**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 180**

**Responding Witness: Daniel K. Arbough**

Q-180. Please provide copies of all presentations made to rating agencies and/or investment firms by PPL, and/or LG&E between January 1, 2013 and the present.

A-180. The Company objected to this request on January 19, 2015 because it seeks the production of documents that are irrelevant to the issues in this case and relate to non-utility or non-jurisdictional utility activities. These activities are not relevant to the analysis of the test period in this case. Without waiver of this objection, see attached. The rating agencies presentations are confidential and proprietary information, and are being provided under seal pursuant to a petition for confidential treatment.

# Cautionary Statements and Factors That May Affect Future Results

---

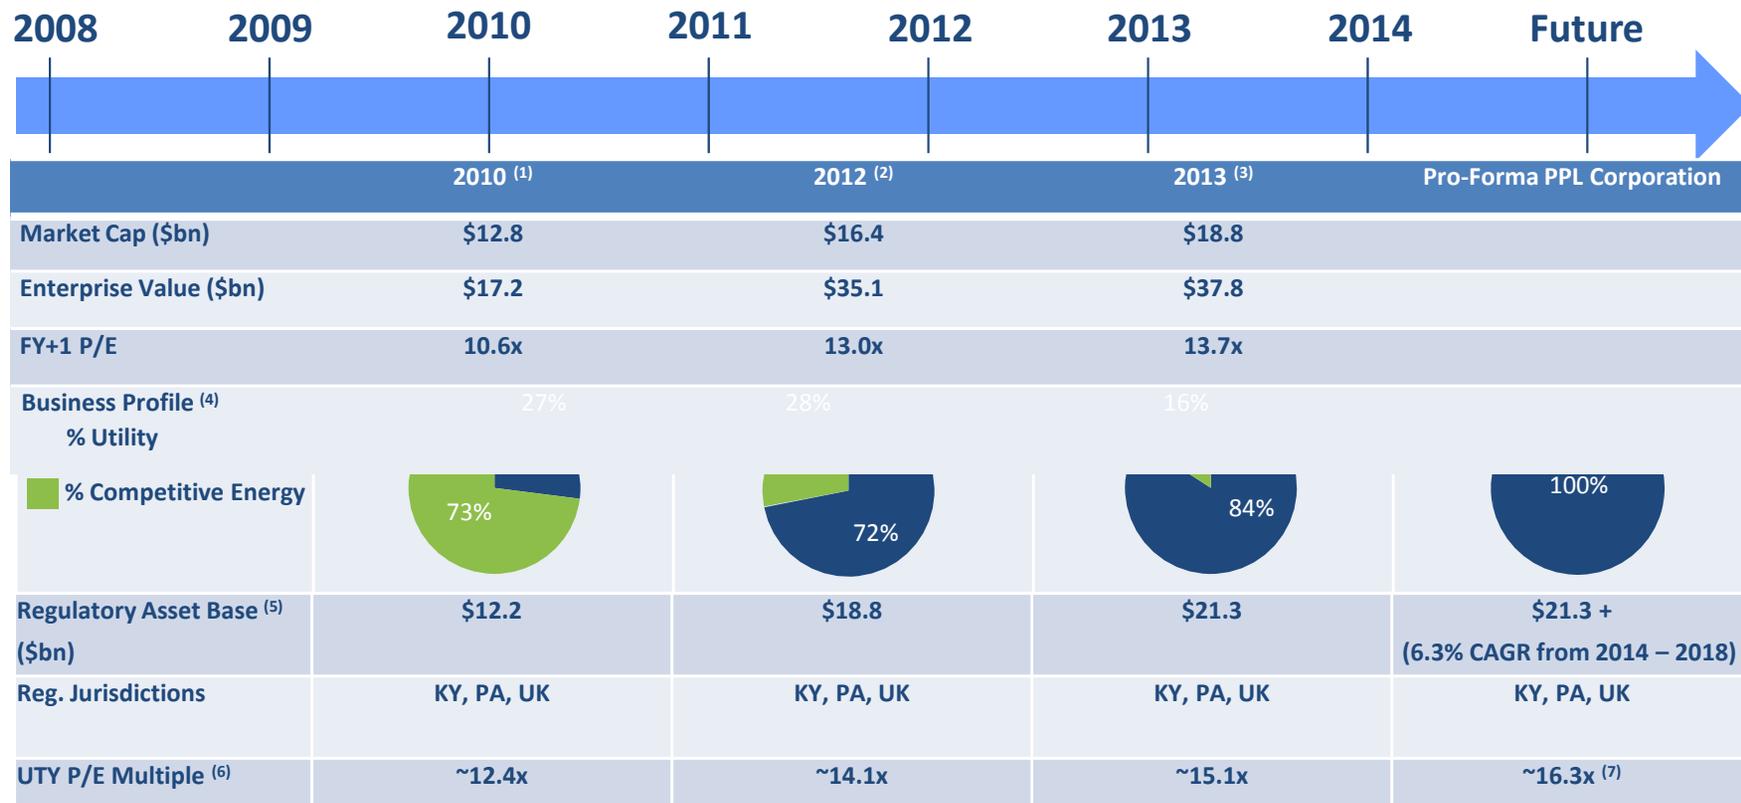

Any statements made in this presentation about future operating results or other future events are forward-looking statements under the Safe Harbor Provisions of the Private Securities Litigation Reform Act of 1995. Actual results may differ materially from such forward-looking statements. A discussion of factors that could cause actual results or events to vary is contained in the Appendix to this presentation and in the Company's SEC filings.

# Commitment to Creating Shareholder Value

## Evolution of PPL

Source: FactSet, Company Filings.

(1) As of December 31, 2010.

(2) As of December 31, 2012.

(3) As of December 31, 2013.

(4) Proportion of earnings from ongoing operations.

(5) Represents capitalization for LKE, as LG&E and KU rate constructs are based on capitalization. Represents Regulatory Asset Value (RAV) for WPD.

(6) Based on PHLX UTY Index TTM multiples.

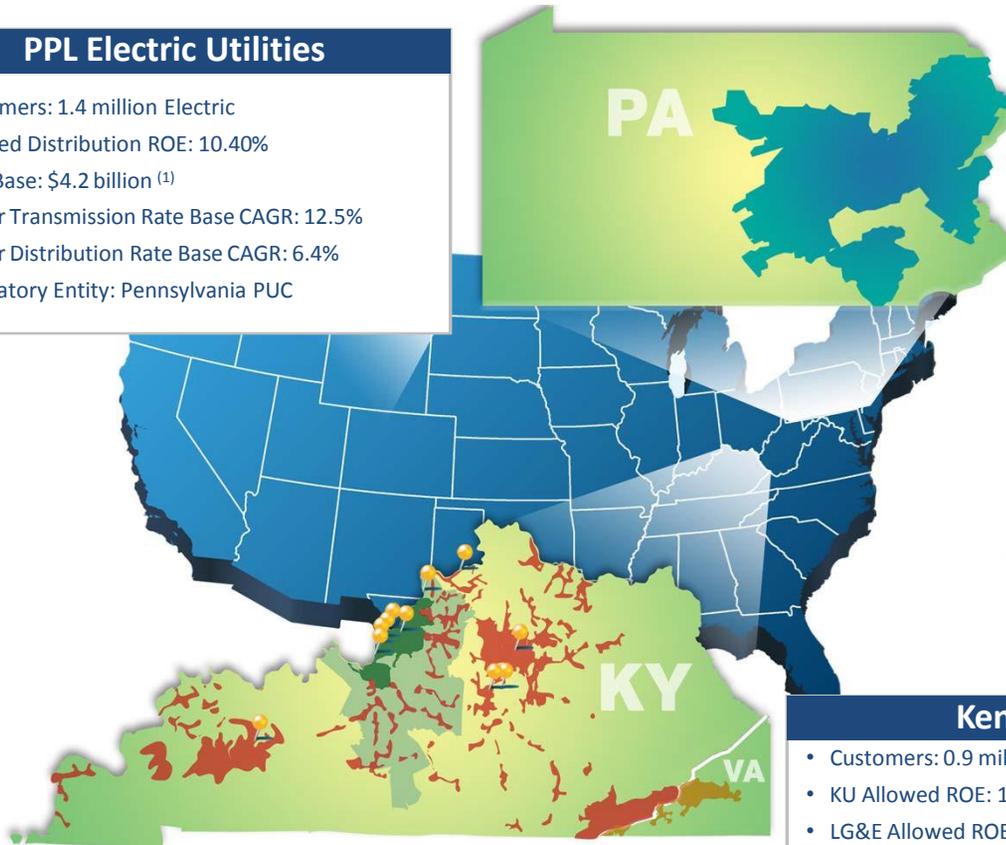

(7) As of June 05, 2014.

# PPL Overview

## PPL Electric Utilities

- Customers: 1.4 million Electric
- Allowed Distribution ROE: 10.40%
- Rate Base: \$4.2 billion <sup>(1)</sup>
- 5-Year Transmission Rate Base CAGR: 12.5%
- 5-Year Distribution Rate Base CAGR: 6.4%
- Regulatory Entity: Pennsylvania PUC

## U.K. Delivery

- Customers: 7.8 million Electric
- Rate Base: \$9.5 billion <sup>(1),(2)</sup>
- 5-Year Rate Base CAGR: 5.9%
- Regulatory Entity: Ofgem

## Kentucky Utilities

- Customers: 0.9 million Electric; 0.3 million Natural Gas
- KU Allowed ROE: 10.25% (KY), 10.00% (VA)
- LG&E Allowed ROE: 10.25%
- Rate Base: \$7.6 billion <sup>(1),(2)</sup>
- 5-Year Rate Base CAGR: 5.1%
- Regulated Capacity: 8.1 GW
- Regulatory Entities: Kentucky PSC, Virginia SCC

(1) Year-end Rate Base as of December 31, 2013.

(2) Represents capitalization for LKE, as LG&E and KU rate constructs are based on capitalization. Represents Regulatory Asset Value (RAV) for WPD.

# PPL Corporation Investment Highlights

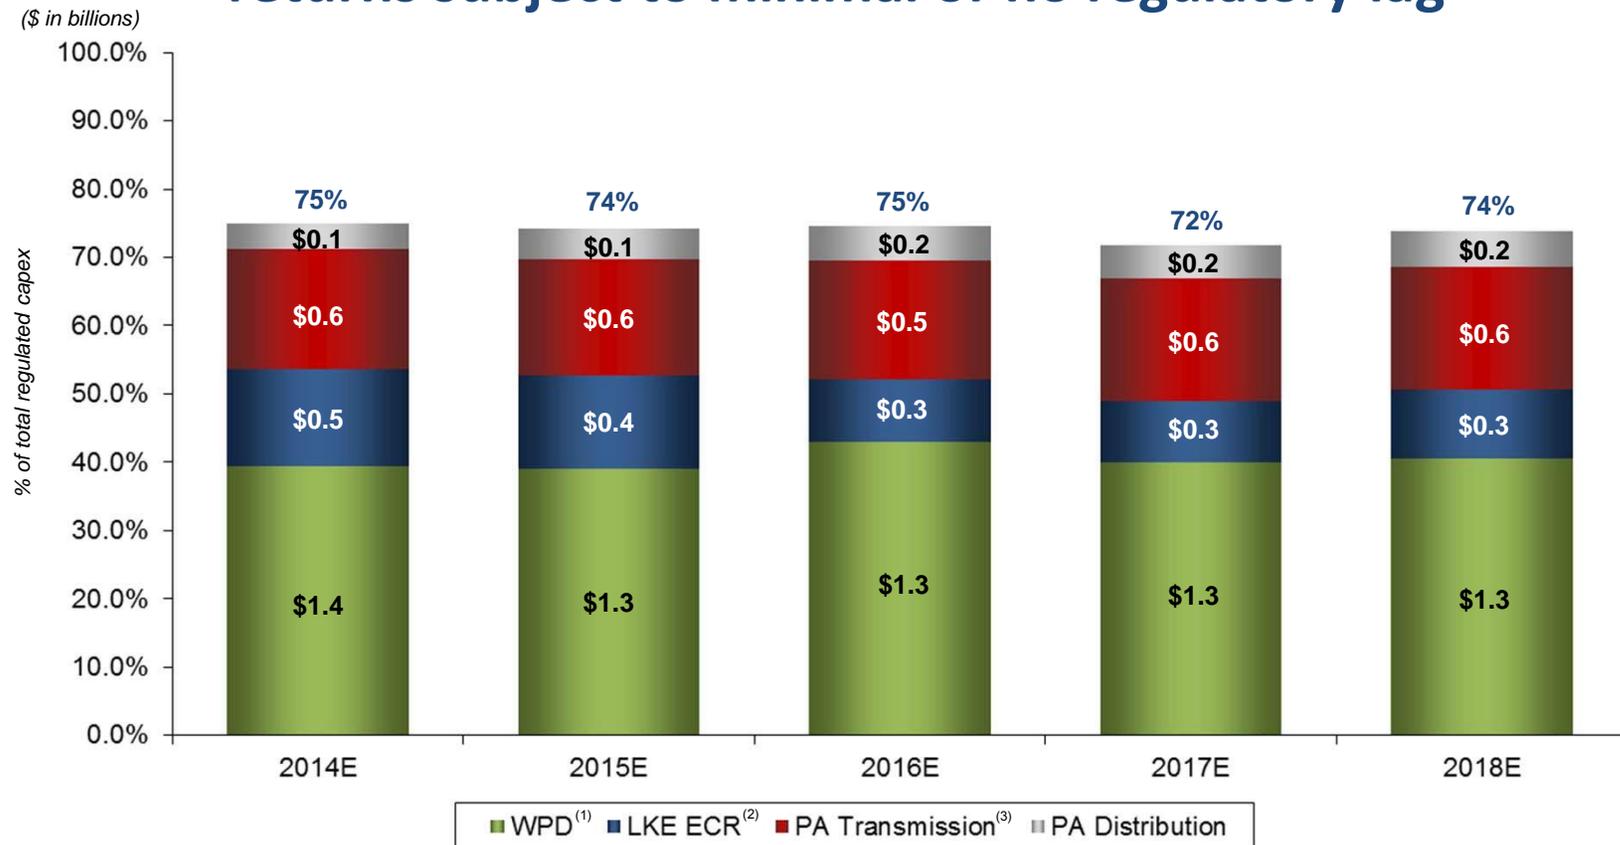

- 100% rate-regulated business model provides earnings and dividend growth potential
  - Substantial projected growth in rate base: 6.3% CAGR from 2014-2018
  - Target EPS compound annual growth rate of at least 4%, excluding PPL Energy Supply<sup>(1)</sup>
  - Maintain current dividend level until PPL Energy Supply transaction is completed; intended growth thereafter
- Operates in premium regulatory jurisdictions that provide substantial opportunity for real-time recovery of capital investments
  - Approximately 75% of regulated capital expenditures earn returns subject to minimal or no regulatory lag
- Strong management team with track record of execution
  - U.K. team best-in-class among U.K. peers
  - PPL Electric Utilities, Kentucky Utilities and LG&E have earned a combined 37 J.D. Power awards for superior performance in reliability and customer service

(1) Based on 2014 hypothetical midpoint of \$2.05.

# Real-Time Recovery of Regulated Capex Spending

Approximately 75% of regulated capital expenditures earn returns subject to minimal or no regulatory lag

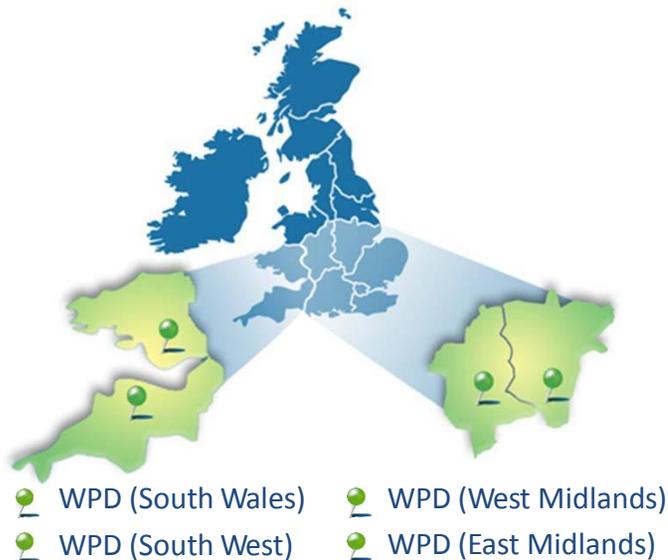

- (1) Figures based on assumed exchange rate of \$1.67 / £.
- (2) Assumes 85% of total planned ECR spend as LKE expects between 80% and 90% to receive timely returns via ECR mechanism based on historical experience and future projections.
- (3) Excludes projected capex related to proposed Compass Project.

# U.K. Regulated Segment Investment Highlights

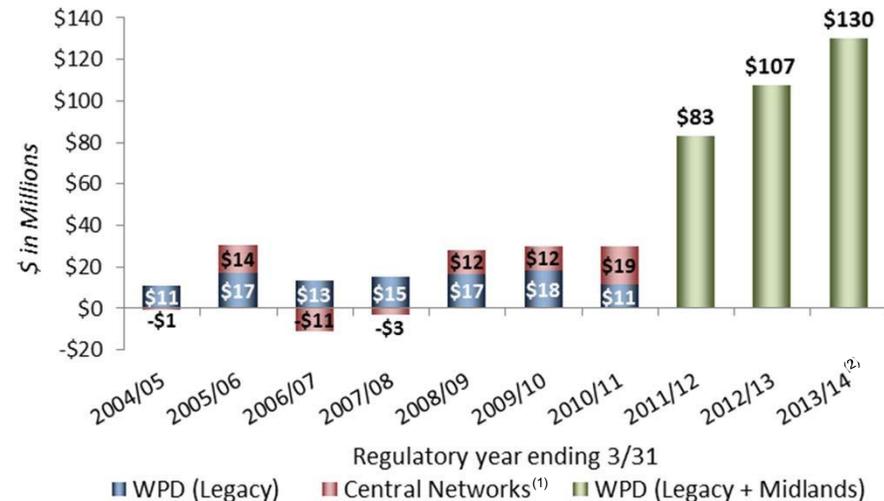

- Highly attractive rate-regulated business
  - Regulator-approved multi-year forward-looking revenues based on future business plan, including capital expenditures and O&M plus adjustments for inflation
  - Real-time return of and return on capital investment – no lag
  - No volumetric risk
  - Additional incentives for operational efficiency and high-quality service
- Best-in-class management team with track record of delivering results

## United Kingdom Delivery Territories:

## Top performing electricity distribution business in the U.K.

- WPD has earned over \$450 million in annual performance awards over the past 10 regulatory years

(1) Central Networks was renamed WPD Midlands upon PPL acquisition in April 2011.  
 (2) Based on Company projections. Ofgem confirmation expected in Q1 2015.

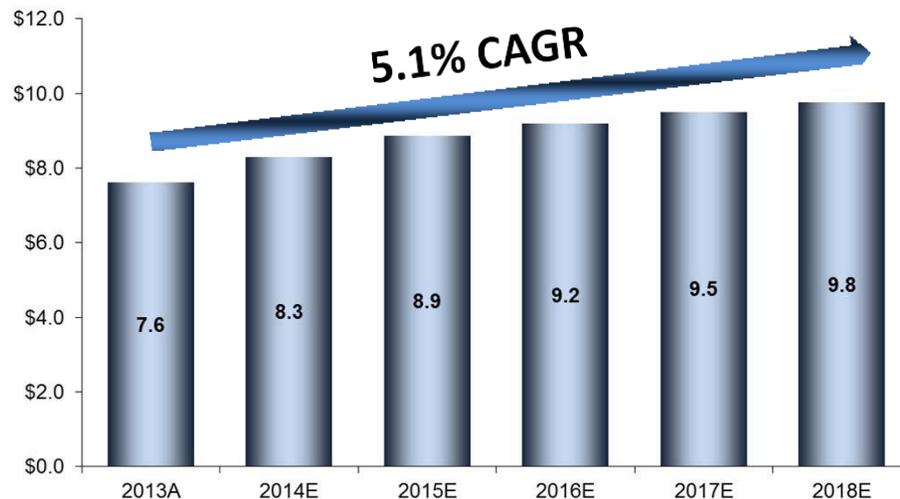

# Kentucky Regulated Segment Investment Highlights

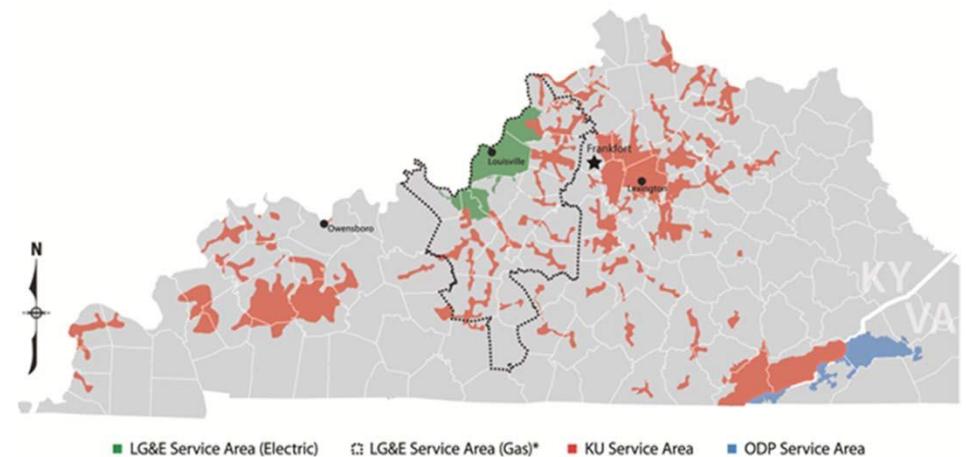

- Efficient, well-run utilities focused on safety, reliability and customer service
- Constructive regulatory environment that provides a timely return on a substantial amount of planned capex over the next 5 years
  - Environmental Cost Recovery (ECR): ~\$2.3 billion estimated spend on projects approved by the KPSC with a 10.25% ROE – virtually no regulatory lag
  - Other supportive recovery mechanisms include Construction Work In Progress, Fuel Adjustment Clause, Gas Supply Clause Adjustment and Demand Side Management recovery

(\$ in billions)

**Significant Rate Base Growth**

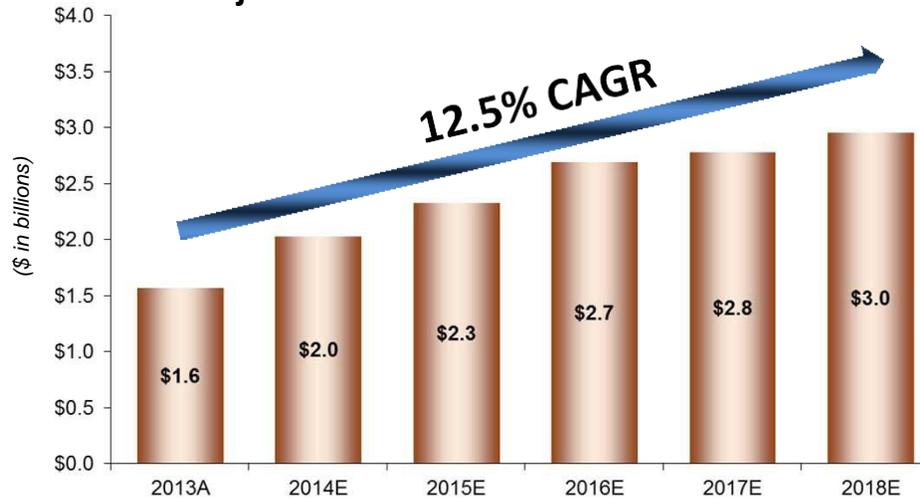

**Kentucky Delivery Territories**

# Pennsylvania Regulated Segment Investment Highlights

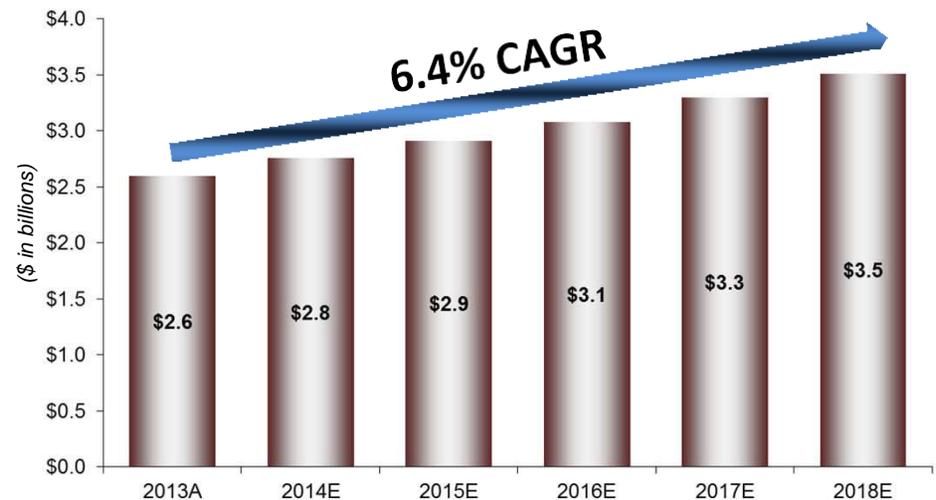

**Projected Transmission Rate Base Growth**

- Significant growth in transmission portion of business which earns an allowed rate of return on a near real-time basis
  - CAGR of 12.5% in transmission rate base through 2018 driven by initiatives to improve aging infrastructure
  - ROE of 11.68% earned through FERC Formula Rate Mechanism
  - ROE of 12.93% and return on CWIP for \$630 million Susquehanna-Roseland project
  - Return on CWIP for most of \$335 million Northeast Pocono Reliability project

- Reliability initiatives drive distribution rate base growth at a projected CAGR of over 6% through 2018
- Act 11 - Alternative ratemaking legislation provides for more timely recovery of about \$800 million in distribution plant costs that improve and maintain safety and reliability over 5 years

**Projected Distribution Rate Base Growth**

# PPL Energy Supply Transaction Overview

- PPL Energy Supply, LLC (“PPL Energy Supply”) will be spun off from PPL Corporation (“PPL”) and combined with Riverstone’s power generation business (“RJS Power Holdings LLC”) to form Talen Energy Corporation (“Talen Energy”)
- Creates a competitive 15 GW IPP with power plants located primarily in PJM and ERCOT
- PPL’s shareholders will own 65% of Talen Energy with Riverstone owning 35%
  - PPL will have no ongoing ownership interest, control or affiliation<sup>(1)</sup>
- Applications filed with FERC, NRC and PA PUC
  - DOJ to be filed in the 1<sup>st</sup> quarter

(1) Other than under certain limited contracts such as a Transition Services Agreement and ongoing arms-length commercial arrangements.

# Appendix

# Increasing 2014 Ongoing Earnings Forecast

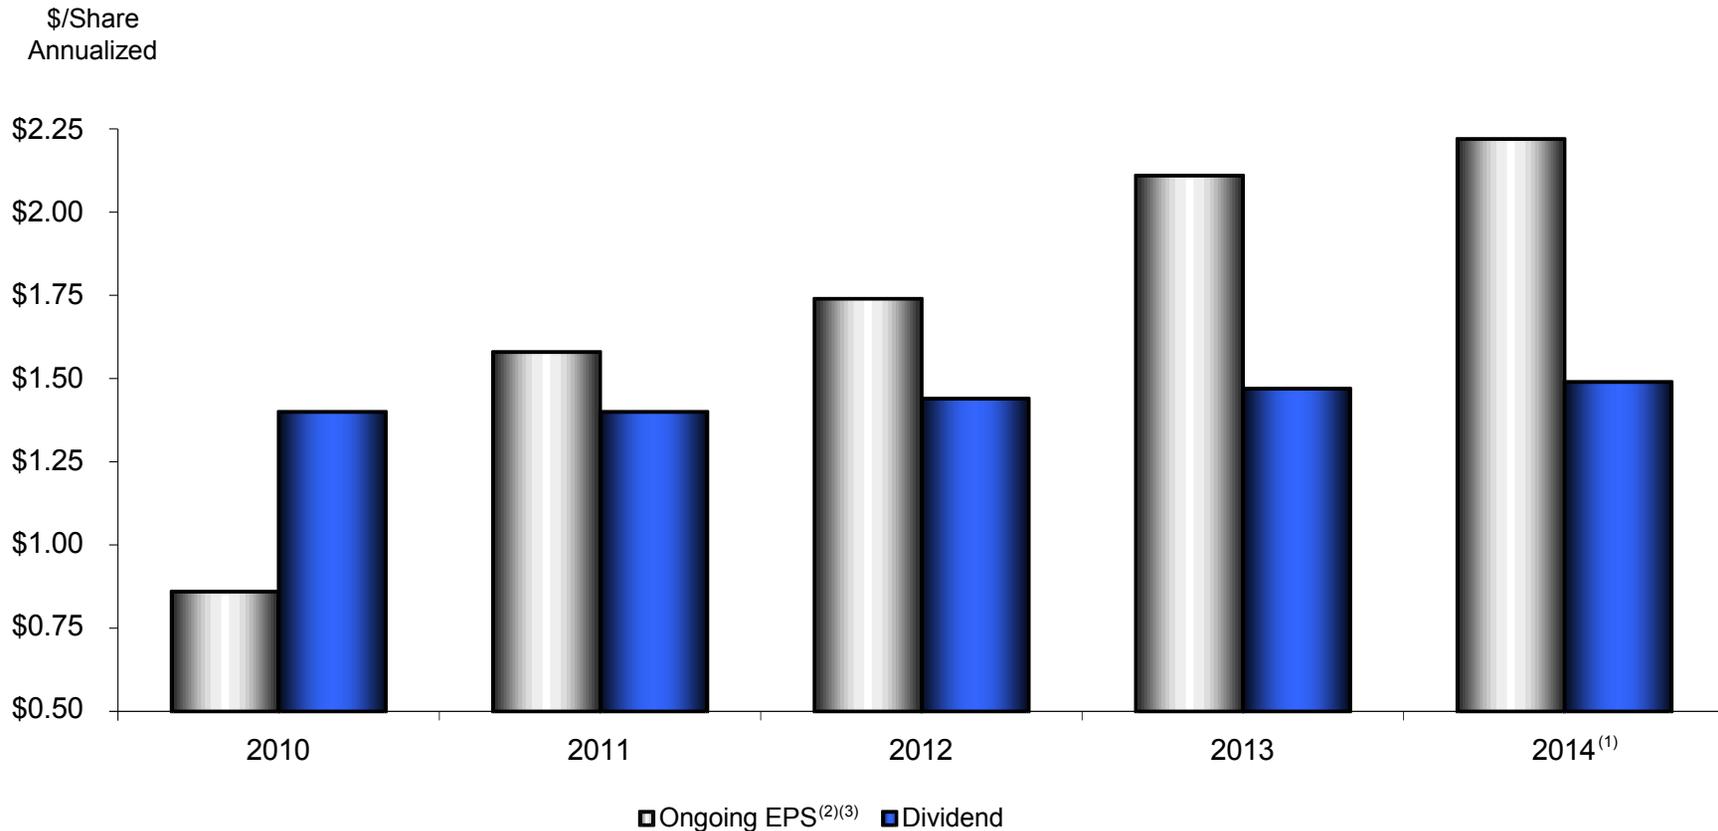

| Segment             | 2013 (Ongoing) | Previous 2014E Ongoing Midpoint | Revised 2014E Ongoing Midpoint |
|---------------------|----------------|---------------------------------|--------------------------------|
| U.K. Regulated      | \$1.32         | \$1.35                          | \$1.38                         |
| Kentucky Regulated  | 0.48           | 0.45                            | 0.45                           |
| PA Regulated        | 0.31           | 0.39                            | 0.39                           |
| Supply              | 0.39           | 0.17                            | 0.24                           |
| Corporate and Other | (0.05)         | (0.06)                          | (0.04)                         |
| <b>Total</b>        | <b>\$2.45</b>  | <b>\$2.30</b>                   | <b>\$2.42</b>                  |

Note: See Appendix for the reconciliation of earnings from ongoing operations to reported earnings.

# Dividend Profile

A predominantly rate-regulated business mix provides strong support for current dividend and a platform for future growth

(1) Based on mid-point of forecast. Annualized dividend based on 2/6/2014 announced increase. Actual dividends to be determined by Board of Directors.  
 (2) From only regulated segments.  
 (3) See Appendix for the reconciliation of earnings from ongoing operations to reported earnings.

Capacity revenues<sup>(3)</sup> are expected to be \$560, \$505 and \$455 million for 2014, 2015 and 2016 respectively.

Note: As of December 31, 2014

Includes PPL Montana's hydroelectric facilities through the 3<sup>rd</sup> quarter of 2014. On November 18, 2014 PPL Montana, LLC had completed the sale of the hydroelectric facilities to NorthWestern Energy.

(1) Represents expected sales of Supply segment based on current business plan assumptions.

(2) The 2015 and 2016 ranges of average energy prices for existing hedges were estimated by determining the impact on the existing collars resulting from 2015/2016 power prices at the 5th and 95<sup>th</sup> percentile confidence levels.

(3) Expected capacity revenue includes all MWs cleared during PJMs RPM Auctions or during incremental auctions at the respective prices and any uncleared MWs at expected incremental auctions prices.

Note: As of September 30, 2014

Credit facilities consist of a diverse bank group, with no bank and its affiliates providing an aggregate commitment of more than 10% of the total committed capacity for the domestic facilities and 13% of the total committed capacity for WPD's facilities.

- (1) As a result of the proposed spinoff transaction, PPL Energy Supply has syndicated a \$1.85 billion credit facility which is currently fully committed. This syndicated credit facility will replace the existing \$3 billion PPL Energy Supply syndicated credit facility and will be effective upon closing of the spinoff transaction.
- (2) In October 2014, the KU letter of credit facility was terminated and replaced with a new \$198 million letter of credit facility expiring October 2017.

(a) The "If-Converted Method" was applied to PPL's Equity Units beginning in the first quarter of 2013, resulting in \$44 million of interest charges (after-tax) being added back to earnings for the twelve months ended December 31, 2013, and approximately 53 million shares of PPL Common Stock being treated as outstanding. Both adjustments are only for purposes of calculating diluted earnings per share.

(a) Includes two months of results in 2010, as the acquisition date of LKE was November 1, 2010.

(b) Includes certain costs incurred prior to the November 1, 2010 acquisition of LKE.

# Forward-Looking Information Statement

*Statements contained in this presentation, including statements with respect to future earnings, cash flows, financing, regulation and corporate strategy are "forward-looking statements" within the meaning of the federal securities laws. Although PPL Corporation believes that the expectations and assumptions reflected in these forward-looking statements are reasonable, these statements are subject to a number of risks and uncertainties, and actual results may differ materially from the results discussed in the statements. The following are among the important factors that could cause actual results to differ materially from the forward-looking statements: market demand and prices for energy, capacity and fuel; weather conditions affecting customer energy usage and operating costs; competition in power markets; the effect of any business or industry restructuring; the profitability and liquidity of PPL Corporation and its subsidiaries; new accounting requirements or new interpretations or applications of existing requirements; operating performance of generating plants and other facilities; the length of scheduled and unscheduled outages at our generating plants; environmental conditions and requirements and the related costs of compliance, including environmental capital expenditures and emission allowance and other expenses; system conditions and operating costs; development of new projects, markets and technologies; performance of new ventures; asset or business acquisitions and dispositions; any impact of hurricanes or other severe weather on our business, including any impact on fuel prices; receipt of necessary government permits, approvals, rate relief and regulatory cost recovery; capital market conditions and decisions regarding capital structure; the impact of state, federal or foreign investigations applicable to PPL Corporation and its subsidiaries; the outcome of litigation against PPL Corporation and its subsidiaries; stock price performance; the market prices of equity securities and the impact on pension income and resultant cash funding requirements for defined benefit pension plans; the securities and credit ratings of PPL Corporation and its subsidiaries; political, regulatory or economic conditions in states, regions or countries where PPL Corporation or its subsidiaries conduct business, including any potential effects of threatened or actual terrorism or war or other hostilities; foreign exchange rates; new state, federal or foreign legislation, including new tax legislation; and the commitments and liabilities of PPL Corporation and its subsidiaries. Any such forward-looking statements should be considered in light of such important factors and in conjunction with PPL Corporation's Form 10-K and other reports on file with the Securities and Exchange Commission.*

# Definitions of Non-GAAP Financial Measures

*"Earnings from ongoing operations," also referred to as "ongoing earnings," should not be considered as an alternative to reported earnings, or net income attributable to PPL shareowners, which is an indicator of operating performance determined in accordance with U.S. generally accepted accounting principles (GAAP). PPL believes that "earnings from ongoing operations," although a non-GAAP financial measure, is also useful and meaningful to investors because it provides management's view of PPL's fundamental earnings performance as another criterion in making investment decisions. PPL's management also uses "earnings from ongoing operations" in measuring certain corporate performance goals. Other companies may use different measures to present financial performance.*

*"Earnings from ongoing operations" is adjusted for the impact of special items. Special items include:*

- Adjusted energy-related economic activity (as discussed below).*
- Unrealized gains or losses on foreign currency-related economic hedges.*
- Gains and losses on sales of assets not in the ordinary course of business.*
- Impairment charges (including impairments of securities in the company's nuclear decommissioning trust funds).*
- Workforce reduction and other restructuring effects.*
- Acquisition and disposition-related adjustments.*
- Other charges or credits that are, in management's view, not reflective of the company's ongoing operations.*

*Adjusted energy-related economic activity includes the changes in fair value of positions used to economically hedge a portion of the economic value of the competitive generation assets, full-requirement sales contracts and retail activities. This economic value is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power) prior to the delivery period that was hedged. Adjusted energy-related economic activity also includes the ineffective portion of qualifying cash flow hedges, the monetization of certain full-requirement sales contracts and premium amortization associated with options. Unrealized gains and losses related to this activity are deferred, with the exception of the full-requirement sales contracts that were monetized, and included in earnings from ongoing operations over the delivery period of the item that was hedged or upon realization. Management believes that adjusting for such amounts provides a better matching of earnings from ongoing operations to the actual amounts settled for PPL's underlying hedged assets. Please refer to the Notes to the Consolidated Financial Statements and MD&A in PPL Corporation's periodic filings with the Securities and Exchange Commission for additional information on adjusted energy-related economic activity.*

*Free cash flow before dividends is derived by deducting capital expenditures, proceeds from the sale of certain assets and other investing activities-net, from cash flow from operations. Free cash flow before dividends should not be considered as an alternative to cash flow from operations, which is determined in accordance with GAAP. PPL believes that free cash flow before dividends, although a non-GAAP measure, is an important measure to both management and investors, as it is an indicator of the company's ability to sustain operations and growth without additional outside financing beyond the requirement to fund maturing debt obligations. Other companies may calculate free cash flow before dividends in a different manner.*

# Definitions of Non-GAAP Financial Measures

*PPL utilizes the following non-GAAP financial measures as indicators of performance for its businesses. These measures are not intended to replace "Operating Income," which is determined in accordance with GAAP, as an indicator of overall operating performance. Other companies may use different measures to analyze and report their results of operations. Management believes these measures provide additional useful criteria to make investment decisions. These performance measures are used, in conjunction with other information, by senior management and PPL's Board of Directors to manage the operations, analyze actual results compared with budget and, in certain cases, to measure certain corporate financial goals used to determine variable compensation.*

*"Kentucky Gross Margins" is a single financial performance measure of the Kentucky Regulated segment's, LKE's, LG&E's and KU's electricity generation, transmission and distribution operations as well as LKE's and LG&E's distribution and sale of natural gas. In calculating this measure, fuel, energy purchases and certain variable costs of production (recorded as "Other operation and maintenance" on the Statements of Income) are deducted from revenues. In addition, certain other expenses, recorded as "Other operation and maintenance" and "Depreciation" on the Statements of Income, associated with approved cost recovery mechanisms are offset against the recovery of those expenses, which are included in revenues. These mechanisms allow for direct recovery of these expenses and, in some cases, returns on capital investments and performance incentives. As a result, this measure represents the net revenues from the electricity and gas operations.*

*"Pennsylvania Gross Delivery Margins" is a single financial performance measure of the Pennsylvania Regulated segment's and PPL Electric's electricity delivery operations, which includes transmission and distribution activities. In calculating this measure, utility revenues and expenses associated with approved recovery mechanisms, including energy provided as a PLR, are offset with minimal impact on earnings. Costs associated with these mechanisms are recorded in "Energy purchases," "Other operation and maintenance," which is primarily Act 129 costs, and "Taxes, other than income," which is primarily gross receipts tax. This performance measure includes PLR energy purchases by PPL Electric from PPL EnergyPlus, which are reflected in "PLR intersegment utility revenue (expense)." As a result, this measure represents the net revenues from the Pennsylvania Regulated segment's and PPL Electric's electricity delivery operations.*

*"Unregulated Gross Energy Margins" is a single financial performance measure of the Supply segment's and PPL Energy Supply's competitive energy activities, which are managed on a geographic basis. In calculating this measure, energy revenues, including operating revenues associated with certain businesses classified as discontinued operations, are offset by the cost of fuel, energy purchases, certain other operation and maintenance expenses, primarily ancillary charges, gross receipts tax, recorded in "Taxes, other than income," and operating expenses associated with certain businesses classified as discontinued operations. This performance measure is relevant due to the volatility in the individual revenue and expense lines on the Statements of Income that comprise "Unregulated Gross Energy Margins." This volatility stems from a number of factors, including the required netting of certain transactions with ISOs and significant fluctuations in unrealized gains and losses. Such factors could result in gains or losses being recorded in either "Unregulated wholesale energy", "Unregulated retail energy" or "Energy purchases" on the Statements of Income. This performance measure includes PLR revenues from energy sales to PPL Electric by PPL EnergyPlus, which are reflected in "PLR intersegment utility revenue (expense)." "Unregulated Gross Energy Margins" excludes adjusted energy-related economic activity, which includes the changes in fair value of positions used to economically hedge a portion of the economic value of the competitive generation assets, full-requirement sales contracts and retail activities. This economic value is subject to changes in fair value due to market price volatility of the input and output commodities (e.g., fuel and power) prior to the delivery period that was hedged. Adjusted energy-related economic activity includes the ineffective portion of qualifying cash flow hedges, the monetization of certain full-requirement sales contracts and premium amortization associated with options. Unrealized gains and losses related to this activity are deferred, with the exception of the full-requirement sales contracts that were monetized, and included in "Unregulated Gross Energy Margins" over the delivery period that was hedged or upon realization.*

## Opinion

### Rating Drivers

- Growing share of the regulated business
- Regulated businesses operate under above average regulatory frameworks
- Falling cash flow from unregulated activities pressuring consolidated credit metrics
- Substantial capital investment program due to pending environmental regulations
- As a holding company, PPL creditors are impacted by structural subordination

### Corporate Profile

PPL Corporation (PPL: Baa3 issuer Rating, stable) is a diversified energy holding company headquartered in Allentown, PA. PPL owns or controls about 19,000 megawatts of generating capacity in the US, sells energy in key U.S. markets, and delivers electricity and natural gas to about 10 million customers in the US and the UK.

### SUMMARY RATING RATIONALE

PPL's rating is reflective of the consolidated credit profile which has been transformed from a largely merchant commodity driven and regionally focused operation, to a more diversified and rate regulated platform. We estimate that in 2013 85% of consolidated results will be provided by more predictable, rate-regulated businesses from three different jurisdictions, several of which have an above-average regulatory profile. To that end, the rating incorporates the reduced reliance that PPL will have on earnings and dividends derived from its less predictable unregulated, commodity business which will experience reduced margins due to lower commodity prices. The rating recognizes the growing importance that the company's Kentucky operations will have on future results which include plans to make substantial environmental capital investments. We observe that the transition to market rates in Pennsylvania has been completed for all of the state's electric utilities, and that the company's focus is centered on infrastructure investment, through the replacement of an aging transmission and distribution system coupled with new transmission and smart grid investments.

### DETAILED RATING CONSIDERATIONS

- Regulated business is growing organically and through acquisitions.

PPL's acquisition of four large regulated utility systems located in Kentucky and in the UK during 2010 and 2011 have transformed the company's business platform to a broader, more diversified rate-regulated business model from one that was highly dependent on the company's commodity business.

We estimate that 85% of PPL's consolidated results going forward will be provided by the more predictable, rate regulated businesses from three different jurisdictions, two of which have, in our opinion, an above-average regulatory profile. Specifically, the UK networks business operates under a highly transparent regulatory framework which we consider to be well-above average and where the tariffs have been approved through March 2015. PPL has owned and operated a networks business in the UK since 1996, and has consistently outperformed its peer companies. PPL's ownership of two Kentucky vertically-integrated utilities, Louisville Gas and Electric Company (LG&E: Baa1 senior unsecured) and Kentucky Utilities Companies (KU: Baa1 senior unsecured) should provide consistent earnings and cash flow under an above average regulated framework where substantial environmental capital investment and growth in rate base assets are expected over the next several years. With the most recent development, the Kentucky Public Service Commission (KPSC) approved a rate case settlement in December 2012. We consider the outcome, which includes an authorized return on equity of 10.25% and a gas-line tracker mechanism, to be supportive of outstanding ratings. Together, we estimate that the UK and Kentucky operations alone will provide almost 60% of the company's earnings and cash flow in most years.

In Pennsylvania, PPL's focus is on infrastructure investment. We observe that from a credit perspective, the PPL Electric Utilities (PPL EU Baa2 senior unsecured) subsidiary received a generally favorable result in its most recent rate case and we expect the company to have substantial capital investment requirements for infrastructure, smart grid and transmission projects. On March 30th 2012, the company filed an electric distribution rate case with the state regulator for recovery of past infrastructure capital investments resulting in a \$105 million

revenue requirement. In December, 2012 the state regulators approved a \$71.1 million rate increase which management believes is still adequate to make the necessary investments to replace aging infrastructure. The authorized return on equity was 10.4%.

Overall, we consider the regulatory environment in the state to be moderately above average when compared to other state regulatory environments. To that end, the state passed a law in 2012 to allow for a distribution system improvement charge (DSIC) in rates, designed to recover capital project costs incurred to repair, improve or replace aging electric and natural gas distribution systems. The bill also includes a provision that allows utilities to use a fully projected future test year permitting the inclusion of projected capital costs in the rate base for assets that will be placed in service during the future test year. In January 2013, PPL EU filed a request with the Pennsylvania Public Utility Commission to implement a DSIC charge to accelerate recovery of about \$700 million in new capital investments that will improve system reliability over the next five years. If approved, this mechanism would take effect in May 2013.

PPL Energy Supply, LLC (PPL Supply Baa2 senior unsecured) owns competitive generation assets in PJM and in the western US. Contribution from this subsidiary, both in absolute terms and relative to consolidated results, has been declining and is likely to continue to decline. In 2010, the earnings contribution from PPL Supply was \$619 million out of a total of \$938 million (or 66%). By 2012, PPL Supply's contribution was down to \$474 million out of \$1,532 million (or 31%) due, in part, to the acquisition of four rate-regulated utilities in 2010 and 2011.

For more information on PPL's operating subsidiaries, please refer to moodys.com.

-PPL's consolidated credit metrics are adequately positioned for its low investment grade rating.

For the past three years, we calculate that PPL's cash flow (CFO pre-W/C) averaged about \$3.0 billion with the company recording cash flow to debt metrics of 15.5% at 12/31/2012. Similarly, we calculate that cash flow interest coverage averaged 4.2x for the past three years with 3.9x registered in 2012. Some of this historical performance can be attributed to the performance at PPL Supply, particularly in 2010, when generation rate caps in Pennsylvania were lifted. We expect PPL's consolidated credit metrics to trend lower in the next few years, with CFO pre-WC/debt closer to 13% to 14%. This is mainly due to the weaker performance at the merchant subsidiary, partially offset by a higher contribution from the predictable but lower margin rate regulated operations. Most importantly, in the future we anticipate the company's financial performance to be substantially more resilient to a declining commodity environment given the greater diversity in operations and the increased contributions from more predictable sources of cash flow and earnings.

-Substantial capital investment program anticipated stemming from pending environmental regulations

Beginning in 2013 over the next five years, PPL will embark on a sizeable capital expenditure plan approximating \$18.2 billion (annual average of \$3.6 billion). By comparison, PPL's capital expenditures averaged \$1.6 billion over the previous four year period. While a large portion of this comparison reflects the incorporation of the two acquisitions as well as the impact of lower capital spending in 2009 due to the anemic economy, capital spending for the rate regulated businesses is expected to show material increases. About \$2.2 billion is earmarked for investments in FERC regulated transmission projects at PPL EU, including the planned Susquehanna-Roseland line linking Pennsylvania and New Jersey which gained its final approval on October 1st, 2012. PPL expects to energize the transmission line sometime in mid 2015.

PPL expects to spend \$6.1 billion at the Kentucky utilities over this five year period including about \$2.3 billion for environmental capital projects. The increased capital spend follows the December 2011 unanimous approval by the Kentucky Public Service Commission of a settlement with KU and LG&E concerning recovery of these capital costs under the state's Environmental Cost Recovery (ECR) mechanism. Under the ECR, KU and LG&E are permitted to recover the costs associated with environmental-related investments, and earn a cash return on the related construction work in progress. The ECR calls for KU to invest \$712 million and LG&E to invest \$1.0 billion in environmental upgrades to meet recent EPA regulations, and earn an ROE of 10.25% on these investments. KU will install baghouses at the Ghent generating station and a baghouse on unit 3 at the Brown station while LG&E will install scrubbers and baghouses at the Mill Creek generating station and a baghouse for Unit 1 at the Trimble County station. In addition, KU and LG&E will earn a 10.25% ROE on about \$370-\$400 million of capital investments relating to previously approved projects, and have also agreed to fund certain assistance programs.

-Structural subordination

PPL's rating reflects the structurally subordinate position of holding company obligations relative to the \$15.9 billion of secured and unsecured long-term debt issued at various operating subsidiaries and intermediate holding

companies. While PPL does not currently have any funded long-term senior debt obligations at the parent holding company level, it guarantees nearly \$3.05 billion of subordinated debt issued by PPL Capital Funding, Inc., the majority of which was used to finance the 2010 and 2011 acquisitions.

### Liquidity Profile

PPL's liquidity is adequately sized for the demands of its operations. At the end of 2012, PPL had about \$900 million of cash and \$3.7 billion in US dollars and 7889 in British Pounds of unused committed credit facilities. The primary demand for liquidity in 2013 is a projected free cash flow deficit of about \$2.6 billion. This large deficit is mainly driven by the \$3.7 billion of capital expenditure at its low risk regulated utilities. As of December 31, 2012, debt maturities in 2013 include \$751 million of long-term debt, all issued at PPL Supply, and \$652 million of short-term debt.

### Rating Outlook

The stable outlook for PPL reflects our view that PPL's credit quality has been fortified through the growing share of its regulated business. The stable outlook also incorporates a view that the company's large capital investment will be prudently financed, to include if needed, the issuance of common equity. The unregulated generation assets' cash flow generating capacity is expected to be lower over the next several years but further downsides are moderated by hedging and its declining share to the consolidated cash flow.

### What Could Change the Rating - Up

While the growing share of the regulated businesses forms a positive rating momentum at PPL, potential for upgrade is currently limited by the cash flow drag of its unregulated merchant operations, which negatively affects the consolidated credit metrics.

### What Could Change the Rating - Down

While we do not foresee any particular event that would result in a negative rating action, the company's cash flow to debt credit metrics are expected to be weaker going forward due to the declining cash flow coming from its unregulated operations. As a result, the company has a smaller margin of error for a negative rating action.

MIS, a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MIS have, prior to assignment of any rating, agreed to pay to MIS for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at [www.moody.com](http://www.moody.com) under the heading "Shareholder Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

For Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). ### Rating Action: Moody's upgrades the ratings of PPL US utility subsidiaries and confirms the rating of PPL Corp. and LKE; rating outlook stable.

Global Credit Research - 31 Jan 2014

#### Approximately \$10.8 Billion of Debt Affected

New York, January 31, 2014 – Moody's Investors Service today upgraded the ratings of PPL Corporation's US utility operating subsidiaries: the rating of PPL Electric Utilities (PPL EU) was upgraded to Baa1 from Baa2 and the ratings of Louisville Gas & Electric Company (LGE) and Kentucky Utilities (KU) were upgraded to A3 from Baa1. Moody's confirmed the senior unsecured ratings of PPL Corporation (PPL) at Baa3 and of LG&E and KU Energy LLC (LKE) at Baa2. This rating action completes our review of PPL and its regulated operations initiated on November 8, 2013. The outlook for all PPL entities is stable.

The primary driver of today's positive rating action on PPL's US utility operating companies was Moody's more favorable view of the relative credit supportiveness of the US regulatory environment, as detailed in our September 2013 Request for Comment titled "Proposed Refinements to the Regulated Utilities Rating Methodology and our Evolving View of US Utility Regulation."

The review, however, did not result in a corresponding upgrade for the parent holding company PPL because the upgrades of PPL's US regulated utilities, which represent 31% of earnings, did not shift PPL's consolidated credit profile sufficiently. PPL's consolidated financial metrics are also weak for its rating category. LKE did not receive an upgrade because of the high debt level at LKE relative to the consolidated LKE. Moreover, because there is free movement of cash between PPL and LKE, PPL has a constraining effect on LKE's ratings.

#### RATINGS RATIONALE

The ratings of PPL and its utility subsidiaries are underpinned by regulatory environments that, while they may vary somewhat from jurisdiction to jurisdiction, are generally supportive of utility credit quality and by an energy commodity market that has alleviated some of the pressure on rates generally. Additionally, PPL's rating is reflective of the consolidated credit profile which has been transformed from a heavily merchant commodity driven and regionally focused operation, to a more diversified and mostly rate regulated platform. These positive factors are balanced against financial metrics on a consolidated basis that have been on the lower end of the range for benchmarks established for regulated utilities. As of end of third quarter 2013, PPL's CFO Pre-WC/debt averaged over the past three years is 15.5%, while the benchmark for regulated utilities in the Baa category is between 13% and 22%.

#### Rating Outlook

The stable outlook for PPL reflects our view that PPL's credit quality has been fortified through the growing share of its regulated business. The stable outlook also incorporates a view that the company's large capital investment will be prudently financed, to include if needed, the issuance of common equity. The unregulated generation assets' cash flow generating capacity is expected to be lower over the next several years but further downsides are moderated by hedging and its declining share to the consolidated cash flow.

#### What Could Change the Rating – Up

Potential for upgrade is currently limited by its financial metrics which are weak for its ratings. Upgrade is possible if exposure to unregulated activity continue to decline while cash flow to debt ratio improves 20% or above on a sustained basis.

#### What Could Change the Rating - Down

While we do not foresee any particular event that would result in a negative rating action, the company's cash flow to debt credit metrics are expected to be weaker going forward due to the declining cash flow coming from its unregulated operations. As a result, the company has a smaller margin of error for a negative rating action.

The principal methodology used in this rating was Regulated Electric and Gas Utilities published in December

2013. Please see the Credit Policy page on [www.moodys.com](http://www.moodys.com) for a copy of this methodology.

Issuer: PPL Corporation

Outlook revised to stable from RUR-UP

Confirmed:

#### REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on [www.moodys.com](http://www.moodys.com).

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this rating action, and whose ratings may change as a result of this rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see [www.moodys.com](http://www.moodys.com) for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on [www.moodys.com](http://www.moodys.com) for additional regulatory disclosures for each credit rating.

**PPL Corp.****Initial Analytical Outcome ("Anchor") And Rating Result**

Our 'BBB' issuer credit rating (ICR) on PPL Corp. (PPL) is derived from:

- Our anchor of 'bbb', based on our "strong" business risk and "significant" financial risk profile assessments for the company.
- Modifiers that have no impact on the rating outcome.
- The stand-alone credit profile (SACP) of 'bbb' for PPL, reflecting its business risk and financial risk profiles, with no impact from modifiers.

Our 'BBB' rating on PPL is the same as the company's SACP. Group rating methodology applies to PPL and, as the parent company, has an ICR the same as its SACP and reflects the group credit profile (GCP) of 'bbb'.

**Rationale**

| <b>Business Risk: Strong</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Financial Risk: Significant</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The stable rating outlook on PPL Corp. reflects our expectation that management will focus on its fully regulated utilities and will not increase unregulated operations beyond current levels. The outlook also reflects our expectations that cash flow protection and debt leverage measures will be appropriate for the rating. Specifically, our baseline forecast includes funds from operations (FFO) to total debt of between 14% and 15% and cash flow from operations (CFO) to debt of between 14% and 15%, consistent with our expectations for the 'BBB' rating. Given the company's mostly regulated focus, we expect that PPL will avoid any meaningful rise in business risk by reaching constructive regulatory outcomes and limiting its unregulated operations to existing levels.</p> <p><b>Downside scenario</b></p> <p>We could lower the ratings if PPL cannot sustain consolidated financial measures of FFO to total debt above 13% or CFO to debt above 11%. This could occur if market power prices remain weak due to ongoing depressed demand or if the company does not maintain a balanced capital structure.</p> <p><b>Upside scenario</b></p> <p>Although unlikely over the medium term, we could raise the ratings if the business profile materially strengthens and if financial measures exceed our baseline forecast including FFO to total debt in excess of 20%.</p> |

## Standard & Poor's Base-Case Scenario

Our base case scenario results in EBITDA growth, rising capital spending, and steady debt leverage.

## Business Risk: Strong

We base our assessment on PPL's business risk profile on the company's "satisfactory" competitive position, "low" industry risk derived from the "very low" regulated utility industry and the "moderately high" unregulated power and gas industry, and the "very low" country risk of the U.S. and the U.K. where the company operates.

PPL's competitive position reflects geographical and operational diversity consisting of numerous utilities that serve 10 million electricity customers in the U.K., Pennsylvania, Kentucky, and Virginia, and 320,000 natural gas distribution customers in Kentucky. In addition, the company owns PPL Energy Supply LLC, an unregulated generation subsidiary that has about 10,500 megawatts of capacity consisting of well-located, low-cost nuclear and coal plants that are well hedged for the current year. With operations across two states and in the U.K., the company benefits significantly from country, geographical, and regulatory diversity, potentially minimizing the effect of economic conditions in one particular country or adverse regulatory decisions.

The customer base for the regulated utilities (both electric and gas) is primarily residential and commercial customers in terms of revenues as well as sales, which provide stable cash flows. The diversity in markets and regulation strengthens credit quality, but the cross-border regulatory jurisdictions require diligent monitoring of regulatory relationships. The U.K. wires-only distribution utilities have credit-supportive U.K. regulation and no commodity risk because nonaffiliated retail suppliers procure the electricity for retail customers. We expect these U.K. operations to contribute about 30% of PPL's consolidated cash flow. The stability of the U.K. cash flows, along with existing utility assets in Kentucky and Pennsylvania mostly offset the business risk profile of PPL Energy Supply's merchant generation, which we assess as satisfactory, resulting in the overall "strong" business risk profile. We expect the merchant generation business to contribute less than 25% of pro forma consolidated cash flows.

## Financial Risk: Significant

Based on our medial volatility financial ratio benchmarks, our assessment of PPL's financial risk profile is "significant". This takes into consideration our expectations that financial measures will remain approximately at current levels based on our view of a mostly regulated utility strategy that will include continuous capital spending and timely cost recovery through various regulatory mechanisms. For the 12 months ended Dec. 31, 2013, FFO to debt was 15.6% and CFO to debt was about 15.5%. Debt to EBITDA was 4.6x. Our baseline forecast includes mostly steady financial measures such as FFO to debt ranging between 14% and 15% over the next three years and CFO to debt ranging between 14% and 16% over the same period. We forecast debt to EBITDA to range from roughly 4.3 to 5.1x. Capital spending and dividend payments translate to rising negative discretionary cash flow over the forecast period, requiring management to maintain vigilant cost recovery to maintain cash flow measures. The negative discretionary cash flow also points to external funding needs. We consider the company's financial policies to be aggressive, largely due to growth through acquisitions and the use of hybrid instruments.

## Liquidity: Adequate

PPL has "adequate" liquidity, as our criteria define the term. The company's liquidity sources are likely to cover its uses by more than 1.1x in the next 12 months. We expect PPL to meet cash outflows even with a 10% decline in EBITDA.

There are sizeable debt maturities in the next three years, but we expect the company to refinance these given its satisfactory standing in the credit markets.

| Principal Liquidity Sources                                                                                                                                                                                                                                    | Principal Liquidity Uses                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• FFO of roughly \$2.7 billion in 2014</li> <li>• Common equity issuance of \$977.5 million related to mandatory convertible securities</li> <li>• Credit facility availability of about \$6 billion in 2014</li> </ul> | <ul style="list-style-type: none"> <li>• Debt maturities of about \$300 million in 2014</li> <li>• Capital spending of \$3.9 billion in 2014</li> <li>• Dividends of roughly \$960 million in 2014</li> </ul> |

## Other Modifiers

Modifiers have no impact on the rating outcome.

## Group Influence

Standard & Poor's bases its 'BBB' ICR on PPL on the consolidated GCP of 'bbb' and application of our group ratings methodology. PPL, as the parent company, has a GCP that matches its 'bbb' SACF.

## Ratings Score Snapshot

Corporate Credit Rating: BBB/Stable/--

Business risk: Strong

- Industry risk: Very low risk
- Country risk: Very low risk
- Competitive position: Satisfactory

Financial risk: Significant

- Cash flow leverage: Significant

Anchor: 'bbb'

Modifiers

## Opinion

### Rating Drivers

- 80% of cash flow from regulated operations
- Falling cash flows at unregulated operations
- Weak coverage ratios for the rating

### Corporate Profile

PPL Corporation (PPL: Baa3 Issuer Rating, stable) is a utility holding company headquartered in Allentown, PA. It has four areas of operation: UK regulated, Kentucky regulated, Pennsylvania regulated and Supply. UK regulated is a pure wires business in the United Kingdom with no retail exposure. Kentucky regulated operates under a traditional integrated utility model. Pennsylvania regulated is comprised of a transmission business, mostly regulated by FERC, and a distribution operation regulated by the Pennsylvania Public Utility Commission. Supply is an unregulated generation business that owns generation assets primarily in Pennsylvania and Montana.

### SUMMARY RATING RATIONALE

PPL's Baa3 rating reflects the low business risk of its regulated utilities, offset by substantial debt leverage at the parent holding company and the higher risk unregulated activities at Supply. The regulated business is characterized by supportive regulatory environments and a large capital expenditure program. The capital expenditure program results in substantial negative free cash flow at the operating utilities and depresses cash flow to debt metrics. PPL's credit metrics are weakly positioned for its ratings, with its three-year average consolidated CFO Pre-WC/debt at about 15% and RCF/debt at about 11%. Without a recovery of the US merchant power market, coupled with high capital expenditures at its regulated subsidiaries, PPL's credit metrics could come under more pressure, with CFO pre-WC/debt trending closer to 13% to 14% over the next three years. These credit metrics are at the low end of the Baa benchmarks outlined in our Regulated Electric and Gas Utility methodology, which has a range of 13% to 22% for CFO Pre-WC/Debt and 9% to 17% for RCF/debt. These benchmarks are specified for regulated utilities before the effects of structural subordination.

### DETAILED RATING CONSIDERATIONS

- 80% of cash flow from regulated operations

At year-end 2013, PPL's regulated operations accounted for about 80% of the consolidated entity, as measured by EBITDA or book capitalization. Within the regulated operations, UK regulated accounts for 50% of the EBITDA, while Kentucky regulated and Pennsylvania regulated make up the balance, at 30% and 20% of the regulated EBITDA, respectively. We rate the UK utility operating subsidiaries at Baa1. The rating reflects its low business risk and strong operational performance offset by the challenges of a large capital expenditure program and pressure from the UK regulators to keep rates low. PPL's operating subsidiaries in Kentucky are rated A3, while its Pennsylvania Electric Utilities subsidiary is rated Baa1. Their ratings largely reflect supportive regulatory environments, offset by heavy capital expenditures, which are expected to run in the range of 3 to 4 times depreciation.

- Falling cash flow from unregulated activities

Due to the downturn in the merchant power markets in the US, PPL's unregulated cash flow has fallen significantly over the past few years. Supply recorded an adjusted CFO Pre-WC of \$788 million for year-end 2013, down from \$992 million in 2011. In calculating Supply's adjusted CFO Pre-WC, we excluded the effects of the cash contribution to the underfunded pension liabilities and the cash impact of the \$697 million lease termination charge as it relates to the Colstrip leveraged lease transaction. PPL has also aggressively deleveraged Supply, with total debt on an adjusted basis falling to \$2.8 billion at year-end 2013 from \$4.2 billion in 2011. As a result, Supply's cash flow to debt metrics improved to 25% for year-end 2013, up from 23% in 2011, even as its cash flows declined over the same period.

- Weak credit metrics for the rating

PPL's credit metrics generally fall at the lower end of the Baa benchmarks under our Regulated Electric and Gas Utility methodology published in December 2013. At year-end 2013, PPL generated a three-year CFO pre-WC/debt ratio of about 16% and RCF/debt of about 11%. In comparison, the ranges for Baa regulated utilities under the methodology are 13% to 22% for CFO Pre-WC/debt and 9% to 17% for RCF/debt. We expect PPL's credit metrics to deteriorate somewhat over the next three years due to declining cash flows from unregulated activities and the effects of the large capital expenditure program at the regulated operations.

The weakness in PPL's credit metrics is even more pronounced when considering two factors specific to PPL: First, PPL has a large amount of debt (\$4 billion) at the holding company that is structurally subordinated to subsidiary debts. Second, PPL has significant exposure to unregulated activities and we generally expect such companies to have more robust credit metrics to offset the higher business risk of these unregulated activities. Nevertheless, we believe that PPL's ratings are appropriate because they have, among other strengths mentioned previously, significant regulatory diversity and a strong management.

### Liquidity Profile

At the end of 2013, PPL had about \$1.1 billion of cash and unused committed credit facilities of about \$4 billion in US dollars and £1 billion in British pounds. This level of liquidity is adequately sized for the demands of its operations, which include a significant level of negative free cash flow (\$623 million for 2013) and a moderate amount of debt maturities, which include about \$1 billion in 2014 and \$1.3 billion in 2015.

Among its many credit facilities, the earliest to expire are a £300 million credit facility at WPD (East Midlands) and a £300 million credit facility at WPD (West Midlands). Both facilities expire in April 2016. The syndicated facilities in the UK contain financial covenants that require the utilities to maintain a 3x interest coverage ratio and total net debt not in excess of 85% of RAV. The facilities in the US contain a financial covenant requiring debt to total capitalization not to exceed 65% for PPL Energy Supply and 70% for PPL, PPL Electric, LKE, LG&E and KU.

### Rating Outlook

The stable outlook incorporates continued strong performance of its regulated operations and limited additional downside expected from the merchant markets.

### What Could Change the Rating - Up

While we do not foresee any particular event that would result in a negative rating action, the company's cash flow to debt credit metrics are expected to be weaker going forward due to the declining cash flow coming from its unregulated operations. As a result, the company has a smaller margin of error for a negative rating action.

**Outlook: Stable**

The stable rating outlook on PPL Corp. reflects our expectation that management will focus on its fully regulated utilities and will not increase unregulated operations beyond current levels. The outlook also reflects our expectations that cash flow protection and debt leverage measures will be appropriate for the rating. Specifically, our baseline forecast includes funds from operations (FFO) to total debt of about 16%, debt to EBITDA between 4x and 5x, and debt leverage to total capital of less than 60%, consistent with our expectations for the 'BBB' rating. Given the company's mostly regulated focus, we expect that PPL will avoid any meaningful rise in business risk by reaching constructive regulatory outcomes and limiting its unregulated operations to existing levels.

**Downside scenario**

We could lower the ratings if PPL could not sustain consolidated financial measures of FFO to total debt of at least 12%, debt to EBITDA of less than 5x, and debt leverage of less than 62%. This could occur if market power prices remained weak due to ongoing depressed demand.

**Upside scenario**

Although unlikely over the medium term, we could raise the ratings if the business profile further strengthened and if financial measures exceeded our baseline forecast on a consistent basis, including FFO to total debt in excess of 20%, debt to EBITDA of less than 4x, and debt to total capital about 50%.

**Standard & Poor's Base-Case Scenario**

Our base case scenario results in EBITDA growth, rising capital spending, and steady debt leverage.

| Assumptions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Key Metrics*                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |              |              |           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>A--Actual. E--Estimate. *Standard &amp; Poor's adjusted consolidated financial measures for PPL include adjustments to debt for operating leases (\$387 mil.), pension-related items (\$1.55 bil.), equity-like hybrids (negative \$2.1 bil.), intermediate hybrids reported as debt (negative \$250 mil.), and accrued interest not in reported debt (\$325 mil.). EBITDA adjustments include operating leases (\$35 mil.), pension-related items (\$20 mil.), and share-based compensation expense (\$49 mil.). FFO adjustments include operating leases (\$83 mil.), equity-like hybrids (\$95 mil.), pension-related items (\$383 mil.), and capitalized interest (negative \$53 mil.). We do not expect these adjustments, other than the equity-like hybrids, to change materially in 2013 and 2014.</p> |              |              |           |

## Business Risk: Excellent

Our assessment of PPL's business risk profile as "excellent" reflects a mostly regulated public utility holding company strategy. PPL's numerous utilities serve 10 million electricity customers in the U.K., Pennsylvania, and Kentucky, and 320,000 natural gas distribution customers in Kentucky. In addition, the company owns PPL Energy Supply LLC, an unregulated generation subsidiary that has about 10,500 megawatts (MW) of capacity consisting of well-located, low-cost nuclear and coal plants that are well hedged through 2013.

With operations across two states and in the U.K., the company benefits significantly from country, geographical, and regulatory diversity, potentially minimizing the effect of economic conditions in one particular country or adverse regulatory decisions. The customer base for the regulated utilities (both electric and gas) is primarily residential and commercial customers in terms of revenues as well as sales, which provides stable cash flows. The diversity in markets and regulation strengthens credit quality, but the cross-border regulatory jurisdictions require diligent monitoring of regulatory relationships.

The U.K. wires-only distribution utilities have credit-supportive U.K. regulation and no commodity risk because nonaffiliated retail suppliers procure the electricity for retail customers. We expect these U.K. operations to contribute

about 30% of PPL's consolidated cash flow. The stability of the U.K. cash flows, along with existing utility assets in Kentucky and Pennsylvania, all of which we assess as excellent, more than offset the business risk profile of PPL Energy Supply's merchant generation, which we assess as satisfactory, resulting in the excellent business profile overall. We expect the merchant generation business to contribute less than 25% of pro forma consolidated cash flows.

## Financial Risk: Aggressive

We consider PPL's financial risk profile "aggressive" based on its adjusted consolidated financial measures, including FFO to total debt of 16.3%, debt to EBITDA of 4.7x, and debt to total capital of 61%, all for the 12 months ended Dec. 31, 2012, all in line with the rating. Also, we consider the company's financial policies to be aggressive, largely due to growth through acquisitions that PPL partly financed with high equity content hybrid securities. Capital spending and dividend payments translate to rising negative discretionary cash flow over the forecast period, requiring management to maintain vigilant cost recovery to maintain cash flow measures. The negative discretionary cash flow also points to external funding needs. Our base forecast of about 16% adjusted FFO to total debt, 4.7x debt to EBITDA, and about 55% total debt to total capital continues to reflect steady utility cash flows and completion of the convertible securities' equity issuances. Our rating on PPL reflects our view of a mostly regulated utility strategy that will include continuous capital spending and timely cost recovery through various regulatory mechanisms. We expect this to lead to steady cash flow measures and manageable debt leverage.

## Liquidity: Adequate

PPL's liquidity position is "adequate" under our liquidity methodology. We expect that the company's liquidity sources over the next 12 months will exceed its uses by 1.2x. We do expect PPL, over the next few years, to externally fund a portion of its liquidity needs for debt maturities and capital spending.

| Principal Liquidity Sources                                                                                                                                                                                    | Principal Liquidity Uses                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Cash of \$475 million in 2013</li> <li>• Assumed credit facility availability of about \$4 billion in 2013</li> <li>• FFO of roughly \$2.9 billion in 2013</li> </ul> | <ul style="list-style-type: none"> <li>• Debt maturities of \$737 million in 2013</li> <li>• Capital spending of \$4.2 billion in 2013</li> <li>• Shareholder distributions of roughly \$880 million in 2013</li> </ul> |

## Covenants

PPL's credit agreements include a financial covenant requiring debt to total capitalization no greater than 65% for PPL Energy Supply and 70% for the U.S. utilities, PPL Electric Utilities Corp., Kentucky Utilities Co., and Louisville Gas & Electric Co. The U.K. utilities have a minimum EBITDA interest coverage of 3x and total net debt to regulated asset value of 85%. As of Dec. 31, 2012, the company was in compliance with the covenants. Headroom could erode somewhat if debt rises rapidly without adequate growth in equity during the capital spending phase.

**Note:** These rating outcomes are shown for guidance purposes only. The ratings indicated in each cell of the matrix are the midpoints of the likely rating possibilities. There can be small positives and negatives that would lead to an outcome of one notch higher or lower than the typical matrix outcome. Moreover, there will be exceptions that go beyond a one-notch divergence. For example, the matrix does not address the lowest rungs of the credit spectrum (i.e., the 'CCC' category and lower). Other rating outcomes that are more than one notch off the matrix may occur for companies that have liquidity that we judge as "less than adequate" or "weak" under our criteria, or companies with "satisfactory" or better business risk profiles that have extreme debt burdens due to leveraged buyouts or other reasons. For government-related entities (GREs), the indicated rating would apply to the standalone credit profile, before giving any credit for potential government support.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Expected improvement of business risk profile resulting from spin-off of unregulated power generation business, PPL Energy Supply LLC</li> <li>• Sole provider in its service territories of essential and regulated services, mostly electricity and some natural gas distribution</li> <li>• Regulated utility operations provide for stable cash flow generation</li> <li>• Environmental rules continue to add costs to coal fleet</li> <li>• Operating diversity in merchant generation power plants</li> <li>• Merchant generation business benefits from operating diversity, the consistent implementation of a rolling hedging strategy that contributes to cash flow stability, and efficient operations that lead to competitively priced power</li> </ul> | <ul style="list-style-type: none"> <li>• Aggressive financial policies and growth strategy that includes acquisitions and use of hybrid securities</li> <li>• Cash flow erosion from lower wholesale power prices</li> <li>• Large capital spending program</li> <li>• Discretionary cash flow remains negative</li> <li>• Net cash flow to capital spending remains less than 100%</li> <li>• Continuing commitment to credit quality and maintenance of balanced capital structure</li> </ul> |

**Outlook:**

Standard & Poor's Ratings Services' ratings on PPL Corp. are on CreditWatch with positive implications to reflect the potential for higher ratings on the company and its subsidiaries upon the successful spin-off of its merchant generation business. We expect the ratings to remain on CreditWatch until the transaction closes and we will provide periodic updates. Material changes to the projected financial measures in our base case and cash flow generation capability of the pro forma group could affect the ultimate financial risk profile assessment.

**Upside scenario**

Upon the close of the transaction, we could raise the issuer credit ratings (ICRs) and issue ratings on PPL Corp., LG&E and KU Energy LLC, Louisville Gas & Electric Co., Kentucky Utilities Co., and PPL Electric Utilities Corp. by up to two notches depending on the credit measures of the consolidated PPL group after the spin-off of the merchant business.

**Standard & Poor's Base-Case Scenario**

Our base case scenario results in EBITDA growth, accounting for rising capital spending, and steady debt leverage.

| Assumptions                                                                                                                                                                                                                                                                                 | Key Metrics           |              |              |              |

**Business Risk: Strong**

Subsequent to the spin-off of the merchant generation business, we expect that PPL's business risk profile will improve because it will consist of regulated utilities in the U.S. and U.K. where at least 50% of pro forma EBITDA would be from low-risk distribution and transmission operations. PPL's business risk profile would fall into the "excellent" range after the divestiture of the higher-risk unregulated generation assets. The "excellent" business risk assessment post divestiture accounts for PPL's focus on regulated utility operations where there is geographical and operating diversity with numerous utilities that serve more than 10 million electricity customers in the U.K., Pennsylvania, Kentucky, and Virginia, and 320,000 natural gas distribution customers in Kentucky. Residential and commercial customers contribute the majority of revenue and sales, providing a measure of stability and predictability to cash flow

generation. With operations across two states and in the U.K., the company benefits significantly from country, geographical, and regulatory diversity, potentially minimizing the effect of economic conditions in one particular region or adverse regulatory decisions. The diversity in markets and regulation strengthens credit quality, but the cross-border regulatory jurisdictions require diligent monitoring of regulatory relationships. The customer base for the regulated utilities (both electric and gas) is primarily residential and commercial customers in terms of revenues as well as sales, which can contribute to cash flow stability. The U.K. wires-only distribution utilities benefit from credit-supportive U.K. regulation and no commodity risk because nonaffiliated retail suppliers procure the electricity for retail customers.

## Financial Risk: Significant

Based on our medial volatility financial ratio benchmarks, we expect to assess PPL's financial risk profile as "significant", with projected credit protection measures being mostly near the lower end of the category. Under our baseline forecast, we expect that funds from operations (FFO) to debt will range from 13.5% and 15% over the next three years and cash flow from operations to debt to range between 13.5% and 14.5% over the same period. We forecast debt to EBITDA to range between 4.7x and 5x. The annual dividend payout ratio is forecast to be 55% over the 2015-2017 period. This level should bolster equity capital through retained earnings, helping to support the balance sheet, even as PPL makes capital investments, especially given our expectation that discretionary cash flow will continue to be negative in light of PPL's large capital spending program.

## Liquidity: Adequate

PPL has "adequate" liquidity, as our criteria define the term. The company's liquidity sources are likely to cover its uses by more than 1.1x for the next 12 months. We expect PPL to meet cash outflows even with a 10% decline in EBITDA.

There are sizeable debt maturities within the next three years, but we expect the company to refinance them given its satisfactory standing in the credit markets.

| Principal Liquidity Sources                                                                                                                                                                                                                                    | Principal Liquidity Uses                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• FFO of roughly \$2.7 billion in 2014</li> <li>• Common equity issuance of \$977.5 million related to mandatory convertible securities</li> <li>• Credit facility availability of about \$6 billion in 2014</li> </ul> | <ul style="list-style-type: none"> <li>• Debt maturities of about \$300 million in 2014</li> <li>• Capital spending of \$3.9 billion in 2014</li> <li>• Dividends of roughly \$960 million in 2014</li> </ul> |

## Other Modifiers

Modifiers have no impact on the rating outcome.

## Group Influence

Standard & Poor's bases its ICR on PPL on the consolidated group credit profile (GCP) and application of our group ratings methodology. PPL, as the parent company, currently has an ICR equal to the 'bbb' GCP, which we will reassess as part of the CreditWatch resolution. Under our group rating methodology, we consider all of PPL's U.S. regulated utilities and their intermediate holding companies core subsidiaries of the PPL group because we believe the utilities are integral to PPL's long-term strategy. The ICRs on these subsidiaries are therefore most likely to remain aligned with the GCP established for PPL.

## Fitch Takes Various Actions on U.S. Corporate Finance Subsidiary IDRs

Ratings Endorsement Policy  
10 Oct 2014 2:56 PM (EDT)

---

Fitch Ratings-Chicago-10 October 2014: Fitch Ratings has affirmed and withdrawn the Issuer Default Ratings (IDRs) of the following list of corporate finance subsidiaries with the exception of Wisconsin Energy Capital Corp. and Covidien International Finance S.A., which remained on Rating Watch Negative and were withdrawn. This action applies to corporate finance subsidiaries that have no assets or operations and rely wholly on a parent entity guarantee for support. The IDR ratings are withdrawn as they are no longer considered analytically meaningful. This action has no effect on any of the existing Issue ratings at these finance subsidiaries.

### Summary of actions:

Fitch Ratings has withdrawn the following ratings:

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information**

**Dated January 8, 2015**

**Question No. 184**

**Responding Witness: Daniel K. Arbough**

Q-184. Please provide the breakdown in the expected return on pension plan assets for LG&E. Specifically, please provide the expected return on different assets classes (bonds, US stocks, international stocks, etc.) used in determining the expected return on plan assets. Please provide all associated source documents and work papers.

A-184. LG&E and KU Energy's ("LKE") pension assets are invested in a master pension trust sponsored by PPL Services Corporation, which holds and invests the assets of all of PPL Corporation's domestic pension plans. The investment management strategy of the master trust is built around a framework of management based on the objectives of Growth, Immunization and Liquidity. The growth portfolio is comprised of investments that generate a return at a reasonable risk, including equity securities, certain debt securities and alternative investments. The immunizing portfolio consists of debt securities and derivative positions that will typically have long durations and is designed to offset a portion of the change in the pension liabilities due to changes in interest rates. The liquidity portfolio consists primarily of cash and cash equivalents.

LKE and PPL generally sets the expected long-term rate of return (EROA) assumption for their domestic pension plans in consultation with their independent actuary using a building blocks approach that first looks at the potential for return based on the characteristics of the investments. The building blocks approach looks at three categories of investments: (1) equities and investments that have equity like risks and returns (including high-yield and emerging markets debt, hedge funds, private equity, real estate and commodities), (2) corporate fixed income and (3) Treasury securities and cash. Each of the above categories is evaluated for potential return based on expectations of inflation, risk-free rates of return, term premiums, credit spreads, and equity risk premiums. The initial return for each major category is then weighted by LKE's target asset allocation percentage for each major category, resulting in a weighted-average return for the total portfolio, which in this case is 6.04% for 2015. Additional considerations that could impact all of the major asset categories, including the overall portfolio effect and additional returns expected from active

portfolio management offset by non-investment expenses, are then factored in to arrive at the final EROA assumption, which is 7.00% for 2015.

In the building blocks approach, the return was estimated at 8.70% for equities and investments that have equity like risks and returns, 3.70% for corporate fixed income and 2.90% for Treasury securities and cash. See attachment for associated work paper.

EXPECTED RETURN ON ASSETS FOR 2015

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 185**

**Responding Witness: Daniel K. Arbough**

Q-185. Please provide the Company's authorized and earned return on common equity for LG&E over the past five years. Please provide copies of all associated work papers and source documents. Please provide copies of the source documents, work papers, and data in electronic (Microsoft Excel) formats, with all data and formulas intact.

A-185. See attached for supporting documents. The calculation of the earned return is being provided in Excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 186**

**Responding Witness: Valerie L. Scott**

- Q-186. Please provide copies of the financial statements (balance sheet, income statement, statement of cash flows, and the notes to the financial statements) for PPL and LG&E for the past two years. Please provide copies of the financial statements in electronic (Microsoft Excel) formats, with all data and formulas intact.
- A-186. See Filing Requirement 807 KAR 5:001 Section 16(7)(p) for the integrated 2012 and 2013 Forms 10-K. These documents contain both PPL Corporation's and LG&E's notes to the financial statements beginning on page 266 of the 2012 Form 10-K and page 171 of the 2013 Form 10-K. The 2013 Form 10-K contains both PPL Corporation's (beginning on page 134) and LG&E's (beginning on page 160) financial statements for the past two years. The Companies do not maintain these statements in Excel.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 187**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-187. Please provide a copy of the Avera/McKenzie testimony in Microsoft Word.

A-187. The Commission's electronic filing procedures do not permit the electronic filing of Word documents. Therefore, the requested testimony is being provided in Microsoft Word to the AG under separate cover.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 188**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

- Q-188. Please provide copies of all source documents, articles, cited documents listed in footnotes, regulatory decisions, work papers, and other sources used in the development and preparation of the Avera/McKenzie testimony.
- A-188. Copies of the workpapers supporting the testimony of Dr. Avera and Mr. McKenzie are attached. Please note that regulatory and court orders and opinions are publicly available and can be obtained from the respective agencies based on the citations provided.

# Attachment in Separate File

The attachment is being  
provided in a separate  
file.

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 189**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-189. Please provide Microsoft Excel copies of all source documents, work papers, and data used to develop the tables and figures in the Avera/McKenzie testimony. For the Microsoft Excel copies of the data, please keep all formulas intact.

A-189. See the response to PSC 2-46.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 190**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-190. Please reference the Avera/McKenzie testimony, pages 9-10, and please provide a breakdown by assets, revenues, and net income for the subsidiaries of PPL Corporation for year-end 2013 and 2014.

A-190. Dr. Avera and Mr. McKenzie did not perform the requested analysis in the course of preparing their testimony; nor was it necessary to support their conclusions in this case. To the extent that such information is publicly available, it can be obtained from financial records filed with the Securities and Exchange Commission, which can be accessed at:

<http://www.sec.gov/edgar/searchedgar/companysearch.html>.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 191**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-191 Please reference the Avera/McKenzie testimony, pages 18-24, please provide copies of all empirical studies performed that compare the business, financial, and investment risk of the jurisdictional electric utility operations of Kentucky Electric to:

- a. PPL Corporation; and
- b. the proxy group companies.

A-191

- a. The Avera/McKenzie testimony at pages 18-24 discusses the development of the comparable-risk proxy group that served as the basis for applying quantitative models to estimate the cost of equity. As discussed there, this evaluation focused on published risk indicators that provide an objective assessment of investors' risk perceptions. Dr. Avera and Mr. McKenzie did not conduct any independent empirical studies to compare the risks of LG&E with PPL Corporation; nor was such an analysis necessary or relevant to their analyses and conclusions in this case.
- b. The Avera/McKenzie testimony at pages 18-24 discusses the development of the comparable-risk proxy group that served as the basis for applying quantitative models to estimate the cost of equity, including a review and comparison of four key risk indicators that provide an objective assessment of investors' risk perceptions for LG&E and the proxy group companies. Dr. Avera and Mr. McKenzie did not conduct any independent empirical studies to compare the risks of LG&E with the proxy group companies; nor was such an analysis necessary or relevant to their analyses and conclusions in this case.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 192**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-192. Please reference the Avera/McKenzie testimony, page 19, please:

- a. indicate the universe of companies with electric and gas operations as indicated by Value Line Investment Survey;
- b. the companies eliminated from the group from each of the four screens; and
- c. the reasons each of the companies were eliminated.

A-192.

- a. See the tab labelled "Utility Proxy Group" in the Excel file provided in response to Question No. 189.
- b. See the response to subpart (a).
- c. See the response to subpart (a).

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 193**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-193. Please reference the Avera/McKenzie testimony, pages 58-59, please:

- a. list the screens applied to the Value Line database in establishing the Non-Utility Proxy Group;
- b. indicate the justification for each of the screens applied to the companies in the Value Line Investment Survey in establishing the Non-Utility Proxy Group;
- c. the companies eliminated from the group from each of the five screens; and (4) the reasons that each of the companies were eliminated.

A-193.

- a. Please refer to the Avera/McKenzie testimony at page 58, lines 20-24.
- b. As indicated in the Avera/McKenzie testimony, consistent with the principles underlying the Hope and Bluefield standards, the purpose of the Non-Utility Group was to apply the opportunity cost standard by developing estimates of investors' required return for a low-risk group of firms in the competitive sector of the economy. Accordingly, the screening criteria identified in the Avera/McKenzie testimony at page 58, lines 20-24 were applied in order to restrict the Non-Utility Group to firms with exceedingly conservative risk profiles. As noted on page 59 of the Avera/McKenzie testimony, a review of objective risk indicators suggests that this select group of non-regulated firms have less risk than LG&E, KU, or the proxy group of electric utilities.
- c. Because the screening criteria were applied interactively using Value Line's proprietary software, Dr. Avera and Mr. McKenzie do not have a list of each of the approximately 1,700 firms covered by Value Line and the basis upon which each firm did not meet the required criteria specified in their testimony at page 58, lines 20-24.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 194**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-194. Please reference the Avera/McKenzie testimony, pages 49-54:

- a. please detail all equity flotation costs incurred by LG&E in the past three years;
- b. for each of the flotation cost estimates, please provide the breakdown of the flotation costs into underwriting spread, company issuance costs, market pressure, and other expenses. Please show all calculations, and provide the associate source documents and work papers.

A-194.

- a. Because LG&E does not have publicly traded common stock, it does not incur flotation costs directly.
- b. As discussed in the Avera/McKenzie testimony, the flotation cost percentages cited at page 53 were based on the results of independent studies. To the extent the requested information is available, it can be obtained from the source documents, copies of which are attached. As reflected in these documents, the 3.6% flotation cost percentage based on a study of data from Morgan Stanley includes only underwriting spread.

## Regulatory Finance

---

common equity to obtain the final cost of equity financing.<sup>1</sup> This incremental return is referred to as the "flotation cost allowance," and is the sum total of direct flotation expenses, market pressure, and market break.

To demonstrate the need for adjusting the market-determined return on equity for flotation costs, consider the following simple example. Shareholders invest \$100 of capital on which they expect to earn a return of 10%, or \$10, but the company nets \$95 because of issuance costs. It is obvious that the company will have to earn more than 10% on its net book investment (rate base) of \$95 to provide investors with a \$10 return on the money actually invested. To provide the same earnings of \$10 on a reduced capital base of \$95 clearly requires a return higher than the shareholder expected return of 10%, namely  $\$10/\$95 = 10.53\%$ . This is because only the net proceeds from an equity issue are used to add to the rate base on which the investor earns.

### 6.2 Magnitude of Flotation Costs

The flotation cost allowance requires an estimated adjustment to the return on equity of approximately 5% to 10%, depending on the size and risk of the issue. A more precise figure can be obtained by surveying empirical studies on utility security offerings.

According to empirical studies by Borum and Malley (1986) and Logue and Jarrow (1978), underwriting costs and expenses average 4% - 5.5% of gross proceeds for utility stock offerings in the U.S. Eckbo and Masulis (1987) found an average flotation cost of 4.175% for utility common stock offerings, and found that flotation costs increased progressively for smaller size issues.

As far as the market pressure effect is concerned, empirical studies clearly show that the market pressure effect is real, tangible, and measurable. Appendix 6-A describes one method of measuring the market pressure effect. Logue and Jarrow (1978) found that the absolute magnitude of the relative price decline due to market pressure was less than 1.5%. Bowyer and Yawitz (1980) examined 278 public utility stock issues and found an average market pressure of 0.72%. In a classic and monumental study published in the *Journal of Financial Economics*, which reviewed the aggregate empirical evidence on market pressure from several studies, Smith (1986) found a market pressure effect of 3.14% for industrial stock

---

<sup>1</sup> An alternate way of stating this requirement is that the utility's stock must be maintained at some minimum market-to-book ratio in such a way that the proceeds from new stock issues will not decline below book value per share.

issues and 0.75% for utility common stock issues. Other studies of market pressure are reported in Logue (1973), Pettway (1984), and Reilly and Hatfield (1969). In Pettway's study, the market pressure effect for a sample of 368 public utility equity sales was in the range of 2% to 3%. Eckbo and Masulis (1987) found that the relative price decline due to market pressure in the days surrounding the announcement amounted to slightly more than 1.5%.

The Eckbo and Masulis study also confirmed that the percentage flotation cost allowance is higher for small issues than for large issues in view of the high fixed cost component of total costs involved in the process of security underwriting. Although total costs of issuing securities vary according to size of the issue and the degree of risk, there are certain expenses that are fixed, regardless of issue size. These include legal fees and prospectus preparation. With respect to the balance, or underwriting costs, there is greater risk assumed with smaller issues.

In summary, based on empirical studies of U.S. utility security offerings, total flotation costs including market pressure conservatively amount to 5% of gross proceeds for U.S. security offerings. This is consistent with the fact that several utilities raise a substantial portion of their external equity every year through an automatic dividend reinvestment plan and offer a 5% discount, suggesting that the savings from abstaining from a public issue of common stock are at least 5%. The flotation cost allowance of 5% is likely to be conservative, since no explicit allowance for market break is incorporated. If negative events should occur during the time period from announcement of a public issue to actual pricing, the price could fall below book value unless a sufficient margin is maintained. Moreover, the 1% allowance for market pressure is probably conservative for large stock issues.

### **6.3 Application of the Flotation Cost Adjustment**

This section formally demonstrates: (1) how and why it is necessary to apply a flotation cost allowance to the dividend yield component of the DCF model in order to obtain the fair return on equity capital; (2) why the flotation adjustment is permanently required to avoid confiscation even if no further stock issues are contemplated; and (3) why flotation costs are only recovered if the rate of return is applied to total equity, including retained earnings, in all future years.

An analogy with bond issues, as discussed in Brigham, Aberwald, and Gapenski (1985), is useful here in order to understand the treatment of issue costs in the case of common stock issues. In the case of bonds,

The latter expression is identical to that obtained from the standard DCF model adjusted for underpricing in Equation 6-4.

The more practical version of the extended DCF model cast in terms of  $G$ , the growth rate in total book equity, also collapses to an identical expression:

$$r = G + (M/B)(K-G) \quad (6-8)$$

To avoid dilution,  $v=0$ , which in turn implies  $G = g = br$ . Equation 6-8 reduces to Equation 6-7 under the condition that  $M/B = 1/(1-f)$ :

$$\begin{aligned} r &= g + (1/(1-f))(K-g) \\ &= g + (1/(1-f)) D_1/P \\ &= D_1/P(1-f) + g \end{aligned}$$

## 6.4 Flotation Cost Controversies

Several important controversies have surfaced regarding the underpricing allowance. The first is the contention that an underpricing allowance is inappropriate if the utility is a subsidiary whose equity capital is obtained from its parent. This objection is unfounded since the parent-subsidiary relationship does not eliminate the costs of a new issue, but merely transfers them to the parent. It would be unfair and discriminatory to subject parent shareholders to dilution while individual shareholders are absolved from such dilution. Fair treatment must consider that if the utility subsidiary had gone to the capital marketplace directly, flotation costs would have been incurred.

A second controversy is whether a flotation cost allowance should be allowed because a company can always obtain equity from sources other than a public issue of common stock, such as a rights issue for example. There are several sources of equity capital available to a firm, including: public common stock issues, conversions of convertible preferred stock, dividend reinvestment plans, employees' savings plans, warrants, and stock dividend programs. Each carries its own set of administrative costs and flotation cost components, including discounts, commissions, corporate expenses, offering spread, and market pressure.

Equity capital raised through a public issue is typically more expensive than alternate sources of equity. Rights issues, when available, are less expensive, but direct costs would still be incurred. Of course, a rights issue assumes that a willing underwriter and a willing market could be found

Regulatory Finance

for such offerings in the first place, an unlikely event in public capital markets for small unproven companies. Internal sources of equity, including dividend reinvestment and/or employee stock option plans, are also typically less expensive, unless a discount on the purchase price is inherent in the plan, in which case they are often equivalent to a public issue. Direct costs are also incurred in an employee stock savings plan and/or a shareholder dividend reinvestment plan.

The flotation cost allowance is still warranted, however, because it is a composite factor that reflects the historical mix of all these sources of equity. The flotation cost allowance factor is a build-up of historical flotation cost adjustments associated and traceable to each component of equity source, and more specifically, is a weighted average cost factor designed to capture the average cost of various equity vintages and types of equity capital raised by the company. It is impractical and prohibitive to start from the inception of a company and source all present equity. A practical solution is to rely on the results of the empirical studies discussed earlier that quantify the average flotation cost factor of a large sample of utility stock offerings.

Richter (1982) demonstrated that the flotation cost allowance applicable to all the company's book equity is a weighted average of the current allowances required for each past financing, and suggested some practical means of circumventing the problem of vintaging each equity source. Richter essentially suggested sourcing book equity by broad categories of equity, such as dividend reinvestment plan equity, stock option equity, and public issue equity, and calculating a weighted average underpricing factor.

A third controversy centers around the argument that the omission of flotation cost is justified on the grounds that, in an efficient market, the stock price already reflects any accretion or dilution resulting from new issuances of securities and that a flotation cost adjustment results in a double counting effect. The simple fact of the matter is that whatever stock price is set by the market, the company issuing stock will always net an amount less than the stock price due to the presence of intermediation and flotation costs. As a result, the company must earn slightly more on its reduced rate base in order to produce a return equal to that required by shareholders.

It has also been argued that a flotation cost allowance is inequitable since it results in a windfall gain to shareholders. This argument is erroneous. As stated previously, the company's common equity account is credited by an amount less than the market value of the issue, so that the company must earn slightly more on its reduced rate base in order to produce a return equal to that required by shareholders.

The suggestion that the flotation cost allowance is unwarranted because investors factor this shortcoming in the stock price implies that it is appropriate to use a deficient model because such a deficiency is reflected in stock prices. In other words, it is appropriate to use a deficient model because investors are aware of this. Such circular reasoning could be used to justify any regulatory policy. For example, under this reasoning, it would be appropriate to authorize a return on equity of 1% because investors reflect this fact in the stock price. This is clearly illogical and erroneous. Any regulatory policy, as irrational as it may be, can be justified using this argument.

Another controversy is whether the underpricing allowance should still be applied when the utility is not contemplating an imminent common stock issue. Some argue that flotation costs are real and should be recognized in calculating the fair return on equity, but only at the time when the expenses are incurred. In other words, the flotation cost allowance should not continue indefinitely, but should be made in the year in which the sale of securities occurs, with no need for continuing compensation in future years. This argument implies that the company has already been compensated for these costs and/or the initial contributed capital was obtained freely, devoid of any flotation costs, which is an unlikely assumption, and certainly not applicable to most utilities. If the flotation costs of past stock issues have been fully recovered, the argument has merit. If that assumption is not met, the argument is without merit. The flotation cost adjustment cannot be strictly forward-looking unless all past flotation costs associated with past issues have been recovered.

A related controversy is whether or not the retained earnings component of equity requires a flotation cost adjustment. There is no flotation cost allowance made to retained earnings because it is implicitly embedded and recognized in the flotation cost adjustment formula. The conventional flotation cost adjustment formula deals with the fact that flotation costs are incurred only when new stock is sold, and not when earnings are retained. This is done by applying the flotation adjustment only to the dividend yield of the DCF formula and not to the growth component. The larger the fraction of earnings retained, the higher the growth rate, the lower the dividend yield component, and the smaller the flotation cost adjustment. In other words, larger retained earnings result in lower flotation costs adjustments as the costs are postponed into the future.

Some have argued that underwriters' discounts are not out-of-pocket expenses and thus should not be included in rates. On the basis of this argument, one might be foolish enough to believe that depreciation of utility plant should not be included in rates on the same grounds that depreciation is not an out-of-pocket expense. Obviously, the argument is without merit.

## Regulatory Finance

Lastly, some suggest that the flotation cost allowance should be based on a company's own actual flotation cost experience rather than on empirical studies that pertain to a large sample of stock offerings. To base a flotation cost allowance on a one-company sample, although company specific, would not provide a sufficiently reliable statistical and economic basis to infer a utility's appropriate flotation cost allowance. While it is conceptually correct to rely on the particular company circumstances in quantifying the flotation cost allowance, it is not a practical alternative. As discussed earlier, the flotation cost allowance is a weighted average cost factor designed to capture the average cost of various equity vintages and types of equity capital raised by the company.

As an additional practical matter, the market pressure effect is difficult to measure accurately for a specific issue. This is because one must disentangle the downward effect on stock price resulting from the increased supply of stock from the effect of general movement in the stock market. One must also measure the actual stock price following a common stock issue in relation to a hypothetical benchmark price without the issue over some arbitrary time period. This can be performed more reliably and more rigorously using a sample of utility stock offerings.

### Alternative Flotation Cost Adjustment Formulas

Arzac and Marcus (1981) developed an alternative approach to accounting for flotation costs in regulatory hearings. To avoid dilution of the initial shareholders' equity, the allowed rate of return should equal:

$$R = \frac{K}{1 - \frac{fh}{1-f}} \quad (6-9)$$

where  $h$  = external equity financing rate, as a percentage of earnings, and the other symbols are as before.

Patterson (1983A and 1983B) formally compared the properties of the Arzac and Marcus adjustment with those of the conventional adjustment, and showed that the former is equivalent to expensing issue costs in each period when a stock issue occurs. In other words, if Equation 6-9 is consistently applied, the utility is reimbursed for its flotation costs in each year as they are incurred. Patterson also showed that the present value of flotation cost adjustments received by the utility is the same for both the

## Notes

1. Source: Exhibit GJE-11.1, Equidest
2. Excludes Block Trades
3. Includes all utility marketed offerings between \$100MM - \$500MM. Offering amount includes proceeds raised through exercise of greenshoe (where applicable)
4. U.S. offerings only

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 195**

**Responding Witness: Dr. William E. Avera / Adrien M. McKenzie**

Q-195. Please provide copies of the source documents, work papers, and underlying data used in the development of Exhibits No. 2 through 11. Please provide the data and work papers in electronic formats (Microsoft Excel), with all data and formulas intact. Please also include electronic copies (Microsoft Excel) of the Exhibit, leaving all data and formulas intact.

A-195. See the responses to Question No. 188 and Question No. 189.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 196**

**Responding Witness: Kent W. Blake**

Q-196. Please provide a copy of Mr. Blake's testimony in Microsoft Word.

A-196. The Commission's electronic filing procedures do not permit the electronic filing of Word documents. Therefore, the requested testimony is being provided in Microsoft Word to the AG under separate cover.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 197**

**Responding Witness: Kent W. Blake**

Q-197. Please provide an electronic copy of all sections and pages of Schedule J in Microsoft Excel, with all data and formulas intact.

A-197. See the response to PSC 1-59 Attachment\_to\_LGE\_PSC\_1-59-LGE\_Schedule\_J spreadsheet.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 198**

**Responding Witness: Daniel K. Arbough**

Q-198. With reference to Schedules J-1.1 and J-1.2, please provide:

- a. copies of all data, source documents, work papers, and other sources used in the development of the Company's proposed capital structure; copies of all data, source documents, work papers, and other sources used in the adjustments made to the balance sheet amounts of debt and equity in the development of the Company's proposed capital structure; and
- b. the data and work papers in (J-1.1) and (J-1.2), in electronic (Microsoft Excel) formats, with all data and formulas intact.

A-198.

- a. Please see Section 10 of the Attachment to Filing Requirement 807 KAR 5:001 Section 16(7)(c) –Item A for description of the development of the capital structure.

Also please see pages 19-21 of the Testimony of Kent W. Blake (Chief Financial Officer Louisville Gas and Electric) filed on November 26, 2014 for additional details surrounding the determination of the target capital structure of the Company.

- b. Please see the Attachment 12 to response to PSC 1-59 provided in Excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 199**

**Responding Witness: Daniel K. Arbough**

Q-199. With reference to Schedules J-1.1, J-1.2, and J-2, please:

- a. provide copies all data, work a papers and calculations used in the development of the cost and amounts of short-term debt; and
- b. detail all assumptions and show calculations for projected amounts and costs of short-term debt; and
- c. provide the data and work papers in (a) and (b) in electronic (Microsoft Excel) formats, with all data and formulas intact.

A-199.

- a. Please see Section 10 of the Attachment to Filing Requirement 807 KAR 5:001 Section 16(7)(c) –Item A for description of the development of the amounts of short-term debt. For details surrounding cost of short-term debt, please refer to the response to part b.
- b. See attachment being provided in Excel format.
- c. Please see Attachment 12 to the response to PSC 1-59 provided in Excel format.

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 200**

**Responding Witness: Daniel K. Arbough**

Q-200. With reference to Schedules J-1.1, J-1.2, and J-3, please:

- a. provide copies all data, work a papers and calculations used in the development of the cost and amounts of long-term debt; and
- b. detail all assumptions and show calculations for projected amounts and costs of long-term debt; and
- c. provide the data and work papers in (a) and (b) in electronic (Microsoft Excel) formats, with all data and formulas intact.

A-200.

- a. Please see Section 10 of the Attachment to Filing Requirement 807 KAR 5:001 Section 16(7)(c) –Item A for description of the development of the amounts of long-term debt. For details surrounding cost of long-term debt, please refer to the response to part b.
- b. Please see attachment to response to Question No. 199.b provided in excel format.
- c. Please see Attachment 12 to the response to PSC 1-59 provided in excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 201**

**Responding Witness: Dr. Martin J. Blake**

Q-201. Please provide a fully executable computerized copy of the LG&E class cost of service study in Microsoft Excel format. In this response provide all linked files.

A-201. Electric: See "Att-PSC2-70-File02" under Description of Document in the files uploaded in response to PSC 2-70. This file includes the cost of service exhibits MJB-8 and MJB-9, Electric Cost of Service Study – Functional Assignment, Classification and Time Differentiation, and Electric Cost of Service Study – Allocation to Customer Classes, respectively.

Additionally, the following uploaded files contain supporting workpapers for the above mentioned electric cost of service study:

- Att-PSC2-70-File15 – LG&E Loss Study
- Att-PSC2-70-File16 – Electric meter cost allocation
- Att-PSC2-70-File17 – Electric services cost allocation
- Att-PSC2-70-File18 – Late payment revenue
- Att-PSC2-70-File19 – OSS energy revenue reallocation
- Att-PSC2-70-File20 –OSS Supporting data
- Att-PSC2-70-File21 – Electric energy and demand allocation inputs

Gas: See "Att-PSC2-70-File10" under Description of Document in the files uploaded in response to PSC 2-70. This file includes the cost of service Exhibits MJB-15 and MJB-16, Gas Cost of Service – Functional Assignment and Classification and Gas Cost of Service – Class Allocation, respectively.

Additionally, the following uploaded files contain supporting workpapers for the above mentioned gas cost of service study:

- Att-PSC2-70-File25 – Gas demand allocation
- Att-PSC2-70-File26 – Gas meter cost allocation
- Att-PSC2-70-File27 – Gas services cost allocation
- Att-PSC2-70-File28 – Gas storage allocation

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 202**

**Responding Witness: Dr. Martin J. Blake**

Q-202. Please explain and provide all workpapers and spreadsheets showing the determination of the separation of Production and Transmission costs among Intermediate, and Peak implicit in the determination in LG&E Dr. Martin Blake, Direct Testimony, Page 8 and Exhibit MJB-4. In this response, explain the relevance or relationship of the Non-Time-Differentiated Cost (34.99%), Summer Peak Period Cost (30.91%) and Winter Peak Period Costs (34.10%). Please provide this response in Microsoft readable electronic format (preferably Microsoft Excel), including all workpapers, source documents, calculations etc. that support the amounts, assumptions, and calculations presented therein.

A-202. The modified BIP methodology takes into account the cost differences inherent in providing electric service to customers at different times during the calendar year due to changes in demand for electricity. The BIP separation is used to allocate the costs associated with production and transmission facilities in place to serve customers during the base, intermediate and peak periods. The base period reflects the level of load that occurs all hours of the year and thus includes the portion of the costs that do not vary with time (occurs 8,760 hours during the year). The peak period is based on the summer peak and includes the portion of those costs that are associated with serving the peak load during the summer peak. The intermediate period is based on the winter peak and includes the portion of those costs associated with serving the peak load during the winter peak. This methodology has been accepted by the Commission for allocating the costs associated with production and transmission facilities in prior LG&E and KU rate cases, and LG&E and KU are not proposing to change the methodology for allocating these costs in this proceeding.

See "Att-PSC2-70-File03" under Description of Document in the files uploaded in response to PSC 2-70. This file is the Excel version of Exhibit MJB-4. Additional data used to develop this exhibit is found in "Att-PSC2-70-File14," which is forecast system peak data.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 203**

**Responding Witness: Dr. Martin J. Blake**

Q-203. Please provide all workpapers, source documents, and electronic spreadsheets showing the development of each external allocator "functional vector" utilized in Dr. Blake's LG&E class cost of service study and referred to at Page 13 of his Direct Testimony. In this response, provide the source for all data and the bases for any weightings. Please provide in Microsoft readable electronic format (preferably Microsoft Excel).

A-203. See the response to Question No. 201.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 204**

**Responding Witness: Christopher M. Garrett**

Q-204 For each KU and LG&E generating unit that was in service as of December 31, 2014 (or most recent period available), owned individually, jointly, or partially, please provide the following:

- a. names of owners (and ownership percentages);
- b. type and fuels;
- c. total nameplate (rated) capacity (MW);
- d. total and individual company gross investment (end of period);
- e. total and individual company depreciation reserve (end of period);
- f. total and individual company annual depreciation expense;
- g. gross KWH produced during the last 12-month period; and,
- h. net (less station use) KWH produced during the last 12-month period.

A-204 a-h. See attached.

| Generating Unit (a) | Owner (a) | Ownership Percentage (a) |      |       | Type (b)     | Fuels (b) | Generator Nameplate Ratings (MW) (c) | Generator Nameplate Ownership (MW) (c) |     |       |

(1) Gross, net generation, investment, & depreciation reserve reported for Dix Dam, and Ohio Falls represents total plant. Generation is not reported on a per unit basis and fixed asset costs are not accumulated on a per unit basis.

(2) Investment, & depreciation reserve reported for Haeffling represents total plant. Fixed asset costs are not accumulated on a per unit basis

(3) Investment and Depreciation Reserve is shown for active units only. This does not include structural components still in place, land, and ARO costs associated with retired units.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 205**

**Responding Witness: Russel A. Hudson**

Q-205. For each KU and LG&E generating unit included in this rate application that was not actually in service as of December 31, 2014, i.e., included in CWIP, please provide the following:

- a. names of owners (and ownership percentages);
- b. type and fuels;
- c. total nameplate (rated) capacity (MW);
- d. total and individual company gross investment (end of period);
- e. total expected gross investment when ultimately placed in service; and,
- f. design or expected rate of each fuel type.

A-205.

**Cane Run 7 Natural Gas Combined Cycle**

- a. Louisville Gas and Electric Company (22% ownership) and Kentucky Utilities Company (78% ownership).
- b. Natural Gas fired combined cycle.
- c. The nameplate ratings are Summer 89 degrees F/66% relative humidity: 680,967 kW gross; 662,667 kW net; and Winter 14 degrees F/65% relative humidity: 691,215 kW gross; 673,005 kW net.
- d. The LG&E amount at December 31, 2014 is \$112,601,573. The KU amount at December 31, 2014 is \$401,735,800. The total amount is \$514,337,373.
- e. The total estimated gross investment when the unit is place in service is \$562 million (\$123 million LG&E and \$439 million KU).
- f. The summer net heat rate is 6,841 btu/kwh.

**E.W. Brown Solar Facility**

- a. Louisville Gas and Electric Company (39% ownership) and Kentucky Utilities Company (61% ownership).
- b. Solar.
- c. The net rated capacity is 10 MW for the entire unit.
- d. The LG&E amount at December 31, 2014 is \$74,387. The KU amount at December 31, 2014 is \$116,314. The total amount is \$190,701.
- e. The total estimated gross investment when the unit is place in service is \$35 million (\$14 million LG&E and \$21 million KU).
- f. There is no heat rate on a photovoltaic system.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 206**

**Responding Witness: David S. Sinclair**

Q-206. Please provide the current combined KU and LG&E generating order of dispatch by unit and basis for this order of dispatch.

A-206. The dispatch order will vary depending on the price of natural gas and coal and other variables. The dispatch order based on coal and natural gas prices as of January 2015 is provided in the table below.

| <b>Dispatch Order<br/>(Lowest Cost to<br/>Highest Cost)</b> | <b>Unit</b>                    |
|-------------------------------------------------------------|--------------------------------|
| 1                                                           | Hydro (Ohio Falls and Dix Dam) |
| 2                                                           | Trimble County 2               |
| 3                                                           | Green River 4                  |
| 4                                                           | Mill Creek 1                   |
| 5                                                           | Mill Creek 2                   |
| 6                                                           | Ghent 2                        |
| 7                                                           | Trimble County 1               |
| 8                                                           | Mill Creek 3                   |
| 9                                                           | Ghent 1                        |
| 10                                                          | Mill Creek 4                   |
| 11                                                          | Ghent 4                        |
| 12                                                          | OVEC                           |
| 13                                                          | Ghent 3                        |
| 14                                                          | Green River 3                  |
| 15                                                          | Cane Run 5                     |
| 16                                                          | Cane Run 4                     |
| 17                                                          | Brown 2                        |

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 207**

**Responding Witness: David S. Sinclair**

Q-207. Please provide the fully forecasted test year combined KU and LG&E generating order of dispatch by unit and basis for this order of dispatch. Include within your response Cane Run 7.

A-207. The dispatch order in the forecast period will vary depending on the price of natural gas and coal and other variables. The average dispatch order for the test year based on forecasted coal and natural gas prices is provided in the table below.

| <b>Dispatch Order<br/>(Lowest Cost to<br/>Highest Cost)</b> | <b>Unit</b>                    |
|-------------------------------------------------------------|--------------------------------|
| 1                                                           | Hydro (Ohio Falls and Dix Dam) |
| 2                                                           | Trimble County 2               |
| 3                                                           | Ghent 3                        |
| 4                                                           | Ghent 4                        |
| 5                                                           | Mill Creek 3                   |
| 6                                                           | Ghent 1                        |
| 7                                                           | Mill Creek 2                   |
| 8                                                           | Mill Creek 1                   |
| 9                                                           | Green River 4                  |
| 10                                                          | Ghent 2                        |
| 11                                                          | Cane Run 7                     |
| 12                                                          | Mill Creek 4                   |
| 13                                                          | Trimble County 1               |

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 208**

**Responding Witness: David S. Sinclair**

Q-208 Please provide total native system, total KU, total LG&E, and LG&E class contributions to each monthly system (KU + LG&E) coincident peak demand during each of the last three years. Provide class contributions at generation voltage level. In this response please provide the date and hour of each provided observation.

A-208 See attached.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 209**

**Responding Witness: David S. Sinclair**

Q-209. For each KU and LG&E generating unit, please provide all forced (unscheduled) outages (dates, time, and duration) by unit during the most recent 12-month period.

A-209. See attached.

| <u>Unit Name</u> | <u>Event Type</u> | <u>Event No</u> | <u>Cause Code</u> | <u>Event Start</u> | <u>Event End</u> | <u>Evt. Hrs</u> | <u>Event Cause Code</u>                         | <u>Event Description</u>                                                              |

|------------------|-------------------|-----------------|-------------------|--------------------|------------------|-----------------|---------------------------------------------------|-------------------------------------------------------------------------------------|
| TC8              | U1                | 15              | 5041              | 1/30/14 6:34       | 1/30/14 7:49     | 1.25            | Gas Turbine - Fuel Piping And Valves              | Forced outage to reset lifted safety valve that occurred due to fuel gas pressure   |
| TC8              | U1                | 103             | 5049              | 6/10/14 18:00      | 6/10/14 20:27    | 2.45            | Other Gas Turbine Fuel System Problems            | CT8 tripped as the unit was being shutdown due to excessive inlet gas pressure.     |
| TC8              | U1                | 138             | 5130              | 8/2/14 3:33        | 8/2/14 3:50      | 0.28            | Gas Turbine - Starting System (including Motor)   | Static Start switch failed to engage.                                               |
| TC8              | U1                | 140             | 5130              | 8/2/14 5:02        | 8/2/14 8:41      | 3.65            | Gas Turbine - Starting System (including Motor)   | Initial signal was that the LCI was not working                                     |
| TC8              | U1                | 162             | 5240              | 9/20/14 11:28      | 9/20/14 19:47    | 8.32            | Gas Turbine - Fire Detection And Extinguishing Sy | The fire protection CO2 skid was found empty. Refrigeration unit checked            |
| TC8              | U1                | 166             | 3661              | 9/25/14 19:53      | 9/25/14 21:21    | 1.47            | 4000-7000-volt Circuit Breakers                   | Lose wire found on control circuit of the LCI 4KV breaker. Wire tightened           |
| TC8              | U1                | 168             | 3661              | 10/1/14 12:45      | 10/1/14 13:15    | 0.50            | 4000-7000-volt Circuit Breakers                   | Improper switching instructions on the 4KV outage on TC5 and 6, caused a black o    |
| TC8              | U1                | 170             | 5041              | 10/1/14 14:58      | 10/1/14 15:25    | 0.45            | Gas Turbine - Fuel Piping And Valves              | This was not a bad solenoid, it was a high differential across the fuel gas main    |
| TC8              | U1                | 173             | 5240              | 10/2/14 12:48      | 10/2/14 13:30    | 0.70            | Gas Turbine - Fire Detection And Extinguishing Sy | Fire protection testing caused the unit to lose turning gear.                       |
| TC8              | U1                | 184             | 5108              | 10/7/14 18:44      | 10/7/14 19:00    | 0.27            | Gas Turbine - High Engine Exhaust Temperature     | The gas valve closing is a result of the high exhaust spread trip                   |
| TC8              | U1                | 208             | 3669              | 11/12/14 13:09     | 11/12/14 13:58   | 0.82            | Other 4000-7000-volt Problems                     | The loss of power on TC7 event 146 caused the loss of power to the shared LCI,      |
| TC8              | U1                | 212             | 5049              | 11/15/14 15:03     | 11/15/14 16:09   | 1.10            | Other Gas Turbine Fuel System Problems            | Relief valve on TC9/10 fuel gas heater lifted,                                      |
| TC8              | U1                | 232             | 5130              | 12/11/14 17:55     | 12/11/14 19:07   | 1.20            | Gas Turbine - Starting System (including Motor)   | Static start 89SS switch failed to engage. Adjustments made to limit switches       |
| TC8              | U1                | 237             | 3611              | 12/13/14 14:10     | 12/13/14 21:42   | 7.53            | Switchyard Circuit Breakers                       | Generator line breaker failed to operate due to springs not charging.               |
| TC8              | U1                | 240             | 3611              | 12/14/14 11:36     | 12/14/14 12:53   | 1.28            | Switchyard Circuit Breakers                       | Generator mail line breaker failed to operate due to springs not charging properly  |
| TC8              | U1                | 242             | 5240              | 12/15/14 11:01     | 12/15/14 16:12   | 5.18            | Fire detection and extinguishing system B         | Fire protection upgrade, difference in wiring between units 5 & 6 and 7 through 1C  |
| TC8              | U2                | 111             | 3869              | 6/23/14 9:10       | 6/24/14 12:15    | 27.08           | Other Fire Protection System Problems             | Fire protection CO2 tank lost all CO2 due to refrigeration unit malfunction.        |
| TC9              | SF                | 3               | 5130              | 1/3/14 0:00        | 1/3/14 20:51     | 20.85           | Gas Turbine - Starting System (including Motor)   | Startup failure due to issue with 89SS.                                             |
| TC9              | SF                | 20              | 5130              | 2/26/14 2:38       | 2/26/14 3:45     | 1.12            | Gas Turbine - Starting System (including Motor)   | Startup failure due to 89SS on TC10 failing to open.                                |
| TC9              | SF                | 30              | 5130              | 3/16/14 18:25      | 3/16/14 20:27    | 2.03            | Gas Turbine - Starting System (including Motor)   | Startup failure due to 89SS not disengaging on TC10.                                |
| TC9              | SF                | 33              | 3631              | 3/18/14 5:09       | 3/18/14 6:54     | 1.75            | 400-700-volt Circuit Breakers                     | Startup failure due to TC9 MCC #2 feed breaker opening cutting power to inservic    |
| TC9              | SF                | 47              | 5130              | 4/3/14 17:50       | 4/3/14 18:45     | 0.92            | Gas Turbine - Starting System (including Motor)   | Start up failure due to 89SS not engaging.                                          |
| TC9              | SF                | 50              | 5130              | 4/6/14 6:20        | 4/6/14 6:45      | 0.42            | Gas Turbine - Starting System (including Motor)   | Failure to start due to 89SS not engaging.                                          |
| TC9              | SF                | 53              | 5130              | 4/9/14 5:08        | 4/9/14 6:21      | 1.22            | Gas Turbine - Starting System (including Motor)   | 89SS failed to engage.                                                              |
| TC9              | SF                | 59              | 5130              | 4/11/14 17:01      | 4/12/14 4:01     | 11.00           | Gas Turbine - Starting System (including Motor)   | LCI breaker problem.                                                                |
| TC9              | SF                | 61              | 5130              | 4/21/14 9:29       | 4/21/14 9:46     | 0.28            | Gas Turbine - Starting System (including Motor)   | 89SS VFD setting too low to work.                                                   |
| TC9              | SF                | 73              | 5130              | 4/28/14 6:12       | 4/28/14 12:59    | 6.78            | Gas Turbine - Starting System (including Motor)   | 89SS switch failed to engage. Adjustments made to linkage.                          |
| TC9              | SF                | 75              | 5130              | 4/29/14 6:12       | 4/29/14 6:34     | 0.37            | Gas Turbine - Starting System (including Motor)   | 89SS motor VFD overload indication. Overload reset.                                 |
| TC9              | SF                | 79              | 5130              | 5/2/14 5:25        | 5/2/14 14:18     | 8.88            | Gas Turbine - Starting System (including Motor)   | 89SS on TC9 Failed to engage. Adjusted linkage and installed through bolt.          |
| TC9              | SF                | 86              | 5130              | 5/7/14 10:27       | 5/7/14 10:32     | 0.08            | Gas Turbine - Starting System (including Motor)   | 89SS in TC10 did not open and did not allow TC9 89SS to close.                      |
| TC9              | SF                | 93              | 3631              | 5/14/14 11:25      | 5/14/14 20:24    | 8.98            | 400-700-volt Circuit Breakers                     | Feed to 480V MCC1 tripped. Unit not able to continue starting sequence.             |
| TC9              | SF                | 101             | 5041              | 5/22/14 14:28      | 5/22/14 14:43    | 0.25            | Gas Turbine - Fuel Piping And Valves              | Unit failed to start due to fuel gas line not being packed to proper pressure.      |
| TC9              | SF                | 129             | 4609              | 7/7/14 10:22       | 7/7/14 10:59     | 0.62            | Exciter Reboot Problems                           | Network switch in the EX2000 cab needed to be rebooted due to power loss            |
| TC9              | SF                | 171             | 3631              | 9/21/14 13:25      | 9/21/14 19:50    | 6.42            | 400-700-volt Circuit Breakers                     | The Motor Operated Disconnects (MOD) did not close when signal was given.           |
| TC9              | SF                | 183             | 5130              | 10/6/14 5:09       | 10/6/14 8:17     | 3.13            | Gas Turbine - Starting System (including Motor)   | LCI had low water level. Added demin water and unit made available.                 |
| TC9              | U1                | 7               | 5130              | 1/6/14 2:27        | 1/6/14 2:57      | 0.50            | Gas Turbine - Starting System (including Motor)   | Forced outage due to issue with 89SS.                                               |
| TC9              | U1                | 15              | 5041              | 2/7/14 12:38       | 2/7/14 15:35     | 2.95            | Gas Turbine - Fuel Piping And Valves              | Forced outage to address pressure swings due to worker fuel gas valve.              |
| TC9              | U1                | 22              | 5160              | 2/26/14 19:14      | 2/26/14 19:15    | 0.02            | Gas Turbine - Cooling And Seal Air System         | Forced outage from load runback due to issue with Exhaust Frame Blower.             |
| TC9              | U1                | 43              | 5130              | 4/3/14 5:09        | 4/3/14 6:12      | 1.05            | Gas Turbine - Starting System (including Motor)   | Start up failure due to 89SS not engaging.                                          |
| TC9              | U1                | 45              | 5041              | 4/3/14 11:38       | 4/3/14 11:55     | 0.28            | Gas Turbine - Fuel Piping And Valves              | Lightning strike affected start-up and worker valves.                               |
| TC9              | U1                | 57              | 5130              | 4/10/14 16:41      | 4/10/14 19:32    | 2.85            | Gas Turbine - Starting System (including Motor)   | 89ND on TC10 failed to engage, both units removed from service to make repairs.     |
| TC9              | U1                | 99              | 3631              | 5/21/14 20:00      | 5/22/14 12:59    | 16.98           | 400-700-volt Circuit Breakers                     | Unit trip due to loss of power feed to 480VAC MCC.                                  |
| TC9              | U1                | 103             | 3631              | 5/22/14 17:24      | 5/22/14 20:36    | 3.20            | 400-700-volt Circuit Breakers                     | Unit tripped due to loss of power to 480VAC MCC.                                    |

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 210**

**Responding Witness: David S. Sinclair**

Q-210. Please identify and explain any events or circumstance occurring during the most recent 12-months that materially (significantly) altered the normal (typical) economic dispatch of LG&E's and KU's electric production resources (if any).

A-210. No such events occurred.

LOUISVILLE GAS AND ELECTRIC COMPANY

CASE NO. 2014-00372

Response to Attorney General's Initial Request for Information  
Dated January 8, 2015

Question No. 211

Responding Witness: David S. Sinclair

Q-211. For each KU and LG&E generating unit, please provide the most recent average annual fuel cost per KWH.

A-211. See table below for KU and LG&E Units.

| <u>Unit</u>   | <b>2014 Preliminary<br/>Fuel Expense<sup>1</sup><br/>(cents / KWh)</b> |
|---------------|------------------------------------------------------------------------|
| Brown 1       | 4.01                                                                   |

<sup>1</sup>Fuel expense excludes firm gas transportation costs.

<sup>2</sup>In 2014, the station usage for Cane Run 11 exceeded the unit's net generation. This explains the negative fuel expense value.

LOUISVILLE GAS AND ELECTRIC COMPANY

CASE NO. 2014-00372

Response to Attorney General's Initial Request for Information  
Dated January 8, 2015

Question No. 212

Responding Witness: David S. Sinclair

Q-212 For each KU and LG&E generating unit, please provide the projected average annual fuel cost per KWH for the fully forecasted test period, including Cane Run 7 in your response.

A-212 See table below for KU and LG&E units.

| <u>Unit</u>   | <b>Forecasted<br/>Test Period<br/>(July 2015 – June 2016)<br/>Fuel Expense<br/>(cents / KWh)</b> |
|---------------|--------------------------------------------------------------------------------------------------|
| Brown 1       | 3.89                                                                                             |
| Brown 2       | 3.38                                                                                             |
| Brown 3       | 3.85                                                                                             |
| Brown 5       | 7.37                                                                                             |
| Brown 6       | 5.44                                                                                             |
| Brown 7       | 5.30                                                                                             |

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 213**

**Responding Witness: Robert M. Conroy**

Q-213. Please specifically explain and define how LG&E distinguishes between primary and secondary voltage; e.g., voltage level.

A-213. The voltage levels for primary and secondary delivery are defined on Sheet No. 99, Character of Service, of the proposed P.S.C. Electric No. 10, which is provided in Tab 4 of the Filing Requirements.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 214**

**Responding Witness: David S. Sinclair**

Q-214. Please provide a copy of the most recent LG&E class load study (basis for estimating class peak demands) including all supporting tables, schedules, and data. Please provide in hard copy as well as in Microsoft readable electronic form.at (preferably Microsoft Excel).

A-214. See attached.

# Attachment in Excel

The attachment(s)  
provided in separate  
file(s) in Excel format.

# Attachment in Excel

The attachment(s)

file(s) in Excel format.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 215**

**Responding Witness: Dr. Martin J. Blake**

Q-215. Please provide all workpapers, analyses, calculations, etc. supporting all LG&E non-jurisdictional and jurisdictional class demands (loads) utilized in the jurisdictional and class cost of service studies. In this response, please explain and indicate how class demands were specifically determined or estimated. Include all definitions of demand utilized; e.g., CP, NCP and sum of individual customers. Please provide in hard copy as well as in Microsoft readable electronic form.at (preferably Microsoft Excel).

A-215. The CP, NCP, and sum of individual customer demands were calculated using the load research data provided in response to PSC 2-70 and described in response to Question No. 201. The CP demand allocators are the class contributions to the summer and winter hourly peaks respectively, the NCP allocator is the highest hourly class maximum demand recorded during the test year, and the sum of individual customer demands is the maximum hourly demand for each individual customer in each rate class summed together.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 216**

**Responding Witness: Dr. Martin J. Blake**

Q-216 Please explain how Curtailable Service Riders CSR10 and CSR30 customers' demands and energy usage are reflected in the LG&E class cost of service study.

A-216 Curtailable customers' actual energy usages were used in the development of the energy allocation factors. The customers' CP demands were forecast to reflect levels that do not include any curtailments.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 217**

**Responding Witness: Robert M. Conroy**

Q-217. With regard to LG&E current Curtailment Service Rider CSR10, please provide in Microsoft readable electronic form.at (preferably Microsoft Excel) the following amounts by rate schedule, separated between Primary and Transmission, for each month during the most recent 12-month period:

- a. total firm contract demand;
- b. total contract curtailment load;
- c. total billing demand;
- d. total demand credits;
- e. total non-compliance charges by month; and,
- f. listing of date, time, duration, and estimated MW curtailment.

A-217. a-e See attachment 1 being provided in Excel format.

- f. See attachment 2 being provided in Excel format.

Dated January 8, 2015**

**Question No. 218**

**Responding Witness: David S. Sinclair / Robert M. Conroy**

- Q-218. With regard to LG&E's proposed Curtailable Service Riders ("CSRs") referenced at Pages 29 and 30 of Mr. Conroy's Direct Testimony, please provide all workpapers, spreadsheets, source documents, assumptions, etc. utilized to develop the CSR provisions (curtailable hours, buy-through rates, etc.) being proposed in this case. Please provide in Microsoft readable electronic format as applicable (preferably Microsoft Excel).
- A-218. The Company assumes the referenced page numbers should be pages 36 and 37 for LG&E. See the response to Sierra Club 1-23.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 219**

**Responding Witness: Dr. Martin J. Blake**

Q-219. With regards to the Specific Assignment of Curtailable Service Rider credits and avoided costs shown in LG&E Dr. Blake's Exhibit MJB-9, Pages 23 and 24:

- a. please explain what the <\$3,438,312> of "Curtailable Service Rider Avoided Cost" represents and provide all workpapers showing the determination of this amount;
- b. please explain and provide all workpapers, spreadsheets, source documents, and analyses showing how the "specific assignments" were made to individual classes; and,
- c. please explain the basis and provide all workpapers and spreadsheets showing how the Allocation of Curtailable Service Rider Credits of \$3,438,312 were made; e.g., the development of Allocation Vector "INTCRE".
- d. Please provide in Microsoft readable electronic format (preferably Microsoft Excel).

A-219.

- a. The <\$3,438,312> of "Curtailable Service Rider Avoided Cost" represents the interruptible credits provided to CSR customers during the test year. See page 2 of Schedule M-2-3-E.
- b. The amount is assigned to the rate class under which the CSR customer is served. See page 1 of Schedule M-2-3-E.
- c. The "INTCRE" allocation factor represents the sum of the fixed production plant that is allocated to the winter (intermediate) and summer (peak) periods, as these are the only periods during which the Curtailable Service Rider may have value to LG&E. The calculation is shown in the cost of service study provided in response to PSC 2 Question No. 70; see "Att-PSC2-70-File02" as described in the response to Question No. 201.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 220**

**Responding Witness: Dr. Martin J. Blake**

Q-220 With respect to Dr. Blake's LG&E zero-intercept analysis (summarized in Exhibits MJB-5, MJB-6 and MJB-7), please provide:

- a. all data utilized in developing each data set, along with the data utilized as inputs for regression modeling;
- b. statistical output including all diagnostic statistics;
- c. specific definition of dependent and independent variable( s) utilized corresponding to the data provided in each Exhibit;
- d. specific regression model (including coefficient);
- e. definition of "size" for each account;
- f. definition of "cost" for each account;
- g. definition of "quantity" for each account; and,
- h. source documents supporting Dr. Blake's regression data.
- i. Please provide in in Microsoft readable electronic format (preferably Microsoft Excel).

A-220

- a. See "Att-PSC2-70-File14" under Description of Document in the files uploaded in response to PSC 2-70. This file is the Continuing Property Records for the referenced zero intercept analyses.
- b. The statistical output is contained in the Excel versions of the referenced exhibits. See specifically "Att-PSC2-70-File04" under Description of Document in the files uploaded in response to PSC 2-70.

- c. For overhead conductor, the dependent variable is the average cost per foot of conductor and the independent variable is the size of the conductor in MCM. For underground conductor, the dependent variable is the average cost per foot of conductor and the independent variable is the size of the conductor in MCM. For line transformers, the dependent variable is the average cost per transformer and the independent variable is the size of the transformer category in kVA. The analysis uses weighted linear regression with the feet of each type of conductor or number of each type of transformer as the weights. The formulation of the weighted linear regression equation, the definition of the variables and an explanation of weighted linear regression are provided on pages 10 through 13 of Dr. Blake's Direct Testimony.
- d. See the response to part c.
- e. See the response to part c.
- f. See the response to part c.
- g. See the response to part c.
- h. See the response to parts a and b.
- i. See the response to parts a and b.

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 221**

**Responding Witness: Dr. Martin J. Blake**

Q-221. Please provide LG&E Dr. Blake's Exhibits MJB-5, MJB-6 and MJB-7 in executable electronic spreadsheets. In this response include all analyses, calculations, work papers, and supporting documents conducted to develop each zero-intercept analysis.

A-221. See the response to Question No. 220, part b.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 222**

**Responding Witness: Dr. Martin J. Blake**

Q-222. Please provide the following separated between primary and secondary (as available) by vintage year, size, and type for LG&E Account 365 (Overhead Conductors) in the greatest level of detail available:

- a. installed footage;
- b. gross investment;
- c. materials investment;
- d. capitalized labor; and,
- e. Handy-Whitman Cost Index or equivalent.
- f. If all data is not available for all years, please provide the level of detail that is available. Please provide in in Microsoft readable electronic format (preferably Microsoft Excel).

A-222. See the response Question No. 220, part a. Gross investment includes both materials investment and capitalized labor.

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 223**

**Responding Witness: Dr. Martin J. Blake**

Q-223. Please provide the following separated between primary and secondary (as available) by vintage year, size, and type for LG&E Account 367 (Underground Conductors) in the greatest level of detail available:

- a. installed footage;
- b. gross investment;
- c. materials investment;
- d. capitalized labor; and,
- e. Handy-Whitman Cost Index or equivalent.
- f. If all data is not available for all years, please provide the level of detail that is available. Please provide in in Microsoft readable electronic format (preferably Microsoft Excel).

A-223. See the response to Question No. 220, part a. Gross investment includes both materials investment and capitalized labor.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 224**

**Responding Witness: Dr. Martin J. Blake**

Q-224 Please provide the following separated between primary and secondary as available by vintage year, size and type for LG&E Account 368 (Line Transformers) in the greatest level of detail available:

- a. installed units;
- b. gross investment;
- c. materials investment;
- d. capitalized labor; and,
- e. Handy-Whitman Cost Index or equivalent.
- f. If all data is not available for all years, please provide the level of detail that is available. Please provide in Microsoft readable electronic format (preferably Microsoft Excel).

A-224 See the response to Question No. 220, part a. Gross investment includes both materials investment and capitalized labor.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 225**

**Responding Witness: Dr. Martin J. Blake**

Q-225. Please provide each of the following LG&E Exhibits included in Dr. Blake's Direct Testimony in executable Excel format (include all linked files):

- a. Exhibit MJB-10;
- b. Exhibit MJB-11;
- c. Exhibit MJB-12; and,
- d. Exhibit MJB-13.
- e. Please include in this response all the workpapers, spreadsheets, source documents, etc. that support the amounts, assumptions and calculations presented in each of these Exhibits.

- A-225. a. See "Att-PSC2-70-File02" under Description of Document in the files uploaded in response to PSC 2-70. This file is the electric cost of service study; specifically in this spreadsheet, see the tab "Res Unit Costs."
- b. See the following under Description of Document in the files uploaded in response to PSC 2-70:

Att-PSC2-60-File05 – contains pages 2-4 of Exhibit MJB-11

Att-PSC2-60-File06 – contains page 1 of Exhibit MJB-11

Att-PSC2-60-File22 – supporting workpapers

Att-PSC2-60-File23 – supporting workpapers

Att-PSC2-60-File24 – supporting workpapers

- c. See "Att-PSC2-70-File07" under Description of Document in the files uploaded in response to PSC 2-70, which is the Excel version of Exhibit MJB-12..

- d. See “Att-PSC2-70-File08” under Description of Document in the files uploaded in response to PSC 2-70, which is the Excel version of Exhibit MJB-13.

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 229**

**Responding Witness: John P. Malloy**

Q-229. Please provide actual and estimated LG&E meter reads by customer class during the most recent 12-months available.

A-229. See table below for a listing of LG&E actual and estimated meter reads by revenue class for the 12 months ending December 31, 2014.

| <u>Revenue Class</u> | <u>Actual Reads</u> | <u>Estimated Reads</u> |
|----------------------|---------------------|------------------------|
| Industrial           | 9,166               | 369                    |
| Large Commercial     | 337,314             | 4,726                  |
| Public Authorities   | 49,790              | 1,651                  |
| Residential          | 7,994,051           | 65,378                 |
| Small Commercial     | 516,002             | 13,493                 |
| Street Lighting      | 12,103              | 130                    |
| Total                | 8,918,425           | 85,747                 |

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information**

**Dated January 8, 2015**

**Question No. 230**

**Responding Witness: David S. Sinclair**

Q-230. With regard to LG&E Purchased Power (Account 555) included in its electric class cost of service study, please provide:

- a. all workpapers and analyses showing the determination of total capacity costs within the Account total; and,
- b. all workpapers and analyses showing the determination of total energy costs within the Account total.
- c. Please provide in Microsoft readable electronic format (preferably Microsoft Excel).

A-230. a. See attachment being provided in Excel format. Certain information is confidential and proprietary and is being provided pursuant to a petition for confidential protection. Purchased Power Demand within Account 555 for LG&E includes capacity costs for the OVEC power purchase agreement and the Bluegrass capacity purchase and tolling agreement. In the attached Excel workbook, the "DemandSummary" worksheet lists the annual OVEC capacity payments upon which the forecasted monthly OVEC capacity payments are based. The monthly capacity payment for the Bluegrass agreement is \$4.15/kW-month in 2015 and escalates at 1.9% per calendar year.

- b. In addition to Purchased Power Demand, Account 555 includes External Purchased Power, Internal Purchased Power, Purchase Power – OSS, and Purchase Power – OSS I/C. The forecast for each of these items was developed using the Companies' production cost model. Attachment 1 being provided in Excel format contains the workpapers for External Purchased Power, Internal Purchased Power, and Purchase Power – OSS I/C. The table below provides guidance on how to filter for the data rows that make up each item.

| Item                     | Company | Group                                       | Item                            | Unit   |
|--------------------------|---------|---------------------------------------------|---------------------------------|--------|
| External Purchased Power | LGE     | Purchases                                   | MarketP, OVEC-L Max, OVEC-L Min | \$000s |
| Internal Purchased Power | LGE     | Intercompany Purchase, Intercompany Savings | KU                              | \$000s |
| Purchase Power – OSS I/C | KU      | ReplacementTo                               | LGE                             | \$000s |

Attachment 2 being provided in Excel format contains the workpapers for Purchase Power – OSS. The forecasted values for Purchase Power – OSS are located in the “BudgetSummary” worksheet in row number 77.

- c. See attachments to parts a and b.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General’s Initial Request for Information**

**Dated January 8, 2015**

**Question No. 231**

**Responding Witness: David S. Sinclair / Dr. Martin Blake**

Q-231. With regard to LG&E Off-System Sales of \$71,794,397 (Blake Exhibit MJB-9, Page 25), please provide in Microsoft readable Excel format:

- a. a detailed explanation along with all workpapers and analyses showing the pricing methodology (basis) and amount (units and dollars) for sales to affiliates;
- b. if not provided in (a) above, please provide the detailed determination of test year Off-System Sales (units and dollars) by month and by affiliate; and,
- c. method used to allocated total Company amount to individual classes.

A-231.

- a. Account 447 includes Intercompany OSS Sales, Intercompany Native Load Sales, and External OSS Sales. The forecast for each of these items was developed using the Companies’ production cost model. The workpapers (in Microsoft Excel format) for Intercompany OSS Sales and Intercompany Native Load Sales were provided as the first attachment to Question No. 230(b). The table below provides guidance on how to filter for the data rows that make up each item.

| <b>Item</b>                    | <b>Company</b> | <b>Group</b>                                | <b>Item</b> | <b>Unit</b> |
|--------------------------------|----------------|---------------------------------------------|-------------|-------------|
| Intercompany OSS Sales         | LGE            | ReplacementTo                               | KU          | \$000s      |
| Intercompany Native Load Sales | KU             | Intercompany Purchase, Intercompany Savings | LGE         | \$000s      |

The workpapers (in Microsoft Excel format) for External OSS Sales were provided as the second attachment to Question No. 230(b). The forecasted values for External OSS Sales are located in this attachment in the “BudgetSummary” worksheet in row number 82.

- b. See the response to part a.
  
- c. Purchases to support off system sales are recorded in the energy costs included in Account 555 under the Functional Assignment tab in the Cost of Service Study. Since the margins on these energy sales are used as a credit towards the cost of fixed generation and transmission facilities being paid for by native load customers, an adjustment must be made to ensure that the margins from these sales are spread to the various customer classes in a way that ensures that the revenues and margins from making off system sales are consistent with the costs associated with making the off system sales. To accomplish this, the expenses associated with off system sales included in the Company's forecast are allocated based on production and transmission rate base instead of energy to ensure there is alignment between the revenue and expenses. This ensures that the revenues and expenses of making off system sales are allocated to the various customer classes on the same basis, namely, each class' share of fixed generation and transmission facilities.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 232**

**Responding Witness: Robert M. Conroy**

Q-232 For each the last three rate cases (before this rate case), please provide the following by rate class:

- a. current base rate revenues excluding all Riders and fuel (before increase);
- b. current Rider revenue excluding fuel;
- c. current fuel revenue;
- d. Company proposed (as-filed) increase;
- e. authorized increase; and,
- f. KWH sales included in Filing.

A-232 The last three rate cases before this case are Case No. 2008-00252, Case No. 2009-00549, and Case No. 2012-00222.

**Case No. 2008-00252**

- a. See Attachment 1, page 1, Actual Net Revenue @ Base Rates.
- b. See Attachment 1, page 1.
- c. See Attachment 1, page 1.
- d. See Attachment 1, page 27.
- e. See Attachment 1, page 28.
- f. See Attachment 1, pages 2-17.

**Case No. 2009-00459:**

- a. See Attachment 2, page 1, Actual Net Revenue @ Base Rates.
- b. See Attachment 2, page 1.
- c. See Attachment 2, page 1.
- d. See Attachment 2, pages 2-17.
- e. See Attachment 2, page 18.
- f. See Attachment 2, pages 2-17.

**Case No. 2012-00222:**

- a. See Attachment 3, page 1, Test Year Base Revenues, As Billed. See Attachment 3, pages 3-14, column (5) and pages 16-25 column (6) for Calculated Revenues At Present Rates.
- b. See Attachment 3, page 1.
- c. See Attachment 3, page 1.
- d. See Attachment 3, pages 2-25.
- e. See Attachment 3, pages 26-50.
- f. See Attachment 3, pages 2-25.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 233**

**Responding Witness: Dr. Martin J. Blake**

Q-233. Please provide all workpapers, analyses, spreadsheets, source documents, etc. that show how each of the electric class's cost of service study allocation factors was determined that are identified in Dr. Blake's Direct Testimony at Pages 14 through 16. Please provide in Microsoft readable electronic format (preferably Microsoft Excel).

A-233. See the response to Question No. 201.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information**

**Dated January 8, 2015**

**Question No. 234**

**Responding Witness: Paul Gregory "Greg" Thomas**

Q-234. Please provide the following LG&E system actual or estimated number of circuit miles as follows:

- a. separated between primary and secondary voltage;
- b. separated between 3-phase and single (dual) phase; and,
- c. separated by size of conductor.

A-234.

- a. LG&E has a total of approximately 6,333 primary circuit miles and 3,602 secondary circuit miles. Lengths of services are not included and are not readily available.
- b. LG&E has approximately 2,308 primary three phase circuit miles and 4,025 primary single (dual) phase circuit miles. LG&E does not maintain records of secondary circuit miles by phasing. LG&E has 3,602 total circuit miles of secondary. Lengths of services are not included and are not readily available.
- c. See the table below for the estimated total primary and secondary distribution circuit miles by size. The data in this attachment is based on records retrieved from the Company's mapping database and represents the best estimate available to respond to AG 234 (c).

| Wire Size | Circuit Mileage |
|-----------|-----------------|

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 235**

**Responding Witness: Robert M. Conroy**

Q-235. With respect to the discussion of the Optional Residential Time-of-Day Rates at Dr. Blake's Direct Testimony, Pages 23 through 27, please provide a detailed explanation of why LG&E is proposing these rates at this time.

A-235. See the testimony of Mr. Conroy, pages 26 through 33, for the requested explanation.

**LOUISVILLE GAS AND ELECTRIC COMPANY**

**CASE NO. 2014-00372**

**Response to Attorney General's Initial Request for Information  
Dated January 8, 2015**

**Question No. 236**

**Responding Witness: Dr. Martin J. Blake**

Q-236. With respect to Exhibit MJB-11, please provide all supporting data and analyses for the billing determinants, rates, revenues, rate periods, etc. determined and presented therein.

A-236. See the response to Question No. 225.
