### Notes:
- Moody’s Long-Term Corporate Bond Yield Averages have been published daily since 1929. They are derived from pricing data on a regularly-replenished population of nearly 75 seasoned corporate bonds in the US market, each with current outstanding balances over $100 million. The bond maturities as close as possible to 30 years; they are dropped from the list if their remaining life falls below 20 years, if their ratings change. Bonds with deep discounts or steep premiums to par are generally excluded. All yields are yield-to-maturity calculated on a semi-annual basis. Each observation published is an unweighted average, with Average Corporate Yields representing the unweighted average of the corresponding Avg. Corporate Bond Yields.
- The data is provided from December 10, 2001.
