, 2010 were settled in January 2011.
- (c) To economically hedge the translation of expected income denominated in British pounds sterling to U.S. dollars, PPL entered into a combination of average rate forwards and average rate options to sell British pounds sterling. The forwards and options outstanding at December 31, 2010 have termination dates ranging from January 2011 through December 2011.

#### *NDT Funds - Securities Price Risk*

In connection with certain NRC requirements, PPL Susquehanna maintains trust funds to fund certain costs of decommissioning the Susquehanna nuclear station. At December 31, 2010, these funds were invested primarily in domestic equity securities and fixed-rate, fixed-income securities and are reflected at fair value on PPL Energy Supply's Balance Sheet. The mix of securities is designed to provide returns sufficient to fund Susquehanna's decommissioning and to compensate for inflationary increases in decommissioning costs. However, the equity securities included in the trusts are exposed to price fluctuation in equity markets, and the values of fixed-rate, fixed-income securities are exposed

to changes in interest rates. PPL actively monitors the investment performance and periodically reviews asset allocation in accordance with its nuclear decommissioning trust policy statement. At December 31, 2010, a hypothetical 10% increase in interest rates and a 10% decrease in equity prices would have resulted in an estimated \$45 million reduction in the fair value of the trust assets, compared with \$40 million at December 31, 2009. See Notes 18 and 23 to the Financial Statements for additional information regarding the NDT funds.

#### *Defined Benefit Plans - Securities Price Risk*

See "Application of Critical Accounting Policies - Defined Benefits" for additional information regarding the effect of securities price risk on plan assets.

#### Credit Risk

Credit risk is the risk that PPL Energy Supply would incur a loss as a result of nonperformance by counterparties of their contractual obligations. PPL Energy Supply maintains credit policies and procedures with respect to counterparty credit (including requirements that counterparties maintain specified credit ratings) and requires other assurances in the form of credit support or collateral in certain circumstances in order to limit counterparty credit risk. However, PPL Energy Supply has concentrations of suppliers and customers among electric utilities, financial institutions and other energy marketing and trading companies. These concentrations may impact PPL Energy Supply's overall exposure to credit risk, positively or negatively, as counterparties may be similarly affected by changes in economic, regulatory or other conditions.

PPL Energy Supply includes the effect of credit risk on its fair value measurements to reflect the probability that a counterparty will default when contracts are out of the money (from the counterparty's standpoint). In this case, PPL Energy Supply would have to sell into a lower-priced market or purchase from a higher-priced market. When necessary, PPL Energy Supply records an allowance for doubtful accounts to reflect the probability that a counterparty will not pay for deliveries PPL Energy Supply has made but not yet billed, which are reflected in "Unbilled revenues" on the Balance Sheets. PPL Energy Supply also has established a reserve with respect to certain sales to the California ISO for which PPL Energy Supply has not yet been paid, which is reflected in accounts receivable on the Balance Sheets. See Note 15 to the Financial Statements for additional information.

See "Overview" in this Item 7 and Notes 16, 18 and 19 to the Financial Statements for additional information on credit concentration and credit risk.

#### **Foreign Currency Translation**

At December 31, 2010, the British pound sterling had weakened in relation to the U.S. dollar compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation loss of \$63 million for 2010, which primarily reflected a \$180 million reduction to PP&E offset by a reduction of \$117 million to net liabilities. At December 31, 2009, the British pound sterling had strengthened in relation to the U.S. dollar as compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation gain of \$106 million for 2009, which primarily reflected a \$225 million increase in PP&E offset by an increase of \$119 million to net liabilities. At December 31, 2008, the British pound sterling had weakened in relation to the U.S. dollar compared with the prior year end. Changes in these exchange rates resulted in a foreign currency translation loss of \$520 million for 2008, which primarily reflected a \$1.1 billion reduction to PP&E offset by a reduction of \$580 million to net liabilities.

#### **Related Party Transactions**

PPL Energy Supply is not aware of any material ownership interests or operating responsibility by senior management of PPL Energy Supply in outside partnerships, including leasing transactions with variable interest entities, or other entities doing business with PPL Energy Supply. See Note 16 to the Financial Statements for additional information on related party transactions.

#### **Acquisitions, Development and Divestitures**

Incremental capacity increases of 247 MW are currently planned, primarily at existing generating facilities. See "Item 2. Properties - Supply Segment" for additional information.

Development projects are continuously reexamined based on market conditions and other factors to determine whether to proceed with the projects, sell, cancel or expand them, execute tolling agreements or pursue other options.

See Notes 8 and 9 to the Financial Statements for additional information on the more significant activities.

### **Environmental Matters**

See "Item 1. Business - Environmental Matters" and Note 15 to the Financial Statements for a discussion of environmental matters.

### **Competition**

See "Item 1. Business - Competition" under the International Regulated and Supply segments and "Item 1A. Risk Factors" for a discussion of competitive factors affecting PPL Energy Supply.

### **New Accounting Guidance**

See Note 1 to the Financial Statements for a discussion of new accounting guidance adopted.

### **Application of Critical Accounting Policies**

Financial condition and results of operations are impacted by the methods, assumptions and estimates used in the application of critical accounting policies. The following accounting policies are particularly important to the financial condition or results of operations, and require estimates or other judgments of matters inherently uncertain. Changes in the estimates or other judgments included within these accounting policies could result in a significant change to the information presented in the Financial Statements (these accounting policies are also discussed in Note 1 to the Financial Statements). PPL's senior management has reviewed these critical accounting policies, the following disclosures regarding their application and the estimates and assumptions regarding them, with PPL's Audit Committee.

#### **1) Price Risk Management**

See "Price Risk Management" in Note 1 to the Financial Statements as well as "Risk Management - Energy Marketing & Trading and Other" above.

#### **2) Defined Benefits**

PPL Energy Supply subsidiaries sponsor various defined benefit pension and other postretirement plans and participate in and are allocated a significant portion of the liability and net periodic defined benefit costs of plans sponsored by PPL Services based on participation in those plans. PPL Energy Supply subsidiaries record an asset or liability to recognize the funded status of all defined benefit plans with an offsetting entry to OCI. Consequently, the funded status of all defined benefit plans is fully recognized on the Balance Sheets. See Note 13 to the Financial Statements for additional information about the plans and the accounting for defined benefits.

PPL Services and PPL Energy Supply make certain assumptions regarding the valuation of benefit obligations and the performance of plan assets. When accounting for defined benefits, delayed recognition in earnings of differences between actual results and expected or estimated results is a guiding principle. Annual net periodic defined benefit costs are recorded in current earnings based on estimated results. Any differences between actual and estimated results are recorded in OCI. These amounts in AOCI are amortized to income over future periods. The delayed recognition allows for a smoothed recognition of costs over the working lives of the employees who benefit under the plans. The primary assumptions are:

- Discount Rate - The discount rate is used in calculating the present value of benefits, which is based on projections of benefit payments to be made in the future. The objective in selecting the discount rate is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the accumulated benefits when due.
- Expected Return on Plan Assets - Management projects the long-term rates of return on plan assets based on historical performance, future expectations and periodic portfolio rebalancing among the diversified asset classes. These projected returns reduce the net benefit costs PPL records currently.
- Rate of Compensation Increase - Management projects employees' annual pay increases, which are used to project employees' pension benefits at retirement.
- Health Care Cost Trend Rate - Management projects the expected increases in the cost of health care.

In selecting a discount rate for its U.S. defined benefit plans, PPL Services and PPL Energy Supply start with an analysis of the expected benefit payment stream for their plans. This information is first matched against a spot-rate yield curve. A portfolio of 604 Aa-graded non-callable (or callable with make-whole provisions) bonds, with a total amount outstanding in excess of \$667 billion, serves as the base from which those with the lowest and highest yields are eliminated to develop the ultimate yield curve. The results of this analysis are considered together with other economic data and movements in various bond indices to determine the discount rate assumption. At December 31, 2010, PPL Services and PPL Energy Supply decreased the discount rate for their U.S. pension plans from 6.00% to 5.41% and 5.47%, respectively, as a result of this assessment. PPL Services decreased the discount rate for its other postretirement benefit plans from 5.81% to 5.16% and PPL Energy Supply decreased the discount rate for its other postretirement benefit plans from 5.55% to 4.95%.

A similar process is used to select the discount rate for the U.K. pension plans, which uses an iBoxx British pounds sterling denominated corporate bond index as its base. At December 31, 2010, the discount rate for the U.K. pension plans was decreased from 5.55% to 5.54% as a result of this assessment.

The expected long-term rates of return for PPL Services and PPL Energy Supply's U.S. defined benefit pension and other postretirement benefit plans have been developed using a best-estimate of expected returns, volatilities and correlations for each asset class. PPL management corroborates these rates with expected long-term rates of return calculated by its independent actuary, who uses a building block approach that begins with a risk-free rate of return with factors being added such as inflation, duration, credit spreads and equity risk. Each plan's specific asset allocation is also considered in developing a reasonable return assumption.

At December 31, 2010, PPL Services' expected return on plan assets decreased from 8.00% to 7.25% for its U.S. pension plans and decreased from 7.00% to 6.45% for PPL's other postretirement benefit plans. The expected long-term rates of return for PPL and PPL Energy Supply's U.K. pension plans have been developed by PPL management with assistance from an independent actuary using a best-estimate of expected returns, volatilities and correlations for each asset class. For the U.K. plans, PPL and PPL Energy Supply's expected return on plan assets decreased from 7.91% to 7.86% at December 31, 2010.

In selecting a rate of compensation increase, PPL Energy Supply considers past experience in light of movements in inflation rates. At December 31, 2010, PPL Services and PPL Energy Supply's rate of compensation increase remained at 4.75% for their U.S. plans. For the U.K. plans, PPL and PPL Energy Supply's rate of compensation increase remained at 4.00% at December 31, 2010.

In selecting health care cost trend rates, PPL Services and PPL Energy Supply consider past performance and forecasts of health care costs. At December 31, 2010, PPL Services' and PPL Energy Supply's health care cost trend rates were 9.00% for 2011, gradually declining to 5.50% for 2019.

A variance in the assumptions listed above could have a significant impact on accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and OCI. While the charts below reflect either an increase or decrease in each assumption, the inverse of this change would impact the accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and OCI by a similar amount in the opposite direction. The sensitivities below reflect an evaluation of the change based solely on a change in that assumption and does not include income tax effects.

At December 31, 2010, defined benefit plan liabilities were as follows.

Pension liabilities	\$	619
Other postretirement benefit liabilities		73

The following chart reflects the sensitivities in the December 31, 2010 Balance Sheet associated with a change in certain assumptions based on PPL Services' and PPL Energy Supply's primary defined benefit plans.

Actuarial assumption	Change in assumption	Increase (Decrease)	
		Impact on defined benefit liabilities	Impact on OCI
Discount Rate	(0.25)%	\$ 149	\$ (149)
Rate of Compensation Increase	0.25%	23	(23)
Health Care Cost Trend Rate (a)	1.00%	1	(1)

(a) Only impacts other postretirement benefits.

In 2010, PPL Energy Supply was allocated and recognized net periodic defined benefit costs charged to operating expense of \$52 million. This amount represents a \$29 million increase from 2009. This increase in expense was primarily attributable to amortization of actuarial losses of the WPD pension plans in the U.K.

The following chart reflects the sensitivities in the 2010 Statement of Income (excluding income tax effects) associated with a change in certain assumptions based on PPL's and PPL Energy Supply's primary defined benefit plans.

Actuarial assumption	Change in assumption	Impact on defined benefit costs
Discount Rate	(0.25)%	\$ 12
Expected Return on Plan Assets	(0.25)%	9
Rate of Compensation Increase	0.25%	4
Health Care Cost Trend Rate (a)	1.00%	1

(a) Only impacts other postretirement benefits.

### 3) Asset Impairment

Impairment analyses are performed for long-lived assets that are subject to depreciation or amortization whenever events or changes in circumstances indicate that a long-lived asset's carrying value may not be recoverable. For these long-lived assets classified as held and used, such events or changes in circumstances are:

- a significant decrease in the market price of an asset;
- a significant adverse change in the manner in which an asset is being used or in its physical condition;
- a significant adverse change in legal factors or in the business climate;
- an accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of an asset;
- a current-period operating or cash flow loss combined with a history of losses or a forecast that demonstrates continuing losses; or
- a current expectation that, more likely than not, an asset will be sold or otherwise disposed of before the end of its previously estimated useful life.

For a long-lived asset classified as held and used, an impairment is recognized when the carrying amount of the asset is not recoverable and exceeds its fair value. The carrying amount is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. If the asset is impaired, an impairment loss is recorded to adjust the asset's carrying value to its estimated fair value. Management must make significant judgments to estimate future cash flows, including the useful lives of long-lived assets, the fair value of the assets and management's intent to use the assets. Alternate courses of action are considered to recover the carrying value of a long-lived asset, and estimated cash flows from the "most likely" alternative are used to assess impairment whenever one alternative is clearly the most likely outcome. If no alternative is clearly the most likely, then a probability-weighted approach is used taking into consideration estimated cash flows from the alternatives. For assets tested for impairment as of the balance sheet date, the estimates of future cash flows used in that test consider the likelihood of possible outcomes that existed at the balance sheet date, including the assessment of the likelihood of a future sale of the assets. That assessment is not revised based on events that occur after the balance sheet date. Changes in assumptions and estimates could result in significantly different results than those identified and recorded in the financial statements.

For a long-lived asset classified as held for sale, an impairment exists when the carrying amount of the asset (disposal group) exceeds its fair value less cost to sell. If the asset (disposal group) is impaired, an impairment loss is recorded to adjust the carrying amount to its fair value less cost to sell. A gain is recognized for any subsequent increase in fair value less cost to sell, but not in excess of the cumulative impairment previously recognized.

For determining fair value, quoted market prices in active markets are the best evidence of fair value. However, when market prices are unavailable, PPL considers all valuation techniques appropriate under the circumstances and for which market participant inputs can be obtained. Generally discounted cash flows are used to estimate fair value, which incorporates market participant inputs when available. Discounted cash flows are calculated by estimating future cash flow streams and applying appropriate discount rates to determine the present value of the cash flow streams.

In 2010, impairments of certain long-lived assets were recorded. See Note 18 to the Financial Statements for a discussion of impairments related to certain sulfur dioxide emission allowances and certain non-core generation facilities.

Goodwill is tested for impairment at the reporting unit level. Reporting units have been determined to be at or one level below operating segments. A goodwill impairment test is performed annually or more frequently if events or changes in circumstances indicate that the carrying value of the reporting unit may be greater than the unit's fair value. Additionally, goodwill is tested for impairment after a portion of goodwill has been allocated to a business to be disposed of.

Goodwill is tested for impairment using a two-step approach. The first step of the goodwill impairment test compares the estimated fair value of a reporting unit with its carrying amount, including goodwill. If the estimated fair value of a reporting unit exceeds its carrying amount, goodwill of the reporting unit is not considered impaired. If the carrying amount exceeds the estimated fair value of the reporting unit, the second step is performed to measure the amount of impairment loss, if any.

The second step requires a calculation of the implied fair value of goodwill. The implied fair value of goodwill is determined in the same manner as the amount of goodwill in a business combination. That is, the estimated fair value of a reporting unit is allocated to all of the assets and liabilities of that unit as if the reporting unit had been acquired in a business combination and the estimated fair value of the reporting unit was the price paid to acquire the reporting unit. The excess of the estimated fair value of a reporting unit over the amounts assigned to its assets and liabilities is the implied fair value of goodwill. The implied fair value of the reporting unit's goodwill is then compared with the carrying amount of that goodwill. If the carrying amount exceeds the implied fair value, an impairment loss is recognized in an amount equal to that excess. The loss recognized cannot exceed the carrying amount of the reporting unit's goodwill.

In 2010, no goodwill was required to be impaired. Management used both discounted cash flows and market multiples, which required significant assumptions, to estimate the fair value of each reporting unit. For the discounted cash flows approach, a decrease in the forecasted cash flows of 10%, or an increase in the discount rate by 25 basis points, would not have resulted in an impairment of goodwill. For the market multiples approach, which is based on either current or forward trading multiples of comparable companies or precedent transactions, a 10% decrease in the multiples would not have resulted in an impairment of goodwill.

In 2010 and 2009, \$5 million and \$3 million of goodwill allocated to discontinued operations was written off.

#### 4) Loss Accruals

Losses are accrued for the estimated impacts of various conditions, situations or circumstances involving uncertain or contingent future outcomes. For loss contingencies, the loss must be accrued if (1) information is available that indicates it is probable that a loss has been incurred, given the likelihood of the uncertain future events, and (2) the amount of the loss can be reasonably estimated. Accounting guidance defines "probable" as cases in which "the future event or events are likely to occur." The accrual of contingencies that might result in gains is not recorded unless recovery is assured. Potential loss contingencies for environmental remediation, litigation claims, regulatory penalties and other events are continuously assessed.

The accounting aspects of estimated loss accruals include (1) the initial identification and recording of the loss, (2) the determination of triggering events for reducing a recorded loss accrual, and (3) the ongoing assessment as to whether a recorded loss accrual is sufficient. All three of these aspects require significant judgment by management. Internal expertise and outside experts (such as lawyers and engineers) are used, as necessary, to help estimate the probability that a loss has been incurred and the amount (or range) of the loss.

In 2010, a significant adjustment to the contingency accrual related to the Montana hydroelectric streambed litigation was recorded. See Note 15 to the Financial Statements for additional information.

Certain other events have been identified that could give rise to a loss, but that do not meet the conditions for accrual. Such events are disclosed, but not recorded, when it is "reasonably possible" that a loss has been incurred. See Note 15 to the Financial Statements for disclosure of other potential loss contingencies that have not met the criteria for accrual.

When an estimated loss is accrued, the triggering events for subsequently reducing the loss accrual are identified, where applicable. The triggering events generally occur when the contingency has been resolved and the actual loss is paid or written off, or when the risk of loss has diminished or been eliminated. The following are some of the triggering events that provide for the reduction of certain recorded loss accruals:

- Allowances for uncollectible accounts are reduced when accounts are written off after prescribed collection procedures have been exhausted, a better estimate of the allowance is determined or underlying amounts are ultimately collected.
- Environmental and other litigation contingencies are reduced when the contingency is resolved and actual payments are made, a better estimate of the loss is determined or the loss is no longer considered probable.

Loss accruals are reviewed on a regular basis to assure that the recorded potential loss exposures are appropriate. This involves ongoing communication and analyses with internal and external legal counsel, engineers, operation management and other parties.

#### 5) Asset Retirement Obligations

PPL Energy Supply is required to recognize a liability for legal obligations associated with the retirement of long-lived assets. The initial obligation should be measured at its estimated fair value. A conditional ARO must be recognized when incurred if the fair value of the ARO can be reasonably estimated. An equivalent amount should be recorded as an increase in the value of the capitalized asset and allocated to expense over the useful life of the asset. Until the obligation is settled, the liability is increased, through the recognition of accretion expense in the income statement, for changes in the obligation due to the passage of time. See Note 21 to the Financial Statements for further discussion of AROs.

In determining AROs, management must make significant judgments and estimates to calculate fair value. Fair value is developed using an expected present value technique based on assumptions of market participants that considers

estimated retirement costs in current period dollars that are inflated to the anticipated retirement date and then discounted back to the date the ARO was incurred. Changes in assumptions and estimates included within the calculations of the fair value of AROs could result in significantly different results than those identified and recorded in the financial statements. Estimated ARO costs and settlement dates, which affect the carrying value of the ARO and the related capitalized asset, are reviewed periodically to ensure that any material changes are incorporated into the latest estimate of the ARO. Any change to the capitalized asset, positive or negative, is amortized over the remaining life of the associated long-lived asset. See Note 21 to the Financial Statements for a discussion of the remeasurement of the ARO for the decommissioning of the Susquehanna nuclear units in the third quarter of 2010, which resulted in a \$103 million reduction in the ARO primarily due to a decrease in estimated inflation rates.

At December 31, 2010, AROs totaling \$345 million were recorded on the Balance Sheet, of which \$13 million is included in "Other current liabilities." Of the total amount, \$270 million, or 78%, relates to the nuclear decommissioning ARO. The most significant assumptions surrounding AROs are the forecasted retirement costs, the discount rates and the inflation rates. A variance in any of these inputs could have a significant impact on the ARO liabilities.

The following table reflects the sensitivities related to the nuclear decommissioning ARO liability associated with a change in these assumptions as of December 31, 2010. There is no significant change to the annual depreciation expense of the ARO asset or the annual accretion expense of the ARO liability as a result of changing the assumptions. The sensitivities below reflect an evaluation of the change based solely on a change in that assumption.

	<u>Change in Assumption</u>	<u>Impact on ARO Liability</u>
Retirement Cost	10%	\$27
Discount Rate	(0.25)%	\$25
Inflation Rate	0.25%	\$26

## 6) Income Taxes

Significant management judgment is required in developing the provision for income taxes, primarily due to the uncertainty related to tax positions taken or expected to be taken in tax returns and the determination of deferred tax assets, liabilities and valuation allowances.

Significant management judgment is required to determine the amount of benefit recognized related to an uncertain tax position. Tax positions are evaluated following a two-step process. The first step requires an entity to determine whether, based on the technical merits supporting a particular tax position, it is more likely than not (greater than a 50% chance) that the tax position will be sustained. This determination assumes that the relevant taxing authority will examine the tax position and is aware of all the relevant facts surrounding the tax position. The second step requires an entity to recognize in the financial statements the benefit of a tax position that meets the more-likely-than-not recognition criterion. The benefit recognized is measured at the largest amount of benefit that has a likelihood of realization, upon settlement, that exceeds 50%. Management considers a number of factors in assessing the benefit to be recognized, including negotiation of a settlement.

On a quarterly basis, uncertain tax positions are reassessed by considering information known at the reporting date. Based on management's assessment of new information, a tax benefit may subsequently be recognized for a previously unrecognized tax position, a previously recognized tax position may be de-recognized, or the benefit of a previously recognized tax position may be remeasured. The amounts ultimately paid upon resolution of issues raised by taxing authorities may differ materially from the amounts accrued and may materially impact the financial statements in the future.

At December 31, 2010, it was reasonably possible that during the next 12 months the total amount of unrecognized tax benefits could increase by as much as \$1 million or decrease by up to \$181 million. This change could result from subsequent recognition, derecognition and/or changes in the measurement of uncertain tax positions related to the creditability of foreign taxes, the timing and utilization of foreign tax credits and the related impact on alternative minimum tax and other credits, the timing and/or valuation of certain deductions, intercompany transactions and unitary

filing groups. The events that could cause these changes are direct settlements with taxing authorities, litigation, legal or administrative guidance by relevant taxing authorities and the lapse of an applicable statute of limitation.

The balance sheet classification of unrecognized tax benefits and the need for valuation allowances to reduce deferred tax assets also require significant management judgment. Unrecognized tax benefits are classified as current to the extent management expects to settle an uncertain tax position by payment or receipt of cash within one year of the reporting date. Valuation allowances are initially recorded and reevaluated each reporting period by assessing the likelihood of the ultimate realization of a deferred tax asset. Management considers a number of factors in assessing the realization of a deferred tax asset, including the reversal of temporary differences, future taxable income and ongoing prudent and feasible tax planning strategies. Any tax planning strategy utilized in this assessment must meet the recognition and measurement criteria utilized to account for an uncertain tax position. Management also considers the uncertainty posed by political risk (e.g. the potential for legislative extension of generation rate caps) and the effect of this uncertainty on the various factors that management takes into account in evaluating the need for valuation allowances. The amount of deferred tax assets ultimately realized may differ materially from the estimates utilized in the computation of valuation allowances and may materially impact the financial statements in the future. See Note 5 to the Financial Statements for income tax disclosures, including the release of \$52 million of valuation allowances associated with state net operating loss carryforwards in 2010.

#### **Other Information**

PPL's Audit Committee has approved the independent auditor to provide audit and audit-related services and other services permitted by Sarbanes-Oxley and SEC rules. The audit and audit-related services include services in connection with statutory and regulatory filings, reviews of offering documents and registration statements, and internal control reviews. See "Item 14. Principal Accounting Fees and Services" for more information.

**PPL ELECTRIC UTILITIES CORPORATION AND SUBSIDIARIES****Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations****Overview**

The information provided in this Item 7 should be read in conjunction with PPL Electric's Consolidated Financial Statements and the accompanying Notes. Terms and abbreviations are explained in the glossary. Dollars are in millions unless otherwise noted.

PPL Electric is an electricity delivery service provider in eastern and central Pennsylvania with headquarters in Allentown, Pennsylvania. Refer to "Item 1. Business - Background" for a description of its business. PPL Electric's strategy and principal challenge is to own and operate its electricity delivery business at the most efficient cost while maintaining high quality customer service and reliability. Because PPL Electric's electricity delivery business is rate-regulated, it is subject to regulatory risk with respect to costs that may be recovered and investment returns that may be collected through customer rates.

To manage financing costs and access to credit markets, a key objective for PPL Electric's business is to maintain a strong credit profile. PPL Electric continually focuses on maintaining an appropriate capital structure and liquidity position. See "Item 1A. Risk Factors" for more information concerning these and other material risks PPL Electric faces in its business.

"Management's Discussion and Analysis of Financial Condition and Results of Operations" provides information concerning PPL Electric's performance in implementing the strategies and managing the risks and challenges mentioned above. Specifically:

- "Results of Operations" provides an overview of PPL Electric's operating results in 2010, 2009 and 2008, including a review of earnings. It also provides a brief outlook for 2011.
- "Financial Condition - Liquidity and Capital Resources" provides an analysis of PPL Electric's liquidity position and credit profile, including its sources of cash (including bank credit facilities and sources of operating cash flow) and uses of cash (including contractual obligations and capital expenditure requirements) and the key risks and uncertainties that impact PPL Electric's past and future liquidity position and financial condition. This subsection also includes rating agency actions on PPL Electric's credit ratings.
- "Financial Condition - Risk Management" provides an explanation of PPL Electric's risk management programs relating to market risk and credit risk.
- "Application of Critical Accounting Policies" provides an overview of the accounting policies that are particularly important to the results of operations and financial condition of PPL Electric and that require its management to make significant estimates, assumptions and other judgments.

See "Item 1. Business - Background - Segment Information - Pennsylvania Regulated Segment" for a discussion of PPL Electric's PLR obligations, PPL Electric's agreement to provide electricity as a PLR at "capped" rates through the end of 2009, and plans for default electricity supply procurement after 2009.

When comparing 2010 with 2009, certain line items on PPL Electric's financial statements were impacted by the Customer Choice Act, Act 129 and other related issues. The expiration of generation rate caps, the resulting competitive solicitations for power supply, the migration of customers to alternative suppliers, the Customer Choice Act and Act 129 had minimal impact on Pennsylvania gross delivery margins, as approved recovery mechanisms allow for cost recovery of associated expenses, including the cost of energy provided as a PLR. However, PPL Electric's 2010 Pennsylvania gross delivery margins were negatively impacted by the expiration of CTC recovery in December 2009. PPL Electric continues to remain the delivery provider for all customers in its service territory and charge a regulated rate for the service of delivering electricity.

See "Statement of Income Analysis - Pennsylvania Gross Delivery Margins" for additional information.

**Results of Operations**

**Earnings**

	<b>2010</b>	<b>2009</b>	<b>2008</b>
Net Income Available to PPL Corporation	\$ 115	\$ 124	\$ 158

The after-tax changes in Net Income Available to PPL Corporation between these periods were due to the following factors, including several special items that management considers significant. Details of these special items are provided below.

	<b>2010 vs. 2009</b>	<b>2009 vs. 2008</b>
Pennsylvania gross delivery margins	\$ 2	\$ (18)
Other operation and maintenance	(29)	3
Interest expense	11	(12)
Income taxes and other	(2)	2
Special items	9	(9)
	\$ (9)	\$ (34)

- See "Pennsylvania Gross Delivery Margins by Component" in the "Statement of Income Analysis" section for an explanation of margins generated by the regulated electric delivery operations.
- Other operation and maintenance increased in 2010 compared with 2009, primarily due to higher payroll-related costs and higher contractor costs related to vegetation management.
- Interest expense decreased in 2010 compared with 2009, primarily due to lower average debt balances in 2010 compared with 2009 and the interest related to the over-recovery of recoverable transition costs.

Interest expense increased in 2009 compared with 2008, primarily due to \$400 million of debt issuances in October 2008 that prefunded a portion of August 2009 debt maturities.

The following after-tax amounts, which management considers special items, also impacted earnings.

	<b>2009</b>
Asset impairments	\$ (1)
Workforce reduction (Note 13)	(5)
Other:	
Change in tax accounting method related to repairs (Note 5)	(3)
Total	\$ (9)

*2011 Outlook*

Excluding special items, higher earnings are projected in 2011 compared with 2010, due to higher distribution revenues resulting from an approved distribution base rate increase effective January 1, 2011.

Earnings beyond 2010 are subject to various risks and uncertainties. See "Forward-Looking Information," "Item 1. Business," "Item 1A. Risk Factors," the rest of this Item 7 and Note 15 to the Financial Statements for a discussion of the risks, uncertainties and factors that may impact future earnings. See "Item 1. Business - Segment Information - Pennsylvania Regulated Segment" for additional information on the 2010 rate case.

**Statement of Income Analysis --**

**Pennsylvania Gross Delivery Margins**

Non-GAAP Financial Measure

The following discussion includes financial information prepared in accordance with GAAP, as well as a non-GAAP financial measure, "Pennsylvania Gross Delivery Margins." "Pennsylvania Gross Delivery Margins" is a single financial performance measure of PPL Electric's Pennsylvania regulated electric delivery operations, which includes transmission and distribution activities, including PLR supply. In calculating this measure, Pennsylvania regulated utility revenues and expenses associated with approved recovery mechanisms, including energy provided as a PLR, are offset. These mechanisms allow for full cost recovery of certain expenses; therefore, certain expenses and revenues offset with minimal impact on earnings. As a result, this measure represents the net revenues from PPL Electric's Pennsylvania regulated electric delivery operations. This performance measure is used, in conjunction with other information, internally by senior management and PPL's Board of Directors to manage its Pennsylvania regulated electric delivery operations. PPL Electric believes that "Pennsylvania Gross Delivery Margins" provides another criterion to make investment decisions.

This measure is not intended to replace "Operating Income," which is determined in accordance with GAAP, as an indicator of overall operating performance. Other companies may use different measures to analyze and to report on the results of their operations. The following table reconciles "Operating Income" to "Pennsylvania Gross Delivery Margins" as defined by PPL Electric.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Operating Income (a)	\$ 284	\$ 329	\$ 375
Adjustments:			
Other operation and maintenance (a)	502	417	410
Depreciation (a)	136	128	131
Taxes, other than income (a)	138	194	203
Expense adjustments (b)	(205)	(216)	(236)
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 883</u>

(a) As reported on the Statements of Income.

(b) The components of these adjustments are detailed in the table below.

The following table provides the income statement line items and other adjustments that comprise Pennsylvania gross delivery margins.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Revenue						
Retail electric (a)	\$ 2,448	\$ 3,218	\$ (770)	\$ 3,218	\$ 3,290	\$ (72)
Wholesale electric to affiliate (a)	7	74	(67)	74	111	(37)
	<u>2,455</u>	<u>3,292</u>	<u>(837)</u>	<u>3,292</u>	<u>3,401</u>	<u>(109)</u>
Expense						
Energy purchases (a)	1,075	114	961	114	163	(49)
Energy purchases from affiliate (a)	320	1,806	(1,486)	1,806	1,826	(20)
Amortization of recoverable transition costs (a)		304	(304)	304	293	11
Expense adjustments (b)						
Include gross receipts tax (c)	129	186	(57)	186	198	(12)
Include Act 129 (d)	54		54			
Other	22	30	(8)	30	38	(8)
Total expense adjustments	<u>205</u>	<u>216</u>	<u>(11)</u>	<u>216</u>	<u>236</u>	<u>(20)</u>
	<u>1,600</u>	<u>2,440</u>	<u>(840)</u>	<u>2,440</u>	<u>2,518</u>	<u>(78)</u>
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 3</u>	<u>\$ 852</u>	<u>\$ 883</u>	<u>\$ (31)</u>

(a) As reported on the Statements of Income.

(b) To include/exclude the impact of any revenues and expenses consistent with the way management reviews Pennsylvania gross delivery margins internally.

(c) Included in "Taxes, other than income" on the Statements of Income.

(d) Included in "Other operation and maintenance" on the Statement of Income.

Pennsylvania Gross Delivery Margins by Component

Pennsylvania gross delivery margins are generated through domestic regulated electric distribution activities, including PLR supply, and transmission activities.

	<u>2010</u>	<u>2009</u>	<u>Change</u>	<u>2009</u>	<u>2008</u>	<u>Change</u>
Distribution	\$ 679	\$ 702	\$ (23)	\$ 702	\$ 731	\$ (29)
Transmission	176	150	26	150	152	(2)
Pennsylvania gross delivery margins	<u>\$ 855</u>	<u>\$ 852</u>	<u>\$ 3</u>	<u>\$ 852</u>	<u>\$ 883</u>	<u>\$ (31)</u>

### *Distribution*

The decrease in 2010 compared with 2009 was primarily due to margins realized in 2009 related to the collection of CTC, which ended in December 2009, partially offset by favorable recovery mechanisms for certain energy related costs.

The decrease in 2009 compared with 2008 was primarily due to lower CTC/ITC margins in 2009, ITC collections ended in 2008. Lower margins were also attributable to unfavorable economic conditions, including industrial customers scaling back on production. In addition, weather had an unfavorable impact on sales volumes, offset by favorable price increases.

### *Transmission*

The increase in 2010 compared with 2009 was primarily due to increased investment in rate base, an increase in the cost of capital due to an increase in equity and the recovery of additional costs through FERC formula-based rates.

### **Other Operation and Maintenance**

The changes in other operation and maintenance expenses were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Act 129 costs incurred (a)	\$ 54	
Vegetation management costs (b)	13	\$ (5)
Payroll-related costs	13	3
Contractor-related expenses	7	(2)
Allocation of certain corporate support group costs	6	
PUC-reportable storm costs, net of insurance recovery	5	(8)
Uncollectible accounts	3	7
Customer education programs	3	(2)
Ancillary charges (c)	(11)	1
Workforce reduction (Note 13)	(9)	9
Employee benefits	(4)	5
Other	5	(1)
Total	<u>\$ 85</u>	<u>\$ 7</u>

- (a) Relates to costs associated with a PUC-approved energy efficiency and conservation plan. These costs are recovered in customer rates. See "Regulatory Issues - Pennsylvania Activities" in Note 15 to the Financial Statements for additional information on this plan. These costs are included in "Pennsylvania Gross Delivery Margins" above.
- (b) In 2010, PPL Electric increased its vegetation management around its 230- and 500-kV major transmission lines in response to federal reliability requirements for transmission vegetation management. See "Regulatory Issues - Energy Policy Act of 2005 - Reliability Standards" in Note 15 to the Financial Statements for additional information.
- (c) Prior to 2010, these charges were assessed to load serving entities (LSE), and PPL Electric was considered the LSE. In 2010, PPL Electric was not billed directly for these charges. The individual PLR generation suppliers incurred these costs and billed PPL Electric as part of the bundled price of PLR supply. Such costs are reflected in energy purchases.

### **Taxes, Other Than Income**

Taxes, other than income decreased by \$56 million in 2010 compared with 2009. The decrease was primarily due to lower Pennsylvania gross receipts tax expense due to a decrease in electricity revenue as customers chose alternate suppliers in 2010.

Taxes, other than income decreased by \$9 million in 2009 compared with 2008. The decrease was primarily due to a \$12 million decrease in Pennsylvania gross receipts tax expense, which reflects a decrease in the tax rate in 2009.

### Depreciation

Depreciation increased by \$8 million in 2010 compared with 2009, primarily due to PP&E additions.

### Other Income (Expense) - net

See Note 17 to the Financial Statements for details.

### Interest Income from Affiliate

Interest income from affiliate decreased by \$5 million in 2009 compared with 2008. This decrease was the result of a reduced average balance outstanding on a note receivable from an affiliate and a lower average rate on this note due to a floating interest rate.

### Financing Costs

The changes in financing costs, which includes "Interest Expense", "Interest Expense with Affiliate" and "Distributions on Preferred Securities," were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Long-term debt interest expense (a)	\$ (16)	\$ 24
Repayment of transition bonds		(13)
Interest on PLR contract collateral (Note 16)	(2)	(8)
Distributions on preferred securities	2	
Recoverable transition costs	(3)	3
Other	2	1
Total	<u>\$ (17)</u>	<u>\$ 7</u>

- (a) The decrease in 2010 compared with 2009 was primarily due to long-term debt retirements in the third quarter of 2009. The increase in 2009 compared with 2008 was primarily due to \$400 million of debt issuances in October 2008 that prefunded a portion of August 2009 debt maturities.

### Income Taxes

The changes in income taxes were due to:

	<u>2010 vs. 2009</u>	<u>2009 vs. 2008</u>
Lower pre-tax book income	\$ (13)	\$ (19)
Federal and state tax reserve adjustments	(5)	(2)
Federal and state tax return adjustments	(5)	(2)
Other	1	
	<u>\$ (22)</u>	<u>\$ (23)</u>

See Note 5 to the Financial Statements for additional information on income taxes.

## Financial Condition

### Liquidity and Capital Resources

PPL Electric continues to focus on maintaining a strong credit profile and liquidity position. PPL Electric expects to continue to have adequate liquidity available through operating cash flows, cash and cash equivalents and its credit facilities. Additionally, PPL Electric currently plans to access debt capital markets in 2011, subject to market conditions.

PPL Electric's cash flows from operations and access to cost-effective bank and capital markets are subject to risks and uncertainties including, but not limited to:

- unusual or extreme weather that may damage PPL Electric's transmission and distribution facilities or affect energy sales to customers;
- the ability to recover and the timeliness and adequacy of recovery of costs associated with regulated utility businesses;
- any adverse outcome of legal proceedings and investigations with respect to PPL Electric's current and past business activities;
- deterioration in the financial markets that could make obtaining new sources of bank and capital markets funding more difficult and more costly; and
- a downgrade in PPL Electric's credit ratings that could adversely affect its ability to access capital and increase the cost of credit facilities and any new debt.

See "Item 1A. Risk Factors" for further discussion of risks and uncertainties affecting PPL Electric's cash flows.

At December 31, PPL Electric had the following:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Cash and cash equivalents	\$ 204	\$ 485	\$ 483
Short-term debt			<u>\$ 95</u>

The changes in PPL Electric's cash and cash equivalents position resulted from:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Net cash provided by operating activities	\$ 212	\$ 294	\$ 648
Net cash provided by (used in) investing activities	(403)	6	(226)
Net cash provided by (used in) financing activities	(90)	(298)	28
Net Increase (Decrease) in Cash and Cash Equivalents	<u>\$ (281)</u>	<u>\$ 2</u>	<u>\$ 450</u>

### Operating Activities

Net cash provided by operating activities decreased by 28%, or \$82 million, in 2010 compared with 2009. The expiration of the generation rate caps at the end of 2009 had little impact on net income, while increased transmission revenue was almost completely offset by decreased distribution revenue. However, higher tree trimming and payroll costs and additional defined benefit plan contributions were the primary drivers to the decrease in cash provided by operating activities. Also impacting the 2010 operating cash flows was the elimination of the CTC charge of approximately \$300 million that was received in 2009. This amount offsets the benefit of not paying the \$300 million in cash collateral to PPL Energy Supply, as discussed below.

Net cash provided by operating activities decreased by 55%, or \$354 million, in 2009 compared with 2008, primarily as a result of the repayment by PPL Electric of \$300 million in cash collateral related to the long-term PLR energy supply agreements with PPL Energy Supply, which expired at the end of 2009. The decrease also reflects the impact of lower delivery revenues and higher payments of interest and income taxes.

PPL Electric expects an increase in cash flows from operations in the near-term from its \$77.5 million, or 1.6%, rate increase that became effective on January 1, 2011.

### Investing Activities

The primary use of cash in investing activities is capital expenditures. See "Forecasted Uses of Cash" for detail regarding capital expenditures in 2010 and projected expenditures for the years 2011 through 2015.

Net cash used in investing activities was \$403 million in 2010 compared with cash provided by investing activities of \$6 million in 2009. The change from 2009 to 2010 primarily reflects an increase of \$113 million in capital expenditures in 2010 and the receipt of \$300 million from an affiliate as repayment of a demand loan in 2009.

Net cash provided by investing activities was \$6 million in 2009 compared with cash used in investing activities of \$226 million in 2008. The change from 2008 to 2009 primarily reflects the receipt of \$300 million from an affiliate as repayment of a demand loan.

### Financing Activities

Net cash used in financing activities was \$90 million in 2010 compared with \$298 million in 2009. The change from 2009 to 2010 primarily reflects no debt activity, decreased contributions from and common stock dividends paid to PPL, and the redemption of preferred stock in 2010. PPL Electric had net debt retirements of \$392 million in 2009 compared with no activity in 2010, received \$345 million less of contributions from PPL in 2010 compared to 2009, paid \$203 million less of common stock dividends to PPL in 2010 compared to 2009, and paid \$54 million to redeem preferred stock in 2010.

Net cash used in financing activities was \$298 million in 2009 compared with net cash provided by financing activities of \$28 million in 2008. The change from 2008 to 2009 primarily reflects less issuances and increased retirements of long-term debt, contributions received from PPL, increased common stock dividends to PPL and the repayment of short-term borrowings in 2009. PPL Electric had net debt retirements of \$392 million in 2009 compared with net debt issuances of \$148 million in 2008, received \$400 million of contributions from PPL in 2009 and paid \$176 million more of common stock dividends to PPL in 2009 compared to 2008.

See "Forecasted Sources of Cash" for a discussion of PPL Electric's plans to issue debt and equity securities, as well as a discussion of credit facility capacity available to PPL Electric. Also see "Forecasted Uses of Cash" for a discussion of PPL Electric's plans to pay dividends on its common and preferred securities, as well as maturities of PPL Electric's long-term debt.

### Forecasted Sources of Cash

PPL Electric expects to continue to have significant sources of cash available in the near term, including various credit facilities and a commercial paper program. PPL Electric currently plans to issue up to \$250 million in long-term debt securities in 2011, subject to market conditions.

#### *Credit Facilities*

At December 31, 2010, PPL Electric's total committed borrowing capacity under its credit facilities and the use of this borrowing capacity were:

	<u>Committed Capacity</u>	<u>Borrowed</u>	<u>Letters of Credit Issued (a)</u>	<u>Unused Capacity</u>
Syndicated Credit Facility (b)	\$ 200		\$ 13	\$ 187
Asset-backed Credit Facility (c)	150		n/a	150
Total PPL Electric Credit Facilities (d)	<u>\$ 350</u>		<u>\$ 13</u>	<u>\$ 337</u>

- (a) PPL Electric has a reimbursement obligation to the extent any letters of credit are drawn upon.
- (b) Borrowings under PPL Electric's syndicated credit facility generally bear interest at LIBOR-based rates plus a spread, depending upon the company's senior secured long-term debt rating. PPL Electric also has the capability to request the lenders to issue up to \$200 million of letters of credit under this facility, which issuances reduce available borrowing capacity. Subject to certain conditions, PPL Electric may request that the facility's capacity be increased by up to \$100 million.

This syndicated credit facility contains a financial covenant requiring debt to total capitalization not to exceed 70%. At December 31, 2010, PPL Electric's consolidated debt to total capitalization percentages, as calculated in accordance with its credit facility, was 43%. The syndicated credit facility also contains standard representations and warranties that must be made for PPL Electric to borrow under it.

The commitments under the credit facility are provided by a diverse bank group, with no one bank and its affiliates providing an aggregate commitment of more than 6% of the total committed capacity.

- (c) This credit facility relates to an asset-backed commercial paper program through which PPL Electric obtains financing by selling and contributing its eligible accounts receivable and unbilled revenues to a special purpose, wholly owned subsidiary on an ongoing basis. The subsidiary pledges these assets to secure loans of up to an aggregate of \$150 million from a commercial paper conduit sponsored by a financial institution. At December 31, 2010, based on accounts receivable and unbilled revenue pledged, \$150 million was available for borrowing.
- (d) The committed capacity expires as follows: \$150 million in 2011 and \$200 million in 2014. PPL Electric intends to renew its existing \$150 million asset-backed credit facility in 2011 in order to maintain its current total committed capacity level.

In addition to the financial covenant noted in the table above, the credit agreements governing the credit facilities contain various other covenants. Failure to comply with the covenants after applicable grace periods could result in acceleration of repayment of borrowings and/or termination of the agreements. PPL Electric monitors compliance with the covenants on a regular basis. At December 31, 2010, PPL Electric was in material compliance with these covenants. At this time, PPL Electric believes that these covenants and other borrowing conditions will not limit access to these funding sources.

See Note 7 to the Financial Statements for further discussion of PPL Electric's credit facilities.

#### *Commercial Paper*

PPL Electric maintains a commercial paper program for up to \$200 million to provide an additional financing source to fund its short-term liquidity needs, if and when necessary. Commercial paper issuances are currently supported by PPL Electric's \$200 million syndicated credit facility, which expires in December 2014, based on available capacity.

PPL Electric did not issue any commercial paper during 2010. Based on its current cash position and anticipated cash flows, PPL Electric currently does not plan to issue any commercial paper during 2011, but it may do so from time to time, subject to market conditions, to facilitate short-term cash flow needs.

#### *Contributions from PPL*

From time to time PPL may make capital contributions to PPL Electric. PPL Electric may use these contributions for general corporate purposes.

#### *Long-Term Debt and Equity Securities*

Subject to market conditions, PPL Electric currently plans to issue up to \$250 million in long-term debt securities in 2011. PPL Electric expects to use the proceeds from the issuance of long-term debt securities primarily to fund capital expenditures and for general corporate purposes.

#### The Economic Stimulus Package

In April 2010, PPL Electric entered into an agreement with the DOE, in which the agency is to provide funding for one-half of a \$38 million smart grid project. The project would use smart grid technology to strengthen reliability, save energy and improve electric service for 60,000 Harrisburg, Pennsylvania area customers. It would also provide benefits beyond the Harrisburg region, helping to speed power restoration across PPL Electric's 29-county service territory. Work on the project is progressing on schedule, and PPL Electric is receiving reimbursements under the grant for costs incurred. The project is scheduled to be completed by the end of September 2012.

#### Forecasted Uses of Cash

In addition to expenditures required for normal operating activities, such as purchased power, payroll, and taxes, PPL Electric currently expects to incur future cash outflows for capital expenditures, various contractual obligations, payment of dividends on its common and preferred securities and possibly the purchase or redemption of a portion of its debt securities.

*Capital Expenditures*

The table below shows PPL Electric's actual spending for the year 2010 and current capital expenditure projections for the years 2011 through 2015.

	<u>Actual</u>	<u>Projected</u>				
	<u>2010</u>	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>
Construction expenditures (a) (b)						
Transmission and distribution facilities	\$ 368	\$ 401	\$ 576	\$ 841	\$ 795	\$ 641
Other	43	51	53	27	26	26
Total Capital Expenditures	<u>\$ 411</u>	<u>\$ 452</u>	<u>\$ 629</u>	<u>\$ 868</u>	<u>\$ 821</u>	<u>\$ 667</u>

- (a) Construction expenditures include AFUDC, which is expected to be approximately \$79 million for the years 2011 through 2015.  
(b) Includes expenditures for intangible assets.

PPL Electric's capital expenditure projections for the years 2011 through 2015 total approximately \$3.4 billion. Capital expenditure plans are revised periodically to reflect changes in operational, market and regulatory conditions. The table includes projected costs for the asset optimization program focused on the replacement of aging transmission and distribution assets, and the PJM-approved regional transmission line expansion project. See Note 8 to the Financial Statements for additional information.

PPL Electric plans to fund its capital expenditures in 2011 with cash on hand, cash from operations and proceeds from the issuance of debt securities.

*Contractual Obligations*

PPL Electric has assumed various financial obligations and commitments in the ordinary course of conducting its business. At December 31, 2010, the estimated contractual cash obligations of PPL Electric were:

	<u>Total</u>	<u>Less Than 1 Year</u>	<u>1-3 Years</u>	<u>4-5 Years</u>	<u>After 5 Years</u>
Long-term Debt (a)	\$ 1,474		\$ 400	\$ 110	\$ 964
Interest on Long-term Debt (b)	1,369	\$ 88	177	119	985
Purchase Obligations (c)	1,480	937	383	160	
Total Contractual Cash Obligations	<u>\$ 4,323</u>	<u>\$ 1,025</u>	<u>\$ 960</u>	<u>\$ 389</u>	<u>\$ 1,949</u>

- (a) Reflects principal maturities only based on stated maturity dates. PPL Electric does not have any capital or operating lease obligations.  
(b) Assumes interest payments through stated maturity.  
(c) The payments reflected herein are subject to change, as the purchase obligation reflected is an estimate based on projected obligated quantities and projected pricing under the contract. Purchase orders made in the ordinary course of business are excluded from the amounts presented.

At December 31, 2010, total unrecognized tax benefits of \$62 million were excluded from this table as PPL Electric cannot reasonably estimate the amount and period of future payments. See Note 5 to the Financial Statements for additional information.

*Dividends*

From time to time, as determined by its Board of Directors, PPL Electric pays dividends on its common stock to its parent, PPL.

As discussed in Note 7 to the Financial Statements, PPL Electric may not pay dividends on its common stock, except in certain circumstances, unless full dividends have been paid on the 6.25% Series Preference Stock for the then-current dividend period. PPL Electric does not, at this time, expect that such limitation would significantly impact its ability to declare dividends.

PPL Electric expects to continue to pay quarterly dividends on its outstanding preferred securities, if and as declared by its Board of Directors.

#### *Purchase or Redemption of Debt Securities*

PPL Electric will continue to evaluate purchasing or redeeming outstanding debt securities and may decide to take action depending upon prevailing market conditions and available cash.

#### Credit Ratings

Moody's, S&P and Fitch periodically review the credit ratings on the debt and preferred securities of PPL Electric. Based on their respective independent reviews, the rating agencies may make certain ratings revisions or ratings affirmations.

A credit rating reflects an assessment by the rating agency of the creditworthiness associated with an issuer and particular securities that it issues. The credit ratings of PPL Electric are based on information provided by PPL Electric and other sources. The ratings of Moody's, S&P and Fitch are not a recommendation to buy, sell or hold any securities of PPL Electric. Such ratings may be subject to revisions or withdrawal by the agencies at any time and should be evaluated independently of each other and any other rating that may be assigned to the securities. A downgrade in PPL Electric's credit ratings could result in higher borrowing costs and reduced access to capital markets.

In prior periodic reports, PPL Electric described its then-current debt ratings in connection with, and to facilitate, an understanding of its liquidity position. As a result of the passage of the Dodd-Frank Act and the attendant uncertainties relating to the extent to which issuers of non-asset backed securities may disclose credit ratings without being required to obtain rating agency consent to the inclusion of such disclosure, or incorporation by reference of such disclosure, in a registrant's registration statement or section 10(a) prospectus, PPL Electric is limiting its credit rating disclosure to a description of the actions taken by the rating agencies with respect to PPL Electric's ratings, but without stating what ratings have been assigned to PPL Electric or its securities. The ratings assigned by the rating agencies to PPL Electric and its respective securities may be found, without charge, on each of the respective ratings agencies' websites, which ratings together with all other information contained on such rating agency websites is, hereby, explicitly not incorporated by reference in this report.

The rating agencies took the following actions related to PPL Electric in 2010.

#### *Moody's*

In April 2010, Moody's took the following actions:

- Revised the outlook for PPL Electric;
- Lowered the rating of PPL Electric's preferred securities;
- Lowered the issuer rating of PPL Electric; and
- Affirmed the senior secured rating and commercial paper rating of PPL Electric.

Moody's stated in its press release that the revision in the rating for PPL Electric, while reflective of PPL's then-announced agreement to acquire LKE, is driven more by weakening financial metrics and the outlooks that had been in place for PPL and PPL Electric for the past year.

#### *S&P*

In April 2010, S&P affirmed its credit rating for PPL Electric following PPL's then-announced agreement to acquire LKE.

In October 2010, S&P affirmed its credit ratings for PPL Electric and revised the outlook on PPL Electric.

#### *Fitch*

In January 2010, as a result of implementing its revised guidelines for rating preferred stock and hybrid securities, Fitch lowered the ratings of PPL Electric's preferred stock and preference stock. Fitch stated in its press release that the new guidelines, which apply to instruments issued by companies in all sectors, typically resulted in downgrades of one notch for many instruments that provide for the ability to defer interest or dividend payments. Fitch stated that it has no reason to believe that such deferral will be activated.

In April 2010, Fitch affirmed its credit ratings and outlook for PPL Electric following PPL's then-announced agreement to acquire LKE.

### **Off-Balance Sheet Arrangements**

PPL Electric has entered into certain agreements that may contingently require payment to a guaranteed or indemnified party. See Note 15 to the Financial Statements for a discussion of these agreements.

### **Risk Management**

#### Market Risk

##### *Commodity Price and Volumetric Risk - PLR Contracts*

PPL Electric is exposed to market price and volumetric risks from its obligation as PLR. The PUC has approved a cost recovery mechanism that allows PPL Electric to pass through to customers the cost associated with fulfilling its PLR obligation. This cost recovery mechanism substantially eliminates PPL Electric's exposure to market price risk. PPL Electric also mitigates its exposure to volumetric risk by entering into full requirement energy supply contracts for its customers. These supply contracts transfer the volumetric risk associated with the PLR obligation to the energy suppliers.

##### *Interest Rate Risk*

PPL Electric has issued debt to finance its operations, which exposes it to interest rate risk. PPL Electric had no potential annual exposure to increased interest expense, based on a 10% increase in interest rates, at December 31, 2010. Such amount was not significant at December 31, 2009. PPL Electric estimated that a 10% decrease in interest rates at December 31, 2010 would increase the fair value of its debt portfolio by \$66 million, compared with \$69 million at December 31, 2009.

#### Credit Risk

Credit risk is the risk that PPL Electric would incur a loss as a result of nonperformance by counterparties of their contractual obligations. PPL Electric requires that counterparties maintain specified credit ratings and requires other assurances in the form of credit support or collateral in certain circumstances in order to limit counterparty credit risk. However, PPL Electric has concentrations of suppliers, financial institutions and customers. These concentrations may impact PPL Electric's overall exposure to credit risk, positively or negatively, as counterparties may be similarly affected by changes in economic, regulatory or other conditions.

In 2007, the PUC approved PPL Electric's post-rate cap plan to procure default electricity supply for retail customers who do not choose an alternative competitive supplier in 2010. Pursuant to this plan, PPL Electric had contracted for all of the electric supply for customers who elected this service in 2010.

In June 2009, the PUC approved PPL Electric's procurement plan for the period January 2011 through May 2013. Through 2010, PPL Electric has conducted six of its 14 planned competitive solicitations.

Under the standard Supply Master Agreement (the Agreement) for the competitive solicitation process, PPL Electric requires all suppliers to post collateral if their credit exposure exceeds an established credit limit. In the event a supplier defaults on its obligation, PPL Electric would be required to seek replacement power in the market. All incremental

costs incurred by PPL Electric would be recoverable from customers in future rates. At December 31, 2010, all of the successful bidders under all of the solicitations had an investment grade credit rating from S&P, and were not required to post collateral under the Agreement. There is no instance under the Agreement in which PPL Electric is required to post collateral to its suppliers.

See "Overview" in this Item 7 and Notes 15, 16, 18 and 19 to the Financial Statements for additional information on the competitive solicitations, the Agreement, credit concentration and credit risk.

### **Related Party Transactions**

PPL Electric is not aware of any material ownership interests or operating responsibility by senior management of PPL Electric in outside partnerships, including leasing transactions with variable interest entities, or other entities doing business with PPL Electric. See Note 16 to the Financial Statements for additional information on related party transactions.

### **Environmental Matters**

See "Item 1. Business - Environmental Matters" and Note 15 to the Financial Statements for a discussion of environmental matters.

### **Competition**

See "Item 1. Business - Segment Information - Pennsylvania Regulated Segment - Competition" for a discussion of competitive factors affecting PPL Electric.

### **New Accounting Guidance**

See Note 1 to the Financial Statements for a discussion of new accounting guidance adopted.

### **Application of Critical Accounting Policies**

Financial condition and results of operations are impacted by the methods, assumptions and estimates used in the application of critical accounting policies. The following accounting policies are particularly important to the financial condition or results of operations, and require estimates or other judgments of matters inherently uncertain. Changes in the estimates or other judgments included within these accounting policies could result in a significant change to the information presented in the Financial Statements (these accounting policies are also discussed in Note 1 to the Financial Statements). PPL's senior management has reviewed these critical accounting policies, the following disclosures regarding their application and the estimates and assumptions regarding them, with PPL's Audit Committee.

#### **1) Defined Benefits**

PPL Electric participates in and is allocated a significant portion of the liability and net periodic defined benefit pension and other postretirement costs of plans sponsored by PPL Services based on participation in those plans. PPL Electric records an asset or liability to recognize the funded status of all defined benefit plans with an offsetting entry to regulatory assets. Consequently, the funded status of all defined benefit plans is fully recognized on the Balance Sheets. See Note 13 to the Financial Statements for additional information about the plans and the accounting for defined benefits.

PPL Services makes certain assumptions regarding the valuation of benefit obligations and the performance of plan assets. When accounting for defined benefits, delayed recognition in earnings of differences between actual results and expected or estimated results is a guiding principle. Annual net periodic defined benefit costs are recorded in current earnings based on estimated results. Any differences between actual and estimated results are recorded in regulatory assets. The amount in regulatory assets is amortized to income over future periods. The delayed recognition allows for a

smoothed recognition of costs over the working lives of the employees who benefit under the plans. The primary assumptions are:

- **Discount Rate** - The discount rate is used in calculating the present value of benefits, which is based on projections of benefit payments to be made in the future. The objective in selecting the discount rate is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the accumulated benefits when due.
- **Expected Return on Plan Assets** - Management projects the long-term rates of return on plan assets based on historical performance, future expectations and periodic portfolio rebalancing among the diversified asset classes. These projected returns reduce the net benefit costs PPL records currently.
- **Rate of Compensation Increase** - Management projects employees' annual pay increases, which are used to project employees' pension benefits at retirement.
- **Health Care Cost Trend Rate** - Management projects the expected increases in the cost of health care.

In selecting a discount rate for its U.S. defined benefit plans, PPL Services starts with an analysis of the expected benefit payment stream for its plans. This information is first matched against a spot-rate yield curve. A portfolio of 604 Aa-graded non-callable (or callable with make-whole provisions) bonds, with a total amount outstanding in excess of \$667 billion, serves as the base from which those with the lowest and highest yields are eliminated to develop the ultimate yield curve. The results of this analysis are considered together with other economic data and movements in various bond indices to determine the discount rate assumption. At December 31, 2010, PPL Services decreased the discount rate for its U.S. pension plans from 6.00% to 5.41% as a result of this assessment and decreased the discount rate for its other postretirement benefit plans from 5.81% to 5.16%.

The expected long-term rates of return for PPL Services' U.S. defined benefit pension and other postretirement benefits have been developed using a best-estimate of expected returns, volatilities and correlations for each asset class. PPL management corroborates these rates with expected long-term rates of return calculated by its independent actuary, who uses a building block approach that begins with a risk-free rate of return with factors being added such as inflation, duration, credit spreads and equity risk. Each plan's specific asset allocation is also considered in developing a reasonable return assumption. At December 31, 2010, PPL Services' expected return on plan assets decreased from 8.00% to 7.25% for its U.S. pension plan and decreased from 7.00% to 6.45% for its other postretirement benefit plan.

In selecting a rate of compensation increase, PPL Services considers past experience in light of movements in inflation rates. At December 31, 2010, PPL Services' rate of compensation increase remained at 4.75% for its U.S. plan.

In selecting health care cost trend rates for PPL Services' other postretirement benefit plans, PPL Services considers past performance and forecasts of health care costs. At December 31, 2010, PPL Services' health care cost trend rates were 9.00% for 2011, gradually declining to 5.50% for 2019.

A variance in the assumptions listed above could have a significant impact on the accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and the regulatory assets allocated to PPL Electric. While the charts below reflect either an increase or decrease in each assumption, the inverse of this change would impact the accrued defined benefit liabilities or assets, reported annual net periodic defined benefit costs and regulatory assets by a similar amount in the opposite direction. The sensitivities below reflect an evaluation of the change based solely on a change in that assumption and does not include income tax effects.

At December 31, 2010, defined benefit plan liabilities were as follows.

Pension liabilities	\$	259
Other postretirement benefit liabilities		57

---

**Increase (Decrease)**

Actuarial assumption	Change in assumption	Impact on defined benefit liabilities	Impact on regulatory assets
Discount Rate	(0.25)%	\$ 35	\$ 35
Rate of Compensation Increase	0.25%	6	6
Health Care Cost Trend Rate (a)	1.00%	1	1

(a) Only impacts other postretirement benefits.

In 2010, PPL Electric was allocated net periodic defined benefit costs charged to operating expense of \$20 million. This amount represents a \$4 million decrease compared with the charge recognized during 2009.

Actuarial assumption	Change in assumption	Impact on defined benefit costs
Discount Rate	(0.25)%	\$ 1
Expected Return on Plan Assets	(0.25)%	2
Rate of Compensation Increase	0.25%	1
Health Care Cost Trend Rate (a)	1.00%	1

(a) Only impacts other postretirement benefits.

## 2) Loss Accruals

Losses are accrued for the estimated impacts of various conditions, situations or circumstances involving uncertain or contingent future outcomes. For loss contingencies, the loss must be accrued if (1) information is available that indicates it is probable that a loss has been incurred, given the likelihood of the uncertain future events, and (2) the amount of the loss can be reasonably estimated. Accounting guidance defines "probable" as cases in which "the future event or events are likely to occur." The accrual of contingencies that might result in gains is not recorded unless recovery is assured. Potential loss contingencies for environmental remediation, litigation claims, regulatory penalties and other events are continuously assessed.

The accounting aspects of estimated loss accruals include (1) the initial identification and recording of the loss, (2) the determination of triggering events for reducing a recorded loss accrual, and (3) the ongoing assessment as to whether a recorded loss accrual is sufficient. All three of these aspects require significant judgment by management. Internal expertise and outside experts (such as lawyers and engineers) are used, as necessary, to help estimate the probability that a loss has been incurred and the amount (or range) of the loss.

No new significant loss accruals were recorded in 2010.

Certain other events have been identified that could give rise to a loss, but that do not meet the conditions for accrual. Such events are disclosed, but not recorded, when it is "reasonably possible" that a loss has been incurred. See Note 15 to the Financial Statements for disclosure of other potential loss contingencies that have not met the criteria for accrual.

When an estimated loss is accrued, the triggering events for subsequently reducing the loss accrual are identified, where applicable. The triggering events generally occur when the contingency has been resolved and the actual loss is paid or written off, or when the risk of loss has diminished or been eliminated. The following are some of the triggering events that provide for the reduction of certain recorded loss accruals:

- Allowances for uncollectible accounts are reduced when accounts are written off after prescribed collection procedures have been exhausted, a better estimate of the allowance is determined or underlying amounts are ultimately collected.
- Environmental and other litigation contingencies are reduced when the contingency is resolved and actual payments are made, a better estimate of the loss is determined or the loss is no longer considered probable.

Loss accruals are reviewed on a regular basis to assure that the recorded potential loss exposures are appropriate. This involves ongoing communication and analyses with internal and external legal counsel, engineers, operation management and other parties.

### 3) Income Taxes

Significant management judgment is required in developing the provision for income taxes, primarily due to the uncertainty related to tax positions taken or expected to be taken in tax returns and the determination of deferred tax assets, liabilities and valuation allowances.

Significant management judgment is required to determine the amount of benefit recognized related to an uncertain tax position. Tax positions are evaluated following a two-step process. The first step requires an entity to determine whether, based on the technical merits supporting a particular tax position, it is more likely than not (greater than a 50% chance) that the tax position will be sustained. This determination assumes that the relevant taxing authority will examine the tax position and is aware of all the relevant facts surrounding the tax position. The second step requires an entity to recognize in the financial statements the benefit of a tax position that meets the more-likely-than-not recognition criterion. The benefit recognized is measured at the largest amount of benefit that has a likelihood of realization, upon settlement, that exceeds 50%. Management considers a number of factors in assessing the benefit to be recognized, including negotiation of a settlement.

On a quarterly basis, uncertain tax positions are reassessed by considering information known at the reporting date. Based on management's assessment of new information, a tax benefit may subsequently be recognized for a previously unrecognized tax position, a previously recognized tax position may be de-recognized, or the benefit of a previously recognized tax position may be remeasured. The amounts ultimately paid upon resolution of issues raised by taxing authorities may differ materially from the amounts accrued and may materially impact the financial statements in the future.

At December 31, 2010, it was reasonably possible that during the next 12 months the total amount of unrecognized tax benefits could increase by as much as \$28 million or decrease by up to \$42 million. This change could result from the timing and/or valuation of certain deductions, intercompany transactions and unitary filing groups. The events that could cause these changes are direct settlements with taxing authorities, litigation, legal or administrative guidance by relevant taxing authorities and the lapse of an applicable statute of limitation.

The balance sheet classification of unrecognized tax benefits and the need for valuation allowances to reduce deferred tax assets also require significant management judgment. Unrecognized tax benefits are classified as current to the extent management expects to settle an uncertain tax position by payment or receipt of cash within one year of the reporting date. Valuation allowances are initially recorded and reevaluated each reporting period by assessing the likelihood of the ultimate realization of a deferred tax asset. Management considers a number of factors in assessing the realization of a deferred tax asset, including the reversal of temporary differences, future taxable income and ongoing prudent and feasible tax planning strategies. Any tax planning strategy utilized in this assessment must meet the recognition and measurement criteria utilized to account for an uncertain tax position. See Note 5 to the Financial Statements for income tax disclosures.

### 4) Regulatory Assets and Liabilities

PPL Electric's electricity delivery business is subject to cost-based rate regulation. As a result, the effects of regulatory actions are required to be reflected in the financial statements. Assets and liabilities are recorded that result from the regulated ratemaking process that may not be recorded under GAAP for non-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because such costs are probable of future recovery in regulated customer rates. Regulatory liabilities generally represent obligations to regulated customers for previous collections of costs that are expected to be refunded to customers in the future. In certain cases, regulatory liabilities are recorded based on the understanding with the regulator that current rates are being set to recover costs that are expected to be incurred in the future, and the regulated entity is accountable for any amounts charged pursuant to such rates and not yet expended for the intended purpose.

Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as changes in the applicable regulatory and political environments, the ability to recover costs through regulated rates, recent rate orders to other regulated entities, and the status of any pending or potential deregulation legislation. Based on this continual assessment, management believes the existing regulatory assets are probable of recovery. This assessment reflects the current political and regulatory climate at the state and federal levels, and is subject to change in the future. If future recovery of costs ceases to be probable, then asset write-offs would be required to be recognized in operating income. Additionally, the regulatory agencies can provide flexibility in the manner and timing of the depreciation of PP&E and amortization of regulatory assets.

At December 31, 2010 and 2009, PPL Electric had regulatory assets of \$620 million and \$542 million. All regulatory assets are either currently being recovered under specific rate orders, represent amounts that are expected to be recovered in future rates or benefit future periods based upon established regulatory practices. At December 31, 2010 and 2009, PPL Electric had regulatory liabilities of \$32 million and \$84 million.

See Note 3 to the Financial Statements for additional information on regulatory assets and liabilities.

#### **Other Information**

PPL's Audit Committee has approved the independent auditor to provide audit and audit-related services and other services permitted by Sarbanes-Oxley and SEC rules. The audit and audit-related services include services in connection with statutory and regulatory filings, reviews of offering documents and registration statements, and internal control reviews. See "Item 14. Principal Accounting Fees and Services" for more information.

(THIS PAGE LEFT BLANK INTENTIONALLY.)

**ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

**PPL Corporation, PPL Energy Supply, LLC and PPL Electric Utilities Corporation**

Reference is made to "Risk Management - Energy Marketing & Trading and Other" for PPL and PPL Energy Supply and "Risk Management" for PPL Electric in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations."

**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Shareowners of PPL Corporation

We have audited the accompanying consolidated balance sheets of PPL Corporation and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of income, equity, comprehensive income, and cash flows for each of the three years in the period ended December 31, 2010. Our audits also included the financial statement schedule listed in the index at Item 15 (a). These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits. We did not audit the financial statements of LG&E and KU Energy LLC (LKE), a wholly-owned subsidiary, which statements reflect total assets of \$10,719 million as of December 31, 2010, and total revenues of \$493 million for the period November 1, 2010 (date of acquisition) to December 31, 2010. Those statements were audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for LKE, is based solely on the report of the other auditors.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the report of other auditors provide a reasonable basis for our opinion.

In our opinion, based on our audits and, for 2010, the report of other auditors, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of PPL Corporation and subsidiaries at December 31, 2010 and 2009, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), PPL Corporation's internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 25, 2011 expressed an unqualified opinion thereon.

*Ernst + Young LLP*

Philadelphia, Pennsylvania  
February 25, 2011

**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Shareowners of PPL Corporation

We have audited PPL Corporation's internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). PPL Corporation's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in Management's Report on Internal Control over Financial Reporting at Item 9A. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As set forth in Item 9A, Management's Report on Internal Control over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of LG&E and KU Energy LLC (LKE), which is included in the 2010 consolidated financial statements of the Company and constituted 32.6% and 47.3% of total assets and net assets, respectively, as of December 31, 2010 and 5.8% and 5.0% of revenues and net income, respectively, for the year then ended. Our audit of internal control over financial reporting of PPL Corporation and subsidiaries also did not include an evaluation of the internal control over financial reporting of LKE.

In our opinion, PPL Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of PPL Corporation and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of income, equity, comprehensive income, and cash flows for each of the three years in the period ended December 31, 2010 and our report dated February 25, 2011 expressed an unqualified opinion thereon.

**Report of Independent Registered Public Accounting Firm**

To the Member of LG&E and KU Energy LLC

In our opinion, the consolidated balance sheet and the related consolidated statements of income, retained earnings, comprehensive income, cash flows and capitalization present fairly, in all material respects, the financial position of LG&E and KU Energy LLC and its subsidiaries at December 31, 2010 and the results of their operations and their cash flows for the period from November 1, 2010 to December 31, 2010 in conformity with accounting principles generally accepted in the United States of America. These financial statements are the responsibility of the LG&E and KU Energy LLC's management. Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit of these statements in accordance with auditing standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

As discussed in Note 2 to the consolidated financial statements, on November 1, 2010, PPL Corporation completed its acquisition of LG&E and KU Energy LLC and its subsidiaries. The push-down basis of accounting was used at the acquisition date.

The image shows a handwritten signature in cursive script that reads "PricewaterhouseCoopers LLP". The signature is written in dark ink and is positioned above the typed name of the firm.

**Report of Independent Registered Public Accounting Firm**

To the Board of Managers and Sole Member of PPL Energy Supply, LLC

We have audited the accompanying consolidated balance sheets of PPL Energy Supply, LLC and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of income, equity, comprehensive income, and cash flows for each of the three years in the period ended December 31, 2010. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Company's internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of PPL Energy Supply, LLC and subsidiaries at December 31, 2010 and 2009, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with U.S. generally accepted accounting principles.

**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Shareowners of PPL Electric Utilities Corporation

We have audited the accompanying consolidated balance sheets of PPL Electric Utilities Corporation and subsidiaries as of December 31, 2010 and 2009, and the related consolidated statements of income, shareowners' equity, and cash flows for each of the three years in the period ended December 31, 2010. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Company's internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of PPL Electric Utilities Corporation and subsidiaries at December 31, 2010 and 2009, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with U.S. generally accepted accounting principles.

*The accompanying Notes to Consolidated Financial Statements are an integral part of the financial statements.*

**COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****1. Summary of Significant Accounting Policies****General**

Terms and abbreviations are explained in the glossary. Dollars are in millions, except per share data, unless otherwise noted.

**Business and Consolidation***(PPL)*

PPL is an energy and utility holding company that, through its subsidiaries, is primarily engaged in: 1) the regulated generation, transmission and distribution of electricity and the regulated distribution of natural gas, primarily in Kentucky; 2) the regulated distribution of electricity in the U.K.; 3) the regulated transmission and distribution of electricity in Pennsylvania; and 4) the competitive generation and marketing of electricity in portions of the northeastern and northwestern U.S. Headquartered in Allentown, PA, PPL's principal subsidiaries are LKE, PPL Energy Supply and PPL Electric.

On November 1, 2010, PPL acquired all of the limited liability company interests of E.ON U.S. LLC from a wholly owned subsidiary of E.ON AG. Upon completion of the acquisition, E.ON U.S. LLC was renamed LG&E and KU Energy LLC (LKE). LKE is engaged in cost-based regulated utility operations through its subsidiaries, KU and LG&E. The acquisition of LKE substantially reapportions the mix of PPL's regulated and competitive businesses by increasing the regulated portion of its business, strengthens PPL's credit profile and enhances rate-regulated growth opportunities as the regulated businesses make investments to improve infrastructure and customer reliability. The increase in regulated assets provides earnings stability through regulated returns and the ability to recover costs of capital investments, in contrast to the competitive supply business where earnings and cash flows are subject to market conditions. LKE's operating results for the two months ended December 31, 2010 are included in PPL's results of operations with no comparable amounts for 2009. LKE's net assets acquired and obligations assumed at the acquisition date were recorded at fair value and are included in PPL's balance sheet at December 31, 2010. See Note 10 for additional information on the acquisition of LKE.

*(PPL Energy Supply)*

PPL Energy Funding is the parent of PPL Energy Supply. On January 31, 2011, PPL Energy Supply distributed its membership interest in PPL Global, representing 100% of the outstanding membership interests of PPL Global, to PPL Energy Supply's parent, PPL Energy Funding, to better align PPL's organizational structure with the manner in which it manages its businesses and reports segment information in its consolidated financial statements. The distribution was made based on the book value of the assets and liabilities of PPL Global with financial effect as of January 1, 2011. PPL Global owns and operates WPD's electricity distribution businesses in the U.K. See Note 24 for additional information related to the distribution. Notes to PPL Energy Supply's Financial Statements may include PPL Global information for years subsequent to 2010.

*(PPL and PPL Energy Supply)*

PPL Generation owns and operates a portfolio of competitive domestic power generating assets. These power plants are primarily located in Pennsylvania and Montana and use well-diversified fuel sources including coal, uranium, natural gas, oil and water. PPL EnergyPlus sells electricity produced by PPL Generation subsidiaries, participates in wholesale market load-following auctions, and markets various energy products and commodities such as: capacity, transmission, FTRs, coal, natural gas, oil, uranium, emission allowances, RECs and other commodities in competitive wholesale and competitive retail markets, primarily in the northeastern and northwestern U.S.

In 2010, PPL Energy Supply completed the sale of its Long Island generation business and related tolling agreements and its remaining three hydroelectric facilities in Maine. See Note 9 for additional information on these sales.

*(PPL and PPL Electric)*

PPL Electric is a cost-based rate-regulated subsidiary of PPL. PPL Electric's principal business is the transmission and distribution of electricity to serve retail customers in its franchised territory in eastern and central Pennsylvania and the supply of electricity to retail customers in that territory as a PLR.

*(PPL, PPL Energy Supply and PPL Electric)*

The consolidated financial statements of PPL, PPL Energy Supply and PPL Electric include each company's own accounts as well as the accounts of all entities in which the company has a controlling financial interest. Entities for which a controlling financial interest is not demonstrated through voting interests are evaluated based on accounting guidance for VIEs. PPL, PPL Energy Supply and PPL Electric consolidate a VIE when they are determined to have a controlling interest in the VIE, and thus are the primary beneficiary of the entity. See "New Accounting Guidance Adopted - Consolidation of Variable Interest Entities" within this note for additional information and Note 22 for information regarding a significant consolidated VIE. Investments in entities in which a company has the ability to exercise significant influence but does not have a controlling financial interest are accounted for under the equity method. All other investments are carried at cost or fair value. All significant intercompany transactions have been eliminated. Any noncontrolling interests are reflected in the consolidated financial statements.

PPL and PPL Energy Supply consolidate foreign subsidiaries on a one-month lag. Material intervening events, such as debt issuances and retirements, acquisitions or divestitures that occur in the lag period are recognized in the current period financial statements. Events that are significant but not material are disclosed.

The consolidated financial statements of PPL and PPL Energy Supply include their share of any undivided interests in jointly owned facilities, as well as their share of the related operating costs of those facilities. See Note 14 for additional information.

## Regulation

*(PPL and PPL Electric)*

LG&E, KU and PPL Electric are cost-based rate-regulated utilities for which rates are set by regulators to enable LG&E, KU and PPL Electric to recover the costs of providing electric or gas service, as applicable, and to provide a reasonable return to shareholders. Rates are generally established based on a test period as adjusted to exclude unusual or nonrecurring items. As a result, the financial statements are subject to the accounting for certain types of regulation as prescribed by GAAP and reflect the effects of regulatory actions. Regulatory assets are recognized for the effect of transactions or events where future recovery of underlying costs is probable in regulated customer rates. The effect of such accounting is to defer certain or qualifying costs that would otherwise currently be charged to expense. Likewise, regulatory liabilities are recognized for obligations expected to be returned through future regulated customer rates or be consumed in the business operations for the effect of transactions or events that would otherwise currently be reflected as income, or in certain cases, regulatory liabilities are recorded based on the understanding with the regulator that current rates include recovery of costs that are expected to be incurred in the future, and the regulated entity is accountable for any amounts charged pursuant to such rates but not yet expended for the intended purpose. The accounting for regulatory assets and liabilities is based on specific ratemaking decisions or precedent for each transaction or event as prescribed by the FERC or the applicable state regulatory commissions. See Note 3 for additional details regarding regulatory assets and liabilities.

*(PPL and PPL Energy Supply)*

WPD operates under distribution licenses granted by and price controls set by Ofgem. The price control formula that governs WPD's allowed revenue is designed to provide economic incentives to minimize operating, capital and financing costs. The price control formula is normally determined every five years. Ofgem completed a review in December 2009 that became effective April 1, 2010 and will continue through March 31, 2015.

WPD is not subject to accounting for the effects of certain types of regulation as prescribed by GAAP.

Accounting Records (PPL and PPL Electric)

The system of accounts for LG&E, KU and PPL Electric is maintained in accordance with the Uniform System of Accounts prescribed by the FERC and adopted by the applicable state regulatory commissions.

Use of Estimates (PPL, PPL Energy Supply and PPL Electric)

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Loss Accruals (PPL, PPL Energy Supply and PPL Electric)

Potential losses are accrued when (1) information is available that indicates it is "probable" that a loss has been incurred, given the likelihood of the uncertain future events and (2) the amount of the loss can be reasonably estimated. Accounting guidance defines "probable" as cases in which "the future event or events are likely to occur." PPL and its subsidiaries continuously assess potential loss contingencies for environmental remediation, litigation claims, regulatory penalties and other events. PPL and its subsidiaries discount loss accruals for environmental remediation when appropriate.

PPL and its subsidiaries do not record the accrual of contingencies that might result in gains, unless recovery is assured.

Changes in Classification (PPL, PPL Energy Supply and PPL Electric)

The classification of certain amounts in the 2009 and 2008 financial statements have been changed to conform to the current presentation. The changes in classification did not affect "Net Income Attributable to PPL Corporation" or "PPL Corporation Shareowners' Common Equity," "Net Income Attributable to PPL Energy Supply" or PPL Energy Supply's "Member's equity" or "Net Income Available to PPL Corporation" or PPL Electric's "Shareowners' Equity."

The classification on the Statements of Cash Flows has not been changed for the classification of amounts to Discontinued Operations.

Comprehensive Income (PPL and PPL Energy Supply)

Comprehensive income, which includes net income and OCI, consists of changes in equity from transactions not related to shareowners. Comprehensive income is shown on PPL's and PPL Energy Supply's Statements of Comprehensive Income.

AOCI, which is presented on the Balance Sheets of PPL and included in Member's Equity on the Balance Sheets of PPL Energy Supply, consisted of these after-tax gains (losses) at December 31.

	<u>2010</u>	<u>2009</u>
<b>PPL</b>		
Foreign currency translation adjustments	\$ (195)	\$ (136)
Unrealized gains on available-for-sale securities	86	62
Net unrealized gains on qualifying derivatives	695	602
Equity investees' AOCI	(2)	(2)
Defined benefit plans:		
Prior service cost	(32)	(61)
Actuarial loss	(1,032)	(993)
Transition asset (obligation)	1	(9)
	<u>\$ (479)</u>	<u>\$ (537)</u>
<b>PPL Energy Supply</b>		
Foreign currency translation adjustments	\$ (195)	\$ (136)

Unrealized gains on available-for-sale securities	86	62
Net unrealized gains on qualifying derivatives	732	573
Equity investee's AOCI	(2)	(2)
Defined benefit plans:		
Prior service cost	(23)	(44)
Actuarial loss	(953)	(930)
Transition obligation		(7)
	<u>\$ (355)</u>	<u>\$ (484)</u>

### Earnings Per Share (PPL)

EPS is computed using the two-class method, which is an earnings allocation method for computing EPS that treats a participating security as having rights to earnings that would otherwise have been available to common shareowners. Share-based payment awards that provide recipients a non-forfeitable right to dividends or dividend equivalents are considered participating securities.

Basic EPS is computed by dividing income available to PPL common shareowners by the weighted-average number of common shares outstanding during the period. Diluted EPS is computed by dividing income available to PPL common shareowners by the weighted-average number of shares outstanding that are increased for additional shares that would be outstanding if potentially dilutive non-participating securities were converted to common shares.

### Price Risk Management

*(PPL and PPL Energy Supply)*

PPL and PPL Energy Supply enter into energy and energy-related contracts to hedge the variability of expected cash flows associated with their generating units and marketing activities, as well as for trading purposes. PPL and PPL Energy Supply enter into interest rate contracts to hedge their exposure to changes in the fair value of their debt instruments and to hedge their exposure to variability in expected cash flows associated with existing debt instruments or forecasted issuances of debt. PPL and PPL Energy Supply also enter into foreign currency exchange contracts to hedge foreign currency exposures related to firm commitments, recognized assets or liabilities, forecasted transactions, net investments and foreign earnings translation.

Certain of PPL and PPL Energy Supply's energy and energy-related contracts meet the definition of a derivative, while others do not meet the definition of a derivative because they lack a notional amount or a net settlement provision. In cases where there is no net settlement provision, PPL periodically reviews these contracts to assess whether a market mechanism has evolved which could facilitate net settlement. Certain derivative energy contracts have been excluded from the requirements of derivative accounting treatment because they meet the definition of NPNS. These contracts are accounted for using accrual accounting. All other contracts that have been classified as derivative contracts are reflected on the balance sheet at their fair value. These contracts are recorded as "Price risk management assets" and "Price risk management liabilities" on the Balance Sheets. Derivative positions that deliver within a year are included in "Current Assets" and "Current Liabilities." PPL and PPL Energy Supply record derivative positions that deliver beyond a year in "Other Noncurrent Assets" and "Deferred Credits and Other Noncurrent Liabilities." Every trade is entered into the risk management system with an assigned strategy and accounting classification. Processes exist that allow for subsequent review and validation of the trade information. These strategies are discussed in more detail in Note 19. PPL's accounting department provides the traders and the risk management department with guidelines on appropriate accounting classifications for various trade types and strategies. Some examples of these guidelines include, but are not limited to:

- Physical coal, limestone, uranium, electric transmission, gas transportation, gas storage and renewable energy credit contracts are not derivatives due to the lack of net settlement provisions.
- Only contracts where physical delivery is deemed probable throughout the entire term of the contract can qualify for the NPNS exception.

- Physical transactions that permit cash settlement and financial transactions do not qualify for NPNS because physical delivery cannot be asserted; however, these transactions can receive cash flow hedge treatment if they lock in the future cash flows for energy-related commodities.
- Certain purchased option contracts or net purchased option collars may receive hedge accounting treatment. Those that are not eligible are marked to fair value through earnings.
- Derivative transactions that do not qualify for NPNS or hedge accounting treatment are marked to fair value through earnings.

A similar process is also followed by PPL's treasury department as it relates to interest rate and foreign currency derivatives. The following accounting guidelines are provided to the treasury department staff:

- Transactions to lock in an interest rate prior to a debt issuance can be designated as cash flow hedges.
- Transactions entered into to hedge fluctuations in the fair value of existing debt can be designated as fair value hedges.
- Transactions entered into to hedge the value of a net investment of foreign operations can be designated as net investment hedges.
- Derivative transactions that do not qualify for hedge accounting treatment are marked to fair value through earnings or through regulatory assets/liabilities if approved by the appropriate regulatory body. These transactions generally include hedges of earnings translation risk associated with subsidiaries that report their financial statements in a currency other than the U.S. dollar. As such, these transactions reduce earnings volatility due solely to changes in foreign currency exchange rates.

Therefore, on the date the derivative contract is executed, PPL may designate the derivative as NPNS, a hedge of the fair value of a recognized asset or liability or of an unrecognized firm commitment (fair value hedge), a hedge of a forecasted transaction or of the variability of cash flows to be received or paid related to a recognized asset or liability (cash flow hedge), a foreign currency fair value or cash flow hedge (foreign currency hedge) or a hedge of a net investment in a foreign operation (net investment hedge). Other derivatives may be linked to certain risk management strategies, but hedge accounting treatment is not permitted or elected. Finally, some derivatives have been entered into for proprietary trading purposes. As such, similar derivatives may receive different accounting treatment, depending on the intended use of such derivative instrument.

Changes in the fair value of derivatives are recorded in either OCI or in current-period earnings, except that LG&E records the change in fair value of its interest rate swap contracts as a regulatory asset or liability since such costs are either currently being recovered in customer rates or are probable of future recovery.

Cash inflows and outflows related to derivative instruments are included as a component of operating, investing or financing activities on the Statements of Cash Flows, depending on the underlying nature of the hedged items.

PPL and its subsidiaries have elected not to offset net derivative positions in the financial statements. Accordingly, PPL and its subsidiaries do not offset such derivative positions against the right to reclaim cash collateral (a receivable) or the obligation to return cash collateral (a payable) under master netting arrangements.

Gains and losses associated with non-trading bilateral sales of electricity at major market delivery points are netted with purchases that offset the sales at those same delivery points. A major market delivery point is any delivery point with liquid pricing available.

PPL and PPL Energy Supply reflect their net realized and unrealized gains and losses associated with all derivatives that are held for trading purposes in the "Net energy trading margins" line on the Statements of Income.

See Notes 18 and 19 for additional information on derivatives.

*(PPL and PPL Electric)*

To meet its obligation as a PLR to its customers, PPL Electric has entered into contracts that meet the definition of a derivative. These contracts have been excluded from the requirements of derivative accounting treatment because they meet the definition of NPNS and are accounted for using accrual accounting. See Notes 18 and 19 for additional information.

## Revenue

### Utility Revenue

*(PPL)*

The Statements of Income "Utility" line item contains rate-regulated revenue from the following:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Domestic electric revenue (a)	\$ 2,856	\$ 3,218	\$ 3,290
U.K. electric revenue (b)	727	684	824
Domestic natural gas revenue (c)	85		
Total	<u>\$ 3,668</u>	<u>\$ 3,902</u>	<u>\$ 4,114</u>

- (a) Represents revenue from the regulated generation, transmission and/or distribution of electricity in Pennsylvania, Kentucky, Virginia and Tennessee, including regulated wholesale revenue.
- (b) Represents electric revenue from the operation of WPD's distribution networks.
- (c) Represents revenue from the distribution and sale of natural gas in Kentucky.

*(PPL Energy Supply)*

The Statements of Income "Utility" line item contains electric revenue from the operation of WPD's distribution network.

*(PPL Electric)*

Since most of PPL Electric's operations are regulated, it is not meaningful to use a "Utility" caption. Therefore, PPL Electric's revenue is presented according to specific types of revenue.

### Revenue Recognition

*(PPL, PPL Energy Supply and PPL Electric)*

Operating revenues, except for "Energy-related businesses," are recorded based on energy deliveries through the end of the calendar month. Unbilled retail revenues result because customers' meters are read and bills are rendered throughout the month, rather than all being read at the end of the month. Unbilled revenues for a month are calculated by multiplying an estimate of unbilled kWh by the estimated average cents per kWh. Unbilled wholesale energy revenues are recorded at month-end to reflect estimated amounts until actual dollars and MWhs are confirmed and invoiced. At that time, unbilled revenue is reversed and actual revenue is recorded.

PPL Energy Supply records energy marketing activity in the period when the energy is delivered. Generally, the wholesale sales and purchases that qualify as derivative instruments held for non-trading purposes are reported gross on the Statements of Income within "Wholesale energy marketing" and "Energy purchases." Additionally, the bilateral sales and purchases that are designated as speculative trading activities and qualify as derivative instruments for accounting purposes are reported net on the Statements of Income within "Net energy trading margins." Spot market activity that balances PPL Energy Supply's physical trading positions is included on the Statements of Income in "Net energy trading margins."

Certain PPL subsidiaries participate in RTOs, primarily in PJM. In PJM, PPL EnergyPlus is a marketer, a load-serving entity to its customers who have selected it as a supplier and a seller for PPL's generation subsidiaries. PPL Electric is a transmission owner and PLR in PJM. A function of interchange accounting is to match participants' MWh entitlements

(generation plus scheduled bilateral purchases) against their MWh obligations (load plus scheduled bilateral sales) during every hour of every day. If the net result during any given hour is an entitlement, the participant is credited with a spot-market sale to the ISO at the respective market price for that hour; if the net result is an obligation, the participant is charged with a spot-market purchase from the ISO at the respective market price for that hour. ISO purchases and sales are not allocated to individual customers. PPL records the hourly net sales and purchases in its financial statements as wholesale energy marketing and energy purchases.

"Energy-related businesses" revenue includes revenue from the mechanical contracting and engineering subsidiaries, as well as WPD's telecommunications and property subsidiaries. The mechanical contracting and engineering subsidiaries record revenue from construction contracts on the percentage-of-completion method of accounting, measured by the actual cost incurred to date as a percentage of the estimated total cost for each contract. Accordingly, costs and estimated earnings in excess of billings on uncompleted contracts are recorded within "Unbilled revenues" on the Balance Sheets, and billings in excess of costs and estimated earnings on uncompleted contracts are recorded within "Other current liabilities" on the Balance Sheets. The amount of costs in excess of billings was \$9 million and \$5 million at December 31, 2010 and 2009, and the amount of billings in excess of costs was \$70 million and \$69 million at December 31, 2010 and 2009.

### **Accounts Receivable**

*(PPL, PPL Energy Supply and PPL Electric)*

Accounts receivable are reported in the Balance Sheets at the gross outstanding amount adjusted for an allowance for doubtful accounts. For PPL, see Note 10 for information related to the acquisition of LKE. The initial accounts receivable acquired in the transaction were recorded at fair value on November 1, 2010.

PPL Electric's customers may elect to procure generation supply from an alternative supplier. As a result of a PUC-approved purchase of accounts receivable program, beginning in the first quarter of 2010, PPL Electric has purchased certain accounts receivable from alternative suppliers at a nominal discount, which reflects a provision for uncollectible accounts. Additionally, PPL Electric receives a nominal fee for administering the program. The alternative suppliers (including PPL EnergyPlus) have no continuing involvement or interest in the purchased accounts receivable. The purchased accounts receivable are initially recorded at fair value using a market approach based on the purchase price paid and are classified as Level 2 in the fair value hierarchy. The purchased accounts receivable have substantially the same risk profile and payment terms as PPL Electric's other customer accounts receivable. During 2010, PPL and PPL Electric purchased \$607 million of accounts receivable from third parties. During 2010, PPL Electric purchased \$212 million of accounts receivable from PPL EnergyPlus.

### **Allowance for Doubtful Accounts**

*(PPL, PPL Energy Supply and PPL Electric)*

Accounts receivable collectability is evaluated using a combination of factors, including past due status based on contractual terms. Reserve balances are analyzed to assess the reasonableness of the balances in comparison to the actual accounts receivable balances and write-offs. Adjustments are made to reserve balances based on the results of analysis, the aging of receivables, and historical and industry trends.

Additional specific reserves for uncollectible accounts receivable, such as bankruptcies, are recorded on a case-by-case basis after having been researched and reviewed by management. The nature of the item, trends in write-offs, the age of the receivable, counterparty creditworthiness and economic conditions are considered as a basis for determining the adequacy of the reserve for uncollectible account balances.

Accounts receivable are charged-off in the period in which the receivable is deemed uncollectible. Recoveries of accounts receivable previously charged-off are recorded when it is known they will be received.

The changes in the allowance for doubtful accounts, including unbilled revenues, were:

	Balance at Beginning of Period	Additions		Deductions (b)	Balance at End of Period
		Charged to Income	Charged to Other Accounts (a)		
<b><u>PPL (c)</u></b>					
2010	\$ 37	\$ 42 (d)	7 (d)	\$ 31	\$ 55 (d)
2009	40	30		33	37
2008	40	29		29	40
<b><u>PPL Energy Supply (c)</u></b>					
2010	\$ 21	\$ 1		\$ 2	\$ 20
2009	26	1		6	21
2008	22	5		1	26
<b><u>PPL Electric</u></b>					
2010	\$ 16	\$ 30		\$ 29	\$ 17
2009	14	29		27	16
2008	18	24		28	14

- (a) Primarily related to a reserve against a receivable recorded for liquidated damages associated with the construction of Unit 2 of the Trimble County generation facility, and thus the provision was recorded as an adjustment to construction work in progress.
- (b) Primarily related to uncollectible accounts written off.
- (c) See Note 15 for information on allowance for doubtful accounts related to California ISO sales.
- (d) Includes amounts associated with two months of LKE activity. See Note 10 for additional information related to the acquisition of LKE.

#### **Cash (PPL, PPL Energy Supply and PPL Electric)**

#### **Cash Equivalents**

All highly liquid debt instruments purchased with original maturities of three months or less are considered to be cash equivalents.

#### **Restricted Cash and Cash Equivalents**

Bank deposits and other cash equivalents that are restricted by agreement or that have been clearly designated for a specific purpose are classified as restricted cash and cash equivalents. The change in restricted cash and cash equivalents is reported as an investing activity on the Statements of Cash Flows. On the Balance Sheets, the current portion of restricted cash and cash equivalents is shown as "Restricted cash and cash equivalents" while the noncurrent portion is included in "Other noncurrent assets." See Note 18 for total restricted cash. For PPL, the December 31, 2010 balance of restricted cash and cash equivalents included \$19 million of cash collateral posted to counterparties related to interest rate swap contracts, \$14 million of margin deposits posted to counterparties in connection with trading activities, \$6 million of funds required by law to be held by WPD's captive insurance company to meet claims and \$13 million of funds deposited with a trustee to defease PPL Electric's 1945 First Mortgage Bonds, as discussed in Note 7. For PPL Energy Supply, the December 31, 2010 balance included \$11 million of margin deposits posted to counterparties in connection with trading activities and \$6 million of funds required by law to be held by WPD's captive insurance company to meet claims. For PPL and PPL Energy Supply, the December 31, 2009 balance consisted primarily of margin deposits posted by counterparties to PPL Energy Supply in connection with trading activities. For PPL Electric, the December 31, 2010 and December 31, 2009 balances of restricted cash and cash equivalents, including the noncurrent portion, consisted primarily of funds deposited with a trustee to defease PPL Electric's 1945 First Mortgage Bonds, as discussed in Note 7.

#### **Fair Value Measurements (PPL, PPL Energy Supply and PPL Electric)**

PPL and its subsidiaries value certain financial and nonfinancial assets and liabilities at fair value. Generally, the most significant fair value measurements relate to price risk management assets and liabilities, investments in securities including investments in the NDT funds and defined benefit plans, and cash and cash equivalents. PPL and its subsidiaries use, as appropriate, a market approach (generally, data from market transactions), an income approach (generally, present value techniques and option-pricing models), and/or a cost approach (generally, replacement cost) to measure the fair value of an asset or liability. These valuation approaches incorporate inputs such as observable, independent market data and/or unobservable data that management believes are predicated on the assumptions market

participants would use to price an asset or liability. These inputs may incorporate, as applicable, certain risks such as nonperformance risk, which includes credit risk.

PPL and its subsidiaries prioritize fair value measurements for disclosure by grouping them into one of three levels in the fair value hierarchy. The highest priority is given to measurements using Level 1 inputs. The appropriate level assigned to a fair value measurement is based on the lowest level input that is significant to the fair value measurement in its entirety. The three levels of the fair value hierarchy are as follows:

- **Level 1** - quoted prices (unadjusted) in active markets for identical assets or liabilities that are accessible at the measurement date. Active markets are those in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis.
- **Level 2** - inputs other than quoted prices included within Level 1 that are either directly or indirectly observable for substantially the full term of the asset or liability.
- **Level 3** - unobservable inputs that management believes are predicated on the assumptions market participants would use to measure the asset or liability at fair value.

Assessing the significance of a particular input requires judgment that considers factors specific to the asset or liability. As such, PPL and its subsidiaries' assessment of the significance of a particular input may affect how the assets and liabilities are classified within the fair value hierarchy. PPL and its subsidiaries recognize transfers between levels at end-of-reporting-period values. See Notes 13, 18, and 19 for additional information on fair value measurements.

#### **Investments** (*PPL, PPL Energy Supply and PPL Electric*)

Generally, the original maturity date of an investment and management's ability to sell an investment prior to its original maturity determine the classification of investments as either short-term or long-term. Investments that would otherwise be classified as short-term, but are restricted as to withdrawal or use for other than current operations or are clearly designated for expenditure in the acquisition or construction of noncurrent assets or for the liquidation of long-term debts, are classified as long-term.

#### Short-term Investments

Short-term investments generally include certain deposits as well as securities that are considered highly liquid or provide for periodic reset of interest rates. Investments with original maturities greater than three months and less than a year, as well as investments with original maturities of greater than a year that management has the ability and intent to sell within a year, are included in "Short-term investments" on the Balance Sheet of PPL and in "Current Assets - Other" on the Balance Sheet of PPL Electric.

#### Investments in Debt and Equity Securities

Investments in debt securities are classified as held-to-maturity and measured at amortized cost when there is an intent and ability to hold the securities to maturity. Debt and equity securities that are acquired and held principally for the purpose of selling them in the near-term are classified as trading. Trading securities are generally held to capitalize on fluctuations in their value. All other investments in debt and equity securities are classified as available-for-sale. Both trading and available-for-sale securities are carried at fair value. The specific identification method is used to calculate realized gains and losses on debt and equity securities. Any unrealized gains and losses on trading securities are included in earnings. Through March 31, 2009, unrealized gains and losses on all available-for-sale securities were reported, net of tax, in OCI or recognized in earnings when the decline in fair value below amortized cost was determined to be an other-than-temporary impairment.

Accounting guidance effective April 1, 2009 has modified the criteria for determining whether a decline in fair value of a debt security is other than temporary and whether the other-than-temporary impairment is recognized in earnings or reported in OCI. Beginning April 1, 2009, when a debt security is in an unrealized loss position:

- if there is an intent to sell the security or a requirement to sell the security before recovery, the other-than-temporary impairment is recognized currently in earnings; or
- if there is no intent to sell the security or requirement to sell the security before recovery, the portion of the other-than-temporary impairment that is considered a credit loss is recognized currently in earnings and the remainder of the other-than-temporary impairment is reported in OCI, net of tax; or
- if there is no intent to sell the security or requirement to sell the security before recovery and there is no credit loss, the unrealized loss is reported in OCI, net of tax.

Equity securities were not impacted by this accounting guidance; therefore, unrealized gains and losses on available-for-sale equity securities continue to be reported, net of tax, in OCI. Earnings continue to be charged when an equity security's decline in fair value below amortized cost is determined to be an other-than-temporary impairment. See Notes 18 and 23 for additional information on investments in debt and equity securities.

## Long-Lived and Intangible Assets

### Property, Plant and Equipment

*(PPL, PPL Energy Supply and PPL Electric)*

PP&E is recorded at original cost, unless impaired. The original cost for PP&E acquired in the LKE acquisition is its fair value on November 1, 2010, which approximated net book value as of the acquisition date. See Note 10 for additional information on the acquisition of LKE. If impaired, the asset is written down to fair value at that time, which becomes the new cost basis of the asset. Original cost includes material, labor, contractor costs, certain overheads and financing costs, where applicable. The cost of repairs and minor replacements are charged to expense as incurred. PPL records costs associated with planned major maintenance projects in the period in which the costs are incurred. No costs are accrued in advance of the period in which the work is performed for PPL Energy Supply or PPL Electric. PPL, through its subsidiaries LG&E and KU, accrues costs of removal net of estimated salvage value through depreciation which is included in the calculation of customer rates over the assets' depreciable lives in accordance with regulatory practices. Cost of removal amounts accrued through depreciation rates are accumulated as a regulatory liability until the removal costs are incurred. See Note 3 for additional information.

*(PPL and PPL Electric)*

AFUDC is capitalized as part of the construction costs for cost based rate regulated projects for which a return on such costs is recovered after the project is placed in service. The debt component of AFUDC is credited to "Interest Expense" and the equity component is credited to "Other Income (Expense) - net" on the Statements of Income.

*(PPL and PPL Energy Supply)*

Nuclear fuel-related costs, including fuel, conversion, enrichment, fabrication and assemblies, are capitalized as PP&E. Such costs are amortized over the period the fuel is spent using the unit-of-production method and included in "Fuel" on the Statements of Income.

PPL and PPL Energy Supply capitalize interest costs as part of construction costs for projects not subjected to cost-based rate regulation.

The following capitalized interest was excluded from "Interest Expense" on the Statements of Income.

	<u>PPL</u>	<u>PPL</u> <u>Energy Supply</u>
2010	\$ 30	\$ 33
2009	44	45
2008	57	56

*(PPL, PPL Energy Supply and PPL Electric)*

Included in PP&E on the balance sheet are capitalized costs of software projects that were developed or obtained for internal use. These capitalized costs are amortized ratably over the expected lives of the projects when they become operational, generally not to exceed five years. Following are capitalized software costs and the accumulated amortization.

	December 31, 2010		December 31, 2009	
	Gross Carrying Amount	Accumulated Amortization	Gross Carrying Amount	Accumulated Amortization
PPL (a)	\$ 213	\$ 70	\$ 97	\$ 52
PPL Energy Supply	30	20	24	19
PPL Electric	54	24	37	15

(a) The December 31, 2010 gross carrying amount includes \$84 million from the acquisition of LKE.

Amortization expense of capitalized software costs was as follows:

	PPL		
	PPL	Energy Supply	PPL Electric
2010	\$ 21	\$ 3	\$ 9
2009	13	2	5
2008	8	2	3

The amortization of capitalized software is included in "Depreciation" on the Statements of Income.

#### Depreciation (PPL, PPL Energy Supply and PPL Electric)

Depreciation is computed over the estimated useful lives of property using various methods including the straight-line, composite and group methods. When a component of PP&E is retired that was depreciated under the composite or group method, the original cost is charged to accumulated depreciation. When all or a significant portion of an operating unit that was depreciated under the composite or group method is retired or sold, the property and the related accumulated depreciation account is reduced and any gain or loss is included in income, unless otherwise required by regulators.

Following are the weighted-average rates of depreciation at December 31.

	2010			2009		
	PPL	PPL Energy Supply	PPL Electric	PPL	PPL Energy Supply	PPL Electric
Regulated utility plant (a)	3.27	2.31	2.27	2.24	2.24	2.24
Non-regulated PP&E - Generation	2.76	2.76		2.48	2.48	

(a) For PPL, the 2010 weighted-average depreciation rate was impacted by the acquisition of LKE. In accordance with purchase accounting guidelines, the original cost for PP&E acquired in the LKE acquisition is its fair value on November 1, 2010, which approximated net book value as of the acquisition date. This resulting lower original cost basis of LKE's PP&E was used in the calculation of the weighted-average depreciation rate for PPL for 2010. Therefore, the consolidation of LKE results in a significantly higher weighted-average rate compared to PPL's historical rates. Excluding LKE, PPL's 2010 weighted-average depreciation rate was 2.28%.

#### Goodwill and Other Intangible Assets (PPL, PPL Energy Supply and PPL Electric)

Goodwill represents the excess of the purchase price paid over the fair value of the identifiable net assets acquired in the acquisition of a business.

Other acquired intangible assets are initially measured based on their fair value. Intangibles that have finite useful lives are amortized over their useful lives based upon the pattern in which the economic benefits of the intangible assets are consumed or otherwise used. Costs incurred to renew or extend terms of licenses are capitalized as intangible assets.

When determining the useful life of an intangible asset, including intangible assets that are renewed or extended, PPL and its subsidiaries consider the expected use of the asset; the expected useful life of other assets to which the useful life of the intangible asset may relate; legal, regulatory, or contractual provisions that may limit the useful life; the company's historical experience as evidence of its ability to support renewal or extension; the effects of obsolescence, demand, competition, and other economic factors; and the level of maintenance expenditures required to obtain the expected future cash flows from the asset.

PPL and its subsidiaries account for emission allowances as intangible assets. Since the economic benefits of emission allowances are not diminished until they are consumed, emission allowances are not amortized; rather, they are expensed when consumed. Such expense is included in "Fuel" on the Statements of Income. Gains and losses on the sale of emission allowances are included in "Other operation and maintenance" on the Statements of Income.

PPL and its subsidiaries also account for RECs as intangible assets, and the associated costs are not expensed until the credits are consumed. Such expense is included in "Energy purchases" on the Statements of Income. Gains and losses on the sale of RECs are included in "Other operation and maintenance" on the Statements of Income.

See Note 20 for additional information on goodwill and other intangible assets.

#### Asset Impairment (PPL, PPL Energy Supply and PPL Electric)

PPL and its subsidiaries review long-lived assets that are subject to depreciation or amortization, including finite-lived intangibles, for impairment when events or circumstances indicate carrying amounts may not be recoverable.

For a long-lived asset classified as held and used, an impairment exists when the carrying amount exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset. If the asset is impaired, an impairment loss is recorded to adjust the asset's carrying amount to its fair value. Certain emission allowances are expected to be sold rather than consumed. These emission allowances are tested for impairment when events or changes in circumstances, such as a decline in market prices, indicate that their carrying value might be impaired. See Note 18 for a discussion of impairment charges recorded associated with long-lived assets classified as held and used.

For a long-lived asset classified as held for sale, an impairment exists when the carrying amount of the asset (disposal group) exceeds its fair value less cost to sell. If the asset (disposal group) is impaired, an impairment loss is recorded to adjust the carrying amount of the asset (disposal group) to its fair value less cost to sell. See Notes 9 and 18 for a discussion of impairment charges recorded associated with long-lived assets classified as held for sale.

Goodwill is reviewed for impairment, at the reporting unit level, annually or more frequently when events or circumstances indicate that the carrying amount of a reporting unit may be greater than the unit's fair value. Additionally, goodwill must be tested for impairment after a portion of goodwill has been allocated to a business to be disposed of. PPL's reporting units are significant businesses that have discrete financial information, and the operating results are regularly reviewed by segment management. PPL's reporting units are at or one level below its operating segments. If the carrying amount of the reporting unit, including goodwill, exceeds its fair value, the implied fair value of goodwill must be calculated. The implied fair value of goodwill is determined in the same manner as the amount of goodwill in a business combination. That is, the fair value of a reporting unit is allocated to all assets and liabilities of that unit as if the reporting unit had been acquired in a business combination. The excess of the fair value of the reporting unit over the amounts assigned to its assets and liabilities is the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recognized for an amount equal to that difference.

The goodwill recognized as a result of the acquisition of LKE, although entirely recorded at LG&E and KU, was assigned to the reporting units expected to benefit from the acquisition, which are the new Kentucky Regulated segment and the Supply segment. See Note 10 for additional information regarding the acquisition.

### Asset Retirement Obligations

*(PPL, PPL Energy Supply and PPL Electric)*

PPL and its subsidiaries recognize various legal obligations associated with the retirement of long-lived assets as liabilities in the financial statements. Initially, this obligation is measured at fair value. An equivalent amount is recorded as an increase in the value of the capitalized asset and allocated to expense over the useful life of the asset. Until the obligation is settled, the liability is increased, through the recognition of accretion expense classified within "Other operation and maintenance" on the Statements of Income, for changes in the obligation due to the passage of time.

Estimated ARO costs and settlement dates, which affect the carrying value of the ARO and the related capitalized asset, are reviewed periodically to ensure that any material changes are incorporated into the latest estimate of the ARO. Any change to the capitalized asset, positive or negative, is amortized over the remaining life of the associated long-lived asset. See Note 21 for additional information on AROs and a discussion of the remeasurement in the third quarter of 2010 of the ARO for the decommissioning of the Susquehanna nuclear units.

*(PPL)*

The accretion and depreciation, related to an ARO, recorded by LG&E and KU is offset with a regulatory asset, such that there is no income statement impact. The regulatory asset is relieved when the ARO is settled.

### **Compensation and Benefits**

Defined Benefits *(PPL, PPL Energy Supply and PPL Electric)*

PPL and certain of its subsidiaries sponsor various defined benefit pension and other postretirement plans. An asset or liability is recorded to recognize the funded status of all defined benefit plans with an offsetting entry to OCI or to regulatory assets or liabilities for LG&E, KU and PPL Electric. Consequently, the funded status of all defined benefit plans is fully recognized on the Balance Sheets.

The expected return on plan assets is determined based on a market-related value of plan assets, which is calculated by rolling forward the prior year market-related value with contributions, disbursements and long-term expected return on investments. One-fifth of the difference between the actual value and the expected value is added (or subtracted if negative) to the expected value to determine the new market-related value.

PPL uses an accelerated amortization method for the recognition of gains and losses for its pension plans. Under the accelerated method, gains and losses in excess of 10% but less than 30% of the greater of the plan's projected benefit obligation or the market-related value of plan assets are amortized on a straight-line basis over the estimated average future service period of plan participants. Gains and losses in excess of 30% of the plan's projected benefit obligation are amortized on a straight-line basis over a period equal to one-half of the average future service period of the plan participants.

See Note 13 for a discussion of defined benefits.

### Stock-Based Compensation

*(PPL, PPL Energy Supply and PPL Electric)*

PPL grants stock options, restricted stock, restricted stock units and performance units to certain employees, and stock units and restricted stock units to directors, under several stock-based compensation plans. PPL grants most of its stock-based awards in the first quarter of each year. PPL and its subsidiaries recognize compensation expense for stock-based awards based on the fair value method. Stock options with graded vesting (i.e., that vest in installments) are valued as a single award. PPL grants stock options with an exercise price that is not less than the fair value of PPL's common stock

on the date of grant. See Note 12 for a discussion of stock-based compensation. All awards are recorded as equity or a liability on the Balance Sheets. Stock-based compensation is included in "Other operation and maintenance" on the Statements of Income.

*(PPL Energy Supply and PPL Electric)*

PPL Energy Supply's and PPL Electric's stock-based compensation expense includes an allocation of PPL Services' expense.

## **Other**

### Debt Issuance Costs

Debt issuance costs are deferred and amortized over the term of the related debt using the interest method or another method, generally straight-line, if the results obtained are not materially different than those that would result from the interest method.

### Income Taxes

*(PPL, PPL Energy Supply and PPL Electric)*

PPL and its domestic subsidiaries file a consolidated U.S. federal income tax return.

Significant management judgment is required in developing PPL and its subsidiaries' provision for income taxes, primarily due to the uncertainty related to tax positions taken or expected to be taken in tax returns and the determination of deferred tax assets, liabilities and valuation allowances.

Significant management judgment is required to determine the amount of benefit to be recognized in relation to an uncertain tax position. PPL and its subsidiaries evaluate tax positions following a two-step process. The first step requires an entity to determine whether, based on the technical merits supporting a particular tax position, it is more likely than not (greater than a 50% chance) that the tax position will be sustained. This determination assumes that the relevant taxing authority will examine the tax position and is aware of all the relevant facts surrounding the tax position. The second step requires an entity to recognize in the financial statements the benefit of a tax position that meets the more-likely-than-not recognition criterion. The benefit recognized is measured at the largest amount of benefit that has a likelihood of realization, upon settlement, that exceeds 50%. The amounts ultimately paid upon resolution of issues raised by taxing authorities may differ materially from the amounts accrued and may materially impact the financial statements of PPL and its subsidiaries in the future.

Deferred income taxes reflect the net future tax effects of temporary differences between the carrying amounts of assets and liabilities for accounting purposes and their basis for income tax purposes, as well as the tax effects of net operating losses and tax credit carryforwards.

PPL and its subsidiaries record valuation allowances to reduce deferred tax assets to the amounts that are more likely than not to be realized. PPL and its subsidiaries consider the reversal of temporary differences, future taxable income and ongoing prudent and feasible tax planning strategies in initially recording and subsequently reevaluating the need for valuation allowances. If PPL and its subsidiaries determine that they are able to realize deferred tax assets in the future in excess of recorded net deferred tax assets, adjustments to the valuation allowances increase income by reducing tax expense in the period that such determination is made. Likewise, if PPL and its subsidiaries determine that they are not able to realize all or part of net deferred tax assets in the future, adjustments to the valuation allowances would decrease income by increasing tax expense in the period that such determination is made.

PPL and its subsidiaries defer investment tax credits when the credits are utilized and amortize the deferred amounts over the average lives of the related assets.

PPL and its subsidiaries recognize interest and penalties in "Income Taxes" on their Statements of Income.

See Note 5 for additional discussion regarding income taxes.

*(PPL Energy Supply and PPL Electric)*

The income tax provision for PPL Energy Supply and PPL Electric is calculated in accordance with an intercompany tax sharing policy which provides that taxable income be calculated as if PPL Energy Supply, PPL Electric and any domestic subsidiaries each filed a separate consolidated return. Tax benefits are not shared between companies. A tax benefit inures only to the entity that gave rise to said benefit. The effect of PPL filing a consolidated tax return is taken into account in the settlement of current taxes and the recognition of deferred taxes. PPL Energy Supply's intercompany tax payable was \$26 million at December 31, 2010 and the intercompany tax receivable was \$21 million at December 31, 2009. PPL Electric's intercompany tax receivable was \$74 million and \$19 million at December 31, 2010 and 2009.

*(PPL and PPL Electric)*

The provision for PPL and PPL Electric's deferred income taxes for regulated assets is based upon the ratemaking principles reflected in rates established by the regulators. The difference in the provision for deferred income taxes for regulated assets and the amount that otherwise would be recorded under GAAP is deferred and included on the Balance Sheet in noncurrent "Regulatory assets" or "Regulatory liabilities" for PPL and PPL Electric.

Taxes, Other Than Income *(PPL, PPL Energy Supply and PPL Electric)*

PPL and its subsidiaries present sales taxes in "Accounts Payable" and value-added taxes in "Taxes" on their Balance Sheets. These taxes are not reflected on the Statements of Income. See Note 5 for details on taxes included in "Taxes, other than income" on the Statements of Income.

Leases

*(PPL, PPL Energy Supply and PPL Electric)*

PPL and its subsidiaries evaluate whether arrangements entered into contain leases for accounting purposes.

*(PPL and PPL Energy Supply)*

See Note 11 for a discussion of arrangements under which PPL and PPL Energy Supply are lessees for accounting purposes.

PPL EnergyPlus entered into several arrangements whereby PPL EnergyPlus was considered the lessor for accounting purposes. See Note 9 for additional information regarding the 2010 sale of the Long Island generation business and the leases that were transferred to the purchaser upon completion of the sale.

Fuel, Materials and Supplies

*(PPL, PPL Energy Supply and PPL Electric)*

Fuel, natural gas stored underground and materials and supplies are valued at the lower of cost or market using the average cost method.

*(PPL and PPL Energy Supply)*

"Fuel, materials and supplies" on the Balance Sheets consisted of the following at December 31.

<u>PPL</u>		<u>PPL Energy Supply</u>	
<u>2010</u>	<u>2009</u>	<u>2010</u>	<u>2009</u>

Fuel	\$ 260	\$ 137	\$ 97	\$ 137
Natural gas stored underground (a)	81	14	21	14
Materials and supplies	302	206	179	174
	<u>\$ 643</u>	<u>\$ 357</u>	<u>\$ 297</u>	<u>\$ 325</u>

(a) The majority of natural gas stored underground is available for resale.

#### Guarantees (PPL, PPL Energy Supply and PPL Electric)

Generally, the initial measurement of a guarantee liability is the fair value of the guarantee at its inception. However, there are certain guarantees excluded from the scope of accounting guidance and other guarantees that are not subject to the initial recognition and measurement provisions of accounting guidance. See Note 15 for further discussion of recorded and unrecorded guarantees.

#### Treasury Stock (PPL and PPL Electric)

PPL and PPL Electric restore all shares of common stock acquired to authorized but unissued shares of common stock upon acquisition.

#### Foreign Currency Translation and Transactions (PPL and PPL Energy Supply)

Assets and liabilities of international subsidiaries, where the local currency is the functional currency, are translated at the exchange rates on the date of consolidation and related revenues and expenses are translated at average exchange rates prevailing during the year. See "Business and Consolidation" above for a discussion regarding the use of a lag period. Adjustments resulting from translation are recorded in AOCI. The effect of translation is removed from AOCI upon the sale or substantial liquidation of the international subsidiary that gave rise to the translation adjustment. The local currency is the functional currency for PPL's U.K. operating company.

Gains or losses relating to foreign currency transactions are recognized in "Other Income (Expense) - net" on the Statements of Income. Net transaction losses were insignificant in 2010, 2009, and 2008.

#### **New Accounting Guidance Adopted** (PPL, PPL Energy Supply and PPL Electric)

##### Accounting for Transfers of Financial Assets

Effective January 1, 2010, PPL and its subsidiaries adopted accounting guidance issued to revise the accounting for transfers of financial assets. This guidance:

- eliminates the concept of a qualifying special-purpose entity (QSPE); therefore, QSPEs will be subject to consolidation guidance;
- changes the requirements for the derecognition of financial assets;
- establishes new criteria for reporting the transfer of a portion of a financial asset as a sale;
- requires transferors to initially recognize, at fair value, assets obtained and liabilities incurred as a result of a transfer accounted for as a sale; and
- requires enhanced disclosures to improve the transparency around transfers of financial assets and a transferor's continuing involvement.

This guidance is applied prospectively to new transfers of financial assets. Disclosures are required for all transfers, including those entered into before the effective date.

The adoption did not have a material impact on PPL and its subsidiaries' financial statements. See Note 7 for information on PPL Electric's participation in an asset-backed commercial paper program and "Accounts Receivable" above for information on PPL Electric's purchase of accounts receivable from alternative suppliers, which are within the scope of this guidance.

### Consolidation of Variable Interest Entities

Effective January 1, 2010, PPL and its subsidiaries adopted accounting guidance issued to replace the quantitative-based risks and rewards calculation for determining which entity, if any, has a controlling financial interest in a VIE and is the primary beneficiary. The primary beneficiary must consolidate the VIE. This guidance:

- prescribes a qualitative approach focused on identifying which entity has the power to direct the activities of a VIE that most significantly impact the VIE's economic performance and the obligation to absorb losses of, or the right to receive benefits from, the VIE that could potentially be significant to the VIE;
- requires ongoing assessments of whether an entity is the primary beneficiary of a VIE;
- requires enhanced disclosures to improve the transparency of an entity's involvement in a VIE;
- requires that all previous consolidation conclusions be reconsidered; and
- requires that QSPEs be evaluated for consolidation (resulting from the elimination of the QSPE concept in the guidance addressing accounting for transfers of financial assets).

The adoption did not have a material impact on PPL and its subsidiaries' financial statements. See PPL and PPL Energy Supply's Balance Sheets and Note 22 for enhanced VIE disclosures.

### Improving Disclosures about Fair Value Measurements

Effective January 1, 2010, PPL and its subsidiaries prospectively adopted accounting guidance issued to improve disclosures about fair value measurements. This guidance:

- requires disclosures be provided for each class of assets and liabilities, with class determined on the basis of the nature and risks of the assets and liabilities;
- clarifies that a description of valuation techniques and inputs used to measure fair value is required for Level 2 and 3 recurring and nonrecurring fair value measurements; and
- for recurring fair value measurements, requires separate disclosure of significant transfers into and out of levels and the reasons for those transfers.

This guidance makes corresponding amendments to employers' disclosures about pensions and other postretirement benefits.

The adoption did not have a material impact on PPL and its subsidiaries' financial statements. The enhanced disclosures are presented in Notes 13 and 18.

### Subsequent Measurement - Cash Flow Hedges

Effective April 1, 2010, PPL and its subsidiaries prospectively adopted accounting guidance that was issued to clarify how an entity should reflect the subsequent measurement of cash flow hedges in AOCI if, during a prior period, hedge accounting was not permitted. This situation may arise if an entity's retrospective assessment of hedge effectiveness indicated that the hedging relationship had not been highly effective in a period, but the prospective assessment of hedge effectiveness showed an expectation that the hedging relationship would be highly effective in the future; therefore, the hedging relationship continued even though hedge accounting was not permitted for a certain period. This guidance:

- requires that the cumulative gain or loss on the derivative that is used to determine the maximum amount of gain or loss that may be reflected in AOCI exclude the gains or losses that occurred during the period when hedge accounting was not permitted; and
- requires that the cumulative change in the expected future cash flows on the hedged transaction exclude the changes related to the period when hedge accounting was not applied.

The adoption did not have a significant impact on PPL and its subsidiaries; however, the impact in future periods could be material. See "Commodity Price Risk (Non-trading)" in Note 19 for additional information.

### Pro Forma Disclosures for Business Combinations

Effective December 31, 2010, PPL and its subsidiaries prospectively adopted accounting guidance that requires disclosure of supplementary pro forma information for business combinations. Under this guidance, an entity must:

- present the pro forma disclosures as if the business combination occurred at the beginning of the prior annual period; and
- disclose the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combination included in the pro forma revenue and earnings.

The adoption did not have a material impact on PPL and its subsidiaries' financial statements. Pro forma information reflecting the acquisition of LKE is presented in Note 10.

## 2. Segment and Related Information

*(PPL and PPL Energy Supply)*

PPL completed the acquisition of LKE on November 1, 2010. See Note 10 for additional information. Following the November 1, 2010 acquisition of LKE, PPL is organized into four segments: Kentucky Regulated, International Regulated (formerly International Delivery), Pennsylvania Regulated (formerly Pennsylvania Delivery) and Supply. There were no changes to the segments other than renaming certain segments, adding a Kentucky Regulated segment and allocating interest expense related to the Equity Units to the Kentucky Regulated segment (\$21 million of which was included in the Supply segment prior to the November 1, 2010 acquisition).

For PPL, the Kentucky Regulated segment consists primarily of LKE's regulated electric generation, transmission and distribution operations, primarily in Kentucky and includes the allocation of interest expense from the Equity Units issued in June 2010 to fund the acquisition. This segment also includes LKE's regulated distribution and sale of natural gas in Kentucky.

The International Regulated segment primarily consists of the regulated electric distribution operations in the U.K. In 2009, the International Regulated segment recognized \$24 million of income tax expense in Discontinued Operations related to a correction of the calculation of tax bases of the Latin American businesses sold in 2007. In 2008, the International Regulated segment recognized income tax benefits and miscellaneous expenses in Discontinued Operations in connection with the dissolution of certain Latin American holding companies. See Note 9 for additional information.

The Pennsylvania Regulated segment includes the regulated electric delivery operations of PPL Electric. This segment also included the regulated gas delivery operations of PPL Gas Utilities prior to its sale in October 2008. See Note 9 for additional information on the sale of PPL Gas Utilities.

The Supply segment primarily consists of the domestic energy marketing and trading activities, as well as the competitive generation operations of PPL Energy Supply. In 2010 and 2009, PPL Energy Supply sold or signed agreements to sell certain Supply segment facilities and businesses. See Note 9 for additional information.

"Unallocated Costs" represent one-time LKE acquisition-related costs including advisory, accounting and legal fees, certain internal costs and Bridge Facility costs. See Note 7 for additional information about the Bridge Facility.

The results of several facilities and businesses have been classified as Discontinued Operations on the Statements of Income. See Note 9 for additional information on these discontinued operations. Therefore, with the exception of net income attributable to PPL/PPL Energy Supply, the operating results from these facilities and businesses have been excluded from the income statement data tables below.

PPL Energy Supply's reportable segments are International Regulated and Supply. In 2010, there were no significant changes to these segments. While the International Regulated segment at PPL Energy Supply is consistent with the International Regulated segment at PPL, the Supply segment information reported by PPL Energy Supply does not equal the Supply segment information reported by PPL because additional Supply segment functions exist at PPL. Further,

certain income items, including PLR revenue and certain interest income with affiliates, exist at PPL Energy Supply but are eliminated in consolidation by PPL. Finally, certain expense items are fully allocated to the segments by PPL only.

Segment costs include direct charges, as well as an allocation of indirect corporate service costs, from PPL Services. These service costs include functions such as financial, legal, human resources and information services. See Note 16 for additional information.

Financial data for the segments are:

- (a) Includes unrealized gains and losses from economic activity. See Note 19 for additional information.
- (b) Gas was combined with Electric because it was not significant.
- (c) See "PLR Contracts" and "NUG Purchases" in Note 16 for a discussion of the basis of accounting between reportable segments.
- (d) Includes interest income from affiliate(s).
- (e) Includes interest expense with affiliate.
- (f) Represents both current and deferred income taxes.
- (g) Includes Discontinued Operations. See Note 9 for additional information.
- (h) The PPL asset balances at December 31, 2010 for the Kentucky Regulated and Supply segments include the assignment of goodwill recorded as a result of the acquisition of LKE. See Note 10 for additional information.

*(PPL Electric)*

PPL Electric operates under one reportable segment, the regulated electric delivery operations in Pennsylvania.

### 3. Regulatory Assets and Liabilities

*(PPL and PPL Electric)*

As discussed in Note 1, PPL and PPL Electric reflect the effects of regulatory actions in the financial statements for their cost-based rate-regulated utility operations as summarized below. Regulatory assets and liabilities are classified as current if, upon initial recognition, the entire amount related to that item will be recovered or refunded within a year of the balance sheet date. As such, the primary items classified as current are related to rate mechanisms that periodically adjust to account for over- or under-collections.

For PPL, LG&E's and KU's Kentucky base rates are calculated based on a return on capitalization (common equity, long-term debt and notes payable) including certain adjustments to exclude non-regulated investments and environmental compliance costs recovered separately through the environmental cost recovery (ECR) mechanism. As such, regulatory assets are generally earning a return.

As a result of purchase accounting, certain fair value amounts, reflecting contracts that have favorable or unfavorable terms relative to market, were recorded on the balance sheet with an offsetting regulatory asset or liability. Prior to the acquisition, LKE recovered in customer rates the cost of coal contracts, power purchases and emission allowances and this rate treatment will continue after the acquisition. As a result, management believes the regulatory assets and liabilities created to offset the fair value amounts meet the recognition criteria established by existing accounting guidance and eliminate any rate making impact of the fair value adjustments. LKE's customer rates will continue to reflect these items (e.g. coal, purchased power, emission allowances) at their original contracted prices.

For PPL, KU's Virginia base rates are calculated based on a return on rate base (net utility plant less deferred taxes and miscellaneous deductions). All regulatory assets and liabilities are excluded from the return on rate base utilized in the calculation of Virginia base rates.

PPL Electric's distribution base rates are calculated based on a return on rate base (net utility plant less deferred taxes and miscellaneous additions and deductions). PPL Electric's transmission revenues are billed in accordance with a FERC tariff that allows for recovery of transmission costs incurred, a return on transmission-related plant and an automatic annual update. See "Transmission Formula Rate" below for additional information on this tariff. All regulatory assets and liabilities are excluded from distribution and transmission return on investment calculations; therefore, generally no return is earned on PPL Electric's regulatory assets.

	PPL		PPL Electric	
	2010	2009	2010	2009
<b>Current Regulatory Assets:</b>				
Generation supply charge	\$ 45		\$ 45

Other (a)	3			
<b>Total current regulatory liabilities</b>	<b>\$ 109</b>	<b>\$ 74</b>	<b>\$ 18</b>	<b>\$ 74</b>
<b>Noncurrent Regulatory Liabilities:</b>				
Accumulated cost of removal of utility plant (a)	\$ 623			
Coal contracts (a) (b)	213			
Power purchase agreement - OVEC (a) (b)	124			
Net deferred tax assets (a)	40			
Act 129 compliance rider	14		\$ 14	
Defined benefit plans (a)	10			
PURTA tax		\$ 10		\$ 10
Other (a)	7			
<b>Total noncurrent regulatory liabilities</b>	<b>\$ 1,031</b>	<b>\$ 10</b>	<b>\$ 14</b>	<b>\$ 10</b>

(a) The differences between PPL's and PPL Electric's balances are due to the consolidation of LG&E and KU.

(b) These regulatory assets and liabilities were recorded as offsets to certain intangible assets and liabilities recorded at fair value from the acquisition of LKE. See Note 10 for information on the acquisition and Note 20 for information on intangible assets.

(PPL)

### Environmental Cost Recovery

Kentucky law permits LG&E and KU to recover the costs of complying with the Federal Clean Air Act, and those federal, state or local environmental requirements which apply to coal combustion wastes and by-products from facilities utilized for production of energy from coal, including a return of operating expenses and a return of and on capital invested. The regulatory asset or liability represents the amount that has been over- or under-recovered due to timing or adjustments to the mechanism.

#### Coal Contracts

As a result of purchase accounting associated with the acquisition of LKE, the fair value of LKE's coal contracts was recorded on the balance sheet. An offsetting regulatory asset was recorded for those contracts with unfavorable terms relative to market. An offsetting regulatory liability was recorded for those contracts that had favorable terms relative to market. These regulatory assets and liabilities are being amortized over the same terms as the related contracts, which expire through 2016.

#### Interest Rate Swaps

Since realized amounts associated with LG&E's interest rate swaps, including a terminated swap contract, are recoverable through rates based on an order from the KPSC, LG&E's unrealized gains and losses are recorded as a regulatory asset or liability until they are realized as interest expense. Interest expense from existing swaps is realized and recovered over the terms of the associated debt, which matures through 2033. Interest expense related to the terminated swap contract is recovered over the remaining life of the debt as of the date of the termination, which extends through in 2035.

#### Emission Allowances

As a result of purchase accounting associated with the acquisition of LKE, LKE's emission allowances were recorded at fair value on the balance sheet with an offsetting regulatory liability. This regulatory liability is being amortized as the emission allowances are consumed, which is expected to occur through 2040.

#### Demand Side Management (DSM)

DSM consists of energy efficiency programs which are intended to reduce peak demand and delay the investment in additional power plant construction, provide customers with tools and information to become better managers of their energy usage and prepare for potential future legislation governing energy efficiency. The rates of LG&E and KU contain a DSM provision which includes a rate mechanism that provides for concurrent recovery of DSM costs and provides an incentive for implementing DSM programs. The provision allows LG&E and KU to recover revenues from lost sales associated with the DSM programs up to the earlier of three years or implementation of new base rates which reflect that load reduction.

#### Gas Supply Clause

LG&E's natural gas rates contain a gas supply clause, whereby increases or decreases in the cost of natural gas supply are reflected in LG&E's rates, subject to approval by the KPSC. The gas supply clause procedure prescribed by the KPSC provides for quarterly rate adjustments to reflect the expected cost of natural gas supply in that quarter. In addition, the gas supply clause contains a mechanism whereby any over- or under-recoveries of natural gas supply cost from prior quarters are refunded to or recovered from customers through the adjustment factor determined for subsequent quarters.

#### Power Purchase Agreement

As a result of purchase accounting associated with the acquisition of LKE, the fair value of the OVEC power purchase agreement was recorded on the balance sheet with an offsetting regulatory liability. This regulatory liability is being amortized over the same terms as the related contract, which will expire in March 2026.

#### Fuel Adjustment Clause (FAC)

LG&E's and KU's retail electric rates contain an FAC, whereby increases and decreases in the cost of fuel for electric generation are reflected in the rates charged to retail electric customers. The FAC allows LG&E and KU to adjust billed amounts for the difference between the fuel cost component of base rates and the actual fuel cost, including transportation costs. The balance at December 31, 2010 was insignificant.

KU also employs an FAC mechanism for Virginia customers using an average fuel cost factor based primarily on projected fuel costs. The Virginia levelized fuel factor allows fuel recovery based on projected fuel costs for the coming year plus an adjustment for any over- or under-recovery of fuel expenses from the prior year.

The KPSC requires public hearings at six-month intervals to examine past fuel adjustments and at two-year intervals to review past operations of the fuel clause and transfer of the then current fuel adjustment charge or credit to the base charges. In August 2010, the KPSC initiated a six-month review of LG&E's and KU's FAC mechanism for the billing period ended April 2010. An Order was received in December 2010 approving the charges and credits billed during the period.

The Mine Safety and Health Administration enacted Emergency Temporary Standards regulations in 2006 and has since issued additional regulations as the result of the passage of the Mine Improvement and New Emergency Response Act of 2006. At the state level, Kentucky and other states from which coal is supplied to LG&E and KU have passed mine safety legislation. This legislation requires all underground coal mines to implement new safety measures and install new safety equipment. Under the terms of the majority of the long-term coal contracts that LG&E and KU have in place, provisions allow for price adjustments for compliance costs resulting from new or amended laws or regulations. LG&E's and KU's coal suppliers regularly submit price adjustments related to these compliance costs. LG&E and KU employ an external consultant to review all relevant mine safety compliance cost claims for validity and reasonableness. Depending upon the terms of the contracts and commercial practice, LG&E and KU may delay payment of the adjustments or pay certain adjustments subject to refund. At appropriate times in the review, payment or refund processes, LG&E and KU adjust the values or amounts of inventory, accounts receivable or accounts payable relating to coal matters. In general, LG&E and KU expect to recover these coal-related cost adjustments through the FAC.

*(PPL and PPL Electric)*

#### Generation Supply Charge (GSC)

The GSC is a recovery mechanism which provides PPL Electric recovery for costs incurred to provide generation supply to PLR customers who receive basic generation supply service. The recovery includes an energy charge, capacity charge and an administrative charge. In addition, the GSC contains a reconciliation mechanism whereby any over-or under-recovery from prior quarters is to be refunded to or recovered from customers through the adjustment factor determined for the subsequent quarter.

#### Universal Service Rider (USR)

PPL Electric's distribution rates include a recovery of applicable costs associated with the universal service programs provided to PPL Electric's residential customers. Universal service programs include low-income programs, such as OnTrack and Winter Relief Assistance Program (WRAP). OnTrack is a special payment program for low-income households within the federal poverty level who are payment-troubled. This program is funded by residential customers and administered by community-based organizations. Customers who participate in OnTrack receive assistance in the form of reduced payment arrangements, protection against shutoff of electric service and referrals to other community programs and services. The WRAP program reduces electric bills and improves living comfort for low-income customers by providing services such as weatherization measures and energy education services. The USR is applied to distribution charges for each customer who receives distribution service under PPL Electric's residential service rate schedules. The USR contains a reconciliation mechanism whereby any over-or under-recovery from the current year is refunded to or recovered from customers through the adjustment factor determined for the subsequent year.

#### Transmission Formula Rate

Transmission rates are regulated by the FERC. Beginning November 1, 2008, PPL Electric's transmission revenues are billed in accordance with a FERC-approved PJM open access transmission tariff that utilizes a formula-based rate

recovery mechanism. The tariff allows for recovery of actual transmission costs incurred, a return on transmission plant placed in service and an incentive return, including a return on construction work in progress, on the Susquehanna-Roseland transmission line project. The tariff utilizes estimated costs for the current year billing to customers and requires a true-up to adjust for actual costs in the subsequent year's rate. In August 2009, the FERC approved this formula-based rate recovery mechanism. As a result, the annual update of the rate is now implemented automatically without requiring specific approval by the FERC before going into effect. PPL Electric accrues or defers revenues applicable to any estimated true-up of this formula-based rate.

In 2009, PPL Electric recorded a \$3 million pre-tax true-up (\$2 million after-tax) related to the 2008 portion of the FERC formula-based transmission revenues. The true-up, reflected in the Pennsylvania Regulated segment for PPL, is not considered by management as material to the financial statements of PPL and PPL Electric for the years 2009 and 2008. See Note 15 for additional information on the FERC transmission rates.

### Defined Benefit Plans

Recoverable costs of defined benefit plans represent the portion of unrecognized transition obligation, prior service cost and net actuarial losses that will be recovered through future rates based upon established regulatory practices. These regulatory assets are adjusted at least annually or whenever the funded status of PPL's defined benefit plans is re-measured.

	PPL		PPL Electric	
	2010	2009	2010	2009
Transition obligation	\$ 2	\$ 10		\$ 10
Prior service cost	68	57	\$ 32	57
Net actuarial loss	522	162	230	162
Recoverable costs of defined benefit plans	<u>\$ 592</u>	<u>\$ 229</u>	<u>\$ 262</u>	<u>\$ 229</u>

Of these costs, \$40 million for PPL and \$9 million for PPL Electric are expected to be amortized into net periodic defined benefit costs in 2011. All costs will be amortized over the average service lives of plan participants.

### Taxes Recoverable through Future Rates and Regulatory Liability associated with Net Deferred Tax Assets

Taxes recoverable through future rates represent the portion of future income taxes that will be recovered through future rates based upon established regulatory practices. Accordingly, this regulatory asset is recognized when the offsetting deferred tax liability is recognized. For general-purpose financial reporting, this regulatory asset and the deferred tax liability are not offset; rather, each is displayed separately. This regulatory asset is expected to be recovered over the period that the underlying book-tax timing differences reverse and the actual cash taxes are incurred.

The regulatory liability associated with net deferred tax assets represents the future revenue impact from the reversal of deferred income taxes required primarily for unamortized investment tax credits. This regulatory liability is recognized when the offsetting deferred tax asset is recognized. For general-purpose financial reporting, this regulatory liability and the deferred tax asset are not offset; rather, each is displayed separately.

### Storm Costs

For PPL, in September 2009, the KPSC approved deferral of \$101 million of costs associated with a severe ice storm that occurred in January 2009 and a wind storm that occurred in February 2009. Additionally, in December 2008, the KPSC approved deferral of \$26 million of costs associated with high winds from the remnants of Hurricane Ike in September 2008. These costs are being amortized over a ten-year period ending July 2020.

For PPL Electric, in 2007, the PUC approved recovery of \$12 million of costs associated with severe ice storms that occurred in January 2005. Amortization began in January 2008 and will continue through August 2015.

### Unamortized Loss on Reacquired Debt

Unamortized loss on reacquired debt represents losses on long-term debt reacquired or redeemed that have been deferred and will be amortized and recovered over either the original life of the extinguished debt or the life of the replacement debt (in the case of refinancing). Such costs are being amortized through 2036 for PPL and through 2029 for PPL Electric.

#### Accumulated Costs of Removal

For PPL, LG&E and KU accrue for costs of removal through depreciation expense with an offsetting credit to a regulatory liability. The regulatory liability is relieved as costs are incurred. See Note 1 for additional information.

PPL Electric does not accrue for costs of removal. When costs of removal are incurred, PPL Electric records the deferral of costs as a reduction to accumulated depreciation. Such deferral is included in rates and amortized over the subsequent 5-year period.

#### PURTA Tax

In December 2009, PPL Electric reached a settlement with the Pennsylvania Department of Revenue related to the appeal of its 1997 PURTA tax assessments that resulted in a reduction in PURTA tax. The regulatory liability is being refunded to customers in 2011 pursuant to PUC regulations.

#### Transmission Service Charge (TSC)

PPL Electric is charged transmission-related costs by PJM applicable to PLR customers. PPL Electric passes these costs on to customers who receive basic generation supply service through the PUC-approved TSC recovery mechanism. The TSC contains a reconciliation mechanism whereby any over- or under-recovery from customers is either refunded to or collected from customers through a transmission service charge adjustment the subsequent year.

#### Competitive Transition Costs

Competitive transition costs were billed to customers as a result of PUC orders, which allowed PPL Electric to recover its competitive transition (or stranded) costs over a transition period ending December 31, 2009. These costs were over-collected at the end of 2009 and were refunded to customers in 2010.

#### Act 129 Compliance Rider

In compliance with Pennsylvania's Act 129 of 2008 and implementing regulations, PPL Electric filed its energy efficiency and conservation plan in July 2009. The plan was approved by PUC Order in October 2009. The Order allows PPL Electric to recover the maximum \$250 million cost of the program ratably over the life of the plan, from January 1, 2010 through May 31, 2013. The plan includes programs intended to reduce electricity consumption. The recoverable costs include direct and indirect charges, including design and development costs, general and administrative costs and applicable state evaluator costs. The rates are applied to customers who receive distribution service through the Act 129 Compliance Rider. The actual program costs are reconcilable, and any over- or under-recovery from customers will be refunded or collected at the end of the program. See Note 15 for additional information on Act 129.

#### Smart Meter Rider

In compliance with Pennsylvania's Act 129 of 2008 and implementing regulations, PPL Electric filed its Smart Meter Plan in 2009. The plan was approved by a PUC Order in June 2010. In August 2010, PPL Electric filed its revised Smart Meter Plan reflecting modification identified by the PUC its Order. In December 2010, the PUC issued a Secretarial Letter approving PPL Electric's Smart Meter Rider which is designed to recover Smart Meter program costs plus a return on Smart Meter investments. The Smart Meter Rider is effective January 1, 2011 and contains a reconciliation mechanism whereby any over- or under-recovery from customers is either refunded to or collected from customers in the subsequent year.

### **4. Earnings Per Share**

(PPL)

Basic and diluted EPS, computed using the two-class method, and reconciliations of the amounts of income and shares of common stock (in thousands) used in the calculation are:

	2010	2009	2008
<b>Income (Numerator)</b>			
Income from continuing operations after income taxes attributable to PPL	\$ 955	\$ 414	\$ 857
Less amounts allocated to participating securities	4	2	4
Income from continuing operations after income taxes available to PPL common shareowners	<u>\$ 951</u>	<u>\$ 412</u>	<u>\$ 853</u>
Income (loss) from discontinued operations (net of income taxes) available to PPL	<u>\$ (17)</u>	<u>\$ (7)</u>	<u>\$ 73</u>
Net income attributable to PPL	\$ 938	\$ 407	\$ 930
Less amounts allocated to participating securities	4	2	4
Net income available to PPL common shareowners	<u>\$ 934</u>	<u>\$ 405</u>	<u>\$ 926</u>
<b>Shares of Common Stock (Denominator)</b>			
Weighted-average shares - Basic EPS	431,345	376,082	373,626
Add incremental non-participating securities:			
Stock options and performance units	224	324	836
Convertible Senior Notes			439
Weighted-average shares - Diluted EPS	<u>431,569</u>	<u>376,406</u>	<u>374,901</u>
<b>Basic EPS</b>			
Available to PPL common shareowners:			
Income from continuing operations after income taxes	\$ 2.21	\$ 1.10	\$ 2.28
Income (loss) from discontinued operations (net of income taxes)	(0.04)	(0.02)	0.20
Net Income	<u>\$ 2.17</u>	<u>\$ 1.08</u>	<u>\$ 2.48</u>
<b>Diluted EPS</b>			
Available to PPL common shareowners:			
Income from continuing operations after income taxes	\$ 2.20	\$ 1.10	\$ 2.28
Income (loss) from discontinued operations (net of income taxes)	(0.03)	(0.02)	0.19
Net Income	<u>\$ 2.17</u>	<u>\$ 1.08</u>	<u>\$ 2.47</u>

While they were outstanding, PPL Energy Supply's 2-5/8% Convertible Senior Notes due 2023 (Convertible Senior Notes), which were issued in May 2003, could be converted into shares of PPL common stock under certain circumstances, including if during a fiscal quarter the market price of PPL's common stock exceeded \$29.83 per share over a certain period during the preceding fiscal quarter or if PPL Energy Supply called the debt. During 2008, all then-outstanding Convertible Senior Notes were either converted at the election of the holders or redeemed at par by PPL Energy Supply.

The terms of the Convertible Senior Notes required cash settlement of the principal amount and permitted settlement of any conversion premium in cash or PPL common stock. Based upon the conversion rate of 40.2212 shares per \$1,000 principal amount of notes (or \$24.8625 per share), the Convertible Senior Notes had a dilutive impact when the average market price of PPL common stock equaled or exceeded \$24.87.

During 2010, PPL issued 312,107 shares of common stock related to the exercise of stock options, vesting of restricted stock and restricted stock units and conversion of stock units granted to directors under its stock-based compensation plans. In addition, PPL issued 234,211 and 2,162,012 shares of common stock related to its ESOP and its DRIP. See Note 12 for a discussion of PPL's stock-based compensation plans.

In June 2010, PPL issued 103.5 million shares of common stock and 23 million Equity Units pursuant to concurrent registered underwritten offerings. See Note 7 for additional information. Subject to antidilution adjustments, the maximum number of shares that could potentially be issued to settle the Purchase Contracts related to the Equity Units is 61,136,300 shares, including 47,915,900 shares that could be issued under standard provisions of the Purchase Contracts and 13,220,400 shares that could be issued under make-whole provisions in the event of early settlement upon a Fundamental Change.

The Purchase Contracts will be dilutive only if the average VWAP of PPL's common stock for a certain period exceeds \$28.80. Because the average VWAP has not exceeded \$28.80 since issuance, the Purchase Contracts were excluded from the diluted EPS calculation.

The following stock options to purchase PPL common stock and performance units were excluded from the computations of diluted EPS because the effect would have been antidilutive.

(Shares in thousands)

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Stock options	4,936	2,394	604
Performance units	45	1	2

## 5. Income and Other Taxes

(PPL)

"Income from Continuing Operations Before Income Taxes" included the following components:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Domestic income	\$ 978	\$ 248	\$ 943
Foreign income	261	290	330
Total	<u>\$ 1,239</u>	<u>\$ 538</u>	<u>\$ 1,273</u>

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for accounting purposes and their basis for income tax purposes and the tax effects of net operating loss and tax credit carryforwards. The provision for PPL's deferred income taxes for regulated assets is based upon the ratemaking principles of the applicable jurisdiction. See Notes 1 and 3 for additional information.

Net deferred tax assets have been recognized based on management's estimates of future taxable income for the U.S. and certain foreign jurisdictions in which PPL's operations have historically been profitable.

Significant components of PPL's deferred income tax assets and liabilities from continuing operations were as follows:

	<u>2010</u>	<u>2009</u>
<b>Deferred Tax Assets</b>		
Deferred investment tax credits	\$ 45	\$ 16
Regulatory obligations	205	28
Accrued pension costs	208	265
Accrued litigation costs	31	5
Federal loss carryforwards	314	
State loss carryforwards	269	184
Federal tax credit carryforwards	169	23
Foreign capital loss carryforwards	377	144
Foreign - pensions	87	168
Foreign - other	8	6
Contributions in aid of construction	152	98
Domestic - other	219	190
Valuation allowances	(464)	(312)
Total deferred tax assets	<u>1,620</u>	<u>815</u>

	<u>2010</u>	<u>2009</u>
<b>Deferred Tax Liabilities</b>		
Plant - net	3,010	1,855
Taxes recoverable through future rates	105	104
Unrealized gain on qualifying derivatives	298	437
Other regulatory assets	213	
Regulatory undercollections	22	
Reacquired debt costs	25	14
Foreign - plant	526	546
Foreign - other	36	35
Domestic - other	95	72
Total deferred tax liabilities	<u>4,330</u>	<u>3,063</u>
Net deferred tax liability	<u>\$ 2,710</u>	<u>\$ 2,248</u>

PPL had the following loss and tax credit carryforwards.

	<u>2010</u>	<u>2009</u>	<u>Expiration</u>
<b>Loss carryforwards</b>			
Federal net operating losses (a)	\$ 799		2029
Federal capital losses (a)	155		2011-2014
State net operating losses (b)	4,168	\$ 2,835	2011-2030
State capital losses (b)	181		2011-2014
Foreign capital losses	1,395	514	Indefinite
<b>Credit carryforwards</b>			
Federal investment tax credit (a)	125		2025-2028
Federal AMT credit (a)	20		Indefinite
Federal foreign tax credit (c)		23	
Federal - other (a)	24		2016-2030

- (a) Loss and credit carryforwards associated with the acquisition of LKE.  
(b) State net operating loss and state capital loss carryforwards associated with the acquisition of LKE are \$1,039 and \$163.  
(c) Fully utilized during 2010.

Valuation allowances have been established for the amount that, more likely than not, will not be realized. The changes in deferred tax valuation allowances were:

	<u>Balance at Beginning of Period</u>	<u>Additions</u>		<u>Deductions</u>	<u>Balance at End of Period</u>
		<u>Charged to Income</u>	<u>Charged to Other Accounts</u>		
2010	\$ 312	\$ 221	\$ 6 (a)	\$ 75 (b)	\$ 464
2009	285	24	17 (c)	14 (d)	312
2008	323	9		47 (c)	285

- (a) A valuation allowance was recorded against certain deferred tax assets as a result of the 2010 acquisition of LKE. See Note 10 for additional information on the acquisition.  
(b) Resulting from the projected revenue increase in connection with the expiration of the Pennsylvania generation rate caps in 2010, the valuation allowance related to state net operating loss carryforwards over the remaining carryforward period was reduced by \$72 million (or \$0.17 per share, basic and diluted).  
(c) Related to the change in foreign net operating loss carryforwards, including the change in foreign currency exchange rates.  
(d) Primarily from the projected revenue increase in connection with the expiration of the Pennsylvania generation rate caps in 2010, the valuation allowance related to a portion of state net operating loss carryforwards was reduced by \$13 million.

PPL Global does not pay or record U.S. income taxes on the undistributed earnings of WPD, as management has determined that the earnings are permanently reinvested. Historically, dividends paid by WPD have been distributions of the current year's earnings. WPD's long-term working capital forecasts and capital expenditure projections for the foreseeable future require reinvestment of WPD's undistributed earnings, and WPD would have to issue debt or access credit facilities to fund any distributions in excess of current earnings. Additionally, U.S. long-term working capital forecasts and capital expenditure projections for the foreseeable future do not require or anticipate WPD distributing any

more than future earnings to its parent in the U.S. The cumulative undistributed earnings are included in "Earnings Reinvested" on the Balance Sheets. The amounts considered permanently reinvested at December 31, 2010 and 2009 were \$837 million and \$622 million. If the earnings are remitted as dividends, PPL Global may be subject to additional U.S. taxes, net of allowable foreign tax credits. It is not practicable to estimate the amount of additional taxes that might be payable on these foreign earnings.

Details of the components of income tax expense, a reconciliation of federal income taxes derived from statutory tax rates applied to "Income from Continuing Operations Before Income Taxes" to income taxes for reporting purposes, and details of "Taxes, other than income" were:

- (a) Pennsylvania H.B. 1531, enacted in October 2009, increased the net operating loss limitation to 20% of taxable income for tax years beginning in 2010. During 2009, based on the projected revenue increase due to the expiration of the Pennsylvania generation rate caps in 2010, PPL recorded a \$13 million state deferred income tax benefit related to the reversal of deferred tax valuation allowances for a portion of its Pennsylvania net operating losses. During 2010, PPL recorded an additional \$72 million state deferred income tax benefit related to the reversal of deferred tax valuation allowances related to the future projections of taxable income over the remaining carryforward period of the net operating losses.

- (b) During 2010, PPL recorded additional U.S. income tax expense resulting from increased taxable dividends and certain restructuring of U.K. entities. The increased taxable dividends allowed PPL to fully utilize its foreign tax credit carryforward in 2010.
- (c) In 1997, the U.K. imposed a Windfall Profits Tax on privatized utilities, including WPD. In September 2010, the U.S. Tax Court ruled in PPL's favor in a pending dispute with the IRS, concluding that the U.K. Windfall Profits Tax is a creditable tax for U.S. tax purposes. As a result and with the finalization of other issues, PPL recorded a \$42 million tax benefit to federal and state income tax reserves and related deferred income taxes during 2010. In January 2011, the IRS appealed the U.S. Tax Court's decision to the U.S. Court of Appeals for the Third Circuit. See Note 15 for additional information.

In July 2010, the U.S. Tax Court ruled in PPL's favor in a pending dispute with the IRS, concluding that street lighting assets are depreciable for tax purposes over seven years. As a result, PPL recorded a \$7 million tax benefit to federal and state income tax reserves and related deferred income taxes. See Note 15 for information on the January 2011 IRS appeal, which at this time does not appear to include the street lighting decision.

During 2010, 2009 and 2008 PPL recorded a \$7 million, \$6 million and \$7 million tax benefit to federal and state income tax reserves related to stranded cost securitization.

- (d) During 2010, PPL recorded a \$46 million foreign tax benefit in conjunction with losses resulting from restructuring in the U.K. These losses offset tax on a deferred gain from a prior year sale of WPD's supply business.
- During 2009, PPL recorded a \$46 million foreign tax benefit and a related \$46 million tax reserve related to losses resulting from restructuring in the U.K. Additionally, PPL recorded a \$29 million foreign tax benefit related to the resolution of a tax dispute and foreign currency exchange losses.
- (e) During 2009, PPL received consent from the IRS to change its method of accounting for certain expenditures for tax purposes. PPL deducted the resulting IRC Sec. 481 adjustment on its 2008 federal income tax return and recorded a \$24 million adjustment to federal and state income tax expense resulting from the reduction in federal income tax benefits related to the domestic manufacturing deduction and certain state tax benefits related to state net operating losses and regulated depreciation.
- (f) During 2010, PPL recorded an increase in tax benefits related to domestic manufacturing deductions due to an increase in domestic taxable income resulting from the expiration of Pennsylvania generation rate caps in 2010. In December 2010, Congress enacted legislation allowing for 100% bonus depreciation on qualified property. The increased tax depreciation deduction related to bonus depreciation significantly reduced the tax benefits related to domestic manufacturing deductions during 2010.
- (g) Beginning in 2013, provisions within Health Care Reform eliminated the tax deductibility of retiree health care costs to the extent of federal subsidies received by plan sponsors that provide retiree prescription drug benefits equivalent to Medicare Part D Coverage. As a result, PPL recorded deferred income tax expense during 2010. See Note 13 for additional information.
- (h) The U.K.'s Finance Act of 2010, enacted in July 2010, included a reduction in the U.K. statutory income tax rate. Effective April 1, 2011, the statutory income tax rate will be reduced from 28% to 27%. As a result, PPL reduced its net deferred tax liabilities and recognized a deferred tax benefit.

The U.K.'s Finance Act of 2008, enacted in July 2008, included a phase-out of tax depreciation on certain buildings. As a result, PPL reduced its net deferred tax liabilities and recognized a deferred tax benefit.

- (i) During 2010, PPL recorded a deferred tax benefit related to investment tax credits on progress expenditures related to hydroelectric plant expansions. See Note 8 for additional information.

During 2008, PPL recorded a \$13 million expense to adjust the amount of synthetic fuel tax credits recorded during 2007. See Note 15 for additional information.

	<u>2010</u>	<u>2009</u>	<u>2008</u>
<b>Taxes, other than income</b>			
State gross receipts	\$ 145	\$ 187	\$ 199
State utility realty	5	5	4
State capital stock	6	6	5
Foreign property	52	57	66
Domestic property and other	30	25	14
Total	<u>\$ 238</u>	<u>\$ 280</u>	<u>\$ 288</u>

See Note 3 for information on a settlement related to PURTA tax that will be returned to PPL Electric customers.

For tax years 2000 through 2007, PPL Montana protested certain property tax assessments by the Montana Department of Revenue on its generation facilities. The tax liabilities in dispute for 2000 through 2007, which had been paid and expensed by PPL Montana, totaled \$45 million. In January 2008, both parties reached a settlement for all years outstanding. The settlement resulted in PPL Montana receiving a refund of taxes paid and interest totaling \$8 million. This settlement was recorded in 2008, of which \$7 million was reflected in "Taxes, other than income" and \$1 million was reflected in "Other Income (Expense) - net" on the Statement of Income.

*(PPL Energy Supply)*

"Income (loss) from Continuing Operations Before Income Taxes" included the following components:

	<u>2010</u>	<u>2009</u>	<u>2008</u>
Domestic income (loss)	\$ 882	\$ (13)	\$ 670
Foreign income	261	290	330
Total	<u>\$ 1,143</u>	<u>\$ 277</u>	<u>\$ 1,000</u>

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for accounting purposes and their basis for income tax purposes and the tax effects of net operating loss and tax credit carryforwards.

Net deferred tax assets have been recognized based on management's estimates of future taxable income for the U.S. and certain foreign jurisdictions in which PPL's operations have historically been profitable.

Significant components of PPL Energy Supply's deferred income tax assets and liabilities from continuing operations were as follows:

	<u>2010</u>	<u>2009</u>
<b>Deferred Tax Assets</b>		
Deferred investment tax credits	\$ 33	\$ 12
Accrued pension costs	100	149
Accrued litigation costs	31	4
Federal tax credit carryforwards	261	23
State loss carryforwards	111	111
Foreign capital loss carryforwards	377	144
Foreign - pensions	87	168
Foreign - other	8	6
Domestic - other	84	102
Valuation allowances	(408)	(255)
Total deferred tax assets	<u>423</u>	<u>464</u>
<b>Deferred Tax Liabilities</b>		
Plant - net	1,246	1,046
Unrealized gain on qualifying derivatives	326	417
Foreign - plant	526	546
Foreign - other	36	35
Domestic - other	52	46
Total deferred tax liabilities	<u>2,186</u>	<u>2,090</u>
Net deferred tax liability	<u>\$ 1,763</u>	<u>\$ 1,626</u>

PPL Energy Supply had a federal foreign tax credit carryforward of \$23 million at December 31, 2009 that was fully utilized during 2010. PPL Energy Supply also had state net operating loss carryforwards that expire between 2011 and 2030 of \$1.7 billion at December 31, 2010 and 2009. Valuation allowances have been established for the amount that, more likely than not, will not be realized.

PPL Global had foreign capital loss carryforwards of \$1.4 billion and \$514 million at December 31, 2010 and 2009. All of these losses have an indefinite carryforward period. Valuation allowances have been established for the amount that, more likely than not, will not be realized.

Changes in deferred tax valuation allowances were:

	<u>Balance at Beginning of Period</u>	<u>Additions</u>		<u>Deductions</u>	<u>Balance at End of Period</u>
	<u>Charged to Income</u>	<u>Charged to Other Accounts</u>			
2010	\$ 255	\$ 205		\$ 52 (a)	\$ 408
2009 (c)	226	12	\$ 17 (b)		255
2008 (c)	259	14		47 (b)	226

- (a) Resulting from the projected revenue increase in connection with the expiration of the Pennsylvania generation rate caps in 2010, the valuation allowance related to state net operating loss carryforwards over the remaining carryforward period was reduced by \$52 million.
- (b) Primarily related to the change in foreign net operating loss carryforwards including the change in foreign currency exchange rates.
- (c) Pennsylvania state legislation, enacted in 2007 and 2009, increased the net operating loss limitation. As a result, the deferred tax asset (and related valuation allowance) associated with certain of its Pennsylvania net operating loss carryforwards for all periods presented were increased to reflect the higher limitation. There was no impact on the net deferred tax asset position as a result of the legislation and related adjustments.

PPL Global does not pay or record U.S. income taxes on the undistributed earnings of WPD, as management has determined that the earnings are permanently reinvested. Historically, dividends paid by WPD have been distributions of the current year's earnings. WPD's long-term working capital forecasts and capital expenditure projections for the foreseeable future require reinvestment of WPD's undistributed earnings, and WPD would have to issue debt or access credit facilities to fund any distributions in excess of current earnings. Additionally, U.S. long-term working capital forecasts and capital expenditure projections for the foreseeable future do not require or anticipate WPD distributing any more than future earnings to its parent in the U.S. The cumulative undistributed earnings are included in "Members Equity" on the Balance Sheets. The amounts considered permanently reinvested at December 31, 2010 and 2009 were \$837 million and \$622 million. If the earnings are remitted as dividends, PPL Global may be subject to additional U.S. taxes, net of allowable foreign tax credits. It is not practicable to estimate the amount of additional taxes that might be payable on these foreign earnings.

Details of the components of income tax expense, a reconciliation of federal income taxes derived from statutory tax rates applied to "Income from Continuing Operations Before Income Taxes" to income taxes for reporting purposes, and details of "Taxes, other than income" were:

	2010	2009	2008

For tax years 2000 through 2007, PPL Montana protested certain property tax assessments by the Montana Department of Revenue on its generation facilities. The tax liabilities in dispute for 2000 through 2007, which had been paid and expensed by PPL Montana, totaled \$45 million. In January 2008, both parties reached a settlement for all years outstanding. The settlement resulted in PPL Montana receiving a refund of taxes paid and interest totaling \$8 million. This settlement was recorded in 2008, of which \$7 million was reflected in "Taxes, other than income" and \$1 million was reflected in "Other Income (Expense) - net" on the Statement of Income.

(PPL Electric)

The provision for PPL Electric's deferred income taxes for regulated assets is based upon the ratemaking principles reflected in rates established by the PUC and the FERC. The difference in the provision for deferred income taxes for regulated assets and the amount that otherwise would be recorded under GAAP is deferred and included in "Regulatory assets" on the Balance Sheets.

Significant components of PPL Electric's deferred income tax assets and liabilities were as follows:

	<u>2010</u>	<u>2009</u>
<b>Deferred Tax Assets</b>		
Deferred investment tax credits	\$ 3	\$ 3
Accrued pension costs		36
Contributions in aid of construction	103	99
